

H-5400-2 - Timber Sale Information System

ACKNOWLEDGMENTS

Credit for the success story of BLM's Timber Sale Information System (TSIS) properly belongs to the dozens of timber sale specialists, foresters, contract inspectors, accountants, and many others who knew all too well what was needed to escape from the "Cuff Record" environments of the past . . . and who also had the patience to continually suggest and patiently correct when we didn't always immediately understand what they were saying or get things right the first time.

They always let us know - quickly and in no uncertain terms - when they found something that was wrong. But, bless them all, we also received those occasional compliments when we got something right . . . and that has made the years of effort seem worthwhile. We'd love to list all of their names here, but there have been so many people involved . . . and we're afraid that we'd leave somebody out. Let's just say that they've all been highly appreciated, each and every one.

Special belated thanks should also go to the BLM district that once didn't want to support TSIS . . . but that simultaneously didn't want to stop supporting TSIS. The resulting "Catch 22" situation was extremely uncomfortable for a time, but things all worked out for the best in the end.

Kathy Pino deserves her very own paragraph here for her endless patience in making countless changes and corrections in our Handbook text without her happy smile ever showing any visible signs of strain. If we'd been in her place, we would have certainly been bouncing off the walls long before changing something "one more time" for the 1,000th time! We might have somehow managed to finish our writing project without her help, but it would certainly have been a vastly inferior product.

Special credit also belongs to our editor, Mr. Bob Woerner, who kept us on track by always insisting on proper grammar and intelligible sentences and paragraphs. He learned more than he had ever wanted to know about Timber Sales in the process, and even managed to teach us a thing or two, in turn, about our English language.

Others deserving mention here are Kathy Helm, in Coos Bay, who provided the spark that finally got us rolling when we were badly stalemated in trying to explain the data relationships of Chapter 3. And we certainly do not want to overlook Christine Brown, who took over when Kathy Pino left us for a well-deserved promotion and transfer. Christine's sharp eyes have caught more than one oversight in the document.

We realize that, in some ways, we've created a monster here. We don't expect that this will ever become a "best seller", or that anybody will ever read it from "cover to cover." What we do hope is that you'll find this to be a useful and comprehensive reference that will help you find the answers to your specific TSIS questions. Ecclesiastes 12:12 is probably partially applicable here.

Tom Costello

John D. Engels
