The New Marketplace

his FY 1999 Operations Summary from Western Area Power Administration provides insight into out role in the electric utility industry's evolving marketplace.

For most of this century, the industry operated in a regulated environment. Today, competition is transforming the landscape. It's changing not only the way electricity is marketed, but every facet of the industry. As the industry restructures itself and as services such as generation, transmission, distribution and end-use retail services are unbundled into separate markets, utilities will have to choose how to respond. Already some utilities have decided to divest generation assets and focus on transmission and distribution. Other market players are choosing to construct new merchant plants. Still others are exploring creative ways to combine and market electricity with other services.

At the same time, many states are independently studying and implementing legislation designed to open wholesale and even retail markets to competition. Congress is grappling with similar issues on a nationwide scale. This dynamic setting means there is little uniformity in "how the game is played" from state to state and region to region. It also means the field is wide open for innovation.

Western finds itself in the thick of this newly unfolding environment. This report highlights ways Western has responded to change and industry restructuring.

NOTE: This summary does not include financial statements. Audited figures will appear in our FY 2000 Annual Report after our new financial system is stabilized.

WESTERN AT A GLANCE

Marketing Profile

| | 1999 | 1998 |
|-----------------------------|------------------|------------------|
| Firm energy revenue | \$583 million | \$578 million |
| Nonfirm energy revenue | \$139 million | \$142 million |
| Total energy sales | 45.1 billion kWh | 45.0 billion kWh |
| Composite firm rate | 16.02 mills | 15.64 mills |
| Coincident peak load (est.) | 6,768 MW | 6,667 MW |

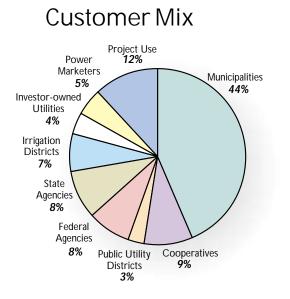

Customer Profile

| | Number | Sales (billion kWh) | Energy Revenue (million \$) |
|--------------------------|-----------------|------------------------|-----------------------------------|
| Municipalities | 284 | 11.1 | 171.6 |
| Cooperatives | 58 | 8.7 | 146.1 |
| Public utility districts | 17 | 4.2 | 83.1 |
| Federal agencies | 50 | 2.4 | 36.2 |
| State agencies | 55 | 11.3 | 157.9 |
| Irrigation districts | 47 | 0.6 | 8.0 |
| Investor-owned utilities | 24 | 3.1 | 64.3 |
| Power marketers | 30 | 1.6 | 33.6 |
| Project use (Reclamation | n) 78 | 1.6 | 10.5 |
| Interproject sales | | 0.5 | 10.4 |
| Firm customers | 576 | 38.7 | 582.6 |
| Nonfirm customers | 67 ¹ | 6.4 | 139.1 |
| Total customers | 643 | 45.1 | 721.7 |

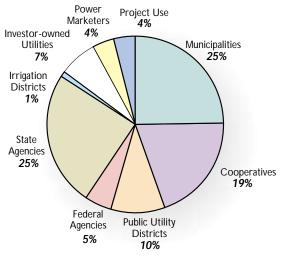

¹ Excludes 73 firm power customers who also purchased nonfirm power.

Where Our Revenue Comes From (\$)

FROM THE ADMINISTRATOR

am pleased to provide our Fiscal Year 1999 Operations Summary. This report reflects our commitment to provide our customers with reliable, cost-based hydropower, keeping them competitive in an in a rapidly changing marketplace.

In FY 1999, we sold more than 45 million megawatthours of energy resulting in \$722 million in revenue. After meeting project and other expenses, we repaid \$143 million of our Federally financed power investment, up from FY 1998's \$136 million repayment. Cumulatively, we have repaid \$2.7 billion, or about 29 percent, of our \$9.1 billion total investment.

At the same time, we continue to play a vital role in ensuring reliability throughout much of the West. Western staff serve on key positions in the North American Electric Reliability Council and two of its regional councils, which span much of the Great Plains and West. We also signed a contract with the Western Systems Coordinating Council that helped launch a pilot program for a new mandatory reliability standards initiative. During the pilot, we exceeded both NERC's minimum criteria and the average of industry participants.

The rise of merchant plants, in response to the nation's growing energy needs, presents a new arena in which we are playing an expanding role. In our service area, 52 merchant plants with a potential generating capacity of nearly 28,000 MW are planned or under construction. A dozen have requested interconnections with our transmission system. Through our design and environmental compliance work with these projects, we are helping maintain reliability in the West at minimal impact to the environment.

We continue to play a vital role as a wholesale power marketer. In FY 1999, above-average water runoff resulted in increased power production. These conditions allowed us to sell surplus power at optimal market prices, while still meeting project and firm power customer needs. These excess sales are used to offset operating costs and keep our rates low, further helping our customers maintain competitively lower rates.

We are also exploring new opportunities with Indian tribes across the West. Twenty-five tribes in the Upper Great Plains have signed contracts for firm power allocations, allowing them to receive the benefits of Federal hydropower. For some tribes, obtaining Federal hydropower will save millions annually.

I am pleased also to report that Western adopted a revised Strategic Plan in FY 1999, bringing us into full compliance with the Government Performance and Results Act. In addition, we completed an FY 1999 Annual Performance Plan that ties our annual budget request to our strategic goals.

In FY 1999, the American Public Power Association recognized us for working safely, and we successfully contained our O&M cost growth to 0.3 percent.

While we are proud of these achievements, the next year promises more "interesting times." Constrained budget levels, the emergence of regional transmission organizations and the changing complexion of the power industry will place increasing demands on us, but also will present new opportunities. With our talent and resources, Western will meet these challenges. We welcome working with customers, suppliers, industry organizations, power marketers and other agencies in defining the industry's new marketplace in the 21st century.

Michael S. Hasskaylo

Michael S. Hacskaylo Administrator

WESTERN PROFILE

estern Area Power Administration annually markets and transmits approximately 10,000 megawatts of power from 55 hydropower plants. We market about 40 percent of hydroelectric power generated in our service territory. Western also markets the United States' 547-MW entitlement from the coal-fired Navajo Generating Station near Page, Ariz.

Western's service area covers 1.3 million square miles in 15 states. We provide project-use power to 78 U.S. Bureau of Reclamation customers. After providing projectuse power, we sell the remaining power to 643 wholesale customers including 284 municipalities, 58 cooperatives, 17 public utility and 47 irrigation districts, 50 Federal and 55 state agencies, 24 investor-owned utilities (only one of which purchases firm power from Western) and 30 marketers that purchase surplus nonfirm power. They, in turn, provide retail electric service to millions of consumers in these central and western states: Arizona, California, Colorado, Iowa, Kansas, Minnesota, Montana, Nebraska, Nevada, New Mexico, North Dakota, South Dakota, Texas, Utah and Wyoming.

Western operates and maintains an extensive, integrated and complex high-voltage power transmission system to deliver power to our customers. Using this 16,819 circuit-mile Federal transmission system, Western markets and delivers reliable electric power to most of the western half of the United States.

Except for the Central Arizona Project's Navajo generation, these power facilities are part of 11 rate-setting systems. These are made up of 14 multipurpose water resource projects and one transmission project. The systems include Western's transmission facilities and power generation facilities owned and operated by the U.S. Bureau of Reclamation, the U.S. Army Corps of Engineers and the International Boundary and Water Commission.

Western and the generation entities are separately managed and financed. Each project maintains a separate financial system and records. Each entity operates and maintains its portion of the multipurpose projects and allocates its operating expenses among the projects. Costs are allocated among individual project purposes. These purposes can include navigation, irrigation, flood control, power, fish and wildlife, recreation and municipal and industrial water supply. Western's financial statements include only the costs assigned to power for repayment.

Power sales, transmission operations and maintenance and engineering services for our system are accomplished by our employees at 51 duty stations located throughout our service area. These include our Corporate Services Office in Lakewood, Colo., and four customer service regions with offices in Billings, Mont.; Loveland, Colo.; Phoenix, Ariz.; and Folsom, Calif. We also market power from our Colorado River Storage Project Management Center in Salt Lake City, Utah. System operations and maintenance are managed at offices in Bismarck, N.D.; Fort Peck, Mont.; Huron, S.D.; and Watertown, S.D.

Legislative Authority

Congress established Western on Dec. 21, 1977, under Section 302 of the Department of Energy Organization Act. Under this statute, power marketing responsibilities and the transmission system assets previously managed by Reclamation were transferred to Western.

Financing Methods

Our power marketing program includes three principal activities: operation and maintenance; purchase power and wheeling; and construction and rehabilitation. Each year, Congress appropriates funds to finance expenses for most of our power systems including the Pick-Sloan Missouri Basin Program, Central Valley Project, Parker-Davis Project and the Pacific Northwest-Pacific Southwest Intertie Project.

Our appropriation also includes an annual contribution for the Utah Reclamation Mitigation and Conservation Account as specified in the Reclamation Projects Authorization and Adjustment Act of 1992. Existing legislation allows for the Colorado River Storage (and its participating projects, Dolores and Seedskadee), Central Arizona and Fort Peck projects to operate with power receipts through a revolving fund. Under the Foreign Relations Authorization Act, in fiscal years 1994 and 1995, a separate appropriation was provided to operate and maintain Falcon and Amistad project facilities for the International Boundary and Water Commission.

While Western receives annual appropriations to finance our operations, power rates are set to recover all costs associated with our activities, as well as repay the Federal investment in power facilities, with interest, and certain costs assigned to power such as aid to irrigation development.

We currently finance a significant amount (68 percent in FY 99) of our Purchase Power and Wheeling Program through nonappropriated, alternative financing methods, such as bill crediting, net billing, reimbursements and nonappropriation transfers.

Boulder Canyon Project is financed through permanent appropriations from the Colorado River Dam Fund. Parker-Davis Project and Central Valley Project customers also provide advance funding to finance certain power system expenses and capital improvements, respectively. We also do work for other Federal and non-Federal organizations under authority of the Economy Act, the Contributed Funds Act and the Interior Department Appropriations Act of 1928.

ACCOMPLISHMENTS

Power Marketing Review

In FY 1999, Former Deputy Energy Secretary Elizabeth Moler directed Western to answer a number of questions about how we will market power in the future. After an exhaustive public process and consideration of public comment, we published our response in the Federal Register. This effort will help chart our future power marketing efforts.

Standards of Conduct

On Feb. 1, 1999, we implemented new Standards of Conduct to comply with Federal Energy Regulatory Commission Order No. 889. The Order required the separation of transmission functions from power marketing functions and restricts communications between power marketing and transmission operations employees. In FY 1999, we began complying by making transmission availability and price information available to all market participants, both our marketing staff and others, at the same time through an electronic system called Open Access Same-time Information System. FERC approved Western's Standards of Conduct filing on April 1, 1999.

Marketing Plans

We completed marketing plans for the Central Valley Project and Salt Lake City Area/Integrated Projects. Under these plans we will renew contracts with nearly 200 existing customers and provide a percentage of each respective project's total resources for allocations to new customers, including Native American tribes.

Tribal Allocations

In FY 1999, we negotiated and signed contracts with 25 Native American tribes in the Upper Great Plains Region. For certain tribes, this results in savings of several million dollars annually. Because the tribes agreed to alternative financing arrangements, Western was able to execute these agreements without increasing our need for appropriations to purchase power.

Restructuring

Western is changing its business practices to meet the varying challenges of industry restructuring. The most dramatic changes occurred in the Sierra Nevada and Desert Southwest regions. Sierra Nevada began conducting transactions for customers through the California Power Exchange to expand customers' resource options. We also have worked extensively with the California Independent System Operator to coordinate issues affecting reliability. The SN Region has been certified as a scheduling coordinator by the California Independent System Operator to conduct power transactions on behalf of customers. In the DSW Region, we continue to play an important role in the ongoing development of Desert STAR, a newly evolving regional transmission organization. DSW also completed an inter-control area agreement with the California ISO to improve coordination of transmission transactions across the boundaries of the two control areas.

Renewable Energy

Western's Non-Hydro Renewable Resources Program was recognized in FY 1999 as a leader in facilitating renewable energy development among our customers and across our service territory. Because of the program's involvement in the President's Million Solar Roofs Initiative and the Secretary of Energy's Wind Power America Initiative, we were able to leverage more than \$318,000 in funding from external sources to assist customers in implementing renewable energy programs and projects. Through an Energy Department matching grant, each of our regions conducted on-site solar photovoltaic installation workshops, providing customers and industry leaders with hands-on training.

Strategic Plan

We also revised our Strategic Plan in FY 1999. The plan established clear goals and measurements to determine whether we meet those goals. We are using this to help us chart a course and mark our accomplishments as we face changes in the utility industry.

Integrated Resource Planning

In FY 1999, we launched a comprehensive public process to review and revise integrated resource planning criteria. Changes in the power industry and requirements in the Energy Policy Act of 1992 led to the criteria reassessment. Through workshops and requests for public comment, we gathered input from customers and stakeholders on ways to streamline the IRP process and make it more flexible. We expect to publish a final rule for IPR criteria in the Federal Register by spring 2000.

Energy Services

FY 1999 was another year of effective partnering for our Energy Services Program. Several technical workshops across our service territory were coordinated and cost-shared with customers. We began developing a series of residential energy fact sheets through our partnership with the Energy Information Clearinghouse. We also provided toll-free technical assistance to customers through our Power Line (1-800-POWERLN) and Energy Services Web site (www.es.wapa.gov). Through a partnership with the Southeastern Power Administration, Western initiated the Utility Options for a Competitive Edge online restructuring database for community-owned utilities at www.utilityoptions.org. The web site provides more than 200 case studies on how energy services help prepare public power entities for competition.

Environmental Program Assessment

In FY 1999, we began assessing our environmental programs in our Rocky Mountain Region and Corporate Support Office. Westernwide assessments have been started and we are developing an Environmental Management system. The self-assessments will provide a blueprint for future environmental programs.

Safety

Acknowledging our high safety standards, the American Public Power Association honored us with a second place award in its annual APPA Safety Contest. APPA has recognized our safety record in nine out of the last 11 years. We also limited lost or restricted workdays to 175 days in FY 1999, well below our goal of 225 days. Our overall safety rating of 2.4 was well below the industry rating of 5.1.

Y2K

We used significant resources during FY 1999 to fix Y2K computer problems. We identified and cataloged existing systems and equipment and then conducted extensive testing to identify non-compliant items. Noncompliant equipment and systems were either repaired or replaced, and Y2K compliant systems were thoroughly tested. To ensure readiness and compliance, we developed contingency plans and participated in industry-sponsored Y2K drills.

Customer Partnerships

At the request of Citizen's Utility Company, a Western customer serving Nogales, Ariz., we upgraded Citizens' substation and resolved synchronization problems to enhance area reliability in FY 1999. Operating on an accelerated schedule, we completed the upgrade in less than seven months.

In the Sierra Nevada Region, our customers agreed to provide funding to replace the turbine runners on three units at Shasta Dam. Customers also continued a funding program for O&M activities on the Central Valley Project power system.

We completed construction of Topock Substation for Arizona Electric Power Cooperative. AEPCO contracted with us to provide these services because it did not have the design and construction expertise needed to meet its expanding load.

Reliability

In FY 1999, each of our four control areas, which balance generation and load within given portions of the power grid, easily met the North American Electric Reliability Council's new Control Performance Standards. The CPS 1 standard measures short-term error between load and generation. The CSP2 standard places boundaries on CPS1 to prevent adverse power flows.

Minimum acceptable performance standard for CPS1 is 100 percent; perfect performance is 200 percent, although under certain conditions this level can be exceeded. Western's CPS1 average was 199 percent. Minimum acceptable performance standard for CPS2 is 90 percent; perfect performance is 100 percent. Western's average was 98 percent. Industry averages were 174 percent for CSP1 and 94 percent for CSP 2.

In addition, NERC honored us on its Generating Availability Data System's Honor Roll for timely and accurately reporting of availability data for 39 U. S. Army Corps of Engineers and Bureau of Reclamation hydrogenerating units in the Upper Great Plains Region.

Reliability-Centered Maintenance

In FY 1999, we adopted the use of a reliability-centered maintenance program to help optimize and better document our existing maintenance program. The RCM philosophy focuses on analyzing, modifying and prioritizing maintenance tasks using equipment criticality decisions. The RCM program provides a structured approach to record the reasons behind each of the maintenance decisions affecting what tests are performed, what initiates a test, what maintenance is performed and if any engineering changes need to be done to ensure reliability. We are training our staff in the RCM philosophy and choosing which program makes the best business sense.

Reliability Management System

In FY 1999, we, along with 22 other Western Systems Coordinating Council members, signed WSCC's Reliability Management System agreement. The agreement signals support for a new contract-based reliability program. WSCC is the first reliability council in North America to begin a reliability program enforced by contracts and sanctions.

Facility Improvements

To ensure reliability and enhance our efficiency, in FY 1999 we carried out numerous facility improvement projects. We rehabilitated, enlarged or completed major repairs at six substations across Western. Remodeling was completed at the Rocky Mountain Region control center/dispatch center and the Sierra Nevada Region backup control center. Major power pole replacement projects were begun in the Upper Great Plains and Desert Southwest regions. In the RM Region, the entire transmission system, including substations, was scanned with infrared monitors to detect hot spots that might signify overloaded equipment or other maintenance concerns. We successfully replaced, re-routed or modified several transmission structures that cross Devil's Lake in North Dakota. Lake levels have been rising since 1993, endangering our transmission lines.

Small Business Award

In 1999, we were honored with the Department of Energy's FY 1998 Small Business Award for meeting or exceeding our goals in awarding contracts for products and services to small businesses, small business set-asides, small disadvantaged businesses and women-owned businesses.

IRP SUMMARY

estern undertook a number of actions in FY 1999 to support the Integrated Resource Planning requirements outlined in Section 114 of the Energy Policy Act of 1992. These include:

- Distributing the IRP annual reporting spreadsheets for individual and cooperatives/memberbased associations to assist customers in compiling and submitting annual IRP progress reports.
- Providing IRP-related publications, information and technical assistance to customers through various media, including our Energy Services Bulletin, the Energy Services Web site (www.es.wapa.gov) and our Power Line technical assistance hotline (1-800-POWERLN).
- Loaning technical equipment, including infrared cameras and demand analyzers, to customers to help them assess and increase efficiency levels.
- Providing direct and indirect technical assistance and information services through our regional energy services programs.
- Facilitating opportunities for customers to evaluate and implement renewable resources through our Non-Hydro Renewable Resources Program.
- Initiating a public process to revise our IRP approval criteria, as mandated by Section 114 of EPAct. We proposed revisions to the IRP regulations that include streamlined IRP criteria and new alternatives that account for wholesale and retail competition in the electric utility industry.

We received IRPs and small customer plans from all firm power customers and regularly receive annual progress reports and small customer annual update letters.

Through the end of FY 1999, we received 178 IRPs from individual customers and IRP cooperatives and 122 small customer plans. These IRPs and small customer plans represent 699 long-term firm power customers and customer members as shown here:

| Region | Individual IRPs | IRP Cooperatives | Small Customer Plans |
|--------|--------------------|---------------------------------------|-------------------------|
| CRSP | 10 | 10 representing 77 customers/members | 4 |
| DSW | 33 | 7 representing 20 customers/members | 16 |
| RM | 17 | 9 representing 136 customers/members | 22 |
| SN | 4 | 6 representing 17 customers/members | 39 |
| UGP | 71 | 11 representing 192 customers/members | 41 |

The table on page 13 presents a breakout of customer demand-side management and renewable resource activities and expenditures as reported in FY 1999 IRP annual progress reports and small customer update letters. The table does not represent all customers and customer members because Western is not required to report small customer data (but does when it is available).

Highlights from customer annual reporting include:

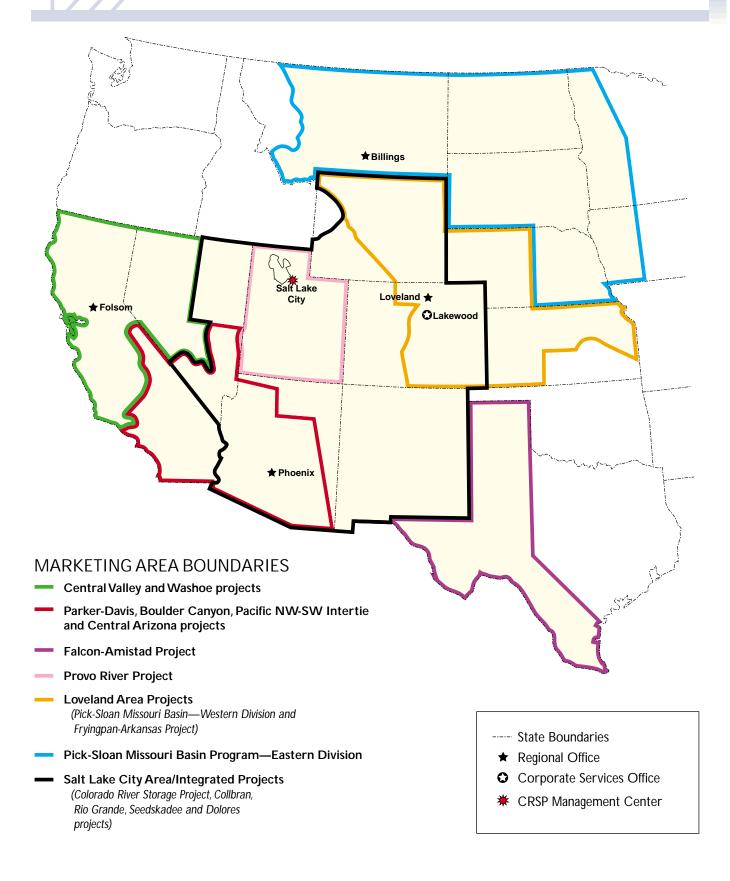

- 1,274,000 kW saved across our service area through DSM measures.
- 3,098,042,400 kWh saved through DSM measures.
- \$73,669,100 expended on DSM measures.
- 3,275,350 kW capacity from renewable resources.
- 9,765,006,700 kWh generated from renewable resources.
- \$192,112,400 expended on renewable resources.*

FY 99 customer IRP reporting results

| | CRSP | DSW | RM | SN | UGP |

Transmission Lines in Service

1978 - 16,165 miles **1999** - 16,819 miles

Transmission Line Age as of Oct. 1, 1999

Service life:

40 years for wood pole lines, 100 years for structures and 50 years for conductor insulator assemblies on steel lines. This graph includes only wood and steel line structures.

INTERCONNECTIONS

estern has a total of 189 control area interconnections with 21 entities. This includes four ties between our four control areas, including two direct current links. We also have a DC link with the Nebraska Public Power District.

| Control Area | Regional Office | Number of Control Area Interconnections |
|------------------|-----------------------|--|
| WAUM (East-MAPP) | Upper Great Plains | 83 |
| WAUM (West-WSCC) | Upper Great Plains | 9 |
| WALC (WSCC) | Desert Southwest | 45 |
| WACM (WSCC) | Rocky Mountain and | |
| | CRSP Management Cente | er 52 |
| | C | |
| | Total | 189 |

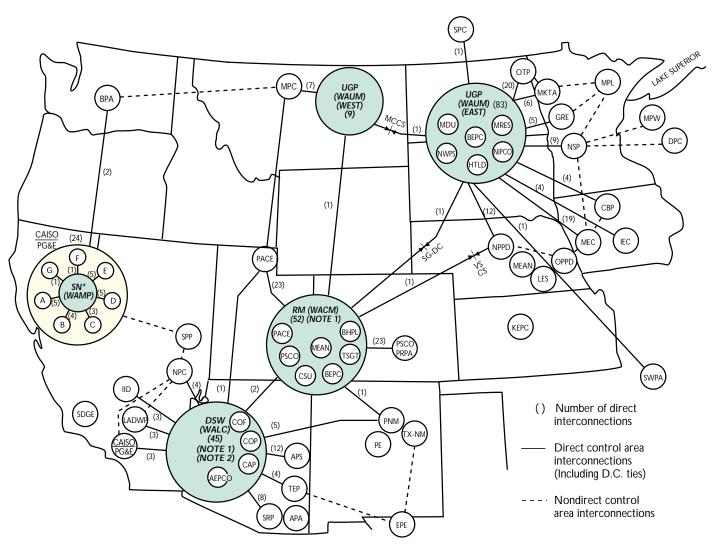

The Upper Great Plains Region operates two control areas—one in the eastern interconnection and one in the western interconnection. The Desert Southwest Region operates a control area in the western interconnection. The Colorado River Storage Project Management Center and the Rocky Mountain Region operate a combined control area in the western interconnection.

The Sierra Nevada Region operates inside the California Independent System Operator's control area. Sierra Nevada has 53 interconnections with 11 entities. Although not a control area, Sierra Nevada control center coordinates energy scheduling for most directly connected customers.

We regularly schedule energy with approximately 25 load-serving entities with which we do not have a direct interconnection. Transactions are scheduled irregularly with approximately 75 other load-serving entities with which we do not have direct interconnections. Additional schedules also occur with power marketers and brokers.

We maintain more than 1,700 active contract agreements with utilities in 18 states, which include our more than 600 power customers. We maintain 1,598 load-serving interconnections with 382 customers inside the load control boundaries.

| Region | Load-Serving Interconnections |
|------------------------|----------------------------------|
| Upper Great Plains | 1,040 |
| Rocky Mountain | 255 |
| Desert Southwest | 241 |
| Sierra Nevada | 24 |
| CRSP Management Center | 38 |
| Total | 1,598 |

* SN does not operate a control area; it operates within the California ISO control area.

¹ Maximum operating capability is the maximum generating capability of the units at unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

² Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

³ Excludes 4.8 MW reserved for plant use.

⁴ Coal-fired generation.

⁵ United States' share (24.3 percent) of 2,250 MW plant capability.

⁶ Pump/generating plant.

⁷ Includes 0.35 MW at Lewiston Powerplant.

⁸ Formerly San Luis Pump/Generating Plant.

⁹ United States' share of 424 MW capability.

¹⁰ Only unit 3 has pump/generation capability.

¹¹ United States' share (50 percent) of plant capability.

¹² Generation from units 1 and 2 is marketed by the Rocky Mountain Region; from units 3 and 4 by the Upper Great Plains Region. For this table, one-half of the total capability and output is shown under each of these two regions.

Operating agencies:

CDWR - California Department of Water Resources Corps - U.S. Army Corps of Engineers IBWC - International Boundary and Water Commission, U.S. Dept. of State PRWUA - Provo River Water Users Association Reclamation - Bureau of Reclamation, U.S. Dept. of the Interior SRP - Salt River Project

Year

PEAK FIRM LOADS

These graphs show monthly regional at-plant coincident peak firm loads, except that Sierra Nevada Project Use loads may not be coincident with the load management loads. Amounts for Desert Southwest and Rocky Mountain exclude Sierra Nevada

Salt Lake City Area/Integrated Project loads. They are included in the CRSP MC amounts.

Our FY99 coincident firm and contingent peak load was 6,768 MW. The peak occurred on July 13 during the hour ending at 6 p.m. (MDT).

SALES SUMMARY

Power Sales by Project¹

| | FY | 1999 | FY 1998 | | |
|---|------------|--------------|------------|--------------|--|
| Project | (MWh) | Revenue (\$) | (MWh) | Revenue (\$) | |
| Boulder Canyon | 5,182,064 | 48,867,047 | 5,697,855 | 43,480,083 | |
| Central Arizona (Navajo) ² | 4,072,000 | 74,879,056 | 3,504,000 | 70,770,835 | |
| Central Valley | 9,703,215 | 158,772,795 | 10,417,339 | 182,950,411 | |
| Falcon-Amistad | 87,958 | 3,291,652 | 137,045 | 3,588,928 | |
| Loveland Area Projects | 2,198,245 | 46,116,413 | 2,201,105 | 45,668,992 | |
| Parker-Davis | 1,766,042 | 10,650,205 | 1,631,313 | 7,934,542 | |
| Pick-Sloan Missouri Basin—Eastern Div | 13,325,478 | 235,306,023 | 12,776,137 | 212,536,383 | |
| Provo River | 16,951 | 208,261 | 32,475 | 265,032 | |
| Salt Lake City Area/Integrated Projects | 8,690,941 | 143,388,660 | 8,600,636 | 152,562,429 | |
| Washoe | 15,191 | 271,773 | 10,916 | 64,293 | |
| Total Western | 45,058,085 | 721,751,885 | 45,008,821 | 719,821,927 | |

¹ Includes firm, nonfirm, project use, interdepartmental and interproject customers and energy sales to them.

² On June 1, 1994, Salt River Project began acting as the scheduling and marketing agent for the CAP portion of the Navajo Generating Station (547 MW). Western retains marketing and repayment responsibility and SRP pays Western monthly fixed and variable costs to meet repayment requirements.

¹ Western has one long-term investor-owned firm power customer, Southern California Edison, which has an entitlement to Boulder Canyon Project power. Western sells CVP power excess to preference customer requirements through an energy banking arrangement with Pacific Gas and Electric Company. Western, as needed, may repurchase this energy at discounted rates.

² Interproject sales are sales among the various projects.

¹ Double-counting occurs when a customer purchases power from more than one project.

² Cooperative customers in Minnesota increased because allocations were transferred to the individual coops in December 1998.

³ Customer count includes 34 UAMPS members.

Note: In FY 1999, Western sold power to 498 preference customers (col 1+2); 73 also purchase nonfirm power (col. 2). We also sold project use power to 78 customers, for a total of 576 firm customers. Nonfirm sales were made to 70 other customers (col. 3), such as power marketers and investor-owned utilities. Detailed information on each customer is listed in the by-project Sales and Revenue tables.

¹ Customer count includes 34 UAMPS members (31 municipalities and 3 irrigation districts).

² Increase in firm power customers resulted when allocations were transferred to individual Minnesota coops in December 1998. Note: In FY 1999, Western sold power to 498 preference customers (col 1+2); 73 also purchased nonfirm power (col. 2). We sold project use power to 78 customers, for a total of 576 firm customers. Nonfirm sales were made to 70 other customers (col. 3), such as power marketers and investor-owned utilities. Detailed information on each customer is listed in the by-project Sales and Revenue tables.

REPAYMENT

Comparison of Cumulative 1998 and 1999 Repayment As of September 30, 1997 and 1998 (in millions of dollars)

| Salt Lake City Area/Integrated Projects | Sept. 30, 2024 |
| Washoe | Dec. 31, 2004 |

Transmission and Ancillary Services Rate Provisions

| Project | Rate schedule designation | Rate |
|---------------------------|---|---|
| Central Valley Project | CV-FT3, Firm Transmission Service CV-SPR1, Spinning Reserve Service CV-SUR1, Supplemental Reserve Service CV-RFS1, Regulation and Frequency Response Service CV-RWT1, Network Transmission Service CV-EID1, Energy Imbalance Service | \$0.51 kW-mo. \$1.35 kW/mo. \$1.27 kW/mo. \$1.48 kW/mo. Load ratio share times 1/12 of annual network transmission revenue requirement. Within deviation band: net deviations at the end of the month are exchanged with like hours of energy, or charged at the CVP firm power rate then in effect. Outside deviation band: positive deviations, no charge; negative on-peak deviations are the greater of 3 times the CVP firm power rate or any additional cost. Negative off-peak deviations are the CVP firm power rate or any additional cost. |
| Loveland Area Projects | L-NT1, Network Integration Transmission Service (Second Step) | Load ratio share of 1/12 of the revenue requirement of \$41,167,055 |
| | L-FPT1, Firm Transmission Service (Second Step) | \$2.85/kW-month or \$34.20/kW-year |
| | L-NFPT1, Nonfirm Transmission Service (Second Step) | 3.75 mills/kWh (Maximum) |
| | L-AS1, Scheduling, System Control and Dispatch Service | \$33.72/schedule/day |
| | L-AS2, Reactive Supply and Voltage Control from Generation Sources Service | \$0.108/kW-month |
| | L-AS3, Regulation and Frequency Response Service L-AS4, Energy Imbalance Service | \$0.071/kW-month Under delivery outside 5% bandwidth, 100 mills/kWh penalty Over delivery outside 5% bandwidth, 50 percent credit of average nonfirm purchase price for the hour |

BOULDER CANYON PROJECT

oover Dam, the highest and third largest concrete dam in the United States, sits on the Colorado River along the Arizona-Nevada border. Lake Mead, the reservoir formed behind Hoover Dam, is still the nation's largest manmade reservoir. The reservoir can hold a two-year supply of the average flow of the Colorado River with its storage capacity of 27.38 million acre-feet.

This enormous project began with 1928 legislation approving construction of the Boulder Canyon Project. Hoover Powerplant has 19 generating units (two for plant use) and an installed capacity of 2,078,800 kW (4,800 kW for plant use). High-voltage transmission lines and substations make it possible for people from Las Vegas, Phoenix and Los Angeles to receive power from the project.

Since the start of commercial power generation in 1936, Hoover, with yearly average generation of 4.2 billion kWh, has served the annual electrical needs of nearly 8 million people. This power is marketed under the Hoover Power Plant Act of 1984 and the 1984 Conformed General Consolidated Power Marketing Criteria and Regulations for Boulder City Area Projects. Western's Desert Southwest Customer Service Region markets and transmits Boulder Canyon power.

The Hoover Power Plant Act of 1984 sets forth the amounts of Hoover power to be sold to customers after June 1, 1987. The marketing criteria have been amended to reflect the provisions of this Act.

Power from the Boulder Canyon Project is marketed as long-term contingent capacity with associated firm energy. This contingent capacity and associated firm energy are available as long as, among other restrictions, sufficient water in the reservoir allows Western to meet its power delivery obligations. If sufficient power to support the customer capacity entitlements is not available, each customer's capacity entitlement is temporarily reduced. Customers are entitled to receive 4.527 billion kWh of firm energy (associated with contingent capacity) each year. If generation at Hoover Powerplant is insufficient, Western can purchase energy to make up the shortfall at the request of individual customers on a pass-through cost basis.

The Boulder Canyon Project obligation to provide power is limited to the available output of Hoover Powerplant. Consequently, power purchases are not needed to meet contractual obligations for the firm energy associated with contingent capacity. However, power purchases are made for those customers requesting firm energy.

Project power is sold in three states: Arizona, California and Nevada. About 55 percent of Boulder Canyon Project energy sales revenue came from California customers. Of the Boulder Canyon Project's 15 customers, 11 are municipalities. These municipalities, however, provide only 28 percent of the energy revenue. Four customers accounted for 82 percent of power revenue from the project. Theses are the Metropolitan Water District of Southern California, Colorado River Commission of Nevada, Arizona Power Authority and Los Angeles Department of Water and Power. Existing power contracts for the Boulder Canyon Project expire on Sept. 30, 2017.

Continued on next page.

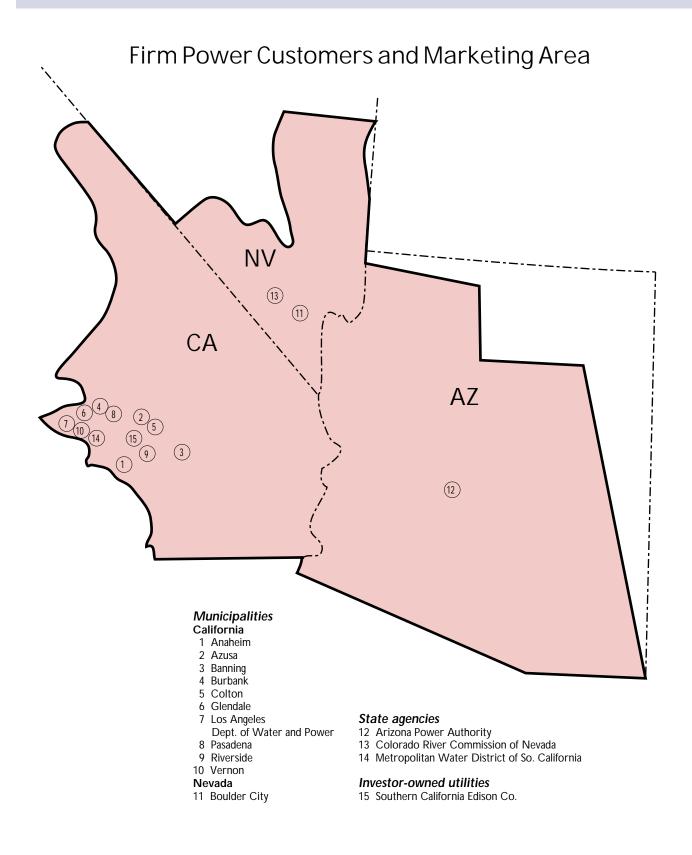

Boulder Canyon Project energy sales revenue increased 12 percent from FY 1998 to FY 1999. Based on the existing rate methodology and customer billing methods instituted in FY 1996, power customers are billed based on annual revenue requirements and their respective percentage of the entitlement, not on actual energy delivered as in previous billing. The FY 1999 revenue requirement was about \$5.3 million more than FY 1998.

Although net generation from Hoover Powerplant decreased 6 percent from FY 1998, FY 1999 generation still exceeded the long-term average. Boulder Canyon Project is located in the Lower Colorado River Basin. FY 1999 was characterized by near normal hydrologic conditions in the Colorado River Basin, 108 percent of average unregulated flow into Lake Powell (which is upstream of Lake Mead and Hoover Dam), and increased storage in the Upper Colorado reservoirs. The timing of FY 1999 generation was affected by downstream water orders, variable precipitation patterns and by release and fill patterns in Upper Colorado River Basin reservoirs.

Increased water releases due to flood control operations resulted in more than 1 billion kWh of Schedule C energy being delivered during FY 1999. This energy was delivered to Boulder Canyon customers according to contract requirements.

Storage in Lake Mead at the end of FY 1999 was 24.6 million acre-feet, which is 90 percent of capacity (95 percent of conservation capacity). Space-building releases for flood control purposes led to this half million acre-feet reduction in storage compared to FY 1998.

¹ The Boulder Canyon Project had excess energy that was delivered to Arizona Power Authority and the Colorado River Commission under Schedule C, First Priority. All other Boulder Canyon Project customers received less energy by the same amount for the excess for these two customers. The total net amount of excess energy is equal to zero. However, a carry forward credit of \$24,922 occurred due to Boulder City's charges being less than the credit by this amount.

² Southern California Edison has an entitlement to Boulder Canyon Project power.

¹ This is an annual adjustment to O&M on the SOR table. Replacements are included as an investment in the financial statements, not as an annual expense, unlike the power repayment study. (FY 1999 replacements = \$3,019,512).

² This is an adjustment for an error made in FY 1998 where replacements were not included as principal payments in the investment repaid section.

CENTRAL VALLEY PROJECT

he Central Valley Project in California's Central Valley has 18 dams that create reservoirs with a total storage capacity of 13 million acre-feet. Two years after the project was authorized in 1937, construction began on 615 miles of canals, five pumping plants and 10 powerplants consisting of 38 hydroelectric generating units. Irrigation aspects of the Central Valley Project cover an area 400 miles long by 45 miles wide comprising almost one-third of California.

The generating units have an installed capacity of 2,031 MW and, after satisfying the project's irrigation pumping, provide the yearly electrical needs for 650,000 people. The Central Valley Project includes 852.26 circuit miles (1,372 km) of high-voltage transmission lines. This does not include 94 miles (151 km) of 500-kV line from Malin Substation (Oregon) to Round Mountain (California). In addition to the CVP lines, Western operates and maintains the California-Oregon Transmission Project, a 350-mile 500-kV line running from Captain Jack Substation near Malin to Tesla (California). We have transmission capacity rights to 11.1 percent of the COTP, which has a rated capability of 1,600 MW. Western also has an entitlement to 400 MW of capacity on the northern segment of the Pacific Northwest-Southwest Intertie.

In FY 1999, the inflow to the four major CVP reservoirs (Trinity, Folsom, New Melones and Shasta) was 13.4 million acre-feet, about 124 percent of the long-term average of 10.8 million acre-feet. As of Sept. 30, 1999, the combined storage of these four facilities was 7.8 million acre-feet or one-half million acre-feet below last year at this time. Net generation totaled 6.5 billion kWh, which is approximately 147 percent of the preceding 13-year average.

Allocations made through power marketing plans for the Central Valley Project govern power sales. All of these power contracts terminate by Dec. 31, 2004. Current agreements call for Western to furnish customers up to a simultaneous peak of 1,152 MW with the associated energy based on each customer's system load factor. Western purchases additional power to supplement Central Valley Project generation to meet these contractual obligations.

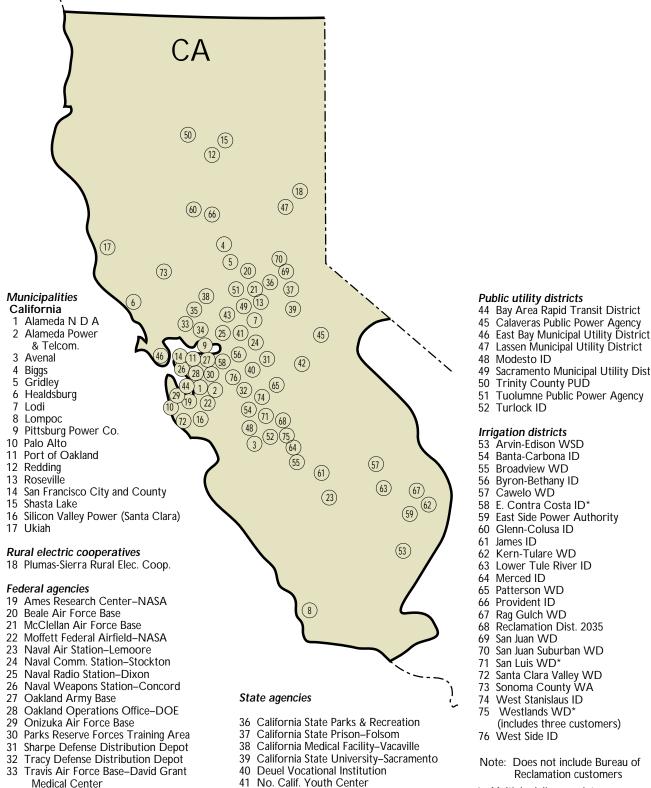

Western's requirements to support generation through power purchases decreased slightly, from 3.9 billion kWh in FY 1998 to 3.4 billion kWh in FY 1999.

Firm power sales totaled 8 billion kWh and \$140.9 million, not including project use or sales to Energy Account No. 2 with Pacific Gas and Electric Company. These sales were made to: municipalities (44.7 percent), public utility districts (32.6 percent), Federal (15.7 percent) and others (7 percent). About 66 percent of all the Central Valley Project's power in FY 1999 was sold to five customers: Sacramento Municipal Utility District, the Bay Area cities of Palo Alto and Santa Clara (Silicon Valley Power) and the cities of Redding and Roseville.

The commercial firm power rates contained in Rate Schedule CV-F9 were approved by the Federal Energy Regulatory Commission on Jan. 8, 1998. The FY 1999 resulting composite rate under Rate Schedule CV-F9 of 19.31 mills/kWh is about 8 percent lower than the rates in effect during the previous fiscal year. Due to our continued efforts to reduce costs, further rate decreases are planned in future years.

¹ Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.
 ² Includes 0.35 MW at Lewiston.
 ³ Pump/generating plant; also known as San Luis.
 ⁴ United States' share of 424 MW capability.

Reclamation - Bureau of Reclamation, Department of the Interior CDWR - California Department of Water Resources

(Includes Clair Engle, Shasta, Folsom and New Melones)

Firm Power Rate Provisions

| Fiscal year | Rate schedule designation | Capacity charge (\$/kW of billing demand) | Energy charge not in excess of delivery obligations | Effective date | Annual composite rate |
|----------------|---------------------------------|---|---|----------------|-----------------------------|
| 1999 | CV-F9 | \$4.37 | 10.06 mills/kWh; | 10/1/97 | 19.31 mills/kWh |
| | | | AERA 3.57 mills/kWh | | |

Transmission and Ancillary Services Rate Provisions

| Fiscal year | Rate schedule designation | Rate |
|----------------|--|---|
| 1999 | CV-FT3, Firm transmission service | \$0.51 kW-mo. |
| | CV-SPR1, Spinning reserve service | \$1.35 kW/mo. |
| | CV-SUR1, Supplemental reserve service | \$1.27 kW/mo. |
| | CV-RFS1, Regulation and frequency response service | \$1.48 kW/mo. |
| | CV-NWT1, Network transmission service | Load ratio share times 1/12 of annual network transmission revenue requirement. |
| | CV-EID1, Energy imbalance service | Within deviation band: net deviations at the end of the month are exchanged with like hours of energy, or charged at the CVP firm power rate then in effect. Outside deviation band: positive deviations, no charge; negative on-peak deviations are the greater of 3 times the CVP firm power rate or any additional cost; negative off-peak deviations are the CVP firm power rate or any additional cost. |

Note: In FY 1999, Western sold CVP power to 79 preference customers (col 1+2); 16 of those customers also purchased nonfirm power (col. 2). We sold CVP project use power to 34 customers, for a total of 113 firm power customers. Nonfirm sales were made to two other customers (col. 3), a public utility district and an investor-owned utility.

Notes: Due to rounding, certain nonfirm sales may reflect revenue without displaying any energy sold.

¹ New customer in FY 1999.

² The Alameda Electric Dept. changed its name to Alameda Power & Telecom in FY 1999.

³ Sales to four DOE labs (LLNL, Site 300, SLAC, Berkeley) were combined into one allocation to DOE's Oakland Operations Office.

⁴ Naval Supply Center Davis Sub is no longer a customer.

⁵ Castle Joint Power Authority merged with Merced Irrigation District in FY 1999.

⁶ Lindsay-Strathmore, Delano and Terra-Bella irrigation districts combined to become Eastside Power Authority in FY 1999.

⁷ This includes estimated FY 1999 sales of \$8.7 million, a reduction of estimated to actual sales for FY 1997 and FY 1998 of \$3,979,838, offset by an increase in revenue for the second of five adjustments required for the FY 1984-1996 prior year estimated to actual true up of \$2,588,104.

¹ Based on the Final 1999 Power Repayment Study.

² Operating revenues are based on preliminary financial statement data. Revenue is adjusted for the FY 1999 Revenue Adjustment Clause of \$674,719.

⁴ O&M and other expenses are based on preliminary financial statement data.

⁵ Purchase power expenses are based on preliminary financial statement data.

 ⁶ Investments are adjusted for prior year true up of plant in service.
 ⁷ The nonpower investment, or aid to irrigation, appears in the PRS as in service in the first future year, but it is included here in the historical cumulative FY 1998 Status of Repayment.

LOVELAND AREA PROJECTS

estern's post-1989 power marketing plan operationally and contractually integrated the Fryingpan-Arkansas Project and the Pick-Sloan Missouri Basin Program-Western Division into the Loveland Area Projects for marketing and rate-setting purposes in 1990. Our Rocky Mountain Customer Service Region administers this program. LAP power is marketed to 40 firm power customers in the Rocky Mountain Region's service area. Fifty-three percent of LAP power is sold in Colorado, with the remaining power sold in Kansas, Nebraska and Wyoming. This fiscal year, as a result of open access transmission, short-term LAP power was also marketed to seven customers outside our normal marketing area, in the states of Arizona, California, Montana, Nevada, New Mexico and Oregon. The LAP revenue requirement for the firm power rate is determined by combining Fry-Ark and Western Division revenue requirements. A single LAP rate design is developed using this revenue requirement.

Fry-Ark and Western Division financial and repayment responsibilities remain separate. Pick-Sloan financial statements contain information that reflects costs from both the Eastern and Western divisions and the generating agencies (Bureau of Reclamation and U.S. Army Corps of Engineers). Western Division is allocated a portion of those costs. Fry-Ark financial statements contain only information for Fry-Ark.

Firm power contracts provide for Western to furnish a specific amount of capacity and energy each month for the term of the contract. LAP firm energy is marketed based on the long-term average generation, rather than customer load factors. As a result of implementing the Energy Planning and Management Program in FY 1996, existing customers with long-term firm power contracts were offered resource commitments for an additional 20 years. These contracts remain in effect until September 30, 2024. We will establish a resource pool for new customers effective Oct. 1, 2004. We will also offer additional resources for potential new customers in October 2009 and October 2014.

Contracts provide for us to purchase non-Federal support energy, up to an individual customer's system load factor, at customer request on a pass-through cost basis.

Fryingpan-Arkansas Project

This multipurpose transmountain diversion development is located in south central Colorado. Surplus water is diverted from the Fryingpan River on the west slope of the Rocky Mountains and brought to the east slope to support irrigation, municipal water supplies and electric power generation.

The project has six dams and five reservoirs with total storage of 741,000 acre-feet of water, 70 miles of tunnels and canals and a pumped-storage powerplant at Mt. Elbert. Its two generating units have a capacity of 206 MW. While the majority of project capacity depends on water pumped during off-peak hours and water releases for power production when needed, some generation is attributed to flow-through water.

Continued on next page.

Authorization for the first 100 MW unit of the powerplant was granted on Aug. 16, 1962. The second unit was authorized on Oct. 27, 1974. Work on these two units was completed in 1984.

Pick-Sloan Missouri Basin Program-Western Division

Both the Eastern and Western divisions have common electrical facilities at Yellowtail Dam in Montana and at a point near Gering, Neb. However, the divisions are separate and distinct systems. Both contribute revenue to repay P-SMBP expenses and investments with different generating resources and separate allocations of firm power and rate structures.

Western Division generating resources include Bureau of Reclamation Missouri River Basin powerplants: Yellowtail, Buffalo Bill, Spirit Mountain, Boysen, Pilot Butte, Glendo, Kortes and Fremont Canyon. They have a total operating capacity of 330 MW from 17 generating units.

The powerplants of Reclamation's Colorado-Big Thompson, Kendrick, Shoshone and North Platte projects have also been integrated with the Western Division for marketing and operation. These projects, with their 20 generating units, have a maximum operating capacity of 328 MW.

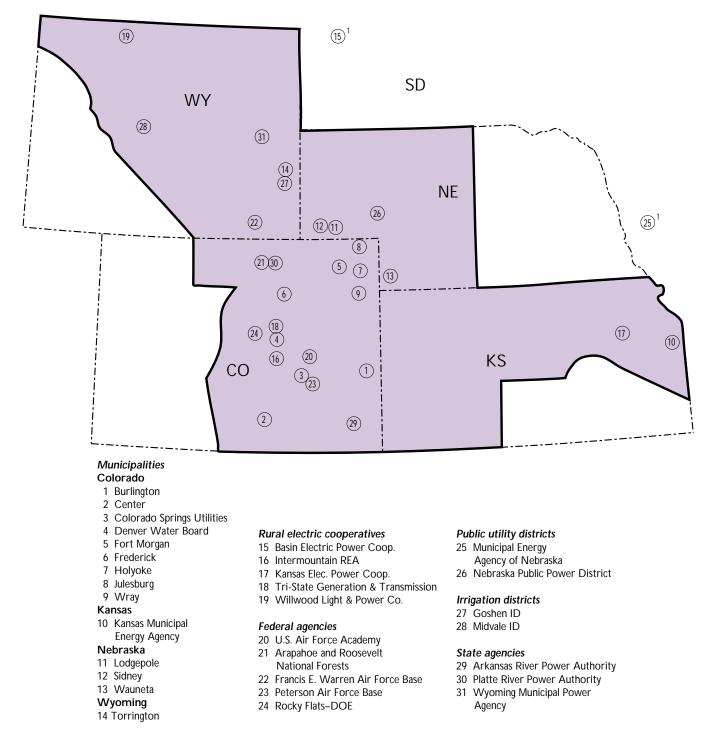

Water deliveries this year to the Colorado-Big Thompson Project were well below average due to above normal precipitation during the irrigation season. The total amount of water diverted from the Colorado River to the Big Thompson system during FY 1999 was only 165,600 acre-feet, due to high carryover storage in Horsetooth Reservoir and Carter Lake. This was only 72 percent of the 1966 to 1995 average diversion of 228,500 acrefeet.

Inflow from the spring snowmelt runoff into the three river basins (Big Thompson, North Platte and Bighorn) during FY 1999 was above average. Consequently, carryover water to be stored in the reservoirs was both above average and more than in the preceding year.

From an operational standpoint, the Loveland Area Projects transmission system was constrained in FY 1999, due to transmission path congestion from north to south and the loss of the Sidney DC Tie for extended periods.

_OVELAND AREA PROJECTS

Firm Power Customers and Marketing Area

Note: Does not include Bureau of Reclamation customers.

¹ All customer loads are delivered within the projects' marketing area, even though a customer's headquarters may not be within it, as shown on this map.

¹ Maximum operating capability is the maximum generating capability of the units at unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

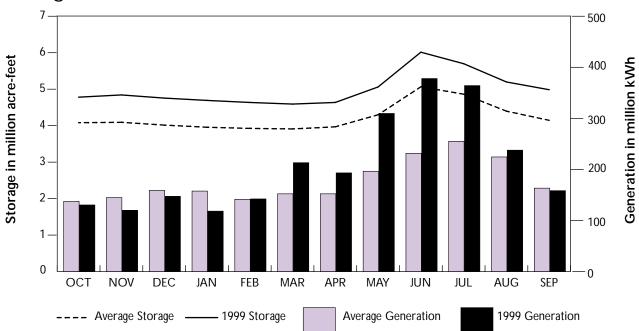

² Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

³ Pump/generating plant.

⁴ Only unit 3 has pump/generation capability.

⁵ Generation from units 1 and 2 is marketed by the Rocky Mountain Region, and from units 3 and 4 by the Upper Great Plains Region. For this table, one-half of the total capability and output is shown under each of these two regions.

Reclamation - Bureau of Reclamation, Department of the Interior

Storage and Generation

LOVELAND AREA PROJECTS

Firm Power Rate Provisions

| | | | Monthly rate | | |
|----------------|---------------------------------|---|---|----------------|-----------------------------|
| Fiscal year | Rate schedule designation | Capacity charge (\$/kW of billing demand) | Energy charge not in excess of delivery obligations | Effective date | Annual composite rate |
| 1999 | L-F4 (2nd Step) | \$2.85 | 10.85 mills/kWh | 10/1/94 | 21.70 mills/kWh |

Transmission and Ancillary Services Rate Provisions

| Fiscal year | Rate schedule designation | Rate |
|-------------|---|---|
| 1999 | L-NT1, Network Integration Transmission Service (Second Step) | Load ratio share of 1/12 of the revenue requirement of \$41,167,055 |
| | L-FPT1, Firm Transmission Service (Second Step) | \$2.85/kW-month or \$34.20/kW-year |
| | L-NFPT1, Nonfirm Transmission Service (Second Step) | 3.75 mills/kWh (Maximum) |
| | L-AS1, Scheduling, System Control and Dispatch Service | \$33.72/schedule/day |
| | L-AS2, Reactive Supply and Voltage Control from Generation Sources Service | \$0.108/kW-month |
| | L-AS3, Regulation and Frequency Response Service | \$0.071/kW-month |
| | L-AS4, Energy Imbalance Service | Under delivery outside 5% bandwidth, 100 mills/kWh penalty Over delivery outside 5% bandwidth, 50 percent credit of average nonfirm purchase price for the hour |
| | L-AS5, Operating Reserve - Spinning Reserve Service | Pass-through cost |
| | L-AS6, Operating Reserve - Supplemental Reserve Service | Pass-through cost |

PARKER-DAVIS PROJECT

he Parker-Davis Project was formed by consolidating two projects, Davis Dam and Parker Dam, under terms of the Act of May 28, 1954. Parker Dam and Powerplant, which created Lake Havasu 155 miles (250 km) below Hoover Dam on the Colorado River, was authorized by the Rivers and Harbors Act of Aug. 30, 1935. The Bureau of Reclamation constructed the project partly with funds advanced by the Metropolitan Water District of Southern California, which now diverts nearly 1.2 million acre-feet each year by pumping it from Lake Havasu. The Cooperative Contract for Construction and Operation of Parker Dam was agreed to in 1933. MWD receives half of the capacity and energy from four generating units. The Federal share of Parker powerplant capacity, as determined by the Bureau of Reclamation, is 54,000 kW.

Davis Dam, on the Colorado River 67 miles (107.8 km) below Hoover Dam, created Lake Mohave. The project was authorized under the Reclamation Project Act of 1939. Construction began in 1941, but due to delays caused by World War II, it wasn't completed until 1953. Davis Dam has a storage capacity of 1.8 million acre-feet. The Bureau of Reclamation has changed the five generation units' operating capacity from 240,000 kW to 232,000 kW due to the age of the generating units and operational constraints.

Parker-Davis Project is operated in conjunction with the other generating installations in the Colorado River Basin. It supplies the electrical needs of more than 300,000 people. The project includes 1,533 circuit-miles (2,466 km) of high-voltage transmission lines in Arizona, southern Nevada and along the Colorado River in California. Parker-Davis's power marketing criteria are part of the 1984 Conformed General Consolidated Power Marketing Criteria of the Boulder City Area Office (now Western's Desert Southwest Customer Service Region).

Water demands in the Lower Colorado River Basin and releases from Hoover Dam determine operation of the Parker-Davis Project. Parker Dam released 8.7 million acre-feet and Davis Dam released 11.3 million acre-feet in FY 1999. Storage in Lakes Mohave and Havasu was near normal at 2.099 million acre-feet combined at the end of the fiscal year.

In FY 1999, net generation decreased by about 4 percent from 1.762 billion kWh in FY 1998 to 1.686 billion kWh. This is the result of annual water release targets established by the Secretary of the Interior and weather conditions along the Colorado River.

Parker-Davis purchase power decreased from 12 million kWh in FY 1998 to 4 million kWh in FY 1999. Total expenses for Parker-Davis purchased power were \$137,575 in FY 1999. The timing of water releases along the lower stem of the Colorado River did not coincide with the periods when energy was required to meet loads.

Parker-Davis is operationally integrated with Hoover Powerplant. In the event Parker-Davis generation is not sufficient to meet firm contractual obligations, Hoover generation may be used, or Western may purchase power from other resources.

Power generated from the Parker-Davis Project is marketed to customers in Nevada, Arizona and California. Excluding project use, criteria provide for marketing 185,530 kW of capacity in the winter season and 242,515 kW capacity in the summer season. Customers receive 1,703 kWh (winter season) and 3,441 kWh (summer season) of energy with each kW of capacity. Excluding project use, total marketable energy is 316 million kWh (winter season) and 835 million kWh (summer season).

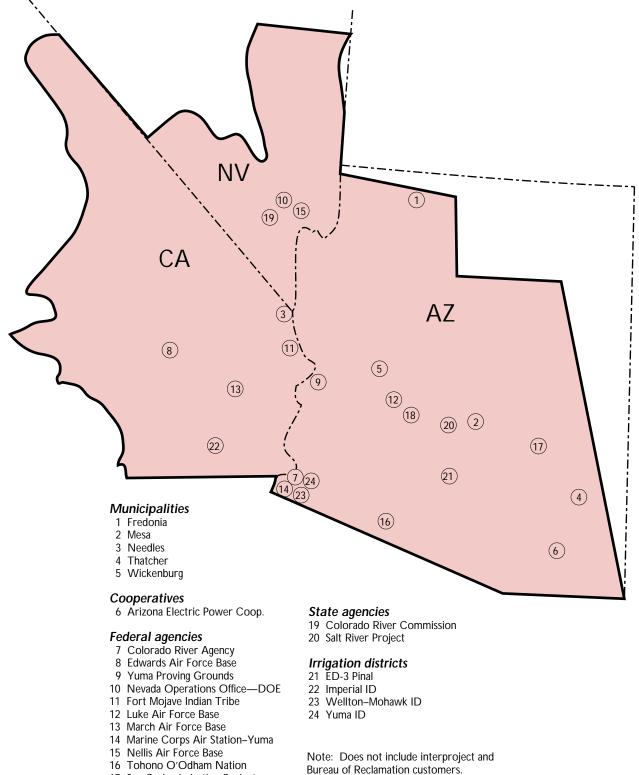

A portion of the resource marketed is reserved for United States' priority use but is not presently needed. This portion—9,460 kW of capacity and associated energy in the winter season and 16,030 kW of capacity and associated energy in the summer season—is withdrawable from existing customers upon two years' written notice. Existing Parker-Davis Project firm power contracts expire on Sept. 30, 2008. About 63 percent of Parker-Davis firm energy sales are made to five of the 46 customers, with about 50 percent of the energy going to Arizona.

Energy sales increased by about 8 percent from 1,631 million kWh in FY 1998 to 1,766 million kWh. Revenue from the sale of electricity increased by about 34 percent from \$7.9 million in FY 1998 to \$10.7 million in FY 1999 due to an increase in excess energy sales and higher nonfirm energy prices.

The methodologies to calculate rates for firm power, firm transmission service, and nonfirm transmission service have been in effect since Nov. 1, 1997.

| Parker-Davis | total | | | 9 | 286 | 286 | 338 | 1,686 | 1,762 |

¹ Installed operating capability is the maximum generating capability of the units at unity power factor without exceeding the specified heat rise on each unit and independent of water constraints. Davis Units 2, 3 and 4 are rated at 48 MW each. Davis Units 1 and 5 have been derated to 44 MW each. Davis emergency capacity can be increased from 232 MW to 240 MW. Parker Units 1, 2, 3 and 4 are rated at 27 MW each.

² Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

³ United States' share (50 percent) of plant capability.

Note: In FY 1999, Western sold PDP power to 26 preference customers (col 1+2); 4 of these customers also purchased nonfirm power (col. 2). Nonfirm sales were made to 20 other customers (col. 3), such as investor-owned utilities and power marketers. Detail information on each customer is listed in the PDP Power Sales and Revenue table.

¹ Rounding adjustment
 ² Parker-Davis Project uses a compound interest amortization approach to determine yearly principle payment amounts. Any dollars left over are applied in future years.
 ³ New aid to irrigation investment relating to replacement/upgrades of irrigation-related facilities.

PICK-SLOAN MISSOURI BASIN PROGRAM

he Pick-Sloan Missouri Basin Program was authorized by Congress in 1944. The multipurpose program provides flood control, irrigation, navigation, recreation, preservation and enhancement of fish and wildlife and power generation. Pick-Sloan power is marketed by two Western regions—Upper Great Plains and Rocky Mountain.

Seven dams and powerplants on the Missouri River produce hydroelectric power for the Eastern Division of the Pick-Sloan. They are: Canyon Ferry in western Montana; Fort Peck at Fort Peck, Mont.; Garrison at Riverdale, N.D.; Oahe at Pierre, S.D.; Big Bend at Fort Thompson, S.D., and Fort Randall and Gavins Point in southern South Dakota. Yellowtail Dam on the Bighorn River in south central Montana produces power for both the Eastern and Western divisions. Including one-half of Yellowtail, Eastern Division powerplants generate more than 10 million kWh in an average year.

The Bureau of Reclamation operates 16 powerplants in the Pick-Sloan-Western Division. Most of these plants are associated with irrigationbased projects that have reached advanced stages of development. Western Division power is marketed through the Loveland Area Projects by Western's Rocky Mountain Region. Details about the Western Division are found in the Loveland Area Projects section beginning on page 71.

Eastern Division

In FY 1999, the Upper Great Plains saw above-average generation of more than 13.3 billion kWh. The relatively higher generation led to above-average power sales revenue of \$235.3 million for Western's Upper Great Plains Region. The outlook for FY 2000 generation is slightly above average as of Oct. 1, 1999.

High levels of generation over the past several years have allowed Pick-Sloan to maintain its firm power rate since 1995. On Oct. 29, 1998, the UGP Region published a Federal Register notice extending the current firm composite rate of 14.23 mills per kWh through Jan. 31, 2001.

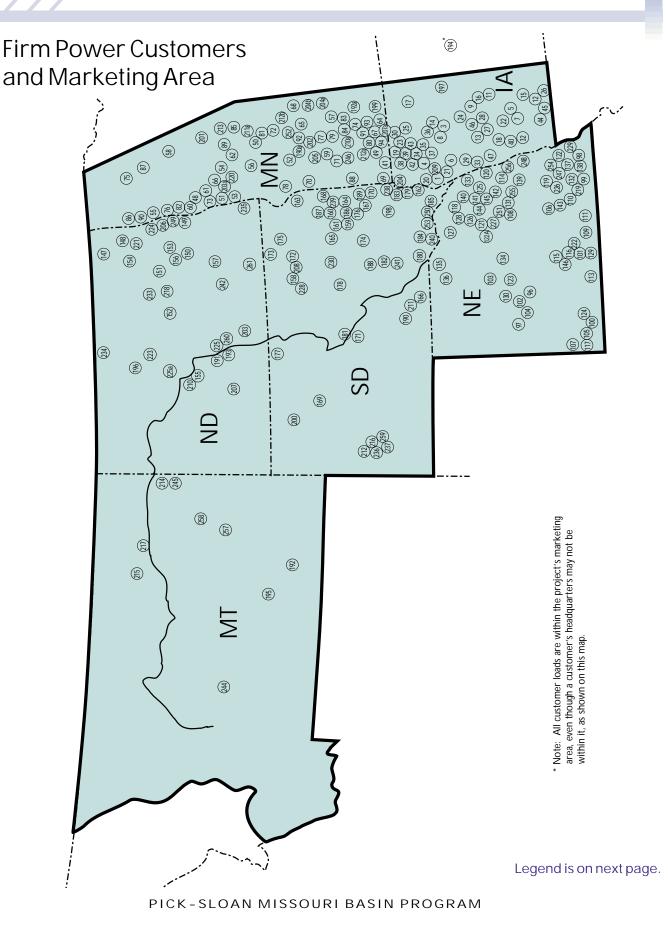

The Upper Great Plains Region serves customers across more than 378,000 square miles in the northern Rocky Mountain and western plains states. Power is delivered through 98 substations, across approximately 7,745 miles of Federal transmission lines, which connect with other regional transmission systems.

The region's 300-plus customers include rural electric cooperatives, municipalities, public utility districts, irrigation districts and Federal and state agencies. Surplus power is sold to a variety of power suppliers, including investor-owned utilities and power marketers as well as preference customers.

The Eastern Division of Pick-Sloan is interconnected with Southwestern Power Administration at Maryville, Mo. A connection to the west for power exchange with Bonneville Power Administration is also available through a transmission service agreement. Through our participation in the Mid-Continent Area Power Pool, the Upper Great Plains Region sells power to MAPP utilities at MAPP transmission rates. In addition, in FY 1998 the Upper Great Plains Region combined its transmission facilities with those of Basin Electric Power Cooperative and Heartland Consumers Power District to form the Integrated System. This allows the Upper Great Plains Region, as well as other transmission users, to transmit power and energy across these entities' transmission facilities using a single Integrated System transmission rate.

Major facilities in the Eastern Division marketing area include an Operations Office and Dispatch Center in Watertown, S.D., where power delivery is managed and operated to ensure system reliability. Three maintenance offices oversee the responsibility of 12 line crews and eight substation crews in operating and maintaining the Eastern Division's extensive transmission system. They are located in Bismarck, N.D.; Huron, S.D.; and Fort Peck, Mont. Miles City, Mont., is home to the Upper Great Plains Region's backto-back direct current converter station. The station can receive alternating current from either the eastern or western power system, convert it into direct current and deliver alternating current into the opposing system. Management and administration is provided from the regional office, located in Billings, Mont.

¹ Maximum operating capability is the maximum generating capability of the units at unity power factor without exceeding the specified heat rise on each unit and independent of water constraints.

² Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

³ Generation from units 1 and 2 is marketed by the Rocky Mountain Region. Generation from units 3 and 4 is marketed by the Upper Great Plains Region. For this table, one-half of the total capability and output is shown under this region.

Reclamation - Bureau of Reclamation, Department of the Interior Corps - U.S. Army Corps of Engineers

Storage and Generation

Firm Power Rate Provisions

| | | | Monthly Rate | | |
|----------------|---------------------------------|---|---|-------------------|-----------------------------|
| Fiscal year | Rate schedule designation | Capacity charge (\$/kW of billing demand) | Energy charge not in excess of delivery obligations | Effective date | Annual composite rate |
| 1999 | P-SED-F6 | \$3.20 | 8.32 mills/kWh for all energy 3.38 mills/kWh for all energy above 60% load factor | 10/1/94 | 14.23 mills/kWh |

Transmission and Ancillary Services Rate Provisions

| Fiscal year | Rate schedule designation | Rate |

¹ The number of cooperative customers in Minnesota increased because the Western allocation was transferred to individual coops in December 1998.

Note: In FY 1999, Western sold P-SMB—ED power to 265 preference customers (col 1+2); 9 of these customers also purchase nonfirm power (col. 2). We sold P-SMB—ED project use power to 29 customers and interdepartment power to two customers, for a total of 295 firm customers. Nonfirm sales were made to 48 other customers (col. 3), such as power marketers and investor-owned utilities. Detailed information on each customer is listed in the P-SMB—ED Power Sales and Revenue table.

Allocation was transferred to individual distribution coops in December 1998.
 Includes sales of nonfirm energy to Rocky Mountain Generation Cooperative, Inc. (6,109 MWh and \$157,316) and to SLCA/IP (6,490 MWh and \$109,365).
 These totals include 1,245,221 MWh and \$22,808,107 for Joint Marketing Plan Sales in FY99.

¹ Based on the Preliminary 1999 Power Repayment Study.

² Adjustment to include purchased transmission services in O&M expense.

³ Adjustment to exclude purchased transmission services from purchase power expense.
 ⁴ Corrects for an overstatement of interest expense in FY 1998.

⁵ Corrects for an overstatement of investment in FY 1998.

⁶ Includes the 1999 budget amounts plus 1998 construction work-in-progress.

⁷ Corrects for an understatement of irrigation aid in FY 1998.

Transmission Revenue

| | FY 1999 | FY 1998 |

SALT LAKE CITY AREA/INTEGRATED PROJECTS

ower generated at Colorado River Storage Project plants and from the Collbran and Rio Grande projects was combined into the Salt Lake City Area/Integrated Projects on Oct. 1, 1987, and is marketed under the Post-1989 General Power Marketing and Allocation Criteria, developed in 1986 and modified in 1989. In 1999, contracts with present customers were extended from 2004 to 2024 and a new marketing proposal for new customers was implemented for the same time frame.

Collbran Project

The Collbran Project, located in west-central Colorado about 35 miles northeast of Grand Junction near the town of Collbran, was authorized by Congress on July 3, 1952. Construction of the project started in 1957 and was essentially completed in 1962.

Collbran developed a major part of the unused water of Plateau Creek and its principal tributaries for irrigation, flood control, recreational and fish and wildlife benefits. It includes several small diversion dams, 34 miles of canals, 19 miles of pipeline and two powerplants (Upper and Lower Molina) with a combined capacity of 14 MW. Net generation in 1999 was 49 million kWh. The five-year average generation is 52 million kWh.

Rio Grande Project

The Rio Grande Project was authorized by the Rio Grande Reclamation Project Act of Feb. 25, 1905. The project is located on the Rio Grande River in south-central New Mexico. Elephant Butte Dam, 125 miles north of El Paso, Texas, was completed in 1916. Caballo Dam, a flood control and reregulating reservoir, located 13 miles downstream, was added to the project in 1938.

Elephant Butte Powerplant and the 115-kV transmission system were added in 1940 and 1952, respectively. The transmission system was sold to Plains Electric Generation and Transmission Cooperative in 1979. Hot Springs Substation was sold to Truth or Consequences, N.M., in 1984. The three-unit powerplant has an operating capacity of 28 MW.

Elephant Butte Powerplant produced 1999 net generation of 102 million kWh. The five-year average is 115 million kWh.

Colorado River Storage Project

The Colorado River Storage Project was authorized by the Act of April 11, 1956. It consists of four major storage units: Glen Canyon, on the Colorado River in Arizona near the Utah border; Flaming Gorge on the Green River in Utah near the Wyoming border; Navajo, on the San Juan River in northwestern New Mexico near the Colorado border; and the Wayne N. Aspinall unit (formerly Curecanti), on the Gunnison River in west-central Colorado.

CRSP has a combined storage capacity that exceeds 33.5 million acre-feet. The project provides water-use developments in the upper Colorado River basin while still maintaining water deliveries to the lower Colorado River as required by the Colorado River Compact. Six Federal powerplants are associated with the project. Operating capacity of CRSP's 16 generating units is 1,710,000 kW. With about 7.4 billion kWh of net generation for the past five years, CRSP provides for the electrical needs of more than a million people spread across Colorado, Utah, New Mexico and Arizona. Portions of southern California, Nevada and Wyoming are also served by CRSP power. More than 4,131 circuit kilometers of high-voltage transmission lines are strung throughout these states to deliver power to customers.

Runoff at Lake Powell was 82 percent of average in FY 1999. Reclamation's releases from Lake Powell were 11.2 million acre-feet, exceeding the minimum objective release obligation of 8.23 MAF. CRSP hydrogeneration produced approximately 7,086,955 MWh in FY 1999.

Seedskadee Project

The Seedskadee Project is located in southwestern Wyoming in the Upper Green River Basin, which is a part of the Upper Colorado River Basin. Seedskadee was authorized for construction as a participating project of the Colorado River Storage Project by the Colorado River Storage Project Act of April 11, 1956.

The project's Fontenelle Dam and Reservoir were completed in April 1964. Power facilities associated with the dam were completed in January 1966. These included a 10-megawatt powerplant and switchyard at Fontenelle Dam and necessary transmission lines to interconnect with the Colorado River Storage Project transmission system at Flaming Gorge Powerplant. The powerplant has since been uprated to 11.5 MW. Fontenelle powerplant came online in 1968.

The authorizing legislation required that power's share of the project's allocated costs be repaid from power revenues from Fontenelle powerplant. For this reason, the Bureau of Reclamation prepared a separate financial statement and power repayment study for Seedskadee through 1977. However, when the facilities were turned over to Western in 1978, Seedskadee's power repayment study was combined into the CRSP PRS.

A re-examination of CRSP's enabling legislation in FY 1991 resulted in Western's realization that Congress intended each CRSP participating project to be financially self-sufficient. Beginning in 1993, Western resumed preparing a separate PRS and financial statements for Seedskadee, including making adjustments to CRSP revenues, expenses and capitalization to separate Seedskadee's financial data from CRSP. Net generation in FY 1999 was 76 million kWh. The five-year average generation is 71 million kWh.

Dolores Project

The Dolores Project, located in Montezuma and Dolores counties in southwestern Colorado, was authorized for construction as a participating project of the Colorado River Storage Project by Public Law 90-537, Sept. 30, 1968; and Public Law 98-569, Oct. 30, 1984. Construction of the project began in 1977. This multipurpose project provides 12.8 MW of installed power generating capacity along with municipal and industrial water, irrigation water, and recreation and fish and wildlife enhancement. Primary storage is provided by the McPhee Dam and Reservoir on the Dolores River.

Powerplants are located on the McPhee Dam and the Towaoc Canal to generate power for the Colorado River Storage Project power system. The McPhee Dam powerplant operates year-round on fishery releases from McPhee Reservoir while the Towaoc Canal powerplant operated from April to October on the irrigation water supply conveyed through the canal. The powerplants at McPhee Dam, completed in 1992 and on the Towaoc Canal, completed in 1993, produce 1,283 kW and 11,495 kW, respectively, for use in the CRSP power system. Net generation in FY 1999 was 23 million kWh. The five-year average generation is 16 million kWh.

Similar to the Seedskadee Project, the authorizing legislation requires that power's share of the project's allocated costs be repaid from power revenues from the two Dolores powerplants.

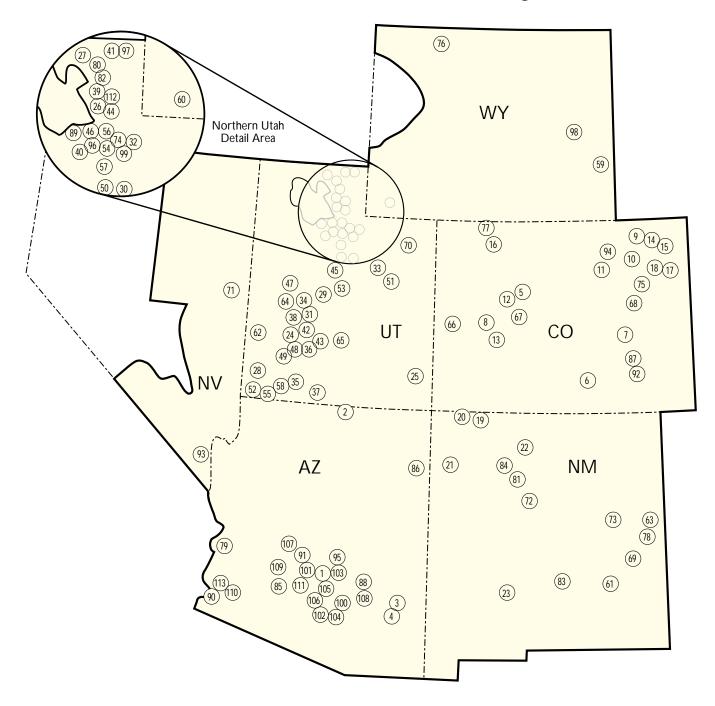

Salt Lake City Area/Integrated Projects

Generation from the Colorado River Storage and its participating projects (Dolores and Seedskadee), and from the Collbran and Rio Grande projects, are marketed as the Salt Lake City Area/Integrated Projects. Integrated Projects FY 1999 net generation was 7.3 billion kWh, or 22 percent greater than average net generation. Average generation for the integrated projects since 1989 is about 6 billion kWh.

SLCA/IP power marketed by Western increased by 1.1 percent from 8.6 billion kWh in FY 1998 to 8.7 billion kWh in FY 1999. This year, power revenues decreased by 7 percent from \$153 million in FY 1998 to \$143 million. Western was required to purchase nearly 1,089,486 MWh to supplement firm contractual requirements and other obligations—a 70-percent increase from the 339,714 MWh purchased last year.

Maximum operating capability is the maximum generating capability of the units at unity power factor without exceeding the specified heat rise on each unit 1 and independent of water constraints. Net generation is gross plant generation less plant use. These amounts have not been reduced by other priorities such as project pumping energy.

¹ UAMPS individual customer totals were not calculated for FY 1998 to more clearly represent UAMPS total revenues.

² Kanab was an independent customer until it joined UAMPS in 1996.

³ Assigned from Navajo Indian Irrigation Project power reservation for on-farm uses and other municipal and industrial purposes.

⁴ These sales are listed by the location of the marketing entity or investor-owned utility. They do not necessarily reflect the state where the energy was delivered.

OTHER PROJECTS

Central Arizona Project

The Central Arizona Project is one of three related water development projects that make up the Colorado River Basin Project. The others are the Dixie and the Upper Basin projects. The Central Arizona Project was developed for Arizona and western New Mexico; the Dixie Project for southeastern Utah; and the Upper Basin Project for Colorado and New Mexico.

Congress authorized the project in 1968 to improve water resources in the Colorado River basin. Segments of the 1968 authorization allowed Federal participation in the Navajo Generating Station, which has three coal-fired steam electric generating units for a combined capacity of 2.25 million kW. Construction of the plant, located near Lake Powell at Page, Ariz., began in 1970. Navajo began generating in 1976.

The Federal share of 24.3 percent, or 546,750 kW, is used to power pumps that move Colorado River water through CAP canals. Surplus generation is currently marketed under the Navajo Power Marketing Plan adopted on Dec. 1, 1987.

About 400,000 kW is currently marketed as surplus, with 760 kWh of energy available annually with each kW of capacity. Western's Desert Southwest Customer Service Region markets Navajo power on behalf of the Bureau of Reclamation's Central Arizona Project.

As of June 1, 1994, Western, Reclamation, the Salt River Project and the Central Arizona Water Conservation District entered into an agreement in which the Salt River Project Agricultural Improvement and Power District in Arizona schedules and operates the Federal share of the Navajo generating station. This arrangement will remain in effect until Sept. 30, 2016.

In addition, an agreement was established in which all surplus spot market energy sales are now managed to benefit CAP. This agreement will remain in effect until Sept. 30, 2011. SRP pays a flat fee plus a variable energy charge (including a generation operating charge, generation energy charge, transmission operating charge and charge to cover Western and Reclamation costs).

Net operating revenue in FY 1999 was approximately \$95 million, of which \$92 million was subsequently transferred to Reclamation. The Federal share of Navajo net generation rose from 3,504 million kWh in FY 1998 to 4,072 million kWh in FY 1999.

Falcon-Amistad Project

Falcon-Amistad Project consists of two international dams located on the Rio Grande River between Texas and Mexico. The United States and Mexico share and operate separate powerplants on each side of the Rio Grande River. The power output is divided evenly between the two nations. The State Department's International Boundary and Water Commission operates the U.S. portion of the projects. Falcon Dam is located about 130 miles (209 km) upstream from Brownsville, Texas. The United States' portion of construction, operation and maintenance was authorized by Congress in 1950. Construction was started in that year and completed in 1954. The United States' share of Falcon Powerplant capacity is 31,500 kW. The powerplant came on line in 1954.

Amistad Dam is located about 300 miles (482.7 km) upstream from Falcon Dam. The Amistad Powerplant was constructed by the U.S. Army Corps of Engineers, as agent for the IBWC. The United States' portion of construction, operation and maintenance was authorized by the Mexican-American Treaty Act of 1950. Amistad powerplant has a generation capacity of 66,000 kW. Construction was started in 1960 and completed in 1969. Its two generating units came on line in 1983.

Project power is marketed to two cooperatives in south Texas via Central Power and Light Company's transmission system. A total of 88 million kWh of energy was delivered in FY 1999.

The five-year net generation average is 124 million kWh. Repayment is made through annual installments. Western received \$3.3 million in FY 1999. These installments are established in advance by Western and the customers on or before Aug. 31 of the year preceding the appropriate fiscal year. Each annual installment pays the amortized portion of the U.S. investment in the Falcon and Amistad hydroelectric facilities with interest, and associated operation, maintenance and administrative costs. This repayment schedule does not depend upon the amount of power and energy delivered or the amount of generation each year.

Pacific NW-SW Intertie Project

The Pacific Northwest-Pacific Southwest Intertie was authorized by Section 8 of the Pacific Northwest Power Marketing Act of Aug. 31, 1964. Originally, the Intertie was to be a combined AC and DC system, which was to connect the Pacific Northwest with the Desert Southwest. As authorized, the overall project was to be a cooperative construction venture between Federal and non-Federal entities.

Due to delays in construction funding, the estimated in-service date of the Intertie was revised to the point that interest by potential users waned. These events resulted in the indefinite postponement of DC line construction. Consequently, the facilities constructed provide only AC transmission service.

Western's portion of the Intertie consists of two parts, a northern portion and a southern portion. The northern portion is administered by Western's Sierra Nevada Region and is incorporated, for repayment and operation, with the Central Valley Project. The northern portion consists of a 94-mile (151 km), 500-kV line from Malin Substation (Ore.) to Round Mountain to Cottonwood

Substation (Calif.). By agreement, the Central Valley Project has transmission rights for 400 MW of northern Intertie capacity.

The southern portion is administered by Western's Desert Southwest Region and is treated as a separate (stand alone) project for repayment and operational purposes. It consists of a 238-mile (383 km), 345-kV line from Mead Substation (Nev.) to Liberty Substation (Ariz.), a 19-mile (31 km), 230-kV line from Liberty to Westwing Substation (Ariz.), a 22-mile (35 km), 230-kV line from Westwing to Pinnacle Peak Substation (Ariz.) and two new segments that came on-line in April 1996: the 260-mile (419 km) Mead-Phoenix 500-kV AC Transmission Line between Marketplace Substation (Nev.) and Perkins Substation (Ariz.) and the 202-mile (325 km) Mead-Adelanto 500-kV AC Transmission Line between Marketplace and the existing Adelanto Switching Substation in southern California.

Current rates for firm and nonfirm transmission service went into effect on Feb. 1, 1996. Current rates for firm transmission over the 230-kV and 345-kV transmission lines were revised and became effective Jan. 1, 1999.

Provo River Project

The Provo River Project was authorized in 1935. Construction on the project, which includes Deer Creek Dam and Powerplant on the Provo River in Utah, began in 1938 but, because of World War II, was not completed until 1951. The powerplant, authorized on Aug. 20, 1951, was completed and generation began in 1958. Its maximum operating capacity is 5,300 kW.

Before Nov. 1999, summer energy was purchased by the Colorado River Storage Project and winter energy interchanged with Utah Power and Light Company in accordance with a 1933 agreement.

Provo River Project power is now marketed independently from the SLCA/IP subsequent to a new marketing plan that was approved and published in the Federal Register on Nov. 21, 1994. This marketing plan allows Western to market the output of the Provo River Project to customers of Utah Municipal Power Agency and Utah Associated Municipal Power Systems in the Provo River drainage.

The five-year generation average is 29.7 million kWh. A total of 17 million kWh of energy was sold and a total of \$208,000 in revenue was collected in FY 1999.

As provided in Rate Order No. WAPA-87 published in the Federal Register on March 2, 2000, Provo River Project customers pay all operating, maintenance and replacement expenses of the project each year and in return receive all of the energy produced by the project.

Washoe Project

The Washoe Project in west-central Nevada and east-central California was designed to improve the regulation of runoff from the Truckee and Carson river system and to provide supplemental irrigation water and drainage, as well as water for municipal, industrial and fishery use. Additionally, it offers flood protection, fish and wildlife benefits and recreation.

The project was authorized by the Washoe Project Act of Aug. 1, 1956, and was constructed between 1960 and 1976, with the powerplant at Stampede Dam added in 1986. Prosser Creek Dam, Marble Creek Dam and Pyramid Lake fishway are also part of the project. The powerplant at Stampede Dam has a maximum installed capacity of 3,333 kW.

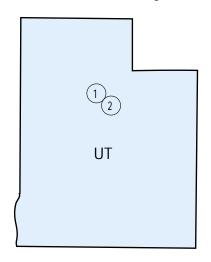

Sierra Nevada Region markets energy and sets power rates for the project. FY 1999 net generation was 15 million kWh, compared to 11 million kWh in FY 1998. Generation from Washoe Project's Stampede powerplant, over that used for project use service, is sold as nonfirm power to Sierra Pacific Power Company at a market rate of 15.08 mills per kWh. To adequately repay the project, a rate of 62.50 mills per kWh would be required.
