## 8th Grade

## Increased mathematics knowledge at grade 8

Similar to the results for grade 4, the mathematical ability of eighthgraders also continued an upward trend in 2007. The average score in 2007 was higher than the score in any previous assessment. Students scored 3 points higher in 2007 than in 2005 and 19 points higher than in $1990^{2}$ (figure 11).

Although not shown here, gains were also made in each of the five mathematics content areas. Score point increases from 1990 to 2007 ranged from a 13-point gain in number properties and operations to a 24-point gain in algebra.

[^0]Figure 11. Trend in eighth-grade NAEP mathematics average scores

* Significantly different ( $p<.05$ ) from 2007.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1990-2007 Mathematics Assessments.

## Improvement at all performance levels

Figure 12. Trend in eighth-grade NAEP mathematics percentile scores

The improvement in mathematics at grade 8 was seen across all performance levels. Scores for students at each of the percentiles were higher in 2007 than the comparable scores from all previous years. Score increases since 1990 were almost even across the percentiles and ranged from 18 to 20 points (figure 12).

Achievement-level results were consistent with the overall scale score and percentile results, showing improvement for students at all achievement levels. The percentages of students at or above Basic, at or above Proficient, and at Advanced were higher in 2007 than in all six previous assessment years (figure 13). The percentage of students at or above Basic increased 2 points since 2005 and 19 points in comparison to 1990. The percentage of students at or above Proficient doubled from 15 percent in 1990 to 32 percent in 2007, and the percentage at Advanced increased from 2 to 7 percent over the same period.

Figure 13. Trend in eighth-grade NAEP mathematics achievement-level performance

## Gains for White, Black, and Hispanic students

Figure 14. Trend in eighth-grade NAEP mathematics average scores, by race/ethnicity

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Special analysis raised concerns about the accuracy and precision of national grade 8 Asian/Pacific Islander results in 1996. As a result, they are omitted from this figure. Sample sizes were insufficient to permit reliable estimates for American Indian/ Alaska Native eighth-graders in 1990, 1992, and 1996. Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin.
SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1990-2007 Mathematics Assessments.

The overall improved performance of eighth-graders was not reflected in all of the five student racial/ethnic groups. White, Black, and Hispanic students showed higher average mathematics scores in 2007 than in all previous assessment years. The score for Asian/Pacific Islander students showed no significant change in comparison to 2005, but was higher than in 1990. No significant change in the score for American Indian/Alaska Native students was seen when compared to previous assessment years (figure 14).

## ACHIEVEMENT-LEVEL RESULTS...

Information is available on achievement-level results for racial/ethnic groups and other reporting categories at http://nationsreportcard.gov/math_2007/data.asp.

## White - Black gap narrows since 2005

Significant score gaps persisted between White students and their Black and Hispanic peers.

At 32 points, the White - Black student score gap in 2007 was smaller than it was in 2005, but not significantly different from the gap in 1990.

The White - Hispanic score gap of 26 points was not significantly different from the gaps in either 2005 or 1990 (figure 15).

Figure 15. Trend in eighth-grade NAEP mathematics average scores and score gaps, by selected racial/ethnic groups

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Score gaps are calculated based on differences between unrounded average scores.

Table 8. Percentage of students assessed in eighth-grade NAEP mathematics, by race/ethnicity: Various years, 1990-2007

| Race/ethnicity | 1990 | 1992 | 1996 | 2000 | 2003 | 2005 | 2007 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| White | $73^{*}$ | $73^{*}$ | $69^{*}$ | $65^{*}$ | $63^{*}$ | $61^{*}$ | 59 |
| Black | 16 | 16 | 17 | 16 | 16 | 16 | 16 |
| Hispanic | $7 *$ | $8^{*}$ | $10^{*}$ | $13^{*}$ | $15^{*}$ | $16^{*}$ | 18 |
| Asian/Pacific <br> Islander | $2^{*}$ | $2^{*}$ | - | 4 | 4 | 5 | 5 |
| American Indian/ <br> Alaska Native | 1 | $1^{*}$ | 1 | 2 | 1 | 1 | 1 |

[^1]The percentage of White eighthgraders in the population was lower in 2007 than in previous assessments, while the percentage of Hispanic students was higher (table 8). The percentage of Asian/ Pacific Islander students in 2007 was not significantly different from 2005, but was higher than in 1990.

## Both males and females make gains

As seen in grade 4 , both male and female eighth-graders showed improved mathematical performance. Higher scores were seen in 2007 than in any of the previous assessment years (figure 16).

In 2007, male students scored 2 points higher on average than their female counterparts. The gap between the two groups in 2007 was not statistically different from the gaps seen in 2005 and 1990.

As in grade 4, differences between male and female students varied somewhat when examined by content area in 2007. With the exception of geometry and data

Figure 16. Trend in eighth-grade NAEP mathematics average scores and score gaps, by gender

* Significantly different ( $p<.05$ ) from 2007.

NOTE: Score gaps are calculated based on differences between unrounded average scores. Score gaps reflect the average scores for male students minus the scores for female students.
analysis and probability, male students scored higher on average than female students in the mathematics content areas (table 9). Female students scored 1 point
higher in data analysis and probability. There was no significant difference in the performance of male and female students in geometry.

Table 9. Average scores in eighth-grade NAEP mathematics, by content area and gender: 2007

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1990-2007 Mathematics Assessments.

## Gaps in performance of public and private school students

Ninety-one percent of eighth-graders attended public schools in 2007, and 9 percent attended private schools. The average mathematics score for eighth-graders in public schools (280) was lower than for students in private schools overall (293) and lower than for students in Catholic schools specifically (292).

Trend results for public and Catholic school students, and for private school students in those years in which sample sizes were sufficient, are available at: http:// nationsreportcard.gov/math_2007/m0038.asp.

## Improved performance across income levels

Similar to the results for grade 4, scores increased for students who were eligible for either free or reduced-price school lunch as well as for students who were not eligible. Average mathematics scores were higher in 2007 than in 2005 for all three groups of students (figure 17).

Eighth-graders who were not eligible for free or reduced-price lunch scored higher on average than those who were eligible in 2007, and students eligible for reduced-price lunch scored higher than those eligible for free lunch.

Figure 17. Trend in eighth-grade NAEP mathematics average scores, by eligibility for free or reduced-price school lunch

* Significantly different ( $p<.05$ ) from 2007.

Table 10. Percentage of students assessed in eighth-grade NAEP mathematics, by eligibility for free or reduced-price school lunch: 2003, 2005, and 2007

| Eligibility status | 2003 | 2005 | 2007 |
| :--- | :---: | :---: | :---: |
| Eligible for free lunch | $26^{*}$ | $29^{*}$ | 32 |
| Eligible for reduced-price lunch | $7^{*}$ | $7^{*}$ | 6 |
| Not eligible | 55 | 56 | 55 |
| Information not available | $11^{*}$ | 8 | 7 |

Changes over time in the percentages of students based on their eligibility for free or reduced-price school lunch are presented in table 10. About onethird of eighth-graders assessed were eligible for free lunch in 2007.

[^2]
## State Performance at Grade 8

All of the 52 states and jurisdictions that participated in 2007 also participated in 2005, and 38 participated in the 1990 assessment, allowing for comparisons over time. As with grade 4, it is important to remember that performance results for states may be affected by differences in demographic makeup and exclusion and accommodation rates for students with disabilities and English language learners, which may vary considerably across states as well as across years.

## Increased scores in one-half of states

The map on the right highlights changes in states' average mathematics scores since 2005 , with increases in 26 states (figure 18). Nine of these states showed increases for only students who were not eligible for free/reduced-price school lunch, while nine states showed increases for both students who were eligible and students who were not eligible.

There were no states in which scores declined since 2005 for students overall.

All of the 38 states that participated in both 1990 and 2007 showed increases in average mathematics scores. These 38 states also showed increases in the percentages of students both at or above Basic and at or above Proficient. These and other state results for grade 8 are provided in figure 20, tables 11 and 12 , and appendix tables A-14 through A-20.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2005 and 2007 Mathematics Assessments.

## Four states make gains in all content areas

Among the 26 states posting overall gains between 2005 and 2007, Kentucky, Massachusetts, Texas, and Wyoming were the only states that also scored higher in all five of the mathematics content areas.

Among the 26 states with no change in performance overall, 9 states (Arkansas, California, Florida, Minnesota, Mississippi, Nevada, North Carolina, Utah, and West Virginia) showed increases in one content area, Illinois increased in two content areas, and Montana increased in one area and decreased in another.

The two maps presented on the right show changes in states' average scores from 2005 to 2007 for two of the five mathematics content areas: algebra and measurement (figure 19).
The algebra and measurement content areas showed the most and fewest changes in state performance, respectively. Thirty states made gains in algebra, with no state posting a decline. The fewest states made gains in measurement, with increases in nine states and a decline in one state.

Mathematics Assessment.

## Assessment Content at Grade 8

#### Abstract

Of the 168 questions that made up the eighth-grade mathematics assessment, the largest percentage (approximately 30 percent) focused on algebra. The emphasis was on students' understanding of algebraic representations, patterns, and functions; linearity; and algebraic expressions, equations, and inequalities. The knowledge and skills expected at grade 8 in number properties and operations include computing with rational numbers, common irrational numbers, and numbers in scientific notation, and using numbers to solve problems involving proportionality and rates. In the measurement

content area, students were expected to be familiar with area, volume, angles, and rates. In geometry, eighthgraders were expected to be familiar with parallel and perpendicular lines, angle relations in polygons, cross sections of solids, and the Pythagorean Theorem. In data analysis and probability, students were expected to use a variety of techniques for organizing and summarizing data, analyzing statistical claims, and demonstrating an understanding of the terminology and concepts of probability.

## Mathematics Achievement Levels at Grade 8

The following descriptions are abbreviated versions of the full achievement-level descriptions for grade 8 mathematics. The cut score depicting the lowest score representative of that level is noted in parentheses.

Basic (262): Eighth-graders performing at the Basic level should complete problems correctly with the help of structural prompts such as diagrams, charts, and graphs. They should be able to solve problems in all NAEP content areas through the appropriate selection and use of strategies and technological tools, including calculators, computers, and geometric shapes. Students at this level also should be able to use fundamental algebraic and informal geometric concepts in problem solving. As they approach the Proficient level, students at the Basic level should be able to determine which of the available data are necessary and sufficient for correct solutions and use them in problem solving. However, these eighth-graders show limited skill in communicating mathematically.

Proficient (299): Eighth-graders performing at the Proficient level should be able to conjecture, defend their ideas, and give supporting examples. They should understand the connections among fractions, percents, decimals, and other mathematical topics such as algebra and functions. Students at this level are expected to have a thorough understanding of Basic level arithmetic operations-an understanding sufficient for problem
solving in practical situations. Quantity and spatial relationships in problem solving and reasoning should be familiar to them, and they should be able to convey underlying reasoning skills beyond the level of arithmetic. They should be able to compare and contrast mathematical ideas and generate their own examples. These students should make inferences from data and graphs, apply properties of informal geometry, and accurately use the tools of technology. Students at this level should understand the process of gathering and organizing data and be able to calculate, evaluate, and communicate results within the domain of statistics and probability.

Advanced (333): Eighth-graders performing at the Advanced level should be able to probe examples and counterexamples in order to shape generalizations from which they can develop models. Eighth-graders performing at the Advanced level should use number sense and geometric awareness to consider the reasonableness of an answer. They are expected to use abstract thinking to create unique problem-solving techniques and explain the reasoning processes underlying their conclusions.

## What Eighth-Graders Know and Can Do in Mathematics

The item map below illustrates the range of mathematical knowledge and skills demonstrated by eighth-graders. For example, students performing near the middle of the Basic range (with an average score of 278) were likely to be able
to estimate time given a rate and a distance. Students performing near the top of the Proficient range (with an average score of 325) were likely to be able to complete a table and write an algebraic expression.

## GRADE 8 NAEP MATHEMATICS ITEM MAP

|  | Scale score $500$ | Content area | Question description |
| :---: | :---: | :---: | :---: |
|  | $\sim$ |  |  |
|  | 364 | Geometry | Model a geometrical situation given specific conditions |
|  | 355 | Measurement | Estimate side length of a square given area |
|  | 342 | Algebra | Identify the graph of a linear equation |
|  | 340 | Number properties and operations | Interpret a number expressed in scientific notation |
|  | 337 | Geometry | Find container height given dimensions of contents |
|  | 334 | Data analysis and probability | Identify best method for selecting a sample |
|  | 333 |  |  |
| $\begin{aligned} & \text { N } \\ & \text { N U } \\ & \text { io } \end{aligned}$ | 329 | Algebra | Convert a temperature from Fahrenheit to Celsius |
|  | 328 | Data analysis and probability | Identify which statistic is represented by a response |
|  | 325 | Algebra | Complete a table and write an algebraic expression |
|  | 320 | Number properties and operations | Determine distance given rate and time |
|  | 317 | Number properties and operations | Analyze a mathematical relationship (shown on page 39) |
|  | 314 | Algebra | Use a formula to solve a problem |
|  | 311 | Number properties and operations | Divide large numbers in a given context |
|  | 308 | Measurement | Determine value of marks on a scale |
|  | 306 | Geometry | Determine measure of an angle in a figure |
|  | 304 | Number properties and operations | Identify fractions listed in ascending order |
|  | 301 | Algebra | Determine an equation relating sales and profit (shown on page 38) |
|  | 299 |  |  |
| $\begin{aligned} & \frac{1}{5} \\ & \infty \end{aligned}$ | 296 | Data analysis and probability | Identify relationship in a scatterplot |
|  | 296 | Number properties and operations | Convert raw points to a percentage |
|  | 287 | Data analysis and probability | Explain which survey is better |
|  | 278 | Number properties and operations | Estimate time given a rate and a distance |
|  | 276 | Algebra | Determine an expression to model a scenario |
|  | 268 | Measurement | Determine width after proportional enlargement |
|  | 265 | Algebra | Identify point on a graph with specified coordinates |
|  | 262 |  |  |
|  | 261 | Algebra | Evaluate an expression for a specific value |
|  | 259 | Data analysis and probability | Recognize misrepresented data |
|  | 258 | Measurement | Determine dimensions that give the greatest volume |
|  | 258 | Geometry | Identify the result of combining two shapes |
|  | 257 | Algebra | Solve an algebraic equation |
|  | 254 | Number properties and operations | Use place value to write a number |
|  | $\begin{array}{r} \sim \\ 0 \end{array}$ |  |  |

## Sample Question About Algebra

This sample question measures eighth-graders' performance in the algebra content area. It addresses the "Algebraic representations" subtopic, which focuses on analyzing, interpreting, and translating among different representations of linear relationships; representing points in a rectangular coordinate system; and recognizing common nonlinear relationships in meaningful contexts. The framework objective measured by this question is "Translate between different representations of linear expressions using symbols, graphs, tables, diagrams, or written descriptions." Students were permitted to use a calculator to solve this problem.

Fifty-four percent of eighth-graders selected the correct answer (choice B). The most common incorrect answer (choice A), which was selected by 17 percent of the students, resulted from interchanging the variables for the number of cards sold and the amount of profit. Incorrect choices C and D are alternate ways to represent the relationship between the number of cards sold and the profit on Monday, but they do not represent the relationship on the other days. Incorrect choice $E$ can be obtained by interchanging the variables and considering only Thursday.

|  | Mon. | Tues. | Wed. | Thurs. | Fri. | Sat. |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number Sold, $n$ | 4 | 0 | 5 | 2 | 3 | 6 |
| Profit, $p$ | $\$ 2.00$ | $\$ 0.00$ | $\$ 2.50$ | $\$ 1.00$ | $\$ 1.50$ | $\$ 3.00$ |

Angela makes and sells special-occasion greeting cards. The table above shows the relationship between the number of cards sold and her profit. Based on the data in the table, which of the following equations shows how the number of cards sold and profit (in dollars) are related?
(A) $p=2 n$
(B) $p=0.5 n$
(c) $p=n-2$
(1) $p=6-n$
(ㄹ) $p=n+1$

## Percentage of eighth-grade students in each response category in 2007

| Choice A | Choice B | Choice C | Choice D | Choice E | Omitted |
| ---: | ---: | ---: | ---: | ---: | ---: |
| 17 | 54 | 13 | 9 | 6 | 1 |

NOTE: Detail may not sum to totals because of rounding.
The table below shows the percentage of eighth-graders within each achievement level who answered this question correctly. For example, 46 percent of eighth-graders at the Basic level selected the correct answer choice.

## Percentage correct for eighth-grade students at each achievement level in 2007

| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 54 | 22 | 46 | 86 | 98 |
| SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education |  |  |  |  |

[^5]
## Sample Question About Number Properties and Operations

This sample question measures eighth-graders' understanding in the number properties and operations content area. It addresses the "Properties of number and operations" subtopic, which focuses on recognizing, describing, and explaining properties of integers and operations. The framework objective measured by this question is "Explain or justify a mathematical concept or relationship." Students were permitted to use a calculator to solve this problem.

Student responses for this question were rated using a twolevel scoring guide, rating responses as "Correct" or "Incorrect."

Forty-two percent of grade 8 students correctly responded to this question. The student response on the right was rated as "Correct." It showed that if two of the three numbers are 23 and 62 , then the third number must be 88 . Therefore, 62 cannot be the largest of the three numbers.

## Percentage of eighth-grade students in each response category in 2007

| Correct | Incorrect | Omitted |
| ---: | ---: | ---: |
| 42 | 55 | 2 |
| NOTE: Detail may not sum to totals because a small percentage of responses that did not |  |  |

NOTE: Detail may not sum to totals because a small percentage of responses that did not address the assessment task are not shown.

The table below shows the percentage of eighth-graders within each achievement level whose answer to this question was rated as "Correct." For example, 43 percent of eighth-graders at the Basic level provided a response rated as "Correct."

## Percentage rated as "Correct" for eighth-grade

 students at each achievement level in 2007| Overall | Below Basic | At Basic | At Proficient | At Advanced |
| ---: | ---: | ---: | ---: | ---: |
| 42 | 13 | 43 | 66 | 78 |

[^6]The sum of three numbers is 173 . If the smallest number is 23 , could the largest number be 62?
Yes
No

Explain your answer in the space below. $62+23=85$ and $173-85=88$. 88 would have to be the third number and 88 is larger than 62 .

## Technical Notes

## Sampling and Weighting

The schools and students participating in NAEP assessments are selected to be representative both nationally and for public schools at the state level. Samples of schools and students are drawn from each state and from the District of Columbia and Department of Defense schools. The results from the assessed students are combined to provide accurate estimates of the overall performance of students in the nation and in individual states and other jurisdictions.

While national results reflect the performance of students in both public schools and nonpublic schools (i.e., private schools, Bureau of Indian Education schools, and Department of Defense schools), statelevel results reflect the performance of public school students only. More information on sampling can be found at http://nces.ed.gov/nationsreportcard/about/ nathow.asp.

Each school that participated in the assessment, and each student assessed, represents a portion of the population of interest. Results are weighted to make appropriate inferences between the student samples and the respective populations from which they are drawn. Sampling weights account for the disproportionate representation of the selected sample. This includes oversampling of schools with high concentrations of students from certain minority groups and the lower sampling rates of students who attend very small nonpublic schools.

## Interpreting Statistical Significance

Comparisons over time or between groups are based on statistical tests that consider both the size of the differences and the standard errors of the two statistics being compared. Standard errors are margins of error, and estimates based on smaller groups are likely to have larger margins of error. The size of the standard errors may also be influenced by other factors such as how representative the students assessed are of the entire population.

When an estimate has a large standard error, a numerical difference that seems large may not be statistically significant. Differences of the same magnitude may or may not be statistically significant depending upon the size of the standard errors of the estimates. For example, a 1-point difference between male and female students may be statistically significant, while a 1-point difference between Black and Asian/Pacific Islander students may not be. Standard errors for the estimates presented in this report are available at http://nces.ed.gov/ nationsreportcard/nde.

## School and Student Participation Rates

To ensure unbiased samples, NCES and the Governing Board established participation rate standards that states and jurisdictions were required to meet in order for their results to be reported. Participation rates for the original sample needed to be at least 85 percent for schools to meet reporting requirements. In the 2007 mathematics assessment, all 52 states and jurisdictions met participation rate standards at both grades 4 and 8 .

The national school participation rates for public and private schools combined were 98 percent for grade 4 and 97 percent for grade 8 . Student participation rates were 95 percent for grade 4 and 92 percent for grade 8 .

Participation rates needed to be 70 percent or higher to report results separately for private schools. While the school participation rate for private schools did meet the standard in 2007, it did not always meet the standard in previous assessment years. Therefore, comparisons could not be made for private schools as a group across all years. Participation rates for Catholic schools, however, were sufficient for reporting in 2007 and in previous assessment years. These data and other private school data are available at http:// nationsreportcard.gov/math_2007/m0038.asp.

National School Lunch Program
NAEP first began collecting data in 1996 on student eligibility for the National School Lunch Program (NSLP) as an indicator of poverty. Under the guidelines of NSLP, children from families with incomes below 130 percent of the poverty level are eligible for free meals. Those from families with incomes between 130 and 185 percent of the poverty level are eligible for reduced-price meals. (For the period July 1, 2006 through June 30, 2007, for a family of four, 130 percent of the poverty level was $\$ 26,000$, and 185 percent was $\$ 37,000$.)

As a result of improvements in the quality of the data on students' eligibility for NSLP, the percentage of students for whom information was not available has decreased in comparison to the percentages reported prior to the 2003 assessment. Therefore, trend comparisons are only made back to 2003 in this report. For more information on NSLP, visit http://www.fns. usda.gov/end/lunch/.

## Appendix Tables

Table A-1. Fourth- and eighth-grade public and nonpublic school students with disabilities (SD) and/or English language learners (ELL) identified, excluded, and assessed in NAEP mathematics, as a percentage of all students: Various years, 1992-2007

| Student characteristics | Accommodations not permitted |  | Accommodations permitted |  |  |  |  |

Table A-9. Average scale scores and achievement-level results in NAEP mathematics for fourth-grade public school students, by race/ethnicity and state: 2007—Continued

## \# Rounds to zero.

$\ddagger$ Reporting standards not met. Sample size is insufficient to permit a reliable estimate.
${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).
NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin.
Results are not shown for students whose race/ethnicity was "unclassified." Detail may not sum to totals because of rounding.

## U.S. DEPARTMENT OF EDUCATION

The National Assessment of Educational Progress (NAEP) is a congressionally authorized project sponsored by the U.S. Department of Education. The National Center for Education Statistics, a department within the Institute of Education Sciences, administers NAEP. The Commissioner of Education Statistics is responsible by law for carrying out the NAEP project.

Margaret Spellings
Secretary
U.S. Department of Education

Grover J. Whitehurst
Director
Institute of
Education Sciences

Mark Schneider
Commissioner
National Center for
Education Statistics

## THE NATIONAL ASSESSMENT GOVERNING BOARD

In 1988, Congress created the National Assessment Governing Board to set policy for the National Assessment of Educational Progress, commonly known as The Nation's Report Card ${ }^{\mathrm{TM}}$. The Governing Board is an independent, bipartisan group whose members include governors, state legislators, local and state school officials, educators, business representatives, and members of the general public.

[^0]:    ${ }^{2}$ The score-point gains are based on the difference of the unrounded scores as opposed to the rounded scores shown in the figure.

[^1]:    - Not available. Special analysis raised concerns about the accuracy and precision of national grade 8 Asian/Pacific Islander results in 1996. As a result, they are omitted from this table.
    * Significantly different ( $p<.05$ ) from 2007

    NOTE: Black includes African American, Hispanic includes Latino, and Pacific Islander includes Native Hawaiian. Race categories exclude Hispanic origin. Detail may not sum to totals because results are not shown for the "unclassified" race/ethnicity category.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1990-2007 Mathematics Assessments.

[^2]:    * Significantly different ( $p<.05$ ) from 2007.

    NOTE: Detail may not sum to totals because of rounding.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2003, 2005, and 2007 Mathematics Assessments.

[^3]:    ${ }^{1}$ Department of Defense Education Activity (overseas and domestic schools).
    NOTE: The shaded bars are graphed using unrounded numbers. Detail may not sum to totals because of rounding.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Mathematics Assessment.

[^4]:    - Not available. The jurisdiction did not participate or did not meet the minimum participation guidelines for reporting.
    * Significantly different ( $p<.05$ ) from 2007 when only one jurisdiction or the nation is being examined.
    ${ }^{1}$ National results for assessments prior to 2003 are based on the national sample, not on aggregated state samples.
    ${ }^{2}$ Department of Defense Education Activity (overseas and domestic schools). Before 2005, DoDEA overseas and domestic schools were separate jurisdictions in NAEP. Pre-2005 data presented here were recalculated for comparability.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, 1990-2007 Mathematics Assessments.

[^5]:    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Mathematics Assessment.

[^6]:    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 2007 Mathematics Assessment.

[^7]:    $\dagger$ Not applicable. Accommodations were not permitted in this sample.
    \# Rounds to zero.
    NOTE: Students identified as both SD and ELL were counted only once under the combined SD and/or ELL category, but were counted separately under the SD and ELL categories. Detail may not sum to totals because of rounding.
    SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), various years, $1992-2007$ Mathematics Assessments.

[^8]:    \# Rounds to zero.
    NOTE: Black includes African American, and Hispanic includes Latino. Race categories exclude Hispanic origin. Students identified as both SD and ELL were counted only once under the combined SD and/or ELL category, but were counted separately under the SD and ELL categories.
