

The loop tour

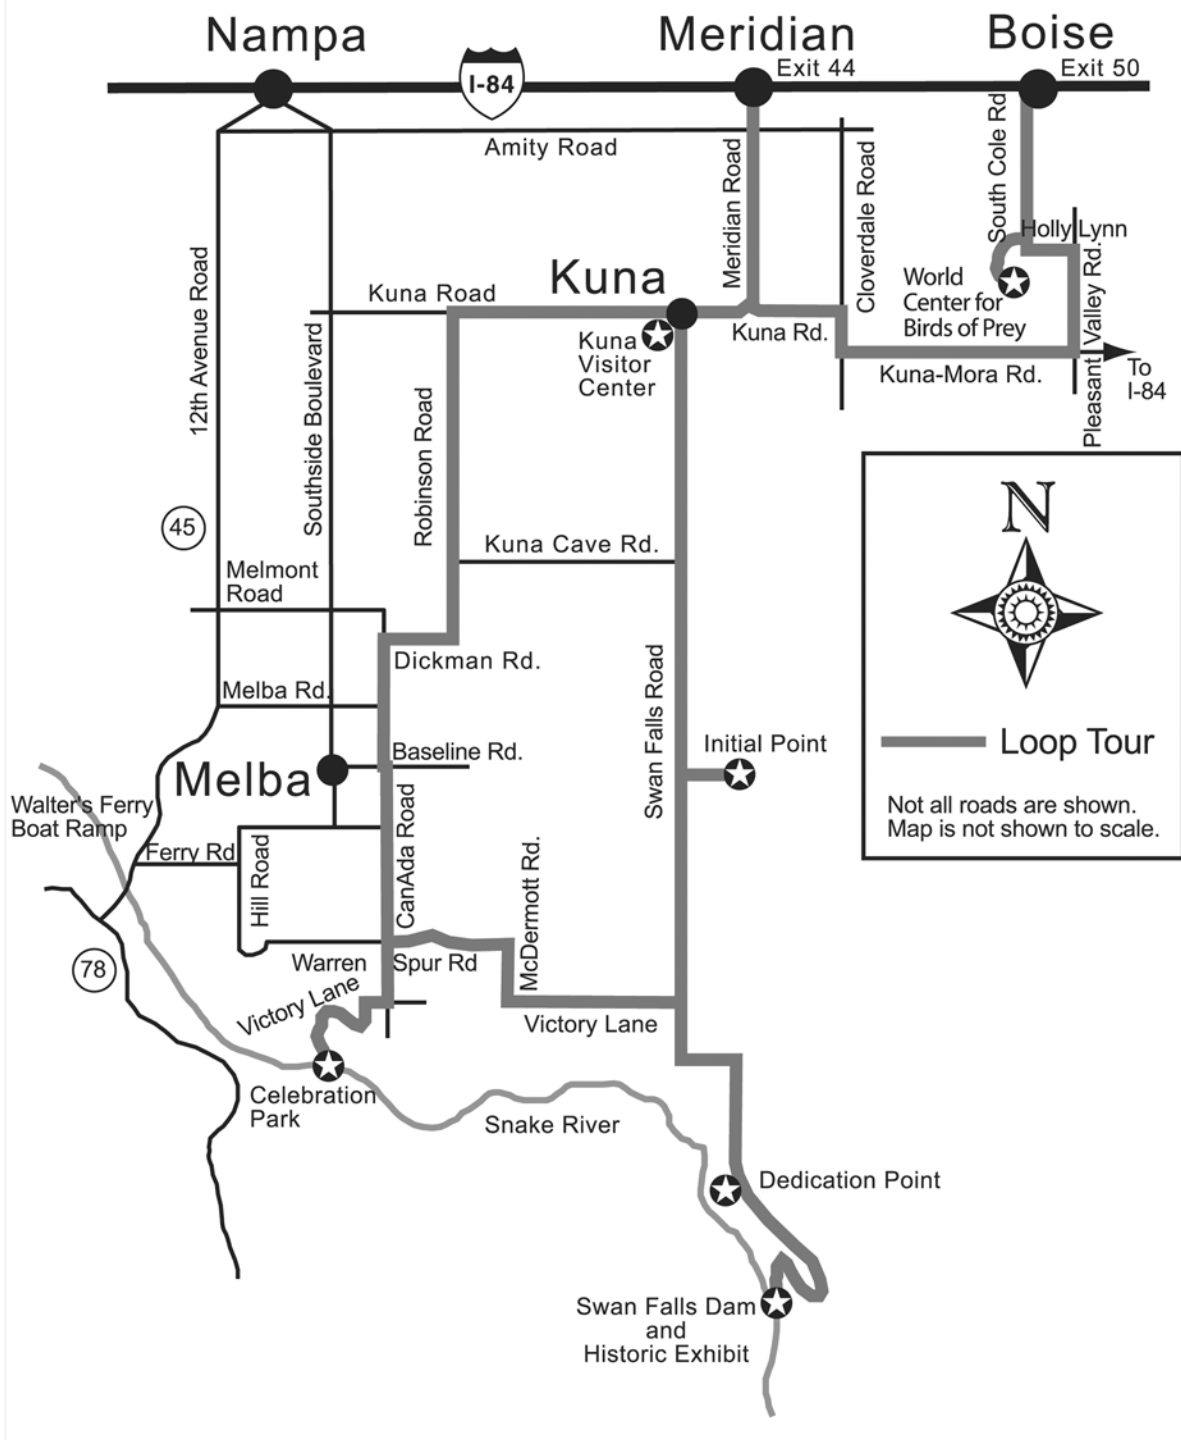

Allow 3 to 4 hours to follow the high-lighted loop tour to these popular destinations:

- **Initial Point** - Idaho's geographic survey reference point.
- **Dedication Point** - an impressive view of the Snake River Canyon.
- **Swan Falls Dam & Historical Exhibit** - history of the dam and Snake River.
- **Celebration Park** - fascinating archaeological and cultural history.

Other recreational opportunities

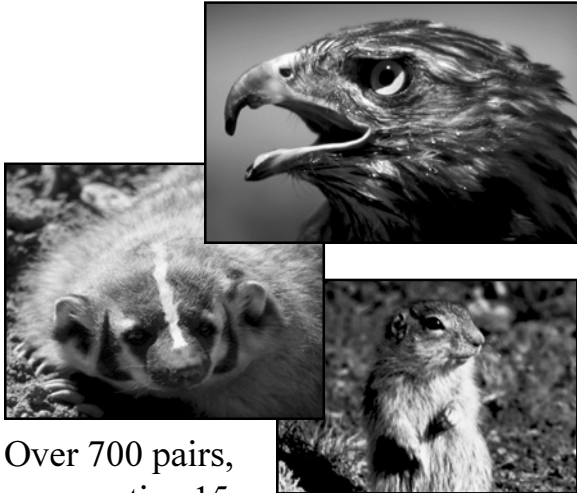

- Wildlife Viewing
- Hiking
- Horseback Riding
- Bicycle Riding
- Fishing
- Boating
- Camping

A 30 page, full color Visitor's Guide is available at Bureau of Land Management offices. For more information contact the BLM office listed on the reverse of this brochure.

...for a high-flying display.

The largest concentration of nesting birds of prey in North America, and perhaps the world, occurs in the Snake River Birds of Prey National Conservation Area (NCA). The steep, craggy cliffs of the Snake River canyon, thermal updrafts, and a broad plateau rich in ground squirrels and jackrabbits make this a place like no other for raptors.

Over 700 pairs, representing 15 raptor species, return here each spring to mate and raise their young.

Although raptors are unusually abundant in the NCA, they are solitary animals and can be difficult to observe. Visitors with patience and time are often rewarded with nature's high flying display.

Remember

- Don't harass wildlife.
- Carry plenty of drinking water.
- Fill your gas tank before entering the NCA.
- Stay on established roads and trails.
- Observe and follow shooting regulations.
- Be careful with campfires.
- Pack out everything you pack in.

Wildlife viewing tips

- Carry binoculars.
- View wildlife from a distance.
- Early morning and late afternoon are best for viewing.
- Raptors are more abundant during spring.
