

Table C. Species managed under International Agreement.

Stock (Species in Bold are Major Stocks)	Jurisdiction	Overfishing? (Is Fishing Mortality above Threshold?)	Overfished? (Is Biomass below Threshold?)	Approaching Overfished Condition?
PACIFIC HALIBUT	PFMC and NPFMC ¹	No	No	No

1. The resource is managed by treaty between the United States and Canada through recommendations of the International Pacific Halibut Commission. Pacific halibut is managed under the jurisdiction of the PFMC for WA, OR, and CA and under the jurisdiction of the NPFMC for Alaska.

Table D. Summary of stock status for species not contained in federal fishery management plans.**NOTE: These stocks are not counted toward the total of overfished stocks.**

1. Stock status is based on Stock Assessment Report No. 06-03 (Supplement) of the ASMFC American Lobster Stock Assessment for Peer Review. In that report, overfished status is defined in terms of "abundance", whereas, it is defined in terms of "biomass" in this table. Likewise, the report uses the term "depleted" rather than "overfished".
2. Although the biomass level is known, determining whether the stock is approaching an overfished condition requires an additional level of analysis which has not been done.
3. Fishing for Atlantic Sturgeon is prohibited, therefore, there is no fishing mortality.
