I. Overview

A. Purpose of the Survey

The National Center for Education Statistics (NCES) sponsored the 1991-92 Teacher Followup Survey (TFS), conducted by the U.S. Bureau of the Census, to update data on teacher career patterns and plans. This survey is a followup of a sample of teachers from the 1990-91 Schools and Staffing Survey (SASS).[1] Data from previous surveys have been used by Congress, state education departments, federal agencies, private school associations, teacher associations, and educational organizations.

The Teacher Followup Survey is the fifth component of the SASS and is conducted 1 year after the SASS data collection. The other four components of SASS are the Teacher Demand and Shortage Survey, School Administrator Survey, School Survey, and Teacher Survey.[2] The 1990-91 SASS teacher sample is a nationally representative sample of public and private school teachers in the United States and is state representative in the public sector. The Teacher Followup Survey is a subsample of teachers in the profession during school year 1990-91. The subsample has two parts, "former teachers" and "current teachers." The Teacher Followup Survey is a followup of the teachers in the 1990-91 SASS teacher sample who left the teaching profession between school years 1990-91 and 1991-92 (former teachers) and a subsample of those who remained in the teaching profession (current teachers).

The major objectives of the Teacher Followup Survey are to:

- Determine the attrition rate for teachers; that is, the percentage of teachers who left the teaching profession between school years 1990-91 and 1991-92;
- Determine the characteristics of those who stay in the teaching profession and those who leave;
- Obtain major activity or occupation data for those who leave the teaching profession and career information for those who remain in the profession;

[1]The Teacher Followup Survey was previously conducted in 1988-89. See the User's Manual *1988-89 Teacher Followup Survey* (NCES 92-058); and the E.D. TABS *Characteristics of Stayers, Movers, and Leavers: Results from the Teacher Followup Survey, 1988-89* (NCES 91-128).

[2]Results from the 1990-91 SASS can be found in the E.D. TABS *Schools and Staffing in the United States: Selected Data for Public and Private Schools, 1990-91* (NCES 93-453) and the report, *Schools and Staffing in the United States: A Statistical Profile, 1990-91* (NCES 93-146).

- Obtain data on educational activities and future plans; and
- Obtain data on attitudes about the teaching profession and job satisfaction.

Survey data collected in the 1990-91 Schools and Staffing Survey teacher questionnaire are included as classifying variables for analysis of the Teacher Followup Survey data. The Teacher Followup Survey data can be analyzed for leavers (former teachers), stayers (current teachers), and movers. Movers are those teachers who have remained in the teaching profession but have moved to different schools.

One objective of the Schools and Staffing Surveys is to collect national data (and state data in the public sector and affiliation data in the private sector) for estimating teacher turnover and for understanding teacher attrition. The Teacher Followup Survey is designed to be used in conjunction with the other Schools and Staffing Surveys to study the attrition behavior of public and private school teachers.

B. Periodicity of Survey

The Teacher Followup Survey will be conducted again in 1995 for a subsample of teachers selected for the 1993-94 SASS. Every 3 year administration of the SASS will be followed 1 year later by the TFS. Plans are being developed for a more extended longitudinal study of a subsample of teachers in a future SASS, where interviews of the same teachers will be conducted periodically over an extended period of time.

C. Target Populations

The target population for the TFS consists of teachers in the United States during the 1990-91 school year. This population has two components in 1991-92, former and current teachers.

D. Definitions

1. Teacher Followup Survey (TFS) Definitions

The following Teacher Followup Survey terms are defined as they apply to TFS:

Teacher. A teacher is defined as any full-time or part-time teacher whose school reported that his/her primary assignment was teaching in any of grades K-12. Itinerant teachers were included, as well as long-term substitutes who were filling the role of a regular teacher on an indefinite basis. An itinerant teacher is defined as a teacher who teaches at more than one school;

for example, an art teacher who teaches at two or more elementary schools in the district.

Public school. A public school is defined as an institution which provides educational services, has one or more teachers to give instruction, is located in one or more buildings, receives public funds as primary support, has an assigned administrator, and is operated by an education agency. Schools in juvenile detention centers and schools located on military bases and operated by the Department of Defense are included.

Private school. A private school is defined as a school not in the public system that provides instruction for any of grades 1-12 where the instruction is not given exclusively in a private home. To be included in SASS, a school was required to provide instruction to students in at least one of grades 1-12 and not to be in a private home. (If it could not be determined whether or not it operated in a private home, the school had to have at least 10 students or more than one teacher). Schools that taught only prekindergarten, kindergarten, or adult education were not included.

Leavers. Teachers who left the teaching profession between school years 1990-91 and 1991-92.

Movers. Teachers who moved to a different school between school years 1990-91 and 1991-92.

Stayers. Teachers who stayed in the same school between school years 1990-91 and 1991-92.

Out-of-Scope TFS teacher. Teachers who died or left the United States between school years 1990-91 and 1991-92. The estimated number of out-of-scope TFS teachers in 1991-92 was 5,423.

2. Schools and Staffing Survey (SASS) Definitions

The following definitions are used in the 1990-91 Schools and Staffing Survey and are included on each respondent's record to identify the school in which he or she taught at that time. Detailed information about a teacher's 1991-92 school was not obtained in the followup year.

Teacher. A teacher is defined as any full-time or part-time teacher whose school reported that his/her primary assignment was teaching in any of grades K-12. Itinerant teachers were included, as well as long-term substitutes who were filling the role of a regular teacher on an indefinite basis. An itinerant teacher is defined as a teacher who teaches at more than one school;

for example, an art teacher who teaches at two or more elementary schools in the district.

Public school. A public school is defined as an institution which provides educational services, has one or more teachers to give instruction, is located in one or more buildings, receives public funds as primary support, has an assigned administrator, and is operated by an education agency. Schools in juvenile detention centers and schools located on military bases and operated by the Department of Defense are included.

Private school. A private school is defined as a school not in the public system that provides instruction for any of grades 1-12 where the instruction is not given exclusively in a private home. To be included in SASS, a school was required to provide instruction to students in at least one of grades 1-12 and not to be in a private home. (If it could not be determined whether or not it operated in a private home, the school had to have at least 10 students or more than one teacher). Schools that taught only prekindergarten, kindergarten, or adult education were not included.

Elementary school. A school that has grade 6 or lower, or "ungraded" and no grade higher than the 8th.

Secondary school. A school that has no grade lower than the 7th, or "ungraded" and has grade 7 or higher.

Combined school. A school that has grades higher than the 8th and lower than the 7th.

Special education, vocational education, alternative schools. Schools identified as special education, vocational education, or alternative schools on the sampling frame were placed in the combined stratum for sampling.

Out-of-scope SASS teacher. A sample teacher was considered out-of-scope if he or she was a short-term substitute, a student teacher, a nonteaching specialist (e.g., guidance counselor, librarian), a teacher's aide, or in some other professional or support staff position. If a sample school was considered out-of-scope, all teachers from that school were also considered out-of-scope.

Community type. Community type for the 1990-91 SASS school year in which the teacher taught was derived from the "urbanicity" code (locale) developed by Johnson.[3] The locale code was based on the school's mailing address matched to Bureau of the Census data files containing population

[3]United States Department of Education, National Center for Education Statistics, *Assigning Type of Locale Codes to the 1987-88 CCD Public School Universe*, (F. Johnson, CS 89-194).

density data, Standard Metropolitan Statistical Area (SMSA) codes, and a Census defining urban and rural areas. These data files came from the 1980 Census.

The community type for the school to which the teachers had moved in the year following the administration of the SASS (1991-92) is available based upon the teacher's self report in the variable TFS137. The Johnson locale code and the self reported urbanicity variables are conceptually different. (See Johnson, F. (1993), "Comparisons of School Locale Setting: Self-Reported Versus Assigned", Proceeding of the survey Research Method Section, American Statistical Association, Alexandria, VA. (forthcoming).

Region.

Northeast. Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania

Midwest. Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas

South. Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas

West. Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Alaska, Hawaii

School size. Size categories were based on the number of students (in head counts) who were enrolled in grades K-12 in the school on or about October 1, 1990 (as reported in Item 1 on the SASS School Questionnaire).

II. Sample Design

A. SASS Sampling Frames

1. Public Schools

The public school sampling frame was based on the 1988-89 school year Common Core of Data (CCD). The CCD is collected annually by the NCES from all state education agencies and is believed to be the most

complete public school listing available. The frame includes regular public schools, schools in Department of Defense operated military bases, nonregular schools such as special education, vocational, and alternative schools.

2. Private Schools

The sampling frame for private schools was the 1989-90 Private School Universe Survey.[4] This data collection used two components to develop estimates of the number of private schools in the United States. A list frame was the primary private school frame and an area frame was used to identify schools not on the list frame and thereby compensate for the undercoverage aspects of the list frame.

List Frame

The list frame used for the 1990-91 SASS private school sample was the same list used for the 1989-90 Private Schools Survey (PSS). It consisted of approximately 22,600 schools from the 1986 Quality Education Data (QED) private school list and about 1,600 schools added in an 1989 update operation.[5]

Area Frame

The area frame consisted of a list of schools that had not been included by QED on their private school listing and had not been reported by a private school association during the list frame updating operation. These schools were located in 123 selected PSUs[6] throughout the United States.

For more information, see the technical report, *1990-91 Schools and Staffing Survey Sample Design and Estimation* (S. Kaufman and H. Huang, NCES-93-449).

Duplicate schools, as well as schools that did not meet the criteria for being in-scope for the survey were eliminated from the files before sampling. The resulting number of public schools on the 1988-89 CCD was 83,165; the resulting number of private schools on the 1989-90 PSS was 24,200. Additional duplicate private schools were discovered on the PSS after sampling had taken place; these schools received a weighting adjustment to account for their increased probability of selection.

[4]United States Department of Education, National Center for Education Statistics, *Private School Universe Survey, 1989-90*, (E. Gerald, M. McMillen, S. Kaufman, NCES 93-122).

[5]In the spring of 1989, the Census Bureau compared lists of schools provided by various private school associations to the 1986 QED lists. Nonmatches were added to the PSS frame.

[6]A PSU is a primary sample unit, which is a geographic area consisting of one or more contiguous counties or an independent city.

Additional out-of-scope public and private schools were detected after processing the sampled schools' SASS School Questionnaires. These schools were eliminated from further processing of the school samples and do not figure into any Schools and Staffing Survey estimates of number of schools.

B. SASS Stratification

1. Public Schools

The first level of stratification was four types of schools: (A) BIA (Bureau of Indian Affairs) schools; (B) Native American schools (schools with 25% or more Native American students); (C) schools in Delaware, Nevada and West Virginia (where it was necessary to implement a different sampling methodology to select at least one school from each LEA in the state because of the small number of LEAs); and (D) all other schools (all schools not included in A, B, or C).

The second level of stratification: The type A schools were stratified by Arizona, New Mexico, South Dakota, and all other states. The type B schools were stratified by Arizona, North Dakota, Oklahoma and all other states (except Alaska, since most Alaskan schools have high Native American enrollment). The type C schools were stratified first by state and then by LEA. The type D schools were stratified by state (all states and the District of Columbia except Delaware, Nevada and West Virginia).

Within each second level of stratification there were three grade level strata (elementary, secondary, and combined schools), defined as follows:

Regular Schools:

Elementary	Lowest Grade ≤ 6 and Highest grade ≤ 8
Secondary	Lowest Grade ≥ 7 and Highest grade ≤ 12
Combined	Lowest Grade ≤ 6 and Highest grade > 8

Nonregular schools which include special education, vocational, technical, adult education (if part of in-scope school) or alternative/continuation grades were classified as combined schools.

2. Private Schools

For list frame private schools, the frame was partitioned into an initial set of 216 cells. The first level of stratification was school association membership (18):

(1) Military - membership in the Association of American Military Colleges and Schools;
(2) Catholic - affiliation as Catholic or membership in the National Catholic Education Association or the Jesuit Secondary Education Association;
(3) Friends - affiliation as Friends or membership in the Friends Council on Education;
(4) Episcopal - affiliation as Episcopal or membership in the National Association of Episcopal Schools;
(5) Hebrew Day - membership in the National Society for Hebrew Day Schools;
(6) Solomon Schechter - membership in the Solomon Schechter Day Schools;
(7) Other Jewish - other Jewish affiliation;
(8) Missouri Synod - membership in the Lutheran Church, Missouri Synod school association;
(9) Wisconsin Synod - membership in the Evangelical Lutheran Church - Wisconsin Synod school association or affiliation as Evangelical Lutheran - Wisconsin Synod;
(10) Evangelical Lutheran - membership in the Association of Evangelical Lutheran Churches school association or affiliation as Evangelical Lutheran Church in America;
(11) Other Lutheran - other Lutheran affiliation;
(12) Seventh-Day Adventist - affiliation as Seventh-Day Adventist or membership in the General Conference of Seventh-Day Adventist;
(13) Christian Schools International - membership in Christian Schools International;
(14) Association of Christian Schools International - membership in the Association of Christian Schools International;
(15) National Association of Private Schools for Exceptional Children - membership in the National Association of Private Schools for Exceptional Children;
(16) Montessori - membership in the American Montessori Society or other Montessori association;
(17) National Association of Independent Schools - member of the National Association of Independent Schools;
(18) All else - member of any other association specified in the PSS or affiliated with a group not listed above or not a member of any association.

The secondary levels of stratification for the list frame were region and school level (elementary, secondary, or combined).

The area frame was stratified by PSU and school level.

C. TFS Stratification and Sample Allocation

The 1991-92 Teacher Follow-up Survey is a followup survey of approximately 7,200 teachers who were part of the 1990-91 SASS teacher sample. As described earlier, the purpose of the Teacher Followup Survey (TFS) was to measure teacher attrition rates a year after the 1990-91 SASS collection. In SASS, schools were selected first. Next, teachers were selected within each sampled school. From the SASS teacher sample the TFS teachers were selected. The Teacher Followup Survey is a stratified sample. The sample was allocated in order to allow comparisons of stayers, movers, and leavers within sector (public/private), experience groups, and level. Therefore, for the TFS, the **responding** 1990-91 SASS teachers were stratified by four variables (teacher status, sector, experience, teaching level) in the order shown below:

Teacher status:

Leavers--teachers in the 1990-91 school year who left the teaching profession prior to the 1991-92 school year.

Stayers--teachers in the 1990-91 school year who are still teaching in the same school in 1991-92 as they were in the previous school year.

Movers--teachers in the 1990-91 school year who are still teaching, but are in a different school in the 1991-92 school year.

Sector:

Public--teachers who taught in a public school system in the 1990-91 school year.

Private--teachers who taught in a private school in the 1990-91 school year.

Experience:

New--teachers who had 3 or less years teaching experience at the end of the 1990-91 school year.

Experienced--teachers who had more than 3 years experience at the end of the 1990-91 school year.

Teaching level:

Elementary--teachers who taught elementary students in the 1990-91 school year regardless of the level of the school (elementary, secondary, combined) in which they taught.

Secondary--teachers who taught secondary students in the 1990-91 school year regardless of the level of the school (elementary, secondary, combined) in which they taught.

The public school teachers in the frame were sorted within each stratum (in order) by teacher's main subject taught (as reported by the principal in the SASS Teacher Listing Record Operation), Census region, urbanicity, school enrollment and SASS teacher control number. The private school teachers were sorted within each stratum (in order) by teacher's main subject taught (as reported by the principal in the SASS Teacher Listing Record Operation), private school affiliation, urbanicity, school enrollment and SASS teacher control number.

The final TFS sample allocation is summarized in Table II-1.

Due to rounding, subtotals may not add to the total.

D. SASS Sample Selection

1. Public Schools

Before the sample of public schools was selected, the schools within each stratum were sorted. To facilitate the calculation of LEA weights, it was important to keep all schools within a stratum and LEA together. To accomplish this, the sort variable values were changed to make them the same for every school within a stratum and LEA. They were changed in the following manner:

a) The first three digits of the ZIP Code of all schools within a stratum and LEA was set equal to the ZIP Code of the first school in the stratum and LEA.

b) The urbanicity code of all schools within a stratum and LEA was changed to the urbanicity code most prevalent among all schools within the stratum and LEA and a new sampling urbanicity variable was created. If a tie occurred, the lower value was used. The urbanicity variable on the data file is not affected by this adjustment.

After these fields were changed the schools within a stratum were sorted by the following variables:

State;
LEA (Local Education Agency) urbanicity:
1 = Large Central City
2 = Mid-size Central City
3 = Urban Fringe of Large City
4 = Urban Fringe of Mid-size City
5 = Large Town
6 = Small Town
7 = Rural;
LEA ZIP Code (The first three digits)
LEA ID number;
LEA percent minority:
1 = 0-5%
2 = 6-20%
3 = 21-50%
4 = 51% or more;
Highest grade in school;
School enrollment; and
CCD School ID (the CCD ID of the last school was used.)

Within each stratum, public schools were systematically selected using a probability proportionate to size algorithm. The measure of size used was the square root of the number of teachers in the school as reported on the CCD file. Any school with a measure of size larger than the sampling interval was excluded from the probability sampling process and included in the sample with certainty.

2. Private Schools

Within each stratum for private schools on the list frame, sorting took place on the following variables:

State;
Urbanicity:
0 = unclassified
1 = urban
2 = suburban
3 = rural;
ZIP Code (The first two digits);
Highest grade in the school;
Enrollment;
PIN number (a unique number which identifies the school).

Within each stratum, private schools in the list frame were systematically selected using a probability proportionate to size algorithm. The measure of size used was the square root of the 1989-90 PSS number of teachers in the school. Any school with a measure of size larger than the sampling interval was excluded from the probability sampling process and included in the sample with certainty.

Eligible schools in the private schools area frame were sorted using the following variables:

Affiliation (Catholic, other religious, and nonsectarian);
Enrollment; and
Alphabetical order of name.

Within each stratum, eligible schools in the area frame were systematically selected using a probability proportionate to size algorithm. The measure of size was the square root of the number of reported teachers from 1989-90 PSS. Any school with a measure of size larger than the sampling interval was excluded from the probability sampling process and included in the sample with certainty.

3. Teachers

Selecting the teacher sample in both public and private schools involved the following steps. The selected schools were asked to provide teacher lists. From the lists, 56,051 public and 9,166 private teachers were selected.

The public and private teacher sample selections are described together because identical methodologies were used. The only differences were in the average number of teachers selected within a school.

Teacher Frame

Each selected school was asked to provide a list of their teachers along with selected teacher characteristics. Eleven percent of the private schools and five percent of the public schools did not provide teacher lists. A factor in the teacher weighting system was used to adjust for these nonparticipant schools.

For each teacher on the list, the following was to be specified:

- New/experienced; (New defined as in third year or less of teaching, experienced defined as everyone else.)
- Bilingual/English as a Second Language (ESL); (Teachers [other than foreign language teachers] using a language other than English in the classroom.)
- Race/ethnicity; and
- Field of Teaching (General elementary, special education, and all others for elementary level teachers; math, science, english, social studies, vocational education, special education, and all others for secondary teachers.)

The above information for each teacher in a selected SASS school comprised the school teacher frame.

Within each selected school, teachers were stratified into one of five teacher types in the following hierarchical order:

- Asian or Pacific Islander;
- American Indian or Aleutian or Eskimo;
- Bilingual;

- New; and
- Experienced

Within-School Teacher Allocation

First, the total number of sample teachers was selected for each without regard to strata assuming no teacher oversampling for new teachers. Then, to allocate across the strata public school teachers were allocated to the new and experienced categories proportional to their numbers in the school. However, for private teachers, it was decided to oversample new teachers to ensure that there would be a sufficient sample of new teachers in the Teacher Follow-up Survey (TFS). (This was also done in 1987-88 SASS.)

Asian or Pacific Islander, American Indian or Aleutian Eskimo, and bilingual teachers were oversampled at a rate to ensure a set number of each group was selected. To make sure a school wasn't overburdened, the maximum number of teachers per school was set at 20. When the number of sample teachers exceeded 20 in a school, the Asian or Pacific Islander, American Indian or Aleutian or Eskimo and bilingual teachers were proportionally reduced to meet the maximum requirement.

Within each teacher stratum, secondary teachers were sorted by teacher's main subject taught (as reported by the principal in the SASS Teacher Listing Record Operation); and elementary teachers were sorted by general elementary, special education or other teaching assignment. When combined schools had both elementary and secondary teachers, the teachers were sorted by grade level/primary field of teaching. This was done to assure a good distribution of teachers by field of teaching.

Within each school and teacher stratum, teachers were selected systematically with equal probability.

A total of 65,217 teachers were actually selected (60,056 new and experienced, 1,511 Asian Pacific Islander, 1,529 American Indian or Aleutian or Eskimo and 2,121 bilingual). Table II-2 shows the number of selected teachers in SASS sample by teacher type and sector.

Table II-2.--Number of selected teachers in SASS sample by teacher type and sector			
Teacher type	**Public**	**Private**	**Total**
American Indian/Aleut	1,259	270	1,529
Asian/Pacific Islander	1,475	36	1,511
Bilingual/ESL	1,957	164	2,121
New	5,970	2,002	7,972
Experienced	45,390	6,694	52,084
Total	56,051	9,166	65,217

E. TFS Sample Selection

Sorting. Within each public TFS stratum, teachers responding to the 1990-91 SASS Teacher Survey were sorted by teacher subject, Census region, urbanicity, school enrollment and SASS teacher control number. Within each private TFS stratum, responding teachers were sorted by teacher subject, affiliation, urbanicity, school enrollment and SASS teacher control number.

Sample Selection. After the teachers were sorted, teachers were selected within each stratum using a probability proportional to size sampling procedure. The measure of size was the 1990-91 SASS intermediate teacher weight which is the product of the Basic Weight, Sampling Adjustment factor, School Nonresponse factor, and the Universe (i.e., First-Stage) Ratio Adjustment factor.

Sample Reduction. A total of 44 sample cases that were out-of-scope in the 1990-91 SASS were sampled for the TFS. As a result, these cases were made out of scope in TFS. This reduces the sample size for TFS but does not affect the weighting of the data.

For more information, see the technical report, *1990-91 Schools and Staffing Survey Sample Design and Estimation* (S. Kaufman and H. Huang, NCES-93-449).

III. Data Collection

A. Time Frame of the Survey

The 1991-92 Teacher Followup Survey took place during the 1991-92 school year. Advance letters were sent to school districts in the sample and to state level administrators in September 1991. School principals who provided teacher listings as part of the 1990-91 Schools and Staffing Survey were mailed a teacher status form

(TFS-1) requesting the current occupational status of teachers originally selected for the SASS teacher sample. This phase was conducted between September and November 1991. A sample of teachers (former and current) was selected in January 1992. The two mailouts of the survey questionnaires occurred during January-February 1992. Telephone followup of nonrespondents took place during April-May 1992. The reference period for most items on the questionnaire was the 1991-92 school year.

B. Data Collection Procedures

The U.S. Bureau of the Census was the data collection agent for the Teacher Followup Survey. The survey was conducted in two phases. The first phase consisted of contacting schools to determine the present occupational status of teachers who responded to the teacher sample in the 1990-91 SASS. In mid-September 1991, the Census Bureau mailed the teacher status forms (TFS-1) to the 12,022 schools selected in the 1990-91 SASS to represent the universe of schools in the nation. The school principal or head was asked to complete the form, indicating whether the teacher was still at the school in a teaching or nonteaching capacity, or had left the school to teach elsewhere or for a non-teaching occupation. After completing the form, the school principal or the head master was instructed to mail the form to the census regional office. The regional offices' job was to check-in and control the flow of the teacher status forms.

The next step was to contact nonrespondent schools, by telephone, to obtain the teacher occupational status information requested on the form. If the principal indicated a sample teacher had moved (this would pertain particularly to teachers who had left the area), the Census Bureau tried to obtain all address correction information for a sample teacher's home address through the post office.

Phase II of the Teacher Followup Survey began in January 1992. The first questionnaire, the TFS-2 (questionnaire for former teachers), was sent to 2,420 sample persons who were reported by school administrators as having *left* the teaching profession. The second questionnaire, the TFS-3 (questionnaire for current teachers), was sent to 4,752 sample persons who were reported as still teaching at the elementary or secondary level. Both questionnaires were mailed to teachers at their home addresses. The respondents were requested to complete the questionnaire and return it to the Census Bureau.

For teachers who did not return a questionnaire within 4 to 5 weeks, the Census Bureau conducted a second mailout. Respondents may not have returned a questionnaire because their status was incorrectly reported by their school administrators. For example, respondents who were teaching in another school who received the questionnaire for former teachers were instructed to return the questionnaire to the Census Bureau. In this case, the Census Bureau sent the correct questionnaire to the respondents during the second mailout. For teachers who did not

respond to the second mailout, the Census Bureau compiled a list, by region, of these nonrespondent teachers and sent each list to the appropriate regional office.

The telephone followup of all nonrespondents to the second mailout began in April 1992. In addition to these nonresponse followup cases, some "nonmailable" cases (cases with incomplete addresses) were assigned for telephone followup. If the regional office was unable to contact the sample teacher through a contact person (two contact persons had been listed by the sample teacher on the SASS form as knowing how or where to get in touch with him or her) or through directory assistance, the school was called to obtain information about the sample teacher.

Questionnaire TFS-4, telephone questionnaire for the Teacher Followup Survey, is a combination of the TFS-2 and the TFS-3 questionnaires. This questionnaire was designed for the field representative to use when conducting a telephone interview. The TFS-4 was *not* mailed to the respondent.

Field followup of nonrespondents ended on May 29, 1992.

IV. Edit Procedures

A. General Edit

During the edit process, clerks performed a general clerical edit of the questionnaires designed to check for out-of-range responses. After completion of the clerical edit and data keying, a computer pre-edit was conducted for the Teacher Followup Survey file. The pre-edit consisted of range checks on priority items to identify survey responses that have a high probability of being in error and consistency checks between selected items.

A list of reject cases, cases that failed the pre-edit checks, was generated. Clerks reviewed the questionnaires to verify the data keying accuracy and attempted to resolve the reject items. For certain cases, the clerk was required to call the respondent to resolve critical inconsistencies or to obtain critical data. There were 426 cases (8.8%) out of 4,814 stayers that failed the pre-edit rejections. There were 462 cases (22.9%) out of 2,014 leavers that failed the pre-edit rejections.

After the pre-edit reject corrections were made, the TFS file passed through an additional computer edit. This included a range check of all items in which out-of-range items were blanked, a consistency edit that checked for completeness of reporting and consistency within each respondent's TFS record and a blanking edit that blanked items that the respondent answered despite instructions to skip that item.

B. Interview Status Recode (ISR)

After the range check, consistency edit, and blanking edit were completed, the records were edited to determine whether the case was eligible for inclusion in the survey and, if so, whether sufficient data had been collected for the case to be classified as an interview. An interview status recode (ISR) value was then assigned to each case as a result of the edit. If 4 out of 6 the following items were completed, then an interview was in-scope for a **former teacher:** main occupation, full- part-time employment, salary, main activity for next year, plan to return to teaching, or main reason for leaving the teaching profession. If 6 out of the following 10 items were completed, then an interview was in-scope for a **current teacher:** full- part-time employment, main teaching assignment, state certification in the main teaching assignment, state certifications in the other teaching assignments, grade level, type of community, teaching in the same school as last year, main activity next year, base salary, or total earned income.

V. Response Rates

A. Survey Response Rates

The following table summarizes the weighted response rates for the Teacher Followup Survey (shown in percent).

	Sector			
	Public		Private	
Component	Current teachers[1]	Former teachers	Current teachers[1]	Former teachers
School response rate[2]	95.0		89.0	
Teacher survey response rate[3]	91.0[5]		83.6[6]	
Teacher followup survey response rate[4]	97.4	92.4	96.2	94.1

[1]Includes stayers and movers.
[2]Percent of schools providing teacher lists for the 1990-91 SASS sample, unweighted.
[3]Percent of eligible sample teachers responding to the 1990-91 SASS Teacher Survey, weighted.
[4]Percent of eligible sample teachers responding to the 1991-92 SASS Teacher Followup Survey, weighted.
[5]These rates do not include the 5 percent of the public schools that did not provide teacher lists.
[6]These rates do not include the 11 percent of the private schools that did not provide teacher lists.

An overall response rate is the product of SASS teacher list response rate * SASS teacher response rate * TFS teacher response rate. Therefore, the overall response rate for public current teachers is 84.2, private current teachers is 71.6, public former teachers is 79.9, and private former teachers is 70.0.

B. Item Response Rates

The following table is a brief summary of the weighted item response rates for items from the questionnaires of the 1991-92 Teacher Followup Survey. A response rate for an item is defined as the number of records with valid responses to an item divided by the eligible respondents for that item.

	Former teachers	Current teachers
Range of item response rates %	67-100	57-100
Percentage of items with a response rate of 90% or more	95	87
Percentage of items with a response rate less than 80%	1	5
Items with a response rate less than 80%	3b	29a(2), 29a(3), 29b(3)

Items with low response rates (<80 percent) should be analyzed with caution. For former teachers this is: item 3b (the kind of business or industry where the respondent works). For current teachers, item 29a(2) (earnings from working in a nonteaching job in this school or any other school during the summer); item 29a(3) (earnings from working in any nonschool job during the summer) and item 29b(3) (additional compensation from working in any job outside the school system during the school year).

VI. Imputation

There are a number of imputation techniques for item nonresponse in sample surveys. In general, the TFS imputation strategy was designed to estimate change in teacher data since the 1990-91 SASS. The imputation process was done in two stages. A logical imputation procedure was done first using existing TFS and SASS data to fill items with missing data. For example, if a respondent did not report the age of his/her youngest child in item 31 of the former teacher questionnaire, the response from the 1990-91 SASS teacher questionnaire (with an adjustment for an increase of one year) was imputed to item 31.

The second stage imputation is a hot deck procedure that can be described in two parts. The first part of the hot deck imputation used donors to measure change for those items that were on both the 1991-92 TFS and the 1990-91 SASS. A donor was a respondent who had similar characteristics, i.e., region, teacher level, urbanicity, highest degree, and years of experience. As an example, if a respondent did not report the base year salary for teaching in item 29 of the current teacher questionnaire, the value for that item was imputed as follows: the TFS base year salary = (the donor's current base year salary/donor's SASS base year salary) x the incomplete record's SASS base year salary.

The second part of the hot deck imputations included those TFS items not in the 1990-91 SASS. For those items the a hot deck method exclusively used TFS donor data to fill items having missing data. Variables which described certain characteristics of the sample person (e.g., full-time/part-time status, instructional level for teachers) were created and used to sort the file and to match incomplete records to those with complete data (donors).

During all imputations, flags were assigned to those variables that were imputed to identify which stage of imputation was used to fill the missing data. Imputation proration was used when the total earned income (item 29c) did not equal the sum of subparts (item 29a and 29b). The subparts were proportionately adjusted to equal the total earned income. A flag was also assigned to the salary variable which was prorated. The following table is a summary of the imputation flags assigned at the first and second stage of imputation as well as proration flags.

	Percent imputed			
	Total	**First stage**	**Second stage**	**Proration**
Former teachers	100.0	4.4	95.6	0.0
Current teachers	100.0	25.5	61.2	13.3
Total former and current teachers	100.0	20.5	69.4	10.1

VII. Weighting

A. SASS Teacher Weights

The SASS teacher basic weight is the inverse of the probability of selection. Teacher basic weights were adjusted to account for schools that refused to participate in the teacher selection process (SASS Noninterview Adjustment), and for teachers within schools who were eligible for interview but for whom questionnaires were not

returned. In addition, the School Adjustment factor and the First-Stage ratio adjustment factor were also applied to produce the final weight.

Noninterview adjustment factors were calculated to compensate for schools eligible for the survey but not interviewed, usually because they refused to respond.

School adjustment factors were applied to certain schools to account for duplicate records, merge schools or any other circumstance that would affect the school's true probability of selection.

First stage ratio adjustment factors adjust the sample weighted count of all cases (interviewed, noninterview, and ineligible) to known frame totals. For public schools, the frame totals such as grade level by urbanicity by state came from the 1988-89 CCD. For private schools, the 1989-90 PSS was the source of totals such as grade level by association membership.

B. TFS Teacher Weights

The final TFS sample weight equals:

TFS basic weight x TFS Nonresponse Adjustment x SASS Teacher-Within-School Noninterview Adjustment x SASS Teacher Adjustment x TFS Ratio Adjustment

where:

TFS basic weight is the inverse of the probability of selecting a teacher given the teacher was selected in the SASS teacher sample. This is the product of the weight from SASS (described in previous section) and TFS subsampling adjustment factor.

TFS nonresponse adjustment is the factor used to adjust for teachers who refused to participate in the 1991-92 TFS survey.

TFS Ratio Adjustment is the factor used to adjust the TFS sample totals to known SASS sample totals. This ensures that the weighted number of TFS teachers (interviews, noninterviews, and out-of-scopes) will equal the weighted number of SASS teachers from 1990-91.

SASS Teacher-Within-School Noninterview Adjustment is the factor needed to account for teachers who were eligible for interview but refused to participate in the 1990-91 SASS.

SASS Teacher Adjustment is the factor used to adjust the counts of teachers on the 1990-91 SASS teacher file to the counts of teachers on the 1990-91 SASS school file.

VIII. Variance Estimation

Schools. Responding public schools were placed into replicates by first forming 48 variance strata. Each variance stratum contained at least two schools which were alternately divided into two half-samples. To form the variance strata, certainty schools were placed in their own variance stratum where each certainty school was assigned to both half-samples. The noncertainty schools within a state/school level sampling stratum were sorted by the school's order of selection. Pairs of schools were then systematically placed into consecutive variance strata, each element of a pair being assigned to different half-samples.

When the 48 variance strata were exhausted, the placement of variance stratum started from the first variance stratum again and continued until all the schools in the sampling stratum have been placed into variance strata. The variance stratum numbering for the next sampling stratum started where the previous sampling stratum left off. When there was an odd number of noncertainty schools within a sampling stratum, one variance stratum was assigned an odd number of cases and adjustments were made to the replicate weights to account for the odd number of cases. After the variance strata were assigned, an orthogonal matrix was used to form the 48 replicates.

Private schools from the list sample were sorted by sampling stratum and order of selection within each sampling stratum. Consecutive pairs of schools were assigned to variance strata numbered from 1 to 48, beginning again with 1 after the 48th pair until all schools in the entire national sample were assigned to a variance stratum. Thus, there are 48 variance strata in the nation. Within each variance stratum schools were split into half-samples. Certainty schools were assigned to their own variance stratum and to both half-samples in the variance stratum. For private schools from the area sample, the noncertainty PSUs (the geographic areas) within each PSU stratum were sorted by measure of size and paired consecutively to form 48 variance strata. Within each of the eight certainty PSUs, schools were assigned to variance strata in the same manner as the list sample of schools.

SASS Teachers. Teachers within a school were assigned to their school's variance stratum and half-sample. Teachers from certainty schools were placed into the same variance stratum as the school, but were split into different half-samples. Certainty teachers from certainty schools received replicate weights of 1.0000.

Schools and teachers were assigned to replicates using a Hadamard orthogonal matrix of order 48. Partial balancing was achieved because of the combining of variance strata. The replicate basic weight for the ith sample unit in the kth replicate is equal to twice the full-sample basic weight when the sample unit is included in the kth replicate, and zero otherwise. The exception is for certainty units, which appear in every replicate and therefore have all

nonzero replicate basic weights and sample units in variance strata with an odd number in them. All replicate basic weight fields in certainty units were assigned to their full-sample basic weight. All schools and teachers were weighted 48 additional times using their appropriate replicate basic weight to calculate 48 replicate final weights which should be used for variance calculation.

TFS Teachers. Since the TFS sample was a proper subsample of the SASS teacher sample, the SASS teacher replicates and replicate factors were used for the TFS sample. The TFS final weight for each TFS teacher was multiplied by each of the 48 SASS replicate factors for that teacher to calculate 48 replicate weights which should be used for variance calculations.

A variance estimate is obtained by first calculating the estimate for each replicate, then summing the squared deviations of the replicate estimates from the full-sample estimate, and finally dividing by the number of replicates:

$$\sum_{k} (\hat{y}_k - \hat{y})^2/48$$

where k=1, 2 48,

$\hat{y}_k$=kth replicate estimate

and $\hat{y}$=full sample estimate.

When calculating variance estimates for some small subdomains of interest (e.g., vocational education teachers), sparseness of the data may result in there being no data from some replicates. This can result in either an extremely large variance estimate or failure of the software used to calculate the variance, with possibly a warning message.

IX. Reinterview Program

The purpose of the reinterview for the TFS was to find ways to improve the survey questions. Two reinterview samples were selected for the survey, the sample of current teachers contained 700 cases and the sample of former teachers contained 800 cases. The goal of the reinterview was to get approximately 500 complete reinterviews for each sample group (former and current teachers). The oversampling was done to account for the potential nonresponse that was based on the 1988-89 TFS. The actual number of reinterviews that were completed were 629 cases for current teachers and 685 cases for former teachers.

A reinterview and reconciliation was conducted for each eligible case in the reinterview sample.

Two reinterview questionnaires were used-- the TFS-2(R) for former teachers and the TFS-3(R) for current teachers. Each questionnaire contained a subset of questions from its original questionnaire. After each reinterview, data from the reinterview were compared to

the original answers and a reconciliation of the original response was conducted with the respondent. The reconciliation consisted of the following:

a) determining the correct answer;

b) determining if there is a difference;

c) probing with questions to find out the reason for the difference; and

d) recording and keeping track of the different reasons for the differences.

The TFS reinterviewing took place during the time period of March 9, 1991 through June 19, 1991. Each reinterview and reconciliation was conducted by telephone. An analysis of the reinterview data is in progress.

X. Confidentiality Protection Measures

The 1991-92 Teacher Followup Survey data is released in accordance with the provisions of the General Education Provisions Act (GEPA) (20 USC 1221e-1) and the Carl D. Perkins Vocational Education Act. GEPA ensures privacy by ensuring that respondents will never be individually identified.

Under Public Law 100-297, the National Center for Education Statistics is responsible for protecting the confidentiality of individual respondents and is releasing data to the public to use for statistical purposes only. Record matching or deductive disclosure by any user is prohibited.

To ensure that the confidentiality provisions contained in PL 100-297 have been fully implemented, procedures for disclosure avoidance were used in preparing the data tape in this release. Every effort has been made to provide the maximum research information consistent with reasonable confidentiality protections.

To prevent disclosure of the identities of teachers on the public use data tapes, state identifiers (for the public school teachers) and state, regional, and detailed affiliation and association codes (for the private school teachers) have been removed. In addition, continuous variables on the questionnaire that would permit disclosure of a teacher's identity (age and salary) have been coded into categories. The new categories for recoded variables are defined for the appropriate source codes on the attached tape record layouts. A few items have been deleted from the files altogether because of disclosure problems. These will be missing on the record layouts.

Difference between public and restricted use file. To protect the confidentiality of responding teachers, certain categories were collapsed on the public use file so that teachers

cannot be identified. These included base academic year salary, teacher's age, total enrollment, percent minority enrollment, and the community type (rural, small town, urban, and central city) of the school. State identifiers and school affiliation were deleted from the public use file.

XI. Changes to TFS Content from 1988-89 to 1991-92

Some changes to wording and the order of specific items has occurred. For items that were in both TFS and SASS the wording of the item was changed to be consistent with SASS. For example, the 1989 question, "What is your current (1988-89) primary teaching assignment field at **THIS SCHOOL**, that is, the field in which you teach the most classes?" was reworded to be consistent with SASS as follows -- "What is your **MAIN** teaching assignment at this school, that is, the field in which you teach the most classes?"

XII. Caution Concerning the Measurement of Change Using 1988-89 and 1991-92 TFS

Care must be taken when estimating change from 1988-89 to 1991-92 in a TFS data element, because some of the change may be due to changes in the sample design, as opposed to change in the education system. Below are design changes that might affect the measurement of change over time.

Changing the sampling frame from QED to CCD. This is a concern because the definition of a school is different between the two frames. In the 1987-88 SASS (QED) a school was defined as a physical location, while in the 1990-91 SASS (CCD) a school was defined as an administrative unit with a principal. In states which have multiple administrative units in a single physical location, the estimated change in the number of schools could increase. This increase is at least partially caused from the definition difference.

It is possible to collapse the 1990-91 SASS school sample to reflect the QED definition of school as was defined in the 1987-88 SASS, thereby eliminating this concern. However, resulting estimates may no longer be consistent with CCD estimates. To the extent that the coverage between CCD and QED are different, then part of the change in school related estimates can be attributed to this coverage difference.

Adjusting the estimated number of teachers from SASS teacher file to the estimated number of teachers from the SASS school file. This was done for 1990-91 SASS to make estimates in the files more consistent. The 1991-92 TFS estimations procedures included this adjustment as well as a ratio estimation of the TFS weighted count of teachers to the SASS weighted count of teachers. Since this was not done in the 1987-88 SASS and 1988-89 TFS, some observed distributional differences between the 1987-88 and 1990-91 SASS teacher files may be partially attributable to this adjustment. In the public 1987-88 SASS files, the teacher counts on the teacher file are smaller than the counts on the school file. In the 1990-91

SASS files, the teacher file counts are increased to equalize the estimates. This increase does not reflect a change in the educational system, but a bias correction differentially applied between the files.

Adjusting the estimated number of teachers from the TFS file to the estimated number of teachers from the SASS teacher file. This was done for the 1991-92 TFS in order to make the estimates consistent from the two years. The weighted sum of all TFS teachers (interviews, noninterviews, and out-of-scopes) is adjusted to equal the weighted number of teachers from the 1990-91 SASS teacher file. Some observed differences between the 1988-89 TFS and the 1991-92 TFS may be due in part to this weighting adjustment, and may not reflect changes in the educational system between the two years.

Missing data on the 1991-92 TFS file are imputed. All data files are adjusted for complete refusals. However, for the 1987-88 administrator and teacher files, and the 1988-89 TFS file, missing data elements within responding units were not imputed. Hence, estimates of totals implicitly use a value of zero for all missing data elements (i.e., 1988-89 totals are underestimates whenever there are missing data). The 1991-92 TFS estimates of totals use imputed values for missing data elements. Therefore, some of the measured changes between the 1988-89 TFS and 1991-92 TFS totals is due to imputing one year but not the other, rather than changes to the educational system.

Change estimates for ratios and averages are also affected by imputations in one year, but not the other. However, the magnitude and direction of the bias is unknown and dependent on the variable of interest. This part of the change is not due to a change in the educational system.

Changes in question wording. Care must also be observed in the interpretation of change estimates between 1988-89 and 1991-92 TFS since specific questions are not always worded the same from the first TFS survey to the next survey.

XIII. User Notes and Comments

We are interested in your reaction to the information presented in the User's Manual about the Teacher Followup Survey, as well as the microdata files we released. We welcome your recommendations for improving our survey work and data products. If you have suggestions or comments or want more information about this report, please contact:

1 ☒ ***OFFICE USE ONLY***

Dear Schools and Staffing Survey Participant:

Thank you for your participation in last year's Schools and Staffing Survey, sponsored by the National Center for Education Statistics (NCES) in the U.S. Department of Education. The information you provided will greatly enhance the Nation's knowledge about the teaching work force and its workplace conditions.

This year we are following up a sample of last year's teachers to determine how many have left the teaching profession and to collect information on factors related to teachers' decisions to remain in or to leave the profession. There is concern about teacher shortages and the availability of an adequate supply of highly qualified personnel. The Teacher Follow-up Survey will provide valuable information regarding teacher attrition.

The U.S. Bureau of the Census is conducting the Teacher Follow-up Survey for NCES by the authority of Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e). The data will be treated as confidential and will be reported only in statistical summaries that preclude the identification of any individual teacher participating in the survey.

The sampling of teachers (and former teachers) minimizes overall response burden. However, the value of each individual response is greatly increased because it represents other teachers (or former teachers). I, therefore, encourage you to participate in this voluntary survey by completing this questionnaire and returning it within 2 weeks to the **Bureau of the Census, Current Projects Branch, 1201 East 10th Street, Jeffersonville, IN 47132-0001**, in the preaddressed envelope enclosed for your convenience.

Thank you for your cooperation in this very important effort.

Sincerely,

EMERSON J. ELLIOTT
Acting Commissioner

INFORMATION ABOUT YOUR PARTICIPATION

Public reporting burden for this collection of information is estimated to average 25 minutes per response, including the time for reviewing instructions, gathering the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the U.S. Department of Education, Information Management and Compliance Division, Washington, DC 20202-4651; and to the Office of Management and Budget, Paperwork Reduction Project 1850–0621, Washington, DC 20503.

INSTRUCTIONS

Most of the items on this questionnaire are arranged so that the questions are on the left side of the page and the answer categories or spaces for written answers are on the right. Please answer the questions by marking the appropriate answer category with an X, or recording your answer in the space provided. We suggest that you use a pencil, rather than a pen or marker.

Notice that at the end of some answer categories and answer spaces, there are instructions to skip to later questions or to continue with the next question on the questionnaire.

If you are unsure about how to answer a question, please give the best answer you can and make a comment in the "Remarks" space. Please include the item number.

If you have any questions, call the Bureau of the Census, toll free, at 1-800-221-1204.

Return your completed questionnaire to the Bureau of the Census in the enclosed preaddressed envelope. Please return it within 2 weeks.

Please keep count of the time you spend completing this questionnaire. At the end of the survey, you are asked to record the amount of time spent.

3 ☒ ***OFFICE USE ONLY***

Dear Schools and Staffing Survey Participant:

Thank you for your participation in last year's Schools and Staffing Survey, sponsored by the National Center for Education Statistics (NCES) in the U.S. Department of Education. The information you provided will greatly enhance the Nation's knowledge about the teaching work force and its workplace conditions.

This year we are following up a sample of last year's teachers to determine how many have left the teaching profession and to collect information on factors related to teachers' decisions to remain in or to leave the profession. There is concern about teacher shortages and the availability of an adequate supply of highly qualified personnel. The Teacher Follow-up Survey will provide valuable information regarding teacher attrition.

The U.S. Bureau of the Census is conducting the Teacher Follow-up Survey for NCES by the authority of Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e). The data will be treated as confidential and will be reported only in statistical summaries that preclude the identification of any individual teacher participating in the survey.

The sampling of teachers (and former teachers) minimizes overall response burden. However, the value of each individual response is greatly increased because it represents other teachers (or former teachers). I, therefore, encourage you to participate in this voluntary survey by completing this questionnaire and returning it within 2 weeks to the **Bureau of the Census, Current Projects Branch, 1201 East 10th Street, Jeffersonville, IN 47132-0001**, in the preaddressed envelope enclosed for your convenience.

Thank you for your cooperation in this very important effort.

Sincerely,

EMERSON J. ELLIOTT
Acting Commissioner

INFORMATION ABOUT YOUR PARTICIPATION

Public reporting burden for this collection of information is estimated to average 25 minutes per response, including the time for reviewing instructions, gathering the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the U.S. Department of Education, Information Management and Compliance Division, Washington, DC 20202-4651; and to the Office of Management and Budget, Paperwork Reduction Project 1850–0621, Washington, DC 20503.

INSTRUCTIONS

Most of the items on this questionnaire are arranged so that the questions are on the left side of the page and the answer categories or spaces for written answers are on the right. Please answer the questions by marking the appropriate answer category with an X, or recording your answer in the space provided. We suggest that you use a pencil, rather than a pen or marker.

Notice that at the end of some answer categories and answer spaces, there are instructions to skip to later questions or to continue with the next question on the questionnaire.

If you are unsure about how to answer a question, please give the best answer you can and make a comment in the "Remarks" space. Please include the item number.

If you have any questions, call the Bureau of the Census, toll free, at 1-800-221-1204.

Return your completed questionnaire to the Bureau of the Census in the enclosed preaddressed envelope. Please return it within 2 weeks.

Please keep count of the time you spend completing this questionnaire. At the end of the survey, you are asked to record the amount of time spent.

INDUSTRY CODES

Appendix D
1980 Census of Population Industry Classifications

The 3 digit number in the left margin is the code symbol for the occupation category. The number in parentheses to the right of the description is the SIC definition.

AGRICULTURE, FORESTRY, AND FISHERIES

010 Agricultural production, crops (01)
011 Agricultural production, livestock (02)
020 Agricultural services, except horticultural (07, except 078)
021 Horticultural services (078)
030 Forestry (08)
031 Fishing hunting, and trapping (09)

MINING

040 Metal mining (10)
041 Coal mining (11, 12)
042 Crude petroleum and natural gas extraction (13)
050 Nonmetallic mining and quarrying, except fuel (14)
060 Construction (15, 16, 17)

MANUFACTURING

NONDURABLE GOODS

FOOD AND KINDRED PRODUCTS

100 Meat products (201)
101 Dairy products (202)
102 Canned and preserved fruits and vegetables (203)
110 Grain mill products (204)
111 Bakery products (205)
112 Sugar and confectionery products (206)

121 Miscellaneous food preparations and kindred products (207,209)
122 Not specified food industries
130 Tobacco manufactures (21)

TEXTILE MILL PRODUCTS

132 Knitting mills (225)
140 Dyeing and finishing textiles, except wool and knit goods (226)
141 Floor coverings, except hard surface (227)

142 Yarn, thread, and fabric mills (228,221-224)
150 Miscellaneous textile mill products (229)

APPAREL AND OTHER FINISHED TEXTILE PRODUCTS

151 Apparel and accessories, except knit (231-238)
152 Miscellaneous fabricated textile products (239)

PAPER AND ALLIED PRODUCTS

160 Pulp, paper, and paperboard mill (261-263,266)
161 Miscellaneous paper and pulp products (264)
162 Paperboard containers and boxes (265)

PRINTING, PUBLISHING, AND ALLIED INDUSTRIES

171 Newspaper publishing and printing (271)
172 Printing, publishing, and allied industries, except newspapers (272-279)

CHEMICALS AND ALLIED PRODUCTS

180 Plastics, synthetics, and resins (282)
181 Drugs (283)
182 Soaps and cosmetics (284)
190 Paints, varnishes, and related products (285)
191 Agricultural chemicals (287)
192 Industrial and miscellaneous chemicals (281,286,289)

PETROLEUM AND COAL PRODUCTS

200 Petroleum refining (291)
201 Miscellaneous petroleum and coal products (295,299)

RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

210 Tires and inner tubes (301)
211 Other rubber products, and plastics footwear and belting (302-304, 306)
212 Miscellaneous plastics products (307)

LEATHER AND LEATHER PRODUCTS

220 Leather tanning and finishing (311)
221 Footwear, except rubber and plastic (313,314)
222 Leather products, except footwear (315-317, 319)

DURABLE GOODS

LUMBER AND WOOD PRODUCTS, EXCEPT FURNITURE

230 Logging (241)
231 Sawmills, planning mills, and millwork (242, 243)
232 Wood buildings and mobile homes (245)
241 Miscellaneous wood products (244,249)
242 Furniture and fixtures (25)

STONE, CLAY, GLASS, AND CONCRETE PRODUCTS

250 Glass and glass products (321-323)
251 Cement, concrete, gypsum, and plaster products (324,327)
252 Structural clay products (325)
261 Pottery and related products (326)
262 Miscellaneous nonmetallic mineral and stone products (328,329)

METAL INDUSTRIES

270 Blast furnaces, steelworks, rolling and finishing mills(331)
271 Iron and steel foundries (332)
272 Primary aluminum industries (3334, pt 334, 3353-55,3361)
280 Other primary metal industries (3331-3333, 3339, 334, 3351, 3356, 3357, 3362, 3369, 339)
281 Cutlery, hand tools, and other hardware (342)
282 Fabricated structural metal products (344)
290 Screw machine products (345)

291 Metal forgings and stampings (346)
292 Ordinance (348)
300 Miscellaneous fabricated metal products (341,343,349)
301 Not specified metal industries

MACHINERY, EXCEPT ELECTRICAL

310 Engines and turbines (351)
311 Farm machinery and equipment (352)
312 Construction and material handling machines (353)
320 Metal working machinery (354)
321 Office and accounting machines (357, except 3573)
322 Electronic computing equipment (3573)
331 Machinery, except electrical, N.E.C. (355, 356, 359)
332 Not specified machinery

ELECTRICAL MACHINERY, EQUIPMENT, AND SUPPLIES

340 Household appliances (363)
341 Radio, tv. And communication equipment (365, 366)
342 Electrical machinery, equipment, and supplies, N.E.C. (361, 362, 364, 367, 369)
350 Not specified electrical machinery, equipment, and supplies

TRANSPORTATION EQUIPMENT

351 Motor vehicles and motor vehicle equipment (371)
352 Aircraft and parts (372)
360 Ship yard boat building and repairing (373)
361 Railroad locomotives and equipment (374)
362 Guided missiles, space vehicles, and parts (376)
370 Cycles and miscellaneous transportation equipment (379)

PROFESSIONAL AND PHOTOGRAPHIC EQUIPMENT, AND WATCHES

371 Scientific and controlling instruments (381,382)
372 Optical and health services supplies (383, 384, 385)
380 Photographic equipment and supplies(386)
381 Watches, clocks, and clockwork operated devices
382 Not specified professional equipment

FINAL WEIGHT AND REPLICATE WEIGHTS

Variable Name	Source Code Public	Source Code Private	Location	Description	Unweighted Frequencies Public	Unweighted Frequencies Private
FINWGT			30-38	The final weight for each teacher. This weight is the inverse of the probability of selection that has been adjusted for unusual circumstance affecting its probability of selection, for nonresponse, and for differences between the sample estimates and the known universe totals.		
REPFWT1-REPFWT48			39-470	Replicate weights for balanced repeated replication (BRR) variance estimation. These weights may be used as input into variance estimation software which uses the BRR estimation method. Rounded to 4 significant decimal places. Maximum number of digits is 4, including the decimal point.
