

# 1992

# Census of Mineral Industries

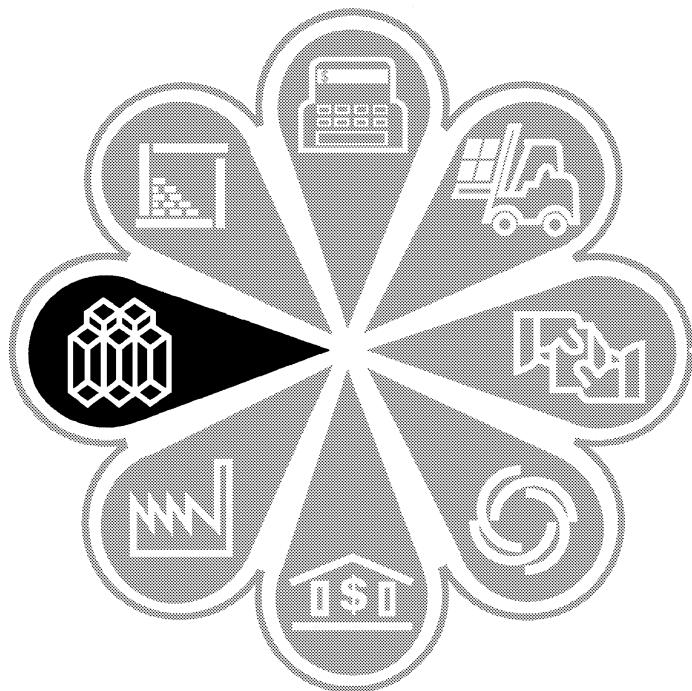

---

MIC92-S-1

SUBJECT SERIES

## General Summary

---

## Acknowledgments

Many persons participated in the various activities of the 1992 Census of Mineral Industries. The overall planning and review of the census operations were performed by the Economic Census Staff of the Economic Planning and Coordination Division.

Manufacturing and Construction Division prepared this report. **Barry A. Rappaport**, Assistant Chief for Construction and Mineral Censuses, was responsible for the overall planning, management, and coordination of the census of mineral industries. Planning and implementation were under the direction of **Patricia L. Horning**, Chief, Construction and Mineral Census Branch, assisted by **M. Susan Bucci**, Section Chief, with primary staff assistance by **Susan L. DiCola, Nancy I. Higgins, John F. Roehl, Eva J. Snapp, and Robert A. Wright**.

**Brian Greenberg**, Assistant Chief for Research and Methodology Programs, assisted by **Stacey Cole**, provided the mathematical and statistical techniques as well as the coverage operations.

**Charles T. Lee**, under the direction of **A. William Visnansky**, Chief, Special Reports Branch, performed overall coordination of the publication process. **Julius Smith, Jr.** and **Andrew W. Hait** provided primary staff assistance.

The Economic Planning and Coordination Division provided the computer processing procedures. **Shirin A. Ahmed**, Assistant Chief for Post Data Collection Processing, was responsible for editing and the analysts' interactive database review and correction system. Design and specifications were prepared under the supervision of **Dennis L. Wagner**, Chief, Post Collection Census Branch, assisted by **S. Mark Schmidt** and **Robert A. Rosati**.

The staff of the Data Preparation Division, **Judith N. Petty**, Chief, performed mailout preparation and receipt operations, clerical and analytical review activities, data keying, and geocoding review.

The Geography Division staff developed geographic coding procedures and associated computer programs.

The Economic Statistical Methods and Programming Division, **Charles P. Pautler, Jr.**, Chief, developed and coordinated the computer processing systems. **Martin S. Harahush**, Assistant Chief for Quinquennial Programs, was responsible for design and implementation of the computer systems. **Gary T. Sheridan**, Chief, Manufactures and Construction Branch, assisted by **Hugh P. Watters**, supervised the preparation of the computer programs.

Computer Services Division, **Marvin D. Raines**, Chief, performed the computer processing.

The staff of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement for publications and report forms. **Cynthia G. Brooks** provided publication coordination and editing.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

**If you have any questions concerning the statistics in this report, call 301-457-4680.**

# Introduction to the Economic Census

## PURPOSES AND USES OF THE ECONOMIC CENSUS

The economic census is the major source of facts about the structure and functioning of the Nation's economy. It provides essential information for government, business, industry, and the general public.

The economic census furnishes an important part of the framework for such composite measures as the gross domestic product, input/output measures, production and price indexes, and other statistical series that measure short-term changes in economic conditions.

Policymaking agencies of the Federal Government use the data, especially in monitoring economic activity and providing assistance to business.

State and local governments use the data to assess business activities and tax bases within their jurisdictions and to develop programs to attract business.

Trade associations study trends in their own and competing industries and keep their members informed of market changes.

Individual businesses use the data to locate potential markets and to analyze their own production and sales performance relative to industry or area averages.

## AUTHORITY AND SCOPE

Title 13 of the United States Code (sections 131, 191, and 224) directs the Census Bureau to take the economic census every 5 years, covering years ending in 2 and 7. The 1992 Economic Census consists of the following eight censuses:

- Census of Retail Trade
- Census of Wholesale Trade
- Census of Service Industries
- Census of Financial, Insurance, and Real Estate Industries
- Census of Transportation, Communications, and Utilities
- Census of Manufactures
- Census of Mineral Industries
- Census of Construction Industries

Special programs also cover enterprise statistics and minority-owned and women-owned businesses. (The 1992 Census of Agriculture and 1992 Census of Governments are conducted separately.) The next economic census is scheduled to be taken in 1998 covering the year 1997.

## AVAILABILITY OF THE DATA

The results of the economic census are available in printed reports for sale by the U.S. Government Printing Office and on compact discs for sale by the Census Bureau. Order forms for all types of products are available on request from Customer Services, Bureau of the Census, Washington, DC 20233-8300. A more complete description of publications being issued from this census is on the inside back cover of this document.

Census facts are also widely disseminated by trade associations, business journals, and newspapers. Volumes containing census statistics are available in most major public and college libraries. Finally, State data centers in every State as well as business and industry data centers in many States also supply economic census statistics.

## WHAT'S NEW IN 1992

The 1992 Economic Census covers more of the economy than any previous census. New for 1992 are data on communications, utilities, financial, insurance, and real estate, as well as coverage of more transportation industries. The economic, agriculture, and governments censuses now collectively cover nearly 98 percent of all economic activity.

Among other changes, new 1992 definitions affect the boundaries of about a third of all metropolitan areas. Also, the Survey of Women-Owned Businesses has now been expanded to include all corporations.

## HISTORICAL INFORMATION

The economic census has been taken as an integrated program at 5-year intervals since 1967 and before that for 1963, 1958, and 1954. Prior to that time, the individual subcomponents of the economic census were taken separately at varying intervals.

The economic census traces its beginnings to the 1810 Decennial Census, when questions on manufacturing were included with those for population. Coverage of economic

activities was expanded for 1840 and subsequent censuses to include mining and some commercial activities. In 1902, Congress established a permanent Census Bureau and directed that a census of manufactures be taken every 5 years. The 1905 Manufactures Census was the first time a census was taken apart from the regular every-10-year population census.

The first census of business was taken in 1930, covering 1929. Initially it covered retail and wholesale trade and construction industries, but it was broadened in 1933 to include some of the service trades.

The 1954 Economic Census was the first census to be fully integrated—providing comparable census data across economic sectors, using consistent time periods, concepts, definitions, classifications, and reporting units. It was the first census to be taken by mail, using lists of firms provided by the administrative records of other Federal agencies. Since 1963, administrative records also have been used to provide basic statistics for very small firms, reducing or eliminating the need to send them census questionnaires. The Enterprise Statistics Program, which publishes combined data from the economic census, was made possible with the implementation of the integrated census program in 1954.

The range of industries covered in the economic censuses has continued to expand. The census of construction industries began on a regular basis in 1967, and the scope of service industries was broadened in 1967, 1977, and 1987. The census of transportation began in 1963 as a set of surveys covering travel, transportation of commodities, and trucks, but expanded in 1987 to cover business establishments in several transportation industries. For 1992, these statistics are incorporated into a broadened census of transportation, communications, and utilities. Also new for 1992 is the census of financial, insurance, and real estate industries. This is part of a gradual expansion in coverage of industries previously subjected to government regulation.

The Survey of Minority-Owned Business Enterprises was first conducted as a special project in 1969 and was incorporated into the economic census in 1972 along with the Survey of Women-Owned Businesses.

An economic census has also been taken in Puerto Rico since 1909, in the Virgin Islands of the United States and Guam since 1958, and in the Commonwealth of the Northern Mariana Islands since 1982.

Statistical reports from the 1987 and earlier censuses provide historical figures for the study of long-term time series and are available in some large libraries. All of the census data published since 1967 are still available for sale on microfiche from the Census Bureau.

## **AVAILABILITY OF MORE FREQUENT ECONOMIC DATA**

While the census provides complete enumerations every 5 years, there are many needs for more frequent data as well. The Census Bureau conducts a number of monthly, quarterly, and annual surveys, with the results appearing in publication series such as Current Business Reports (retail and wholesale trade and service industries), the Annual Survey of Manufactures, Current Industrial Reports, and the Quarterly Financial Report. Most of these surveys, while providing more frequent observations, yield less kind-of-business and geographic detail than the census. The County Business Patterns program offers annual statistics on the number of establishments, employment, and payroll classified by industry within each county.

## **SOURCES FOR MORE INFORMATION**

More information about the scope, coverage, classification system, data items, and publications for each of the economic censuses and related surveys is published in the *Guide to the 1992 Economic Census and Related Statistics*. More information on the methodology, procedures, and history of the census will be published in the *History of the 1992 Economic Census*. Contact Customer Services for information on availability.

# Census of Mineral Industries

## SURVEY DESCRIPTION

In the farm-oriented economy of the early 19th century, the need for mineral statistics for setting government policy, except for tariffs and taxes, was slight. The only sources of information on the mining sector were the censuses of mineral industries, then taken at 10-year intervals. Today, the need for mining statistics has greatly increased so there is now a vast array of detailed information covering virtually every measurable aspect of mining activity including employment; payrolls; hours worked; production; prices; inventories; investment in structures; machinery and equipment; and consumption of raw materials, and fuels. The census of mineral industries, though conducted only at 5-year intervals, still plays an essential role, since no other source measures the structure of the mining sector in such a comprehensive and detailed way.

For every mining establishment with one employee or more, the census obtains data on its input of labor, materials, and capital; its output of products and services; its location; and the legal form of organization of the owning firm.<sup>1</sup>

A set of summary or general statistics is developed for each establishment (i.e., total employment, payroll, production-worker employment, hours worked, wages, cost of supplies, value of shipments and receipts, capital expenditures, and value added by mining) and aggregated by industry, by area, by employment size of establishment, and by type of ownership. Reports are published on the detailed industrial characteristics of each State, and overall measures of mining activity are shown at the county level provided the information can be published without compromising the confidentiality of individual company data. Since census legislation guarantees confidentiality to the firms that are required to report, it is frequently necessary to suppress some aggregates.

The census of mineral industries also is used to update other indicators of economic activity, especially the national income accounts. Census data on materials consumed and product output by industry are basic to the input-output matrix developed by the Bureau of Economic Analysis for the mining sector. The Federal Reserve Board monthly

Index of Industrial Production, a key indicator of current economic activity, relies on census industry and product data as benchmarks and weights to sum industries to higher levels of aggregation. The census also provides benchmarks for surveys conducted by other government agencies and by associations.

## INDUSTRY CLASSIFICATION OF ESTABLISHMENTS

**Structures of the standard industrial classification.** The establishments in the census of mineral industries are classified according to the Standard Industrial Classification (SIC) Manual.<sup>2</sup> The SIC manual covers the entire field of economic activities, subdivided as follows:

Below the major group level, the SIC provides for three-digit groups and finally for four-digit industries. To illustrate:

### Division B, Mining

Major group 10.....	Metal mining
Industry group 104 .....	Gold and silver ores
Industry 1044 .....	Silver ores

The SIC was developed to classify establishments as distinguished from similar systems used to classify companies or enterprises. An establishment is defined as a single physical location engaged in one of the industry categories of the SIC.

The SIC is the responsibility of an interagency technical committee established by the Office of Management and Budget. The system is used by all Federal Government agencies engaged in the classification of establishments. Many State and local governments and business concerns also organize their own records along SIC lines in order to facilitate comparison with Federal statistics.

The first SIC manual was issued in 1939. For the mining sector, the nucleus was the set of industry classifications developed over many years for use in the census of mineral industries. A revised manual was issued for the mining industries in 1945 and, with minor modifications, used for the 1954 Census of Mineral Industries. Minor

<sup>1</sup>Since 1967, some of this information for small companies was not obtained directly, but estimated from other government records. See the discussion of coverage of establishments in Industry Classification of Establishments and Planning and Preparation.

<sup>2</sup>**Standard Industrial Classification Manual: 1987:** For sale by Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Stock No. 041-001-00314-2.

revisions of the SIC between 1958 and 1967 introduced some four-digit industry changes, but none of them crossed three-digit group lines. Another revision of the SIC for 1972 produced additional four-digit industry changes. This revision affected 17 industries, as defined for 1967, by merging them into 6 newly defined industries. These revisions and their impact on comparability appear in the introduction, "Industry and Product Classification" of the 1972 census General Summary. The latest revision affecting comparability was issued for 1987. Appendix A of the 1987 manual notes the revisions in the four-digit industry levels between 1972 and 1987.

**Structure of the SIC mining division.** For the mining division, there are 4 two-digit SIC major groups (10, 12, 13, and 14), which are subdivided into 20 three-digit SIC groups (101 to 149), and further subdivided into 31 four-digit industries (1011 to 1499).

Most of the 31 mineral industries are defined in terms of specific groups of related products. In determining the boundaries of industries, it is essential that each industry comprises a group of establishments that are highly specialized in producing products that define the industry (primary products) and that a large proportion of all the products be made in establishments classified in the industry.

There are wide differences among industries in their purity; i.e., the extent to which the establishments classified in the industry:

1. Account for the total production of commodities "primary" to the industry.
2. Produce products or services "belonging" to other industries; i.e., secondary products.
3. Use similar materials or processes.

These variations are frequently construed to be shortcomings. However, these limitations in the classification structure arise from the inherent complexity of our economic system and from the variation in types of production that take place in individual establishments.

While the SIC is the basis for aggregating census data, the data collected, in turn, provide the statistical basis for periodic critical evaluation of that classification system and its revision.<sup>3</sup>

No general-purpose system of industrial classification can satisfy all users of census data. Some business users are interested primarily in a narrow range of products which they and their competitors produce. Others are involved in a wide range of products that move through the same marketing channel. Others seek data relating to the consumers of one or more types of materials. Some are

interested only in the data for highly specialized plants; others, for plants producing a "full line" of products. Those studying productivity may require data for plants using the same techniques.

The large number of SIC industries provides the analyst with the "building blocks" for making useful approximations, even if specific data cannot be developed to resolve many of these problems. A single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached at which the adaptation of a system to better serve one use will reduce its ability (sometimes disproportionately) to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries differently from the two- and three-digit SIC categories. Public and private agencies also recombine the detailed classes. The four-digit industries are more susceptible to allocation to such categories than the two-digit SIC groups.

**Subindustries.** The Bureau of the Census frequently has further classified some of the basic four-digit SIC industries into "subindustries." Subindustries are employed where there are wide disparities in the operating ratios of the establishment in the industry because the establishment is operated as a mine only, a mine with treatment plant, a treatment plant only, or because the operated mine is underground, open pit, or a combination. This technique was used for all mining industries for editing purposes, and many were regarded as significant enough to be used for publication.

**Definition of mining.** The mineral industries include all establishments primarily engaged in mining. This term is used in the broad sense to include the extraction of:

1. Minerals occurring naturally.
2. Solids, such as coal and ores.
3. Liquids, such as crude petroleum.
4. Gases, such as natural gas.

The term "mining" is also used in the broad sense to include quarrying, well operation, milling (crushing, screening, washing, flotation, etc.), and other preparation and beneficiating needed to render the mineral marketable. Exploration is included as is the development of mineral properties. Services performed on a contract, fee, or other basis in the development of mineral properties are classified separately within this division.

Mining operations are classified by industry on the basis of the principal mineral produced or, if there is no production, on the basis of the principal mineral for which exploration or development work is in process. The recovery of material from culm banks, ore dumps, and other waste minerals piles is classified in the appropriate mining industry according to the mineral product recovered.

<sup>3</sup>See **Industry Classification and Sector Measures of Industrial Production** by James W. McKid, Bureau Working Paper No. 20, 1965, and **Historical Comparability of Census of Manufactures Industries, 1929-1958** by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

Mineral preparation plants are usually operated together with mines or quarries and, frequently, no separate records are maintained. All such preparation plants are included in the scope of the minerals census. Coal cleaning and sizing plants operated at mines or as separate establishments are also included. However, crushing, grinding, and other treatment of certain nonmetallic minerals at separately operated plants are included in the manufacturing industries. Contract hauling (except out of open pits in conjunction with mining) is excluded from the mineral industries.

Statistics on mining operations which are carried on as secondary activities at manufacturing establishments (such as clay pits at clay products plants) are not within the scope of this census. However, certain information on these operations has been obtained in the census of manufactures and is included in some of the industry reports and in the State reports. Wherever such inclusion occurs, it is clearly specified.

All blast furnaces; metal smelters; metal and petroleum refineries; plants manufacturing cement, brick, tile, and pottery; and plants engaged in dressing or polishing stone are classified in the manufacturing industries. Separate reports were obtained and included in the minerals census for the few ore dressing plants operated in conjunction with smelters.

**SIC classifies establishments.** The SIC is an establishment classification system, and the census of mineral industries is conducted on an establishment basis. That is, a company with operations at more than one location is required to submit a report for each location. On the other hand, a company engaged in distinctly different lines of activity at one location is required to submit a separate report for each activity if the plant records permit such a separation and if the activities are substantial in size.

For oil and field operations and contract services, reporting was somewhat different from the "establishment" reporting basis used for other types of mining. Concerns operating oil and gas wells, drilling wells, or exploring for oil and gas for their own account were required to submit a separate report for each State or offshore area adjacent to each State in which they conducted such activities. Concerns which supplied contract services for mining establishments were required to submit one report covering all such activities in the United States. Information on receipts for services, production-workers' wages and hours, was requested by State. These consolidated reports were then allocated to State establishments based on the data reported at the State level. The 1992 figures for establishments include the summation of operations for each State allocated from these nationwide reports.

The requirement that distinct lines of activity at the same location be separately reported was applied only where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, many mining establishments extract products that fall into different SIC industries. Generally, the amounts involved are not significant enough to warrant the

filings of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in activities defined in different industries of the SIC. Frequently, companies organize their operations and their records separately for the diverse activities and report them as separate plants. When they do not do so on their own initiative, the Bureau of the Census requests separate reports if it appears that 100 employees or more are involved in each activity. For the most part, companies have cooperated and "split out" the different activities that would otherwise significantly distort the relationship of the industry and product statistics. Frequently, however, the two groups of products cannot be distinguished sufficiently in company records to provide establishment-type reporting.

**Establishments included in census of mineral industries.** Since the 1967 Census of Mineral Industries, the censuses have included only establishments of companies with one paid employee or more. Prior to 1967, different criteria were used to determine if an establishment had to report in the census. In the 1963, 1958, and 1954 censuses, establishments without paid employees were excluded if any of the following three items amounted to less than \$500 for the entire year:

1. Value of products shipped and services performed for others.
2. Expenses for wages, salaries, supplies, minerals received for preparation, fuel, purchased electric energy, contract work, and purchased machinery.
3. Capital expenditures for development and exploration of mineral properties, new construction and major alterations, and new and used machinery and equipment.

In general, small establishments were excluded from the 1939 and 1929 censuses if each of three similar items amounted to less than \$2,500 and from the 1919 census if value of products was less than \$500 and expenditures for development work less than \$5,000. An output criterion of

Table A. **Percent of Mining Establishments, Value Added by Mining, and Capital Expenditures, by Employment-Size Class: 1992**

Employment-size	Percent of total		
	Mining establish- ments	Value added by mining	Capital expendi- tures
All establishments.....	100.0	100.0	100.0
0 to 4 employees.....	51.8	5.7	7.9
5 to 9 employees.....	16.5	4.6	4.5
10 to 19 employees.....	13.5	7.2	6.8
20 to 49 employees.....	10.8	14.5	15.2
50 to 99 employees.....	3.7	10.2	8.8
100 to 249 employees .....	2.4	17.4	17.4
250 to 499 employees .....	.8	13.3	12.6
500 to 999 employees .....	.3	16.9	16.0
1,000 employees or more ....	.1	10.3	10.7

1,000 tons for bituminous coal and lignite was used in these three censuses. Common sand and gravel operations were excluded in 1939 if they produced less than 15,000 tons of sand and gravel and had expenses of less than \$15,000. For 1929, common sand and gravel establishments producing less than 25,000 tons were excluded. This industry was not covered in censuses prior to 1929. In earlier censuses, there were no minimums for size of establishments.

The production of minerals, particularly stone, sand, and gravel, by Federal, State, and local governments is excluded from the census. Also excluded is production of these items by highway contractors and construction contractors who do not maintain separate records for sand and gravel production.

The census includes, however, mining establishments of the same company, such as coal mines serving only coke ovens operated by the same company, oil and gas wells serving only refineries or public utilities owned by the same company, and copper mines and mills where all of the ore is transferred to a company-owned smelter.

The percent of mining establishments, value added by mining, and capital expenditures by employment-size classes are shown in table A.

In general, the 1992 minerals census reports provide complete coverage of production and development operations although there are certain limitations to coverage in some industries. These limitations are discussed in detail in the industry reports.

**Special treatment of small establishments.** Beginning with the 1967 census, an effort was made to relieve the very small establishments from the necessity of filing a census report. In the 1992 minerals census, small single-unit companies with up to 20 employees (the cut off varied by industry), were excused from filing reports. In 1992, 12,000 companies fell into this category. Limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Bureau of the Census. (Special arrangements were made to safeguard the confidentiality of both tax and census records.) Data other than payrolls and sales for these small establishments were imputed from industry average ratios. The effect on industry aggregates is slight in most industries; for mining as a whole, these small "administrative records" accounted for only 1.9 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

If these establishments had been included in the 1987 Census of Mineral Industries, they were assigned the industry classifications to which they had been coded. If they had started operations later, they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are

relatively fine lines of demarcation between industries or between mining and nonmining activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the Bureau of the Census conducted a special classification survey in order to clarify the industry codes of some of the establishments in the administrative-record file. All establishments without specific four-digit codes and those where there could be significant misclassification between mining and other sectors were either sent a classification questionnaire or a general schedule, Form NC-9923. Nevertheless, the total establishment counts in most industries should be viewed as approximations rather than precise measurements. The counts for establishments with 20 employees or more are far more reliable than the total number of establishments.

**Auxiliary units.** Mining requires a wide range of diverse support activities. These activities include general administrative; supervisory; purchasing; accounting; general engineering and systems planning; and legal, financial, and related management functions usually performed centrally for other establishments of the same company. These separate locations are referred to as auxiliaries. An auxiliary is an establishment whose employees work primarily in supporting services for other establishments of the same company (i.e., its mines, factories, retail stores, etc.) rather than for other business firms or organizations. Employment and payroll data for auxiliary units are included in the published data for the census of mineral industries.

**Product codes.** The SIC coding system is designed to describe industries and operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 4 very broad two-digit groups, 20 three-digit groups, and 31 four-digit industries. Based on the SIC, the Bureau of the Census has developed a product coding system along similar lines which contains 71 five-digit product classes and 152 individual seven-digit products. The seven-digit products and five-digit product classes are considered the primary products of the industry with the same first four digits as the product code. For example, the seven-digit product code number 10312 01 refers to lead concentrates. The first five digits of this code number, 10312, refer to the "product class" lead and zinc concentrates and the first four digits, 1031, refer to the industry in which these products were made (the lead and zinc ores industry). The same system is applied to the coding of supplies. The first four digits of a supply code (for example, the code number 101121, crude iron ore received from concentration) used as a supply describe the industry that produces it; e.g., 1011, the iron ore industry.

The SIC-based commodity classification is used in the Bureau of the Census' entire industrial statistics program, including monthly, quarterly, and annual surveys. The Bureau of the Census also publishes data on imports and exports in terms of SIC-based categories as well as the

traditional Schedule B and Tariff Schedule of United States Annotated (TSUSA) systems.<sup>4</sup>

**Primary and secondary products of establishments.** An establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values of seven-digit product codes to their four-digit industry and the selection of the largest four-digit value as the establishment's industry classification. However, as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in any industry specialize to this extent. Therefore, the general statistics (employment, payrolls, inventories, value added by mining, total value of shipments and receipts, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry reports) encompass not only the primary activities of the establishments in that industry but also their secondary activities. On the other hand, the product statistics in table 6 of the industry reports measure the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the general statistics of an industry, especially the industry total value of shipments (industry reports, tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in table 5 should be considered.

## GEOGRAPHIC CLASSIFICATION

The 1992 Census of Mineral Industries measures industrial activity at the National, State, and county levels. Prior to 1977, similar information was summarized for the traditional nine geographic divisions (e.g., New England, Middle Atlantic, etc.) and the four geographic regions (Northeast, South, Middle Atlantic, and West).

The presentation of data for individual industries and industry groups at all these geographic levels has always created serious problems in protecting the confidentiality of individual company data. Consequently, it has frequently been necessary to set priorities as to what will be published. In the past, the preference was given to publishing data for the broad geographic regions over States leading to greater suppression of industry detail at the State level. There has been increasing interest in State information in preference to the broader regions. As a result, since 1977 the censuses of mineral industries has given first precedence to publishing State figures. A decision also was

made to forgo publication of any divisional and regional totals. This was desirable to avoid suppressing industry detail that could have been published in one State to protect data for another State in the same division that had to be suppressed to preserve the confidentiality of a respondent's figures.

Table B. **Value Added by Mining for States: 1992**

Geographic area	Value added (million dollars)	Percent
<b>United States</b> .....	113 621.3	100
Alabama .....	1 525.7	1.3
Alaska .....	8 522.0	7.5
Arizona .....	1 821.9	1.6

<sup>4</sup>Schedule B is the U.S. export classification, while TSUSA is applied to imports.

(V) Rounds to zero.

Thus, some summary tables for the nine geographic divisions and four regions that were published prior to the 1977 censuses, do not appear in the publications of the 1992 Census of Mineral Industries. The relative importance of mining among the States is shown in table B.

## PLANNING AND PREPARATION

**General.** The Bureau of the Census has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State Government agencies, individual companies, labor unions, and research and educational organizations is sought in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, the problems encountered in the previous censuses are studied; and improved methods of collection, processing, and tabulation are explored.

**Mailing lists.** Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from IRS and SSA records. After the 1963 censuses, feasibility studies indicated that greater use could be made of the data in the IRS-SSA records. In the 1992 census, approximately 12,000 small mining firms were exempted from the filing requirement. Instead, census-type statistics for this group were developed from IRS-SSA records. IRS and SSA information was obtained under provisions of the Internal Revenue Code as amended by the Tax Reform Act of 1976. (Before that, Internal Revenue Service records were available through a series of executive orders.) In close cooperation with IRS and SSA, specific procedures for the use of individual tax returns were developed that assured confidential treatment of them. The name, address, payroll, and general business receipts were obtained from these reports, in addition to the SIC industrial activity code assigned by SSA. The Census Bureau and the Bureau of Labor Statistics signed a memorandum of understanding in April 1991 which spelled out procedures that allowed census access to certain standard industrial classification information collected under Bureau of Labor Statistics sponsorship. The agreement's purpose was to assist the Census Bureau in improving the coverage and accuracy of its business classifications by matching those classifications with those in the Bureau of Labor Statistics' Business Establishment List. Other census statistics for these small firms were imputed using industry average ratios of the data item to payrolls and sales.<sup>5</sup>

**Planning the content of questionnaires.** As in previous censuses, the content of the 1992 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the mineral

concerns who supply the data and those who use the statistics. Those consulted included Government agencies, individual firms, the American Statistical Association, the American Economic Association, and all mining associations covering specific industries.

Many individual mining companies and their trade associations were consulted about the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1992 report forms were circulated among trade associations and mining companies. These draft report forms included new product detail reflecting suggestions received by the Bureau of the Census after the 1987 canvass. Items whose total value was \$10 million or less were not retained separately in the list unless they were needed to assure correct classification of other products or were of strategic importance. A restriction was also placed on proposals for new product detail; it was stipulated that the 1992 value of any new product category should exceed \$25 million.

The mining operations were requested to comment specifically on the availability of the data requested in their records and the appropriateness of the product descriptions and units of measure.

The many comments and suggestions received in this clearance procedure were evaluated by the census staff. A detailed account of the clearance procedure and the decisions reached was forwarded to the Office of Management and Budget, along with the report forms developed by the Bureau of the Census as a result.

A final review was made by the Office of Management and Budget with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives such as controllers, economists, and market research directors, representing a cross section of all industries.

## REPORTING FORMS

A representative selection of the reporting forms used in the census are discussed below.<sup>6</sup>

**General forms.** This group of forms was used in the economic censuses, either as company-wide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

**NC-9901, Report of Organization.** This company-wide report was used prior to mailing the 1992 census questionnaires to develop the directory of establishments operated by multiunit companies. A more detailed account of their use is given under Mailing Lists.

**NC-9926, Classification Report.** This form went only to small manufacturing and mineral industry single-establishment companies to obtain specific classification codes needed to identify each establishment's activity.

<sup>5</sup>Imputation was only about 2 percent of overall totals.

<sup>6</sup>Samples of general forms and mineral industry forms are reproduced in appendix E.

**NC-9923, General Schedule.** This questionnaire was designed to obtain information from single-establishment companies for which the available industry code was not sufficient enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-9923 helped assign the industry necessary for either mailing the appropriate 1992 questionnaires to establishments, if they were large, or for classifying and tabulating administrative-record data in the appropriate census.<sup>7</sup>

**ES-9200, Auxiliary Establishment Report**—Many multiestablishment companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. They were asked to complete form ES-9200 for those establishments. The form contained questions on the approximate number of employees engaged in such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmining establishments. The respondent also was asked to describe the industry activity of the operating establishments serviced by the auxiliary unit reporting on form ES-9200.

**ES-9100, Enterprise Summary Report.** Each large multiestablishment company received a form ES-9100, in addition to a specific questionnaire for each establishment. The ES-9100 requested consolidated company totals for receipts, new capital expenditures, inventories, and fixed assets, which are published as part of the Census Bureau's Enterprise Statistics Program.

**Census of mineral industries forms and instruction manuals.** The questionnaire and instructions reproduced in the appendix, form MC-1403, is typical of the 10 long forms used for operating mining establishments. Each of these forms was designed to be used for a specific group of industries. The inquiries on the 10 long forms were identical except for the detailed questions on products shipped, materials used, assets for oil and gas extraction industries, and miscellaneous topics such as operations performed and metal contents of complex ores.

**Short form.** The oil and gas extraction and stone and sand and gravel industries include a large number of small-to-medium sized firms that account for a significant portion of the industry's output. Usually these firms are not so small that the limited data in the administrative-record files would meet the needs of the census. To obtain sufficient data, yet hold the reporting burden down for these smaller firms, a special abbreviated short form was designed. Key input and output statistics were obtained without the detail requested on the standard form.

<sup>7</sup>Use of form NC-9923 is also discussed in Mailing Lists.

## MAILING LISTS

**General.** As discussed in the Planning and Preparation section, the list of respondents for 1992 was obtained from IRS-SSA records. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,<sup>8</sup> it was necessary to follow separate procedures for multiestablishment companies (those operating at more than one location).

**The precanvass.** Multiestablishment companies were required to file at least one establishment report<sup>9</sup> covering each location operated by multiestablishment companies. The Bureau of the Census conducts an annual update of its directory of establishments operated by large companies in which "Report of Organization" (form NC-9901) is mailed each year to known multiestablishments with 50 or more employees and to a rotating sample of smaller multiestablishment companies with fewer than 50 employees.

This form consists of a report on company affiliation and a list of the domestic establishments operated by the company. The company's establishments as identified in census records are prelisted and the respondents are asked to correct this list. They are also asked to describe new establishments not prelisted and indicate their size.

Large multiestablishment companies are segregated for special handling because of possible overlap and duplication. Many of these companies are active in manufacturing, retail, and wholesale trade as well as in mining. The reporting instructions are reviewed in discussions with officials of the accounting departments of many of these firms to make certain that the procedure is understood and the establishments are properly described on form NC-9901.

**Single-establishment companies.** The mailing lists for single establishment companies (those operating at only one location) were developed from an initial control file assembled from IRS and SSA records. Out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multi-establishments in the multiestablishment directory were removed.

The final step was to identify the small companies to which forms were not to be mailed because census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-establishment companies.

<sup>8</sup>SSA records for multiestablishment companies identify "reporting units," which, in many instances, correspond to census establishments. Differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Bureau of the Census concept of a company differs from IRS-SSA definition, since the Census company includes all establishments under common ownership or control. In IRS-SSA records, subsidiary corporations are often treated as independent companies.

<sup>9</sup>If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see SIC Classification of Establishments.)

**General schedule.** While these lists generally contained adequate industry information to determine the proper form for mailing, a number of the records did not have precise industry information. Form NC-9923, General Schedule, was mailed to these companies. Since it was assumed that these companies were quite small, only the dollar volume of business was requested. The completed reports were coded and included in the tabulations. If form NC-9923 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

## COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The precanvass and other special procedures for multiestablishment companies described in Mailing Lists and Data Collection were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiestablishment companies, also were used to verify the completeness of establishment coverage.

Comparison of statistics tabulated from the census of mineral industries with data originating with other agencies was possible in many instances, thus providing a further confirmation of completeness and accuracy. In the industry reports, differences between the census of mineral industries and other statistics are explained wherever possible. The Bureau of the Census' other procedures designed to improve the accuracy of the census data are discussed below in the items of data collection and processing.

## GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the minerals census data by State and county. Prior to the census, the mailing address information was matched by computer to geographic reference files in order to assign geographic codes. Computer file flags were assigned to indicate how confident we were of the codes assigned. Large establishments with low confidence codes were researched clerically.

As in previous censuses, a post office box address or ZIP Code of the establishment was not accepted as defining the physical location. Respondents were requested to check the address labels on the questionnaires and if incorrect or with a nonphysical location address (such as post office box) to provide the following information; street address, place (post office name), State abbreviation, ZIP Code, county name, type place, and whether the establishment was located inside or outside the legal boundaries of the place. Any changes and corrections that were returned were noted and geographically coded accordingly.

Because of the unique establishment definitions in mineral industries and the rural locations of mining establishments in general, geographic coding is particularly difficult. In these cases, the name or number of the nearest highway and the distance from the nearest town or urban place was reported.

## DATA COLLECTION

Although the greater use of administrative records in 1992 substantially reduced the number of companies canvassed directly, there remained over 16,000 mineral operations that were required to file; small mineral operators for whom the administrative records sufficed numbered about 12,000. The assembly of several hundred different questionnaires into mailing packages was an extensive operation.

Most of the 1992 questionnaires were mailed by late December 1992, with a due date of February 15, 1993. The collection phase was completed by late October 1993. Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. In all, there were four mail followups. Telephone calls were made to the large companies to help with reporting problems and to request that the forms be completed and returned.

Estimates based on data from administrative records were included in the census tabulations for the relatively small number that had not responded by the closeout date in October 1993. Thus, reported or estimated data for all companies and establishments in the original mailing list (except those determined to be inactive during 1992) were included in the final statistical results. A special effort was made to obtain actual returns from all large firms, so that the dollar volume of business represented by proxy returns was relatively small.

## DATA PROCESSING

**General.** The editing,<sup>10</sup> coding, and tabulation of data for all of the establishments represented in the 1992 economic census were complicated tasks. Automated data processing and other advanced techniques were used in all phases.

The questionnaires were mailed from and returned to the Bureau of the Census office at Jeffersonville, Indiana, where most noncomputer (that is, clerical) processing operations were performed. Data were placed on a key-to-disc system, and the encoded data sent to Washington on a high-speed transmission system. The Washington, DC staff handled computer operations and all operations in connection with the use of IRS and SSA records.

<sup>10</sup>In data processing, the term editing means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

**Preliminary processing.** After they were checked in, the questionnaires were keyed and subjected to simple edits to see that they conformed to certain minimum requirements before further processing. For multiestablishment companies, the sums of employment and payroll reported on its establishment questionnaire were compared with the control totals received on IRS form 941. Questionnaires received from single-establishment firms were reviewed to ascertain whether they had become multiestablishments through merger or acquisition. Questions arising in these operations were resolved by writing or telephoning the respondents. Complex problems were referred to the Washington, DC professional staff.

**Computer editing.** The review for consistency among data items and completeness was done on the computer. Average values and tolerance limits for key operating ratios (for example, cost of supplies per dollar of shipments, payroll per employee, production-worker wages per hours worked, etc.) played a fundamental role in the editing process.

A detailed description of the step-by-step processing procedures appears in the Bureau of the Census publication, *History of the 1992 Economic Census*. This volume describes the procedures followed in both the centralized overall processing and in the individual censuses such as mineral industries.

## ESTABLISHMENTS DURING THE YEAR AND AT THE END OF THE YEAR

The establishment data shown as "Establishments during year" in the tables represent all establishments of companies with one paid employee or more that have production, development, or exploration activities at any time during the year. Also included are separately operated auxiliary establishments. Of the approximately 30,800 establishments with such activities during the year, approximately 30,450 or 99 percent of them were also operating at the end of the year.

## EMPLOYMENT AND PAYROLL IN AUXILIARIES

Employment, payroll, and establishment counts of auxiliaries are included in all tables of the census of mineral industries. Table 7 in chapter 1 and table 4 in chapter 2 of this report show employment and payroll data separately by industries and States.

## SUPPLIES CONSUMED

Every establishment was requested to report the total cost of supplies. In addition, quantity and all cost information were collected for approximately 45 specific supplies. Supplies were generally collected only in those industries in which the supplies were important inputs. Detailed

consumption information was collected in item 17A of the questionnaire, the standard supplies inquiry. The resulting statistics are presented mainly in table 7a of the industry reports.

In using the detailed data on supplies consumed, the following limitations should be noted:

1. Supplies were reported for the establishment as a whole, and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry total for supplies appearing in tables 7a of the industry reports includes consumption in secondary products as well as primary products of the industry. The extent of secondary production in each industry is shown in table 5, chapter 1 of this report.
2. Special attention should be paid to the codes ending in "000" and captioned "Undistributed minerals, purchased machinery, parts, attachments and supplies used." The amounts appearing on these lines are totals imputed for:
  - a. Establishments whose statistics were developed from administrative records.
  - b. Establishments whose reports were not received at the time the data were tabulated.
  - c. Totals for establishments that returned report forms but failed to report their consumption in specific terms.

Thus, for most industries, the data for specific supplies are understated. A judgement on the statistical significance of the understatement may be made from the ratio of the value shown for the "not specified by kind" data to the total of selected supplies, minerals received for preparation, and purchased machinery installed for the industry.

1. Establishments consuming less than a specified amount of a supply were not requested to report consumption of the supply separately. For the majority of individual supplies, the minimum amount was \$25,000. The use of this cutoff is not believed to have had a significant effect on the totals.
2. A total of "not elsewhere classified" (n.e.c.), supply code 970099, was collected on most forms and is published for each industry. This is the total cost of supplies for an industry for which no supply items were prelisted on the form.

## VALUE OF SHIPMENTS AND RECEIPTS

### Value of shipments of multiestablishment companies.

Respondents were instructed to report net selling values, f.o.b. mine, well, or plant, after discounts and allowances and excluding freight charges and excise and sales taxes. Multiestablishment companies were instructed to report for each establishment as if it were a separate economic unit

and, in particular, to report interplant transfers at their full economic value. Full economic value is defined as not only the cost of production but also a reasonable proportion of company overhead and profits. Generally, there is no advertising or other selling cost assigned by companies to interplant transfers, so it would be expected that the value per unit of such transfers would be less than that for commercial sales. To assure consistency in the valuation as the interplant transfer moved through the company, the plant receiving the transferred goods was instructed to include them in its cost of materials at the same value as at the shipping point plus the cost of freight and other handling charges.

**Individual products.** In the 1992 census program, information was collected on the output of 152 individual product items.<sup>11</sup> A "product," as used in the census of mineral industries, is the finest level of detail for which output information was requested. It is not necessarily synonymous with the term "product" as used in the marketing sense. In some cases, it may be much more detailed, and in other cases, it is more aggregative. If detailed production figures are available from other government sources or reliable private surveys, it was not considered necessary to request extensive detail in the census. Frequently, large aggregative values at the products level indicated that detailed production figures were available from other statistical programs.

Typically, both quantity and value of shipments were collected. However, physical quantity measures are not meaningful for some product lines, and for these, only value of shipments was collected. If a product was used to a large degree in the fabrication of other products within the same establishment in which it was produced, total quantities produced and often the quantities consumed were collected. Information on production, as well as shipments, was also collected for products for which there are significant differences between the two in a given year.

**Classes of products.** The individual products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. In the code structure, a seven-digit number is assigned to the individual product, a five-digit code to the class of product, and a four-digit code to the total primary products in an industry. (See Industry Classification of Establishments for application of coding structure to the assignment of SIC codes for establishments.)

The 152 product items in the 1992 census were grouped into 71 separate product classes. General similarity was the basis for the product class combinations within each four-digit industry; i.e., kind or use of the products. The economic significance of the class was also taken into

account; residual products of an industry were grouped when the dollar value of the products did not warrant separate classes.

**Effect of use of administrative records on product data.** As noted elsewhere in this Introduction, approximately 12,000 small mining companies were not mailed report forms and most of their detail was imputed based on limited information in IRS and SSA administrative records used in conjunction with industry averages and other information. All of the value of products of these small establishments were coded only to the four-digit products of the industry in which they were classified. These product shipments are uniquely identified in table 6 of the industry reports. Also included are product shipments of reporting companies that were described too generally to code below the four-digit level. Frequently, these were residuals in the company's records which the company felt it could not further break down.

One factor tends to reduce the value of products, n.s.k., attributed to administrative-record companies. In some four-digit industries, there is only one product category (an example is Industry 1422, Crushed and Broken Limestone). Administrative-record estimates for these products were treated as specific information and not published as "n.s.k."

In using the data for the specific seven-digit products shown in table 6 of the industry reports, the importance of the "n.s.k." has to be considered. The shipments of individual products tend to be understated somewhat in proportion to the size of the "n.s.k." Census-to-census comparison of seven-digit products should be made with caution if there has been a significant increase or decrease in the importance of the "n.s.k."

## VALUE ADDED BY MINING

Value added is computed by subtracting the cost of supplies, purchased fuels and electric energy, contract work, purchased machinery installed, and minerals received from other establishments and used in mineral production from the value of shipments and receipts plus capital expenditures. This measure avoids the duplication in the value of shipments and receipts that results from the use of products of some establishments as supplies, energy sources, or materials by other establishments. Moreover, it provides a measure of value added in mineral production and also in the development of mineral properties. For these reasons, it is considered to be the best value measure for comparing the relative economic importance of mining among industries and geographic areas.

"Value of shipments and receipts," used in this calculation, includes the shipments of all products of the mining establishment, together with receipts for work done for others. "Capital expenditures" includes expenditures for development of mineral properties as well as for new construction and major alterations of preparation plants

<sup>11</sup>See 1992 Census of Manufactures and Census of Mineral Industries, MC92-R-1, Numerical List of Manufactured and Mineral Products.

and other structures and expenditures for new and used machinery and equipment. The "costs" used in this calculation include costs charged to both the current and capital accounts. Both the shipments and costs figures include products bought and resold in the same condition.

## CAPITAL EXPENDITURES AND GROSS ASSETS

**Capital expenditures.** Under this heading, mining establishments were instructed to report expenditures of the type chargeable to fixed assets accounts for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year. Included in such expenditures totals are expenditures for development and exploration of mineral properties. Excluded are cost of maintenance and repair charged to current operating expense, and cost of land and mineral rights.

The Bureau of the Census estimates of capital expenditures tend to be lower than those published by the Bureau of Economic Analysis. The major source of difference results in the scope of the two series. Census data relate only to mining establishments, whereas the BEA-SEC series relating to mining includes all establishments of mining companies, nonmining as well as mining, but excludes mining establishments of companies that they have classified as chiefly nonmining.

**Gross value of fixed assets.** In addition to reporting capital expenditures during the year, assets data were collected on buildings, other structures, machinery, equipment, capitalized mineral exploration and development, and mineral land and rights for which depreciation, amortization, or depletion accounts are maintained, along with depreciation and/or depletion and retirements during the year. As the Census capital expenditure series differs from the BEA series, the Census gross asset series will differ from similar series based on company level reports; i.e., those appearing in the IRS *Statistics of Income* and the Bureau of the Census *Quarterly Financial Report of Corporations*. (See appendix A for more complete definition of terms.)

## INVENTORIES

The value of end-of-year inventories held by each mining establishment was obtained for 1991 and 1992. For the majority of the mineral industries, separate information was requested for:

1. Mined or quarried products.
2. Supplies, parts, fuels, etc.

A measure of the changes in mined or quarried product inventories from the beginning to the end of each year is essential to the conversion of value of shipments during the

year to value of production. The ratios of inventories to shipments at different times also are used in analysis of trends and business-cycle movements. For the best use of all of these measures, the inventories should be valued in the same prices as the shipments are valued.

Beginning in the 1982 Census of Mineral Industries, all respondents were requested to report their inventories at (the lower of) cost or market prior to adjustment to LIFO cost. This is a change from the 1977 census when respondents were permitted to value their inventories using any generally accepted accounting method.

In using inventory data by stage of production for all industries at the industry level, it should be noted that an item treated as a mined or quarried product by an establishment in one industry may be reported as a raw material by another establishment in a different industry. Such differences are present in the inventory figures by stage of production shown for individual industries, industry groups, and "all mining" which are merely aggregates of figures reported by establishments in specified industries.

## CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. However, the number of companies classified in a given industry is not considered a disclosure, so this item may be given even though other information is withheld. In suppressing figures to avoid disclosing information of individual companies, individual States are given precedence over geographic regions and divisions. This change was initiated in 1977. In prior censuses, the large geographic areas were given precedence. As a result of this change in philosophy, it has become more difficult to produce industry detail for the larger geographic areas, and data for these areas are no longer published. States are given precedence over counties.

In tables showing industry detail, major industry group (two-digit totals take precedence over industry group (three-digit) totals which, in turn, take precedence over individual (four-digit) industries. Similarly, in product tables, four-digit product groupings take precedence over five-digit product classes and the latter over individual seven-digit products.

Such order of precedence was used because:

1. It was considered preferable to show State data for an industry, even at the cost of withholding data for a region. In recent years, there seemed to be more need for and use of data for individual States than for the larger regions especially since many regional development programs encompassed clusters of States different from the standard regions and divisions.
2. By giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

The disclosure analysis for the State statistics in the tables of this report is based on the total value of shipments and receipts and capital expenditures. Whenever the total value of shipments and receipts cannot be shown without disclosing information for individual companies, the complete line has been suppressed, except for capital expenditures. If capital expenditures alone is a disclosure, only total capital expenditures and cost of supplies statistics are suppressed. However, the suppressed data are included in higher level totals.

## SPECIAL TABULATIONS

Special tabulations of data collected in the 1992 Census of Mineral Industries may be requested. The data will be in summary form and subject to the same rules prohibiting disclosure of confidential information (including name, address, kind of business, or other data for individual business establishments or companies) as are the regular publications. Special tabulations are prepared on a cost basis. A request for a cost estimate, as well as exact specifications on the type and format of the data to be provided, should be directed to the Chief, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233-6901.

## ABBREVIATIONS AND SYMBOLS

The following abbreviations and symbols are used in this publication:

—	Represents zero.
(D)	Withheld to avoid disclosing data for individual companies; data are included in higher level totals.
(NA)	Not available.
(NC)	Not comparable.
(S)	Withheld because estimate did not meet publication standards.
(X)	Not applicable.
(Z)	Less than half the unit shown.
n.e.c.	Not elsewhere classified.
n.s.k.	Not specified by kind.
r	Revised.
SIC	Standard Industrial Classification.

Other abbreviations, such as lb, gal, yd, and bbl, are used in the customary sense.

1–5. Industry-Product Analysis—Summary of Industry Shipments and Receipts and Net Shipments of Primary Products: 1992 .....	26
1–6. Major Group Statistics by Type of Company Ownership and Legal Form of Organization: 1992 .....	26
1–7. Employment at Auxiliaries and Related Facilities by Industry Group and Industry: 1992 and 1987 .....	28
1–8. Selected Statistics for Nonproducing Establishments by Industry Group and Industry: 1992 and 1987 .....	29

### CHAPTER 2. GEOGRAPHIC AREA STATISTICS

2–1. Historical Statistics for States and Offshore Areas: 1992 and Earlier Census Years .....	30
2–2. Summary Statistics for States and Offshore Areas: 1992 .....	35
2–3. Number of Mineral Establishments by Employment-Size Class for States and Offshore Areas: 1992 .....	41
2–4. Employment at Auxiliaries and Related Facilities for Selected States: 1992 and 1987 .....	41
2–5. Selected Statistics by Type of Operation for States and Offshore Areas: 1992 .....	42

### APPENDIXES

A. Explanation of Terms .....	A-1
B. Industry Descriptions .....	B-1
C. Authority for Census: Title 13, United States Code .....	C-1
D. Alphabetic Index of Products and Services of Mineral Establishments .....	D-1
E. Report Forms .....	E-1

<sup>1</sup>Beginning with 1967, data for single-establishment companies without paid employees were excluded from the census.

<sup>2</sup>Represents net value of shipments and receipts.

<sup>3</sup>Includes gross shipments for ferroalloy ores and metallic ores, n.e.c. In 1963, the difference between gross and net shpmnts for these industries was about \$7.6 million.

**Table 1-2. Industry Group Statistics for Selected States and Offshore Areas: 1992 and 1987—Con.**

[Data in this table are comparable to those published in table 2 of the industry series which has data for four-digit industries by State. These data may differ slightly from those in the industry series due to minor corrections identified after the industry series was issued. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

SIC code	Industry group and geographic area	1992										1987			
		Establishments during year		All employees		Production, development, and exploration workers			Value added by mining (million dollars)	Cost of supplies used, purchased machinery installed, etc. (million dollars)	Value of shipments and receipts (million dollars)	Capital expenditures (million dollars)	All employees <sup>2</sup> (1,000)		
		E1	Total (number)	With 20 employees or more (number)	Number <sup>2</sup> (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)

**Table 1-2. Industry Group Statistics for Selected States and Offshore Areas: 1992 and 1987—Con.**

[Data in this table are comparable to those published in table 2 of the industry series which has data for four-digit industries by State. These data may differ slightly from those in the industry series due to minor corrections identified after the industry series was issued. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes.]

SIC code	Industry group and geographic area	1992											1987	
		Establishments during year		All employees		Production, development, and exploration workers			Value added by mining (million dollars)	Cost of supplies used, purchased machinery installed, etc. (million dollars)	Value of shipments and receipts (million dollars)	Capital expenditures (million dollars)	All employees <sup>2</sup> (1,000)	Value added by mining (million dollars)
		E1	Total (number)	With 20 employees or more (number)	Number <sup>2</sup> (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)

<sup>1</sup>Some payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate statistics for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time data were tabulated. The following symbols are shown where estimated data based on administrative-record data account for 10 percent or more of figures shown: E1–10 to 19 percent; E2–20 to 29 percent; E3–30 to 39 percent; E4–40 to 49 percent; E5–50 to 59 percent; E6–60 to 69 percent; E7–70 to 79 percent; E8–80 to 89 percent; E9–90 percent or more.

<sup>2</sup>States with 100 employees or more are shown. Some statistics are withheld to avoid disclosing data for individual companies. If employment is 100 or more, number of establishments is shown and employment-size range is indicated by one of the following symbols: C—100 to 249 employees; E—250 to 499 employees; F—500 to 999 employees; G—1,000 to 2,499 employees; H—2,500 to 4,999 employees; I—5,000 to 9,999 employees.

<sup>3</sup>Represents offshore areas not associated with a State.

**Table 1–3a. Summary Statistics by Major Group and Industry: 1992**

[Data in this table are comparable to those published in table 3a of the industry series which has data by four-digit industry. These data may differ slightly from those in the industry series due to minor corrections identified after the industry series was issued. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Payroll for year .....	mil dol..	24 198.6	2 110.9	348.2	550.0
See footnotes at end of table.					

**Table 1–3a. Summary Statistics by Major Group and Industry: 1992—Con.**

[Data in this table are comparable to those published in table 3a of the industry series which has data by four-digit industry. These data may differ slightly from those in the industry series due to minor corrections identified after the industry series was issued. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Item	All mineral industries	Total	Major Group 10, Metal Mining		
			Industry 1011, Iron Ores	Industry 1021, Copper Ores	Industry 1031, Lead and Zinc Ores
Production, development, and exploration workers:					
Average for year .....	1,000..	415.4	42.0	7.2	11.9
March .....	1,000..	417.7	42.5	7.4	12.0
May .....	1,000..	419.2	42.6	7.4	11.9
August .....	1,000..	417.1	41.7	6.5	11.9
November .....	1,000..	408.8	41.3	7.4	11.8
Hours .....	millions..	876.3	88.4	14.9	24.6
Wages .....	mil dol..	13 832.6	1 540.2	274.2	405.2
Supplemental labor costs not included in payroll .....	mil dol..	5 500.8	528.1	103.4	136.7
Legally required expenditures, including Social Security contributions .....	mil dol..	2 413.4	222.0	43.4	55.3
Payments for voluntary programs .....	mil dol..	3 087.4	306.0	60.0	81.4
Value added by mining .....	mil dol..	113 621.3	6 724.0	985.4	2 169.4
Cost of supplies .....	mil dol..	65 652.9	4 720.2	782.3	1 721.6
Supplies used, minerals received, and purchased machinery					
installed .....	mil dol..	48 740.8	3 064.2	401.8	1 229.7
Resales .....	mil dol..	558.6	1.7	(D)	137.9
Purchased fuels consumed .....	mil dol..	2 729.2	300.8	86.6	61.4
Purchased electric energy:					
Quantity .....	mil kWh..	77 063.3	18 562.2	7 287.5	6 594.9
Cost .....	mil dol..	3 638.8	798.3	267.9	316.7
Electric energy generated less sold .....	mil kWh..	3 702.9	394.1	—	(D)
Contract work .....	mil dol..	9 985.6	555.1	(D)	113.7
Cost of purchased communication services .....	mil dol..	172.0	8.5	1.3	.5
Value of shipments and receipts .....	mil dol..	162 095.4	9 864.4	1 714.8	3 374.9
Value of resales .....	mil dol..	639.8	1.9	(D)	—
Inventories, end of 1991 .....	mil dol..	7 927.2	1 387.9	225.1	339.2
Mined or quarried products .....	mil dol..	4 085.0	843.8	110.2	186.5
Supplies, parts, fuels, etc. ....	mil dol..	3 842.3	544.1	114.9	152.7
Inventories, end of 1992 .....	mil dol..	7 930.4	1 381.1	221.2	360.8
Mined or quarried products .....	mil dol..	4 259.8	854.7	111.6	210.1
Supplies, parts, fuels, etc. ....	mil dol..	3 670.6	526.4	109.6	150.7
Gross book value of depreciable assets (usually original cost) at beginning of year <sup>1</sup> .....	mil dol..	87 641.5	18 181.0	3 812.6	3 893.7
Buildings and other structures, except land <sup>2</sup> .....	mil dol..	10 886.7	3 187.4	1 425.8	445.9

<sup>1</sup>Includes data for separately operated auxiliary establishments and establishments that were not possible to classify based on information available.

**Table 1–4a. Major Group Statistics by Employment Size of Establishment: 1992**

[Data in this table are comparable to those published in table 4 of the industry series which has data by four-digit industry. These data may differ slightly from those in the industry series due to minor corrections identified after the industry series was issued. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Major group and employment-size class	Establishments during year (number)	All employees		Production, development, and exploration workers			Value added by mining (million dollars)	Cost of supplies used, purchased machinery installed, etc. (million dollars)	Value of shipments and receipts (million dollars)	Capital expenditures (million dollars)

Note: Data shown as (D) are included in underscored figures above.

<sup>1</sup>Some payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate statistics for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time data were tabulated. The following symbols are shown where estimated data based on administrative-record data account for 10 percent or more of figures shown: E1–10 to 19 percent; E2–20 to 29 percent; E3–30 to 39 percent; E4–40 to 49 percent; E5–50 to 59 percent; E6–60 to 69 percent; E7–70 to 79 percent; E8–80 to 89 percent; E9–90 percent or more.

<sup>2</sup>Some payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate statistics for these small establishments. Data are also included in respective size classes shown.

**Table 1–5. Industry–Product Analysis—Summary of Industry Shipments and Receipts and Net Shipments of Primary Products: 1992**

[Million dollars. An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as resales or contract work. Columns A–E show this product pattern for an industry. Extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F–H. Data in this table are comparable to those published in table 5 of the industry series. These data may differ slightly from those in the industry series due to minor corrections identified after the industry series was issued. For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

SIC code	Industry	Value of shipments and receipts					Value of net shipments of primary products or services		
		Total	Primary products	Secondary products	Receipts for services	Products purchased and resold without further processing	Total produced in all industries	Produced in this industry	Produced in other industries

<sup>1</sup>Represents sum of direct-shipping ores, iron ore concentrates for consumption, and iron agglomerates.

<sup>2</sup>Represents gross shipments less minerals received for preparation.

<sup>3</sup>Represents gross shipments excluding coal not specified by kind and less coal received for preparation.

<sup>4</sup>Represents raw coal for use without preparation plus prepared coal.

<sup>5</sup>Represents net natural gas liquids only.

<sup>6</sup>Represents net shipments obtained by subtracting minerals received for preparation from gross shipments.

**Table 2–2. Summary Statistics for States and Offshore Areas: 1992—Con.**

[For meaning of abbreviations and symbols, see introductory text. For explanation of terms, see appendixes]

Item	Vermont	Virginia	Washington	West Virginia	Wisconsin	Wyoming	Offshore areas
Establishments during year .....	60	577	194	1 163	167	718	55
With 0 to 19 employees .....	50	349	163	823	139	587	36
With 20 to 99 employees .....	8	208	26	265	24	97	8
With 100 employees or more .....	2	20	5	75	4	34	11
All employees:							
Average for year .....	1,000..	.7	15.9	3.2	2.3	16.0	5.5
Payroll for year .....	mil dol..	20.5	546.5	112.5	1 330.8	79.2	643.5
Production, development, and exploration workers:							
Average for year .....	1,000..	.5	12.7	2.4	27.4	1.6	12.5
March .....	1,000..	.5	13.1	2.4	27.3	1.4	12.3
May .....	1,000..	.5	13.3	2.5	27.5	1.7	12.5
August .....	1,000..	.5	12.4	2.5	27.6	1.8	12.7
November .....	1,000..	.5	11.9	2.3	27.4	1.6	12.5
Hours .....	millions..	1.0	25.8	5.1	58.6	3.7	25.5
Wages .....	mil dol..	13.5	414.2	83.1	1 097.1	54.6	483.9
Supplemental labor costs not included in payroll .....	mil dol..	4.8	183.9	32.6	587.5	20.7	169.4
Legally required expenditures, including Social Security contributions .....	mil dol..	1.9	75.0	12.7	256.4	9.5	70.8
Payments for voluntary programs .....	mil dol..	3.0	108.9	19.8	331.1	11.2	98.7
Value added by mining .....	mil dol..	77.7	1 601.8	310.5	4 212.4	251.2	5 965.6
Cost of supplies .....	mil dol..	43.8	1 439.3	144.6	3 163.1	122.5	3 063.5
Supplies used, minerals received, and purchased machinery installed .....	mil dol..	30.5	1 070.2	95.9	2 233.7	84.5	2 504.9
Resales .....	mil dol..	(D)	35.2	4.2	67.5	4.0	36.4
Purchased fuels consumed .....	mil dol..	2.7	42.6	14.3	99.7	16.1	125.0
Purchased electric energy:							
Quantity .....	mil kWh..	111.9	1 481.0	330.3	2 900.0	174.9	4 187.2
Cost .....	mil dol..	7.8	64.4	11.1	122.0	8.2	156.9
Electric energy generated less sold .....	mil kWh..	(D)	(D)	(D)	(D)	.5	300.8
Contract work .....	mil dol..		226.9	19.0	640.2	9.7	240.2
Cost of purchased communication services .....	mil dol..	(D)	1.9	.7	4.5	.5	6.4
Value of shipments and receipts .....	mil dol..	110.8	2 890.9	420.2	6 854.9	322.7	8 424.1
Value of resales .....	mil dol..	(D)	49.0	5.7	80.4	4.9	61.0
Inventories, end of 1991 .....	mil dol..	12.3	180.3	30.4	334.3	34.1	252.6
Mined or quarried products .....	mil dol..	8.8	130.2	14.0	204.9	27.0	110.1
Supplies, parts, fuels, etc. .....	mil dol..	3.4	50.1	16.4	129.3	7.1	142.5
Inventories, end of 1992 .....	mil dol..	13.2	166.1	34.1	358.0	34.8	252.4
Mined or quarried products .....	mil dol..	9.6	119.0	16.6	221.1	28.0	109.0
Supplies, parts, fuels, etc. .....	mil dol..	3.6	47.0	17.6	136.9	6.8	143.4
Capital expenditures during year (except land and mineral rights) .....	mil dol..	10.8	150.2	35.0	520.6	51.0	605.0
New capital expenditures during year .....	mil dol..	10.3	108.5	17.8	332.1	33.4	224.4
Buildings and other structures, except land .....	mil dol..	.4	8.0	1.3	20.5	2.8	22.5
Machinery and equipment .....	mil dol..	9.9	100.5	16.5	311.5	30.6	201.9

<sup>1</sup>Includes data for separately operated auxiliary establishments and establishments that were not possible to classify based on information available.

<sup>2</sup>Represents offshore areas not associated with a State.

---

## Appendix A. Explanation of Terms

---

**Employment and related items.** The report forms requested separate information on production, development, and exploration workers for a specific payroll period within each quarter of the year and on other employees as of the payroll period which included the 12th of March.

**All employees.** This item includes all full-time and part-time employees on the payrolls of mining establishments during any part of the pay period which included the 12th of the months specified on the report form. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Also included are employees working for miners paid on a per ton, car, or yard basis. Excluded are employees at the mine but on the payroll of another employer (such as employees of contractors) and employees at company stores, boardinghouses, bunk-houses, and recreational centers. Also excluded are members of the Armed Forces and pensioners carried on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms are excluded.

**Production, development, and exploration workers.** This item includes employees (up through the working-supervisor level) engaged in manual work (using tools, operating machines, hauling materials, loading and hauling products out of the mine in mine cars or trucks, and caring for mines, plants, mills, shops, or yards). Included are exploration work, mine development, storage, shipping, maintenance, repair, janitorial, and guard services, auxiliary production for use at establishments (such as power plant), recordkeeping, and other services closely associated with these production and development operations at the establishment covered by the report. Gang and straw bosses and supervisors who performed manual labor are included, as are employees paid on either a time- or piece-rate basis. Also included are miners paid on a per ton, car, or yard basis and persons engaged by them and paid out of the total amount received by these miners. In addition, other employees at the establishment but not on its payroll are included if paid directly through its own employees, such as superintendents and supervisors. The payments received by these types of employees are included as part of the establishments payroll. Employees above the working-supervisor level are excluded from this category.

**All other employees.** This item covers nonproduction employees of the establishment including those engaged

in the following activities: supervision above the working-supervisor level, sales, highway trucking (by employees not entering mines or pits), advertising, credit, collection, clerical and routine office functions, executive, purchasing, financing, legal, personnel (including cafeteria and medical), professional (such as engineers and geologists), and technical activities. Also included are employees on the payroll of the establishment engaged in the construction of major additions or alterations to the plant and utilized as a separate work force. (Workers engaged in regular maintenance and repair operations are not included here but are classified as production, development, and exploration workers.)

**Separately operated auxiliary establishments employees.** This item includes employment at separate central administrative offices or auxiliary units of multiestablishment companies and at those offices or units servicing more than one establishment during the payroll period which included March 12. Establishments are classified on the basis of the industry or principal industry served. Employees at an office located at or near the mining establishment are usually included in the mine report.

**All employees, average for year.** The 1992 census report form requested employment figures for production, development, and exploration workers for four selected pay periods (mid-March, May, August, and November). For all other employees, only a mid-March figure was requested. The annual average is an average of the four monthly figures for production, development, and exploration workers plus the March figure for all other employees. This approach was used to simplify the schedule format and lighten the reporting burden of respondents, since it was found that the average of these selected pay periods closely approximates, for most industries, the average employment for the year that would be obtained from 12 monthly pay periods.

**Payroll.** This item includes the gross earnings of all employees on the payroll of mining establishments paid in the calendar year 1992. It includes all forms of compensation such as salaries, wages, commissions, payments received on a ton, car, or yard basis, dismissal pay, bonuses, vacation and sick leave pay, employee contributions to pension plans (such as 401(K) plan), and compensation in kind, prior to such deductions as employees'

Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of corporations; it excludes payments to proprietors or partners of unincorporated concerns, and payments to members of Armed Forces and pensioners carried on the active payroll of mining establishments. Also excluded are royalty payments to unions and costs of smelting, explosives, fuses, electric cap lamps, and mine supplies used in production, development, and exploration work but charged to employees and deducted from their wages.

As in the case of employment and establishment figures, the annual payrolls of separate auxiliary establishments of multiestablishment companies are included in the totals for individual industries and for States.

**Production-, development-, and exploration-worker hours.** This item represents all hours that production, development, and exploration workers worked, both on active days during which there was production or development work and on inactive days when only security guards, inspectors, repair persons, and other maintenance persons were on duty. It includes all hours worked or paid for at the mining operations, except hours paid for vacations, holidays, or sick leave, when the employee was not at the establishment. Included are actual overtime hours, not straight time equivalent hours. Hours of working proprietors or partners and employees of contractors are excluded.

**Supplemental labor costs.** This item represents employer's cost for fringe benefits not included in payrolls.

*Legally required expenditures, including Social Security contributions.* This cost includes employer contributions for all programs required under Federal and State legislation, such as Federal Old Age and Survivors' Insurance, unemployment compensation, and worker's compensation. Also included are legally required State temporary disability payments.

*Payments for voluntary programs.* Included in this cost are payments resulting from union negotiated contracts and all employer payments of insurance premiums on hospital and medical plans, life insurance premiums, and premiums on supplementary accident and sickness insurance. For programs supported by joint employer-employee contributions, only the employer payments are included. Also included are payments or allocations on all pension plans regardless of methods of administration, supplemental unemployment compensation plans, welfare plans, stock purchase plans in which the employer payment is not subject to withholding tax, and deferred profit sharing plans.

**Value added by mining.** This measure of mining activity is derived by subtracting the cost of supplies, minerals received for preparation, purchased machinery installed, purchased fuel, purchased electricity, and contract work

from the sum of the value of shipments (mining products plus receipts for services rendered) and total capital expenditures. This statistic avoids the duplication in value of shipments and receipts which results from the use of products of some establishments as supplies, energy sources, or materials by others. Moreover, it provides a measure of value added not only in mineral production but also in the development of mineral properties. For these reasons, it is considered to be the best value measure for comparing the relative economic importance of mining among industries and geographic areas.

**Cost of supplies used, purchased machinery installed, etc.** Besides supplies used and purchased machinery installed, this cost includes fuels and electric energy used and contract work done by others for each establishment. It includes charges to both the current and capital accounts. It also includes the cost of items used during 1992 whether they were purchased, withdrawn from inventories, or received from other establishments of the company. For selected supplies and fuels and for electric energy, both quantity and cost data were requested. The cost data refer to direct charges actually paid or payable (after discounts) for items used during the year. Freight charges and other direct charges incurred by the establishment in acquiring the item are included. Companies whose records did not show actual amounts used were asked to approximate use by adding purchases (or receipts) during the year to beginning inventory and subtracting ending inventory. Separate figures were requested for (1) selected supplies used, minerals received for preparation, and purchased machinery installed; (2) electric energy purchased; (3) purchased fuels used for heat, power, or the generation of electricity; (4) contract work done by others; and (5) products bought and resold in the same condition. Supplies and equipment used in mine development, plant expansion, and capitalized repairs, which are chargeable to fixed assets accounts, are included in this item, as are supplies furnished without charge to contractors for use at the mining operation and supplies sold to employees for use at the establishment. Excluded are such costs as advertising, insurance, telephone, and research and consulting services of other establishments or such overhead costs as depreciation charges, rent, interest, and royalties.

**Selected supplies used, minerals prepared, etc.** In addition to the total cost of supplies used, purchased machinery installed, etc., which every establishment was required to report, information also was collected on the consumption of major supplies used in mining. These inquiries were restricted to supplies which were important parts of the cost of production, exploration, and development of a particular industry and for which cost information was available. On report forms for most mineral industries (except the contract services and the crude petroleum and natural gas industries), a uniform inquiry was included on minerals prepared at the reported establishments. Figures were obtained on crude minerals mined at the establishment (quantity), received from other establishments of the

company or purchased from others (quantity and cost), and received for preparation on a custom or toll basis (quantity and estimated value). Establishments consuming less than a specified amount (usually \$25,000) were not required to report the cost of a supply. For small establishments for which administrative records were used, the cost of supplies was included in "not specified by kind."

**Value of shipments and receipts.** The amounts shown as value of shipments and receipts for each industry and for individual products or classes of products are the net selling values, f.o.b. mine or plant after discounts and allowances, excluding freight charges and excise taxes. Shipments includes all products physically shipped from the establishment during 1992, including material withdrawn from stockpiles and products shipped on consignment, whether or not sold in 1992. Prepared material or concentrates includes preparation from ores mined at the same establishment, purchased, received from other operations of the same company, or received for milling on a custom or toll basis. For products transferred to other establishments of the same company or prepared on a custom basis, companies were requested to report the estimated value, not merely the cost of producing the items. Multiestablishment companies were asked to report value information for each establishment as if it were a separate economic unit. They were instructed to report the value of all products transferred to other plants of the company at their full economic value; to include, in addition to direct cost of production, a reasonable proportion of company overhead and profits.

For all establishments classified in an industry, value of shipments and receipts includes (1) the value of all primary products of the industry, (2) the value of secondary products which are primary to other industries, (3) the receipts for contract work done for others, except custom milling, and (4) the value of products purchased and resold without further processing. Receipts for custom milling are not included to avoid duplication with the value of custom milled ores included in an industry's primary and secondary products. Some duplication exists in industry and industry group totals because of the inclusion of materials transferred from one establishment to another for mineral preparation or resale.

**Shipments of individual products.** In the 1992 Census of Mineral Industries, information was collected on output for about 150 individual mineral products. In general, the shipments figures of the 1992 and 1987 minerals censuses were confined to separate totals for each crude and each prepared mineral. When shipments were significant, separate figures also were obtained on crude minerals going to preparation plants and those going to consumers.

Figures were collected on both quantity and value of shipments. Shipments includes commercial shipments and transfers of products to other operations of the same company. For products that are used to a significant extent within the same establishment for power or heat, and for

minerals mined and prepared in the same establishment, total production figures or separate data on production for such uses were collected. Typically, production also was collected for products for which there was usually significant differences between total production and total shipments because of stock changes.

For service industries, the amount received or due for services performed during 1992 was collected as a measure of output. For mine operators who also perform services, the amount received for such services was added to the total value of products shipped to determine total value of shipments and receipts for each establishment.

**Capital expenditures.** This item covers expenditures made during the year for development and exploration of mineral properties, for new construction, and for purchased machinery chargeable to fixed assets accounts of the mineral establishment. They are the type for which depreciation, depletion, or Office of Minerals Exploration accounts are ordinarily maintained. Capital expenditures during 1992 were determined as "additions completed during the year plus construction in progress at the end of the year minus construction in progress at the beginning of the year." Reported capital expenditures include work done on contract, as well as by the mine forces. Expenditures for machinery and equipment include those made for replacement purposes, as well as those for additions to capacity. Excluded from these expenditures were costs of maintenance and repairs charged as current operating expense and expenditures for land and mineral rights.

Whenever applicable, separate figures were provided for expenditures for development and exploration of mineral property, construction of preparation plants and other construction, new machinery and equipment, used plant, and used equipment acquired from others.

**Gross value of depreciable assets.** Assets data were collected on buildings, other structures, machinery, equipment, capitalized mineral exploration and development, and mineral land and rights for which depreciation, amortization, or depletion accounts are maintained. The values shown represent the actual cost of assets at the time they were acquired, including all costs incurred in making the assets usable (such as transportation and installation costs). The data were collected for the beginning and end of the year. Assets at the beginning of the year plus new and used capital expenditures minus retirements should equal assets at the end of the year. For new construction or other improvement projects in progress but not completed by the end of the year, the cumulative capital expenditures were included in the beginning- and end-of-year assets figures.

**Retirements.** This item represents the gross value of depreciable assets sold, retired, scrapped, destroyed, abandoned, etc., during 1992. The values shown are the acquisition costs of the retired assets. This item also

includes the value of assets (at acquisition cost rather than current market value) transferred to other establishments of the same company.

**Depreciation.** This item shows the reduction in value of depreciable assets brought about through use, gradual obsolescence, or the effect of the elements (decay or corrosion) during the year. Included are charges against assets acquired or completed during the year.

**Rental payments.** This item consists of rental payments made to other companies for use of such depreciable assets as buildings, other structures, machinery, and equipment. It does not include payments made to the parent company or another subsidiary of the parent company for the use of buildings and equipment owned by the parent company or its subsidiary. The value of such company-owned assets is included in the gross value of depreciable assets.

Rented equipment is reported according to the type of lease negotiated with the lessor. If the lease qualified as an "operating lease" the periodic payments made to the producer or the lessor are reported in the rental section. However, if the leasing arrangement met the criteria set down by the Financial Accounting Standards Board for a "capital lease," the original cost or market value of the equipment or building is reported as a value of fixed assets and not as rental payments.

**Current account expenditures.** This item includes all expenses for mineral properties, exploration, and development charged to current accounts. This includes all supplies, machinery, equipment, parts, fuels, power, etc., used for development or exploration and charged to current

operating expenses. Also included are royalty payments, acquisition costs for mineral land and rights which were not capitalized, and the cost of maintenance and repairs associated with exploration or development activity and charged to current accounts.

**Inventories.** This item includes inventories of mined or quarried products and supplies, parts, fuels, etc., at the beginning and end of the year. Included as mined or quarried products are stockpiles of products ready for shipment and stocks of raw products awaiting treatment or beneficiation. Beginning with the 1982 Census of Mineral Industries, all respondents were requested to report their inventories at (the lower of) cost or market prior to adjustment to LIFO cost. This is a change from the 1977 census in which respondents were permitted to value their inventories using any generally accepted accounting method.

**Fuels and electric energy used.** This item includes the quantity and cost of fuels and electric energy used in mining. For most industries, separate quantity and cost figures are shown for purchased coal, distillate fuel oil, residual fuel oil, gas, gasoline, and electric energy, and a cost figure is shown for "other fuels" (see table 7b of the industry series). Data also were obtained on the quantity of fuels and electric energy produced and consumed at the same establishment. These data are shown for coal, crude petroleum, and natural gas used at the producing establishments for heat and power, and for electric energy generated and used at the same mining operations. For electric energy, the quantity generated and used is approximated by subtracting the quantity of electric energy sold from the total quantity generated (excluding generating station use).

---

# Appendix B.

# Industry Descriptions

---

## 10 METAL MINING

This major group includes establishments primarily engaged in mining, developing mines, or exploring for metallic minerals (ores). These ores are valued chiefly for the metals contained, to be recovered for use as such or as constituents of alloys, chemicals, pigments or other products. This major group also includes all ore dressing and beneficiating operations, whether performed at mills operated in conjunction with the mines served or at mills, such as custom mills, operated separately. These include mills which crush, grind, wash, dry, sinter, calcine, or leach ore, or perform gravity separation or flotation operations. Magnesite and brucite operations are classified in industry 1459, and crushed dolomite operations are classified in industry 1422. Smelters and refineries are classified in Manufacturing, major group 33, and establishments engaged in producing primary magnesium metal are classified in Manufacturing, industry 3339. The operation of brine wells or sea water plants for the production of magnesium is classified in Manufacturing, major group 28.

When performed by operators of the properties, exploration under preliminary phases of operation should be classified according to the type of ore expected to be found. Exploration performed on a contract or fee basis is classified in industry 1081.

### 101 IRON ORES

#### 1011 Iron Ores

Establishments primarily engaged in mining, beneficiating, or otherwise preparing iron ores and manganiferous ores valued chiefly for their iron content. This industry includes production of sinter and other agglomerates except those associated with blast furnace operations. Blast furnaces primarily engaged in producing pig iron from iron ore are classified in Manufacturing, industry 3312.

### 102 COPPER ORES

#### 1021 Copper Ores

Establishments primarily engaged in mining, milling, or otherwise preparing copper ores. This industry also includes establishments primarily engaged in the recovery of copper concentrates by precipitation and leaching of copper ore.

Establishments primarily engaged in the recovery of refined copper by leaching copper concentrates are classified in Manufacturing, major group 33.

### 103 LEAD AND ZINC ORES

#### 1031 Lead and Zinc Ores

Establishments primarily engaged in mining, milling, or otherwise preparing lead ores, zinc ores, or lead-zinc ores.

### 104 GOLD AND SILVER ORES

#### 1041 Gold Ores

Establishments primarily engaged in mining gold ores from lode deposits or in the recovery of gold from placer deposits by any method. In addition to ore dressing methods such as crushing, grinding, gravity concentration, and froth flotation, this industry includes amalgamation, cyanidation, and the production of bullion at the mine, mill, or dredge site.

#### 1044 Silver Ores

Establishments primarily engaged in mining, milling, or otherwise preparing silver ores. The production of bullion at the mine or mill site is included.

### 106 FERROALLOY ORES, EXCEPT VANADIUM

#### 1061 Ferroalloy Ores, Except Vanadium

Establishments primarily engaged in mining, milling, or otherwise preparing ferroalloy ores, except vanadium. The mining of manganiferous ores valued chiefly for their iron content is classified in industry 1011. Establishments primarily engaged in mining vanadium ore are classified in industry 1094, and those mining titanium ore are classified in industry 1099.

### 108 METAL MINING SERVICES

#### 1081 Metal Mining Services

Establishments primarily engaged in performing metal mining services for others on a contract or fee basis, such as the removal of overburden, strip mining for metallic ores,

prospect and test drilling, and mine exploration and development. Establishments which have complete responsibility for operating mines for others on a contract or fee basis are classified according to the product mined rather than as metal mining services. Establishments primarily performing hauling services are classified in Division E, Transportation.

## **109 MISCELLANEOUS METAL ORES**

### **1094 Uranium-Radium-Vanadium Ores**

Establishments primarily engaged in mining, milling, or otherwise preparing uranium-radium-vanadium ores.

### **1099 Miscellaneous Metal Ores, Not Elsewhere Classified**

Establishments primarily engaged in mining, milling, or otherwise preparing miscellaneous metal ores, not elsewhere classified. Production of metallic mercury by furnacing or retorting at the mine site is also included.

## **12 COAL MINING**

This major group includes establishments primarily engaged in producing bituminous coal, anthracite, and lignite. Included are mining operations and preparation plants (also known as cleaning plants and washeries), whether or not such plants are operated in conjunction with mine sites. The production of coal fuel briquettes and packaged fuel is classified in Manufacturing, industry 2999. Establishments primarily engaged in the production of gas and hydrocarbon liquids from coal at the mine site are classified in major group 13.

### **122 BITUMINOUS COAL AND LIGNITE MINING**

#### **1221 Bituminous Coal and Lignite Surface Mining**

Establishments primarily engaged in producing bituminous coal or lignite at surface mines or in developing bituminous coal or lignite surface mines. This industry includes auger mining, strip mining, culm bank mining, and other surface mining, by owners or lessees or by establishments which have complete responsibility for operating bituminous coal and lignite surface mines for others on a contract or fee basis. Bituminous coal and lignite preparation plants performing such activities as cleaning, crushing, screening or sizing are included if operated in conjunction with a mine site, or if operated independently of any type of mine.

#### **1222 Bituminous Coal Underground Mining**

Establishments primarily engaged in producing bituminous coal in underground mines or in developing bituminous coal underground mines. This industry includes underground mining by owners or lessees or by establishments

which have complete responsibility for operating bituminous coal underground mines for others on a contract or fee basis. Bituminous coal preparation plants performing such activities as cleaning, crushing, screening or sizing are included if operated in conjunction with a mine. Independent bituminous coal preparation plants are classified in industry 1221.

## **123 ANTHRACITE MINING**

### **1231 Anthracite Mining**

Establishments primarily engaged in producing anthracite or in developing anthracite mines. All establishments in the United States that are classified in this industry are located in Pennsylvania. This industry includes mining by owners or lessees or by establishments which have complete responsibility for operating anthracite mines for others on a contract or fee basis. Also included are anthracite preparation plants, whether or not operated in conjunction with a mine.

## **124 COAL MINING SERVICES**

### **1241 Coal Mining Services**

Establishments primarily engaged in performing coal mining services for others on a contract or fee basis. Establishments which have complete responsibility for operating mines for others on a contract or fee basis are classified according to the product mined, rather than as mining services.

## **13 OIL AND GAS EXTRACTION**

This major group includes establishments primarily engaged in: (1) producing crude petroleum and natural gas; (2) extracting oil from oil sands and oil shale; (3) producing natural gasoline and cycle condensate; and (4) producing gas and hydrocarbon liquids from coal at the mine site. Types of activities included are exploration, drilling, oil and gas well operation and maintenance, the operation of natural gasoline and cycle plants, and the gasification, liquefaction, and pyrolysis of coal at the mine site. This major group also includes such basic activities as emulsion breaking and desilting of crude petroleum in the preparation of oil and gas customarily done at the field site. Pipeline transportation of petroleum, gasoline, and other petroleum products (except crude petroleum field gathering lines) is classified in Transportation and Public Utilities, major group 46, and of natural gas in major group 49. Establishments primarily engaged in petroleum refining and in the production of lubricating oils and greases are classified in Manufacturing, major group 29.

## **131 CRUDE PETROLEUM AND NATURAL GAS**

### **1311 Crude Petroleum and Natural Gas**

Establishments primarily engaged in operating oil and gas field properties. Such activities may include exploration for crude petroleum and natural gas; drilling, completing,

and equipping wells; operation of separators, emulsion breakers, desilting equipment, and field gathering lines for crude petroleum; and all other activities in the preparation of oil and gas up to the point of shipment from the producing property. This industry includes the production of oil through the mining and extraction of oil from oil shale and oil sands and the production of gas and hydrocarbon liquids through gasification, liquefaction, and pyrolysis of coal at the mine site. Also included are establishments which have complete responsibility for operating oil and gas wells for others on a contract or fee basis. Establishments primarily engaged in performing oil field services for operators on a contract or fee basis are classified in industry group 138.

## **132 NATURAL GAS LIQUIDS**

### **1321 Natural Gas Liquids**

Establishments primarily engaged in producing liquid hydrocarbons from oil and gas field gases. Establishments recovering liquefied petroleum gases incidental to petroleum refining or to the manufacturing of chemicals are classified in Manufacturing, major group 28 or 29. Establishments recovering helium from natural gas are classified in Manufacturing, major group 28.

## **138 OIL AND GAS FIELD SERVICES**

### **1381 Drilling Oil and Gas Wells**

Establishments primarily engaged in drilling wells for oil or gas field operations for others on a contract or fee basis. This industry includes contractors that specialize in spudding in, drilling in, redrilling, and directional drilling.

### **1382 Oil and Gas Field Exploration Services**

Establishments primarily engaged in performing geo-physical, geological, and other exploration services for oil and gas on a contract or fee basis.

### **1389 Oil and Gas Field Services, Not Elsewhere Classified**

Establishments primarily engaged in performing oil and gas field services, not elsewhere classified, for others on a contract or fee basis. Services included are excavating slush pits and cellars; grading, and building of foundations at well locations; well surveying; running, cutting, and pulling casings, tubes, and rods; cementing wells; shooting wells; perforating well casings; acidizing and chemically treating wells; and cleaning out, bailing, and swabbing wells. Establishments which have complete responsibility for operating oil and gas wells for others on a contract or fee basis are classified according to the product extracted rather than as oil and gas field services. Establishments primarily engaged in hauling oil and gas field supplies and

equipment are classified in Division E, Transportation and Public Utilities. Establishments primarily engaged in oil and gas field machine shop work are classified in Manufacturing, industry 3599.

## **14 MINING AND QUARRYING OF NONMETALLIC MINERALS, EXCEPT FUELS**

This major group includes establishments primarily engaged in mining or quarrying, developing mines, or exploring for nonmetallic minerals, except fuels. Also included are certain well and brine operations, and primary preparation plants, such as those engaged in crushing, grinding, washing, or other concentration. Establishments primarily engaged in manufacturing cement are classified in industry 3241; those engaged in manufacturing lime are classified in industry 3274; those engaged in cutting and finishing stone and stone products are classified in industry 3281; and those engaged in manufacturing brick and other structural clay products are classified in industry group 325. Establishments primarily engaged in crushing, pulverizing, or otherwise treating earths, rocks, and minerals mined in industry group 145 or 149; or barite mined in Industry 1479, not in conjunction with mining or quarrying operations, are classified in Manufacturing, industry 3295; establishments primarily engaged in these activities in conjunction with mines or quarries are classified in Mining. Establishments primarily engaged in crushing, pulverizing, or otherwise treating other nonmetallic minerals are classified in Mining, whether or not they are operated in conjunction with mines. Establishments primarily engaged in manufacturing other stone, clay, glass, and concrete products from minerals mined at the same establishment are classified in Manufacturing, major group 32, when separate reports are not available for the mining and manufacturing activities.

## **141 DIMENSION STONE**

### **1411 Dimension Stone**

Establishments primarily engaged in mining or quarrying dimension stone. Also included are establishments engaged in producing rough blocks and slabs. Establishments primarily engaged in mining dimension soapstone or in mining or quarrying and shaping grindstones, pulpstones, millstones, burrstones, and sharpening stones are classified in industry 1499. Establishments primarily engaged in dressing (shaping, polishing, or otherwise finishing) blocks and slabs are classified in Manufacturing, industry 3281. Nepheline syenite mining operations are classified in industry 1459.

## **142 CRUSHED AND BROKEN STONE, INCLUDING RIPRAP**

### **1422 Crushed and Broken Limestone**

Establishments primarily engaged in mining or quarrying crushed and broken limestone, including related rocks, such as dolomite, cement rock, marl, travertine, and calcareous tufa. Also included are establishments primarily

engaged in the grinding or pulverizing of limestone, but establishments primarily engaged in producing lime are classified in Manufacturing, industry 3274.

#### **1423 Crushed and Broken Granite**

Establishments primarily engaged in mining or quarrying crushed and broken granite, including related rocks, such as gneiss, syenite, and diorite.

#### **1429 Crushed and Broken Stone, Not Elsewhere Classified**

Establishments primarily engaged in mining or quarrying crushed and broken stone, not elsewhere classified.

### **144 SAND AND GRAVEL**

#### **1442 Construction Sand and Gravel**

Establishments primarily engaged in operating sand and gravel pits and dredges, and in washing, screening, or otherwise preparing sand and gravel for construction uses.

#### **1446 Industrial Sand**

Establishments primarily engaged in operating sand pits and dredges, and in washing, screening, and otherwise preparing sand for uses other than construction, such as glassmaking, molding, and abrasives.

### **145 CLAY, CERAMIC, AND REFRactory MINERALS**

Establishments primarily engaged in mining, milling, or otherwise preparing clays and refractory minerals. Mines operated in conjunction with plants manufacturing cement, brick or other structural clay products, or pottery and related products, are included in this industry when separate reports are available. Establishments primarily engaged in grinding, pulverizing, or otherwise treating clay, ceramic, and refractory minerals not in conjunction with mining or quarrying operations are classified in Manufacturing, industry 3295.

#### **1455 Kaolin and Ball Clay**

Establishments primarily engaged in mining, milling, or otherwise preparing kaolin or ball clay, including china clay, paper clay, and slip clay.

#### **1459 Clay, Ceramic, and Refractory Minerals, Not Elsewhere Classified**

Establishments primarily engaged in mining, milling, or otherwise preparing clay, ceramic, or refractory minerals, not elsewhere classified. Establishments producing clay in conjunction with the manufacture of refractory or structural clay and pottery products are classified in Manufacturing, major group 32.

### **147 CHEMICAL AND FERTILIZER MINERAL MINING**

#### **1474 Potash, Soda, and Borate Minerals**

Establishments primarily engaged in mining, milling, or otherwise preparing natural potassium, sodium, or boron compounds. Establishments primarily engaged in mining common salt are classified in industry 1479.

#### **1475 Phosphate Rock**

Establishments primarily engaged in mining, milling, drying, calcining, sintering, or otherwise preparing phosphate rock, including apatite. Establishments primarily engaged in the production of phosphoric acid, superphosphates, or other manufactured phosphate compounds or chemicals are classified in Manufacturing, major group 28.

#### **1479 Chemical and Fertilizer Mineral Mining, Not Elsewhere Classified**

Establishments primarily engaged in mining, milling, or otherwise preparing chemical or fertilizer mineral raw materials, not elsewhere classified. Establishments primarily engaged in milling, grinding, or otherwise preparing barite not in conjunction with mining or quarry operations are classified in Manufacturing, industry 3295; similar establishments preparing other minerals of this industry are included here. Establishments primarily engaged in producing salt by evaporation of sea water or brine are classified in Manufacturing, industry 2899.

### **148 NONMETALLIC MINERALS SERVICES, EXCEPT FUELS**

#### **1481 Nonmetallic Minerals Services, Except Fuels**

Establishments primarily engaged in the removal of overburden, strip mining, and other services for nonmetallic minerals, except fuels, for others on a contract or fee basis. Establishments primarily engaged in performing hauling services are classified in Division E, Transportation and Public Utilities.

#### **149 MISCELLANEOUS NONMETALLIC MINERALS, EXCEPT FUELS**

#### **1499 Miscellaneous Nonmetallic Minerals, Except Fuels**

Establishments primarily engaged in mining, quarrying, milling, or otherwise preparing nonmetallic minerals, except

fuels. This industry includes the shaping of natural abrasive stones at the quarry. Establishments primarily engaged in the production of blast, grinding, or polishing sand are

classified in industry 1446, and those calcining gypsum are classified in Manufacturing, industry 3275.

# **Appendix C.**

## **Authority for Census: Title 13, United States Code**

---

### **COLLECTION AND PUBLICATION; FIVE-YEAR PERIODS (131)**

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses ... in the year 1964, then in the year 1968, and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof.

### **GEOGRAPHIC SCOPE OF CENSUSES (191A)**

(a) Each of the censuses authorized by this chapter shall include each State, the District of Columbia, the Virgin Islands, the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States exercises jurisdiction, control, or sovereignty. Inclusion of the other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

### **WRONGFUL DISCLOSURE OF INFORMATION (214)**

Whoever, being or having been an employee or staff member referred to in subchapter II of chapter I of this title, having taken and subscribed the oath of office, or having sworn to observe the limitations imposed by section 9 of

this title, publishes or communicates any information, the disclosure of which is prohibited under the revisions of section 9 of this title, and which comes into his possession by reason of his being employed (or otherwise providing services) under the provisions of this title, shall be fined not more than \$5,000 or imprisoned not more than 5 years, or both.

### **FAILURE TO ANSWER QUESTIONS AFFECTING COMPANIES, BUSINESSES, RELIGIOUS BODIES, AND OTHER ORGANIZATIONS: FALSE ANSWERS (224)**

Whoever, being the owner, official, agent, person in charge or assistant to the person in charge of any company, business, institution establishments, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule or questionnaire prepared and submitted to him under the authority of this title, shall be fined not more than \$500; and if he willfully gives a false answer to any such question, he shall be fined not more than \$10,000.

---

## Appendix D.

# Alphabetic Index of Products and Services of Mineral Establishments

---

This index provides an alphabetic list of products and services classified in the mineral industries for which data are shown in table 6 of the industry reports. The references in this index refer to items for which statistics are either shown separately in that table or are included as part of a group of products or services. The index also includes products and services referred to in the industry descriptions in the explanatory text of the separate industry reports.

References to products may be found in various tables in the industry chapters; however, detailed product information is typically given in table 6. The industry codes are based on the 1987 edition of the *Standard Industrial Classification (SIC) Manual*<sup>1</sup> published by the Office of Management and Budget.

<sup>1</sup>**Standard Industrial Classification Manual: 1987:** For sale by Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Stock No. 041-001-00314-2.

<b>A</b>	
Abandoning of wells for oil or gas field operations .....	13890
Abrasive, natural (except quartz and sand) .....	14994
Acidizing and other chemical treatment of wells, except hydraulic fracturing .....	13890
Agate .....	14999
Alabaster, crude .....	14997
Alabaster, prepared .....	14997
Alum, natural, crude .....	14741
Alum, natural, prepared .....	14742
Aluminum ores, crude .....	10992
Aluminum ores, prepared .....	10992
Amblygonite .....	14798
Amethyst .....	14999
Andalusite, crude .....	14599
Andalusite, prepared .....	14599
Anthracite, crushed .....	12312
Anthracite, mechanically cleaned .....	12312
Anthracite, raw, shipments, other than to coal preparation plants .....	12311
Anthracite, raw, shipped to coal preparation plants .....	12311
Anthracite, screened .....	12312
Anthracite, sized .....	12312
Anthracite, stripping overburden services .....	12410
Antimony concentrates .....	10998
Antimony ores, crude .....	10998
Apatite, crude, shipped to washer or concentrate .....	14751
Apatite, dried .....	14752
Aplite, crude .....	14599
Aplite, prepared .....	14599
Argillite, crude, dimension stone .....	14110
Arsenic minerals .....	14798
Asbestos .....	14999
Ash, volcanic .....	14993
Asphalt, native .....	14992
Auger mining services, bituminous coal .....	12410
Auger mining services, lignite .....	12410

<b>B</b>	
Bailing out wells, oil and gas field .....	13890
Ball clay, crude .....	14551
Ball clay, prepared .....	14552
Barite, crude .....	14791
Barite, crushed .....	14791
Barite flotation concentrates .....	14791
Barite, ground .....	14791
Barite, prepared .....	14791
Barium ores, crude .....	14791
Basalt, rough, dimension stone .....	14110
Basalt, crushed and broken .....	14290
Bastnaesite, crude .....	10998
Bastnaesite, prepared .....	10998
Bauxite, calcined or activated .....	10992
Bauxite, crude, undried .....	10992
Bauxite, crude, undried, for direct shipping .....	10992
Bauxite, dried .....	10992
Bentonite, crude .....	14591
Bentonite, prepared .....	14591
Beryllium concentrates .....	10998
Beryllium ores, crude .....	10998
Bitumens, native .....	14992
Bituminous coal, crushed-surface .....	12212
Bituminous coal, crushed-underground .....	12222
Bituminous coal, mechanically cleaned-surface .....	12212
Bituminous coal, mechanically cleaned; underground .....	12222
Bituminous coal, raw, shipments other than to coal preparation plants from surface .....	12211
Bituminous coal, raw, shipments other than to coal preparation plants-from underground .....	12221
Bituminous coal, raw, shipped to coal preparation plants from surface .....	12211
Bituminous coal, raw, shipped to coal preparation plants from underground .....	12221

**B—Con.**

Bituminous coal, screened-surface.....	12212
Bituminous coal, screened-underground.....	12222
Bituminous coal, sized-surface .....	12212
Bituminous coal, sized-underground .....	12222
Bituminous limestone .....	14992
Bituminous sandstone .....	14992
Blasting services for anthracite mining.....	12410
Blasting services for bituminous coal mining .....	12410
Blasting services for lignite mining .....	12410
Blasting services for metal mining .....	10810
Blasting services for nonmetallic minerals (except fuels) mining.....	14810
Bleaching clay, crude .....	14593
Bleaching clay, prepared.....	14593
Bluestone, crude, dimension.....	14110
Board roads, building of, for oil or gas field operations .....	13890
Borate compounds and minerals, prepared .....	14744
Borax.....	14744
Boron compounds .....	14744
Boulders (mixed), crushed and broken .....	14290
Brimstone .....	14794
Briquets, iron.....	10112
Brucite, crude .....	14599
Brucite, prepared .....	14599
Building board roads for oil or gas field operations .....	13890
Building, erecting, repairing, and dismantling rigs and derricks for oil or gas field operations .....	13890
Bullion, gold, produced at mine site.....	10413
Burley fire clay, crude .....	14592
Burley fire clay, prepared .....	14592
Burrstones, natural .....	14994
Butane, natural .....	13212

**C**

Cadmium, concentrates.....	10997
Calamine, prepared .....	10312
Calaverite, prepared .....	10412
Calcareous tufa, rough, dimension .....	14110
Calcareous tufa, crushed and broken .....	14220
Calcined phosphate rock .....	14752
Calcite, optical grade .....	14999
Canal dredging for oil or gas field operations .....	13890
Carbonates, sodium .....	14743
Celestite.....	14798
Cement rock, crushed and broken .....	14220
Cementing wells for oil or gas field operations .....	13890
Cerium concentrates .....	10998
Cerium ores, crude .....	10998
Cerrusite, prepared .....	10312
Cesium .....	10998
Chalcocite, prepared .....	10212
Chalcopyrite, prepared .....	10212
Chalk, crushed and broken .....	14220
Chemical treatment of wells for oil or gas field operations .....	13890

**C—Con.**

China clay, crude .....	14551
China clay, prepared .....	14552
Chromite, concentrates or prepared .....	10997
Chromite, crude .....	10997
Chromium concentrates .....	10997
Chromium ores, crude .....	10997
Cinnabar, crude .....	10998
Cinnabar, prepared .....	10998
Clay, ball, crude .....	14551
Clay, ball, prepared .....	14552
Clay, bleaching .....	14593
Clay, ceramic and refractory minerals, crude .....	14599
Clay, ceramic and refractory minerals, prepared .....	14599
Clay, china, crude .....	14551
Clay, china, prepared .....	14552
Clay, common, crude .....	14597
Clay, common, prepared .....	14597
Clay, fire, crude .....	14592
Clay, fire, prepared .....	14592
Clay, paper, crude .....	14551
Clay, paper, prepared .....	14552
Clay, slip, crude .....	14551
Clay, slip, prepared .....	14552
Clays, natural, bleaching .....	14593
Cleaning lease tanks for oil or gas field operations .....	13890
Cleaning out, including steam cleaning, bailing out, or swabbing wells for oil or gas field operations .....	13890
Clearing locations for oil or gas field operations .....	13890
Cobalt ores, concentrates .....	10997
Cobalt ores, crude .....	10997
Colemanite .....	14744
Columbite, crude .....	10997
Columbite, prepared .....	10997
Columbium ores, crude .....	10997
Columbium ores, prepared .....	10997
Common clay, crude .....	14597
Common clay, prepared .....	14597
Condensate, cycle .....	13212
Construction of oil or gas pipelines on lease; construction of gathering lines to point where distribution company takes over .....	13890
Construction sand, crude .....	14421
Construction sand, treated .....	14422
Contract services, general, for oil or gas field operations .....	13890
Copper concentrates .....	10212
Copper ore, crude, and old tailings shipped to mills for treatment .....	10211
Copper ore, crude, and old tailings shipped to smelters .....	10211
Copper-water precipitates, including precipitates from ore leached in place .....	10213
Core cutting in oil or gas wells .....	13890
Core drilling, oil or gas field exploration services .....	13820

**C—Con.**

Cornwall stone, crude	14599
Corundum	14994
Crane work-on lease, for oil or gas field operations	13890
Crude oil	13111
Crude petroleum	13111
Cryolite	14999
Culm bank recovery, for anthracite (services)	12410
Cuprite, prepared	10212
Cutting casing, tubes or rods for oil or gas field operations	13890
Cutting cores in oil or gas wells	13890
Cyanite, crude	14599
Cyanite, prepared	14599
Cycle condensate	13212
<b>D</b>	
Diabase, crude, dimension stone	14110
Diabase, crushed and broken	14290
Diamonds, industrial	14994
Diaspore, crude	14592
Diaspore, prepared	14592
Diatomaceous earth	14996
Diatomite	14996
Dimension stone, rough, other than granite or limestone	14110
Diorite, crude, dimension stone	14110
Diorite, crushed and broken	14230
Directional drilling for oil or gas field operations	13810
Dirt work in oil or gas fields	13890
Disposal systems, salt water, for oil or gas field operations	13890
Dolomite, rough, dimension stone	14110
Dolomite, crushed and broken	14220
Dolomite marble, rough, dimension, stone	14110
Dolomitic marble, crushed and broken	14290
Dragstones	14994
Dredging canals for oil or gas field operations	13890
Dried phosphate rock	14752
Drill stem testing in oil, gas, dry and service well drilling	13890
Drilling, core, oil or gas field exploration services	13820
Drilling, directional, oil or gas field	13810
Drilling dry holes for gas and oil field	13810
Drilling gas wells	13810
Drilling oil wells	13810
Drilling rat holes and mouse holes for oil or gas field operations	13890
Drilling service wells for oil or gas field operations	13810
Drilling, shot hole, oil or gas field exploration services	13820
Drilling sites, preparation of, for oil or gas field operations	13890
Drilling, stratigraphic oil or gas field exploration services	13820
Drilling water intake wells, oil or gas field	13810
Drilling wells for gas or oil field operations	13810

**D—Con.**

Driving keyways for oil or gas field operations	13890
Dumortierite, crude	14599
Dumortierite, prepared	14599
<b>E</b>	
Earth, diatomaceous	14996
Earth, fuller's (including all natural bleaching clays)	14593
Emery	14994
Engine installing for oil or gas field operations	13890
Electrowon copper recovered from leaching operations	10213
Erecting, cleaning, repairing, and dismantling lease tanks for oil or gas field operations	13890
Ethane, natural gas liquid	13212
Excavating mud pits, slush pits, and cellars for oil or gas field operations	13890
Exploration services for anthracite mining	12410
Exploration services for bituminous coal mining	12410
Exploration services for lignite mining	12410
Exploration services for metal mining	10810
Exploration services for nonmetallic minerals (except fuels) mining	14810
<b>F</b>	
Feldspar, crude	14596
Feldspar, crushed or ground	14596
Feldspar, prepared	14596
Ferberite concentrates	10997
Ferberite crude ores	10997
Ferroalloy ores, except molybdenum and vanadium, crude	10997
Fertilizer minerals, natural	14798
Fire clay, crude (including plastic, flint, diaspore, burley and stoneware)	14592
Fire clay, plastic, crude	14592
Fire clay, plastic, prepared	14592
Fishing for tools (for oil or gas field operations)	13890
Flagstones, crude, dimension	14110
Flint, fire clay, crude	14592
Flint, fire clay, prepared	14592
Flooding and water injection for oil or gas field operations	13890
Fluorite, crude	14798
Fluorspar, crude	14798
Fluorspar, crushed	14798
Fluorspar flotation concentrates	14798
Fluorspar, ground	14798
Fluorspar, prepared	14798
Fuller's earth	14593
<b>G</b>	
Gabbro, crude, dimension stone	14110
Gabbro, crushed and broken stone	14290
Galena, prepared	10312
Ganister, crushed and broken stone	14290
Garnet	14994
Gas, natural	13115

Plugging wells, oil or gas field services .....	13890
Potassium bromide .....	14742
Potassium salts, crude .....	14741
Potassium salts, processed or refined .....	14742
Propane (natural) .....	13212
Precious stones .....	14999
Preparation of drilling sites for oil or gas field operations .....	13890
Prospect and test drilling services for anthracite mining .....	12410
Prospect and test drilling services for bituminous coal mining .....	12410
Prospect and test drilling services for lignite mining .....	12410
Prospect and test drilling services for metal mining .....	10810
Prospect and test drilling services for nonmetallic minerals (except fuels) mining .....	14810
Psilomelane, crude, ore for treatment .....	10997
Pulling casing, tubes, or rods for oil or gas field operations .....	13890
Pulpstones, natural .....	14994
Pumice .....	14993
Pumicite .....	14993
Pumps installed for oil or gas field operations .....	13890
Pyrite concentrates .....	14798
Pyrites, fines .....	14798
Pyrites, lump ore .....	14798
Pyrolusite, crude, for treatment .....	10997
Pyrolusite, prepared .....	10997
Pyrophyllite, crude .....	14998
Pyrophyllite flotation concentrates .....	14998
Pyrophyllite, prepared .....	14998
Pyrophyllite, sawed, crushed or ground .....	14998
Pyrrhotite .....	14798

**Q**

Quartz crystal (pure) .....	14999
Quartzite, crushed and broken .....	14290
Quartzite, ganister, crushed and broken .....	14290
Quicksilver (metal), prepared at mine site .....	10998
Quicksilver ore .....	10998

**R**

Radium ores .....	10941
Rare-earth metal concentrates .....	10998
Rare-earth metal ores, crude .....	10998
Rat hole and mouse hole drilling for oil and gas field operations .....	13890
Reconditioning wells for oil or gas field operations .....	13810
Remedial work, subsurface, for oil or gas field operations .....	13810
Residue gas .....	13213
Reworking wells, oil or gas field operations .....	13810
Rhodium .....	10998
Rhodochrosite, crude, for treatment .....	10997
Rhodochrosite, prepared .....	10997
Rig building, repairing and dismantling oil or gas wells .....	13890
Rig skidding, for oil or gas field operations .....	13890
Rigs built, erected, repaired and dismantled for oil or gas field operations .....	13890
Riprap, granite .....	14230
Riprap, limestone .....	14220
Riprap, miscellaneous stone (except limestone and granite) .....	14290
Roads, board, building of, for oil or gas field operations .....	13890
Rock salt (sodium chloride) .....	14793
Rock, volcanic, light colored, crushed and broken .....	14290
Rocks, volcanic, light colored, rough, dimension .....	14110
Rolling pipe for oil or gas field operations .....	13890
Roscoelite, crude .....	10941
Roscoelite, prepared .....	10942
Roustabout work for oil or gas field operations .....	13890
Rubber clay, crude .....	14551
Rubber clay, prepared .....	14552
Rubbing stones .....	14994
Rubble .....	14110
Rubidium .....	10998
Ruby .....	14999
Running, cutting and pulling casting, tubes or rods for oil or gas field operations .....	13890
Ruthenium .....	10998
Rutile concentrates .....	10998
Rutile ore, crude .....	10998

**S**

Salt, common .....	14793
Salt, (rock), sodium chloride .....	14793
Salt water disposal systems, for oil or gas field operations .....	13890
Sand, blast .....	14469
Sand blasting pipe lines on lease for oil or gas field operations .....	13890
Sand, common, crude .....	14421
Sand, common, prepared .....	14422
Sand, construction, prepared .....	14422
Sand, construction, run of pit or bank .....	14421

**S—Con.**

Sand, construction, screened.....	14422
Sand, construction, washed, screened, ground, or prepared.....	14422
Sand, engine .....	14469
Sand, filtration .....	14469
Sand, glass, for melting only .....	14461
Sand, grinding .....	14469
Sand, industrial .....	14469
Sand, oil .....	14469
Sandstone, bituminous.....	14992
Sandstone, crude, dimension.....	14110
Sandstone, crushed and broken .....	14290
Sapphire .....	14999
Scandium .....	10998
Scheelite, crude .....	10997
Scheelite, prepared .....	10997
Schist, mica, crude, dimension .....	14110
Schist, mica, crushed and broken.....	14290
Scoria .....	14993
Scythestones .....	14994
Selenium.....	10998
Seismograph surveys for oil or gas field operations .....	13820
Selenite, crude .....	14997
Selenite, prepared.....	14997
Semianthracite, mechanically cleaned from surface operations .....	12212
Semianthracite, mechanically cleaned from underground operations .....	12222
Semianthracite, raw, (shipped to preparation plants) from surface operations .....	12211
Semianthracite, raw, (shipped to preparation plants) from underground operations .....	12221
Semiprecious stones .....	14999
Serpentine, crude, dimension stone.....	14110
Serpentine, crushed and broken stone .....	14290
Shale, crude .....	14597
Shale, prepared .....	14597
Shell mining .....	14998
Shooting wells for oil or gas field operations .....	13890
Shot hole drilling, oil or gas field services .....	13890
Siderite (carbonate), crude, for treatment .....	10111
Siderite concentrates, for agglomeration plants not at blast furnace .....	10112
Sienna .....	14798
Silica (from sand).....	14461
Sillimanite, crude .....	14599
Sillimanite, prepared .....	14599
Silver concentrates .....	10442
Silver mill bullion and precipitates recovered by amalgamation .....	10443
Silver mill bullion and precipitates recovered by cyanidation .....	10443
Silver ore, crude, for shipment to mills for treatment .....	10441

**S—Con.**

Silver ore, crude, and old tailings shipped to mills for treatment.....	10441
Silver ore, crude, and old tailings shipped to smelters .....	10441
Silver placer .....	10443
Sintered iron .....	10112
Sintered phosphate rock .....	14752
Skidding of rigs for oil or gas field operations .....	13890
Slate, crude, dimension stone .....	14110
Slate, crush and broken .....	14290
Slate granules, crushed and broken .....	14290
Slip clay, crude .....	14551
Slip clay, prepared .....	14552
Smithsonite, crude, for shipment to mills for treatment .....	10311
Smithsonite, prepared.....	10312
Soapstone, crude .....	14998
Soapstone, crushed, ground or sawed .....	14998
Soapstone flotation concentrates.....	14998
Soapstone, prepared.....	14998
Soda ash, natural .....	14743
Sodium borates.....	14744
Sodium carbonates, natural .....	14743
Sodium chloride (rock salt) .....	14793
Sodium sulfate.....	14743
Spar, Iceland, prepared .....	14998
Sphalerite, crude, for shipment to mill for treatment .....	10311
Sphalerite, prepared .....	10312
Spodumene .....	14798
Spudding in wells for oil or gas field operations.....	13810
Staurolite.....	14999
Steam cleaning for oil or gas wells .....	13890
Steatite, crude .....	14998
Steatite, prepared .....	14998
Stone, crude, dimension other than limestone and granite .....	14110
Stone, crushed and broken, other than granite or limestone .....	14290
Stone, abrasive .....	14994
Stoneware fire clay, crude .....	14592
Stoneware fire clay, prepared .....	14592
Stratigraphic drilling, oil or gas field exploration.....	13820
Strip mining services for anthracite mining .....	12410
Strip mining services for bituminous coal mining.....	12410
Strip mining services for lignite mining.....	12410
Strip mining services for metal mining .....	10810
Strip mining services for nonmetallic minerals (except fuels) mining.....	14810
Stripping overburden services for anthracite mining .....	12410
Stripping overburden services for bituminous coal mining .....	12410
Stripping overburden services for lignite mining.....	12410
Stripping overburden services for metal mining .....	10810

**S—Con.**

Stripping overburden services for nonmetallic minerals (except fuels) mining .....	14810
Strontianite.....	14798
Strontium minerals .....	14798
Subbituminous coal, mechanically crushed, screened or sized from surface operations .....	12212
Subbituminous coal, mechanically crushed, screened or sized from underground operations .....	12222
Subbituminous coal, raw, shipment to coal preparation plants from surface operations.....	12211
Subbituminous coal, raw, shipment to coal preparation plants from underground operations .....	12221
Subsurface remedial work for oil or gas field operations .....	13810
Sulfate, sodium .....	14743
Sulfate, native .....	14794

Surveying wells for oil or gas field operations.....	13890
Swabbing wells for oil or gas field operations .....	13890
Syenite (except nepheline), crude, dimension stone .....	14110
Syenite (except nepheline), crushed and broken .....	14230
Syenite (nepheline), crude .....	14596
Syenite (nepheline), prepared .....	14596
Sylvanite, crude ore for shipment to smelters .....	10411
Sylvanite, concentrates .....	10412

**T**

Taconite pellets .....	10112
Taconite, crude ore for treatment .....	10111
Tailing in wells, oil or gas field.....	13810
Talc, crude .....	14998
Talc, crushed, ground or sawed .....	14998
Talc, flotation concentrates .....	14998
Talc, prepared .....	14998
Tantalite, crude ore for treatment.....	10997
Tantalite, prepared .....	10997
Tantalum, crude ores for direct shipment .....	10997
Tantalum, prepared .....	10997
Telluride (gold) mining, crude, for shipment to mills .....	10411
Tellurium .....	10998
Testing, drill-stem, for oil or gas field operations .....	13890
Testing, pipe, for oil or gas field operations .....	13890
Thallium .....	10998
Thorite, crude .....	10998
Thorite, prepared .....	10998
Thorium ores, crude .....	10998
Thorium, prepared .....	10998
Tripoli .....	14994
Trona .....	14743
Tufa, calcareous, crude, dimension .....	14110
Tufa, calcareous, crushed and broken .....	14220
Tungsten concentrates .....	10997
Tungsten ores, crude .....	10997
Turquoise .....	14999

**U**

Ulexite .....	14744
Umber .....	14798
Uraninite, crude .....	10941
Uraninite, prepared .....	10942
Uranium-vanadium concentrates .....	10942
Uranium-vanadium ore, crude .....	10941

**V**

Vacuum truck service for oil or gas field operations .....	13890
Vanadium, concentrates .....	10942
Vanadium ores, crude .....	10941
Verde antique, rough, dimension stone .....	14110
Verde antique, crushed and broken stone .....	14290
Vermiculite .....	14999
Volcanic ash .....	14993
Volcanic rock, light colored, rough, dimension .....	14110
Volcanic rock, light colored, crushed and broken .....	14290

**W**

Washeries, anthracite .....	12312
Washeries, bituminous coal .....	12212
Water injection or flooding for oil or gas field operations .....	13890
Water intake well drilling for oil or gas field operations .....	13810
Well casing running, cutting and pulling for oil or gas field operations .....	13890
Well logging, oil or gas field .....	13890
Well plugging, for oil or gas field operations .....	13890
Well surveying, for oil or gas field operations .....	13890
Wellhead fittings, installed for oil or gas field operations .....	13890
Wells, oil, gas, dry, or service: reworking .....	13810

Wells, oil, gas, or service: drilling in, spudding in, tailing in .....	13810
Whetstones .....	14994
Whiting, crushed and broken .....	14220
Willemite, crude, for shipment to smelters .....	10311
Willemite, prepared .....	10312
Wireline services for oil or gas field operations .....	13890
Wolframite, crude .....	10997
Wolframite, prepared .....	10997
Wollastonite .....	14999
Workover of wells for oil or gas field operations .....	13810
Wulfenite, crude .....	10997
Wulfenite, prepared .....	10997
Wurtzilite .....	14992

**Y**

Yttrium, prepared .....	10998
-------------------------	-------

**Z**

Zinc concentrates .....	10312
Zinc ore, crude, for shipment to smelters .....	10311
Zinc ore, crude, and old tailings shipped to mills for treatment .....	10311
Zinc ore, crude, and old tailings shipped to smelters .....	10311
Zirconium concentrates .....	10998
Zirconium ores, curde .....	10998

## Appendix E. Report Forms

---

This appendix contains reproductions of a representative selection of the report forms used in the 1992 Economic Census with emphasis on the census of mineral industries. The use of each of the forms is described in the Introduction, Report Forms. Following is a list of forms included in this appendix:

Number	Title	Number	Title
NC-9901	<b>Report of Organization.</b> This company-wide report was used prior to mailing the 1992 census questionnaires to develop the directory of establishments operated by multiunit companies.	ES-9200	<b>Auxiliary Establishment Report.</b> This form was completed by establishments whose function was to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies.
NC-9923	<b>General Schedule.</b> This questionnaire was used to obtain information from small companies for which the industry code available in the Social Security Administration records was not precise enough to indicate which one of the standard questionnaires should be mailed.	MC-1403	<b>Chemical and Fertilizer and Miscellaneous Nonmetallic Minerals—.</b> This is a typical example of the types of general statistics, supplies, and product and service questions asked and how each form was tailored to reflect the uniqueness of each industry
ES-9100	<b>Enterprise Summary Report.</b> This form was sent to each large multiestablishment company in addition to a specific questionnaire for each establishment and requested consolidated company totals of selected data.		

# Publication Program

## 1992 CENSUS OF MINERAL INDUSTRIES

Publications of the 1992 Census of Mineral Industries, containing data on establishments primarily engaged in the extraction of minerals, are described below. Publications order forms for the specific reports may be obtained from any Department of Commerce district office or from Customer Services, Bureau of the Census, Washington, DC 20233-8300.

### Preliminary Reports

#### Industry series—12 reports (MIC92-I-10A(P) to -14E(P))

Preliminary data from the 1992 census are issued in 12 separate reports covering 31 mineral industries. Preliminary summary data for the United States and States are released in one report.

### Final Reports

#### Industry series—12 reports (MIC92-I-10A to -14E)

Each of the 12 reports provides information for an industry or a group of related industries (e.g., clay, ceramic, and refractory minerals). Final figures for the United States are shown for each of 31 mineral industries on quantity and value of products shipped and supplies used; inventories; quantity and cost of fuels and electric energy purchased and the quantities of fuels produced and consumed; capital expenditures; assets; rents; employment; depreciation, amortization, and depletion; payroll; hours worked; cost of purchased machinery; value added by mining; mineral development, and exploration costs; number of establishments; and number of companies. Comparative statistics for earlier years are included. Industry statistics are shown by State, type of operation, and size of establishment.

#### Geographic area series—9 reports (MIC92-A-1 to -9)

A separate report for each of the nine geographic divisions presents statistics for individual States and off-shore areas for two- and three-digit industry groups by

type of operation and by county. Also, data are shown for value of shipments; value added by mining; employment; payroll; hours worked; capital expenditures; cost of supplies, etc.; purchased machinery installed; and number of mining establishments, with comparative 1987 data on employment and value added by mining.

#### Subject series—2 reports (MIC92-S-1 and -2)

One of these reports is a general national-level summary; the other report contains detailed statistics on fuels and electric energy consumed by mineral industries.

#### Reference series—1 report (MC92-R-1)

The *Numerical List of Manufactured and Mineral Products* includes a description of the principal products and services published in the 1992 Censuses of Manufactures and Mineral Industries.

### Electronic Media

All data included in the printed reports are available on compact disc-read only memory (CD-ROM). The CD-ROM's provide the same information found in the reports. Electronic media products are available for users who wish to summarize, rearrange, or process large amounts of data. These products, with corresponding technical documentation, are sold by Customer Services, Bureau of the Census, Washington, DC 20233-8300.

## OTHER ECONOMIC CENSUSES REPORTS

Data on retail trade, wholesale trade, service industries, financial, insurance, real estate, construction industries, manufactures, transportation, communications, utilities, enterprise statistics, minority-owned businesses, and women-owned businesses also are available from the 1992 Economic Census. A separate series of reports covers the census of outlying areas—Puerto Rico, Virgin Islands of the United States, Guam, and the Commonwealth of the Northern Mariana Islands. Separate announcements describing these reports are available free of charge from Customer Services, Bureau of the Census, Washington, DC 20233-8300.
