

4. Network Usage and Growth

The amount of traffic carried on the public switched network is a vital concern to the Joint Board and the Commission, because the interstate toll rate decreases that have accompanied the subscriber line charge increase were designed to make use of the network more efficient and to stimulate traffic growth. To monitor use of this network, the National Exchange Carrier Association (NECA) provides quarterly reports to the Commission on the monthly volume of switched interstate access minutes of use (MOU). To supplement this information, local telephone companies that settle on a cost basis (hereinafter referred to as cost companies) also provide, on an annual basis, their Dial Equipment Minutes (DEM) and factors. The Joint Board recognized that much of this information was not previously collected by any single entity and that reports could be received and consolidated by some other entity (such as NECA). In addition, all local telephone companies provide, on an annual basis, the number of presubscribed lines by study area. The data reported in this section include new data for 1995 and revisions of the data that were contained in our previous reports.

This report includes monthly data on switched interstate telephone traffic as reflected in the NECA calculations of carrier common line (CCL) access minutes of use from January 1994 through December 1996. Table 4.1 shows the latest available figures on minutes of use for interstate traffic for the total industry as reported by NECA, derived from the Common Line earned revenues. Tables 4.2 and 4.3 show the figures for large (Tier 1) and small (non-Tier 1) companies, respectively.¹ These figures do not include the minutes from the closed end of WATS or 800/888 calls. Similar monthly data, extending back to mid-1985, are contained in earlier editions of this report. These are summarized in Table 4.4 on a quarterly basis.

Table 4.5 summarizes annual data for the total industry for 1980 through 1995 on local, state, interstate, and total DEM minutes. It also shows annual percentage growth rates and the distribution between categories of usage. Table 4.6 summarizes industry total loops from Table 3.12. Table 4.7 shows the average daily line usage. It is calculated from the values in Tables 4.5 and 4.6.

The NECA compilation of data provided at the study area level appears in Tables 4.8 through 4.22. Unless otherwise noted, these tables provide annual data for the years 1990 through 1995; similar data (for cost companies) going back to 1984 appear in the May 1993 Monitoring Report, and data going back to 1980 appear in the January 1992 Monitoring Report. In order to be responsive to state concerns, the study areas are sorted by state, and state totals or averages (where applicable) are provided. Within each state's listing, the study areas are arranged in numerical order by their NECA study area code.² The second column identifies whether a study area is part of a Tier 1 cost

1 A Tier 1 carrier is a local exchange carrier that has \$100 million or more annually in revenue from regulated telecommunications for five consecutive years. The non-Tier 1 companies include both Tier 2 cost companies and average schedule companies.

2 A study area is usually an operating company's operations in one state. The first two digits of the NECA study area code identify the state, and the remaining four digits identify

company, a Tier 2 cost company, or an average schedule company (designated by a 1, 2, or A, respectively). The data in these tables are revised and supersede the usage data in previous reports.³

Tables 4.8 through 4.14 provide data on interstate access minutes of use. For the first time, these tables include data for the study areas of average schedule companies. Table 4.8 presents data on originating premium minutes. Table 4.9 presents data on terminating premium minutes. Table 4.10 presents data on total premium minutes. Table 4.11 shows originating non-premium minutes. Table 4.12 shows terminating non-premium minutes. Table 4.13 shows total non-premium minutes. Table 4.14 has data on total interstate access minutes, calculated as the sum of the values in Tables 4.10 and 4.13.

Tables 4.15 through 4.18 provide data on dial equipment minutes (DEM). Table 4.15 has local minutes, Table 4.16 has state minutes, Table 4.17 has interstate minutes, and Table 4.18 has total minutes. NECA refined its method of developing DEM estimates on an aggregate level for average schedule companies, and these new estimates are used in the calculation of total industry figures.

Table 4.19 provides data on presubscribed lines for the years 1991 through 1996. Similar data going back to 1989 appear in the May 1995 Monitoring Report. Due to the inclusion of 1996 data, a summary of the changes in carriers which occurred in 1996 is listed at the end of Table 4.19. (Changes for earlier years can be found in Table 3.15.)

Tables 4.20 through 4.22 present data on interstate separations factors. Table 4.20 presents DEM factors for the years 1990 through 1995. These are the ratio of interstate DEM to total DEM. Table 4.21 presents weighted (or transitional) DEM factors. Table 4.22 presents transitional subscriber plant factors (SPF) for the years 1990 through 1995. It provides data only for study areas where the SPF has not remained at 25% since 1993.⁴ Similar data for other study areas appear in the May 1995 Monitoring Report.

Table 4.23 provides a cross reference table of the NECA state codes that are part of their study area codes.

the study area. The numerical code for each state is shown in Table 4.23.

- 3 In cases where study areas have merged, the historical data have been restated to reflect the merger.
- 4 One study area, 552302, reported a revised 1993 SPF of 29.55%, which is included in this report. Because the SPF was previously reported as 25%, this study area was not included in Table 4.22 of the May 1996 Monitoring Report.

The following descriptions of the minutes of use measures are based on information provided by NECA:

Access MOU (both premium and non-premium) are "earned MOU" which are derived by dividing the premium or non-premium earned revenues by the corresponding rate. This definition of access minutes is in agreement with the TRP and ARMIS reports. Access minutes of use generating revenues have been discounted, which can produce distortions in revenue amounts. Further, revenues are normalized to include changes in terminating/originating and percent interstate use factors, billing adjustments, and the imputations of access charges (where applicable). Revenues are also calendarized, which will change derived minutes.

Premium CCL access MOU consist of feature groups A, B and D traffic originating from or terminating at offices converted to equal access, and feature group C for non equal access end office(s) and interstate intraLATA MOU. Non-premium CCL access MOU consist of feature groups A and B traffic originating from or terminating at offices not converted to equal access, and feature group C for minutes associated with Other Common Carrier Interim NXX and 800/888 service.

Originating and terminating access MOU both include the domestic portions of international calls; i.e., outgoing international calls are counted only in the originating minutes and incoming international calls are counted only in the terminating minutes. Similarly, WATS and 800/888 calls are counted only in the terminating minutes, because the access charges are billed at the terminating rate.⁵ Finally, originating minutes include time for incomplete calls and setup time, which are not included in terminating minutes.

Total Dial Equipment Minutes (DEM) represent all switched holding time minutes in a local dial office. DEM is defined in the FCC rules, Part 36, paragraph 125(b). It is composed of all originating and terminating exchange, MTS, 800/888, and out-WATS MOU. DEM represents exchange, LEC intraLATA and corridor toll, and feature group A, B, C, and D MOU. (Please note that due to its unique switching arrangements, feature group A in DEM includes both serving office and end office MOU.) DEM does not include MOU in directly terminated toll stations or similar facilities, because they do not use local dial office facilities. The interstate DEM include the domestic portions of international calls.

The state and interstate DEM include both intraLATA and interLATA minutes combined. The DEM differ from access MOU in that they include both ends of WATS and 800/888 calls, whereas access MOU include only one end of those calls because only one end is subject to access charges.

5 However, although WATS calls generate access minutes only at the terminating end of the call and 800/888 calls generate access minutes only at the originating end of the call, both types of minutes are counted in the terminating minutes.
