

Geography and Environment

This section presents a variety of information on the physical environment of the United States, starting with basic area measurement data and ending with climatic data for selected weather stations around the country. The subjects covered between those points are mostly concerned with environmental trends, but include such related subjects as land use, water consumption, air pollutant emissions, toxic releases, oil spills, hazardous waste sites, threatened and endangered wildlife, and weather-related events.

The information in this section is selected from a wide range of federal agencies that compile the data for various administrative or regulatory purposes, such as the Environmental Protection Agency, U.S. Geological Survey, National Oceanic and Atmospheric Administration, Soil Conservation Service, and General Services Administration. Other agencies include the Bureau of the Census, which presents nationwide area measurement information and the Bureau of Economic Analysis, which compiles data on pollution abatement and control expenditures.

Area—For the 1990 census, area measurements were calculated by computer based on the information contained in a single, consistent geographic database, the TIGER™ File (described below), rather than relying on historical, local, and manually calculated information. This especially affects water area figures reported in 1990; these had only included those bodies of water of least 40 acres and those streams with a width of at least one-eighth of a statute mile from 1940 to 1980. Water area figures for 1990 increased because the data reflected all water recorded in the Census Bureau's geographic database including coastal, Great Lakes, and territorial waters.

Geography—The U.S. Geological Survey conducts investigations, surveys, and research in the fields of geography,

In Brief

Wastewater treatment facilities served almost 190 million people in 1996 or 72 percent of the population.

Emissions of CFC (chlorofluorocarbon) gases in the United States declined 67 percent between 1990 and 1996 from 223,000 metric tons annually to 73,000 tons.

Forty-one percent of the municipal paper waste was recovered in 1996 compared to 28 percent in 1990.

The recovery rate also increased for ferrous metals from 20 percent to 38 percent of the waste generated.

New Jersey leads the Nation in the number of hazardous waste sites on the Superfund list with 110 of the country's 1,231 sites as of the end of 1997.

geology, topography, geographic information systems, mineralogy, hydrology, and geothermal energy resources as well as natural hazards. In cooperation with state and local agencies, the U.S. Geological Survey prepares and publishes topographic, land use/land cover, geologic, and hydrologic maps and digital data compilations. The U.S. Geological Survey provides United States cartographic data through the Earth Sciences Information Center, water resources data through the National Water Data Exchange (NAWDEX), and a variety of research and Open-File reports which are announced monthly in New Publications of the U.S. Geological Survey. In a joint project with the Census Bureau, the U.S. Geological Survey provided the basic information on geographic features for input into a national geographic and cartographic database prepared by the Census Bureau, called the TIGER™ (Topologically Integrated Geographic Encoding and Referencing) System.

Maps prepared by the Bureau of the Census show the names and boundaries of various types of legal and statistical entities, such as places, county subdivisions, and larger areas and are available as of the specific decennial census. An inventory is available for the 1990 census, both on computer tape and CD-ROM as the 1990 TIGER/GICS (Geographic Identification Code Scheme) and for the 1992 economic censuses in the *Geographic Reference Manual* (EC92-R-1). The Census Bureau maintains a current inventory of governmental units and their legal boundaries through its Boundary and Annexation Survey. The TIGER™ System contains information on the legal and statistical entities used by the Census Bureau, as well as on both manmade and natural features, such as streets, roads, railroads, rivers, and lakes; information is available to the public in the form of machine-readable TIGER™ extract files.

An inventory of the Nation's land resources by type of use/cover was conducted by the Soil Conservation Service in 1982, 1987, and 1992. The results, published in the *1992 National Inventory of Land Resources*, cover all nonfederal land in Puerto Rico, the Virgin Islands, and the United States except Alaska.

Environment—The principal federal agency responsible for pollution abatement and control activities is the Environmental Protection Agency (EPA). It is responsible for establishing and monitoring national air quality standards, water quality activities, solid and hazardous waste disposal, and control of toxic substances.

National Ambient Air Quality Standards (NAAQS) for suspended particulate matter, sulfur dioxide, photochemical oxidants, carbon monoxide, and nitrogen dioxide were originally set by the EPA in April 1971. Every 5 years, each of the NAAQS is reviewed and revised if new health or welfare data indicates that a change is necessary. The standard for

photochemical oxidants, now called ozone, was revised in February 1979. Also, a new NAAQS for lead was promulgated in October 1978 and for suspended particulate matter in 1987. Table 398 gives some of the health-related standards for the six air pollutants having NAAQS. Responsibility for demonstrating compliance with or progress toward achieving these standards lies with the state agencies. In 1996, there were 1,734 nonfederal sampling stations for particulates, 690 for sulfur dioxide, 554 for carbon monoxide, 1,037 for ozone, 415 for nitrogen dioxide, and 428 for lead. Data from these state networks are periodically submitted to EPA's National Aerometric Information Retrieval System (AIRS) for summarization in annual reports on the nationwide status and trends in air quality; for details, see *National Air Quality and Emissions Trends Report, 1996*.

Climate—NOAA, through the National Weather Service and the National Environmental Satellite, Data and Information Service, is responsible for data on climate. NOAA maintains about 11,600 weather stations, of which over 3,000 produce autographic precipitation records, about 600 take hourly readings of a series of weather elements, and the remainder record data once a day. These data are reported monthly in the *Climatological Data* (published by state), and monthly and annually in the *Local Climatological Data* (published by location for major cities).

The normal climatological temperatures, precipitation, and degree days listed in this publication are derived for comparative purposes and are averages for the 30-year period, 1961-90. For stations that did not have continuous records for the entire 30 years from the same instrument site, the normals have been adjusted to provide representative values for the current location. The information in all other tables is based on data from the beginning of the record at that location through 1995, except as noted.

No. 387. Land and Water Area of States and Other Entities: 1990

[One square mile=2.59 square kilometers. Excludes territorial water, which was included in the 1993 edition of the *Statistical Abstract*]

¹ Represents zero. ² From source to mouth. ³ The length from the source of the Missouri River to the Mississippi River and thence to the Gulf of Mexico is about 3,710 miles. ³ Includes about 167,000 cubic ft. per second diverted from the Mississippi into the Atchafalaya River but excludes the flow of the Red River. ⁴ Excludes the drainage areas of the Red and Atchafalaya Rivers. ⁵ Drainage area includes both the United States and Canada. ⁶ In east-central Louisiana, the Red River flows into the Atchafalaya River, a tributary of the Mississippi River. Data on average discharge, length, and drainage area include the Red River, but exclude all water diverted into the Atchafalaya from the Mississippi River.

No. 395. National Ambient Water Quality in Rivers and Streams—Violation Rate: 1980 to 1995

[In percent. Violation level based on U.S. Environmental Protection Agency water quality criteria. Violation rate represents the proportion of all measurements of a specific water quality pollutant which exceeds the "violation level" for that pollutant. "Violation" does not necessarily imply a legal violation. Data based on U.S. Geological Survey's National Stream Quality Accounting Network (NASQAN) data system; for details, see source. Years refer to water years. A water year begins in Oct. and ends in Sept. µg=micrograms; mg=milligrams. For metric conversion, see page ix]

POLLUTANT	VIOLATION LEVEL	1980	1985	1989	1990	1991	1992	1993	1994	1995

No. 398. National Ambient Air Pollutant Concentrations: 1990 to 1996

[Data represent annual composite averages of pollutant based on daily 24-hour averages of monitoring stations, except carbon monoxide is based on the second-highest, non-overlapping, 8-hour average; ozone, average of the second-highest daily maximum 1-hour value; and lead, quarterly average of ambient lead levels. Based on data from the Aerometric Information Retrieval System. $\mu\text{g}/\text{m}^3$ =micrograms of pollutant per cubic meter of air; ppm=parts per million]

POLLUTANT	Unit	Monitoring stations, number	Air quality standard ¹	1990	1991	1992	1993	1994	1995	1996
Carbon monoxide	ppm	334	² 9	5.90	5.60	5.20	4.90	5.10	4.5	4.2
Ozone	ppm	573	³ .12	0.113	0.114	0.106	0.108	0.108	0.113	0.106
Sulfur dioxide	ppm	473	.03	0.008	0.0078	0.0073	0.0071	0.0068	0.0056	0.0056
Particulates (PM-10) ⁴	$\mu\text{g}/\text{m}^3$	955	.50	29.4	29.1	26.8	26.0	26.2	25.1	24.2
Nitrogen dioxide	ppm	212	.053	0.020	0.020	0.019	0.019	0.020	0.019	0.019
Lead	$\mu\text{g}/\text{m}^3$	189	⁵ 1.5	0.09	0.07	0.06	0.05	0.04	0.04	0.04

¹ Refers to the primary National Ambient Air Quality Standard that protects the public health. ² Based on 8-hour standard of 9 ppm. ³ Based on 1-hour standard of .12 ppm. ⁴ The particulates (PM-10) standard replaced the previous standard for total suspended particulates in 1987. ⁵ Based on 3-month standard of 1.5 $\mu\text{g}/\text{m}^3$.

No. 403. Generation and Recovery of Selected Materials in Municipal Solid Waste: 1980 to 1996

[In millions of tons, except as indicated. Covers post-consumer residential and commercial solid wastes which comprise the major portion of typical municipal collections. Excludes mining, agricultural and industrial processing, demolition and construction wastes, sewage sludge, and junked autos and obsolete equipment wastes. Based on material-flows estimating procedure and wet weight as generated]

No. 412. Major U.S. Weather Disasters: 1980 to 1998

[Covers only weather related disasters costing \$1 billion or more]

EVENT	Description	Time period	Esti mated cost (bil. dol.)	Deaths
Southeast severe weather	Tornadoes and flooding related to strong El Nino in the southeast	Winter/Spring 1998	\$1	Over 130
Northern plains flooding	Severe flooding in Dakotas and Minnesota due to heavy spring snowmelt	April-May 1977	\$2	11
MS and OH valleys flooding and tornadoes	Tornadoes and severe flooding hit the states of AR, MO, MS, TN, IL, IN, KY, OH, and WV	March 1997	\$1	67
West Coast flooding	Flooding from rains and snowmelt in CA, WA, OR, ID, NV, & MT	Dec. 1996- Jan. 1997	\$2-\$3	36
Hurricane Fran	Category 3 hurricane in NC and VA	Sept. 1996	\$5	37
Southern Plains severe drought	Drought in agricultural areas of TX & OK	Fall 1995- summer 1996	Over \$4	(NA)
Pacific Northwest severe flooding	Flooding from heavy rain & snowmelt in OR, WA, ID, and MT	Feb. 1996	\$1	9
Blizzard of '96 followed by flooding	Heavy snowstorm followed by severe flooding in Appalachians, Mid-Atlantic, and Northeast	Jan. 1996	\$3	187
Hurricane Opal	Category 3 hurricane in FL, AL, parts of GA, TN, & Carolinas	Oct. 1995	Over \$3	27
Hurricane Marilyn	Category 2 hurricane in Virgin Islands	Sept. 1995	\$2	13
TX/OK/LA/MS severe weather and flooding	Flooding, hail, & tornadoes across TX, OK, parts of LA, MS, Dallas & New Orleans hardest hit	May 1995	\$5-\$6	32
California flooding	Flooding from frequent winter storms across much of CA	Jan.-Mar. 1995	\$3	27
Texas flooding	Flooding from torrential rain & thunderstorms across southeast TX	Oct. 1994	\$1	19
Tropical storm Alberto	Flooding due to 10 to 25 inch rain across GA, AL, part of FL	July 1994	\$1	32
Southeast ice storm	Intense ice storm in pts of TX, OK, AR, LA, MS, AL, TN, GA, SC, NC, & VA	Feb. 1994	\$3	9
California wildfires	Out-of-control wildfires over southern CA	Fall 1993	\$1	4
Midwest flooding	Extreme flooding across central U.S.	Summer 1993	\$15-\$20	48
Drought/heat wave	Extreme drought/heatwave across southeastern U.S.	Summer 1993	\$1	(NA)
Storm/blizzard	Storm/blizzard over eastern U.S.	Mar. 1993	\$3-\$6	270
Nor'easter of 1992	Slow-moving storm batters northeast U.S. coast, New England hardest hit	Sept. 1992	\$1-\$2	19
Hurricane Iniki	Category 4 hurricane hit Hawaiian island of Kauai	Sept. 1992	1.8	7
Hurricane Andrew	Category 4 hurricane hit FL & LA	Aug. 1992	\$27	58
Oakland firestorm	Oakland, CA firestorm due to low humidity & high winds	Oct. 1991	\$1.5	25
Hurricane Bob	Category 2 hurricane—mainly coastal NC, Long Island, & New England	Aug. 1991	\$1.5	18
Hurricane Hugo	Category 4 hurricane hit Puerto Rico & Virgin Islands, devastated NC & SC	Sept. 1989	Over \$9	86
Drought/heat wave	Drought/heatwave over central & eastern U.S.	Summer 1988	\$40	5,000- 10,000
Hurricane Juan	Category 1 hurricane, flooding most severe problem, hit LA and southeast U.S.	Oct.-Nov. 1985	\$1.5	63
Hurricane Elena	Category 3 hurricane across FL to LA	Aug.-Sept. 1985	\$1.3	4
Florida freeze	Severe freeze central/northern FL, damage to citrus industry	Dec. 1983	\$2	-
Hurricane Alicia	Category 3 hurricane across TX	Aug. 1983	\$3	21
Drought/heat wave	Drought/heatwave over central & eastern U.S.	June-Sept. 1980	\$20	10,000

- Represents zero. NA Not available or not reported.
