Section 26

Manufactures

This section presents summary data for manufacturing as a whole and more detailed information for major industry groups and selected products. The types of measures shown at the different levels include data for establishments, employment and wages, plant and equipment expenditures, value and quantity of production and shipments, value added by manufacture, inventories, and various indicators of financial status.

The principal sources of these data are U.S. Census Bureau reports of the censuses of manufactures conducted every 5 years, the *Annual Survey of Manufactures*, and *Manufacturing Profiles*, an annual compilation of the formerly printed series of *Current Industrial Reports*. Indexes of industrial production are presented monthly in the Federal Reserve Board's *Federal Reserve Bulletin*. These numbers were recently changed to a new index base year (1992 = 100) as of early 1997. Reports on current activities of industries or current movements of individual commodities are compiled by such government agencies as the Bureau of Labor Statistics; the Economic research Service of the Department of Agriculture; the International Trade Administration; and by private research or trade associations such as The Conference Board, Inc., the American Iron and Steel Institute, the Electronic Industries Association, and several others.

Data on financial aspects of manufacturing industries are collected by the Bureau of Economic Analysis (BEA) and the Census Bureau. Industry aggregates in the form of balance sheets, profit and loss statements, analyses of sales and expenses, lists of subsidiaries, and types and amounts of security issues are published for leading manufacturing corporations registered with the Securities and Exchange Commission. The BEA issues

data on capital in manufacturing industries and capacity utilization rates in manufacturing. See also Section 17, Business Enterprise.

Censuses and annual surveys—The first census of manufactures covered the year 1809. Between 1809 and 1963, a census was conducted at periodic intervals. Since 1967, it has been taken every 5 years (for years ending in "2" and "7"). Results from the 1997 census are expected in 1999 and 2000. Census data, either direct reports or estimates from administrative records, are obtained for every manufacturing plant with one paid employee or more. The *Annual Survey of Manufactures (ASM)*, conducted for the first time in 1949, collects data for the years between censuses for the more general measure of manufacturing activity covered in detail by the censuses. The annual survey data are estimates derived from a scientifically selected sample of establishments. The 1996 annual survey is based on a sample of about 58,000 establishments of an approximate total of 230,000. These establishments represent all manufacturing establishments of multiunit companies and all single-establishment manufacturing companies mailed schedules in the 1992 Census of Manufactures. For the current panel of the ASM sample, all establishments of companies with 1992 shipments in manufacturing in excess of \$500 million were included in the survey with certainty. For the remaining portion of the mail survey, the establishment was defined as the sampling unit. For this portion, all establishments with 250 employees or more and establishments with a very large value of shipments also were included. Therefore, of the 58,000 establishments included in the ASM panel, approximately 33,000 are selected with certainty. These establishments account for approximately 80 percent of total

value of shipments in the 1992 census. Smaller establishments in the remaining portion of the mail survey were selected by sample.

Establishments and classification—

The censuses of manufactures for 1947 through 1992 cover operating manufacturing establishments as defined in the *Standard Industrial Classification Manual (SIC)*, issued by the U.S. Office of Management and Budget (see text, Section 13). The Manual is also used for classifying establishments in the annual surveys. The comparability of manufactures data over time is affected by changes in the official definitions of industries as presented in the Manual. It is important to note, therefore, that the 1987 edition of the Manual was used for the 1987 and 1992 censuses; and the 1972 edition of the Manual and the 1977 Supplement were used for the 1972 through 1982 censuses. This Manual defines an industry as a number of establishments producing a single product or a closely related group of products. In the main, an establishment is classified in a particular industry if its production of a product or product group exceeds in value added its production of any other product group. While some establishments produce only the products of the industry in which they are classified, few within an industry specialize to that extent. The statistics on employment, payrolls, value added, inventories, and expenditures, therefore, reflect both the primary and secondary activities of the establishments in that industry. For this reason, care should be exercised in

relating such statistics to the total shipments figures of products primary to the industry. Beginning with 1997 census, the Manual will be replaced with a new way of organizing economic statistics called the North American Industry Classification System (NAICS) (see Table 1245 as an example and the new *North American Industry Classification System (NAICS) - United States, 1997*.

Establishment—Establishment signifies a single physical plant site or factory. It is not necessarily identical to the business unit or company, which may consist of one or more establishments. A company operating establishments at more than one location is required to submit a separate report for each location. An establishment engaged in distinctly different lines of activity and maintaining separate payroll and inventory records is also required to submit separate reports.

Durable goods—Items with a normal life expectancy of 3 years or more. Automobiles, furniture, household appliances, and mobile homes are common examples.

Nondurable goods—Items which generally last for only a short time (3 years or less). Food, beverages, clothing, shoes, and gasoline are common examples.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

No. 1231. Gross Domestic Product in Manufacturing in Current and Real (1992) Dollars, by Industry: 1990 to 1997

[In billions of dollars (\$5,743.8 represents \$5,743,837,000,000). Data are based on the 1987 Standard Industrial Classification (SIC). Data include nonfactor charges (capital consumption allowances, indirect business taxes, etc.) as well as factor charges against gross product; corporate profits and capital consumption allowances have been shifted from a company to an establishment basis]

NA Not available. ¹ Estimated data based on Annual Survey of Manufactures; see text, Manufactures section. ² Includes administrative and auxiliary units. ³ Excludes administrative offices and auxiliary units. ⁴ Includes forms of organization not shown separately. ⁵ Includes data for employees of manufacturing establishments engaged in distribution and construction work.

⁶ Data are based on pay periods ending nearest 15th of March, May, August, and November. ⁷ Adjusted value added; takes into account (a) value added by merchandising operations (that is, difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) net change in finished goods and work-in-process inventories between beginning and end of year. ⁸ Includes extensive and unmeasurable duplication from shipments between establishments in the same industry classification. ⁹ Includes plants under construction and not yet in operation.

Note: Reports for manufacturing industries for 1997 from the 1997 Economic Census are being issued on a flow basis beginning in the summer of 1999.

Source: Except as noted, U.S. Census Bureau, Census of Manufactures, 1982, 1987, and 1992; and Annual Survey of Manufactures.

No. 1233. Manufactures—Summary, by Industry: 1992 and 1996

[16,949 represents 16,949,000. Data based on various editions of the *Standard Industrial Classification (SIC) Manual*, published by the Office of Management and Budget; see text, Section 26, Manufactures. N.e.c. = Not elsewhere classified]

¹ Represents the average of production workers plus all other employees for the payroll period ended nearest the 15th of March. ² Includes other industries not shown separately.

Note: Reports for manufacturing industries for 1997 from the 1997 Economic Census are being issued on a flow basis beginning in the summer of 1999.

¹ Includes employment and payroll at administrative offices and auxiliary units. All employees represents the average of production workers plus all other employees for the payroll period ended nearest the 12th of March. Production workers represents the average of the employment for the payroll periods ended nearest the 12th of March, May, August, and November. ² Adjusted value added; takes into account (a) value added by merchandising operations (that is, difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) net change in finished goods and work-in-process inventories between beginning and end of year. ³ Includes extensive and unmeasurable duplication from shipments between establishments in the same industry classification.

Note: Reports for manufacturing by state for 1997 from the 1997 Economic Census are being issued on a flow basis beginning in the summer of 1999.

No. 1238. Value of Manufacturers' Shipments, Inventories, and New Orders, by Market Grouping: 1993 to 1997

[In millions of dollars (3,127,625 represents 3,127,625,000,000). Based on 1987 Standard Industrial Classification (SIC). For definition of individual market groupings, see publication cited below. Based on a sample survey of most manufacturing companies with \$500 million or more in annual shipments]

| Market grouping | Shipments | | | | | Inventories (Dec. 31) | | | | | New orders | | | | |

No. 1241. Index of Manufacturing Capacity: 1980 to 1998

[**1992 output=100.** Annual figures are averages of quarterly data. Capacity represents estimated quantity of output relative to output in 1992 which the *current* stock of plant and equipment in manufacturing industries was capable of producing. Primary processing industries comprise textiles, lumber, paper and pulp, petroleum, rubber, stone, clay, glass, primary metals, fabricated metals, and a portion of chemicals. Advanced processing industries comprise chemical products, food, beverages, tobacco, apparel, furniture, printing and publishing, leather, machinery, transportation equipment, instruments, ordnance, and miscellaneous industry groups]

| Year | Relation of output to capacity (percent) | | | | Year | Relation of output to capacity (percent) | | | |

NA Not available. ¹ Production represents total amount removed from fermenters, including distilling material, and includes increase after fermentation (by amelioration, sweetening, and addition of wine spirits). ² Barrels of 31 wine gallons. ³ Source: U.S. Census Bureau, *Census of Manufactures*, and *Annual Survey of Manufactures*. ⁴ Excludes alcohol produced for industrial use. Also excludes vodka and gin production. ⁵ For spirits of 100 proof or over, a tax gallon is equivalent to the proof gallon; for spirits of less than 100 proof, the tax gallon is equivalent to the wine gallon. A proof gallon is the alcoholic equivalent of a U.S. gallon at 60 degrees F, containing 50 percent of ethyl alcohol by volume. ⁶ Includes ethyl alcohol. ⁷ A wine gallon is the U.S. gallon equivalent to the volume of 231 cubic inches. ⁸ Includes special natural wines. ⁹ Excludes distilled materials.

No. 1248. Broadwoven and Knit Fabrics—Shipments, Foreign Trade, and Apparent Consumption: 1997

[4,246,048 represents 4,246,048,000. Fabric blends as shown in the CIR report, MQ22T are reported based on the chief weight of the fiber; whereas, fabrics blends as shown for imports are based on the chief value of the fiber. Apparent consumption represents new domestic supply and is derived by subtracting exports for the total manufacturers' shipments plus imports]

| Product description | Manufacturers' shipments (quantity) | Imports for consumption | | Percent imports to manufacturers' shipments | Exports of domestic merchandise | | Percent exports to manufacturers' shipments | Apparent consump- tion (quantity) |
|---|---|----------------------------|--------------------|--|------------------------------------|--------------------|--|--|
| | | Quantity | Value (\$1,000) | | Quantity | Value (\$1,000) | | |
| BROADWOVEN FABRICS (quantity 1,000 sq. meters) | | | | | | | | |
| Cotton fabrics ² | 4,246,048 | 1,591,422 | 1,800,985 | 37.5 | 300,772 | 690,927 | 7.1 | 5,536,698 |

| Raw wool ^{2 3} | Mil. lbs. | 133 | 151 | 157 | 153 | 142 | 142 | 144 |
| Noils, and fiber ⁴ | Mil. lbs. | 20 | 21 | 23 | 19 | 20 | 23 | 20 |
| Other fibers | Mil. lbs. | 659 | 754 | 829 | 864 | 792 | 748 | 740 |
| Knit fabric production | Mil. lbs. | 1,901 | 2,179 | 2,188 | 2,211 | 2,131 | 1,919 | 1,974 |
| Rugs, carpet and carpeting | Mil. dol. | 8,527 | 8,749 | 9,283 | 9,531 | 9,770 | 10,148 | 10,262 |
| Sheets | 1,000 doz. | 14,716 | 15,300 | 16,331 | 16,190 | 15,282 | 16,108 | 16,480 |
| Pillow cases | 1,000 doz. | 12,443 | 12,945 | 14,464 | 14,622 | 14,232 | 14,234 | 15,305 |
| Terry towels | 1,000 doz. | 41,855 | 46,885 | 47,161 | 48,348 | 47,939 | 46,991 | 44,940 |

¹ Includes man-made fiber top converted from tow without combing. A number of companies were added for 1990 based on information in the 1987 Census of Manufactures. Data were received from these companies for 1990; therefore, the information shown for years prior to 1990 may not be directly comparable. These changes represent approximately 20 percent of the total fibers consumed on the woolen system and worsted combing. ² Data are shown on a scoured basis for greasy wool.

³ Shorn and pulled wool of sheep excludes raw wool consumed in cotton system spinning to avoid disclosing figures for individual companies. ⁴ Includes reprocessed and reused wool, mohair, alpaca, vicuna, and other specialty fibers as well as tops and noils consumed in woolen spinning and mohair consumed in worsted combing. Does not include wool tops consumed in cotton system spinning.
