

Media Internship in Fire Communications and Education

The National Park Service Fire and Fuels Management Program is expanding its Communications and Education functions. Increasing social and ecological concerns associated with wildland fire requires greater emphasis on community outreach. Since the implementation of the National Fire Plan began in 2001, Point Reyes National Seashore and Golden Gate National Recreation Area have established many new partnerships and fuels treatment projects. Fire and fuels management activities are communicated through a variety of media to a variety of audiences. This growing public communications and education program focuses on Fire Safety, Fire Ecology, and Fire History in both parks and neighboring lands.

Benefits

- Complete a Degree Requirement
- Build Your Portfolio
- Gain Experience in a Government Agency
- Learn about Wildland Fire Management, Ecology, and Policy
- Learn about “The Message Project”, the National Park Service Identity Program
- Receive a Stipend
