

Citing Material on the Webpage

A standard format for citing electronic sources is in the process of being developed by the Council of Science Editors (formerly the Council of Biology Editors) for their seventh edition of the "Scientific Style and Format". More information on citing electronic sources can be found at <http://www.bedfordstmartins.com/online/cite8.html>. Until this format is published, documents on this web site can be cited as follows:

Author's name. Date of Internet publication. Document title [medium designator].
Publisher. <URL>. Date the document was accessed or downloaded.

Example:

Hand, D. and D. Olson. 2003. Steelhead returns to Warm Springs National Fish Hatchery, 1978-2003 [Internet]. U. S. Fish and Wildlife Service, Columbia River Fisheries Program Office, Vancouver, WA.
<<http://columbiariver.fws.gov/pdfdocs/hatchery/wonderfulpaper.pdf>>. Accessed 2004 Jan 15.

Note: DO NOT break the URL at the end of a line using a hyphen or other punctuation. It is preferable to keep the URL on one line, if you need to use more than one line, break the URL at a forward slash.

Documents that are not individually authored (posters, brochures, plans, etc.) are considered to be authored by the organization. If the author organization is the same as the publishing organization, omit the author and reference the organization in the publisher section.

Example:

2003. Hatchery update Warm Springs National Fish Hatchery [brochure on Internet]. U.S. Fish and Wildlife Service, Columbia River Fisheries Program Office, Vancouver, WA. <<http://columbiariver.fws.gov/pdfdocs/hatchery/ws2003.pdf>>. Accessed 2003 Jan 15.

If a document has been previously published in another medium such as a peer-reviewed journal, the original source material should be obtained. If you need to cite such a document from this webpage cite it as you normally would for the journal article but add where the document was obtained, i.e. <URL>, and the date it was downloaded.
