

**THE ECOLOGY OF BISON MOVEMENTS AND
DISTRIBUTION IN AND BEYOND
YELLOWSTONE NATIONAL PARK**

**A Critical Review
With Implications for Winter Use and
Transboundary Population Management**

ACKNOWLEDGEMENTS

The history and enormity of issues leading to this study have touched the professional or personal lives of a broad spectrum of Americans, including federal and state civil servants and citizens who care passionately about the integrity of Yellowstone National Park, bison conservation, or protection of livestock against reinfection with a zoonotic organism nearing eradication in the industry. Given the strong polarization among interests involved in these environmental conflicts, the authors feel privileged to have been welcomed by key informants to engage in exploration of their knowledge and insights, and in many cases to have been provided with unpublished data contributing to our assessment and recommendations. Foremost among those we wish to acknowledge as contributing to the assessment is Dr. Mary Meagher, whose passionate concerns for the conservation of Yellowstone bison and the integrity of the Yellowstone Park ecosystem have been uncompromising. We encourage her to continue analyzing the as yet unrealized potential of a data set spanning more than 30 years, complimented by experience in the Yellowstone ecosystem exceeding the duration of most professional careers in wildlife management. In contrast, Rick Wallen, the current bison biologist with the National Park Service, is just beginning to develop a research and management program. We thank Rick for contributing information and his insights to the assessment and hope in return that the report contributes to the development of his program. We are grateful to both Rick Wallen and Dr. Doug Smith for the experience and insights we gained while riding the Mary Mountain Trail with them in October 2004. Finally, we wish to acknowledge the enormous contribution to the project by Traci Weller of Bozeman, Montana. Traci organized and scheduled the interviews and workshops, recorded the dialogue and prepared transcripts. Her competency and humor sustained us through the arduous interview schedule.

CONTENTS

	EXECUTIVE SUMMARY	v
	GLOSSARY OF TERMS	xv
1	INTRODUCTION	1
	The Task..... 2	
	Structure of This Study..... 3	
	Organization of the Report..... 6	
2	REVIEW OF LITERATURE ON UNGULATE MOVEMENTS	7
	Evolution of Movement Patterns..... 7	
	Benefits of Dispersal..... 9	
	Benefits of Migration..... 11	
	Use of Space..... 14	
	Dispersal and Density..... 17	
	Awareness of Destination..... 18	
	Range Expansion..... 20	
	Biophysical Constraints..... 24	
	Migration Initiation Thresholds..... 35	
	Multi-Species Resource Use..... 37	
	Chapter Summary..... 41	
3	ENVIRONMENTAL SETTING	42
	Geography and Geology..... 42	
	Bison Winter Ranges and Movement Corridors..... 43	
	Climate..... 45	
	Vegetation, Forage Production, and Utilization..... 49	
	Fire..... 50	
	Bison Habitat and Forage..... 50	
	Other Wildlife..... 51	
	Anthropogenic Features..... 52	
	Motorized Oversnow Vehicle Winter Use History..... 53	
	Conclusions..... 54	
	Tables..... 55	
	Figures..... 63	
4	HISTORY OF BISON MANAGEMENT IN YELLOWSTONE NATIONAL PARK	76
	Yellowstone Bison in Prehistory..... 76	
	Yellowstone Bison in the Historic Period..... 81	
	New Paradigm for Bison Management 96	
	Conclusions..... 99
