

EPA Tracked Sites with Non-Grid Connected Photovoltaic (PV) Solar Energy Generation Potential

Solar Resource kWh/m ² /day	Resource Potential
< 4	Moderate
> 4 - 5	Good
> 5 - 6	Very Good
> 6	Excellent

EPA Tracked Sites	
●	Abandoned Mine Land
●	Brownfield
●	RCRA
●	Federal Superfund
●	Non-Federal Superfund

Screening Criteria

Solar resource availability, property size, and distance to transmission lines and roads are not screening criteria

All sites are generally considered favorable for siting non-grid connected PV

This map was developed by SRA International for the U.S. Environmental Protection Agency (EPA) OSWER Center for Program Analysis. Results are based on site screening criteria adapted from National Renewable Energy Laboratory (NREL) criteria and GIS data provided by NREL and EPA. This map and its associated data are intended to provide a general understanding of the renewable energy potential of EPA tracked sites; additional site specific analysis is required to determine the actual energy generation potential of EPA tracked sites. For further information, please see the accompanying Data Guidelines document, or contact cleanenergy@epa.gov.
