

**Appendix D – Explanation of Major Changes from FY 2009 to FY 2010  
Office of Air & Radiation**

<b>Change from FY 2009 Guidance Document</b>		<b>Reason for Change</b>	<b>Effected Pages and Sections</b>
<b>Priorities</b>	New work related to designating areas for the revised ozone and lead NAAQS promulgated in 2008.	The NAAQS for ozone and lead were both revised in 2008.	Technical Guidance.
<b>Funding</b>	Final FY 2010 budget request has not yet been determined. Continued restructuring in ambient monitoring technical areas anticipated including proposals for support of lead monitoring and high-risk air toxic areas.	Changes due to factors such as revised air monitoring regulations, revised NAAQS for PM, and changes in how monitoring is funded.	Appendix A.
<b>Strategies</b>	None	None	None
<b>Annual Commitment Measures</b>	Approximately 15 measures (mostly those related to outdoor air) were substantively changed (either added, deleted, or rewritten).	Outdoor air measures were changed to keep pace with changed program implementation requirements stemming from Clean Air Act-driven timelines. Three non-commitment indicators were added to capture important activities not previously tracked—tribal emissions inventories, and voluntary greenhouse gas reduction activities other than Energy Star.	Appendix B.
<b>Tracking Process</b>	None	None	None
