

NECK

This is a black and white photograph of a turtle's shoulder and neck area, which has been surgically opened. The turtle's head and neck are on the left side of the frame. The carapace, or upper shell, is visible at the bottom left. The acromion, a bony projection, is indicated by two black lines pointing to a specific point on the shoulder. The plastron, or lower shell, is on the right side. A person's hands are visible at the top and bottom, holding the dissection open. The word 'NECK' is printed vertically on the left side of the image.
