March 2007

Save with an ENERGY STAR Qualified Dishwasher...

Save Time. Using an ENERGY STAR qualified dishwasher (instead of handwashing) will save nearly 10 days of your time each year. So stop scrubbing—just load and go!

Save Money. Cut your energy and water bills by more than \$40 per year compared to handwashing.

Save Energy. Use half as much energy as washing by hand.

Save Water. Use nearly 5,000 gallons less water per year, compared to washing dishes by hand.

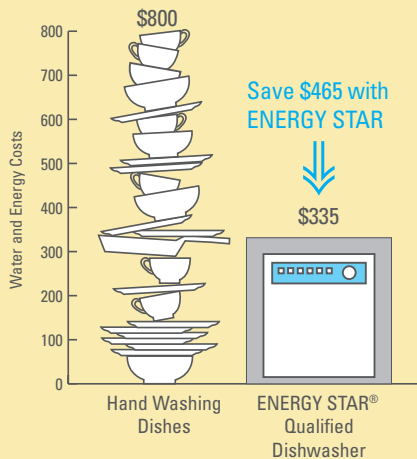

Reduce Noise. ENERGY STAR qualified dishwashers run 50% more quietly than 10-year old models.

Help the Environment. Less energy means less pollution and greenhouse gases in the environment. Less water consumption helps protect our lakes, streams and oceans.

To find out more about how to choose energy-efficient dishwashers, visit www.energystar.gov/dishwashers.

Dishwasher Water and Energy Savings

You can save \$465 in energy and water bills over the life of an ENERGY STAR dishwasher compared to washing dishes by hand.

How These Dishwashers Save Water and Energy

Soil Sensors test how dirty the dishes are and adjust the cycle to minimize energy and water use.

More Efficient Jets use less energy to spray detergent and water on the dishes when cleaning.

Innovative Dish Rack Designs situate the dishes to maximize cleaning with minimal water.

If you still wash your dishes by hand, you're probably wasting more than just your valuable time. Over an average eleven-year lifespan, ENERGY STAR qualified dishwashers can save...

- **55,000 Gallons of Water** – that's a lifetime supply of drinking water for more than four people
- **\$465 in Energy and Water Bills** – that's like getting a 15-year supply of dishwasher detergent
