Goal: supporting high-quality research

Examining and evaluating an assignment, the student work that resulted from the assignment, the teachers' assessment of the student work, and the reflection on how the design and implementation of the lesson might be improved to ensure that all students have an opportunity to achieve at high levels provides a rich source of data for further studies. We are in the process of conducting a study of linking teacher participation in the process to increased student achievement. Currently, the staff of the Academy and their partners in the international project, Schools Around The World, are studying student work from the nine countries to address the issue of science literacy.
