

aid the Agency in its reregistration decision for this chemical (please refer to the Note to Reader in the aldicarb public docket). EPA is also soliciting public comment on preliminary benefits assessments for specific crops. EPA developed the risk assessments for aldicarb as part of its public process for making pesticide reregistration eligibility and tolerance reassessment decisions. Through these programs, EPA is ensuring that pesticides meet current standards under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug, and Cosmetic Act (FFDCA), as amended by the Food Quality Protection Act of 1996 (FQPA).

Aldicarb is a restricted use systemic insecticide, acaricide and nematocide used to control leaf phylloxera; bud moth; citrus nematode (suppression); aphids; mites; white flies; thrips; fleahoppers, leafminers; leafhoppers; overwintering boll weevil; lygus; nematodes (suppression); cotton leaf perforator; seedcorn maggot; Mexican bean beetle; flea beetles; Colorado potato beetle; greenbug; chinch bug; three cornered alfalfa hopper (suppression); and sugar beet root maggot. Aldicarb is registered for use on agricultural crops including citrus, cotton, dry beans, peanuts, pecans, potatoes, sorghum, soybeans, sugar beets, sugarcane, sweet potatoes, and seed alfalfa (CA). In addition, aldicarb may be applied to field grown ornamentals (CA) and tobacco, and on coffee grown in Puerto Rico. There are no aldicarb products intended for sale to homeowners or for use in residential settings.

EPA is providing an opportunity, through this notice, for interested parties to provide risk management proposals or otherwise comment on risk management for aldicarb. Risks of concern associated with the use of aldicarb are: risks from rural drinking water wells in peanut/cotton growing regions in the southern coastal plain (Alabama, Georgia, South Carolina), ecological risks to mammals, birds, fish and aquatic invertebrates. In targeting these risks of concern, the Agency solicits information on effective and practical risk reduction measures.

EPA is applying the principles of public participation to all pesticides undergoing reregistration and tolerance reassessment. The Agency's Pesticide Tolerance Reassessment and Reregistration; Public Participation Process, published in the **Federal Register** on May 14, 2004 (69 FR 26819)(FRL-7357-9), explains that in conducting these programs, EPA is tailoring its public participation process

to be commensurate with the level of risk, extent of use, complexity of issues, and degree of public concern associated with each pesticide. Due to its uses, risks, and other factors, aldicarb is being reviewed through the full 6-Phase public participation process.

All comments should be submitted using the methods in **ADDRESSES**, and must be received by EPA on or before the closing date. Comments and proposals will become part of the Agency Docket for aldicarb. Comments received after the close of the comment period will be marked "late" EPA is not required to consider these late comments.

After considering comments received, EPA will develop and issue for comment the aldicarb IRED. Further risk mitigation measures may be needed when EPA considers its cumulative assessment of the N-methyl carbamate pesticides.

B. What is the Agency's Authority for Taking this Action?

Section 4(g)(2) of FIFRA as amended directs that, after submission of all data concerning a pesticide active ingredient, "the Administrator shall determine whether pesticides containing such active ingredient are eligible for reregistration," before calling in product specific data on individual end-use products and either reregistering products or taking other "appropriate regulatory action."

Section 408(q) of the FFDCA, 21 U.S.C. 346a(q), requires EPA to review tolerances and exemptions for pesticide residues in effect as of August 2, 1996, to determine whether the tolerance or exemption meets the requirements of section 408(b)(2) or (c)(2) of FFDCA.

viii. Make sure to submit your comments by the comment period deadline identified.

II. What Action is the Agency Taking?

EPA is printing a summary of each pesticide petition received under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, proposing the establishment or amendment of regulations in 40 CFR part 180 for residues of pesticide chemicals in or on various food commodities. EPA has determined that this pesticide petition contains data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petition. Additional data may be needed before EPA rules on this pesticide petition.

Pursuant to 40 CFR 180.7(f), a summary of the petition included in this notice, prepared by the petitioner along with a description of the analytical method available for the detection and measurement of the pesticide chemical residues is available on EPA's Electronic Docket at <http://www.regulations.gov>. To locate this information on the home page of EPA's Electronic Docket, select "Quick Search" and type the OPP docket ID number. Once the search has located the docket, clicking on the "Docket ID" will bring up a list of all documents in the docket for the pesticide including the petition summary.

New Tolerances

(PP) 4E6867 and 6E7066. The Interregional Research Project Number 4 (IR-4), 500 College Road East, Suite 291 W., Princeton, NJ 08540], proposes to amend the tolerance(s) in 40 CFR 180.466 for residues of the insecticide, fenpropathrin, (alpha-cyano-3-phenoxybenzyl 2,2,3,3-tetramethylcyclopropanecarboxylate) in or on certain raw agricultural commodities. 4E6867 proposes tolerances for residues of fenpropathrin in or on fruit, stone, group 12 at 5.0 parts per million (ppm); nut, tree, group 14 at 0.10 ppm, pistachio at 0.10 ppm and almond, hulls at 5.0 ppm, 6E7066 proposes tolerances for residues of fenpropathrin in or on avocado, black sapote, canistel, mamey sapote, mango, papaya, sapodilla and star apple at 1.0 ppm; barley, grain at 0.30 ppm; barley, hay at 2.5 ppm; and barley, straw at 4.5 ppm.

Adequate analytical methodology is available to detect and quantify fenpropathrin at residue levels in numerous matrices. The methods use

solvent extraction and partition and/or column chromatography clean-up steps, followed by separation and quantitation using capillary gas liquid chromatography (GLC) with FID. The extraction efficiency has been validated using radiocarbon samples from the plant and animal metabolism studies. The enforcement methods have been validated at independent laboratories and by EPA. The limit of quantification (LOQ) for fenpropathrin in raw agricultural commodity samples is usually 0.01 ppm. The available analytical enforcement methodology was previously reviewed in the **Federal Register** of March 2, 2000 (65 FR 11234) (FRL-6492-6).
