

GSA Office of Governmentwide Policy

Federal Fleet Report, Fiscal Year 2008

January 31, 2009

Dear Reader:

We are pleased to present the Federal Fleet Report for Fiscal Year 2008.

The Federal Fleet Report is produced through the Federal Automotive Statistical Tool (FAST), an Internet-based application that collects fleet-related data from Federal executive agencies. FAST satisfies several distinct but overlapping reporting requirements for several different parties:

Federal Fleet Report.....General Services Administration
Energy Policy Act Compliance.....Department of Energy
Federal AFV Location Reporting.....Energy Information Administration
Agency Fleet Budget Reporting.....Office of Management and Budget

By utilizing the FAST database for all of these reporting requirements we ensure that information reported and published is consistent while reducing the reporting workload on the agencies. FAST also permits much speedier production of reports and availability of useful information for managers and policymakers.

Copies of this and previous reports are available at the GSA website at <http://www.gsa.gov/vehiclepolicy> and the FAST website at <https://fastweb.inel.gov/>. If you have any questions about this report or would like to offer comments or suggestions on its contents, please contact us at vehicle.policy@gsa.gov.

We trust that this year's report will be of value to you.

Executive Summary

Overview

Federal departments, agencies, and their contractors use motor vehicles to perform their missions. These vehicles, totaling more than 645,000 for Fiscal Year 2008, are obtained from three primary sources: agency purchase, lease from the GSA Fleet Program, or commercial lease. This report presents inventory, utilization, costs, and fuel use associated with the Federal motor vehicle fleet. The data in this report are summarized by:

- Overall Federal Fleet Profiles
- Inventory
- Cost
- Utilization
- Fuel

The data are also displayed by vehicle type, and in some instances, by location (foreign vs. domestic). Overviews of tabular data are also displayed in graphical charts for the current year and 5-year trends.

Privately-owned motor vehicles used by Federal employees on official business are not included in the Federal Fleet Report, nor are short-term commercial rental vehicles (used less than 60 continuous days).

Background

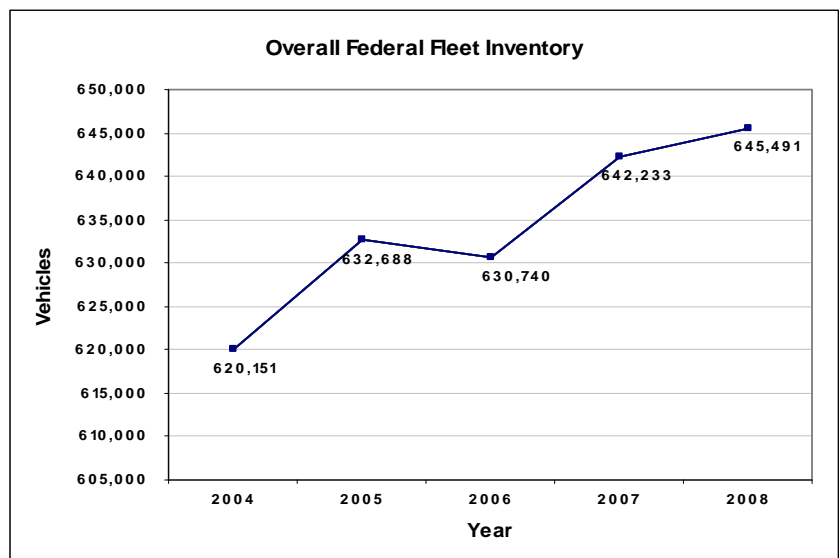

The report summarizes statistical data by passenger-carrying vehicles, trucks, and all other vehicle types. Data are further summarized by characterizing each agency’s vehicles by civilian, military and U.S. Postal Service, and in some instances, by vehicle source and location (domestic vs. foreign). Vehicle types identified in the report include:

- Sedans and station wagons
- Passenger vans
- Sport utility vehicles
- Light trucks (4x2 and 4x4)
- Medium trucks
- Heavy trucks
- Ambulances
- Buses

Major Federal Fleet Trends

Worldwide Motor Vehicle Inventory

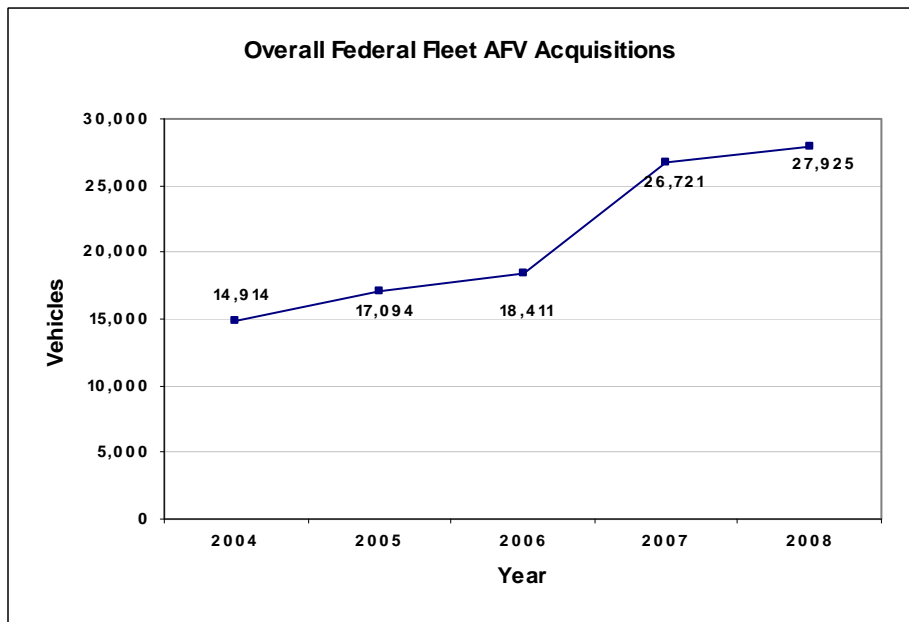

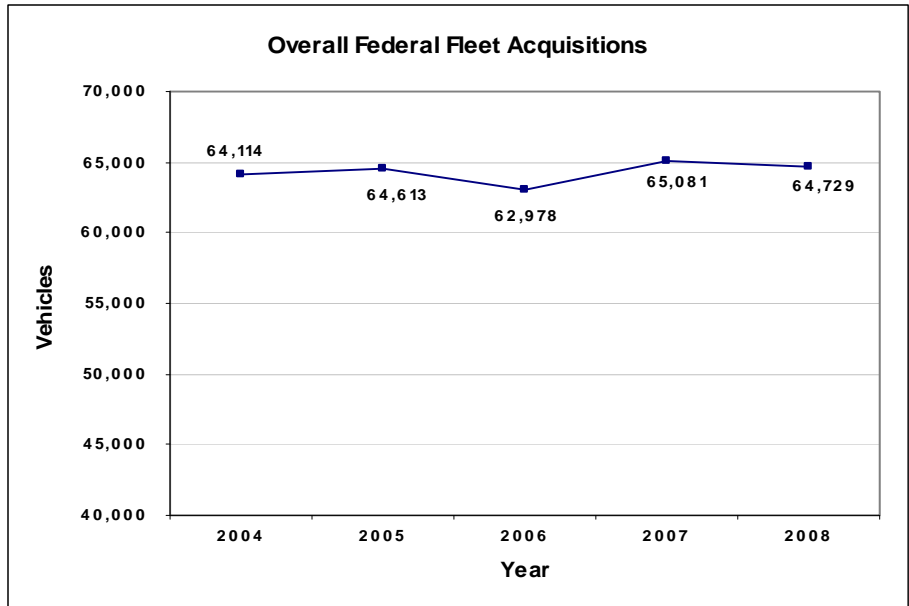

The Federal government’s worldwide fleet grew by an insignificant 0.5 percent in fiscal year 2008. Growth was concentrated in the Department of Homeland Security (12.7 percent) and the overall military (1.7 percent), although the various military components were mixed. Inventory in the overall civilian fleet actually declined (-0.7 percent). The Postal Service fleet also grew slightly (0.8 percent). Not too much should be read into this, as some fluctuation from year to year is normal, and simply reflects the timing of vehicle acquisitions and disposals.

Motor Vehicle Acquisitions

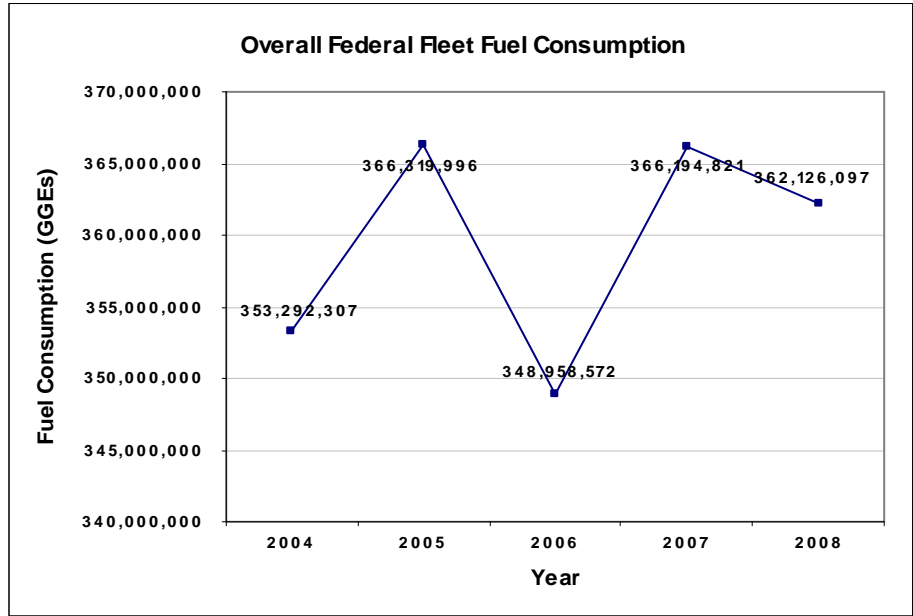

These two graphs depict vehicle acquisitions in general and acquisition of alternative fuel vehicles in particular. Overall acquisitions were again stable, with an insignificant reduction of half a percent reflecting normal year-to-year variation. Acquisition of gasoline-fueled vehicles declined again, for the fifth consecutive year. Changes in diesel and E-85 acquisitions were not statistically significant. Federal agencies naturally acquire the types of vehicles that are available in the configurations they need, and significant changes will not occur until new technologies reach the market.

Last year's slowdown in the trend toward SUVs continues. The combination of high fuel prices and acquisition costs, plus new internal controls on SUV acquisitions, seems to be working. But the slack was taken up by midsize rather than compact sedans, with nearly all of the growth in the passenger vehicle fleet in the midsize sedan category. Law enforcement activities continue to contribute to fleet growth in both SUV and midsize sedan categories.

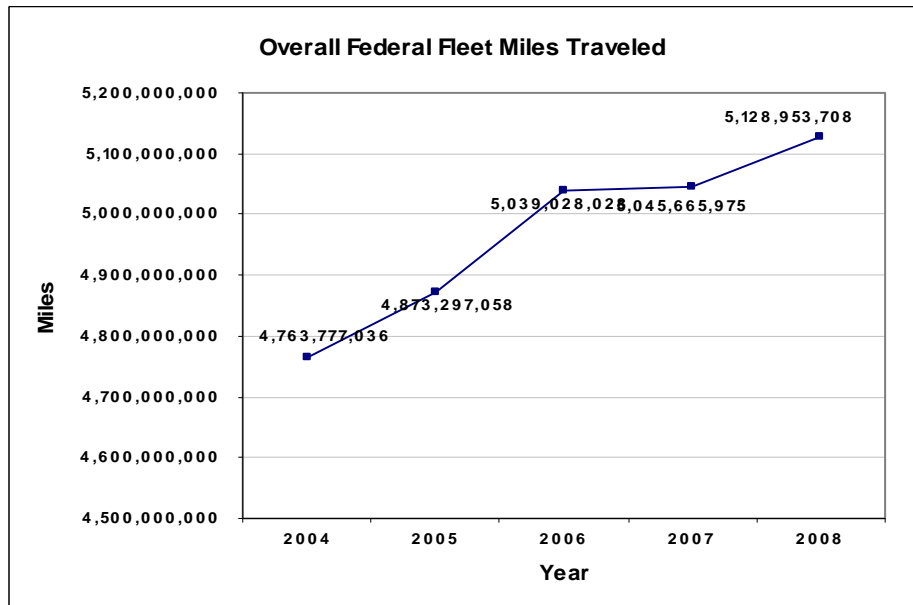

Total Fuel Consumption

Total fuel consumption of the Federal fleet declined by a significant 1.1 percent. This continues a somewhat wobbly but consistent trend of the last few years; although there have been spikes, the general trend is down since 2003's 371 billion gallon-equivalents. While not dramatic, this represents an extraordinary effort on the part of Federal fleet managers, who have little direct control over the use of their vehicles. However, it is also prudent to recall many agencies' continuing difficulties in collecting and reporting accurate fuel consumption data. More work is needed to ensure that accurate data are incorporated in charge card purchasing processes as well as agencies' fleet management information systems.

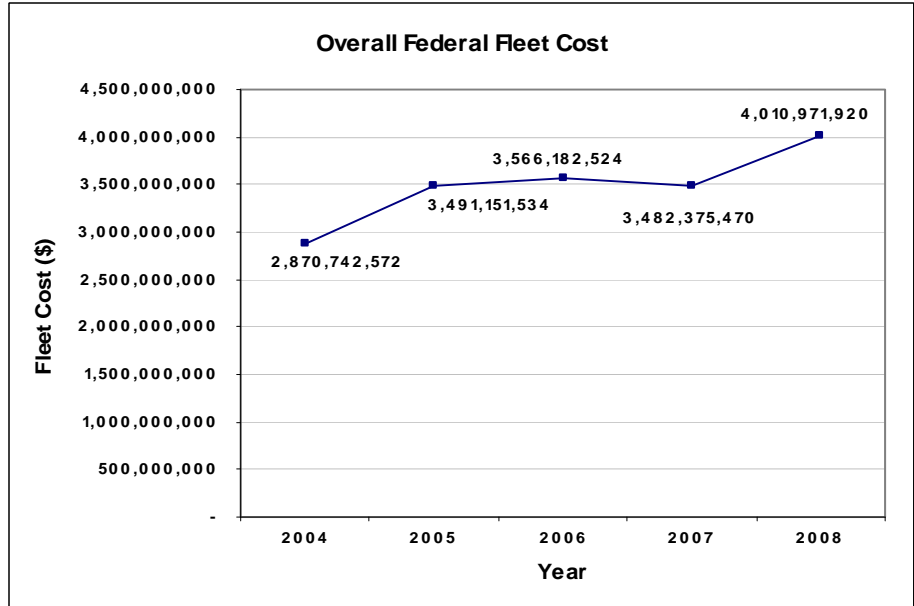

Worldwide Miles Traveled

After being almost perfectly flat from 2006 to 2007, total miles traveled increased by a significant 1.65 percent in 2008. If the data are correct, this shows a fleet that is both more efficient and better utilized, a definite improvement over last year when the indicators were all in the wrong directions. This is the sort of trend we hope will continue.

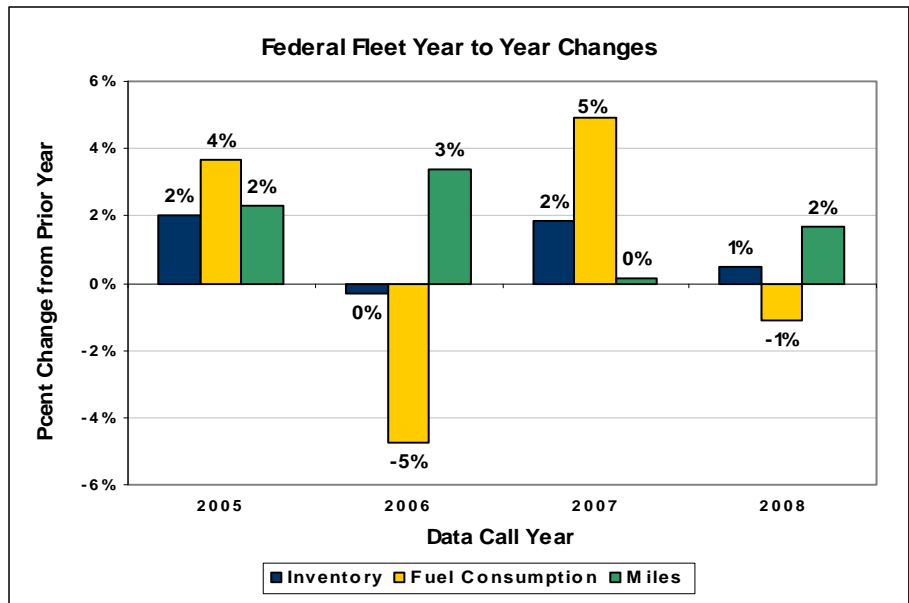

Worldwide Operating Costs

After the anomalous decline of 2007, the 15 percent increase in fleet cost passes the reasonableness test, and reflects the sudden and dramatic upturn in petroleum prices all fleets experienced during the year. Given the size of the fuel price increases this is quite consistent with both the increase in miles traveled and the decline in fuel consumption. Fuel remains the principal driver of fleet cost. Increases like this one underline the importance of carefully managing all other areas of fleet costs.

FAST Data Trends

Unlike last year, where inventory, fuel consumption, and miles traveled moved inconsistently, this years trends make sense in an environment of nearly flat inventory, spiking fuel costs, and improved utilization. As always, however, caution should be exercised in extrapolating the data. Inventory and miles are still easier to measure and come from internal sources, where fuel use depends at least in part on external data providers that continue to be plagued by reporting difficulties.

Continued effort is needed to ensure the reliability of data provided by fuel charge card companies. The problems with fuel coding reliability from service station purchase to final transaction reporting are well known and of long standing, and attempts to address them continue.

Other Items of Note

Prior to 2007 agencies that failed to report for any reason were deleted from the data tables. This year, to avoid formatting problems and ensure consistency from year to year, such agencies are displayed with blanks in the data fields. New to the Fleet Report this year is the Federal Housing Finance Agency, created by the Housing and Economic Recovery Act of 2008.

Section 1: Overall Fleet Profiles

Section 1 provides a high-level look at the worldwide Federal fleet. It contains tables that cover inventory, cost, utilization, and fuel consumption. Each succeeding section provides more detailed tables, charts, and graphs on these areas. Section 1 ends with a table that summarizes each area in one comprehensive view.

Section 2: Inventory

This section provides additional information to supplement Table 1-1. In addition to end-of-year inventory, it also provides 5-year trend charts, as well as information on where agencies acquire their vehicles (purchase, commercial lease, or GSA Fleet lease).

Passenger vehicles and trucks are broken down into their constituent vehicle types, as are law enforcement vehicles. Again, the passenger vehicle category now includes vehicles other than sedans and station wagons that are used primarily or exclusively to transport passengers, such as passenger vans and sport utility vehicles (SUVs).

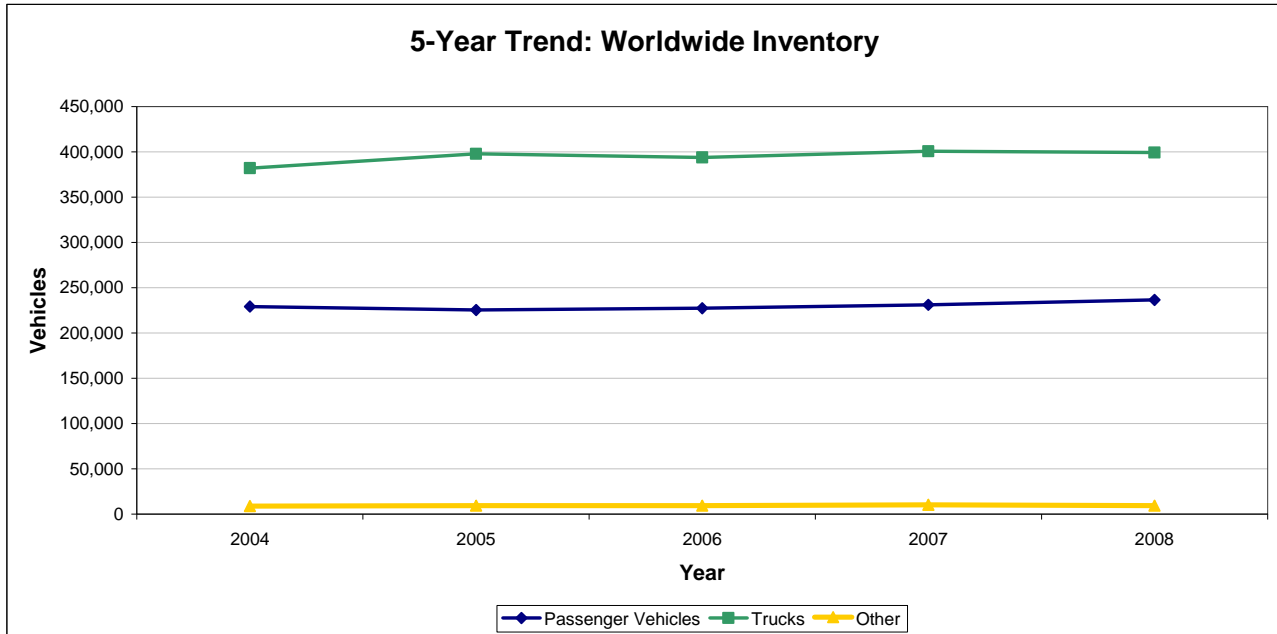

The division between light duty and medium duty for SUVs and passenger vans is a gross vehicle weight rating (GVWR) of 8,500 pounds, as specified in the Clean Air Act and the Energy Policy Act.

Charts 2-7, 2-8 and Tables 2-7 and 2-8 show the federal inventory of law enforcement vehicles. It should be noted that this category is intended to reflect only vehicles with actual law enforcement missions; it does not reflect administrative-use vehicles used by agencies with a law enforcement mission.

*These data come from GSA's Automotive Division. Procurements by GSA's Automotive Division capture most, but not all, Federal executive vehicle procurements. Agencies are sometimes granted waivers to conduct their own procurements. Also, GSA reports procurement actions in terms of orders placed, not shipments or deliveries made, so these figures will not necessarily match new acquisitions as reported by agencies in the FAST system.

* These are agency-owned vehicles only, not commercially leased or GSA Fleet vehicles.

Section 3: Cost

Section 3 expands on the information provided in Table 1-2. FAST began collecting new types of cost data for FY 2004. For example, many agencies do not account for depreciation of fleet assets, so in prior years the depreciation expense reported by GSA Fleet (expressed as a cost per mile by vehicle type) was attributed to other agencies (excepting the U.S. Postal Service, which does account for depreciation). Beginning in FY 2004, all agencies are required to report vehicle depreciation as a separate expense.

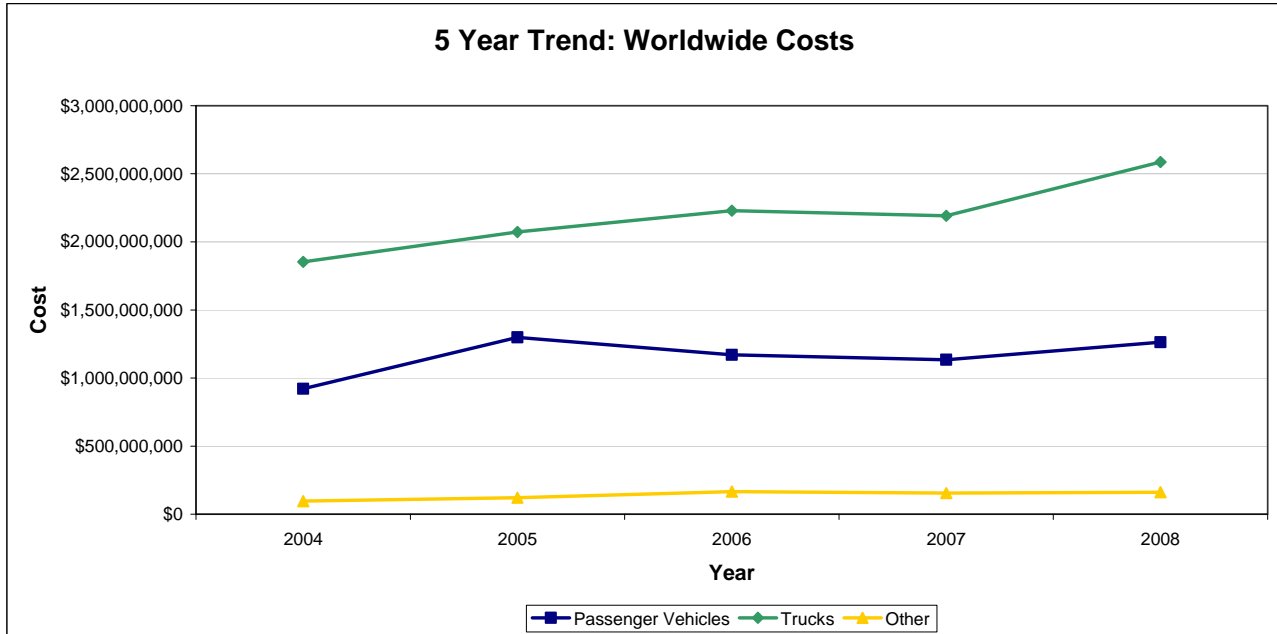

Other costs collected and represented in this section include fuel, maintenance, indirect costs, commercial lease cost and GSA lease cost. Maintenance includes the cost of maintaining and repairing vehicles, including maintenance personnel, parts, supplies, and equipment. Indirect costs include management and overhead personnel, office supplies, building and utility costs, and any other costs that cannot be directly attributed to the operation or maintenance of vehicles. Commercial lease cost includes the lease charges paid to commercial leasing companies. GSA Lease cost is the total amount billed by GSA Fleet to its customer agencies, which includes fuel. Fuel costs for agency owned and commercially leased vehicles are not collected by vehicle type and are therefore shown as a single cost item in the Totals section in Table 3-2. All costs in this report are shown in U.S. Dollars.

This section also reveals some of the inconsistencies in the data that the agencies have reported through FAST. In some cases, it may not be possible to calculate the cost per mile, or miles per vehicle using the raw data from other tables in the report. The inconsistencies arise from agencies who have reported inventory and cost, but no miles, or miles, but no costs for certain vehicle types. In these situations, the data rows in the miles per vehicle and cost per mile tables for that agency and vehicle type will be blank.

* The reported cost of GSA Fleet vehicles was divided by the reported miles traveled by those vehicles to produce this table. The costs shown here may not correspond to the cost per mile claimed by GSA Fleet for its overall fleet operations. GSA Fleet is the sole source of reliable and accurate data about itself.

Section 3: Cost

Chart 3-6: Cost Per Mile – Commercially Leased Vehicles*

Cost Per Mile by Year
