SUPPLEMENTARY INFORMATION:

I. Abstract

StormReady and TsunamiReady are voluntary programs offered to provide guidance and incentive to officials who wish to improve their hazardous weather operations—not only the equipment needed for reception of hazardous weather warnings, but overall planning, education and awareness. Applicants will use the StormReady Application form and TsunamiReady/StormReady Application form to apply for initial StormReady or TsunamiReady/StormReady recognition and renewal of that recognition every three years; thus, a typical StormReady community would use this form 3 times every 10 years. The government will use the information collected by application to determine whether a community has

met all of the guidelines, e.g. for community preparedness and local warning dissemination, to receive StormReady and/or TsunamiReady recognition.

II. Method of Collection

Applications will be submitted on paper (faxed or mailed) or electronically.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) authorizes the Gulf of Mexico Fishery Management Council (Council) to prepare and amend fishery management plans for any fishery in waters under its jurisdiction. National Marine Fisheries Service (NMFS) manages the reef fish fishery in the waters of the Gulf of Mexico under the Reef Fish Fishery Management Plan (FMP). The regulations implementing the FMP appear at 50 CFR part 622, and regulations at 50 CFR part 697 and subpart H of 50 CFR part 600 also pertain. The corresponding regulations established a mandatory VMS requirement.

The Reef Fish FMP contains several area-specific regulations where fishing is restricted or prohibited in order to protect habitat or spawning aggregations, or to reduce fishing pressure in areas that are heavily fished. Unlike size, bag, and trip limits, where the catch can be monitored onshore when a vessel returns to port, area restrictions require at-sea enforcement.

However, at-sea enforcement of offshore area restrictions is difficult due to the distance from shore and the limited number of patrol vessels, resulting in a need to improve enforceability of area fishing restrictions through remote sensing methods. In addition, all fishing gears are subject to some area fishing restrictions. Because of the sizes of these areas and the distances from shore, the effectiveness of enforcement through over flights and at-sea interception is limited. An electronic VMS allows a more effective means to monitor vessels for intrusions into restricted areas.

The VMS provides effort data and would significantly aid in enforcement of areas closed to fishing. All position reports are treated in accordance with NMFS existing guidelines for confidential data. As a condition of authorized fishing for or possession of Reef Fish in or from the Gulf of Mexico Exclusive Economic Zone (EEZ), a vessel owner or operator subject to the requirements for a VMS in this section must allow NMFS, the United States Coast Guard (USCG), and their authorized officers and designees access to the vessel's position data obtained from the VMS.

The currently approved reporting requirements are being renewed without change. The burden estimates, however, do have changes due to programmatic changes and attrition in the fishery.

II. Method of Collection

Respondents have a choice of either electronic or paper forms. Methods of submittal include e-mail of electronic forms, and mail and facsimile transmission of paper forms.
