

Irrigation Company, Roosevelt Irrigation District, Roosevelt Water Conservation District, and others. Roosevelt and the other SRP reservoirs also provide a variety of recreational uses and environmental benefits in central Arizona. Due to dry conditions in central Arizona for the past six years, the water level at Roosevelt has been below normal. As a result, riparian vegetation has invaded and flourished in the portion of Roosevelt historically used by SRP to store water for use in the Phoenix metropolitan area. Animals that use riparian habitat have followed the vegetation growth and now occupy areas within the reservoir. In particular, a population of flycatchers now occupies habitat within the storage space at Roosevelt. Thus, periodic refilling of the reservoir may adversely affect habitat used by the flycatcher, clapper rail, bald eagle, and cuckoo.
