SUPPLEMENTARY INFORMATION: The MMS prepares EA's and Findings for Outer Continental Shelf (OCS) oil and gas exploration and development activities and other operations on the Pacific OCS. ExxonMobil's OSPR Project involves replacing a failed power cable (17 miles) linking OCS Platform Heritage with the onshore Las Flores Canyon Processing Facility and installing a new cable (4 miles) between OCS Platforms Hondo and Harmony to provide redundancy in the event of a future cable failure. The MMS and SBC prepared a joint environmental document (MND/EA) for the OSPR Project to facilitate review of the project by regulatory agencies, the public, and other interested parties. The MND/EA examines the potential environmental effects of the OSPR project and presents MMS and SBC conclusions regarding the significance of those effects. Pursuant to CEQA, MND's are prepared to determine whether proposed projects have the potential to result in significant environmental effects. The MMS prepares EA's to determine whether proposed projects constitute a major Federal action that significantly affects the quality of the human environment in the sense of NEPA 102(2)(C). A FONSI is prepared in those instances where the MMS finds the project will not result in significant effects on the quality of the human environment. The FONSI briefly presents the basis for that finding and includes a summary or copy of the EA. This notice constitutes the public Notice of Availability of environmental documents required under the NEPA regulations.
