

Kansas City Plant
National Security Asset

To be the most admired team within the NNSA for our relentless drive to convert ideas into the highest quality national security products and services by applying the right technology, outstanding program management and the best commercial practices.

COMMITMENTS MADE COMMITMENTS KEPT

F For more than 55 years, the National Nuclear Security Administration's Kansas City Plant has served as one of our nation's foremost national security assets. Managed and operated by Honeywell Federal Manufacturing & Technologies LLC, the Kansas City Plant manufactures a wide array of sophisticated, nonnuclear mechanical, electronic and engineered material components for national defense systems. These include 85 percent of the components used in nuclear weapons.

With operations in Missouri, New Mexico and Arkansas, Kansas City Plant customers include the NNSA, DOE, national labs, DoD, other government agencies, United Kingdom and industry partners. As the NNSA's highest rated production facility, the Kansas City Plant is recognized for its innovation, quality and safety performance. We support 40 technically demanding product families, including arming devices, microcircuits, polymers, plastics, and radars. We engage 90 advanced technologies, including forgings, concurrent engineering environments, laminates and optics.

Our unique expertise extends beyond the nuclear weapons complex to benefit national security, enhance the global competitiveness of U.S. businesses, and promote nonproliferation. Our Work for Others program helps others develop new processes and products, while defraying NNSA costs.
