PREFACE

This manual contains the user's guide for the GPRA+ Clinical Indicator Reporting System version 2.0, which includes FY03 clinical performance indicators.

The GPRA+ Clinical Indicator Reporting System is an RPMS (Resource and Patient Management System) software application designed for local and Area monitoring of clinical GPRA and developmental indicators in a timely manner. GPRA+ was based on a design by the Aberdeen Area (GPRA2000).

The Government Performance and Results Act (GPRA) requires Federal agencies to report annually on how the agency measured up against the performance targets set in its annual Plan. IHS GPRA indicators include measures for clinical prevention and treatment, quality of care, infrastructure, and administrative efficiency functions.

Each year, an updated version of GPRA+ software will be released to reflect changes in the logic descriptions of the different denominators and numerators. Additional indicators may also be added. Local facilities can run reports as often as they want to and can also use GPRA+ to transmit data to their Area. The Area Office can use GPRA+ to produce an aggregated Area report.

The GPRA+ Reporting System will produce reports on demand from local RPMS databases for both GPRA and developmental clinical indicator measures that are based on RPMS data. GPRA+ is intended to eliminate the need for manual chart audits for evaluating and reporting clinical indicators. Administrative and clinical users will be able to review individual or all indicators at any time, and can:

- identify potential data issues in their RPMS, i.e., missing or incorrect data;
- identify specific areas where the facility is not meeting the indicator in order to initiate business process or other changes;
- quickly measure impact of process changes on indicators;
- identify areas meeting or exceeding indicators to provide lessons learned.

To produce reports with comparable data across every facility, the GPRA indicator definition was "translated" into programming code with the assistance of clinical subject matter experts. GPRA+ uses pre-defined taxonomies to find data items in PCC to determine if a patient meets the indicator criteria. Taxonomies contain groups of codes (e.g., diagnoses or procedures) or site-specific terms. Each indicator has one or more denominators and numerators defined.

GPRA+ is intended for use by Area and site Quality Improvement staff, Compliance Officers, GPRA Coordinators, clinical staff such as physicians, nurses, nurse practitioners, and other providers, Area Directors, as well as any staff involved with quality assurance initiatives.

1.0 Introduction

The GPRA+ Clinical Indicator Reporting System is an RPMS (Resource and Patient Management System) software application designed for local and Area monitoring of clinical performance indicators in a timely manner.

Because definitions of clinical indicators can change every year, GPRA+ will be updated and released annually. The current version 2.0 includes FY03 clinical performance indicators. Version 1.0 GPRA+ FY02 continues to be available as a separate menu option from the main GPRA+ menu.

1.1 What Is GPRA?

The Government Performance and Results Act (GPRA) requires Federal agencies to demonstrate that they are using their funds effectively toward meeting their missions. The law requires agencies to have both a 5-year Strategic Plan in place and to submit Annual Performance Plans describing specifically what the agency intends to accomplish toward those goals with their annual budget. Every year, the agency reports on how the agency measured up against the performance targets set in the Plan.

GPRA indicators include clinical, such as various diabetes measures, cancer screening and others; information technology related, such as increasing sites using certain software; quality of care, such as % of accredited hospitals; prevention, such as immunizations and injury prevention; infrastructure, such as access to or improved sanitation facilities; and administrative efficiency.

All GPRA indicators are determined annually by the GPRA Coordinating Committee, with input from specific subject matter experts in various subject areas. An annual meeting is held each spring with I/T/U representatives and subject matter experts to review, discuss and edit or add indicators.

See Appendix X for a complete list of FY03 GPRA indicators. Further information about GPRA performance reporting, including results for FY2001 and FY2002 can be found at the following web site:

<http://www.ihs.gov/NonMedicalPrograms/PlanningEvaluation/pe-gpra.asp>.

1.2 Clinical Performance Indicators

Indicator example: GPRA Indicator # 7 Pap Smear Rates: Maintain the proportion of eligible women who have had a pap smear documented within the past three years at the FY2002 rate.

Each indicator has one or more denominators and numerators defined. The denominator is the total population that is being reviewed for a specific indicator. For Indicator #7 above, the denominator is all female patients ages 18 through 64. The numerator is the number of patients in the denominator who meet specific criteria.

For indicator #7, the first numerator is the number of patients in the denominator who had a pap smear, defined by certain codes, any time in the three years prior to the end of the report period. The second numerator is the number of patients who refused to have a pap smear and their refusal was documented in RPMS.

1.3 Comparing Ourselves to National Guidelines

Appropriately for a healthcare organization, most IHS GPRA indicators describe clinical treatment and prevention measures. We need to not only assess our internal performance improvement from year to year, but also to compare ourselves to the larger medical community.

Health People 2010 (HP 2010) presents a comprehensive, nationwide health promotion and disease prevention agenda under the direction of the U.S. Department of Health and Human Services. Through 467 objectives in 28 focus areas, HP 2010 represents the ideas and expertise of individuals and organizations concerned about the Nation's health. Each objective was developed with a target to be achieved by the year 2010.

2.0 Taxonomy Setup

This section will describe what needs to be done to set up all taxonomies needed for the GPRA+ program. Taxonomies are used to find data items in PCC in order to determine if an item was done for the patient. Taxonomies are groupings of functionally related data elements. Taxonomies identify specific codes, code ranges, or terms that need to be used by PCC computer programs including this GPRA+ Report.

For data elements like diagnoses and procedures, a taxonomy simply identifies the codes that a program should look for. For data elements like medications and lab tests, taxonomies are used to mitigate the variations in terminology that exist in RPMS tables from one facility to another.

For example, one site's Lab table might contain the term *Glucose Test* while another site's table may contain the term *Glucose* for the same test. PCC programs have no means for dealing with variations in spelling, spacing, and punctuation. So rather than attempting to find all potential spellings of a particular lab test, the programs look for taxonomies, whose names are standardized at every facility. In this example, the various programs would use the "DM Audit Glucose Tests Taxonomy" which contains all varieties of glucose tests used at that particular facility as they are spelled and punctuated at that facility.

Codes and terms contained in a taxonomy are referred to as members of the taxonomy.

In most cases, the taxonomy will already exist on your system because it is used by another RPMS application. The user will need to review the taxonomies and make sure that all appropriate entries are in the taxonomies. The table below can be used as a checklist.

9.0 Internal Relations

All users should be given the access to the appropriate options and keys to them, as needed. All of the options in this system stand alone.

10.0 How to Generate Online Documentation

The file number range for this package is 90240. The namespace is BGP. All templates, routines, screen forms, etc. begin with BGP.

This section describes some of the methods by which users can generate IHS RPMS GPRA Reporting system technical documentation. Online technical documentation pertaining to the IHS RPMS GPRA Reporting software, in addition to that which is located in the help prompts and on the help screens throughout the IHS RPMS GPRA Reporting package, can be generated through the use of several Kernel options. These include, but are not limited to, the following:

- %INDEX
- Menu Management
- Inquire Option
- Print Option File
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

Entering question marks at the “Select...Option” prompts can also provide users with valuable technical information. For example, a single question mark (?) lists all options that can be accessed from the current option. Entering two question marks (??) lists all options accessible from the current one, showing the formal name and lock for each. Three question marks (???) displays a brief description for each option in a menu, whereas an option name preceded by a question mark (?OPTION) shows extended help, if available, for that option.

For a more exhaustive option listing and further information about other utilities that supply online technical information, please consult the DHCP Kernel Reference manual.

10.1 %INDEX

This option analyzes the structure of a routine to determine in part if the routine adheres to RPMS Programming Standards. The %INDEX output can include the following components:

- Compiled list of errors and warnings
- Routine listing
- Local variables
- Global variables
- Naked globals
- Label references

- External references

By running %INDEX for a specified set of routines, you are afforded the opportunity to discover any deviations from RPMS Programming Standards that exist in the selected routines and to see how routines interact with one another (i.e., which routines call or are called by other routines).

To run %INDEX for the IHS RPMS GPRA Reporting package, specify the BGP namespace at the Routine(s)?> prompt.

10.2 Inquire Option

This menu management option provides the following information about a specified option:

- Option name
- Menu text
- Option description
- Type of option
- Lock (if any)

In addition, all items on the menu are listed for each menu option. To secure information about IHS RPMS GPRA Reporting options, you must specify the BGP namespace.

10.3 Print Option File

This utility generates a listing of options from the Option file (#19). You can choose to print all of the entries in this file or you can specify a single option or range of options. For a list of IHS RPMS GPRA Reporting options, please refer to the Exported Options section of this manual.

10.4 List File Attributes

This VA FileMan option allows you to generate documentation pertaining to files and file structure. Using the Standard format of this option yields the following data dictionary information for a specified file:

- File name and description
- Identifiers
- Cross-references
- Files pointed to by the file specified
- Files that point to the file specified input, print, and sort templates

In addition, the following applicable data is supplied for each field in the file:

- Field name, number, title, and description
- Global location
- Help prompt
- Cross-references
- Input transform
- Date last edited
- Notes

Using the Global Map format of this option generates an output that lists the following information:

- All cross-references for the file selected
- Global location of each field in the file
- Input, print, and sort templates

For a comprehensive listing of GPRA+ package files, please refer to the files section of this manual.

11.0 SAC Exemptions

This program uses a standard global for export of data to the Area office. The global is called ^BGPDATA(and is killed at the root level in the BGPDFTA routine.

The kill of these unsubscripted globals has been approved by the Standards and Conventions committee.

12.0 Glossary

Archiving	The storing of historical or little-used data off-line (often on tape).
Banner	A line of text with a user's name and domain.
Browser	An interactive application that displays ASCII text on a terminal that supports a scroll region. The text can be in the form of a word-processing field or sequential local or global array. The user is allowed to navigate freely within the document.
Callable Entry Points	Places in a routine that can be called from an application program.
Cross-reference	An indexing method whereby files can include pre-sorted lists of entries as part of the stored database. Cross-references (x-refs) facilitate look-up and reporting.
Entry Point	Entry point within a routine that is referenced by a "DO" or "GOTO" command from a routine internal to a package.
File	A set of related records or entries treated as a single unit.
FileMan	The database management system for RPMS.
Global	In MUMPS, global refers to a variable stored on disk (global variable) or the array to which the global variable may belong (global array).
ICD	International Classification of Diseases.
INDEX (%INDEX)	A Kernel utility used to verify routines and other MUMPS code associated with a package. Checking is done according to current ANSI MUMPS standards and RPMS programming standards. This tool can be invoked through an option or from direct mode (>D ^%INDEX).
IRM	Information Resource Management. The IHS personnel responsible for information systems management and security.

Kernel	The set of MUMPS software utilities that function as an intermediary between the host operating system and application packages, such as Laboratory and Pharmacy. The Kernel provides a standard and consistent user and programmer interface between application packages and the underlying MUMPS implementation. These utilities provide the foundation for RPMS.
Menu	A list of choices for computing activity. A menu is a type of option designed to identify a series of items (other options) for presentation to the user for selection. When displayed, menu-type options are preceded by the word “Select” and followed by the word “option” as in Select Menu Management option: (the menu’s select prompt).
Namespace	A unique set of 2 to 4 alpha characters that are assigned by the database administrator to a software application.
Option	An entry in the Option file. As an item on a menu, an option provides an opportunity for users to select it, thereby invoking the associated computing activity. Options may also be scheduled to run in the background, non-interactively, by TaskMan.
Patient Care Component (PCC)	The central repository for data in the Resource and Patient Management System (RPMS).
Queuing	Requesting that a job be processed at a later time rather than within the current session.
Routine	A program or sequence of instructions called by a program that may have some general or frequent use. MUMPS routines are groups of program lines that are saved, loaded, and called as a single unit via a specific name.
UCI	User Class Identification: a computing area.
Up-Hat (^)	A circumflex, also know as a “hat” or “caret,” that is used as a piece delimiter in a global. The up-hat is denoted as “^” and is typed by pressing Shift+6 on the keyboard.
Utility	A callable routine line tag or function. A universal routine usable by anyone.

Variable A character or group of characters that refers to a value. MUMPS recognizes 3 types of variables: local variables, global variables, and special variables. Local variables exist in a partition of the main memory and disappear at sign-off. A global variable is stored on disk, potentially available to any user. Global variables usually exist as parts of global arrays.
