

CRUISE REPORT

Cruise Number: MF95-07, *Leg II*

FOCI Number: FOCI-7MF95

NOAA Ship: Miller Freeman

Area of Operations: Southeast Bering Sea

Itinerary:

Departed - Dutch Harbor, 3 May 1995

Returned- Dutch Harbor, 18 May 1995

Participating Organizations: NOAA - Alaska Fisheries Science Center
(AFSC)
NOAA - Pacific Marine Environmental
Laboratory (PMEL)
University of Washington, School of
Oceanography

Major Cruise Objectives:

- (1) continue acquisition of long-term biological and physical time series from designated transects and moored biophysical platforms;
- (2) conduct surveys of pollock eggs and larvae for use in estimating distribution;
- (3) collect samples of larval pollock for studies on growth, feeding, condition, and vertical distribution;
- (4) determine the flux and fate of water and organisms in the Alaska Coastal Current after it enters the Bering Sea through Unimak Pass;
- (5) calibrate instruments on moored platforms;

- (6) examine fine-structure of ichthyo- and zooplankton using the Tracor Acoustic Profiling System (TAPS);
- (7) examine the impact of invertebrate predation on larval pollock;
- (8) recovery one and deploy two FOCI biophysical platforms.

Chief Scientist: Jeffrey M. Napp, NOAA/NMFS/AFSC

Personnel:

Karl Beighley	Teacher at Sea
Lisa Britt	NOAA/AFSC
Annette Brown	NOAA/AFSC
Kim Cleary	NOAA/PMEL
Carol DeWitt	NOAA/PMEL
David Kachel	NOAA/PMEL
William Parker	NOAA/PMEL
William Rugen	NOAA/AFSC
Michael Martin	University of Washington

Operations Summary

Description. Our sampling stations are shown in Figures 1 -3. We began with a test station to check our equipment and then proceeded to collect biological, chemical, and physical oceanographic samples from stations around Unimak Pass (Cruise Objectives 1, 4, 6). Calibration samples at Mooring 1 (95BSS-01 and 95BSM-01; Cruise Objective 5) were obtained enroute to the northeastern portion of our survey area. Our survey for eggs and larvae of pollock (Cruise Objective 2) was begun on the third day of the cruise. The survey was twice interrupted to deploy and recover FOCI biophysical platforms (95BSM-02 and 95BSM-03; Cruise Objective 8). At the conclusion of the survey, we completed our process-oriented studies. Samples to determine larval feeding, prey abundance, and larval physiological condition were taken from two "patches" of larvae; one each from the Outer and Middle Shelf Domains (Cruise Objective 3; Figures 2 and 3). Samples were also obtained to determine the incidence of invertebrate predation on larvae (Cruise Objective 7).. Samples for larval condition and prey abundance were collected at several locations of high larval abundance during the survey. The cruise concluded with two dedicated plankton acoustic transects (Cruise Objective 6) and reoccupation of three stations in

Unimak Pass (Cruise Objectives 1 and 4). Samples for ancillary studies include: collection and transport of live zooplankton for laboratory studies, collection of larval pollock for analysis of stock structure using genetic probes, collection of larvae and protozoa for a study on the use of protozoa by first feeding pollock larvae, samples of phytoplankton absorbance for studies on spring bloom dynamics and release of Ocean Color Monitor (OCM) satellite-tracked drifters for studies of spring bloom dynamics and generation of phytoplankton biomass algorithms for the SeaWiFS satellite.

Statistics - A total of 161 stations were occupied. A complete list of station activities is included (Table 1). Below is a table of summary statistics.

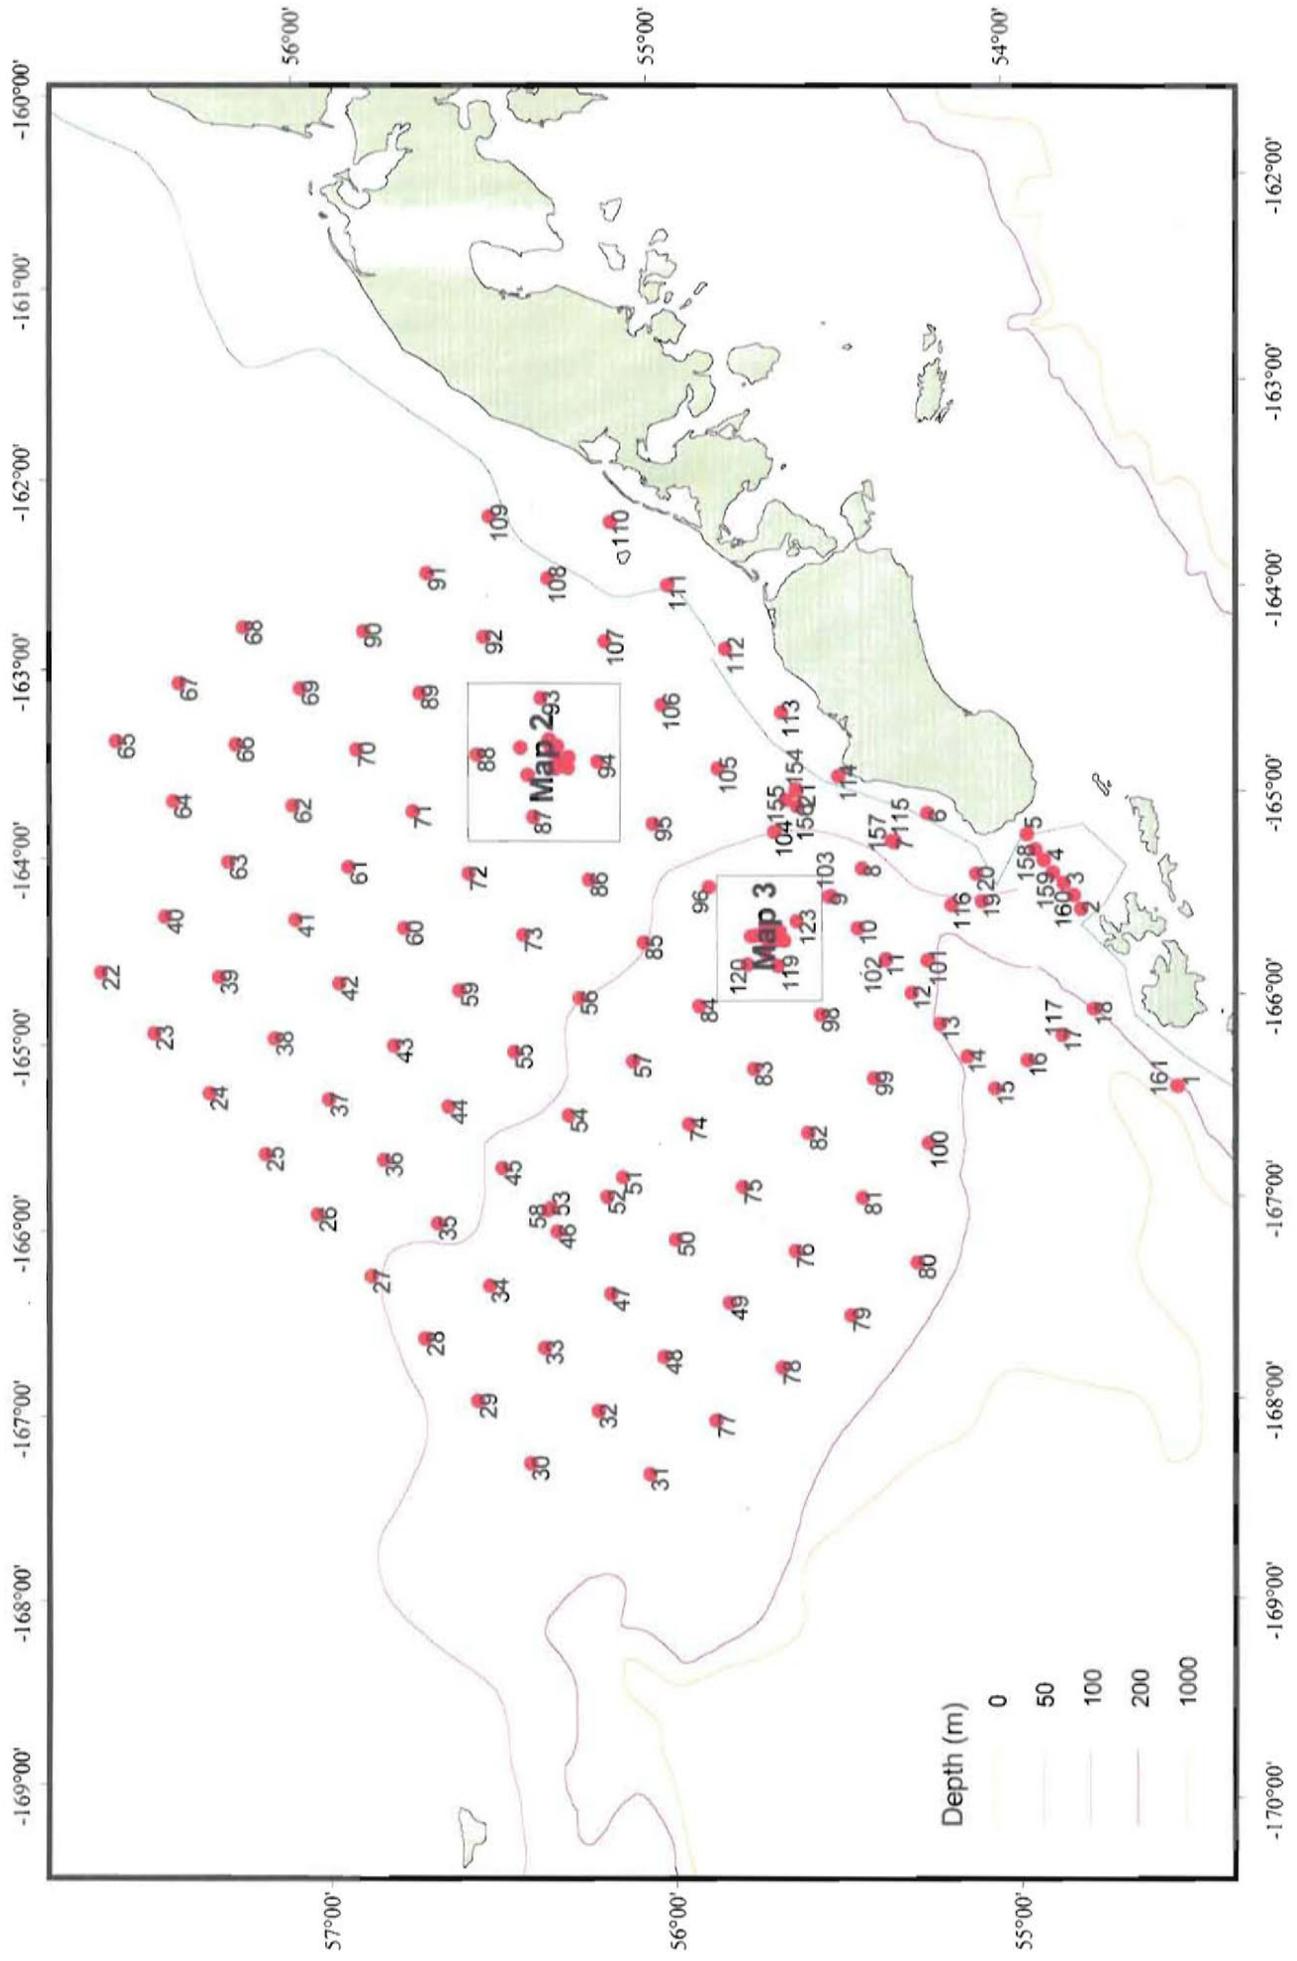

Operation	Number Completed
CTD casts	53
Plankton tows	
Bongo	136
CaIVET	9
Tucker	8
MOCNESS	9
Live	32
Ring Net	6
Biophysical Platforms	
deployments	2
recover	1
Satellite buoy deployment	
Seimac	4
WOCE/OCM	5
Bioacoustic Data Collection	
Vertical tows	14
Oblique (Tow-Yo or single)	5
Horizontal tows	5

Preliminary Results: Despite the presence of ice on the Southeast shelf until early April, large numbers of pollock eggs and larvae were

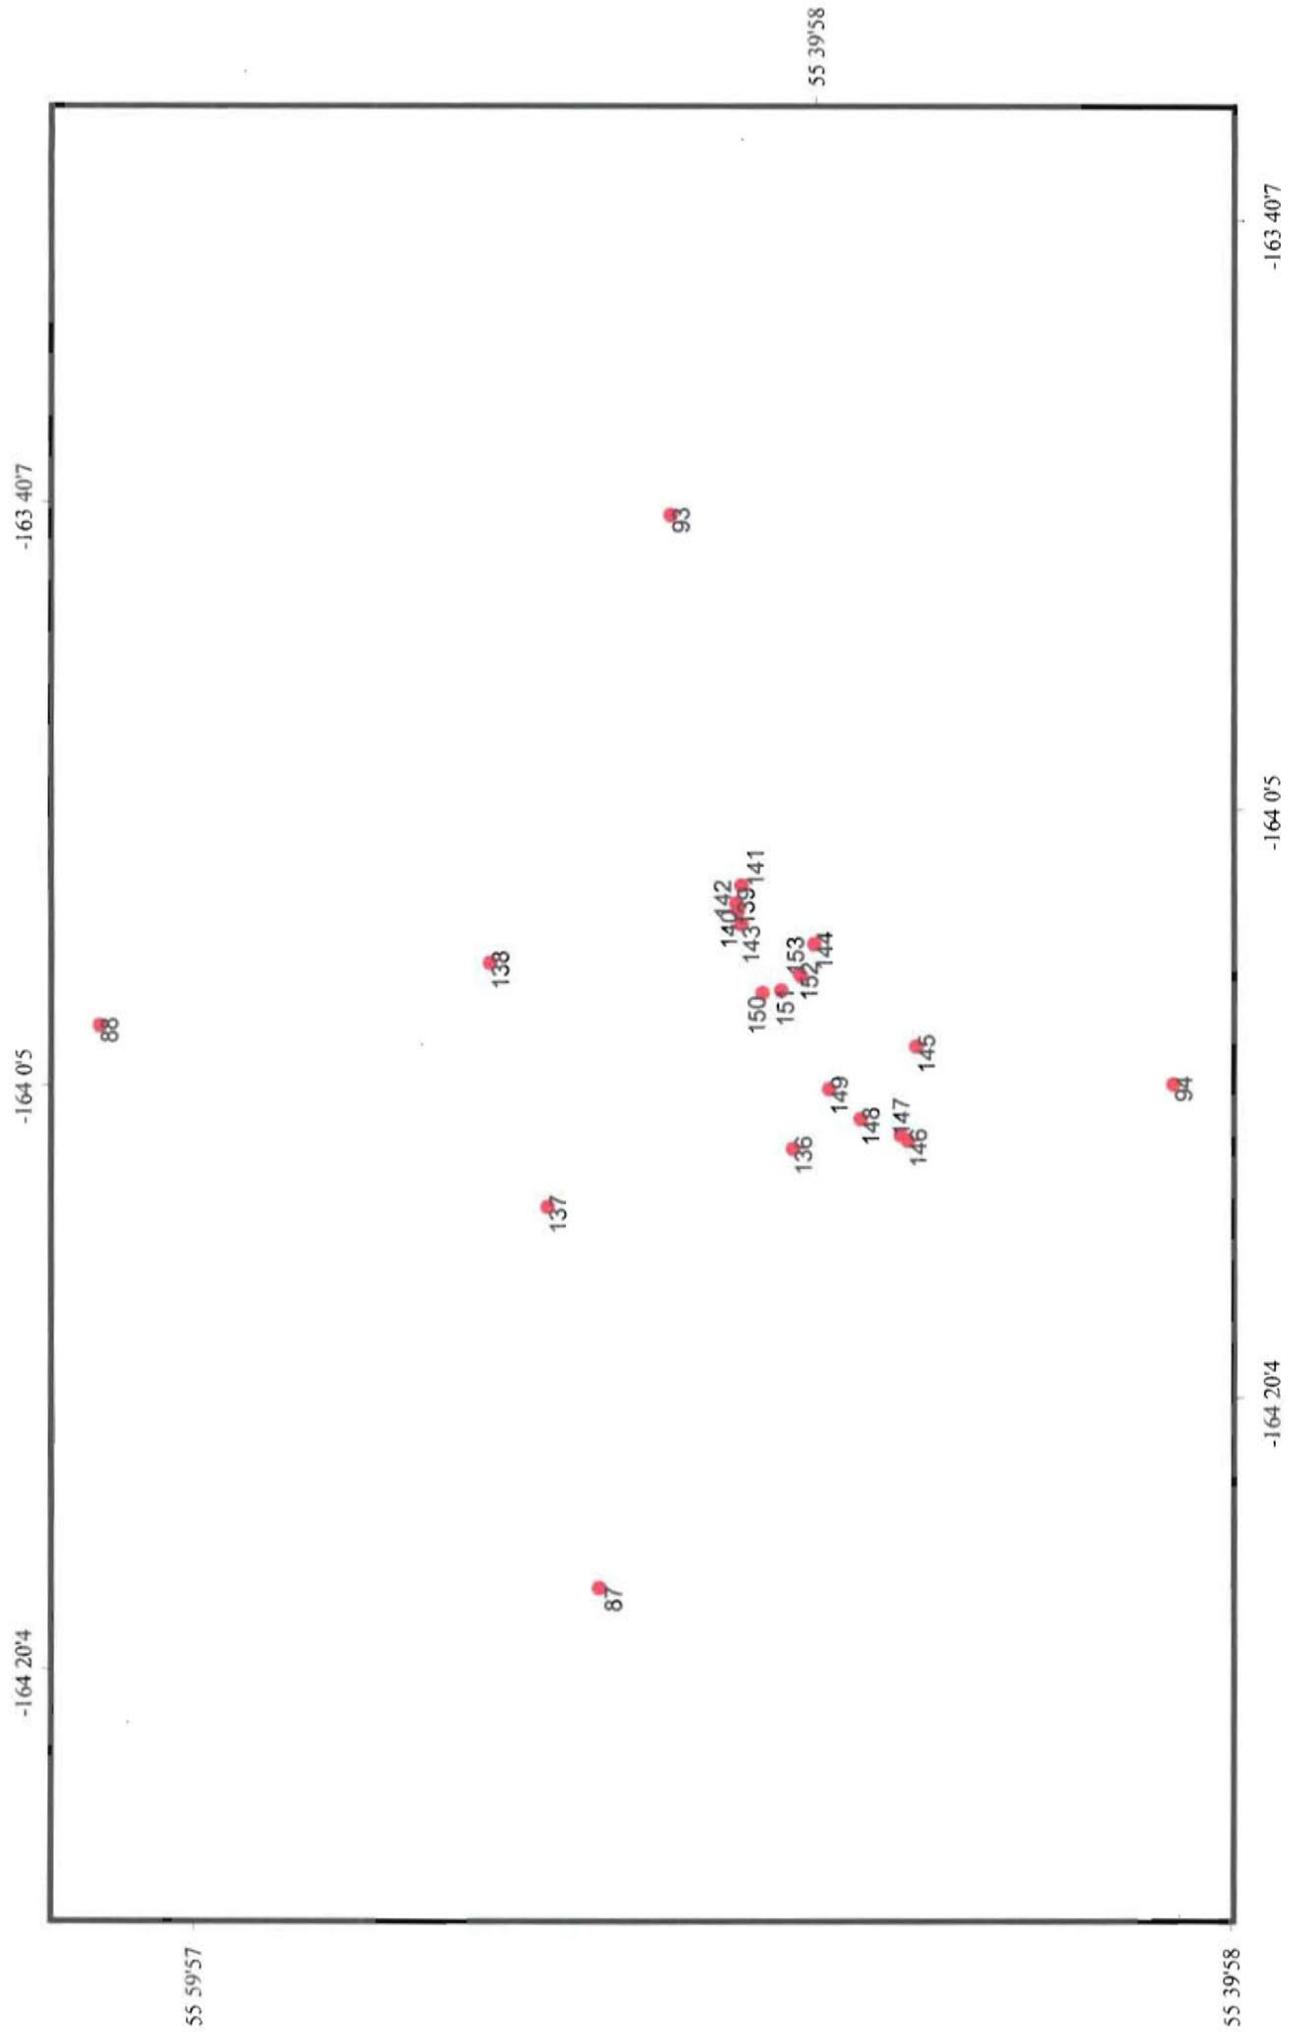

encountered. The cold temperatures probably delayed hatching of these larvae compared to other years. Further conclusions must wait until the biological and physical samples are analyzed and the data can be placed in a historical context.

Acknowledgments: We exceeded our expectations and objectives due to a combination of good weather, good luck, and the skill/logistical support of the officers and crew of the Miller Freeman. The Survey and Deck Departments worked especially hard to help us use our time efficiently and effectively. I thank the Commanding Officer for striving to create and maintain a "service-oriented" vessel, and the Field Operations Officer for his flexibility and advice. Thank you one and all!
