

DRAFT CRUISE REPORT

Cruise Number: DY0807
FOCI Number: 3DY08

Ship:

FRV Oscar Dyson

Area of Operations:

Eastern Bering Sea

Itinerary:

Date depart / port: May 12, 2008 / Dutch Harbor, AK
Date arrive / port: May 21, 2008 / Dutch Harbor, AK

Participating organizations:

NOAA - Alaska Fisheries Science Center (AFSC)

Chief Scientist:

Jeffrey Napp M / AFSC
(206) 526-4148
Jeff.Napp@noaa.gov

Personnel:

Debbie Blood	F / AFSC
Rachael Cartwright	F / AFSC
Dan Cooper	M / AFSC
Colleen Harpold	F / AFSC
Kathy Mier	F / AFSC
Ingrid Spies	F / AFSC
Matt Wilson	M / AFSC

Cruise Objectives:

Examine the interactions among climate, weather, and the recruitment of fishes in the eastern Bering Sea. We conducted ichthyoplankton and zooplankton survey in the waters along the eastern Aleutian Island chain and the Alaska Peninsula. This work was needed to describe larval fish assemblages and to determine how physical and biological factors affected the transport and survival of fish larvae. The cruise was collaboration between the North Pacific Research Board's Bering Sea Integrated Ecosystem Research Program (BSIERP) and NOAA's North Pacific Climate Regimes and Ecosystem Productivity (NPCREP). Fish species of particular interest during this cruise were: arrowtooth flounder (*Atheresthes stomias*), Pacific cod (*Gadus macrocephalus*) and walleye pollock (*Theragra chalcogramma*). We determined the horizontal and vertical distribution of these species as well as the abundance and distribution of their plankton prey. Near real time discrimination of *Atheresthes* spp. larvae was performed at sea using molecular techniques.

Summary of Operations:

Operation	Tows
20cm bongo (20Bon)	70
60cm bongo (60Bon)	74
Seabird SeaCAT CTD (CAT)	72
CTD with bottle samples (CTDB)	20
1m ² MOCNESS (MOC1)	8
Neuston (Neu)	68
Deployment of satellite buoy (SatBuoy)	3

Samples Collected

	Tows	Number
Number of larvae preserved in EtOH for A. Matarese (AMGEN)	31	179
SeaBird SeaCat CTD (CAT)	72	
Extracted chlorophyll (Chlor)	17	102
SeaBird CTD (CTD)	19	
Number of <i>Bathymaster</i> spp. larvae preserved in Zfix (CW)	8	30
Deployment of buoy or mooring (Deploy)	3	3
Stimulated fluorescence collected during CTD casts (Fluor)	18	
Number of fish larvae for Ingrid Spies (genetics) (ISGEN)	10	20
Collection of live organisms for experiments (Live)	1	
Microzooplankton samples preserved in formalin (MZ)	5	30
Photosynthetically Active Radiation data collected during CTD casts (PAR)	18	
Quantitative tow preserved in formalin (QTowF)	239	248
Rough count of pollock larvae (RCountL)	67	3017
Number of samples for Ron Heintz, AFSC / TSMRI (RH BIO)	10	21
Steve Porter pollock or flathead sole eggs for rearing (SPEGGS)	10	
Steve Porter larval pollock for flow cytometry (SPFCM)	3	60
Pacific cod genetic samples for Tom Hurst - RACE Newport laboratory (TH COD)	15	77

Summary of Cruise:

Narrative:

Our cruise began with sampling over the Bering Canyon for *Atheresthes* spp. and *Rheinhardtius hippoglossoides*. The *Atheresthes* spp. larvae were used to successfully optimize a molecular identification technique so we can visually distinguish arrowtooth and Kamchatka flounder in the future using pigment patterns and morphometrics. After completing 8 stations over Bering Canyon and 4 Unimak Pass stations, we steamed eastward up on to the shelf to begin our survey for walleye pollock (*Theragra chalcogramma*) and Pacific cod (*Gadus macrocephalus*). Walleye pollock, Pacific cod, and arrowtooth flounder are all target species of our NPRB-funded project in the Bering Sea Integrated Ecosystem Research Program (BSIERP). The pollock and cod patch was located and the eastern portion of it was mapped for the next several days before we began a diel study to determine their vertical distribution. While in the patch we obtained samples of larvae for a BSIERP project led by R. Heintz, AFSC / TSMRI to assess the physiological condition of the target fish species during their first year of life . After completing the diel study, we mapped the distribution of fish larvae in the western portion of our grid and then finished the cruise over Bering Canyon to obtain more *Atheresthes* larvae. Three satellite drifters were deployed during the cruise, 2 in the pollock / cod patch and one just north of Unimak Pass. A cruise this summer led by our colleague, Dr. Nicola Hilgruber (UAF), will use the drifter data to locate the fish contained in the patch and conduct additional sampling for the NPRB project. We also obtained samples for many other ancillary projects including: molecular identification of larval fish species, larval feeding condition assessed by flow cytometry and cell cycle indices, visual physiology of Bathylagid fish larvae, larval fish net extrusion experiments, age and growth in Greenland halibut larvae. All work was completed through the combined support of NRPB and NOAA's Climate Regimes and Ecosystem Productivity programs.

Days Lost to Weather:

None

Days Lost to Equipment Failure:

None

Recommendations:

To make MOCNESS operations safer and more efficient, MOC-P and the NOAA – Fisheries should work together to obtain a conducting cable on the aft pointing traction winch. At present it is not possible to use the CTD, bongo / SeaCat, and MOCNESS in rapid succession. There are only two conducting cables to share among the various electronic sample gears and switching the cables between instruments takes additional time and has the associated risk of damaging the termination during the transfer. In addition, there is not room enough on the quarterdeck to use a cart to hold the MOCNESS while using the other pieces of sampling equipment. If scientists need to use all three pieces of equipment then the best solution is to add conducting cable to the only remaining winch (the aft pointing traction winch).

Acknowledgments:

The scientific party would like to acknowledge the hard work and support of the officers and crew of the FRV *Oscar Dyson*. This was our first cruise aboard the *Dyson*, and we were very pleased and impressed with the cooperation of the ship's officers and crew. Their hard work on our behalf helped make this cruise a big success. We especially want to thank the two Senior Survey Techs, Ms. Colleen Peters and Ms. Kathy Hough for their hard work on our behalf. LT Michael Levine, the ship's Operations Officer helped prepare us for a successful cruise, and Mr. Wiley Sliney and his able crew of fisherman helped make our deck operations safe and successful. The EcoFOCI Program is looking forward to working with the ship and her crew for many years to come.
