

Terminal Area Forecast Summary

**Fiscal Years
2001-2015**

December 2001

**U.S. Department of Transportation
Federal Aviation Administration
FAA-APO-01-7**

Preface

This publication provides aviation data users with summary historical statistics on passenger demand and aviation activity at U.S. airports, in particular, at the 31 large hub airports with one percent or more of total enplanements. It also contains forecasts for all airports in the National Plan of Integrated Airport Systems (NPIAS) which were prepared and reviewed prior to the terrorist attacks of September 11 and therefore, do not reflect the impact of these events. Thus, the utility of this document to aviation planners is only as to what has happened in the past and as a benchmark to measure the impact of the September 11 incidents on future activity.

The Terminal Area Forecast (TAF) is developed by the Federal Aviation Administration's (FAA) Statistics and Forecast Branch, Office of Aviation Policy and Plans, and uses as a primary input the national forecasts of aviation activity contained in the revised forecast tables that can be found in the web version of the FAA Aerospace Forecasts: Fiscal Years 2001-2012 (March 2001) at the following address:
http://api.hq.faa.gov/apo_home.asp.

The TAF will be updated using March 2002 national forecasts and the most recent airport specific data available. The revised airport specific forecasts will be sent out for regional review in June 2002 and published in fall 2002.

The TAF can be accessed from two Internet

locations. A copy of the TAF database and Windows 98-based TAF model are located at <http://www.apo.data.faa.gov/>. The TAF model allows users to create their own scenarios and forecasts. The TAF model may assist users in creating their own assessment of the impact of the September 11 attack and subsequent events on the future activity of individual airports. Also, the user can download the TAF forecast publication from this site. The publication includes data for all FAA and contract towers as well as terminal radar approach control facilities (TRACONs). This document is organized by the nine FAA regions.

Additionally, the user can access TAF data directly at <http://www.apo.data.faa.gov/>. This JAVA-based model allows the public to access and print historical (1976 to 2000) and forecast (2001 to 2015) aviation activity data by individual airport, state, or FAA region.

The Office of Aviation Policy and Plans regrets any inconvenience to the public caused by the time needed to prepare new forecasts which reflect the effect of the September 11th attacks.

John M. Rodgers
Director, Office of Aviation Policy and
Plans

Acknowledgments

This document was prepared by the Statistics and Forecast Branch of the FAA Office of Aviation Policy and Plans. Daniel E. Taylor and Peter LeBoff have primary responsibility for the development of the forecasts. Robert L. Bowles, Manager, Statistics and Forecast Branch; Roger Schaufele, Charles Moles, and Cheryl Miner, industry economists, also contributed their valuable support.

The software support was executed under the direction of Carlton R. Wine, Manager, Information Systems Branch. Mr. Wine and his staff organize and manage the data bases used to produce the forecasts, update the computer programs, and carry out the computer operations necessary to produce the individual airport forecasts. We extend a

special thanks to Damien G. Agostinelli and Philip Sperry who programmed the TAF software and have made the access and analysis of this airport data so more efficient.

Special acknowledgments are made to FAA Regional and District Office staff, particularly Airports and Air Traffic personnel, for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Statistics and Forecast Branch in making adjustments to the preliminary version of the report. Undoubtedly, their effort has enhanced the accuracy and credibility of the final product.

Summary Highlights for Fiscal Year 2000

- A total of 703.9 million passengers were enplaned at U.S. airports in 2000. Enplanements at FAA and Federal contract towered airports in 2000 summed to 699.7 million.
- The top 100 air carrier airports accounted for 664.5 million enplanements in 2000, or 94 percent of total enplanements at U.S. airports.
- FAA towers handled 53.2 million operations (takeoffs and landings) in 2000, including 24.1 million commercial aircraft operations.
- Towers operated under Federal contract by FAA handled 15.8 million operations, including 1.8 million commercial operations.
- The 31 large hub airports (enplaning one percent of total passengers) enplaned 492.3 million passengers in 2000.
- The 35 medium hub airports (enplaning 0.25 to 0.99 percent of total passengers) recorded 133.3 million enplanements in 2000.
- Atlanta (39.4 million enplanements), Chicago O'Hare (34.3 million), Los Angeles (32.1 million), Dallas/Ft. Worth (28.7 million), and San Francisco (19.6 million) are the five largest U.S. commercial airports, accounting for 21.9 percent of total enplanements at U.S. airports.
- Atlanta is projected to remain the country's busiest airport through the forecast period. Los Angeles will overtake Chicago O'Hare for second busiest airport.
- Enplanements at Phoenix, Ft. Lauderdale, and Baltimore-Washington airports are projected to grow fastest among large hub airports.
- The FAA's Southern region airports enplaned 156.2 million passengers in 2000, more than any other region and 22 percent of total passenger enplanements. The Western Pacific region followed with 147.0 million enplanements.
- The Southern region is expected to remain the largest region and Western Pacific region will remain in second place.

Forecast Process

Introduction

This Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations, and instrument operations. The data cover the 266 FAA towered airports, 195 Federal contract tower airports, 180 radar approach control facilities, and 3,031 non-FAA airports. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is on the Internet at two locations. A copy of the TAF database and Windows95-based TAF model are located at <http://api.hq.faa.gov/>. The TAF model allows users to develop alternative scenarios and forecasts. Also at this web address, you will find a download version of the TAF publication. The publication includes all FAA and contract towers as well as terminal radar approach control facilities (TRACONs). This document is divided by the nine FAA regions.

Additionally, you can access the TAF data directly at <http://www.apo.data.faa.gov/>. This JAVA-based model allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning future airport improvements.

Data presented in the TAF show historical information from 1976 through 2000 and forecasts for to 2015. The forecasts were prepared prior to the terrorist event of September 11, 2001 and represent historical trends at that time. New forecasts are being prepared

which will go out for regional review in June 2002 and will be published in Fall 2002.

The tables available on the Internet contain annual historical data (1976-2000) and forecasts (2001-2015). The airport activity data consist of the following:

- ◆ *enplanements (originating and connecting)* for air carriers and commuters;
- ◆ *itinerant operations* for air carriers, commuters and air taxis, general aviation (GA), and military;
- ◆ *local operations* for GA and military aircraft; and
- ◆ *total instrument operations* (primary and secondary).

Appendix A furnishes a detailed description of the activity data elements in the TAF.

Forecast Method

Aviation activity forecasts at FAA-towered and contract towered airports are developed using historical relationships between airport activity measures and local and national factors influencing aviation activity. Each estimate is examined for its reasonableness by comparisons with historical trends and for consistency with airport activity. If forecasts deviate from their expected trend, FAA employs other statistical techniques to reforecast the series. Other methods may include use of other functional forms and the use of growth rates developed separately from TAF. The TAF may incorporate estimates prepared by local authorities and/or recent FAA-approved airport master plan forecasts, when the forecast staff economists conclude that the methods used to develop these forecasts are accept-

able. In addition, the 40 commercial service airports in the large hub cities receive a more in-depth review by FAA economists. The analyses of these hub city airports include additional consideration for the effect of local economic variables (such as income, employment, etc.) and the growth of originating and connecting traffic as well as the price of flying to and from that airport. The hub forecasts also include assumptions regarding the seating capacity and load factors for aircraft operating out of the airport.

The TAF assumes an unconstrained demand for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand. However, if the airport historically functions under constrained conditions, the FAA forecast may reflect those constraints since they are embedded in historical data. In statistical terms, the relationships between economic growth data and data representing growth in aviation activity reflect those constraints.

Because military operations forecasts often have national security implications, the Department of Defense (DOD) provides only limited information on future aviation activity. Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For all FAA towers and non-FAA facilities with air carrier or commuter passenger service, the TAF corresponds to prevailing local and national trends. For non-FAA facilities, which rely solely on Form 5010 data for general aviation activity levels, operations are

held constant unless otherwise specified by a local or regional official.

Forecast Review Process

Initially, FAA headquarters staff and management review FAA and federal contract tower airport forecasts. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made by the FAA regional staff are reviewed and, if determined reasonable by APO staff economists, are incorporated into the TAF. Significant increases in commercial activity are normally incorporated into the TAF only where APO receives verifiable evidence of a firm commitment by an air carrier or commuter airline to initiate new service.

Summary statistics presented in the TAF differ marginally from the national totals contained in the revised edition of FAA Aerospace Forecasts: Fiscal Years 2001-2012. Reasons for the minor differences are threefold. First, the TAF forecast methods rely, in part, upon an airport's historical national share of aviation activity, but also consider airport specific trends. In particular, large hub airport forecasts are based, in part, on the projected local economic activity and airport specific airline fares. Second, the TAF includes facilities not serviced by the FAA in its totals. These facilities make up a large share of the general aviation operations activity shown in the summary tables. Finally, individual forecasts are not scaled to force aggregates to equal national totals.

Data Sources

The forecast process begins with an update of the latest historical passenger and aircraft activity data, using information derived from

several data sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and instrument (radar assisted) operations data for airports with FAA and Federal contract air traffic control services are reported by FAA air traffic and Federal contract tower staff. Operations at non-FAA airports are taken from FAA Form 5010 reports on aviation activity at the airport as estimated by FAA inspectors and/or information provided by airport managers, state aviation activity surveys and other information.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's (DOT) Form T-100 data. Commuter enpla-

nements are derived from both DOT Forms T-100 and 298-C data.

Based aircraft data are supplied by state aviation officials and reported on FAA Form 5010. These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

For the most part, the TAF contains actual historical data through fiscal year 2000. However, international and commuter enplanements contain estimates for the fourth quarter of fiscal year 2000 (July to September). Appendix A contains a detailed description of each TAF data element.

TAF and National Forecast Totals

Events of September 11, 2001

The events of September 11, 2001 and its aftermath have left in its wake shock waves throughout the aviation industry. Commercial and general aviation demand and aircraft activity have been substantially reduced by these events. The forecasts presented in this TAF do not reflect these changes.

The forecasts presented herein were generally completed by September 11th. Hence, the forecasts are a reflection of how the FAA viewed the aviation industry just prior to the terrorist attacks. Next year's TAF will reflect a substantially different forecast based on our knowledge and understanding of events at that time. Revised forecasts reflecting the events of September 11 will be prepared and sent out for regional review in June 2002 and the 2002 TAF will be published in Fall 2002.

National Forecast Trends

Trends at individual airports reflect to varying degrees national trends taking place within the aviation industry. Therefore, a change from last year's TAF reflects, in part, changes in the national forecast. Changes also reflect, of course, dynamics occurring at individual airports.

National forecasts published on our website in March 2001 projected aircraft operations (takeoffs and landings) at FAA and Federal contract tower airports growing at an annual rate of 2.4 percent over the next 12 years. As a result of the impact of September 11 and current economic conditions, growth is

expected to average 1.8 percent with declining traffic during 2002.

Data Summary and Comparisons

In fiscal year 2000, the FAA served 266 towers (levels 1 through 5) and 195 Federal contract towers. California has the most FAA towers with 33, followed by Texas with 19. Regions with the most FAA towers are Southern and Western Pacific, which operate 52 and 49 FAA towers, respectively. Table S-3 presents FAA and Federal contract towers by region and state.

The 31 large hub airports enplaned 492.3 million passengers in fiscal year 2000 while 35 medium and 71 small hub airports enplaned 133.3 and 55.2 million passengers, respectively. The 325 non-hub airports enplaned 18.8 million passengers. Table S-5 presents passenger enplanements and airport operations by hub size. Appendix B contains a listing of hub airports classified by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

Operations (arrivals and departures) at large hub airports totaled 15.2 million compared to levels of 8.3 and 9.6 million at medium and small hub airports, respectively. Total airport operations by hub size are shown in Table S-5.

Non-hub airports accounted for 35.9 million operations or 52 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations account for the majority of operations at these smaller airports.

Tables S-6 through S-10 summarize airport operations and enplanements by region from 1996 through 2015. The Southern (26.4 million), Western Pacific (21.7 million), and Great Lakes (21.2 million) regions rank as the top three FAA regions in airport operations. Operations for all TAF airports totaled 127.1 million in 2000.

Aircraft operations in the Western Pacific and Northwest Mountain regions are projected to be the fastest growing FAA regions. The Southern region led the FAA regions in passengers enplaned with 156.2 million in fiscal year 2000, followed by Western Pacific with 147.0 million passengers.

Large, Medium, and Small Hubs

This section reports historical data and forecast aviation activity summaries for the nation's hub airports. An airport qualifies as a *large* hub with one percent or more of total U.S. passengers enplaned. A *medium* hub airport enplanes from 0.25 to 0.99 percent of total U.S. passengers while *small* and *non*-hub airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively. Table S-5 shows enplanements and operations for FAA towered airports by hub size.

Forecasts

Table S-1 presents pre September enplanement forecast summaries for large hub airports. Atlanta was the busiest passenger airport in fiscal year 2000 (39.4 million passengers), followed by Chicago O'Hare with 34.3 million, Los Angeles with 32.1 million, and Dallas/Ft. Worth with 28.7 million.

Atlanta and Los Angeles will experience the strongest growth in enplanements among the top four airports. Graph S-1 shows relative enplanements growth over the next 15 years. The five fastest growing airports are Phoenix, Ft. Lauderdale, Baltimore-Washington, Philadelphia, and Cincinnati.

Houston Intercontinental, Baltimore-Washington (BWI), and Washington Dulles will make the largest upward movement in ranking of enplanements. Houston moves up from 14th to 8th, BWI moves from 26th to 21st, and Washington Dulles moves up from 27th to 23rd position. Hub airports with the largest drop in hub rankings are San Francisco (from 5th to 11th) and New York's La Guardia (from 19th to 25th)

Table S-2 presents operations forecast summaries for the 31 large hub airports. In fiscal year 2000, FAA controllers at Atlanta handled 922,000 landings and takeoffs, a workload slightly higher than Chicago O'Hare, which totaled 906,000 operations. The next busiest airports are Dallas/Ft. Worth and Los Angeles with 875,000 and 781,000 airport operations, respectively.

In 2015, Atlanta is projected to have the largest number of operations followed by Dallas/Ft. Worth. Operations at Chicago O'Hare increase relatively slowly dropping Chicago to 4th in the operations ranking by 2015. Los Angeles moves into third position.

Graph S-2 shows that three airports growing fastest in operations are Phoenix, Baltimore-Washington and Houston Intercontinental. Cincinnati and Houston Intercontinental are expected to move into the list of the top 10 busiest airports replacing Miami and Minneapolis-St. Paul.

The 35 medium hubs enplaned 133.3 million passengers and 8.3 million operations in 2000.

Comments:

Table AAL-7. Instrument Operations by Service Provider

Loc ID	Facility Type	Facility Name, City	1995	2000	2001	2002	2005	2010	2015
* A11	Tracon, Rapcon,	ANCHORAGE TRACON, Anchorage	284,846	343,331	351,555	359,706	384,750	427,265	470,278
ANC	Limited Radar	ANCHORAGE INTL, Anchorage	224,280	252,498	260,448	269,350	296,084	340,772	385,494
MRI	VFR Tower	MERRILL FIELD, Anchorage	1,539	1,278	1,282	1,306	1,375	1,492	1,607
		Other Airports,;	59,027	89,555	89,825	89,050	87,291	85,001	83,177
* FAI	Radar Tower	FAIRBANKS INTL, Fairbanks	53,568	89,655	90,242	91,502	95,243	101,565	107,864

Notes: The first facility listed is instrument operations service provider; For TRACONS, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

Notes: The first facility listed is instrument operations service provider; For TRACONS, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

		Other Airports,;	108,472	168,011	182,390	185,182	194,728	212,438	231,795

Notes: The first facility listed is instrument operations service provider; For TRACONs, miscellaneous service is to non-FAA facilities; For radar towers, non-FAA facilities are included with local tower services. Instrument operations to airports served by the approach control facility may not total the number of operations reported by a TRACON or tower due to the complexities in the airspace system.

SOUTHERN (ASO)

Appendix A

Description of Activity Measures

Air Carrier Enplanements

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on Form 41, T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

Commuter Passengers

These data include originating passengers on scheduled commuter or regional carriers as reported on DOT Form 298-C. Carriers reporting on Form 298-C operate at least five scheduled round trips per week and its entire fleet consists of aircraft with 60 or fewer seats. Where possible, adjustments have been made to include connecting passengers.

FAA adjusts the TAF database to include enplanements (originations and connections) for those regional carriers that report on Form 41 as an air carrier but fly primarily commuter aircraft. The adjustment removes these enplanements from the air carrier category and places them into the commuter category. These carriers operate primarily as regional commuter carriers although they fly a small number of larger air carrier aircraft.

Aircraft Operations

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count operations at FAA contract towers. At non-FAA facilities, operations counts represent an estimate.

Air carrier operations represent either takeoffs or landings of commercial aircraft with seating capacity of more than 60 seats.

Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats conducting scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

General aviation operations represent all civil aviation aircraft takeoffs and landings not classified as commercial or military. Military operations represent takeoffs and landings by military aircraft. GA and military operations are further subdivided into itinerant or local flights.

Local Operations

Aircraft operating in the traffic pattern or within sight of the tower, or aircraft known to be departing or arriving from flight in local practice areas, or aircraft executing practice instrument approaches at the airport.

Itinerant Operations

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and landings of aircraft going from one airport to another.

Instrument Operations

These data include arrivals, departures, and overflights conducted by an FAA approach control facility for aircraft with an Instrument Flight Rule (IFR) flight plan or special Visual Flight Rule procedures. They also contain operations where a terminal control facility provides IFR aircraft separation.

The FAA classifies these operations into the following three types.

Primary Instrument Operations

These data consist of aircraft arrivals and departures at a primary airport, normally the airport with the approach control facility.

Secondary Instrument Operations

These data show arrivals and departures at secondary airports.

Overflights

These data include operations of aircraft in transit through the approach control facility airspace.
