WILDLAND FIRE QUALIFICATIONS HANDBOOK

ZERO CODE

02 - OBJECTIVE. Establish positions, qualifications, and certification requirements in wildland fire suppression to ensure Forest Service personnel have the organization, training, and qualifications to carry out fire management policies and programs in a safe, cost-efficient manner, consistent with land and resource management objectives.

03 - POLICY. Forest Service personnel shall:

1. Comply with the qualification requirements for the skills and knowledge unique to wildland fire suppression and the Incident Command System (ICS) as established by the National Wildfire Coordinating Group (NWCG) in the Wildland Fire Qualification Guide 310-1 (sec. 12).

2. Comply with any additional Forest Service requirements as set forth in this Wildland Fire Qualifications Handbook; additional training and qualifications requirements are identified by an asterisk and are listed in sections 26 and 31.

3. Accept the participation in cooperative fire suppression efforts of personnel from other agencies or of cooperators not hired by the Forest Service, who comply with the minimum requirements specified by the NWCG Wildland Qualification Guide 310-1.

Exceptions to these requirements may be necessary during times of initial action until qualified personnel arrive.

04 - RESPONSIBILITY. Regional Foresters, the Area Director, Forest Supervisors, and District Rangers are responsible for assessing employees' training development needs and providing appropriate training opportunities. Employees are ultimately responsible for their own development and should respond to training opportunities which will provide improved performance.

05 - DEFINITIONS. For additional definitions of terms related to the Incident Command System (ICS), refer to the Glossary of Terms for the Fireline Handbook NWCG 410-1 (FSH 5109.32, sec. 05).

1. **Certification.** The process in which a manager confirms that an individual has met all minimum qualifications and is qualified to perform in a specified position based on performance. The certification is documented on a data management system program and with the issuance of a Red Card to the individual.

2. **Currency Requirement.** The requirement to have performed satisfactorily in a specified position within the last 5 years (or for last 3 years in aviation positions) to maintain qualification for that position. (See also "Other Positions Meeting Currency Requirements.")

WILDLAND FIRE QUALIFICATIONS HANDBOOK

3. Experience. Documented, satisfactory performance in specified ICS positions that is needed to qualify for another (usually higher level) position; in the case of a trainee, satisfactory performance in the position for which the individual is qualifying.
4. Incident Command System (ICS). The combination of facilities, equipment, personnel, procedures, and communications operating with a common organizational structure, with responsibility for the management of assigned resources to effectively accomplish stated objectives pertaining to an incident.
5. Other Positions Meeting Currency Requirements. Positions in another function, or at an equivalent or lower level in the same function, which will meet the currency requirements for the position under which they are listed.
6. Qualified Individual. An individual whose agency has documented that all requirements for training, experience, and physical fitness have been successfully completed for a specific ICS position.
7. Recertification. Confirmation through the reissuance of a Red Card that an individual has regained qualification for an ICS position lost because of a lack of current experience.
8. Satisfactory Performance. Performance by an individual that meets or exceeds the written standards for a specific ICS position, as evaluated by the individual's incident or agency supervisor.
9. Skill Position. A position that requires specific skills and knowledge to perform a wildland fire suppression job. Examples include Firefighter, Fire Behavior Analyst, and Single Resource Boss.
10. Technical Specialist. A person having unique skills, performed in an everyday job, which are needed to support an incident operation. Examples include Contracting Officer, Environmental Specialist, Electrician, and Meteorologist.
11. Trainee. One who has successfully completed most or all of the required training courses, who has met the physical fitness requirements, and who is completing the experience requirement for a position by working on an incident under the direct supervision of a person already qualified in that position. A trainee may be assigned as an assistant but never as a deputy.

WILDLAND FIRE QUALIFICATIONS HANDBOOK

CHAPTER 10 - NATIONAL INTERAGENCY INCIDENT MANAGEMENT SYSTEM

11 - NATIONAL INTERAGENCY INCIDENT MANAGEMENT SYSTEM. All wildland fire protection agencies are organized to handle a reasonable amount of forest, brush, and grass fires within their jurisdictions. They usually can fight larger, more destructive fires with their own resources plus aid from other agencies. However, additional or substantial outside assistance may be required at some time. A nationwide multi-agency management system has been adopted, called the National Interagency Incident Management System (NIIMS), which provides a total systems approach for response in such emergency situations.

NIIMS is a system for responding to a wide range of emergencies, such as fires, floods, earthquakes, hurricanes, tornados, tidal waves, riots, spilling of hazardous materials, and other natural or human-caused incidents. It consists of five major subsystems, which together provide a total approach to incident management. The subsystems and their functions are as follows:

1. Incident Command System (ICS). An on-scene structure of generic management-level positions suitable to manage any incident.
2. Training. Development and delivery of training courses.
3. Qualifications and Certification. National standards for qualifications and certification for ICS positions.
4. Publications Management. Development, control, sources, and distribution of NIIMS publications provided by the National Wildfire Coordinating Group (NWCG).
5. Supporting Technology. Technology and systems used to support an emergency response, such as orthophoto mapping, National Fire Danger Rating System, remote automatic weather stations, automatic lightning detection systems, infrared technology, and communications.

11.1 - Organizational Charts for Incident Command System. Exhibits 1 through 5 display the organization and reporting lines for Incident Command System (ICS) positions for the most complex wildland fires, referred to as Type I and Type II (sec. 21.1). See section 26 (exs. 1-7) for position qualifications, and section 31 (exs. 1-6) for a summary of training, prerequisite positions, and physical fitness requirements for each position.

12 - WILDLAND FIRE QUALIFICATION GUIDE 310-1. The Wildland Fire Qualification Guide 310-1, produced by the National Wildfire Coordinating Group (NWCG), provides national minimum requirements for wildland firefighting personnel qualified to perform fire suppression jobs. The guide's qualifications are the minimums for any organization or agency sending personnel outside their areas of jurisdiction to ensure each person has met experience, training, and physical fitness guidelines. (The guide is available from the Boise Interagency Fire Center.)

Each agency has the latitude to supplement the position qualification requirements with more specific skill levels and to describe additional levels of positions to meet agency needs.

WILDLAND FIRE QUALIFICATIONS HANDBOOK

CHAPTER 20 - QUALIFICATIONS AND CERTIFICATION

21 - QUALIFICATION FOR INCIDENT COMMAND SYSTEM POSITIONS. This handbook contains the fire management positions outlined by the National Wildfire Coordinating Group (NWCG) in the Wildland Fire Qualification Guide 310-1, along with additional requirements for skills, training, and prerequisites for management positions in the Forest Service. (Guide 310-1 is available from the Boise Interagency Fire Center.) Qualifications for each position include the minimum acceptable levels of training, experience, physical fitness, and/or currency requirements. Job descriptions and duties for these positions are listed in NWCG Fireline Handbook 410-1 (FSH 5109.32).

Qualification for a position in the Incident Command System (ICS) organization depends on proven ability. Training and experience are prerequisites, but position certification is determined by evaluating the trainee's performance. The individual also must meet the position's physical fitness requirements.

Personnel from other agencies or cooperators not hired by the Forest Service comply with the requirements specific to their own agency and/or the minimums established in the Wildland Fire Qualification Guide 310-1.

NWCG reviews and updates the Qualifications and Certification Subsystem every three years. Users may propose revisions as needs are identified through the agency and NWCG.

21.1 - Incident Complexity. The line manager must determine the complexity of an incident and assign qualified personnel as needed. More than 95 percent of all wildland fires fall within the low range of complexity and are controlled with Initial Attack and Reinforcement Forces. These are referred to as Type III and Type IV Incidents, and the involved agencies have the latitude to agree on qualifications that meet their needs within the local operating area.

The remaining 5 percent of incidents, which fall into the high range of complexity, are referred to as Type I and Type II. Qualifications for Incident Commanders and General Staff have been established for Type I and II Incidents (including Area Command) because they normally require resources from outside the local area.

21.2 - Guidelines for Determining Incident Complexity. Following are guidelines to assist managers in determining incident complexity. The guidelines are presented in order of ascending complexity and describe the fire suppression response and the fire organization that are appropriate to the particular situation and are consistent with

WILDLAND FIRE QUALIFICATIONS HANDBOOK

established fire management direction (FSM 5130). The Type IV incident is on the lowest range of complexity, and Type I is at the highest range. The Type I Incident combines the Multi-Division and Multi-Branch classifications as described in NWCG Wildfire Qualification Guide (310-1).

1. Type IV Incident (Initial Attack). Characteristics are:
 - a. Command and General Staff positions are not activated.
 - b. Resources may vary from a single firefighter to several single resources or a single Task Force or Strike Team.
 - c. The incident is limited to one operational period in the control phase. Mop-up may extend into multiple periods.
 - d. A written action plan is not required.
2. Type III Incident (Extended Attack). Characteristics are:
 - a. Some of the Command and General Staff positions may be activated, usually at the Division/Group Supervisor and Unit Leader level.
 - b. Resources may vary from several single resources to several Task Forces/Strike Teams.
 - c. The incident may be divided into divisions, but usually does not meet the Division/Group Supervisor complexity for span-of-control.
 - d. The incident may involve multiple operational periods prior to control, which requires a written action plan.
 - e. Staging areas and a base may be used.
3. Type II Incident. Characteristics are:
 - a. Most or all of the Command and General Staff positions are filled. A Type II Incident requires a Type II Incident Commander and General Staff functioning as a team.
 - b. Base Camp(s) is(are) established.
 - c. The incident extends into multiple operational periods.
 - d. A written action plan is required.

WILDLAND FIRE QUALIFICATIONS HANDBOOK

- e. Many of the Functional Units are needed and staffed.
 - f. Operations personnel normally do not exceed 200 per operational shift, and total incident personnel do not exceed 500 (numbers are guidelines only).
 - g. Divisions usually are established to facilitate making work assignments in different locations. A qualified Division/Group Supervisor is not required on Divisions established for reasons other than span-of-control or other complexity factors.
4. Type I Incident. A Type I Incident meets all the characteristics of a Type II Incident, plus the following:
- a. All Command and General Staff positions are activated.
 - b. Operations personnel often exceed 500 per operational shift, and total personnel usually exceed 1,000 (numbers are guidelines only).
 - c. Divisions almost always are established that require personnel qualified as Division/Group Supervisor.
 - d. The establishment of Branches may be required.

22 - CERTIFICATION FOR INCIDENT COMMAND SYSTEM POSITIONS. All regular Forest Service personnel and cooperators employed by the Forest Service under the Pay Plan for Emergency Firefighters (FSH 5109.34, ch. 10 - NWCG Handbook 2) and assigned Incident Command System (ICS) positions must be judged to be technically and physically qualified to fill their positions. A unit Fire Qualification Review Committee decides certification; an individual's competency to perform is a key evaluation component.

Qualification for a position in the NIIMS/ICS organization depends on proven ability (sec. 21). Training, experience, and physical fitness are prerequisites to qualification, but certification to hold an ICS position is determined through evaluation of performance as a trainee in the target position, if required, or in a prerequisite assignment.

The qualifications of each employee to hold an ICS position, including physical fitness and current experience, must be re-evaluated annually and new certification issued, if appropriate. Physical fitness qualifications should be checked within the 30-day period before the normal beginning of fire season.

WILDLAND FIRE QUALIFICATIONS HANDBOOK

22.1 - Certification Records. Certification records shall be maintained by each unit. Each currently certified individual shall be issued a Red Card annually. The card contains name, Social Security number, agency, year, unit, qualified positions, on-the-job training needs, measured physical fitness, other skills, and any remarks.

22.2 - Currency Requirements. Requirements for currency of experience are 3 years for air operations positions and 5 years for others. In many cases, currency requirements can be met by performing in a similar position. These are identified under each ICS Position Qualification in the exhibits in sections 26 and 31. Currency requirements for air operations positions may also be met by performing on a day-to-day basis or on special projects, such as aerial spraying, search and rescue, and aerial ignition on prescribed burns.

Position experience is considered as qualifying only if the individual has previously met all training and prerequisite experience requirements for the position assignment.

22.3 - Recertification. Management's evaluation of an individual's competency is key to recertification where qualifications are lost because the individual has no recent experience. Recertification should follow a demonstrated satisfactory performance; for example, the individual performs one assignment in a trainee role. This trainee assignment introduces the individual to new technology and helps recall the position's duties and responsibilities.

23 - PHYSICAL FITNESS STANDARDS AND DEFINITIONS. Physical fitness standards must be met for Incident Command System (ICS) position certification, in addition to training and experience.

23.1 - Physical Fitness Requirements. Requirements for physical fitness are identified as Arduous, Moderate, Light, and None.

1. Arduous. The duties require field work performance by individuals with above-average endurance and superior physical conditioning. Occasional demand for extraordinarily strenuous activities in emergencies over extended periods of time may be necessary. Requirements include running, walking, climbing, jumping, twisting, bending, and lifting more than 50 pounds, with the work pace set by the emergency situation and over irregular terrain.

2. Moderate. The duties require field work performance by individuals with average endurance and physical conditioning. Individuals usually set their own pace. Emergencies occasionally demand moderately strenuous activities over long time periods. Activities include considerable walking over irregular ground, climbing, bending, stooping, squatting, twisting, reaching, and lifting 25 to 50 pounds.

WILDLAND FIRE QUALIFICATIONS HANDBOOK

3. Light. The duties mainly involve office-type work with occasional field activity characterized by light physical exertion requiring individuals to be in basic good health. Individuals almost always govern the extent and pace of their physical activity. The activities may include climbing (such as stairs), standing, operating a vehicle, and some bending, stooping, or light lifting. Long hours of work may be necessary.

4. None. The duties normally are performed in a controlled environment, such as an incident or base camp. Testing is not required for individuals filling these positions having no physical fitness standards.

23.2 - Physical Fitness Measurement. The physical fitness measurement is the standard step test or alternate 1-1/2 mile run. Equivalent step test scores are:

Arduous:	45 or better
Moderate:	40 to 44
Light:	35 to 39

Physical fitness examinations as part of fitness-for-duty evaluation are generally at the expense of the employee and normally are not required prior to step test evaluation. After the step test is given and there is a question as to the person's fitness, the tester may require a physical examination at Government expense.

23.21 - Administering the Step Test or 1-1/2 Mile Run. The step test or alternate 1-1/2 mile run must be administered by a person currently qualified in Standard Red Cross First Aid and Cardiopulmonary Resuscitation (CPR). The administrator must be able to recognize symptoms of physical distress, stop the test, and assist as needed.

Administer the step test according to the calculator program or the slide/tape program, both entitled "Measuring Your Physical Fitness" (available from the Missoula Technology and Development Center). Ensure the test is given in an area free from disturbance, which has the recommended temperature and adequate fresh air.

Ensure the person being tested is knowledgeable about step test procedures and how aerobic fitness affects one's ability to do physical work. The publication, "Fitness and Work Capacity" (PMS 304-2, available from the Boise Interagency Fire Center (BIFC), and the slide/tape program, "Measuring Your Physical Fitness," provide this information.

WILDLAND FIRE QUALIFICATIONS HANDBOOK

23.3 - Fitness Development. Firefighters are permitted up to one hour per day for fitness development, during the fire season when they are not engaged in fire suppression activities. This direction applies to permanent and temporary employees when:

1. They are in positions covered by the special retirement positions of 5 U.S.C. 8336(c) and 8412(d) (see FSH 6109.12, Employment and Benefits Handbook, sec. 41 (Civil Service Retirement System) and sec. 42 (Federal Employees Retirement System)), and

2. They are required to meet an arduous level of physical fitness .

24 - SKILL POSITIONS. Skill positions require specific skills and knowledge to perform wildland fire suppression jobs; for example, Single Resource Boss, Helicopter Crew Member, and Firefighter. In many cases, skill positions are prerequisites leading to Incident Command System (ICS) management positions. The Forest Service has established training and experience requirements (sec. 26 and 31) in addition to duties and prerequisites outlined in the National Wildfire Coordinating Group (NWCG) Wildland Fire Qualification Subsystem Guide 310-1.

25 - TECHNICAL SPECIALISTS. Often, technical specialists are needed to support incident operations. A technical specialist is a person hired or assigned to a position requiring special skills, such as a cook, communication technician, driver, and pilot. No minimum qualifications are prescribed for these positions, as these personnel normally perform the same type of duties in their regular jobs. The supervisor shall review the specialist's technical and physical abilities to determine qualifications. This review may include checking licenses, evaluating previous training and work experience, and observing on-the-job performance. The supervisor has the authority to retain or dismiss the specialist on the basis of this evaluation.

26 - POSITION QUALIFICATIONS. The following position descriptions show training requirements, experience, physical requirements, and positions meeting currency requirements for wildland fire suppression personnel. The positions are grouped together by section and displayed in exhibits: Area Command (ex. 1), Command (ex. 2), Command Staff (ex. 3), Operations (ex. 4), Planning (ex. 5), Logistics (ex. 6), and Finance (ex. 7).

An asterisk (*) by an item or position indicates Forest Service qualification requirements in addition to NWCG Wildland Fire Qualification Guide 310-1 requirements.

Exhibits 1 through 7 includes position qualifications for the following:

WILDLAND FIRE QUALIFICATIONS HANDBOOK

Any Single Resource Boss
Incident Commander on a multi-resource incident

*6. Crew Representative (CREP)

TRAINING

Successful completion of training relevant to Crew Representative expectations for the local administrative unit or Region.

EXPERIENCE

Satisfactory performance as a Single Resource Boss.

PHYSICAL REQUIREMENT

Arduous

OTHER POSITIONS MEETING CURRENCY REQUIREMENTS

Any Single Resource Boss

WILDLAND FIRE QUALIFICATIONS HANDBOOK

Exhibit 4--Continued***7. Single Resource Boss**

Includes: Crew Boss (CRWB)
 Dozer Boss (DOZB)
 Engine Boss (ENGB)
 Firing Boss (FIRB)
 Felling Boss (FELB)
 Helicopter Boss (HELB)
 Tractor Plow Boss (TRPB)

TRAINING

I-220 Basic ICS
 S-230 Crew Boss
 S-260 Fire Business Management Principles
 S-270 Air Operations
 S-390 Fire Behavior

Training in specialty of Resource Boss:

S-213 Dozer Use (for Dozer Boss and Tractor Plow Boss)

S-214 Engine Use (for Engine Boss)

S-215 Firing Methods and Equipment (for Firing Boss)

Training as required in FSH 5709.12, section 24.1, for Helicopter Manager

EXPERIENCE

Satisfactory performance as a Squad Boss for one season.

For Helicopter Boss, must meet helicopter manager requirements in FSH 5709.12, section 24.

PHYSICAL REQUIREMENT

Arduous

OTHER POSITIONS MEETING CURRENCY REQUIREMENTS

Squad Boss

CHAPTER 30 - TRAINING

Contents

- 31 TRAINING
- 31.1 Incident Command System Position Training Requirements

WILDLAND FIRE QUALIFICATIONS HANDBOOK

CHAPTER 30 - TRAINING

31 - TRAINING. Courses are designed to be taken in an ascending order of complexity based on successively higher levels of responsibility and skills. The required training identified for each position shown in chapter 20, section 26, lists only those courses needed for that position and are in addition to the training required in all prerequisite positions.

Courses are identified by a number preceding the letter "I" or "S." "I" courses fall within the National Interagency Incident Management System-Incident Command System (NIIMS-ICS), and "S" are skill courses. The ascending numbering system shows sponsorship level:

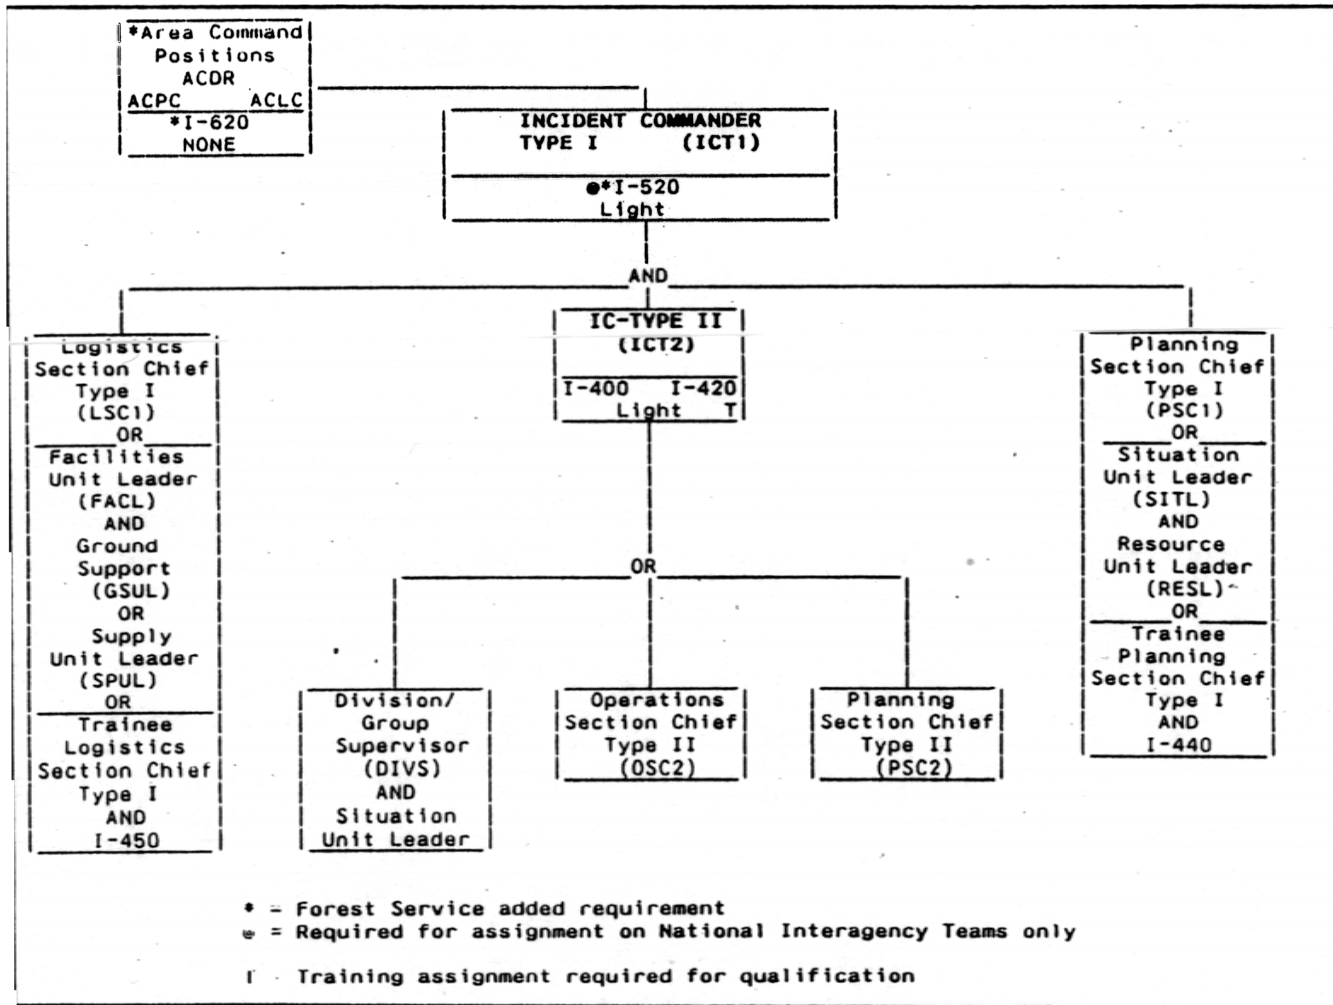

100-200 level	Local
300-400 level	Regional
500-600 level	National

Refer to the "Field Managers' Course Guide," NFES number 1260, PMS 901-1, Boise Interagency Fire Center, for descriptions, purpose, and objectives of the training courses.

31.1 - Incident Command System Position Training Requirements. Exhibits 1-6 summarize training, prerequisite positions, currency, and physical fitness requirements for each ICS position.
