**Re: GE-Pittsfield/Housatonic River Site  
Monthly Status Report Pursuant to Consent Decree for February 2009 (GEC900)**

Dear Mr. Tagliaferro and Mr. Gorski:

Enclosed are copies of General Electric's (GE's) monthly progress report for February 2009 activities conducted by GE at the GE-Pittsfield/Housatonic River Site. This monthly report is submitted pursuant to Paragraph 67 of the Consent Decree (CD) for this Site, which was entered by the U.S. District Court on October 27, 2000.

The enclosed monthly report includes not only the activities conducted by GE under the CD, but also other activities conducted by GE at the GE-Pittsfield/Housatonic River Site (as defined in the CD). The report is formatted to apply to the various areas of the Site as defined in the CD, and to provide for each area, the information specified in Paragraph 67 of the CD. The activities conducted specifically pursuant to or in connection with the CD are marked with an asterisk. GE is submitting a separate monthly report to the Massachusetts Department of Environmental Protection (MDEP), with a copy to the United States Environmental Protection Agency (EPA), describing the activities conducted by GE at properties outside the CD Site pursuant to GE's November 2000 Administrative Consent Order from MDEP.

The enclosed monthly report includes, where applicable, tables that list the samples collected during the subject month, summarize the analytical results received during that month from sampling or other testing activities, and summarize other groundwater monitoring and oil recovery information obtained during that month. Also, enclosed for each of you (and for Weston) is a CD-ROM that contains these same tables of the analytical data and monitoring information in electronic form.

Please call me if you have any questions.

Sincerely,

Richard W. Gates  
Remediation Project Manager

Enclosure

***February 2009***

**MONTHLY STATUS REPORT  
PURSUANT TO CONSENT DECREE  
FOR  
GE-PITTSFIELD/HOUSATONIC RIVER  
SITE**

**GENERAL ELECTRIC COMPANY**

**PITTSFIELD, MASSACHUSETTS**

## **Background**

The General Electric Company (GE), the United States Environmental Protection Agency (EPA), the Massachusetts Department of Environmental Protection (MDEP), and other governmental entities have entered into a Consent Decree (CD) for the GE-Pittsfield/Housatonic River Site, which was entered by the U.S. Court on October 27, 2000. In accordance with Paragraph 67 of the CD, GE is submitting this monthly report, prepared on GE's behalf by ARCADIS (formerly Blasland, Bouck & Lee, Inc.), which summarizes the status of activities conducted by GE at the GE-Pittsfield/Housatonic River Site ("Site") (as defined in the CD).

This report covers activities in the areas listed below (as defined in the CD and/or the accompanying Statement of Work for Removal Actions Outside the River [SOW]). Only those areas that have had work activities for the month subject to reporting are included. The specific activities conducted pursuant to or in connection with the CD are noted with an asterisk.

### **General Activities (GECD900)**

#### **GE Plant Area (non-groundwater)**

1. 20s, 30s, 40s Complexes (GECD120)
2. East Street Area 2 – South (GECD150)
3. East Street Area 2 – North (GECD140)
4. East Street Area 1 – North (GECD130)
5. Hill 78 and Building 71 Consolidation Areas (GECD210/220)
6. Hill 78 Area – Remainder (GECD160)
7. Unkamet Brook Area (GECD170)

#### **Former Oxbow Areas (non-groundwater)**

8. Former Oxbow Areas A & C (GECD410)
9. Lyman Street Area (GECD430)
10. Newell Street Area I (GECD440)
11. Newell Street Area II (GECD450)
12. Former Oxbow Areas J & K (GECD420)

#### **Housatonic River**

13. Upper ½-Mile Reach (GECD800)
14. 1½-Mile Reach (only for activities, if any, conducted by GE) (GECD820)
15. Rest of the River (GECD850)

#### **Housatonic River Floodplain**

16. Current Residential Properties Adjacent to 1½-Mile Reach (Actual/Potential Lawns) (GECD710)
17. Non-Residential Properties Adjacent to 1½-Mile Reach (excluding banks) (GECD720)
18. Current Residential Properties Downstream of Confluence (Actual/Potential Lawns) (GECD730)

#### **Other Areas**

19. Allendale School Property (GECD500)
20. Silver Lake Area (GECD600)

**Groundwater Management Areas (GMAs)**

21. Plant Site 1 (GECD310)
22. Former Oxbows J & K (GECD320)
23. Plant Site 2 (GECD330)
24. Plant Site 3 (GECD340)
25. Former Oxbows A&C (GECD350)

**GENERAL ACTIVITIES  
GE-PITTSFIELD/HOUSATONIC RIVER SITE  
(GEC900)  
FEBRUARY 2009**

**a. Activities Undertaken/Completed**

- Continued GE-EPA electronic data exchanges for the Housatonic River Watershed and Areas Outside the River.\*
- Continued communications with EPA regarding flood storage compensation issues.\*

**b. Sampling/Test Results Received**

- Sample results were received for routine sampling conducted pursuant to GE's NPDES Permit for the GE facility. Sampling records and results are provided in Attachment A to this report.
- NPDES Discharge Monitoring Reports (DMRs) for the period of January 1 through January 31, 2009, are provided in Attachment B to this report.
- GE received a report from CAS titled *NPDES Biomonitoring Report for February 2009*, which included analytical results for samples collected for NPDES-related whole effluent toxicity testing, as well as an attached report from Aquatec Biological Sciences providing the results of the whole effluent toxicity testing performed in February 2009. A copy of this document is provided in Attachment C.

**c. Work Plans/Reports/Documents Submitted**

None

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue NPDES sampling and monitoring activities.
- Attend public and Citizens Coordinating Council (CCC) meetings, as appropriate.
- Continue communications with EPA regarding flood storage compensation issues.\*

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

Issues relating to flood storage compensation are under discussion with EPA.\*

**f. Proposed/Approved Work Plan Modifications**

None

**ITEM 1  
PLANT AREA  
20s, 30s, 40s COMPLEXES  
(GEC120)  
FEBRUARY 2009**

**a. Activities Undertaken/Completed**

- Completed supplemental utility corridor sampling to accommodate Pittsfield Economic Development Authority's (PEDA's) revised drawings relating to the planned utility lines to be installed by PEDA at the former 20s and 30s Complexes and the adjacent portion of Woodlawn Avenue, as identified in Table 1-1 (noted as Supplemental Soil Sampling – 20's Complex and Supplemental Soil Sampling – Woodlawn).
- Completed supplemental soil sampling to characterize, for off-site disposal, soils anticipated to be disturbed and displaced by PEDA's proposed box culvert installation, as identified in Table 1-1 (noted as Supplemental Soil Sampling – Box Culvert).
- Completed soil sampling, on behalf of and as directed by PEDA, in the former 20s Complex to assist PEDA in meeting its obligation to maintain conformance with CD Performance Standards relating to subsurface soil within the existing Other Ground Covering Feature Area as defined in the Grant of Environmental Restriction and Easement (ERE) for the 20s Complex, as identified in Table 1-1 (noted as Supplemental PEDA Sampling – 20's).
- Resumed discussions with PEDA, at PEDA's request, relating to activities associated with future transfer of the former 40s Complex to PEDA.

**b. Sampling/Test Results Received**

See attached tables.

**c. Work Plans/Reports/Documents Submitted**

None

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Obtain and validate data from above-referenced supplemental utility corridor sampling and, following completion, revise the prior draft reports that summarize the previously completed soil sampling conducted on PEDA's behalf in the vicinity of the planned utility lines to incorporate the results of the additional sampling.
- Prepare and submit, on PEDA's behalf, separate soil investigation reports for planned stormwater installations within the former 20s and 30s Complexes for which supplemental sampling is not required.

**ITEM 1  
(cont'd)  
PLANT AREA  
20s, 30s, 40s COMPLEXES  
(GECD120)  
FEBRUARY 2009**

**d. Upcoming Scheduled and Anticipated Activities (next six weeks) (cont'd)**

- Obtain and validate data from the above-referenced PEDA-directed soil sampling in the former 20s Complex, and provide the validated data to PEDA for its subsequent reporting to EPA.
- Continue discussions with PEDA relating to activities associated with future transfer of the former 40s Complex to PEDA, including discussions relating to the development of a revised ERE (see Item 1.e below).
- Begin development of a Final Completion Report for the 40s Complex (see Item 1.e below).\*

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

- GE is awaiting EPA's comments on GE's December 21, 2006 proposal for the remaining at-grade concrete slabs of former Buildings 42, 43/43A, and 44, which also addressed certain issues relative to the final restoration of previously placed crushed demolition debris.\*
- On January 25, 2007, GE submitted to EPA a draft letter which proposed, at PEDA's request, additional soil sampling within the 40s Complex. PEDA has now advised GE that it no longer wishes to proceed with that sampling.\*
- In January 2007, GE also provided EPA and MDEP with a draft ERE and Plan of Restricted Area for the 40s Complex. These documents will now be revised in light of PEDA's decision not to proceed with additional soil sampling.\*
- Work on development of a Final Completion Report for the 40s Complex had been deferred pending resolution of issues relating to additional soil sampling. GE will now proceed to develop a draft of a Final Completion Report.\*

**f. Proposed/Approved Work Plan Modifications**

None

**Notes:**

1. Samples were collected by ARCADIS and submitted to SGS Environmental Services, Inc. for analysis of PCBs.
2. ND - Analyte was not detected. The number in parenthesis is the associated detection limit.
3. Field duplicate sample results are presented in brackets.

**Data Qualifiers:**

Organics

J - Indicates an estimated value less than the practical quantitation limit (PQL).

GENERAL ELECTRIC COMPANY - PITTSFIELD, MASSACHUSETTS  
(Results are presented in dry weight parts per million, ppm)**

Notes:

1. Samples were collected by ARCADIS and submitted to SGS Environmental Services, Inc. for analysis of Appendix IX+3 constituents.
2. NA - Not Analyzed.
3. ND - Analyte was not detected. The number in parenthesis is the associated detection limit.
4. Total 2,3,7,8-TCDD toxicity equivalents (TEQs) were calculated using Toxicity Equivalency Factors (TEFs) derived by the World Health Organization (WHO) and published by Van den Berg et al. in Environmental Health Perspectives 106(2), December 1998.
5. With the exception of dioxin/furans only those constituents detected in one or more samples are summarized.
6. Field duplicate sample results are presented in brackets.

Data Qualifiers:

Organics (volatiles, semivolatiles, dioxin/furans)

- J - Indicates an estimated value less than the practical quantitation limit (PQL).
- I - Polychlorinated Diphenyl Ether (PCDPE) Interference.
- Q - Indicates the presence of quantitative interferences.
- X - Estimated maximum possible concentration.
- Y - 2,3,7,8-TCDF results have been confirmed on a DB-225 column.

Inorganics

- B - Indicates an estimated value between the instrument detection limit (IDL) and PQL.

**ITEM 2  
PLANT AREA  
EAST STREET AREA 2-SOUTH  
(GEC150)  
FEBRUARY 2009**

**a. Activities Undertaken/Completed**

- Continued demolition activities at Buildings 63, 63X, and 68. Buildings 63 and 63X have been completely razed and the associated demolition debris has been processed for future consolidation at the Hill 78 On-Plant Consolidation Area (OPCA). Demolition of Building 68 is underway and the associated demolition debris is being processed for off-site transportation and disposal.
- Conducted ambient air monitoring for particulate matter and PCBs during demolition of Buildings 63, 63X, and 68, as identified in Table 2-1.
- Conducted sampling of 64G air compressor maintenance oil, as noted in Table 2-1.

**b. Sampling/Test Results Received**

See attached tables.

**c. Work Plans/Reports/Documents Submitted**

- Submitted letter to EPA presenting final disposition documentation for the Overhead Crane Brake Reservoir that was previously removed from Building 63 pursuant to written notification made to EPA on July 17, 2008 (February 17, 2009).
- Provided EPA with draft Flood Storage Assessment for remediation/demolition activities within the 100-year floodplain between Newell and Elm Street Bridges (February 19, 2009). Following EPA review, this assessment will be submitted as an attachment to the Second Addendum to the Conceptual Removal Design/Removal Action (RD/RA) Work Plan for East Street Area 2-South.\*

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Submit Second Addendum to the Conceptual RD/RA Work Plan for East Street Area 2-South (following EPA review of draft Flood Storage Assessment described above).\*
- Complete structural demolition of Building 68 and transport associated demolition debris off-site for disposal.
- Coordinate with EPA to schedule consolidation of Buildings 63 and 63X demolition debris at Hill 78 OPCA (subject to suitable weather conditions).\*

	Southeast	0.014		11:30	
	Northeast	0.015		11:30	
Notification Level		0.120			

**Notes:**

All concentrations measured with an EBAM unless otherwise noted.

Background monitoring station is located east of Building 9B, between Building 9B and New York Avenue (BK-3).

Predominant wind direction determined using hourly wind direction data from the Pittsfield Municipal Airport Weather Station.

<sup>1</sup> Monitoring was performed only on days when site activities occurred.

<sup>2</sup> The particulate monitors obtain real-time data. The sampling data were obtained by Berkshire Environmental Consultants, Inc. on the sampling date.

<sup>3</sup> Sampling period was lengthened at all sites due to longer workday schedule.

<sup>4</sup> Sampling period was shortened due to power failure.

**ITEM 3  
PLANT AREA  
EAST STREET AREA 2-NORTH  
(GEC140)  
FEBRUARY 2009**

**a. Activities Undertaken/Completed**

- Collected and transferred approximately 26,500 gallons of water from Building 9 to Building 64G for treatment.
- Completed erosion repair/control plan to address the steep embankment on the corner of New York Avenue and Merrill Road.
- Collected and transferred approximately 10,000 gallons of water from the Building 100 fire protection line break to Building 64G for treatment.

**b. Sampling/Test Results Received**

None

**c. Work Plans/Reports/Documents Submitted**

None

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

Initiate erosion repair/control plan to address steep embankment on the corner of New York Avenue and Merrill Road in Spring 2009.

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

- GE is awaiting EPA's comments on GE's December 21, 2006 proposal for the remaining at-grade concrete slabs of certain buildings in the portion of East Street Area 2-North that is intended to be transferred to PEDDA (i.e., the 19s Complex).\*
- The City of Pittsfield previously proposed changes to the draft CD Modification to allow on-site disposition of crushed demolition debris from Buildings 7, 11, 16, 17, 17C, and 19. GE is currently discussing the draft CD Modification, including those proposed changes, with PEDDA.\*
- Demolition activities for Buildings 7, 11, 16, 17, 17C, and 19 will be scheduled following filing of CD Modification to allow on-site disposition of crushed demolition debris from those buildings.

**ITEM 3  
(cont'd)  
PLANT AREA  
EAST STREET AREA 2-NORTH  
(GEC140)  
FEBRUARY 2009**

**e. General Progress/Unresolved Issues/Potential Schedule Impacts (cont'd)**

- The formal follow-notification letter associated with GE's May 10, 2007 verbal notification to EPA and MDEP regarding the result of a liquid sample collected from a drainage piping system in the Building 11 laboratory will be submitted after GE has completed removal of any additional liquids collected from the piping system (as discussed with M. Milette [EPA] during the May 10, 2007 verbal notification, and documented in a May 17, 2007 letter to EPA regarding the results of certain oil samples from Buildings 11 and 16). However, given site-specific conditions, such additional removal activities can only be completed as part of the demolition of Buildings 11 and 16. Therefore, submittal of the follow-up notification letter is dependent upon initiation of demolition activities for those buildings.

**f. Proposed/Approved Work Plan Modifications**

None

**ITEM 4

**f. Proposed/Approved Work Plan Modifications**

None

**ITEM 5  
PLANT AREA  
HILL 78 & BUILDING 71 CONSOLIDATION AREAS  
(GEC210/220)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

**a. Activities Undertaken/Completed**

- Conducted air monitoring for particulates and PCBs, as identified in Table 5-1. This monitoring included air monitoring events for all the monitors associated with the On-Plant Consolidation Areas (OPCAs) on February 17-18, 2009, as identified in Table 5-1.
- Continued transfer of leachate from Building 71 OPCA to Building 64G for treatment. The total amount transferred in February 2009 was 4,363 gallons (see Table 5-2).
- Conducted preliminary data review (PDR) of PCB analytical data for ambient air samples collected from the OPCA air monitors on January 21-22 and February 17-18, 2009. The PDR was conducted based on the following data quality indicators associated with the tabulated data set – sampling collection time, sampling calibration check, temperature receipt, associated blanks, laboratory control samples, recoveries and surrogate recoveries – in accordance with Validation Annex F in GE's revised Field Sampling Plan/Quality Assurance Project Plan (FSP/QAPP) and the Region I Data Validation Functional Guidelines referenced therein. This PDR resulted in no qualifications of the data. Tier I and Tier II data validation of all PCB analytical data for ambient air samples collected from the OPCA air monitors during these events will be conducted after receiving the full data packages from the laboratory.
- Conducted Tier I and Tier II data validation of PCB analytical data for ambient air samples collected from the OPCA air monitors on November 24-25 and December 3-4, 9-10, and 29-30, 2008 (either as part of OPCA air monitoring events or as part of air monitoring conducted for the Hill 78 Area-Remainder remediation). The Tier I and Tier II data validation consisted of a review of all data package summary forms for identification of quality assurance/quality control (QA/QC) deviations, as well as qualification of the data, in accordance with Validation Annex F in GE's revised FSP/QAPP and the Region I Data Validation Functional Guidelines referenced therein. As shown in Table 5-5, the Tier I/II review resulted in minor qualifications for some data from the December 3-4 and 9-10 events (related to the tentative identification of PCB Aroclor 1248), but no other qualifications. The PCB analytical data from these samples have an overall usability of 100%. The validated data from these events are included in Table 5-6 (the annual summary PCB table for 2008).

**b. Sampling/Test Results Received**

See attached tables.

**ITEM 5  
(cont'd)  
PLANT AREA  
HILL 78 & BUILDING 71 CONSOLIDATION AREAS  
(GEC210/220)  
FEBRUARY 2009**

**c. Work Plans/Reports/Documents Submitted**

Submitted to EPA, via electronic mail, the PCB analytical results for ambient air samples collected from the OPCA monitors on January 21-22 and February 17-18, 2009, along with Tier II validated results for the data from the November 24-25 and December 3-4, 9-10 and 29-30, 2008 air monitoring events (February 27, 2009).

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue monthly submittals of PCB analytical data and Tier II data validation for ambient air samples collected from the OPCA air monitors.
- It is tentatively anticipated that consolidation of demolition debris from Buildings 63 and 63X within the Hill 78 OPCA will be scheduled for spring 2009, subject to suitable weather conditions and discussions with EPA.

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

Timing for completion of final closure of the Hill 78 OPCA is dependent on timing of building demolition activities.

**f. Proposed/Approved Work Plan Modifications**

None

**Notes:**

All sampling activities performed by Berkshire Environmental Consultants, Inc. All analytical activities performed by Northeast Analytical, Inc. Only results for detected Aroclors, as well as Total PCBs, are presented.

PDR - Preliminary Data Review

ND - Non Detect (PQL)

PQL - Practical Quantitation Limit

PD - Aroclor 1242 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1242 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

PE - Aroclor 1248 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1248 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

AF - Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

**Qualification Notes:**

<sup>1</sup> PDR was conducted based on the following data quality indicators associated with the tabulated data set above: sampling collection time, sampling calibration check, temperature receipt, associated blanks, laboratory control samples recoveries, and surrogate recoveries.

	West of OPCAs	0.003		10:45	
Notification Level		0.120			
Action Level		0.150			

**Notes:**

Concentrations measured with an EBAM unless noted.

\* Measured with a DR-4000 particulate monitor.

The background monitoring station is located east of Building 9B, between Building 9B and New York Avenue (BK-3).

Predominant wind direction determined using hourly wind direction data from the Pittsfield Municipal Airport Weather Station.

<sup>1</sup> The particulate monitors obtain real-time data. The sampling data were obtained by Berkshire Environmental Consultants, Inc. on the sampling date.

**Notes:**

All sampling activities performed by Berkshire Environmental Consultants, Inc. All analytical activities performed by Northeast Analytical, Inc.  
ND - Non Detect (<0.0003)  
PDR - Preliminary Data Review  
J - Indicates that the associated numerical value is an estimated concentration.

<sup>1</sup> The background monitoring station is located east of Building 9B, between Building 9B and New York Avenue (BK-3). For the period of February 20 - March 21, 2008, the background monitoring station was temporarily relocated to the corner of Harvard Street and Tyler Street Extension (BK-4), due to site activities associated with the East Street Area 2 - North project which were located in close proximity to BK-3.

<sup>2</sup> Sample results qualified as estimate due to the surrogate analysis exhibiting recoveries less than the control limit.

<sup>3</sup> Sampling data that did not match the Aroclor pattern established through analysis of the target Aroclor standard (which consisted of data for Aroclor 1248) were qualified as estimated ("J").

<sup>4</sup> PDR was conducted based on the following data quality indicators associated with the tabulated data set above: sampling collection time, sampling calibration check, temperature receipt, associated blanks, laboratory control samples recoveries, and surrogate recoveries.

<sup>5</sup> This sampling event was conducted as part of the Hill 78 Area - Remainder and Building 73 Demolition projects. The Southeast (SE) and Pittsfield Generating (PGE) locations were not part of this sampling event.

<sup>6</sup> This sampling event was conducted as part of the Hill 78 Area - Remainder project. The SE and PGE locations were not part of this sampling event.

<sup>7</sup> Sampling data that did not match the Aroclor pattern established through analysis of the target Aroclor standard (which consisted of data for Aroclor 1242) were qualified as estimated ("J").

**ITEM 7  
PLANT AREA  
UNKAMET BROOK AREA  
(GECD170)  
FEBRUARY 2009**

**a. Activities Undertaken/Completed**

- Continued flow monitoring activities in Unkamet Brook.\*
- Continued flow modeling for Unkamet Brook based on the flow monitoring data.\*
- Provided e-mail to EPA describing the revised RAA boundary in the southernmost portion of the RAA (February 4, 2009).
- Sent letter to CSX Transportation with the results of the supplemental soil sampling conducted in December 2008 (February 2, 2009).

**b. Sampling/Test Results Received**

- See attached tables and enclosed compact disk containing flow monitoring data from Unkamet Brook.\*
- See updated Graph 7-1 summarizing preliminary flow monitoring data collected from Unkamet Brook through February 3, 2009.\*

**c. Work Plans/Reports/Documents Submitted**

Submitted Conceptual RD/RA Work Plan for Unkamet Brook Area-West (February 12, 2009).\*

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue flow modeling for Unkamet Brook based on the flow monitoring data.\*
- Work on development of Conceptual RD/RA Work Plan for Unkamet Brook Area-Remainder (due to EPA by March 27, 2009).\*
- Prepare and submit a letter to EPA summarizing December 2008 supplemental analytical results collected in the southernmost portion of the property (due to EPA March 19, 2009).

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

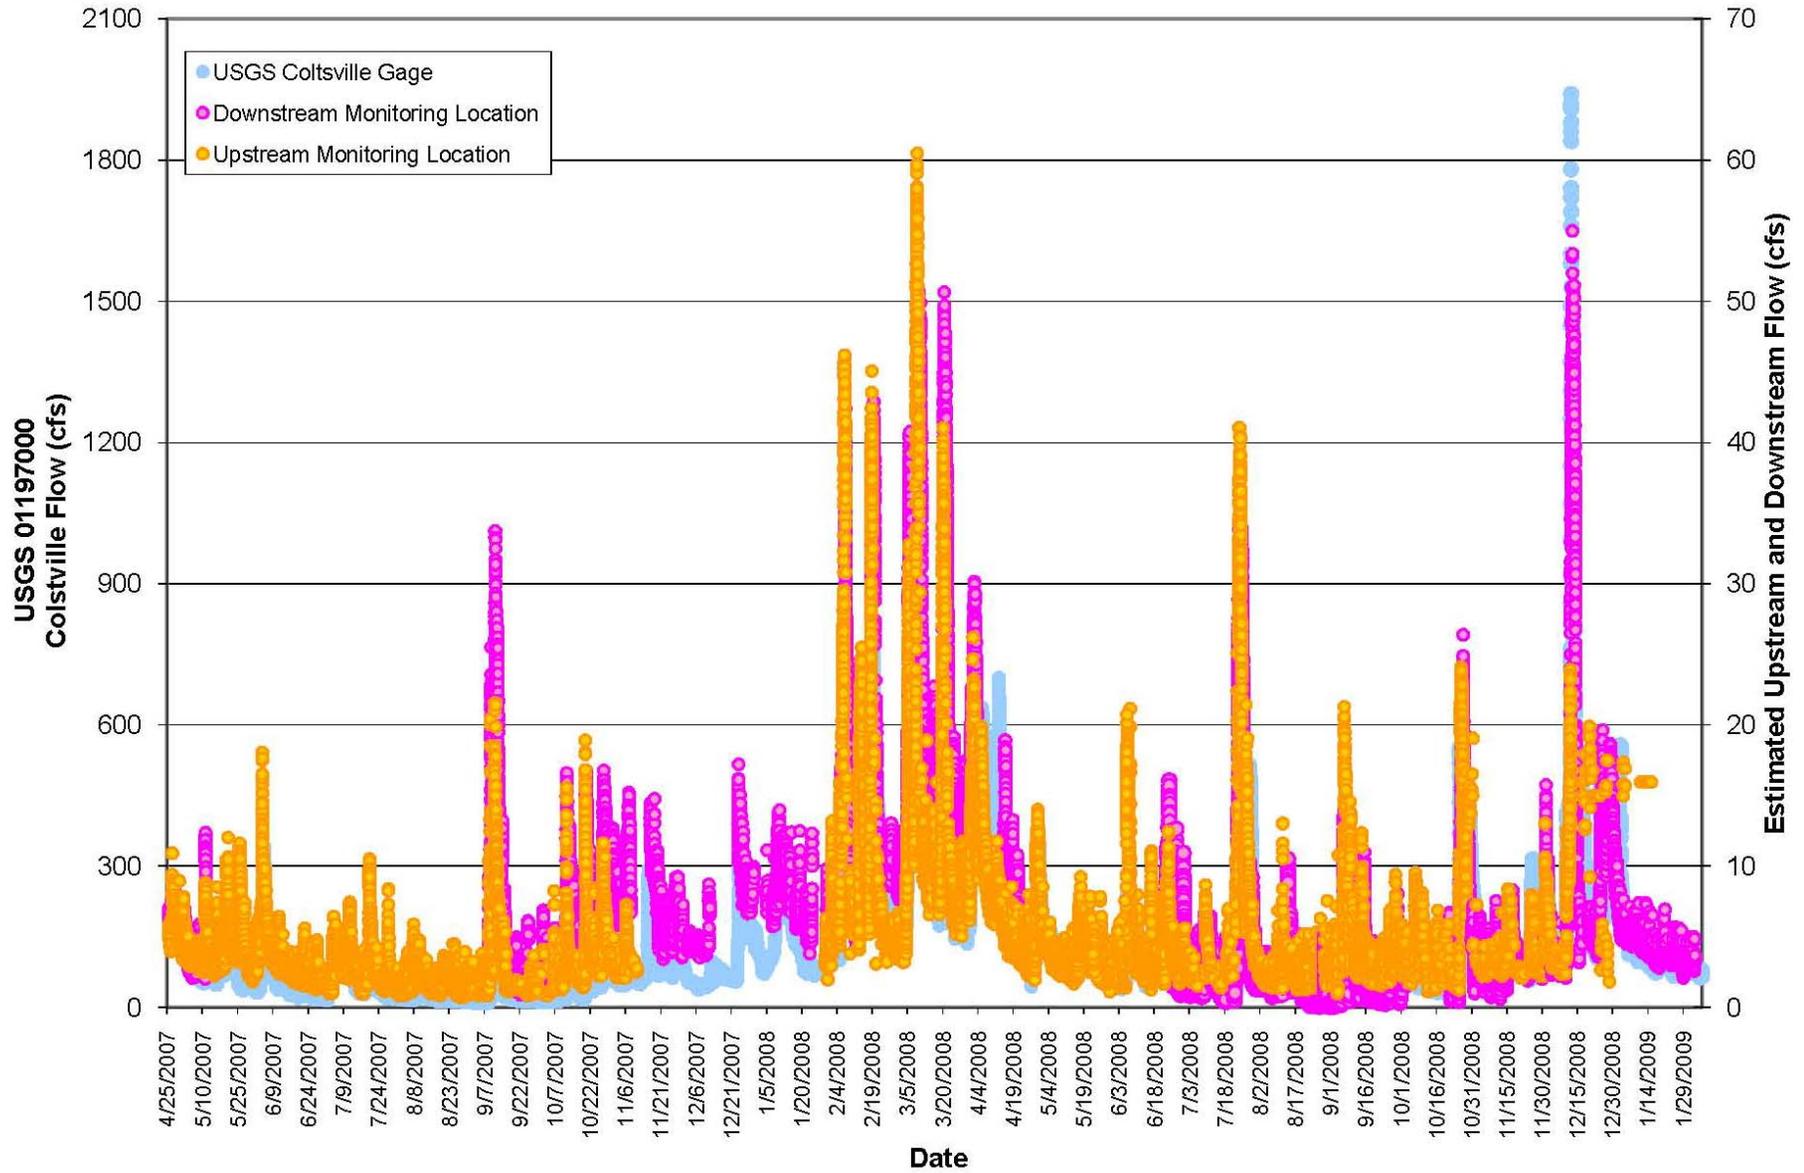

None

**f. Proposed/Approved Work Plan Modifications**

EPA approved the revised RAA boundary in an e-mail to GE dated February 5, 2009.

**ITEM 9  
LYMAN STREET AREA  
(GECD430)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

a. **Activities Undertaken/Completed**

None

b. **Sampling/Test Results Received**

None

c. **Work Plans/Reports/Documents Submitted**

None

d. **Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Finalize and execute ERE for Parcel I9-8-1.
- Work with City of Pittsfield to obtain City's execution of ERE for adjacent City-owned portion of Lyman Street and subordination agreement for ERE for Parcel I9-8-1.

e. **General Progress/Unresolved Issues/Potential Schedule Impacts**

Revision of draft Final Completion Report is awaiting completion of ERE for Parcel I9-8-1 and separate ERE for an adjacent City-owned portion of Lyman Street, and resolution of other issues relating to Final Completion Report.

f. **Proposed/Approved Work Plan Modifications**

None

**ITEM 11  
NEWELL STREET AREA II  
(GEC450)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to or in connection with the Consent Decree.

**a. Activities Undertaken/Completed**

Conducted additional sampling for non-PCB constituents in the portions of Vermont and Ontario Streets covered by the Second Addendum to Final RD/RA Work Plan (Second Addendum), in accordance with EPA's January 20, 2009 conditional approval letter for the Second Addendum, as listed in Table 11-1.

**b. Sampling/Test Results Received**

None

**c. Work Plans/Reports/Documents Submitted**

Submitted executed EREs for GE-owned properties, together with associated documentation (subordination agreements from City of Pittsfield and title commitments), to MDEP for acceptance of the EREs (February 20, 2009).

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

Submit report presenting results of additional sampling in the portions of Vermont and Ontario Streets covered by the Second Addendum and evaluating the need to expand the soil removal proposed in the Second Addendum.

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

Revision of Final Completion Report is awaiting completion of the additional remediation in the area covered by the Second Addendum, as well as recordation/registration of EREs for GE-owned properties and receipt of ERE for City-owned property.

**f. Proposed/Approved Work Plan Modifications**

None

HOUSATONIC RIVER AREA  
1½ MILE REACH  
(GEC820)  
FEBRUARY 2009**

(Note: This item is limited to activities conducted by GE and does not include work performed by EPA.)

**a. Activities Undertaken/Completed**

- On GE's behalf, ARCADIS performed one round of water column monitoring at 10 locations along the Housatonic River between Coltsville, MA and Great Barrington, MA, on February 26, 2009. Two of these locations are situated in the 1½ Mile Reach: Lyman Street Bridge (Location 4) and Pomeroy Avenue Bridge (Location 6A). A composite grab sample was collected at each location and submitted to Northeast Analytical for analysis of PCBs (total), total suspended solids (TSS), POC, and chlorophyll-a, as identified in Table 14-1. The sample collected at Pomeroy Avenue Bridge was also analyzed for volatile suspended solids (VSS). (The other eight locations are discussed under Items 15 and 20 below.)
- GE obtained the property owner's execution of an ERE for Parcel I7-21-1 and subordination agreements for that ERE.

**b. Sampling/Test Results Received**

See attached tables.

**c. Work Plans/Reports/Documents Submitted**

None

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue Housatonic River water column monitoring.
- Send EPA and MDEP the final ERE and associated documents for Parcel I7-21-1 for acceptance of the ERE by MDEP.

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

No issues

**f. Proposed/Approved Work Plan Modifications**

None

Notes:

1. Samples were collected by ARCADIS, and submitted to Northeast Analytical, Inc. for analysis of PCBs (unfiltered), total suspended solids (TSS), particulate organic carbon (POC), chlorophyll (a) and volatile suspended solids (VSS).
2. Sampling methods involved the collection of composite grab samples at each location, representative of three stations (25, 50, and 75 percent of the total river width at each location) at 50 percent of the total river depth at each station.
3. NA - Not Analyzed.
4. ND - Analyte was not detected. The number in parenthesis is the associated detection limit.

**ITEM 15  
HOUSATONIC RIVER AREA  
REST OF THE RIVER  
(GECD850)  
FEBRUARY 2009**

**a. Activities Undertaken/Completed**

- On GE's behalf, ARCADIS performed one round of water column monitoring at 10 locations along the Housatonic River between Coltsville and Great Barrington, MA, on February 26, 2009. Two locations are situated in the 1½ Mile Reach of the Housatonic River and were discussed in Item 14. One location is at the outlet of Silver Lake and is discussed in Item 20 below. Of the remaining seven locations, two are located upstream of the 1½ Mile Reach: Hubbard Avenue Bridge (Location 1) and Newell Street Bridge (Location 2). The five remaining locations are situated in the Rest of the River: Holmes Road Bridge (Location 7); New Lenox Road Bridge (Location 9); Woods Pond Headwaters (Location 10); Schweitzer Bridge (Location 12); and Division Street Bridge (Location 13). Sampling activities were performed at these locations on February 26, 2009 from downstream to upstream. Composite grab samples were collected at each location sampled and submitted to Northeast Analytical for analysis of PCBs (total), TSS, POC, and chlorophyll-a, as identified in Table 15-1.
- GE continued work on responding to EPA's comments on the CMS Report.\*

**b. Sampling/Test Results**

See attached tables.

**c. Work Plans/Reports/Documents Submitted**

Sent letter to EPA responding to EPA's letter to GE of February 5, 2009, relating to the CMS process, submissions, and evaluations (February 25, 2009).\*

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue Housatonic River monthly water column monitoring.
- Complete and submit response to EPA's interim comments, dated September 9, 2008, on the CMS Report (by March 9, 2009).\*
- Meet with EPA and representatives of the States of Massachusetts and Connecticut to discuss the ecologically sensitive alternative being developed as an additional remedial alternative to those discussed in the CMS Report.\*

OTHER AREAS  
SILVER LAKE AREA  
(GECD600)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

**a. Activities Undertaken/Completed**

- Collected one round of monthly water column samples from the Silver Lake Outfall (February 26, 2009) and obtained gauge reading for flow calculation (see Item 21.a).
- Discussed with EPA issues pertaining to GE's Conceptual RD/RA Work Plan for Sediments and its Revised Conceptual RD/RA Work Plan for Soils Adjacent to Silver Lake.
- Discussed with EPA and the City issues relating to the ownership of the bank area where a walking path and picnic tables are contemplated to be placed.

**b. Sampling/Test Results Received**

See attached tables.

**c. Work Plans/Reports/Documents Submitted**

None

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Send draft EREs for properties where owners have agreed to EREs to EPA and MDEP for review.
- Prepare and submit final Revised Conceptual RD/RA Work Plan for Sediments.
- Continue discussions of issues relating to the ownership of the bank area where a walking path and picnic tables are contemplated to be placed. Upon resolution of those issues, submit document addressing the natural resource restoration/enhancement activities on the banks of the lake.

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

Issues relating to the ownership of the bank area where a walking path and picnic tables are contemplated to be placed are under discussion.

**f. Proposed/Approved Work Plan Modifications**

None

Notes:

1. Sample was collected by ARCADIS, and submitted to Northeast Analytical, Inc. for analysis of unfiltered PCBs and total suspended solids (TSS).
2. Sampling methods involved the collection of single grab 50 percent of the total river width, and 50 percent of the total river depth.
3. ND - Analyte was not detected. The number in parenthesis is the associated detection limit.

Data Qualifiers:

PB - Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCBs present in a sample that has undergone environmental alteration.

**ITEM 21  
GROUNDWATER MANAGEMENT AREAS  
PLANT SITE 1 (GMA 1)  
(GEC310)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

**a. Activities Undertaken/Completed**

**General:**

- Conducted routine groundwater elevation and NAPL monitoring activities.
- Temporarily relocated a portion of the Lyman Street Area groundwater recovery line that traverses through East Street Area 2-South, as necessary to accommodate demolition of Buildings 63 and 63X. The groundwater recovery line will be permanently relocated following completion of remediation activities at East Street Area 2-South.
- Conducted waste characterization sampling of purge water from development of wells A7-R, ES2-15R, and ES2-17R, as noted in Table 21-1.

**East Street Area 1-North and South:**

- Continued automated groundwater and NAPL pumping at North Side and South Side Caissons. No LNAPL was recovered from the North Side or South Side Caissons in February.
- Continued routine well monitoring and manual NAPL removal activities. Approximately 0.006 liter (0.002 gallon) of LNAPL was removed from this area during February.

**East Street Area 2-South:**

- Continued automated groundwater and LNAPL removal activities. A total of approximately 5,118,679 gallons of groundwater was recovered from pumping systems 64R, 64S, 64V, 64X, RW-1(S), RW-1(X), and RW-2(X). In addition, approximately 767 gallons of LNAPL were removed from pumping systems 64R, 64V, GMA1-17W, RW-1(S), RW-1(X), RW-4, 64X, and 64S Caisson.
- Installed upgraded depression pump at well RW-4 to lower drawdown level from 19 feet to 20 feet to increase zone of influence of well.
- Continued automated DNAPL removal activities. Approximately 19 gallons of DNAPL were removed from pumping system RW-3(X) during February.

**East Street Area 2-South: (cont'd)**

- Continued routine well monitoring and manual NAPL removal activities. Approximately 20,232 liters (5,338 gallons) of LNAPL were removed from wells in this area during February. Approximately 1,913 liters (0,505 gallon) of DNAPL were removed from wells in this area during February.
- Treated/discharged 4,526,748 gallons of water through 64G Groundwater Treatment Facility.

**East Street Area 2-North:**

- Continued well monitoring and NAPL removal activities. No LNAPL was recovered from this area during February.

**20s, 30s, and 40s Complexes:**

- Continued well monitoring and NAPL removal activities. No LNAPL was recovered from this area during February.

**Lyman Street Area:**

- Continued automated groundwater and NAPL removal activities. A total of approximately 157,613 gallons of groundwater was recovered from pumping systems RW-1R, RW-2, and RW-3. No LNAPL was removed from the automated recovery systems during February.
- Continued routine well monitoring and NAPL removal activities. No LNAPL was removed from wells in this area during February. Approximately 0.870 liter (0.230 gallon) of DNAPL was removed from wells in this area during February.

**Newell Street Area II:**

- Continued automated DNAPL removal activities. Approximately 16 gallons of DNAPL were removed by System 2 in February.
- Continued routine well monitoring and NAPL removal activities. No LNAPL was removed from wells in this area during February. Approximately 1,476 liters (0,389 gallon) of DNAPL were recovered from wells in this area during February.

Submitted Fall 2008 NAPL Monitoring Interim Report (February 27, 2009).

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Remove sediment from DNAPL monitoring wells where greater than 1 foot variance from listed total depth was recorded in fall 2008.
- Inspect condition of selected wells as noted in Fall 2008 NAPL Monitoring Report.
- Continue routine groundwater and NAPL monitoring/recovery activities.
- Conduct spring 2009 NAPL bailing round.
- Conduct spring 2009 groundwater elevation and NAPL monitoring event (see Item 21.f below).
- Conduct spring 2009 interim groundwater sampling event (see Item 21.f below)

**ITEM 21**  
**(cont'd)**  
**GROUNDWATER MANAGEMENT AREAS**  
**PLANT SITE 1 (GMA 1)**  
**(GEC310)**  
**FEBRUARY 2009**

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

The replacement for monitoring well O-R in the 20s Complex was not installed following decommissioning of that well in December 2006, as the proposed location was not accessible to the drill rig. No suitable alternate locations could be identified where a well could be installed at this time, due to future changes in the ground surface that are proposed for this area. Following discussions among representatives of GE, EPA, and PEDDA, it was decided that the well would be installed following construction/re-grading activities in this area. At that time, GE will also extend or cut certain existing wells to fit the final grade, as discussed in GE's May 22, 2006 proposal.

**f. Proposed/Approved Work Plan Modifications**

- On February 6, 2009, MDEP and EPA were verbally notified of an observed increase in LNAPL thickness at replacement well ES2-15R, as compared to historical monitoring data in original well ES2-15. In accordance with GE's NAPL monitoring protocol for GMA 1. GE initiated weekly monitoring and LNAPL removal at this well for a period of one month. As shown in Table 21-7, the LNAPL thickness at that well has been reduced from 3.60 feet on February 6, 2009 to 2.65 feet on February 24, 2009. Since this approach appears to be successfully reducing the amount of LNAPL in the well, GE plans to extend its weekly monitoring and removal activities at this well beyond the required time period.
- Minor modifications to the interim groundwater quality monitoring program were proposed in the Fall 2008 Groundwater Quality Monitoring Interim Report (January 30, 2009) and will be implemented following EPA approval.
- Modifications to the NAPL Monitoring Program that were proposed in the Fall 2008 NAPL Monitoring Report (February 27, 2009) will also be implemented following EPA approval.

Total PCBs		580000
<b>Semivolatile Organics</b>		
1,2,4,5-Tetrachlorobenzene		20000 J
1,2,4-Trichlorobenzene		250000
1,4-Dichlorobenzene		13000 J
Pentachlorobenzene		32000 J
Phenol		55000
<b>Inorganics</b>		
Chromium		0.144 B
Mercury		0.00322 B

Notes:

1. Sample was collected by ARCADISand submitted to SGS Environmental Services, Inc. for analysis of PCBs, volatiles, semivolatiles and metals.
2. Only detected constituents are summarized.

Data Qualifiers:

Organics (volatiles, PCBs, semivolatiles)

J - Indicates an estimated value less than the practical quantitation limit (PQL).

Inorganics

B - Indicates an estimated value between the instrument detection limit (IDL) and PQL.

After treatment, the majority of the water processed at GE's Building 64G groundwater treatment facility is discharged to the Housatonic River through NPDES permitted Outfall 005. However, as part of GE's overall efforts to contain NAPL within the site and to optimize NAPL recovery operations, a portion of the treated water discharged from the 64G facility is routed to GE's on-site recharge pond located in East Street Area 2-South.

Well Name	Measuring Point Elev. (feet)	Date	Depth to Water (ft BMP)	Depth to LNAPL (ft BMP)	LNAPL Thickness (feet)	Depth to DNAPL (ft BMP)	Total Depth (ft BMP)	DNAPL Thickness (feet)	Corrected Water Elev. (feet)
<b>Housatonic River</b>									
SG-HR-1	990.73	2/4/2009	19.20						971.53
SG-HR-1	990.73	2/11/2009	19.20						971.53
SG-HR-1	990.73	2/18/2009	19.42						971.31
SG-HR-1	990.73	2/25/2009	19.50						971.23

Notes:

1. ft BMP - feet Below Measuring Point.
2. --- indicates LNAPL or DNAPL was not present in a measurable quantity.
3. NA indicates information not available.
4. NM indicates information not measured.
5. P indicates that LNAPL is present at a thickness that is < 0.01 feet, the corresponding thickness is recorded as such.
6. Well HR-G2-RW-1 is constructed at an angle of 41.67 degrees from vertical. Depth to water data reflect measurements collected along the angled well casing. Groundwater elevations are corrected to account for the angle of the well casing.
7. A survey reference point (SG-HR-1) was established on the Newell Street Bridge. The "Depth to Water" value(s) provided in the above table refer to the vertical distance from the surveyed reference point to the water surface.
8. \* - A weighted bailer has been installed at this location to remove accumulations of DNAPL. The DNAPL thickness reported is that measured within the bailer upon the initial retrieval.

**(GEC320)**  
**FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

**a. Activities Undertaken/Completed**

Continued routine river elevation monitoring.

**b. Sampling/Test Results Received**

See attached table.

**c. Work Plans/Reports/Documents Submitted**

Submitted Fall 2008 Monitoring Event Evaluation Report (February 6, 2009).

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue routine river elevation monitoring.
- Conduct spring 2009 groundwater elevation monitoring event.
- Conduct spring 2009 long-term groundwater sampling event (see Item 22.f below).

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

None

**f. Proposed/Approved Work Plan Modifications**

The spring 2009 sampling schedule is contingent on EPA approval of the Fall 2008 Monitoring Event Evaluation Report.

GROUNDWATER MANAGEMENT AREAS  
PLANT SITE 2 (GMA 3)  
(GEC330)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

**a. Activities Undertaken/Completed**

- Conducted routine groundwater elevation and NAPL monitoring activities. Approximately 1.8 gallons of LNAPL were removed by the automatic skimmer located in well 51-21, and approximately 0.3 gallons of LNAPL were removed by the automatic skimmer located in well GMA3-17 (see Table 23-2). An additional 2.002 liters (0.528 gallon) of LNAPL were manually removed from the wells in this area during February (see Table 23-3).
- Conducted waste characterization of purge water from well development activities in fall 2008, as noted in Table 23-1.

**b. Sampling/Test Results Received**

See attached tables.

**c. Work Plans/Reports/Documents Submitted**

Submitted Fall 2008 Groundwater Quality and NAPL Monitoring Interim Report, including report on the fall 2008 soil gas and indoor air sampling at Buildings 51 and 59 (February 27, 2009).

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue routine groundwater and NAPL monitoring/recovery activities.
- Conduct spring 2009 bailing round.
- Conduct spring 2009 groundwater elevation and NAPL monitoring event.
- Conduct spring 2009 interim groundwater sampling event (see Item 23.f below).

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

No issues

**f. Proposed/Approved Work Plan Modifications**

The spring 2009 sampling schedule is contingent on EPA approval of the Fall 2008 Groundwater Quality and NAPL Monitoring Interim Report.

**Notes:**

1. ft BMP - feet Below Measuring Point.
2. --- indicates LNAPL or DNAPL was not present in a measurable quantity.
3. NA indicates information not available
4. NM indicates information not measured
5. P indicates that LNAPL is present at a thickness that is < 0.01 feet, the corresponding thickness is recorded as such.

**ITEM 24  
GROUNDWATER MANAGEMENT AREAS  
PLANT SITE 3 (GMA 4)  
(GEC340)  
FEBRUARY 2009**

\* All activities described below for this item were conducted pursuant to the Consent Decree.

**a. Activities Undertaken/Completed**

Conducted routine groundwater elevation monitoring activities.

**b. Sampling/Test Results Received**

See attached table.

**c. Work Plans/Reports/Documents Submitted**

Submitted Fall 2008 Groundwater Quality Monitoring Interim Report (February 27, 2009).

**d. Upcoming Scheduled and Anticipated Activities (next six weeks)**

- Continue routine monthly monitoring at well GMA4-3.
- Conduct spring 2009 interim groundwater sampling even (see Item 24.f below).
- Conduct spring 2009 groundwater elevation monitoring event.

**e. General Progress/Unresolved Issues/Potential Schedule Impacts**

None

**f. Proposed/Approved Work Plan Modifications**

Modifications to the Interim Monitoring Program were proposed in the Fall 2008 Groundwater Quality Monitoring Interim Report (February 27, 2009), and will be implemented following EPA approval.

Notes:

1. Samples were collected by General Electric Company, and were submitted to Accutest Laboratories and Columbia Analytical Services, Inc. for analysis of PCBs, TSS, BOD, oil & grease, and copper, lead and zinc.  
NA - Not Analyzed.
2. ND - Analyte was not detected. The number in parentheses is the associated detection limit.
3. With the exception of inorganics and conventional parameters, only those constituents detected in one or more samples are summarized.
4. -- Indicates that all constituents for the parameter group were not detected.
- 5.

Data Qualifiers:

Inorganics

B - Indicates an estimated value between the instrument detection limit (IDL) and PQL.

NPDES Biomonitoring Report  
February 2009

March 9, 2009

Mr. Jeffrey Nicholson  
GE Corporate Environmental Programs  
159 Plastics Avenue  
Pittsfield, MA 01201

Re: NPDES Biomonitoring Report for February 2009  
Submission #: R0900929

Dear Mr. Nicholson:

Enclosed is our report on the Acute Whole Effluent Toxicity testing conducted in February 2009. The Outfall Composite samples were collected on 2/19/09 at 10:00 am. The Housatonic River samples were collected on 2/19/09 at 9:00 am. The Outfall Composite and Housatonic River samples were analyzed at Columbia Analytical Services for total cyanide, ammonia, total organic carbon, total phosphorus, chloride, total solids, total suspended solids, total residual chlorine, and total metals. Dissolved metals were analyzed for only on the Outfall Composite samples. Results are presented in Appendix 2. The Outfall Composite and Housatonic River samples were sent directly by General Electric to Aquatec Biological Services for the acute aquatic toxicity testing including the analysis of alkalinity, hardness, specific conductance, and pH. Results are presented in Appendix 1.

Should you have any questions please contact me at (585)288-5380 x131.

Thank you for allowing us to provide this service.

Sincerely,

COLUMBIA ANALYTICAL SERVICES

Deb Patton  
Project Manager

2. Laboratory Reports from Columbia Analytical Services, Inc. and O'Brien & Gere, Inc.
3. Chain of Custody Forms

## I. Summary

On February 19, 2009 sampling of wastewater discharges from the General Electric Company facility in Pittsfield MA was conducted in accordance with the wet weather toxicity testing requirement of the GE NPDES Permit MA0003891. Composite samples were collected from GE outfalls 001, 005-64T, 005-64G and 09B over a 24-hour period. These composite samples were combined in a flow-proportioned manner to generate a single wastewater sample that was shipped to Aquatec Biological Sciences in Williston, Vermont. A grab sample of Housatonic River water, to be used as dilution water in the toxicity test, was collected upstream of the GE discharges on February 19, 2009 and shipped to AquaTec along with the wastewater composite. AquaTec dechlorinated the composite sample prior to the acute toxicity test following the toxicity reduction procedures summarized in a letter dated November 11, 1993 to EPA Region I from JG Ruebesam of General Electric Company. The composite wastewater sample and the dilution water sample were tested for chemical constituents by O'Brien & Gere, Inc. and Columbia Analytical Services. The analytical results are summarized in Table I and the detailed laboratory test data are include as Appendices to this report. As a result of land transfer documents executed on April 27, 2005 and recorded in the Berkshire County Registry of Deeds on May 2, 2005, Outfalls 001 and 004 were transferred to the Pittsfield Economic Development Authority (PEDA). Outfalls 001 and 004 DMRs will no longer be submitted under the GE NPDES Permit No. MA0003891. However, GE's NPDES Permit requires that the metal and toxicity composites to be made by compositing samples from the following outfalls: 001, 004, 005, 007, and 009. These two composites will continue to include an aliquot of water from outfall 001 and outfall 004, and will be reported on GE's DMR until further actions by the Agencies.

The results from Aquatec Biological Sciences for the acute toxicity test on the wastewater discharge sample indicated a No Observed Acute Effect Level (NOAEL) of 100%.

## II. Review of Toxicity Test Results

The wastewater discharge sample collected on February 19, 2009 was tested for 48-hour acute toxicity using *Daphnia pulex* organisms. The sample did not require dechlorination with sodium thiosulfate ( $\text{Na}_2\text{S}_2\text{O}_3$ ) prior to toxicity testing. Aquatec Biological Sciences reported the results of this toxicity testing as follows:

Effluent toxicity as NOAEL =	100%
Effluent toxicity as $\text{LC}_{50}$ =	>100%

No limit is established for wet weather NOAEL in the GE NPDES permit.

The following table summarizes the results of the control sample analyses performed by AquaTec during the acute toxicity bioassay:

<u>Control Analysis</u>	<u>Result</u>
Survival in 100% dilution water	100%
Survival in laboratory water	96%
Survival in laboratory water with 100 mg/L sodium thiosulfate	100%
$\text{LC}_{50}$ for <i>Daphnia pulex</i> in sodium chloride reference toxicant solution	4.001g NaCl/L on February 20, 2009

The *Daphnia* survival rates in control solutions of upstream dilution water, laboratory water and reference toxicant solution were within acceptable limits, indicating that the results of the toxicity test are valid.

## III. Review of Wastewater Sampling Procedures

Composite samples of the individual NPDES wastewater discharges were collected over a 24-hour period. These samples were composited in a flow-weighted manner to generate a single combined discharge sample for toxicity testing and chemical analysis.

The 24-hour composite samples from the individual discharges were collected as follows:

Each automatic sampler (at outfall 001, 64T, 64G, and 09B) was programmed to collect approximately 7 liters of wastewater into a 10-liter glass container in a time-proportioned manner over a 24-hour period. Outfalls 004, 007, and 09A have been plugged and no longer flow.

All sample containers were packed in ice or refrigerated to keep the wastewater samples cold during the 24-hour collection period.

Flow meter readings were taken at the beginning and end of the 24-hour collection period to determine the total 24-hour flow for each wastewater discharge.

At the end of the 24-hour collection period, the discharge samples were taken to Building 64G where OB&G personnel composited these samples, in a flow weighted manner, to generate a single combined sample for the acute toxicity test and the chemical analyses, as follows:

The proportions of each individual discharge sample needed to produce a single combined sample were calculated from the flow measurements. The calculated sample volumes were then transferred from their original collection containers to a

2.5 or 5 gallon mixing container. The combined discharge sample was then split into various containers for toxicity testing and chemical analyses. These containers were shipped by vendor courier to AquaTec for toxicity testing and by FedEx (overnight) to Columbia Analytical Services for chemical analyses. All samples were chilled with ice packs during shipment.

A grab sample of Housatonic River water was collected on the second day of sampling at the Lyman Road Bridge in Hinsdale, MA, upstream of the GE site. This sample was split for chemical analysis and toxicity testing in a similar manner as the combined effluent sample (see above).

Details of the times and dates of sample collection as well as the names of the individuals collecting and transporting the samples are provided on the chain of custody forms in Appendix 3 of this report.

#### IV. Review of Individual NPDES Discharges

The following is a brief description of each of the seven outfalls that are monitored for acute and chronic toxicity in accordance with NPDES Permit MA0003891 issued to the General Electric Company, Pittsfield, MA.

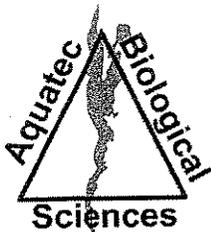

1. Outfall 001 is permitted to discharge storm water runoff from the oil/water separator in Building 31W to Silver Lake.
2. Outfall 004 is permitted to discharge storm water runoff to Silver Lake. (**Outfall plugged**)
3. Outfall 005 is permitted to discharge contact cooling water, non-contact cooling water, treated process water and storm water runoff from the Wastewater Treatment Plant in Building 64T, and treated groundwater from the Groundwater Treatment Plant in Building 64G to the Housatonic River. Monitoring samples are collected separately from the effluents of 64G and 64T. Both samples are included in the flow composite sample used for toxicity testing.
4. Outfall 007 is permitted to discharge stormwater runoff to the Housatonic River. (**Outfall plugged**)
5. Outfall 09A is permitted to discharge non-contact cooling water and stormwater runoff to Unkamet Brook. (**Outfall plugged**)
6. Outfall 09B is permitted to discharge non-contact cooling water, treated process water and stormwater runoff from the oil/water separator in Building 119W to Unkamet Brook.

Ms. Deb Patton, Project Chemist  
Columbia Analytical Services,  
1 Mustard Street – Suite 250  
Rochester, NY 14609

Dear Ms. Patton:

Attached please find electronic (PDF) copy of our report of the results for whole effluent toxicity testing of samples received from GE Pittsfield, Massachusetts on February 20, 2009.

According to the Chain-of-Custody documentation the samples for Whole Effluent Toxicity (WET) Testing were collected on February 19, 2009. The samples were transported to Aquatec Biological Sciences, Inc. by courier and delivered on February 20, 2009. The effluent sample (Sample 38579) was logged in for the acute 48-hour static toxicity test with *Daphnia pulex*. The receiving water sample (Sample 38580) was logged in for dilution water. A sub-sample of each sample was checked for residual chlorine and for alkalinity and hardness measurements at Aquatec Biological Sciences, Inc. The toxicity test was started on February 20, 2009, within the specified holding time.

At the conclusion of the toxicity test on February 22, 2009, a final count of surviving organisms was completed. The average survival was 92-100% in all effluent concentrations and the controls. Acute toxicity was not detected, and the 48-hour LC50 was reported as >100% effluent (Section 4.1 of the report).

If you have any questions regarding the report, please call Dr. Philip C. Downey or me.

Sincerely,

John Williams  
Manager, Environmental Toxicology

## 1.0 Introduction

### 1.1 Background

In 1972, amendments were made to the Clean Water Act (CWA) prohibiting the discharge of any pollutant from a point source to waters of the United States, unless the discharge is authorized by a National Pollutant Discharge Elimination System (NPDES) permit. Since the passing of the 1972 amendments to the CWA, significant progress has been made in cleaning up industrial wastewater and municipal sewage point source discharges. EPA defines point sources as discrete discharges via pipes or man-made ditches.

In 1984, the U.S. Environmental Protection Agency (EPA) released a national policy statement and a supporting document that recommended, where appropriate, effluent permit limits should be based on effluent toxicity as measured in aquatic toxicity tests. Generally, permits require that no toxic discharge occur in toxic amounts. The routine use of dilution-series toxicity tests and/or biologically-based criteria (i.e., invertebrate and vertebrate community studies) have become increasingly utilized to calculate or estimate the potential toxicity of a discharge.

EPA has the authority to delegate primary responsibility for the implementation, permitting, and enforcement of NPDES regulations to appropriate State regulatory agencies. Even when EPA delegates this authority to the states, EPA still maintains oversight responsibility.

### 1.2 Objective of the General Electric Study

The objective of this study was to measure the acute toxicity of the composite wastewater discharged by the General Electric facility located in Pittsfield, Massachusetts to the Housatonic River. The water flea, *Daphnia pulex*, is exposed to effluent and dilutions of effluent under static conditions. *Daphnia pulex* is routinely used by regulatory agencies and by contract laboratories for toxicity testing and EPA has published guidance documents for the performance of this test (U.S. EPA, 2002).

A toxicity test was conducted from February 20-22, 2009 at Aquatec Biological Sciences, Inc. (Aquatec) located in Williston Vermont. Aquatec Biological Sciences, Inc. holds NELAC accreditation for the requested whole effluent toxicity test. All original raw data and the final report produced for this study are stored in Aquatec's archives in Williston, Vermont.

## 2.0 Materials and Methods

### 2.1 Protocol

Procedures used in this acute toxicity test followed those described in the Aquatec Standard Operating Procedure (SOP) TOX2-001, Daphnid Acute R5, January 4, 2006. This SOP generally follows the standard methodology presented in U.S. EPA. 2002 (EPA-821-R-02-012). *Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters to Freshwater and Marine*

*Organisms*, 5<sup>th</sup> Ed., January 2002, Method 2021.0 (as summarized in Appendix 2 of this report). A copy of the SOP is located in Appendix 6 (Controlled document, please do not copy or distribute.)

Additional SOPs used in this study are outlined below:

Title	SOP Number	Revision Date
Sample Acceptance	TOX1-017	Rev. 4, February, 2004
Hardness – total titrimetric method	TOX1-011	Rev. 3, January 2003
Alkalinity – total titrimetric method	TOX1-010	Rev. 6, January 2004
Thermo-Orion 145 A+ Conductivity Meter	TOX1-016	Rev. 1, January 2004
Dissolved oxygen	TOX1-006	Rev. 7, January 2004
pH measurement	TOX1-007	Rev. 2, January 2004
Salinity: refraction method	TOX1-008	Rev. 3, January, 2003

## 2.2 Effluent and Receiving Water Samples

The effluent sample (Outfall Composite A9664C) was collected by GE personnel on February 19, 2009. The receiving water sample (Housatonic River A9663R) was a grab collected from the Housatonic River on February 19, 2009. Samples were delivered to Aquatec on February 20, 2009. Upon receipt at Aquatec, the temperature of the temperature blank contained within the cooler was within the range of 0-4°C. The effluent and receiving water were prepared for testing and characterized (Table 1). The receiving water was the dilution water for preparing effluent concentrations and was also the reference control for statistical comparisons.

## 2.3 Control water

Laboratory control water for the toxicity test was a 1:1 mixture of laboratory reconstituted moderately hard water and 60-micron filtered river water collected from the Lamoille River, Vermont. This water was characterized for the following parameters: pH (7.0); dissolved oxygen (8.4 mg/L); conductivity (225 uS/cm).

## 2.4 Test Organism

Daphnids (*Daphnia pulex*), less than 24-hours old were obtained from Aquatec laboratory cultures. The culture system consisted of several 1-liter glass beakers containing approximately 1-liter of culture medium and up to approximately 100 daphnids. The culture water was laboratory reconstituted moderately hard water. Prior to use, the culture water was characterized:

Parameter	Result
Total hardness (mg/L)	Within range of 80-110 mg/L
Alkalinity (mg/L as CaCO <sub>3</sub> )	Within range of 60-70 mg/L
pH	Nominal 7.4 – 8.0

The culture area was maintained at a nominal temperature of 20°C (range 19 – 21 °C) with a regulated photoperiod of 16 hours light and 8 hours of darkness.

Daphnid cultures were fed a combination of green algae (*Selenastrum capricornutum*) and YCT obtained from Aquatic BioSystems of Fort Collins, Colorado. The cultures were fed a ration of *Selenastrum* and YCT daily Monday through Friday. Daphnids were transferred to new culture medium weekly.

Approximately 24 hours before toxicity test initiation, all daphnid neonates were removed from the culture beakers. Offspring produced within 24 hours were used for toxicity testing.

## 2.5 Test Procedures

Prior to initiating the toxicity test, a sub-sample of effluent and receiving water was decanted for subsequent alkalinity and hardness determination. A sub-sample was also checked for presence of chlorine by a titration method (See Section 2.6) to determine whether de-chlorination of effluent was required. Chlorine was not detected by this method, therefore de-chlorination of the effluent was not performed. The sample was then aerated and warmed to test temperature.

The toxicity test was conducted at effluent concentrations of 100%, 75%, 50%, 35%, 15%, and 5% effluent. Test concentrations were prepared by diluting the appropriate volume of effluent with dilution water to a total volume of 400 mL. Test solutions were then decanted to five replicate 30-mL cups per concentration, each containing approximately 20 mL of test solution. Three sets of control replicates were also included in the test array, set up as the effluent replicates. The controls included: Housatonic River water (dilution control) and a laboratory control (a mix of moderately hard water and Lamoille River, VT water).

Prior to testing, daphnids less than 24-hours old were collected from the cultures, pooled in Carolina bowl, and fed. The test was initiated when the daphnid neonates were transferred to the replicate test cups, five daphnids per cup. The toxicity test cups were incubated to maintain temperature in the range of 19°C to 21 °C. The lighting cycle was 16 hours light and eight hours dark and a luminance of approximately 80 ft-c.

## **2.6 Test Monitoring**

The number of surviving daphnids was observed at approximately 24-hour intervals during the test, with the final count of surviving daphnids at approximately 48 hours. Temperature was measured daily in one replicate of each test treatment. The parameters of pH, dissolved oxygen, and conductivity were measured at the beginning and the end of the test.

Total hardness was measured by the EDTA titrimetric method and total alkalinity was measured by potentiometric titration to an endpoint of 4.5. The check for residual chlorine was performed with an acidified sample to which potassium iodide and starch indicator added. If chlorine was detected, the color was titrated away with 0.02 N sodium thiosulfate to determine the equivalent volume of 0.2 N sodium thiosulfate to add to effluent (if needed).

Dissolved oxygen was measured with a YSI Model 58 dissolved oxygen meter. A Beckman Phi 40 was used to measure pH. A Thermo-Orion Model 145 conductivity meter was used to measure conductivity. Salinity was measured with an Atago salinity refractometer.

## **2.7 Reference Toxicant Test**

A 48-hour standard reference toxicant (SRT) test was conducted concurrently with the effluent toxicity test. The SRT test was conducted as a quality control procedure to establish the health and sensitivity of the test organisms. The SRT included four concentrations of reagent grade sodium chloride (NaCl) with nominal concentrations of 0.75, 1.5, 3.0, 6.0, and 12 g NaCl/L. Four test replicates, each containing five daphnid neonates were test at each concentration and the laboratory control.

# **3.0 Statistics**

## **3.1 Statistical protocol**

The concentration-response relationships observed were characterized by the median lethal concentration (LC50), which was the calculated concentration lethal to 50 percent of the test organisms. If no concentrations resulted in 50% mortality, the LC50 was reported as greater than the highest concentration effluent (in this case >100% effluent), by direct observation. If greater than 50 percent mortality was observed in any effluent treatment, then a computer program, Comprehensive Environmental Toxicity Information System (CETIS) was used to calculate the LC50 value, following the U.S. EPA statistical flowchart (Appendix 3).

The Acute-No-Observable-Effect Concentration (A-NOEC) was determined statistically using multiple comparison tests (CETIS), with the receiving water control as the reference.

## 4.0 Results

### 4.1 Effluent Toxicity Test

Results of effluent and receiving water characterizations performed at Aquatec as part of the toxicity test are presented in Table 1. Water quality parameters measured during the toxicity test are presented in Table 2. Measured temperatures during the test were within the range of 19°C to 21°C. The percent mortality data for the toxicity test are presented in Table 3. Acute toxicity was not demonstrated during this evaluation. The 48-hour LC50 value was >100% effluent. The A-NOEC was 100% effluent.

### 4.2 Reference Toxicant Test

The most recent standard reference toxicant (SRT) test was performed in February 2009. The resulting 48-hour LC50, calculated by the Spearman-Kärber method, was 4.0 g NaCl/L with 95% confidence intervals of 3.67 – 4.36 g/L. This LC50 value was within the Control Chart limits generated for tests in our laboratory.

## 5.0 Qualifiers

### 5.1 Qualifiers and Special Conditions

To the best of our knowledge, no qualifiers or special conditions were applicable to the reported test.

Test Description: <i>Daphnia pulex</i> acute toxicity test.	Test #: 58524

### Sample Identification:

Sample Description	Effluent	Rec. Water (Housatonic River)
Sample #	38579	38580

### Sample Preparation:

Filtration	60 micron ✓	60 micron ✓
Chlorine <sup>1</sup>	ND	ND
Dechlorine <sup>2</sup>	—	—
Salinity <sup>(‰)</sup>	0‰	0‰
Prepared by (Init./date)	2/20/09 JG	————— +

<sup>1</sup> Record vol. 0.025 N sodium thiosulfate to dechlorinate 100 mL sample or record "ND" (not detected).

<sup>2</sup> Dechlorination required if detected. Record vol. 0.25 N sodium thiosulfate added per gallon effluent.

Dilution Plan for: *Daphnia pulex* static acute toxicity test

Receiving water is the dilution water

Lab Control = moderately hard water / Lamoille River (1:1 mix)

Dechlorination Control = moderately hard water / Lamoille River (1:1 mix) + Sodium thiosulfate (0.1 mL of 0.25 N Sodium thiosulfate per 1 L.)

Concentration (%)	Volume Effluent (mL)	Volume Diluent (mL)	Total Volume (mL)
Laboratory Control	0	400	400
Thiosulfate Control	0	400	400
Rec. Water Control	0	400	400
5.0	20	380	400
15	60	340	400
35	140	260	400
50	200	200	400
75	300	100	400
100	400	0	400
Total Volume	1120	1680	

### Comments:

Collect alkalinity and hardness samples on the effluent and receiving water sample.

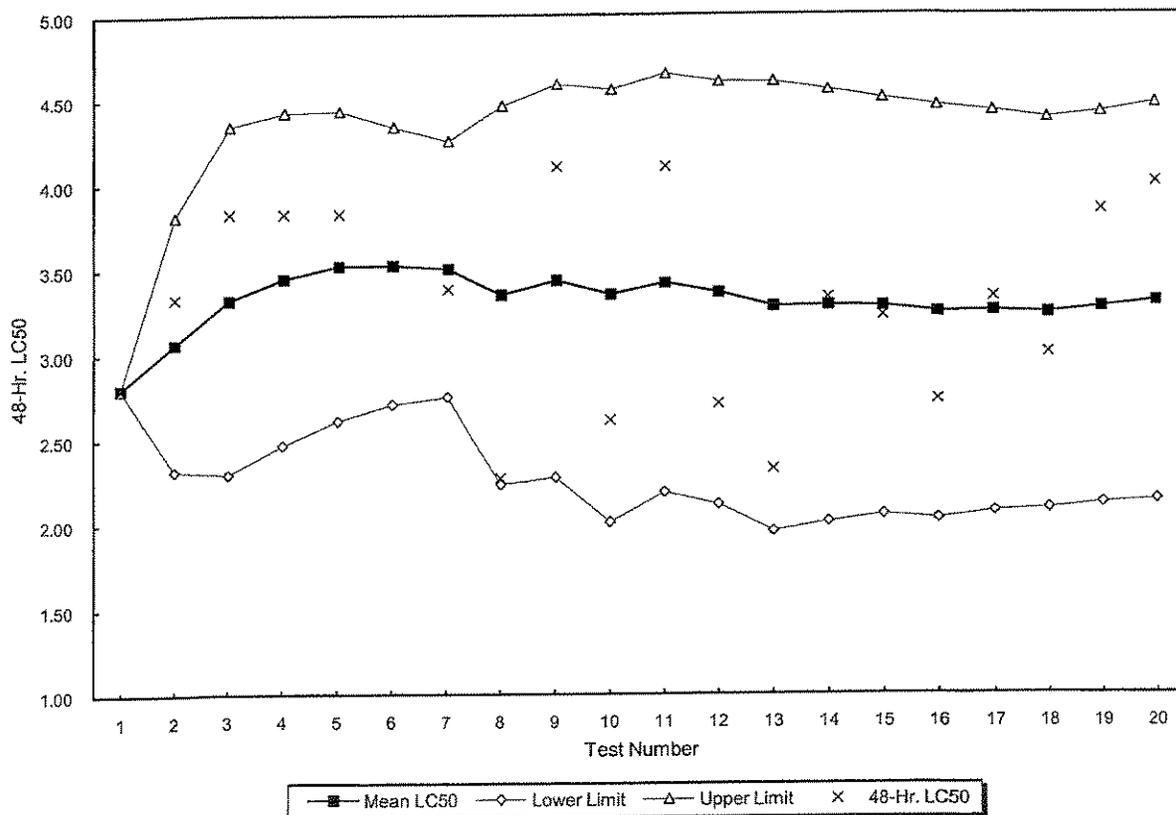

**Appendix 5**  
**Standard Reference Toxicant test Control Chart**

ACUTE AQUATIC TOXICITY COMPOSITE

Month: FEB  
Week: 3  
Fiscal Wk: 8  
Weather: DRY

*This Effluent sample is a flow proportioned composite made from 24 Hr Composite samples collected at the indicated outfalls and specified times.*

Outfall #	Collection Time	Gallons/Day	MI in Composite	Percent of Composite
001	7:30AM	17,140	1,108.8	10.08%
004		0	0.0	0.00%
007		0	0.0	0.00%
64T	7:15AM	7,524	486.7	4.42%
64G	7:15AM	145,380	9,404.5	85.50%
09A		0	0.0	0.00%
09B	7:40AM	1	0.1	0.00%
		170,045	11000	100.00%

The Acute Toxicity Composite was made today by SEAN C. COYLE @ 10:00 AM  
according to the table above, and given the sample ID# A9664C.

### Cooler Receipt And Preservation Check Form

Project/Client GE - Pittsfield Submission Number R9-929

Cooler received on 2/20/09 by: dh COURIER: CAS UPS FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler? YES NO
2. Were custody papers properly filled out (ink, signed, etc.)? YES NO
3. Did all bottles arrive in good condition (unbroken)? YES NO
4. Did any VOA vials have significant\* air bubbles? YES NO N/A
5. Were Ice or Ice packs present? YES NO
6. Where did the bottles originate? CAS/ROC, CLIENT
7. Temperature of cooler(s) upon receipt: 0.1°

Is the temperature within 0° - 6° C?: Yes Yes Yes Yes Yes  
 If No, Explain Below No No No No No

Date/Time Temperatures Taken: 2/20/09 9:45

Thermometer ID: 161 / IR GUN#2 / IR GUN#3 Reading From: Temp Blank Sample Bottle

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: \_\_\_\_\_

PC Secondary Review: N/A

Cooler Breakdown: Date: 2/20/09 by: dh

1. Were all bottle labels complete (i.e. analysis, preservation, etc.)? YES NO
2. Did all bottle labels and tags agree with custody papers? YES NO
3. Were correct containers used for the tests indicated? YES NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated N/A

Explain any discrepancies: \_\_\_\_\_

pH	Reagent			Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
		YES	NO						
≥12	NaOH	x		WC85153E	5/13				
≤2	HNO <sub>3</sub>		x	BDB2687A	9/09	-CDM	4ml	BDB2690B	4.2
≤2	H <sub>2</sub> SO <sub>4</sub>	x		WC85240C	1/10				
Residual Chlorine (-)	For TCN and Phenol	x		If present, contact PM to add ascorbic acid					
	Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub>	-	-			*Not to be tested before analysis - pH tested and recorded by VOAs or GenChem on a separate worksheet			
	Zn Aceta	-	-						
	HCl	*	*						

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: \_\_\_\_\_
