

GSA Office of Governmentwide Policy

Federal Fleet Report, Fiscal Year 2006

January 31, 2007

Dear Reader:

We are pleased to present the Federal Fleet Report for fiscal year 2006.

There is only one change in the Report this year, and that is the addition of a Table 2-10. This new table summarizes the average age of Federal fleet vehicles. These data were collected from Federal agencies for the first time this year.

The Federal Fleet Report is produced through the Federal Automotive Statistical Tool (FAST), an Internet-based application that collects fleet-related data from Federal agencies. FAST satisfies several distinct but overlapping reporting requirements:

Federal Fleet Report.....General Services Administration
Energy Policy Act Compliance.....Department of Energy
Federal Vehicle Location Reporting.....Energy Information Administration
Agency Fleet Budget Reporting.....Office of Management and Budget

Copies of this and previous Reports are available through our Internet site at <http://www.gsa.gov/vehiclepolicy>. Please feel free to contact us at vehicle.policy@gsa.gov if you have any questions about the Report, or would like to offer comments or suggestions on its content.

We trust that this year's Report will be of value to you.

Executive Summary

Overview

Federal departments, agencies, and their contractors use motor vehicles to perform their missions. These vehicles, totaling more than 630,000 for fiscal year 2005, are obtained from three primary sources: agency purchase, lease from the GSA Fleet Program, or commercial lease. This report presents inventory, utilization, costs, and fuel use associated with the Federal motor vehicle fleet. The data in this report are summarized by:

- Overall Federal Fleet Profiles
- Inventory
- Cost
- Utilization
- Fuel

The data are also displayed by vehicle type, and in some instances, by location (foreign vs. domestic). Overviews of tabular data are also displayed in graphical charts for the current year and 5-year trends.

Privately-owned motor vehicles used by Federal employees on official business are not included in the Federal Fleet Report, nor are short term commercial rental vehicles (used less than 60 continuous days).

Background

The Report summarizes statistical data by passenger-carrying vehicles, trucks, and all other vehicle types. Data are further summarized by characterizing each agency's vehicles by civilian, military and U.S. Postal Service, and in some instances, by vehicle source and location (domestic vs. foreign).

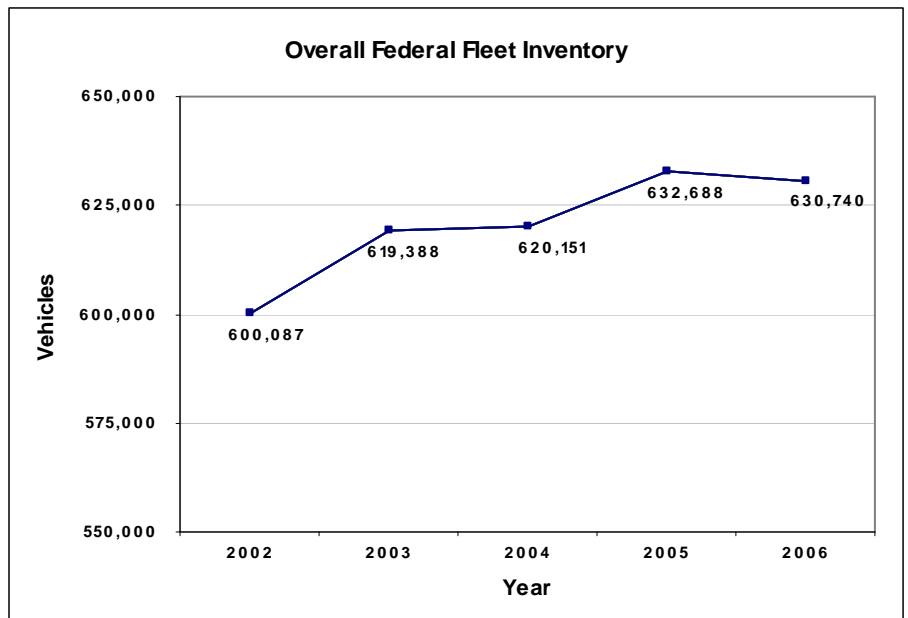

Vehicle types identified in the Report include:

- Sedans and station wagons
- Passenger vans
- Sport utility vehicles
- Light trucks (4 X 2 and 4 X 4)
- Medium trucks
- Heavy trucks
- Ambulances
- Buses

Major Federal Fleet Trends

Worldwide Motor Vehicle Inventory

The Federal government's worldwide fleet declined slightly in fiscal year 2006. Growth of 2 percent in the civilian agencies' fleets, led by the Department of Homeland Security, the Department of Justice, and the U.S. Postal Service, was more than offset by a significant (4.3 percent) decline in the military agencies' fleets. Among the latter only the Army's fleet grew, by just under 1.5 percent.

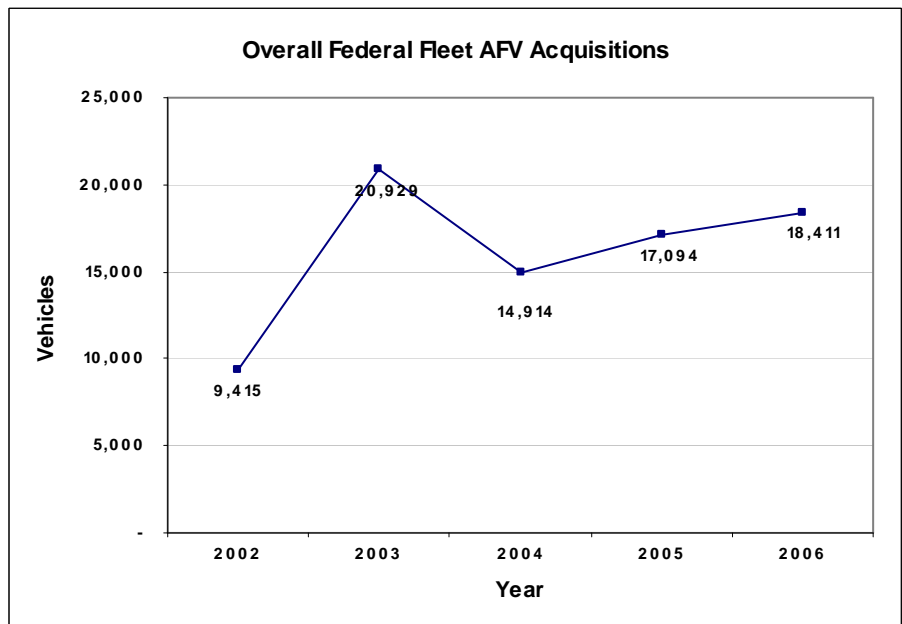

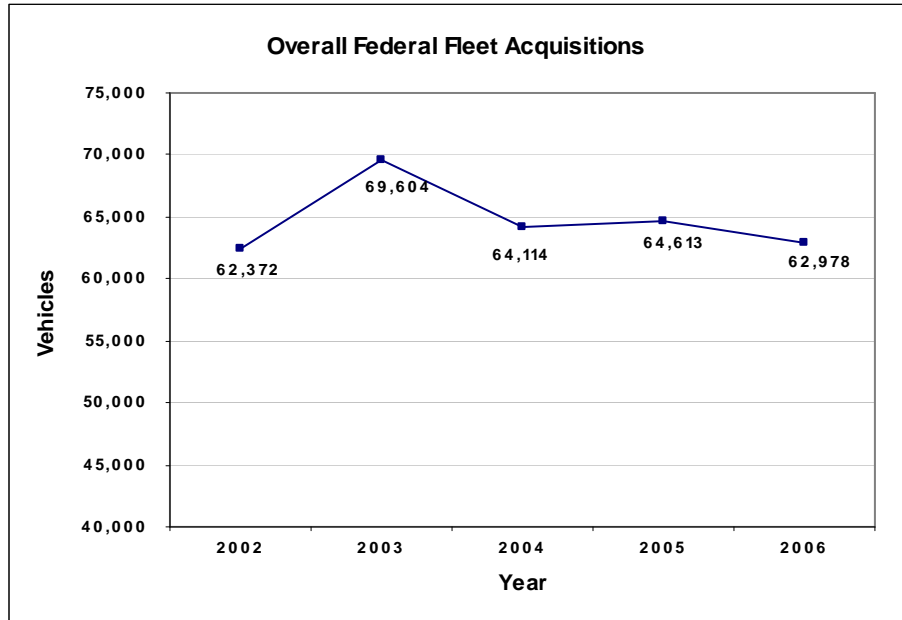

Motor Vehicle Acquisitions

These two charts summarize total motor vehicle acquisitions and acquisitions specifically of alternative fuel vehicles. Overall, new vehicle acquisitions were quite stable from 2005 from 2006, declining by 1,635 vehicles. This represents a normal variation in year to year replacement as vehicles of different types with different replacement criteria come due. Once again, acquisition of gasoline-fueled vehicles declined, continuing a trend begun in 2004. Diesel and alternative fuel vehicle acquisitions continued to take a larger piece of the overall acquisition pie. Nearly all of that growth was from E85 vehicles; CNG constitutes a very small fraction of the alternative fuel total, and electric and LPG have fallen off the chart completely.

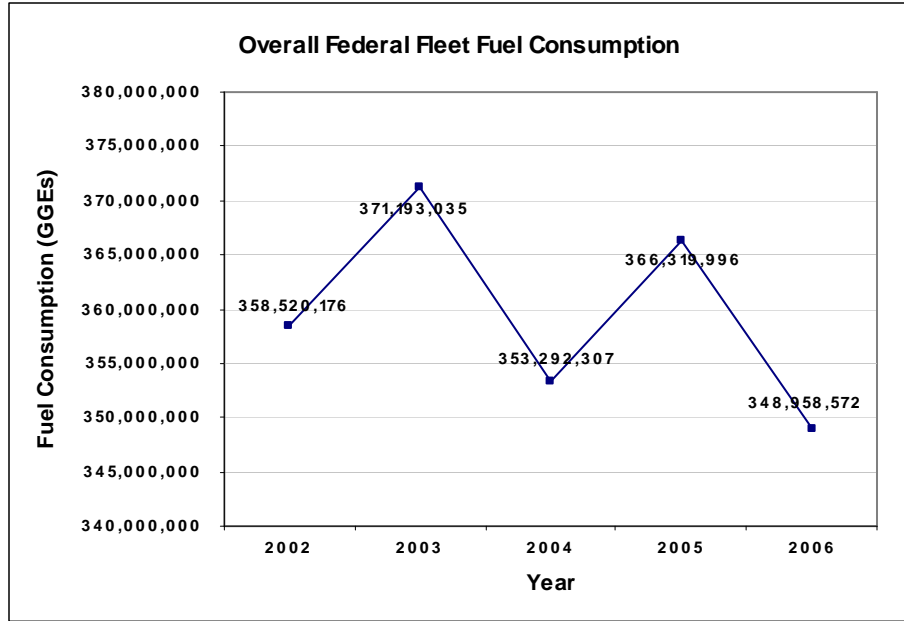

In a switch from last year, when we noted a trend toward trucks and away from passenger vehicles, this year it is light trucks that are losing ground to SUVs. While this is certainly less worrisome than the trend from sedans to SUVs, which would produce increases in fuel consumption and cost, it is unclear what this new trend portends.

A mission-driven drive toward more flexible vehicles? An indication of driver preference? A simple reflection of the growing commercial market for these vehicles? In any event, this 14 percent increase in the SUV fleet is worth keeping an eye on.

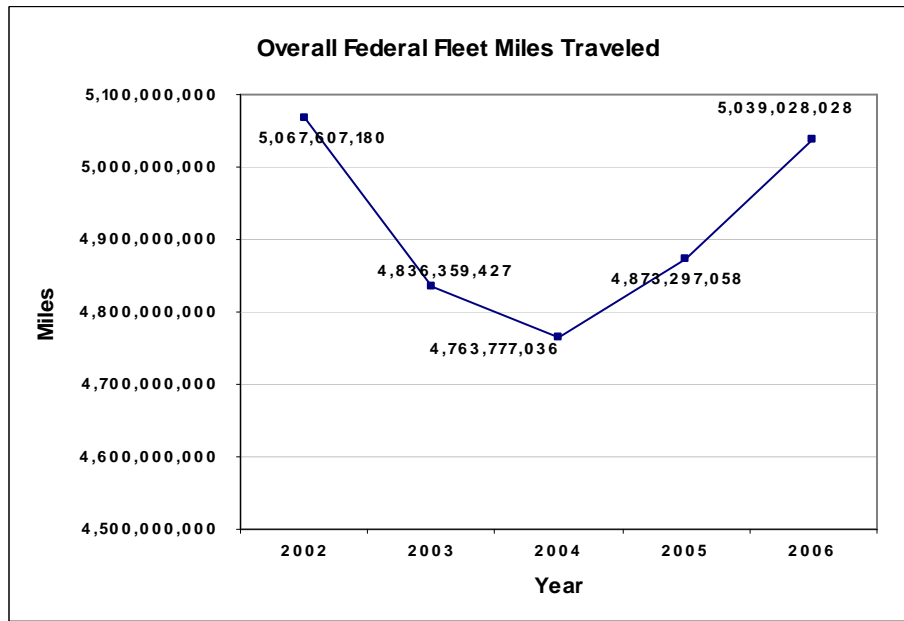

Total Fuel Consumption

Overall fuel consumption dropped dramatically, by 4.7 percent. If accurate, this is a striking development, and would show 2005's increase as an anomaly in a downward trend. Continued high fuel prices also may have acted as a brake on fuel consumption, as could the trend (noted above) from light trucks toward somewhat more fuel-efficient SUVs. It will take at least another year to be sure.

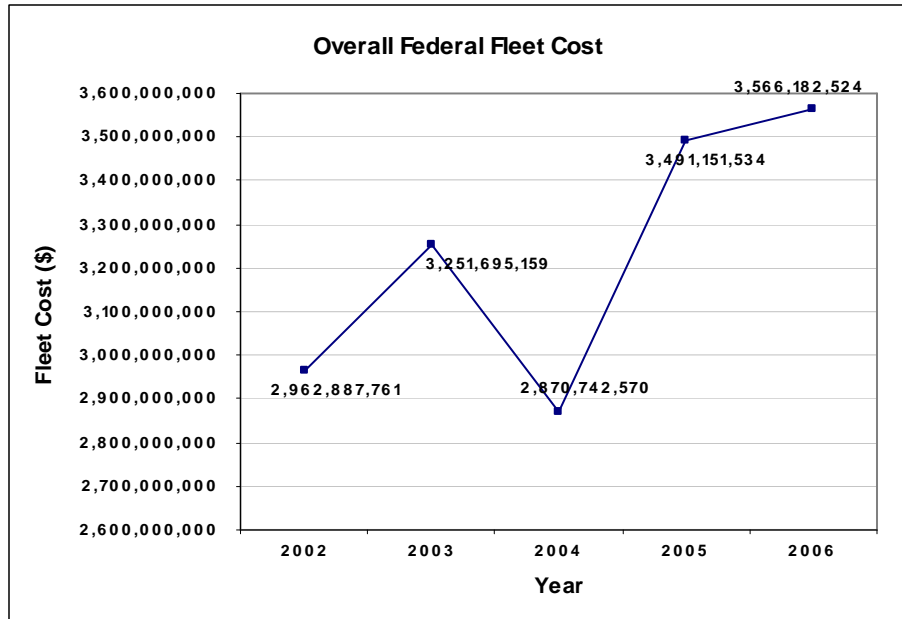

Worldwide Miles Traveled

In the second year of increases after a two-year downward trend, miles traveled increased in 2006 by 3.4 percent. Unfortunately, this compounds the ambiguity of the reported decline in fuel consumption; the two appear to be mutually exclusive. However, no data problems were found in the database to explain the discrepancy. Again, another year of data will be useful in determining the cause of this result.

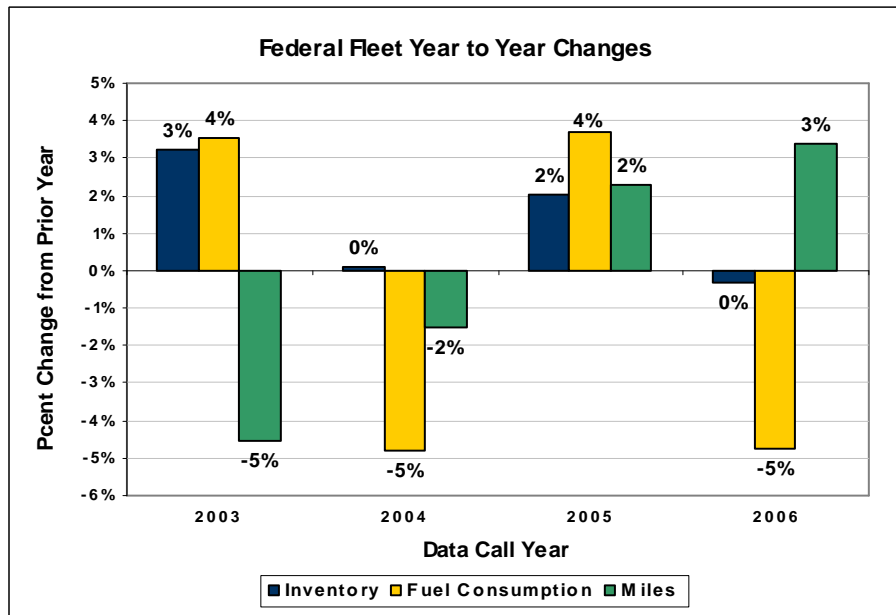

Worldwide Operating Costs

After a huge increase of nearly 21.7 percent in 2005, costs rose in 2006 by a modest 2.1 percent. The dramatic fuel price increases of 2005 declined somewhat and then stabilized at a higher level. The cost of fuel in general and gasoline in particular is a major driver of overall fleet costs, no matter the direction of the movement.

FAST Data Trends

Where one expects to see inventory, fuel consumption, and miles traveled moving together, this year the standout characteristic is the unexpected simultaneous drop in fuel consumption and increase in miles. Obviously this calls into question the improvements we touted in last year's report, when all three indicators, for the first time, moved in the same direction and by similar percentages. Whether this is an accurate representation of what happened, or the result of data reporting problems in one or more agencies, it is too soon to know.

That said, more agencies are implementing automated systems that report data to FAST without significant human intervention, which should reduce errors. Eventually we hope to have the majority of agencies, particularly the large ones, reporting to FAST through automated systems. On the other hand, we continue to be concerned with the slow progress in resolving coding inconsistencies between refueling stations and credit card processors, a longstanding problem that makes it difficult to accurately segregate various types of fuel purchases.

Other Items of Note – FAST incorporated a new data element for agencies to report in fiscal year 2006. The result is shown in Table 2-10. This is the first time that we have been able to report even partial data on the average age of Federal agencies' owned fleet vehicles. Although some agencies were

unable to collect the data or to modify their systems to report it, agencies with over 98 percent of Federal fleet vehicles own and operate vehicles that average 9.3 years old. Passenger vehicles average 5 years of age, trucks over 10 years, and other types 9.5 years. Note that these figures do not include vehicles provided by GSA Fleet, which has a much younger fleet than most other agencies.

Section 1: Overall Fleet Profiles

Section 1 provides a high-level look at the worldwide Federal fleet. It contains tables that cover inventory, cost, utilization, and fuel consumption. Each succeeding section provides more detailed tables, charts, and graphs on these areas. Section 1 ends with a table that summarizes each area in one comprehensive view.

Section 2: Inventory

This section provides additional information to supplement Table 1-1. In addition to end-of-year inventory, it also provides 5-year trend charts, as well as information on where agencies acquire their vehicles (purchase, commercial lease, or GSA Fleet lease).

Passenger vehicles and trucks are broken down into their constituent vehicle types, as are law enforcement vehicles. Again, the passenger vehicle category now includes vehicles other than sedans and station wagons that are used primarily or exclusively to transport passengers, such as passenger vans and sport utility vehicles (SUV).

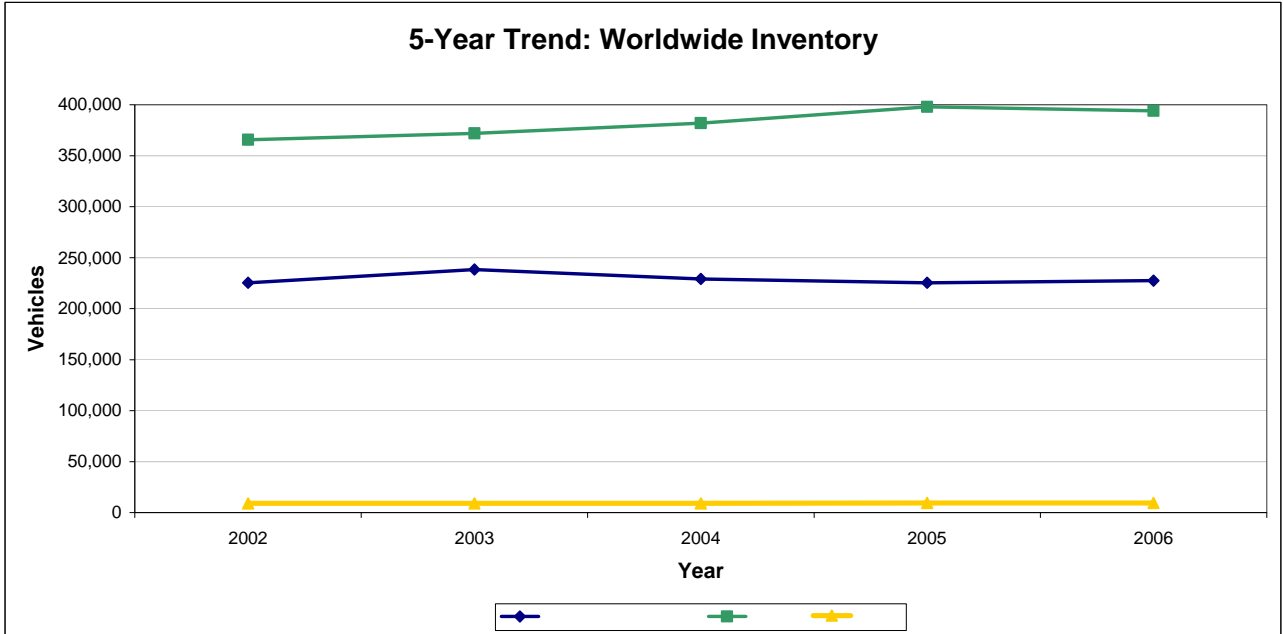

The division between light duty and medium duty for SUVs and passenger vans is a gross vehicle weight rating (GVWR) of 8,500 pounds, as specified in the Clean Air Act and the Energy Policy Act.

Charts 2-7, 2-8 and Tables 2-7 and 2-8 show the federal inventory of law enforcement vehicles. It should be noted that this category is intended to reflect only vehicles with actual law enforcement missions; it does not reflect administrative-use vehicles used by agencies with a law enforcement mission.

*These data come from GSA's Automotive Division. Procurements by GSA's Automotive Division capture most, but not all, Federal executive vehicle procurements. Agencies are sometimes granted waivers to conduct their own procurements. Also, GSA reports procurement actions in terms of orders placed, not shipments or deliveries made, so these figures will not necessarily match new acquisitions as reported by agencies in the FAST system.

*This is a new reporting element for fiscal year 2006. Some agencies were not able to report. However, the agencies that did report represent over 98 percent of the total Federal fleet. These are agency-owned vehicles only, not commercially leased or GSA Fleet vehicles.

Section 3: Cost

Section 3 expands on the information provided in Table 1-2. FAST began collecting new types of cost data for FY 2004. For example, many agencies do not account for depreciation of fleet assets, so in prior years the depreciation expense reported by GSA Fleet (expressed as a cost per mile by vehicle type) was attributed to other agencies (excepting the U.S. Postal Service, which does account for depreciation). Beginning in FY 2004, all agencies are required to report vehicle depreciation as a separate expense.

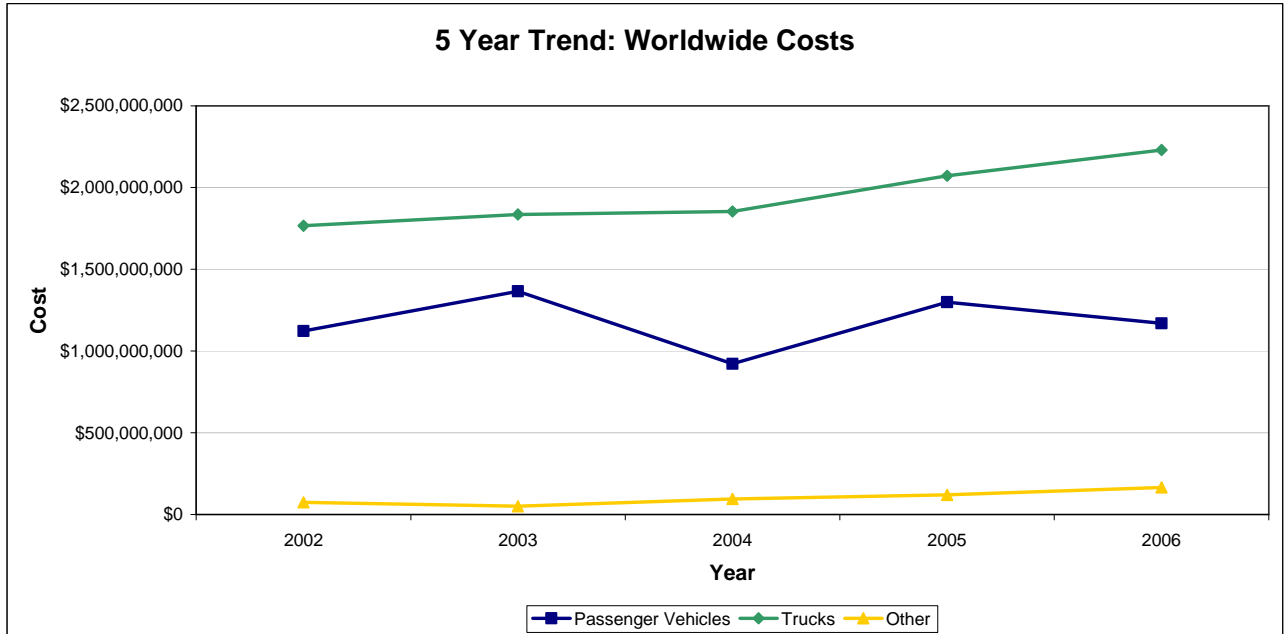

Other costs collected and represented in this section include fuel, maintenance, indirect costs, commercial lease cost and GSA lease cost. Maintenance includes the cost of maintaining and repairing vehicles, including maintenance personnel, parts, supplies, and equipment. Indirect costs include management and overhead personnel, office supplies, building and utility costs, and any other costs that cannot be directly attributed to the operation or maintenance of vehicles. Commercial lease cost includes the lease charges paid to commercial leasing companies. GSA Lease cost is the total amount billed by GSA Fleet to its customer agencies, which includes fuel. Fuel costs for agency owned and commercially leased vehicles are not collected by vehicle type and are therefore shown as a single cost item in the Totals section in Table 3-2. All costs in this report are shown in U.S. Dollars.

This section also reveals some of the inconsistencies in the data that the agencies have reported through FAST. In some cases, it may not be possible to calculate the cost per mile, or miles per vehicle using the raw data from other tables in the report. The inconsistencies arise from agencies who have reported inventory and cost, but no miles, or miles, but no costs for certain vehicle types. In these situations, the data rows in the miles per vehicle and cost per mile tables for that agency and vehicle type will be blank.

Section 3: Cost

Chart 3-5: Cost Per Mile – GSA Fleet*

Cost Per Mile by Year					
Vehicle Type	2002	2003	2004	2005	2006
Passenger Vehicles	\$ 0.3381	\$ 0.4101	\$ 0.3453	\$ 0.5197	\$ 0.3941
Trucks	\$ 0.5101	\$ 0.4604	\$ 0.5572	\$ 0.5996	\$ 0.6161
Other	\$ 0.9600	\$ 0.4788	\$ 1.0965	\$ 0.7132	\$ 1.2514
Overall	\$ 0.4068	\$ 0.4248	\$ 0.4290	\$ 0.5515	\$ 0.4870

*The reported cost of GSA Fleet vehicles was divided by the reported miles traveled by those vehicles to produce this table. The costs shown here may not correspond to the cost per mile claimed by GSA Fleet for its overall fleet operations. This chart shows a significant discontinuity for the "Other" vehicles category (comprised of ambulances and buses) for FY2003 and FY2004. As additional cost detail for the GSA-leased portion of the Federal fleet has become available during those years, GSA Fleet has adapted the method by which the costs for individual vehicles are tracked and then summarized for use by the agencies in submitting data to FAST. We believe the FY2003 cost per mile drop shown on this chart is strictly a function of the method GSA Fleet used to calculate those costs, does not reflect an actual drop in costs, and has been resolved with the methodology now employed.
