#### § 1039.255

- (ii) How you accumulated engine operating hours (service accumulation), including the dates and the number of hours accumulated.
- (iii) All maintenance, including modifications, parts changes, and other service, and the dates and reasons for the maintenance.
- (iv) All your emission tests, including documentation on routine and standard tests, as specified in part 40 CFR part 1065, and the date and purpose of each test.
- (v) All tests to diagnose engine or emission-control performance, giving the date and time of each and the reasons for the test.
  - (vi) Any other significant events.
- (4) Production figures for each engine family divided by assembly plant.
- (5) Keep a list of engine identification numbers for all the engines you produce under each certificate of conformity.
- (c) Keep data from routine emission tests (such as test cell temperatures and relative humidity readings) for one year after we issue the associated certificate of conformity. Keep all other information specified in paragraph (a) of this section for eight years after we issue your certificate.
- (d) Store these records in any format and on any media, as long as you can promptly send us organized, written records in English if we ask for them. You must keep these records readily available. We may review them at any time.
- (e) Send us copies of any engine maintenance instructions or explanations if we ask for them.

# § 1039.255 What decisions may EPA make regarding my certificate of conformity?

- (a) If we determine your application is complete and shows that the engine family meets all the requirements of this part and the Act, we will issue a certificate of conformity for your engine family for that model year. We may make the approval subject to additional conditions.
- (b) We may deny your application for certification if we determine that your engine family fails to comply with emission standards or other requirements of this part or the Act. Our deci-

- sion may be based on a review of all information available to us. If we deny your application, we will explain why in writing.
- (c) In addition, we may deny your application or suspend or revoke your certificate if you do any of the following:
- (1) Refuse to comply with any testing or reporting requirements.
- (2) Submit false or incomplete information (paragraph (e) of this section applies if this is fraudulent).
  - (3) Render inaccurate any test data.
- (4) Deny us from completing authorized activities despite our presenting a warrant or court order (see 40 CFR 1068.20). This includes a failure to provide reasonable assistance.
- (5) Produce engines for importation into the United States at a location where local law prohibits us from carrying out authorized activities.
- (6) Fail to supply requested information or amend your application to include all engines being produced.
- (7) Take any action that otherwise circumvents the intent of the Act or this part.
- (d) We may void your certificate if you do not keep the records we require or do not give us information when we ask for it.
- (e) We may void your certificate if we find that you intentionally submitted false or incomplete information.
- (f) If we deny your application or suspend, revoke, or void your certificate, you may ask for a hearing (see § 1039.820).

### Subpart D [Reserved]

#### Subpart E—In-Use Testing

#### § 1039.401 General provisions.

We may perform in-use testing of any engine subject to the standards of this part. However, we will limit recall testing to the first 75 percent of each engine's useful life as specified in §1039.101(g).

### **Subpart F—Test Procedures**

## § 1039.501 How do I run a valid emission test?

(a) Use the equipment and procedures for compression-ignition engines in 40

#### **Environmental Protection Agency**

CFR part 1065 to determine whether engines meet the duty-cycle emission standards in \$1039.101(a) and (b). Measure the emissions of all the pollutants we regulate in \$1039.101 as specified in 40 CFR part 1065. Use the applicable duty cycles specified in \$\$1039.505 and 1039.510.

- (b) Section 1039.515 describes the supplemental procedures for evaluating whether engines meet the not-to-exceed emission standards in §1039.101(e).
- (c) Measure smoke using the procedures in 40 CFR part 86, subpart I, for evaluating whether engines meet the smoke standards in §1039.105, except that you may test two-cylinder engines with an exhaust muffler like those installed on in-use engines.
- (d) Use the fuels specified in  $\S 1039.104$ (e) and 40 CFR part 1065 to perform valid tests.
- (1) For service accumulation, use the test fuel or any commercially available fuel that is representative of the fuel that in-use engines will use.
- (2) For diesel-fueled engines, use the appropriate diesel fuel specified in 40 CFR part 1065 for emission testing. Unless we specify otherwise, the appropriate diesel test fuel is the ultra lowsulfur diesel fuel. If we allow you to use a test fuel with higher sulfur levels, identify the test fuel in your application for certification and ensure that the emission control information label is consistent with your selection of the test fuel (see §1039.135(c)(9)). For example, do not test with ultra low-sulfur diesel fuel if you intend to label your engines to allow use of diesel fuel with sulfur concentrations up to 500 ppm.
- (e) You may use special or alternate procedures to the extent we allow them under 40 CFR 1065.10.
- (f) This subpart is addressed to you as a manufacturer, but it applies equally to anyone who does testing for you, and to us when we perform testing to determine if your engines meet emission standards.

[69 FR 39213, June 29, 2004, as amended at 70 FR 40463, July 13, 2005]

# §1039.505 How do I test engines using steady-state duty cycles, including ramped-modal testing?

This section describes how to test engines under steady-state conditions. In

some cases, we allow you to choose the appropriate steady-state duty cycle for an engine. In these cases, you must use the duty cycle you select in your application for certification for all testing you perform for that engine family. If we test your engines to confirm that they meet emission standards, we will use the duty cycles you select for your own testing. We may also perform other testing as allowed by the Clean Air Act.

(a) You may perform steady-state testing with either discrete-mode or ramped-modal cycles, as follows:

- (1) For discrete-mode testing, sample emissions separately for each mode, then calculate an average emission level for the whole cycle using the weighting factors specified for each mode. Calculate cycle statistics for the sequence of modes and compare with the specified values in 40 CFR part 1065 to confirm that the test is valid. Operate the engine and sampling system as follows:
- (i) Engines with  $NO_X$  aftertreatment. For engines that depend on aftertreatment to meet the  $NO_X$  emission standard, operate the engine for 5-6 minutes, then sample emissions for 1-3 minutes in each mode. You may extend the sampling time to improve measurement accuracy of PM emissions, using good engineering judgment. If you have a longer sampling time for PM emissions, calculate and validate cycle statistics separately for the gaseous and PM sampling periods.
- (ii) Engines without NO<sub>X</sub> aftertreatment. For other engines, operate the engine for at least 5 minutes, then sample emissions for at least 1 minute in each mode. Calculate cycle statistics for the sequence of modes and compare with the specified values in 40 CFR part 1065 to confirm that the test is valid.
- (2) For ramped-modal testing, start sampling at the beginning of the first mode and continue sampling until the end of the last mode. Calculate emissions and cycle statistics the same as for transient testing.
- (b) Measure emissions by testing the engine on a dynamometer with one of the following duty cycles to determine whether it meets the steady-state emission standards in §1039.101(b):
