

8. Clothing contaminated by spillage must be removed immediately and thoroughly laundered before wearing. Special care is required to prevent contamination of the inside of gloves.

9. Approved respirators must be worn while pesticides are being mixed, and when dusts or liquids are being handled or sprayed. Care should be exercised when selecting the respirator type to insure that it is designated specifically for the substance to be used. Each respirator must be labeled and approved by the U.S. Department of Agriculture or NIOSH. Filters or canisters must be changed after 8 hours use and more often if odor of the pesticide is detected. (Always have extra cartridges available when needed).

10. Pesticide storage, mixing, and formulation facilities:

(a) All pesticides must be stored in a dry, well ventilated, separate room, building, or covered area not accessible to unauthorized personnel or the public and placed under lock and key.

(b) Identification signs should be placed on rooms, buildings, and fences to advise of the contents and warn of their hazardous nature.

(c) Where applicable, the outside of each storage area should be labeled with "Danger," "Poison," and "Pesticide Storage" signs.

(d) Fire extinguishers must be installed near the door of materiel storage rooms. Diluted oil based pesticides are flammable and must be stored separate from other materials.

(e) All pesticide storage, mixing, and formulation areas must have adequate ventilation in order to reduce inhalation of toxic vapors. Sparkproof lighting fixtures should be installed in closed storage areas to eliminate ignition hazards.

11. Empty pesticide containers must be disposed of properly. Do not burn them. When herbicides or defoliant volatize the resulting vapors may be poisonous to humans, and they may damage nearby plants, crops, or shrubbery; also, pesticides or defoliant containing chlorates may be a serious fire hazard when heated.

12. Glass pesticide containers should be disposed of by breaking. Chop holes in top, bottom, and sides of metal containers or crush them so they cannot collect water or be re-used. After breaking or puncturing them, bury the containers at least 18 inches deep in an isolated area provided for this purpose, away from water supplies or high water tables. Records to locate such buried pesticides within the landfill site should be maintained. Post warning signs.

13. Safety programs developed for the safe handling and mixing of toxic chemicals should be coordinated with the Safety Office prior to implementation.

## PART 276—WATER RESOURCES POLICIES AND AUTHORITIES: APPLICATION OF SECTION 134a OF PUBLIC LAW 94-587

Sec.

- 276.1 Purpose.
- 276.2 Applicability.
- 276.3 [Reserved]
- 276.4 Legislative provisions.
- 276.5 Legislative history.
- 276.6 General policy.
- 276.7 Procedures.
- 276.8 Cessation.

AUTHORITY: Sec. 134a, Pub. L. 94-587, 90 Stat. 2928.

SOURCE: 42 FR 9175, Feb. 15, 1977, unless otherwise noted.

### § 276.1 Purpose.

This establishes policy guidelines and procedures for Corps of Engineers application of the provisions of section 134a of Pub. L. 94-587.

### § 276.2 Applicability.

Policies and procedures contained herein apply to all elements and field operating agencies of the Corps of Engineers having Civil Works responsibilities.

### § 276.3 [Reserved]

### § 276.4 Legislative provisions.

Section 134a authorizes and directs institution of a procedure for certification, at the request of local interests, that particular improvements for flood control to be locally constructed can reasonably be expected to be compatible with a specific, potential Federal project under study. Local interests may proceed to construct such certified compatible improvements at local expense with the understanding that such improvements can be expected to be included in the scope of the Federal project, if later authorized, both for the purposes of analyzing the costs and benefits of the project and assessing the local participation in the costs of such project. This legislative authority ceases to be in effect after December 31, 1977.

### § 276.5 Legislative history.

Discussion of this legislation is contained in the reports by the Senate

Committee on Public Works and the House Committee on Public Works and Transportation which accompanied S. 3823, the Water Resources Development Act of 1976 (Pub. L. 94-587). These reports make clear that Congress intended to encourage local communities to assume responsibility and accelerate local cooperation in reducing urban flooding dangers without committing the United States to any future Federal expenditure. The Senate Committee report noted that some communities might be reluctant to undertake compatible local flood control measures for fear that the local work would jeopardize the potentially favorable cost-benefit ratio of a prospective Federal project. The Act authorizes establishing a procedure for certification of certain local improvements undertaken for the purpose of flood control. Cost assignable to that part of the local improvement that would constitute an integral part of a prospective Federal plan would be eligible to be recommended for credit toward required local cooperation. The Senate Committee report specifically stated that:

\* \* \* This flexibility should in no way be interpreted as a Federal assurance of late approval of any project. While it is in no way a Federal commitment, this provision assures the city that the work it undertakes, once certified, will not be removed from the cost-benefit analysis, and it assures the city that such local work will be credited toward the local costs of cooperation, should the project be later authorized. This will not, however, qualify the community for any cash refunds. If the local costs on such certified work exceed the local share, when later computed, the local government must assume that extra cost. \* \* \*

#### § 276.6 General policy.

(a) This provision will be applied only at locations where a congressionally authorized study is underway or where the study report has been forwarded for Executive Branch review or for consideration by Congress. If a study is underway, the District Engineer must have held the final public meeting and filed a draft EIS with CEQ prior to certification. Certification will be in response to a specific request from a State, city, municipality or public agency that is the prospective

local sponsoring agency for the contemplated Federal plan under study.

(b) Work eligible for certification shall be limited to that part of the local improvement directly related to a flood control purpose.

(c) Only local work commenced after certification shall be eligible for certification except for local engineering work noted below in § 276.6(e). The work proposed for certification must meet the following requirements: The work will be separately useful even if the Federal Government does not authorize and construct the contemplated project; the work to be accomplished by the non-Federal entity will not create a potential hazard; certification of the proposal will be in the general public interest.

(d) Costs assigned to that part of the local improvement that would constitute an integral part of the prospective recommended Federal plan can be included for credit toward required local cooperation. The amount creditable shall equal the expenditures made by the non-Federal entity for work that would have been accomplished at Federal expense if the entire project were carried out by the Corps of Engineers. However, credit will not exceed the amount the District Engineer considers a reasonable estimate of the reduction in Federal expenditures resulting from the local work. Costs of subsequent maintenance will not be credited. In the event that the local construction work is financed by a Federal non-reimbursable grant or Federal funds from other Federal sources, the amount creditable against future local cooperation requirements shall be reduced by a commensurate amount. However, there will be no corresponding reduction in the benefits credited for the local improvement.

(e) Local interests are responsible for developing all necessary engineering plans and specifications for the work they propose to undertake. However, those non-Federal engineering costs and overhead costs directly attributable to the creditable part of local work may be included in the amount credited.
