Summary of Changes

Section 3020.1

The section “Assessment of Capital Adequacy” is revised to reference (1) the Board staff’s October 12, 2007, legal interpretation regarding the risk-based capital treatment of asset-backed commercial paper (ABCP) liquidity facilities and (2) the Board staff’s August 21, 2007, legal interpretation regarding the appropriate risk-based capital risk weight to be applied to certain collateralized loans of cash.

Section 4030.1

The section on “Asset Securitization” is revised to (1) indicate that a banking organization may risk weight the credit equivalent amount of an eligible ABCP liquidity facility by looking through to the underlying assets of the ABCP conduit and (2) reference the aforementioned Board staff’s October 12, 2007, legal interpretation.

Sections 4060.1–4060.4

The sections on “Information Technology” have been revised to incorporate the November 9, 2007, adoption of the interagency rules, “Identity Theft Red Flags and Address Discrepancies Under the Fair and Accurate Credit Transactions Act of 2003,” (the FACT Act) and guidelines issued by the federal financial institution regulatory agencies and the Federal Trade Commission. The rule and guidelines implement sections 114 and 315 of the FACT Act. (For the Federal Reserve Board’s rule, implementing section 315, see Part 222—Fair Credit Reporting (Regulation V and its appendix J). The rule and guidelines address three elements: (1) duties of users of credit reports regarding address discrepancies; (2) duties regarding the detection,

prevention, and mitigation of identity theft (implementation of an Identity Theft Prevention Program); and (3) duties of credit and debit card issuers regarding changes of address. The joint rules and guidelines were effective on January 1, 2008. The date for mandatory compliance with the rule was November 1, 2008. The sections have been revised to incorporate the rule’s provisions that focus on a financial institution’s safety and soundness (in particular, item 2 above). The examination objectives, examination procedures, and internal control questionnaire have been revised to incorporate the rule and its guidelines. See also the October 10, 2008, letter (SR-08-7/CA 08-10) and its interagency-generated attachments.

Section 4150.1

The section on the “Review of Regulatory Reports” was revised significantly to include a more current discussion of the institution’s general and specific responsibilities, and the examiner’s review responsibilities, with regard to regulatory financial reports and refilings submitted to the Federal Reserve and other federal agencies, such as the Securities and Exchange Commission and the U.S. Department of the Treasury. Many of the reports’ general instructions and descriptions have been revised and made current, including those pertaining to the submission of the bank Call Report. The section clarifies the various monetary deposit transaction reporting categories applicable to depository institutions, as found in the Federal Reserve’s “Reserve Requirements of Depository Institutions” (Regulation D). The report titles and descriptions of domestic and international transactions and activities that are to be reported have been updated. In addition, a listing of U. S. Department of Treasury reports—reports that are applicable to institutions regulated and supervised by the Federal Reserve Board—has been updated.

Commercial Bank Examination Manual

Supplement 29—April 2008

Summary of Changes

Section 1000.1

This section, “Examination Strategy and Risk-Focused Supervision,” has been revised to (1) state that under section 11(a)(1) of the Federal Reserve Act, examiners and supervisory staff have the authority to examine at their discretion the accounts, books, and affairs of each member bank and to require such statements and reports as it may deem necessary; (2) include the use of standard terminology in examination reporting for matters that require the Board’s attention; and (3) provide a discussion of the prohibition on the release of confidential information and any agreements that would authorize the release of this information. (See SR-07-19 and SR-97-17; also 72 *Fed. Reg.* 17, 798.)

Sections 1010.1

This section on “Internal Control and Audit Function, Oversight, and Outsourcing” was revised to include the provisions of the FDIC’s November 2005 rule change to Part 363 (12 CFR 363) (effective December 28, 2005). The changes increased the asset threshold from \$500 million to \$1 billion or more for internal control assessments by the institution’s management and its external auditors. For institutions having between \$500 million and \$1 billion in assets, the requirements for audit committees’ independence and composition were eased to require a majority, rather than all, of the outside audit committee members to be independent of management. Previously, similar revisions to section 1010.1 were made for some of the

FDIC’s changes. For example, see footnote 4 (See also the May 2006 supplement 25).

Section 5020.1

The section on “The Overall Conclusions Regarding Condition of the Bank” has been revised to refer to SR-07-19, “Confidentiality Provisions in Third-Party Agreements,” and to delete superseded SR-98-21. The listing of examples of off-balance-sheet activities that a bank may be engaged in, and the various risks that a bank may be exposed to, have been updated and expanded. Reference is added for the Uniform Financial Institutions Rating System (the CAMELS rating system).

Section 6000.1

The “Commercial Bank Report of Examination” section has been revised to include changes to the Federal Reserve’s examination report’s instructions for the use of standardized terminology that may involve the “Matters Requiring Board Attention” report page or section. To improve the consistency and clarity of written communications, the Federal Reserve’s staff will use the standard terminology and definitions to differentiate among (1) Matters Requiring Immediate Attention, (2) Matters Requiring Attention, and (3) Observations. (See SR-08-01, “Communication of Examination/Inspection Findings.”) Other limited general and technical changes have been made to the examination report’s instructions to allow for “continuous flow” reporting format. References to several Supervision and Regulation letters and other references have been added, while others were deleted as either being superseded or cancelled.

Commercial Bank Examination Manual

Supplement 28—October 2007

Summary of Changes

Section 1000.1

This section, “Examination Strategy and Risk-Focused Supervision,” has been revised to accommodate changes to the “Examination-Frequency Guidelines for State Member Banks” subsection. The changes resulted from an interim rule, effective April 10, 2007, that was jointly issued by the Federal Reserve Board and the other federal bank regulatory agencies (the agencies). The interim rule implemented (1) section 605 of the Financial Services Regulatory Relief Act of 2006 (FSRRA) and (2) Public Law 109-473 (to be codified at 12 USC 1820(d)). The interim rule was adopted as final, without change, on September 11, 2007. (See *72 Fed. Reg.* 54347, September 25, 2007.)

The rule permits federally insured depository institutions that have up to \$500 million in total assets and that meet certain other criteria to qualify for an 18-month (rather than a 12-month) on-site examination cycle. Before the enactment of FSRRA, only insured depository institutions that had less than \$250 million in total assets were eligible for an 18-month on-site examination cycle. The rule specifies, consistent with current practice, that a small insured depository institution meets the statutory “well managed” criteria for an 18-month examination cycle if the institution, besides having a CAMELS composite rating of 1 or 2, received a rating of 1 or 2 for the management component of the CAMELS rating at its most recent examination. (See SR-07-8 and its attachment, *72 Fed. Reg.* 17798.)

Sections 2103.2–2103.4

These updated sections provide the examination objectives, examination procedures, and internal control questionnaire for section 2103.1, “Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices” (added in the May 2007 update to this manual). Section 2103.1 set forth the December 6, 2006, supervisory guidance that was jointly issued by the agencies. The guidance was effective December 12, 2006, and is applicable to state member banks; it is also broadly applicable to bank

holding companies and their nonbank subsidiaries. (See SR-07-1 and its attachments.)

Section 2135.1

This new section, “Subprime Mortgage Lending,” sets forth the June 29, 2007, interagency Statement on Subprime Mortgage Lending that was issued by the agencies. The subprime statement was developed and issued to address issues and questions related to certain adjustable-rate mortgage (ARM) products marketed to subprime borrowers. The statement applies to all banks and their subsidiaries as well as to bank holding companies and their nonbank subsidiaries.

The subprime statement emphasizes the need for institutions to have prudent underwriting standards and to provide consumers with clear and balanced information so that both the institution and consumers can assess the risks arising from certain ARM products that have discounted or low introductory rates. The statement is focused on these types of ARMs and uses the interagency Expanded Guidance for Subprime Lending issued in 2001 in order to determine subprime-borrower characteristics. Although the statement is focused on subprime borrowers, the principles in the statement are also relevant to ARM products offered to nonsubprime borrowers. (See SR-07-12 and its attachment.)

Sections 3030.1–3030.4

These new sections, “Assessing Risk-Based Capital—Direct-Credit Substitutes Extended to Asset-Backed Commercial Paper Programs,” consist of interagency guidance issued in March 2005. That guidance was based on the Board’s adoption of the November 29, 2001, amended risk-based capital standards. The standards established a new capital framework for banking organizations engaged in securitization activities. The interagency guidance clarifies how banking organizations are to use the internal ratings they assign to asset pools purchased by their asset-backed commercial paper (ABCP) programs in order to appropriately risk-weight any direct-credit substitutes (for example, guarantees) that are

extended to such programs. Examination objectives, examination procedures, and an internal control questionnaire are included.

The guidance provides an analytical framework for assessing the broad risk characteristics of direct-credit substitutes that a banking organization provides to an ABCP program it sponsors. Specific information is provided on evaluating direct-credit substitutes issued in the form of program-wide credit enhancements. (See SR-05-6.)

Section 4033.1

This new section, “Elevated-Risk Complex Structured Finance Activities,” sets forth the January 11, 2007, Interagency Statement on Sound Practices Concerning Elevated Risk Complex Structured Finance Activities. This supervisory guidance addresses risk-management principles that should help institutions to identify, evaluate, and manage the heightened legal and reputational risks that may arise from their involvement in complex structured financing transactions (CSFTs). The guidance is focused on those CSFTs that may present heightened levels of legal or reputational risk to an institution and are thus defined as “elevated-risk

CSFTs.” Such transactions typically are conducted by a limited number of large financial institutions. (See SR-07-05 and 72 *Fed. Reg.* 1372, January 11, 2007.)

Section 6010.1

This section, “Other Types of Examinations,” has been revised to discuss the responsibilities Reserve Bank staff have in the examination and supervision of, and the reporting for, an institution’s compliance with the Government Securities Act. Reserve Bank staff should report only those findings derived from the examinations of government securities broker or dealer operations of state member banks, branches, or agencies subject to Federal Reserve supervision. A Reserve Bank’s staff is required to report separately (to designated Board staff) the results of their reviews of government securities broker-dealer activities (and such broker-dealer’s related custodial activities). The optional reporting form, Summary Report of Examination of Government Securities Broker-Dealer and Custodial Activities, may be used for this purpose. See the specific examination guidance and procedures in SR-06-8, SR-93-40, and SR-87-37. (See also SR-94-5, SR-90-1, and SR-88-26.)

Commercial Bank Examination Manual

Supplement 27—May 2007

Summary of Changes

Sections 2010.3, 2040.3, and 4150.1

The “Due from Banks (Examination Procedures),” “Loan Portfolio Management (Examination Procedures),” and “Review of Regulatory Reports” sections were revised as the result of the Financial Services Relief Act of 2006 (Relief Act) and the Board’s December 6, 2006, approval of an interim rule amendment of Regulation O (effective December 11, 2006). The Relief Act eliminated certain statutory reporting and disclosure requirements pertaining to insider lending by federally insured financial institutions. Sections 215.9, 215.10, and Subpart B of Regulation O were deleted as a result of the rule’s changes. (See 71 *Fed. Reg.* 71,472, December 11, 2006.) The Board approved the final rule for this amendment without change on May 25, 2007 (effective July 2, 2007). (See 72 *Fed. Reg.* 30,470, June 1, 2007.)

Sections 2043.1, 2043.2, 2043.3, and 2043.4

These new “Nontraditional Mortgages—Associated Risks” sections have been developed based on the September 29, 2006, Interagency Guidance on Nontraditional Mortgage Product Risks. (See SR-06-15.) The guidance addresses both the risk-management and consumer disclosure practices that institutions (for this manual, state member banks and their subsidiaries) should employ to effectively manage the risks associated with closed-end residential mortgage loan products that allow borrowers to defer payment of principal and, sometimes, interest. Examination objectives, examination procedures, and an internal control questionnaire are provided, which should be used when conducting an examination of a bank that is engaged in such lending activities.

Section 2070.1

This “Allowance for Loan and Lease Losses” section has been fully revised to incorporate the December 13, 2006, Interagency Policy Statement on the Allowance for Loan and

Lease Losses (ALLL). (See SR-06-17.) The guidance updates the 1993 Interagency Guidance on the ALLL (SR-93-70). The revised policy statement emphasizes that each institution is responsible for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses. Each institution should ensure that the adequate controls are in place to consistently determine the appropriate balance of the ALLL in accordance with (1) GAAP, (2) the institution’s stated policies and procedures, and (3) management’s best judgment and relevant supervisory guidance. The policy emphasizes also that an institution should provide reasonable support and documentation of its ALLL estimates, including adjustments to the allowance for qualitative or environmental factors and unallocated portions of the allowance.

Section 2103.1

A new section, “Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices,” sets forth the December 6, 2006, interagency supervisory guidance, which was issued jointly by the Federal Reserve and the other federal bank regulatory agencies. The guidance, effective December 12, 2006, is applicable to state member banks.

The guidance was developed to reinforce sound risk-management practices for institutions with high and increasing concentrations of commercial real estate loans on their balance sheets. An institution’s strong risk-management practices and its maintenance of appropriate levels of capital are important elements of a sound commercial real estate (CRE) lending program, particularly when an institution has a concentration in CRE or a CRE lending strategy leading to a concentration.

The guidance applies to concentrations in CRE loans sensitive to the cyclicity of CRE markets. For purposes of this guidance, CRE loans include loans where repayment is dependent on the rental income or the sale or refinancing of the real estate held as collateral. The guidance does not apply to owner-occupied

loans and loans where real estate is taken as a secondary source of repayment or through an abundance of caution.

The guidance notes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary depending on the portfolio risk characteristics and the quality of risk-management processes. The guidance, therefore, does not establish a CRE concentration limit that applies to all institutions. Rather, the guidance encourages institutions to perform ongoing risk assessments to identify and monitor CRE concentrations.

The guidance provides numerical indicators as supervisory monitoring criteria to identify institutions that may have CRE concentrations that warrant greater supervisory scrutiny. The monitoring criteria should serve as a starting point for a dialogue between the supervisory staff and an institution's management about the level and nature of the institution's CRE concentration risk. (See SR-07-1 and its attachments.)

Section 3020.1

The "Assessment of Capital Adequacy" section was revised to include an interim interagency decision on the impact of the Financial Accounting Standards Board's issuance of its September 2006 Statement of Financial Accounting Standards No. 158 (FAS 158), "Employers Accounting for Defined Benefit Pension and Other Postretirement Plans." The decision was announced in a December 14, 2006, joint press release, which was issued by the Federal Reserve Board and the other federal banking and thrift regulatory agencies (the agencies). FAS 158 provides that a banking organization that spon-

sors a single-employer defined benefit postretirement plan, such as a pension plan or health care plan, must recognize the overfunded or underfunded status of each such plan as an asset or a liability on its balance sheet with corresponding adjustments recognized as accumulated other comprehensive income (AOCI). The agencies' interim decision conveys that banking organizations are to exclude from regulatory capital any amounts recorded in AOCI that have resulted from their adoption and application of FAS 158.

Sections 2000.4, 2130.3, 4060.1, 4060.4, 4063.4, 4128.1, 4128.3, and 5020.1

These sections "Cash Accounts (Internal Control Questionnaire)," "Consumer Credit," "Information Technology" (including the internal control questionnaire), "Electronic Banking (Internal Control Questionnaire)," "Private-Banking Activities," (including the examination procedures), and "Overall Conclusions Regarding Condition of the Bank," have been amended for the revised Suspicious Activity Report by Depository Institutions (SAR-DI) form. The Federal Reserve, along with the other federal financial institutions regulatory agencies and the Financial Crimes Enforcement Network (FinCEN), proposed revisions to this form and the instructions in order to (1) enhance their clarity, (2) allow for joint filings of suspicious activity reports, and (3) improve the usefulness of the SAR-DI form to law enforcement authorities. The new form's implementation date has not been determined. Banking organizations subject to SAR filing should continue using the existing SAR-DI format. (See 72 *Fed. Reg.* 23,891, May 1, 2007.)

Commercial Bank Examination Manual

Supplement 26—November 2006

Summary of Changes

Sections 2040.1 and 2040.3

These “Loan Portfolio Management” sections have been revised to incorporate a May 22, 2006, Board staff interpretation of Regulation O pertaining to the use of bank-owned or bank-issued credit cards by bank insiders for the bank’s business purposes. The interpretation is also concerned with the extension of credit provisions and the market-terms requirement of Regulation O when a bank insider uses the bank-owned or bank-issued credit card to acquire goods and services for personal purposes. The examination procedures have been revised to include the provisions of this interpretation.

Sections 3000.1, 3000.2, and 3000.3

The “Deposit Accounts” sections have been revised to include a brief overview of the Federal Deposit Insurance Corporation’s (FDIC’s) Deposit Insurance System. FDIC’s deposit insurance coverage was amended by the issuance of its March 23, 2006, interim final rules (effective on April 1, 2006). These interim rules implemented certain provisions of (1) the Federal Deposit Insurance Reform Act of 2005 and (2) the Federal Deposit Insurance Reform Conforming Amendments Act of 2005. (See 71 *Fed. Reg.* 14,629.) For deposit accounts, the FDIC’s interim rules provided for (1) inflation (cost-of-living) adjustments to increase the standard maximum deposit insurance amount (SMDIA) of \$100,000 on a five-year cycle, beginning on April 1, 2010; (2) an increase in the FDIC’s SMDIA from \$100,000 to \$250,000 for certain individual retirement accounts, which includes future cost-of-living adjustments; and (3) per-participant FDIC pass-through deposit insurance coverage for employee benefit accounts. (See 12 CFR 330.) The FDIC’s increased insurance coverage of individual retirement accounts also applies to eligible deferred compensation plan accounts.

The “Deposit Accounts” sections also were revised to incorporate the May 11, 2001, Joint Agency Advisory on Brokered and Rate-Sensitive Deposits issued by the federal banking agencies to highlight the potential risks associ-

ated with excessive reliance on such deposits. The advisory provides guidance on prudent risk identification and the management for these types of funding. (See SR-01-14.) The examination objectives and procedures were revised to incorporate the advisory’s guidance.

Section 3020.1

This section, “Assessment of Capital Adequacy,” was revised to incorporate a general discussion of the risk-based capital treatment of securities-lending transactions (see 12 CFR 208, appendix A, section III.D.1.c). Included is a brief summary of the Board’s February 6, 2006, revision of the Board’s market-risk measure (effective on February 22, 2006). The revision reduced the capital requirements for certain cash-collateralized securities-borrowing transactions of state member banks that adopt the market-risk rule. The action aligns the capital requirements for those transactions with the risk involved. It provides a capital treatment for state member banks that is more in line with the capital treatment that applies to their domestic and foreign competitors. (See Regulation H, 12 CFR 208, appendix E, and 71 *Fed. Reg.* 8,932, February 22, 2006.)

In addition, the revised section includes discussions of the May 14, 2003, and August 15, 2006, Board interpretations that were issued in response to separate inquiries received from the same bank. The May 14, 2003, interpretation concerns an inquiry regarding the risk-based capital treatment of certain European agency securities-lending arrangements that the bank had acquired. For these transactions (the cash-collateral transactions), the bank, acting as agent for its clients, lends its clients’ securities and receives cash collateral in return. It then reinvests the cash collateral in a reverse repurchase agreement for which it receives securities collateral in return. For the cash-collateral transactions, the bank indemnifies its client against the risk of default by both the securities borrower and the reverse repurchase counterparty.

The August 15, 2006, interpretation was also issued in regard to the risk-based capital treatment of certain other securities-lending transactions. For these transactions, the bank, acting as agent for clients, lends its clients’ securities and

receives liquid securities collateral in return (the securities-collateral transactions). The bank indicated that the liquid securities collateral was to include government agency, government-sponsored entity, corporate debt or equity, or asset-backed or mortgage-backed securities. The bank stated that in the event that the borrower defaulted, the bank would be in a position to terminate a securities-collateral transaction and sell the collateral in order to purchase securities to replace the securities that were originally lent. The bank's exposure would be limited to the difference between the purchase price of replacement securities and the market value of the securities collateral. The bank requested that it receive risk-based capital treatment similar to that which the Board had approved and extended to the bank in its letter dated May 14, 2003 (the prior approval).

The Board, using its reservation of authority, again determined that under its current risk-based capital guidelines the capital charge for this specific type of securities-lending arrangement would exceed the amount of economic risk posed to the bank, which would result in capital charges that would be significantly out of proportion to the risk. Referencing the prior approval, the Board approved the August 15, 2006, exception to its risk-based capital guidelines. The bank, which had adopted the market-risk rule, will compute its regulatory capital for these transactions using a loan-equivalent methodology in accordance with the prior approval. In so doing, the bank will assign the risk weight of the counterparty to the exposure amount of all such transactions with the counterparty. The bank must calculate the exposure amount as the sum of its current unsecured exposure on its portfolio of transactions with the counterparty, plus an add-on amount for potential future exposure. This estimated exposure is to be calculated using the bank's VaR model to determine the capital charge for the securities-collateral transactions, subject to the certain specified conditions.

Section 4030.1

The section titled "Asset Securitization" has been revised to incorporate the August 4, 2005, Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper Liquidity Facilities and the Resulting Risk-Based Capital Treatment. The guidance clarifies the application of

the asset-quality test for determining the eligibility or ineligibility of an ABCP liquidity facility and the resulting risk-based capital treatment of such a facility for banks. The guidance also re-emphasizes that the primary function of an eligible ABCP liquidity facility should be to provide *liquidity*—not credit enhancement. An eligible liquidity facility must have an asset-quality test that precludes funding against assets that are (1) 90 days or more past due, (2) in default, or (3) below investment grade, implying that the institution providing the ABCP liquidity facility should not be exposed to the credit risk associated with such assets. The interagency statement indicates that an ABCP liquidity facility will meet the asset-quality test if, at all times throughout the transaction the (1) liquidity provider has access to certain types of acceptable credit enhancements that support the liquidity facility and (2) notional amount of such credit enhancements exceeds the amount of underlying assets that are 90 days or more past due, defaulted, or below investment grade, that the liquidity provider may be obligated to fund under the facility. (See SR-05-13.)

Section 4063.1

The section "Electronic Banking" was revised to incorporate a brief reference to the August 15, 2006, Interagency Questions and Answers (Q&As) for the October 2005 Interagency Guidance on Authentication in an Internet Banking Environment. (See SR-06-13 and SR-05-19.) The Q&As were designed to assist financial institutions and their technology service providers in conforming to the scope, risk assessments, timing, and other issues addressed in the October 2005 guidance that becomes effective at year-end 2006. The section notes, again, that single-factor authentication, as the only control mechanism, is inadequate for high-risk transactions involving access to customer information or the movement of funds to other parties.

Sections 4133.1 and 4133.3

These "Prompt Corrective Action" sections include several changes to more closely align the content to the Board's prompt-corrective-action (PCA) rules. Minor technical amendments that were previously made to the rules (effective on October 1, 1998) are also included.

For example, the definition of total assets was revised to allow the Federal Reserve the option of using period-end rather than average total assets for determining the PCA categories within the rules. (See 63 *Fed. Reg.* 37,630, and 12 CFR 208, subpart D.) The section now includes examination procedures for evaluating compliance with the PCA rules.

Sections 4140.1, 4140.2, 4140.3, and 4140.4

The “Real Estate Appraisals and Evaluations” sections have been revised to incorporate the June 22, 2006, interagency statement, The 2006

Revisions to Uniform Standards of Professional Appraisal Practice (USPAP), issued by the federal banking agencies. Under the appraisal regulations, institutions must ensure that their appraisals supporting federally related transactions adhere to USPAP. The interagency statement provides an overview of the USPAP revisions and the ramifications of these revisions to regulated institutions. The 2006 USPAP, effective July 1, 2006, incorporates certain prominent revisions made by the Appraisal Standards Board. These revisions include a new Scope of Work Rule and the deletion of the Departure Rule and some of its associated terminology. (See SR-06-9.)

Commercial Bank Examination Manual

Supplement 25—May 2006

Summary Of Changes

Section 1000.1

This revised section, “Examination Strategy and Risk-Focused Examinations,” reaffirms the definition of the responsible Reserve Bank (RRB) and specifies the RRB’s responsibilities for conducting inter-District examination and supervision activities for a banking organization. The section highlights and clarifies the role of the RRB with respect to inter-District and local Reserve Bank coordination of banking examination and supervision activities. (See SR-05-27/CA-05-11.)

Sections 1010.1, 1010.2, 1010.3, 1010.4, and A.1010.1

The sections titled “Internal Control and Audit Function, Oversight, and Outsourcing” have been revised to incorporate the February 9, 2006, Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters. The advisory informs financial institutions that it is unsafe and unsound to enter into external audit contracts (that is, engagement letters) for the performance of auditing or attestation services when the contracts (1) indemnify the external auditor against all claims made by third parties, (2) hold harmless or release the external auditor from liability for claims or potential claims that might be asserted by the client financial institution (other than claims for punitive damages), or (3) limit the remedies available to the client financial institution (other than punitive damages). Such limits on external auditors’ liability weaken the auditor’s independence and performance, thus reducing the supervisory agency’s ability to rely on the auditor’s work. The examination objectives, examination procedures, and internal control questionnaire incorporate certain key provisions of the advisory. Section A.1010.1 provides examples of unsafe and unsound limitation-of-liability provisions, and it discusses frequently asked questions and answers that were posed to the Securities and Exchange Commission (Office of the Chief Accountant). The answers confirm that an accountant (auditor) is *not* independent when an

accountant and a client enter into an agreement of indemnity, directly or through an affiliate that seeks to assure the accountant immunity from liability for the accountant’s own negligent acts, whether they are acts of omission or commission. (See SR-06-4.)

Section 1015.1

This new section, “Conflict-of-Interest Rules for Examiners,” has been developed to inform Federal Reserve System examiners of the System’s policies on maintaining an independent appearance by avoiding conflicts of interest. Examiners must comply with statutory prohibitions and adhere to the System’s rules on conflicts of interest, which are intended to ensure the examiners’ objectivity and integrity. The statutory prohibition (18 USC 213) on accepting any loan or gratuity from any bank under examination is discussed. The limited easing of examiner borrowing restrictions on obtaining credit cards and certain home mortgage loans is also discussed; the easing of these restrictions resulted from the implementation of the Preserving Independence of Financial Institution Examinations Act of 2003 (18 USC 212–213). (See SR-05-2.) The special post-employment restrictions of the Intelligence Reform and Terrorism Prevention Act of 2004 are also reviewed. The Board implemented these restrictions in its November 17, 2005, rule (effective December 17, 2005). (See 12 CFR 263 and 264 and SR-05-26.)

Section 1020.1

The “Federal Reserve System Bank Watch List and Surveillance Programs” section has been substantially revised to reflect the Federal Reserve’s replacement of the former SEER (the System to Estimate Examination Ratings) surveillance models with a new econometric framework, referred to as the Supervision and Regulation Statistical Assessment of Bank Risk model, or SR-SABR. The SR-SABR model assigns a two-component surveillance rating to each bank. The first component is the current composite CAMELS rating assigned to the bank. The second component is a letter (A, B, C, D, or

F) that reflects the model’s assessment of the relative strength or weakness of a bank compared with other institutions within the same CAMELS rating category. The section describes the new model, details the screening thresholds for SR-SABR within the State Member Bank Watch List program, and updates the watch list follow-up procedures. (See SR-06-2.)

Sections 2015.1, 2015.2, 2015.3, and 2015.4

The new “Interbank Liabilities” sections set forth supervisory guidance that is based on Regulation F (12 CFR 206), which was developed under the authority of section 23 of the Federal Reserve Act (12 USC 371b-2). The Board established standards to limit the risks posed by exposure of insured depository institutions to other depository institutions with which they do business, referred to as *correspondents*. Regulation F applies to FDIC-insured banks, savings associations, and branches of foreign banks (referred to collectively as *banks*). Banks are generally required to have in place internal policies and procedures to evaluate and control the exposure to their correspondents. Regulation F specifies a general “limit,” stated in terms of the exposed bank’s capital, for overnight credit exposure to an individual correspondent. A bank should also ordinarily limit its credit exposure to an individual correspondent to an amount equal to not more than 25 percent of the exposed bank’s total capital, unless the bank can demonstrate that its correspondent is at least “adequately capitalized,” for which no capital limit is specified. A bank is required to establish and follow its own internal policies and procedures for exposure to all correspondents, regardless of its capital level. The rule was effective on December 19, 1992; the Board made technical amendments to the rule on September 3, 2003 (effective September 10, 2003). Examination objectives, examination procedures, and an internal control questionnaire are included. (See SR-93-36.)

Section 4042.3

The accounting considerations within the “Operational Risk Assessment” subsection (examination procedure 3b) were revised to remove the reference to “in excess of 25 percent

of the other assets” threshold for the reporting of the cash surrender value of life insurance assets in the bank Call Report, FFIEC 031, Schedule RC-F item 5, other assets. As of March 31, 2006, this item must be used to report the cash surrender value of *all* life insurance assets.

Sections 4050.1 and 4128.1

Two sections, “Bank-Related Organizations” and “Private-Banking Activities,” were revised to incorporate the Board’s March 15, 2006, approval of an amendment to Regulation K. The amendment incorporates (by reference) section 208.63 of Regulation H into sections 211.5 and 211.24 of Regulation K. As a result, Edge and agreement corporations and other foreign banking organizations (that is, Federal Reserve-supervised U.S. branches, agencies, and representative offices of foreign banks) must establish and maintain procedures reasonably designed to ensure and monitor their compliance with the Bank Secrecy Act and related regulations. (See SR-06-7.)

Sections 4128.1, 4128.2, and 4128.3

The “Private-Banking Activities” section has been further revised to discuss certain borrowing mechanisms that nonresident-alien customers may establish to keep their financial assets in the United States so those assets can be used as operating capital for businesses they own and operate in their home countries. Private bankers need to maintain, in the United States, adequate customer-due-diligence information on such nonresident-alien customers and their primary business interests so that the customer’s home-country government can identify who owns the assets. Examination procedures for private-banking activities (section 4128.3) have also been added.

Section 5020.1

The “Overall Conclusions Regarding Condition of the Bank” section was revised to incorporate the January 20, 2006, Interagency Guidance on Sharing Suspicious Activity Reports with Head Offices and Controlling Companies. The guidance confirms that (1) a U.S. branch or agency of

a foreign bank may disclose a Suspicious Activity Report (SAR) to its head office outside the United States and (2) a U.S. bank or savings association may disclose a SAR to controlling

companies, whether domestic or foreign. Banking organizations must maintain appropriate arrangements for the protection of confidentiality of SARs. (See SR-06-01.)

Commercial Bank Examination Manual

Supplement 24—November 2005

LIST OF CHANGES

<i>Section number</i>	<i>Description of the change</i>
2040.1, 2040.2, 2040.3, 2040.4	The “Loan Portfolio Management” section has been revised to incorporate the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans, which was issued by the Federal Reserve and the other federal supervisory agencies (the agencies). ¹ The advisory provides guidance on the appropriate accounting and reporting for both derivative loan commitments (commitments to originate mortgage loans that will be held for resale) and forward loan-sales commitments (commitments to sell mortgage loans). When accounting and reporting for derivative loan commitments, institutions are expected to use generally accepted accounting principles (GAAP). Institutions must also correctly report derivative loan commitments in accordance with the Call Report instructions and forms. (See SR-05-10.) The examination objectives, examination procedures, and internal control questionnaire have been revised to incorporate this interagency advisory.
2090.1, 2090.2, 2090.3, 2090.4	The section “Real Estate Loans” has been revised to include the May 16, 2005, Interagency Credit Risk Management Guidance for Home Equity Lending. The agencies issued the guidance to promote a greater focus on sound risk-management practices at financial institutions that have home equity lending programs, including open-end home equity lines of credit and closed-end home equity loans. The agencies expressed concern that some institutions’ credit-risk management practices for home equity lending had not kept pace with the product’s rapid growth and the easing of underwriting standards for products having higher embedded risk. The guidance highlights the sound risk-management practices an institution should follow to align the growth with the risk within its home equity portfolio. The guidance should also be considered in the context of existing regulations and supervisory guidelines. (See SR-05-11 and its attachment.) The examination objectives, examination procedures, and internal control questionnaire were revised to incorporate the interagency guidance.
3000.1	The “Deposit Accounts” section has been revised to update the statutory and regulatory provisions for a bank soliciting, acquiring, renewing, or rolling over brokered deposits, as those provisions are stated in section 29 of the Federal Deposit Insurance Act (12 USC 1831f) and section 337.6 of the Federal Deposit Insurance Corporation’s brokered-deposit rule (12 CFR 337.6). Section 3000.1 defines and discusses the three capitalization status levels for banks: well capitalized, adequately capitalized, or undercapitalized. These levels determine the extent to which banks may engage in brokered-deposit activities. These definitions are the same as those found in the prompt-corrective-action rules of the FDIC and the Federal Reserve Board. (See 12 CFR 325.103 and 12 CFR 208.43.)

1. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

Section number	Description of the change
4042.1, 4042.2, 4042.3, 4042.4	<p>The “Purchase and Risk Management of Life Insurance” section has been revised to include appendix C, Interagency Interpretations of the Interagency Statement on the Purchase and Risk Management of Life Insurance (the interpretations). The interpretations have been developed to clarify a variety of matters, including financial reporting, credit-exposure limits, concentration limits, and the appropriate methods for calculating the amount of insurance an institution may purchase.</p> <p>Three new supporting sections provide examination objectives, examination procedures, and an internal control questionnaire. The new sections are based on the Interagency Statement on the Purchase and Risk Management of Life Insurance. (See SR-04-19 and its attachment.)</p>
4128.1	<p>The “Private-Banking Activities” section has been revised to include general and specific references to the relevant supervisory guidance in the June 2005 Federal Financial Institutions Examination Council’s <i>Bank Secrecy Act/Anti-Money Laundering Examination Manual</i>. (See SR-05-12 and its attachments.)</p>
4140.1	<p>The section “Real Estate Appraisals and Evaluations” has been revised to include a summary description of the interagency responses to questions on both the agencies’ appraisal regulations and the October 2003 interagency statement titled Independent Appraisal and Evaluation Functions. The agencies’ March 22, 2005, interpretive responses address common questions on the requirements of the appraisal regulations and the October 2003 interagency statement. (See SR-05-5 and its attachment.) The section has also been revised to include a summary of the September 8, 2005, interagency interpretive responses to frequently asked questions that were issued jointly to help regulated institutions comply with the agencies’ appraisal regulation and real estate lending requirements when financing residential construction in a tract development. (See SR-05-14 and its attachment.)</p>
6003.1	<p>A new section, “Community Bank Examination Report,” provides the examiner with guidance on preparing examination reports for community banks. Developments in technology, the expansion of financial services, and a risk-focused approach to examinations necessitated a need for increased flexibility when organizing and structuring the content of the community bank examination report. Examiners may use certain content headings, which follow a continuous-flow reporting format, or they may use a separate-report-page format. The reporting instructions distinguish between <i>mandatory</i> content (when warranted by the bank’s condition or circumstances) and <i>optional</i> content. The examiner has discretion in the arrangement of certain content. Subject to certain limitations, the examiner may customize and streamline the examination report to better focus on the examiner’s findings involving matters of risk that have a significant impact on the bank’s overall financial condition. This guidance applies <i>only</i> to the preparation of community bank examination reports. (See SR-01-19.)</p>

Commercial Bank Examination Manual

Supplement 23—May 2005

LIST OF CHANGES

<i>Section number</i>	<i>Description of the change</i>
1000.1, 4030.1	The “Examination Strategy and Risk-Focused Examinations” and the “Asset Securitization” sections have been updated to add references to the new bank holding company RFI/C(D) rating system, which became effective January 1, 2005. (See SR-04-18.)
2130.1, 2130.3, 2130.4	The “Consumer Credit” sections have been revised to discuss various types, characteristics, and fee structures of a bank’s ad hoc and automatic overdraft programs. Section 2130.1 includes the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs that addresses the agencies’ concerns about the potentially misleading implementation, marketing, and disclosure practices associated with the operation of these programs. Financial institutions are encouraged to review their overdraft-protection programs to make certain that their marketing and communications do not mislead consumers or encourage irresponsible consumer financial behavior that could increase the institution’s risk. The guidance also addresses the safety-and-soundness considerations, risk-based capital treatment, and legal risks associated with overdraft-protection programs. (See SR-05-3/CA-05-2.) The examination procedures and the internal control questionnaire have been updated to incorporate this guidance. (See also the summary for sections 3000.1 and 3000.3.) <p>The consumer credit examination procedures have also been updated to include references to and guidance on the Suspicious Activity Report (SAR) and the Bank Secrecy Act (BSA) compliance program. (See sections 208.62–63 of the Board’s Regulation H (12 CFR 208.62–63) and SR-04-8.)</p>
2210.1	The “Other Assets and Other Liabilities” section has been updated to coincide with current accounting guidance and the instructions for the bank Call Report. The section discusses the current examination focus, concerns, and procedures for other assets and other liabilities, as well as their current categories and composition. The section includes the accounting treatment for bank-owned life insurance (BOLI) and an improved discussion of deferred tax assets and deferred tax liabilities (including the risk-based capital limitation on their inclusion in tier 1 capital). For more information on BOLI, see SR-04-4 and SR-04-19.
3000.1, 3000.3	Two of the “Deposit Accounts” sections have been revised to include the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs that was issued to assist banks in the responsible disclosure and administration of their overdraft-protection services. The policy states that banks should establish and monitor written policies and procedures for ad hoc, automated, or other overdraft-protection programs. A bank’s policies and procedures should be adequate to address the credit, operational, and other risks associated with these types of programs. (See SR-05-3/CA-05-2 and the summary for the 2130 sections.) The examination procedures have been revised to incorporate this supervisory guidance.

Section number	Description of the change
3015.1	A new section, “Deferred Compensation Agreements,” has been added to the “Liabilities and Capital” chapter. The section provides guidance from the February 11, 2004, Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance. The advisory was issued because the agencies, through the examination process, identified many institutions that had incorrectly accounted for obligations under a type of deferred compensation agreement commonly referred to as a <i>revenue-neutral plan</i> or an <i>indexed retirement plan</i> . The advisory informs institutions that they need to review their accounting for deferred compensation agreements to ensure that the agreements have been appropriately measured and reported. (See SR-04-4 and SR-04-19.)
4042.1	A new section, “Purchase and Risk Management of Bank-Owned Life Insurance,” provides the text of the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance. The statement discusses the safety-and-soundness and risk-management implications of purchases and holdings of life insurance by banks. The agencies issued the guidance because they were concerned that some institutions may not have an adequate understanding of the risks associated with BOLI, including its liquidity, operational, reputational, and compliance/legal risks. Further, institutions may have committed a significant amount of capital to BOLI holdings without properly assessing the associated risks. When an institution is planning to acquire BOLI that will result in an aggregate cash surrender value in excess of 25 percent of its tier 1 capital plus the allowance for loan and lease losses, the agencies expect the institution to obtain the prior approval of its board of directors or its designated board committee. The guidance addresses the need for institutions to conduct comprehensive pre- and post-purchase analyses of BOLI, including its unique characteristics, risks, and rewards. Institutions are expected to have comprehensive risk-management processes for their BOLI purchases and holdings; these processes should be consistent with safe and sound banking practices. (See SR-04-4 and SR-04-19.)
4043.1	The “Insurance Sales Activities and Consumer Protection in Sales of Insurance” section has been revised to include the following references: <ul data-bbox="253 1150 993 1204" style="list-style-type: none">• the recently updated discussion on tying arrangements (section 2040.1)• the new BOLI supervisory guidance (section 4042.1)
4050.1	The “Bank-Related Organizations” section has been revised to incorporate the U.S. Department of the Treasury’s regulation regarding foreign correspondent accounts. The regulation became effective October 28, 2002. (See 31 CFR 103.177 (amended as of December 24, 2002) and 103.185.) The regulation implemented sections 313 and 319(b) of the USA Patriot Act. A covered financial institution (CFI) is prohibited from establishing, maintaining, administering, or managing a correspondent account in the United States for, or on behalf of, a foreign shell bank (a foreign bank that has no physical presence in the United States or other jurisdictions) that is <i>not</i> affiliated (1) with a U.S.-domiciled financial institution or (2) with a foreign bank that maintains a physical presence in the United States or a foreign country and is supervised by its home-country banking authority. A CFI that maintains

*Section number**Description of the change*

a correspondent account for a foreign bank in the United States must maintain records in the United States identifying the owners of the foreign bank. (See SR-03-17 and the attached October 2003 Bank Secrecy Act Examination Procedures for Correspondent Accounts for Foreign Shell Banks; Recordkeeping and Termination of Correspondent Accounts for Foreign Banks. See also SR-01-29.)

4060.1,
4060.2,
4060.3,
4060.4

The “Information Technology” sections have been revised to include the Board’s December 16, 2004, adoption of rule changes (effective July 1, 2005) that implement section 216 of the Fair and Accurate Credit Transactions Act of 2003 and that amend the Interagency Guidelines Establishing Information Security Standards. (See the Board’s December 21, 2004, press release.) To address the risks associated with identity theft, financial institutions are required to make modest adjustments to their information security programs to develop, implement, maintain, and monitor, as part of their existing information security program, appropriate measures to properly dispose of consumer and customer information derived from credit reports (information maintained in paper-based or electronic form). Each financial institution must contractually require its service providers to develop appropriate measures for the proper disposal of the institution’s consumer and customer information and, when warranted, monitor its service providers to confirm that they have satisfied their contractual obligations.

The sections have also been revised to include the Board’s March 21, 2005, adoption of Jointly Issued Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice. (See the Board’s March 23, 2005, press release.) Financial institutions are to develop and implement a response program designed to address incidents of unauthorized access to sensitive customer information, maintained by the institution or its service provider, that could result in substantial harm or inconvenience to the customer. Each financial institution has the flexibility to design a risk-based response program tailored to the size, complexity, and nature of its operations. Customer notice is a key feature of an institution’s response program. (See Regulation H, appendix D-2, supplement A (12 CFR 208, appendix D-2, supplement A).) The examination objectives, examination procedures, and internal control questionnaire have been updated to incorporate or reference these rule changes and the interagency guidance.

4063.4

The “Electronic Banking: Internal Control Questionnaire” has been updated to include the following references:

- SR-03-12 (and the attached July 2003 SAR form)
- the Board’s Regulation H requirements for suspicious-activity reporting (12 CFR 208.62)
- the Board’s Regulation H requirements for the BSA compliance program (12 CFR 208.63)

See also SR-04-8 and the attached May 24, 2004, Interagency Advisory—Federal Court Reaffirms Protections for Financial Institutions Filing Suspicious Activity Reports.

<i>Section number</i>	<i>Description of the change</i>
4128.1	The “Private Banking” section has been revised to incorporate new and enhanced statutory requirements of the USA Patriot Act. The requirements are designed to prevent, detect, and prosecute money laundering and terrorism. For banking organizations, the act’s provisions are implemented through regulations issued by the U.S. Department of the Treasury (31 CFR 103). Section 326 of the Patriot Act (codified in the BSA at 31 USC 5318(l)) requires financial institutions to have customer identification programs, that is, programs to collect and maintain certain records and documentation on customers. Institutions should also develop and use identity verification procedures to ensure the identity of their customers. SR-04-13 describes the BSA examination procedures for customer identification programs; examiners should follow these procedures when evaluating an institution’s compliance with the regulation. (See also SR-03-17 and SR-01-29.) Relevant interagency interpretive guidance, in a question-and-answer format, addresses the customer identification rules. (See SR-05-9.)
4150.1	The “Review of Regulatory Reports” section has been revised to discuss the termination of the Federal Reserve’s Regulatory Reports Monitoring Program. A less formal program will continue at the Reserve Banks. (See SR-04-15.)
5020.1	The “Overall Conclusions Regarding Condition of the Bank” section has been revised to include guidance on a bank’s use of the SAR form and the filing of a SAR with the Department of the Treasury’s Financial Crimes Enforcement Network (FinCEN). A bank’s record-retention requirements for documentation supporting a SAR are also discussed. (See section 208.62 of the Board’s Regulation H (12 CFR 206.62) and SR-04-8.) In addition, the section has been revised to include the February 28, 2005, Interagency Advisory on the Confidentiality of the Supervisory Rating and Other Nonpublic Supervisory Information. The advisory reminds banking organizations of the statutory prohibitions on the disclosure of supervisory ratings and other confidential supervisory information to third parties. (See SR-05-4.)
7000.0	The “International” section has been revised to convey an overview of the examination focus for international banking transactions and activities. The discussion of other examination topics and Federal Reserve System and FFIEC examination manuals has been updated for those international areas that may be need to be reviewed during a bank examination.
7000.1	The former “International—General Introduction” section has been renamed “International—Examination Overview and Strategy.” The revised title better reflects the content of the sections that follow, which provide the examination and supervisory guidance for international transactions, activities, and international banking. References and other section titles were also updated.

Commercial Bank Examination Manual

Supplement 22—November 2004

LIST OF CHANGES

<i>Section number</i>	<i>Description of the change</i>
1000.1	The “Examination Strategy and Risk-Focused Examinations” section incorporates a May 2004 recommended-practices document promulgated by the interagency State-Federal Working Group. The working group consists of state bank commissioners and senior officials from the Federal Reserve and the Federal Deposit Insurance Corporation. ¹ The recommended practices highlight the importance of communication and coordination between state and federal banking agencies in the planning and execution of supervisory activities over state-chartered banking organizations. The recommended practices are the common courtesies and practices examination and supervisory staff are to follow in the implementation and execution of their agencies’ supervisory activities. These recommended practices further reinforce the long-standing commitment of federal and state banking supervisors to provide efficient, effective, and seamless oversight of state banks of all sizes. The practices apply to institutions that operate in a single state or in more than one state. (See SR-04-12.)
2020.1, 2020.3	The “Investment Securities and End-User Activities” section has been updated to include the revised Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts (the uniform agreement) that was jointly issued by the federal banking and thrift agencies (the agencies) on June 15, 2004. The revised uniform agreement amends the 1938 classification of securities agreement (the 1938 accord), which was revised on July 15, 1949, and May 7, 1979. The uniform agreement sets forth the definitions of the classification categories and the specific examination procedures and information for classifying bank assets, including securities. The classification of loans in the uniform agreement was not changed by the June 2004 revision. The revised uniform agreement addresses, among other items, the treatment of rating differences, multiple security ratings, and split or partially rated securities. It also eliminates the automatic classification for sub-investment-grade debt securities. (See SR-04-9.) The examination procedures were also revised to incorporate the supervisory guidance provided in the revised uniform agreement.
2040.1, 2040.2, 2040.3	The “Loan Portfolio Management” section has been revised to incorporate a detailed discussion on tying arrangements. Section 106 of the Bank Holding Company Act Amendments of 1970 generally prohibits a bank from conditioning the availability or price of one product or service (the <i>tying product</i> , or the <i>desired product</i>) on a requirement that a customer obtain another product or service (the <i>tied product</i>) from the bank or an affiliate of the bank. Section 106 prevents banks from using their market power over certain products (specifically credit) to gain an unfair competitive advantage in other products.

1. The source for the recommended-practices document is the November 14, 1996, Nationwide State and Federal Supervisory Agreement (the agreement) to enhance the overall state-federal coordinated supervision program for state-chartered banks. The agreement provides for the supervision of state-chartered banks that have interstate branches. (See SR-96-33.)

*Section number**Description of the change*

Section 106 also prohibits a bank from conditioning the availability or price of one product on a requirement that a customer (1) provide another product to the bank or an affiliate of the bank or (2) not obtain another product from a competitor of the bank or from a competitor of an affiliate of the bank. For example, the statute prohibits a bank from requiring that a prospective borrower purchase homeowners' insurance from the bank or an affiliate of the bank to obtain a mortgage loan from the bank. Section 106 contains several exceptions to its general prohibitions, and it authorizes the Board to grant, by regulation or order, additional exceptions from the prohibitions when the Board determines an exception "will not be contrary to the purposes" of the statute.

Under the federal banking laws, a subsidiary of a bank is considered to be part of the bank for most supervisory and regulatory purposes. Therefore, the restrictions in section 106 generally apply to tying arrangements imposed by a subsidiary of a bank in the same manner that the statute applies to the parent bank itself. Thus, a subsidiary of a bank is generally prohibited from conditioning the availability or price of a product on the customer's purchase of another product from the subsidiary, its parent bank, or any affiliate of its parent bank. Section 106 generally does not apply to tying arrangements imposed by a nonbank affiliate of a bank.

In addition to the regulatory prohibitions and exceptions, this section includes the Board or Board staff interpretations on tying arrangements, including those issued on August 18, 2003, and February 2, 2004. These two interpretations state that bank customers that receive securities-based credit can be required to hold their pledged securities as collateral at an account of a bank holding company's or bank's broker-dealer affiliate. The examination objectives and examination procedures have also been revised to address tying arrangements.

3000.1,
3000.2,
3000.3,
3000.4

The "Deposit Accounts" section has been revised to incorporate the June 15, 2004, interagency advisory "Guidance on Accepting Accounts from Foreign Governments, Foreign Embassies, and Foreign Political Figures." The advisory was issued by the federal banking and thrift agencies (the agencies) and the U.S. Department of the Treasury's Financial Crimes Enforcement Network (FinCEN). The advisory was issued in response to inquiries the agencies and FinCEN received on whether financial institutions should do business and establish account relationships with the foreign customers cited in the advisory. Banking organizations are advised that the decision to accept or reject such foreign-account relationships is theirs alone to make. Financial institutions are to be aware that there are varying degrees of risk associated with these accounts, depending on the customer and the nature of the services provided. Institutions should take appropriate steps to manage these risks, consistent with sound practices and applicable anti-money-laundering laws and regulations. (See SR-04-10.) The examination objectives, examination procedures, and internal control questionnaire were also revised to incorporate the advisory's supervisory guidance.

3020.1,
3020.3

The "Assessment of Capital Adequacy" section has been updated to include provisions of a final rule revision pertaining to a bank's risk-based capital requirements for asset-backed commercial paper (ABCP) programs. The

Section number

Description of the change

Board approved the rule changes on July 17, 2004 (effective September 30, 2004). See appendix A of Regulation H (12 CFR 208, appendix A).

In January 2003, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 46, “Consolidation of Variable Interest Entities” (FIN 46). FIN 46 required, for the first time, the consolidation of variable interest entities (VIEs) onto the balance sheets of companies deemed to be the primary beneficiaries of those entities. In December 2003, FASB revised FIN 46 as FIN 46-R. (The interpretation (FIN 46 or FIN 46-R) was effective for reporting periods that ended as early as December 15, 2003. However, there are various effective dates, which are determined on the basis of the nature, size, and type of business entity.) FIN 46-R requires the consolidation of many ABCP programs onto the balance sheets of banking organizations.

Under the Board’s revised risk-based capital rule, a bank that qualifies as a primary beneficiary and must consolidate an ABCP program that is defined as a variable interest entity under generally accepted accounting principles may exclude the consolidated ABCP program’s assets from risk-weighted assets provided that it is the sponsor of the program. Banks must also hold risk-based capital against eligible ABCP liquidity facilities with an original maturity of one year or less that provide liquidity support to ABCP by applying a new 10 percent credit-conversion factor to such facilities. Eligible ABCP liquidity facilities with an original maturity exceeding one year remain subject to the rule’s current 50 percent credit-conversion factor. Ineligible liquidity facilities are treated as direct-credit substitutes or recourse obligations, which are subject to a 100 percent credit-conversion factor. When calculating the bank’s tier 1 and total capital, any associated minority interests must also be excluded from tier 1 capital. The examination procedures were also revised to incorporate the revised risk-based capital requirements.

4030.1,
4030.2,
4030.3,
4030.4

The “Asset Securitization” section has been revised to incorporate the Board’s July 17, 2004, approval (effective September 30, 2004) of a final rule to the risk-based capital requirements for ABCP programs and their liquidity facilities. For more details, see the summary for section 3020.1. The examination objectives, examination procedures, and internal control questionnaire were also revised to incorporate the revised rule for ABCP programs.

4125.1,
4125.3

The “Payment System Risk and Electronic Funds Transfer Activities” section incorporates the Board’s September 22, 2004, changes to its Policy on Payments System Risk (the PSR policy). (See 69 *Fed. Reg.* 57917, September 28, 2004, and 69 *Fed. Reg.* 69926, December 1, 2004.) Effective July 20, 2006, the PSR policy requires Reserve Banks (1) to release interest and redemption payments on securities issued by government-sponsored enterprises (GSEs) and certain international organizations (institutions for which the Reserve Banks act as fiscal agents but whose securities are not obligations of, or fully guaranteed as to principal and interest by, the United States) only if the issuer’s Federal Reserve account contains sufficient funds to cover them and (2) to align the treatment of the general corporate account activity of GSEs and certain international organizations with the treatment of

*Section number**Description of the change*

the activity of other account holders that do not have regular access to the discount window and those account holders not eligible for intraday credit. The examination procedures have also been updated to incorporate the revisions to the Board's PSR policy.

Commercial Bank Examination Manual

Supplement 21—May 2004

LIST OF CHANGES

<i>Section number</i>	<i>Description of the change</i>
1010.1	This revised section on internal control and audit function, oversight, and outsourcing incorporates a brief overview of the joint final rules adopted by the Board and the other federal bank and thrift regulatory agencies. (See the Board's August 8, 2003, press release.) Section 36 of the Federal Deposit Insurance Act, as implemented by 12 CFR 363, governs the agencies' authority to take disciplinary actions against independent accountants and accounting firms that perform audit and attestation services required by the act. Attestation services address management's assertions concerning internal controls over financial reporting. An insured depository institution must include the accountant's audit and attestation reports in its annual report. The joint final rules established the practices and procedures under which the agencies can, for good cause, remove, suspend, or bar an accountant or firm from performing audit and attestation services for federally insured depository institutions with assets of \$500 million or more. The rules became effective October 1, 2003.
2040.1, 2040.3, A.2040.3	Two of the loan portfolio management sections were revised to provide references to accounting pronouncements that apply to mortgage banking transactions and activities and that are consistent with the bank call report instructions. Comprehensive mortgage banking examination procedures are provided in the new section A.2040.3 (in the appendix to the manual). The comprehensive procedures address the examination, supervisory, and valuation concerns discussed in the following guidance: the February 25, 2003, Interagency Advisory on Mortgage Banking; SR-03-4, "Risk Management and Valuation of Mortgage Servicing Assets Arising from Mortgage Banking Activities"; the mortgage banking examination modules; and many of the mortgage banking inspection (examination) procedures found in section 3070.0 of the <i>Bank Holding Company Supervision Manual</i> .
2070.1	This section on the allowance for loan and lease losses (ALLL) was revised to include references to updated accounting guidance, SR-04-5, and the March 1, 2004, interagency Update on Accounting for Loan and Lease Losses. The interagency update covers recent developments in accounting, current sources of generally accepted accounting principles, and supervisory guidance that applies to the ALLL. Other SR-letters associated with the supervisory guidance for the ALLL are referenced. (See also section 2072.1.)
2100.1, 2100.4	The section on real estate construction loans and the respective internal control questionnaire were revised to incorporate the October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions and, to a limited extent, the supervisory guidance in SR-03-18. (See the summary for section 4140.1 below.)
4050.1	The section on bank-related organizations was revised to include brief definitions and descriptions of the limited activities and services authorized in Regulation K for foreign bank offices and organizations (that is, foreign bank branches, agencies, commercial lending companies, representative

*Section number**Description of the change*

offices, and correspondent banks). For the purposes of sections 23A and 23B of the Federal Reserve Act, the definition of affiliate was also clarified and expanded on the basis of the provisions of the Board’s Regulation W.

4140.1,
4140.3,
4140.4

The section on real estate appraisals and evaluations and the respective examination procedures and internal control questionnaire were revised to reference and incorporate the October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions. A banking institution’s board of directors is responsible for reviewing and adopting policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program (the program) for all of its lending functions. Concerns about the independence of appraisals and evaluations arise from the risk that improperly prepared appraisals may undermine the integrity of credit-underwriting processes.

An institution’s lending functions should not have undue influence that might compromise the program’s independence. Institutions may not use an appraisal prepared by an individual who was selected or engaged by a borrower. Likewise, institutions may not use “readdressed appraisals”—appraisal reports that are altered by the appraiser to replace any references to the original client with the institution’s name. Altering an appraisal report in a manner that conceals the original client or intended users of the appraisal is misleading and violates the agencies’ appraisal regulations and the Uniform Standards of Professional Appraisal Practice (USPAP). (See SR-03-18.)

4180.1,
4180.2,
4180.3,
4180.4

These new sections discuss the January 5, 2004, Interagency Policy on Banks/Thriffs Providing Financial Support to Funds Advised by the Banking Organization or Its Affiliates. The policy alerts banking organizations, including their boards of directors and senior management, to the safety-and-soundness implications of and the legal impediments to a bank providing financial support to investment funds advised by the bank, its subsidiaries, or affiliates (that is, an affiliated investment fund).

The interagency policy emphasizes the following three core principles. A bank should not—

- inappropriately place its resources and reputation at risk for the benefit of affiliated investment funds’ investors and creditors;
- violate the limits and requirements in Federal Reserve Act sections 23A and 23B and Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or
- create an expectation that the bank will prop up the advised fund (or funds).

In addition, bank-affiliated investment advisers are encouraged to establish alternative sources of financial support to avoid seeking support from affiliated banks. A bank’s investment advisory services can pose material risks to the bank’s liquidity, earnings, capital, and reputation and can harm investors, if the risks are not effectively controlled. Bank management is expected to notify and consult with its appropriate federal banking agency before (or, in an emergency, immediately after) providing material financial support to an affiliated investment fund. (See SR-04-1.) Examination

*Section number**Description of the change*

objectives, examination procedures, and an internal control questionnaire have been provided to address the supervisory concerns set forth in the policy.

Preface

The bank examination process is the Federal Reserve's fact-finding arm in discharging its regulatory and supervisory responsibilities. The essential objectives of an examination are (1) to provide an objective evaluation of a bank's soundness and compliance with banking laws and regulations, (2) to permit the Federal Reserve to appraise the quality of management and directors, and (3) to identify those areas where corrective action is required to strengthen the bank, improve the quality of its performance, and enable it to comply with applicable laws, rulings, and regulations.

To accomplish these objectives, the examiner should evaluate the prudence of the bank's practices, the bank's adherence to laws and regulations, the adequacy of the bank's liquidity and capital, the quality of the bank's assets and earnings, the nature of the bank's operations, and the adequacy of the bank's internal control and internal audit. The scope of an examination may cover every phase of banking activity, or it may concentrate on specific areas that deserve greater emphasis because of their potential effect on a bank's soundness.

ABOUT THIS MANUAL

The goal of the *Commercial Bank Examination Manual* is to organize and formalize longstanding examination objectives and procedures that provide guidance to the examiner, and to enhance the quality and consistent application of examination procedures. The manual provides specific guidelines for—

- determining the scope of an examination;
- determining the procedures to be used in examining all areas of a bank, including those procedures that may lead to the early detection of trends that, if continued, might result in a deterioration in the condition of a bank;
- evaluating the adequacy of the bank's written policies and procedures, the degree of compliance with them, and the adequacy of its internal controls;
- evaluating the work performed by internal and external auditors;
- evaluating the performance and activities of management and the board of directors;

- preparing workpapers that support examination reports and aid in evaluating the work performed; and
- using objective criteria as a basis for the overall conclusion, and for the resulting comments and criticism, regarding the condition and quality of the bank and its management.

The examiner-in-charge must properly plan and organize the examination before work begins. Initial decisions concerning examination scope can usually be made based on the nature of the bank's operations; its size; the past experience of the examiner-in-charge with the bank; information in the previous examination report, including the condition of the bank at that examination; communications with the bank between examinations; and analysis from the Uniform Bank Performance Report. The planning of work and preexamination procedures are covered in the Examination Planning section of this manual.

Examiners should view the manual as a working tool rather than as a reference manual. In most sections of the manual, examination procedures and internal control questionnaires are provided to form the basis for the examination of a bank. These procedures should lead to consistent and objective examinations of varying scopes. The bank's condition is disclosed by the performance of examination procedures, including review of internal controls and audit function, and the evaluation of the results therefrom, not by the examiner's judgment alone.

For larger banks, additional examination procedures need to be incorporated into the process to effectively examine those institutions' complex organizational reporting and accounting systems. Conversely, some of the procedures contained in this manual do not apply to smaller-sized banks. Additionally, state laws and local characteristics necessitate supplemental procedures. For example, specific procedures relating to various types of agricultural lending have not been developed in this manual. Similarly, state banking laws must be considered when applying the procedures to various areas, such as lending, capital adequacy, and pledging requirements. When modifying the procedures, the examiner-in-charge is responsible for determining that the examination objectives are met and that the examination meets the needs of the individual bank.

The manual is also intended to guide examiners in their efforts to encourage banks to develop written policies and related procedures in all areas where none exist, and to correct situations where there are deficiencies in or a lack of compliance with existing procedures. To aid the examiner, this manual includes topics such as loan portfolio management, investment portfolio management, asset and liability management, earnings analysis, capital analysis, and service area analysis. A section on the appraisal of bank management guides the examiner in assembling and evaluating information from all other manual sections and helps uncover inconsistencies in the application of bank policies among various management groups. Examiners should be able to increase the level of professionalism and the soundness of the banking system by encouraging all banks to follow the best practices that currently exist in the banking industry. In no case, however, should this approach discourage the development and implementation of conceptually sound and innovative practices by individual banks.

Although this manual is designed to provide guidance to the examiner in planning and conducting bank examinations, it should not be considered a legal reference. Questions concerning the applicability of and compliance with federal laws and regulations should be referred to appropriate legal counsel. In addition, the manual should not be viewed as a comprehensive training guide. Separate training programs provide more detailed instructions to assist the examiner in better understanding banking operations and applying examination procedures.

HOW TO USE THIS MANUAL

Organization

The *Commercial Bank Examination Manual* is divided into nine major parts, each set off by a divider tab:

- Part 1000—Examination Planning
- Part 2000—Assets
- Part 3000—Liabilities and Capital
- Part 4000—Other Examination Areas
- Part 5000—Assessment of the Bank
- Part 6000—Federal Reserve Examinations
- Part 7000—International
- Part 8000—Statutes and Regulations
- Appendix

Sections in each part are made up of four subsections, where applicable. They are—

- an overview
- examination objectives
- examination procedures
- internal control questionnaire

The overviews, for the most part, summarize the respective topics. This information is expanded on and reinforced through the Federal Reserve's educational programs and the examiner's experience on the job.

The examination objectives describe the goals that should be of primary interest to the examiner. Two of the objectives determine the scope of the examination for the specific area of examination interest. They are (1) the evaluation of the system of internal control and of bank policies, practices, and procedures, and (2) the evaluation of the scope and adequacy of the audit function. Other common objectives are to determine compliance with laws, regulations, and rulings, and to determine the need for corrective action.

The examination procedures include procedures to be performed during a full-scope, comprehensive examination. In some instances not all of the procedures apply to all banks; examiners may exercise some flexibility depending on the particular characteristics of the bank under examination. The materiality and significance of a given area of bank operations are the examiner's primary considerations in deciding the scope of the examination and the procedures to be performed. Examiner flexibility results in examinations tailored to fit the operations of the bank.

The evaluation of a bank's internal control environment should encompass a review of the internal audit activities and the implementation of selected internal control questionnaires (ICQs), which set forth standards for operational control. Due to the difference between an examination and an audit, it is not contemplated that all ICQs will be implemented in any one examination. The body of ICQs used during the course of the examination should be made up of three elements: (1) those mandated for all examinations, (2) those selected by the examiner-in-charge based upon experience, knowledge of problems within the bank, and perception of risk, and (3) those that focus on areas where on-site evaluation of operational control appears warranted in light of the results of the examina-

tion of internal audit activities. In addition to serving as a guide during on-site evaluations, the ICQs can be used in the appraisal of operational audit techniques in banks where the scope of internal auditing includes such considerations. The ICQ steps marked with an asterisk require substantiation by observation or testing; they are considered to be fundamental to any control program regardless of the size of the institution. These steps should be incorporated in management control programs in smaller banks to compensate for the absence of internal auditing.

Following the main parts are a listing of statutes and regulations administered by the Federal Reserve and an appendix that includes various forms, checklists, statements, and guidelines, which provide the examiner with additional information regarding certain topics.

Numbering System

The manual is arranged using a numbering system based on the manual's sections and subsections. For example, the overview subsection of the Internal Control section is numbered 1010.1. 1010 is the section number for Internal Control, and .1 is the number for the overview. The examination objectives subsection for that section is numbered 1010.2, and so on. Subsections are always numbered consecutively regard-

less of the number of subsections within a particular section.

The appendix sections begin with the letter A, followed by the number of the section to which the item relates. For example, the Supplement on Internal Auditing for the Internal Control section is numbered A.1010.1. Should the Internal Control section have more than one appendix item, the numbering would appear as A.1010.1, A.1010.2, etc.

Updates

Beginning with the March 1994 reprint of the *Commercial Bank Examination Manual*, all manual pages are dated March 1994. Succeeding updates will be dated the month and year in which they are issued. There is an effective date at the top of the first page of each subsection that shows the last time that subsection was updated.

The manual is usually updated in the spring and fall of each year; special supplements are issued as needed. On the back of the title page is a checklist so you can record when an update has been filed. For this manual to be most useful, it is essential that updated pages be filed as soon as possible. If you have any questions about receiving updates, please contact Publications Services, Mail Stop 127, Board of Governors of the Federal Reserve System, Washington, D.C. 20551; 202-452-3244.

Table of Contents

<i>Section</i>	<i>Section</i>
1000 EXAMINATION PLANNING	3000 LIABILITIES AND CAPITAL
1000 Examination Strategy and Risk-Focused Examinations	3000 Deposit Accounts
1010 Internal Control and Audit Function, Oversight, and Outsourcing	3010 Borrowed Funds
1015 Conflict-of-Interest Rules for Examiners	3012 Complex Wholesale Borrowings
1020 Federal Reserve System Bank Watch List and Surveillance Programs	3015 Deferred Compensation Agreements
1030 Workpapers	3020 Assessment of Capital Adequacy
	3030 Assessing Risk-Based Capital—Direct-Credit Substitutes Extended to ABCP Programs
2000 ASSETS	
2000 Cash Accounts	4000 OTHER EXAMINATION AREAS
2010 Due from Banks	4000 [Reserved]
2015 Interbank Liabilities	4010 Analytical Review and Income and Expense
2020 Investment Securities and End-User Activities	4020 Asset/Liability Management
2030 Bank Dealer Activities	4030 Asset Securitization
2040 Loan Portfolio Management	4033 Elevated-Risk Complex Structured Finance Activities
2043 Nontraditional Mortgages—Associated Risks	4040 Management of Insurable Risks
2050 Concentrations of Credit	4042 Purchase and Risk Management of Life Insurance
2060 Classification of Credits	4043 Insurance Sales Activities and Consumer Protection in Sales of Insurance
2070 Allowance for Loan and Lease Losses	4050 Bank-Related Organizations
2072 ALLL Methodologies and Documentation	4060 Information Technology
2080 Commercial and Industrial Loans	4063 Electronic Banking
2082 Loan-Sampling Program for Certain Community Banks	4070 Dividends
2090 Real Estate Loans	4080 Employee Benefit Trusts
2100 Real Estate Construction Loans	4090 Interest-Rate Risk Management
2103 Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices	4100 Litigation and Other Legal Matters; Examination-Related Subsequent Events
2110 Floor-Plan Loans	4110 Contingent Claims from Off-Balance-Sheet Credit Activities
2115 Leveraged Financing	4120 Other Non-Ledger Control Accounts
2120 Direct Financing Leases	4125 Payment System Risk and Electronic Funds Transfer Activities
2130 Consumer Credit	4128 Private-Banking Activities
2133 Subprime Lending	4130 Private Placements
2135 Subprime Mortgage Lending	4133 Prompt Corrective Action
2140 Agricultural Loans	4140 Real Estate Appraisals and Evaluations
2150 Energy Lending—Production Loans	
2160 Asset-Based Lending	
2170 Securities Broker and Dealer Loans	
2180 Factoring	
2190 Bank Premises and Equipment	
2200 Other Real Estate Owned	
2210 Other Assets and Other Liabilities

7110 International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets	

EXAMINATION AND SUPERVISORY AUTHORITY AND CONFIDENTIALITY PROVISIONS

The Federal Reserve System's statutory examination authority permits examiners to review all books and records maintained by a financial institution that is subject to the Federal Reserve's supervision. This authority extends to all documents.¹ Section 11(a)(1) of the Federal Reserve Act provides that the Board has the authority to examine, at its discretion, the accounts, books, and affairs of each member bank and to require such statements and reports as it may deem necessary.

Federal Reserve supervisory staff (includes the examination staff), therefore, may review *all* books and records of a banking organization that is subject to Federal Reserve supervision.^{1a} In addition, under the Board's Rules Regarding the Availability of Information, banking organizations are prohibited from disclosing confidential supervisory information without prior written permission of the Board's General Counsel.^{1b} Confidential supervisory information is defined to include any information related to the examination of a banking organization.^{1c} Board staff have taken the position that identification of information requested by, or provided to, supervisory staff—including the fact that an examination has taken or will take place—is related to an examination and falls within the definition of confidential supervisory information. It is contrary to Federal Reserve regulation and policy for agreements to contain confidentiality provisions that (1) restrict the banking organization from providing information to Federal Reserve supervisory staff;¹ (2) require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory staff; or (3) require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve examination or any nonpublic

Federal Reserve supervisory initiative or action. Banking organizations that have entered into agreements containing such confidentiality provisions are subject to legal risk. (See SR-07-19.)

EXAMINATION-FREQUENCY GUIDELINES FOR STATE MEMBER BANKS

The Federal Reserve is required to conduct a full-scope, on-site examination of every insured member bank at least once during each 12-month period, with the exception that certain small institutions can be examined once during each 18-month period. The 18-month examination period can be applied to those banks that—

- have total assets of less than \$500 million;^{1d}
- are well capitalized;
- were assigned a management rating of 1 or 2 by the Federal Reserve as part of the bank's rating under the Uniform Financial Institutions Rating System;
- were assigned a composite CAMELS rating of 1 or 2 by the Federal Reserve at their most recent examination;
- are not subject to a formal enforcement proceeding or action; and
- have not had a change in control during the preceding 12-month period in which a full-scope, on-site examination would have been required but for the above exceptions.

(See section 208.64 of Regulation H and *72 Fed. Reg.* 17798, April 10, 2007, and *72 Fed. Reg.* 54347, September 25, 2007.) The exceptions do not limit the authority of the Federal Reserve to examine any insured member bank as frequently as deemed necessary. (See also SR-07-8 and SR-97-8.)

^{1d} Based on jointly issued interim rules (effective April 10, 2007) issued by the Federal Reserve Board (Board), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS). The interim rule was adopted as final, without change, on September 11, 2007. (See *72 Fed. Reg.* 54347, September 25, 2007.) The interim rules implemented section 605 of the Financial Services Regulatory Relief Act of 2006 (FSRRA) and Public Law 109-473. Previously, the 18-month examination cycle was available only for institutions that had total assets of \$250 million or less.

1. SR-97-17 details the procedure supervisory staff should follow if a banking organization declines to provide information asserting a claim of legal privilege.

1a. Supervisory staff include individuals who are on and/or off site.

1b. 12 CFR 261.20(g).

1c. 12 CFR 261.2(c)(1)(i).

Alternate-Year Examination Program

The frequency of examination may also be affected by the alternate-year examination program. Under the alternate-year examination program, those banks that qualify are examined in alternate examination cycles by the Reserve Bank and the state. Thus, a particular bank would be examined by the Reserve Bank in one examination cycle, the state in the next, and so on. Any bank may be removed from the program and examined at any time by either agency, and either agency can meet with a bank's management or board of directors or initiate supervisory action whenever deemed necessary.

Banks that are ineligible for an alternate-year examination are those institutions that are in excess of \$10 billion in assets and are rated a composite 3 or worse. De novo banks are also ineligible until they are rated 1 or 2 for two consecutive examinations after they have commenced operations. Also, a bank that undergoes a change in control must be examined by the Federal Reserve within 12 months of the change in control.

SUPERVISION OF STATE-CHARTERED BANKS

In May 2004, the State-Federal Working Group, an interagency group of state bank commissioners and senior officials from the Federal Reserve and the Federal Deposit Insurance Corporation (FDIC), developed a recommended-practices document designed to reiterate and reaffirm the need for a commonsense approach for collaborating with states in the supervision of state-chartered banking organizations.² The recommended practices highlight the importance of communication and coordination between state and federal banking agencies in the planning and execution of supervisory activities.

2. The source for the recommended practices is the November 14, 1996, Nationwide State and Federal Supervisory Agreement (the agreement) to enhance the overall state-federal coordinated supervision program for state-chartered banks. The agreement established a set of core principles to promote coordination in the supervision of all interstate banks, with particular emphasis on complex or larger (for example, \$1 billion or more of assets) institutions. (See SR-96-33.) These principles are equally applicable and important when supervisors from federal and state banking agencies are communicating and coordinating the supervision of state-chartered banks operating within a single state.

When communicating and coordinating with other agencies, examination and supervisory staff should follow the common courtesies and recommended practices identified in the May 2004 document. The recommended practices reinforce the long-standing commitment of federal and state banking supervisors to provide efficient, effective, and seamless oversight of state banks of all sizes, whether those institutions operate in a single state or more than one state. The recommended practices also minimize, to the fullest extent possible, the regulatory burden placed on state-chartered banks—thus further supporting and fostering a seamless supervisory process. (See SR-04-12.)

Recommended Practices for State Banking Departments, the FDIC, and the Federal Reserve

1. State and federal banking agencies should take steps to ensure that all staff responsible for the supervision and examination of state-chartered banks are familiar with the principles contained in the agreement. State and federal banking agencies should ensure that adherence to the principles in the agreement is communicated as a priority within their respective agencies at all levels of staff—ranging from the field examiners to the officers in charge of supervision and to state bank commissioners.
2. Home-state supervisors should make every effort to communicate and coordinate with host-state supervisors as an important part of supervising multistate banks as specified in the Nationwide Cooperative Agreement executed by the state banking departments and recognized by the federal agencies in the agreement.
3. State and federal banking agencies should consider inviting one another to participate in regional examiner training programs and/or seminars to discuss emerging issues and challenges observed in the banking industry.
4. Federal and state banking departments should maintain and share current lists of their staff members designated as PCPs (primary contact persons) for their institutions.
5. PCPs and EICs (examiners-in-charge) from the state banking department(s) and federal agencies should discuss and prepare super-

- visory plans at least once during the examination cycle, and more frequently as appropriate for institutions of greater size or complexity or that are troubled. The agencies should discuss and communicate changes to the plan as they may evolve over the examination cycle. The supervisory plans should be comprehensive, including examination plans, off-site monitoring, follow-up or target reviews, supervisory actions, etc., as applicable.
6. The PCPs from the home-state banking department and federal banking agencies should make every effort to share reports that their individual agencies have produced through their off-site monitoring program or through targeted supervisory activities.
 7. State and federal banking agencies should notify one another as early as possible if their agency cannot conduct a supervisory event (e.g., examination) that was previously agreed upon—or if the agency intends to provide fewer examiners/resources than originally planned.
 8. Meetings with bank management and directors should involve both the appropriate staff in the home-state banking department and in the responsible federal banking agency whenever possible. If a joint meeting is not possible or appropriate (for example, the bank arranges the meeting with one agency only), the other agency (the home-state banking department or the responsible federal banking agency as applicable) should be informed of the meeting.
 9. The home-state and responsible federal agency should make every effort to issue a joint exam report in the 45-day time frame identified in the agreement. If circumstances prevent adherence to time frames identified in the agreement, the state and federal agencies should coordinate closely and consider benchmarks or timing requirements that may apply to the other agency.
 10. All corrective-action plans (for example, memoranda of understanding, cease-and-desist orders) should be jointly discussed, coordinated, and executed to the fullest extent possible among all examination parties involved. Also, all information on the institution's corrective-action plan and progress made toward implementing the plan should be shared.
 11. To ensure that messages to management are consistent to the fullest extent possible, supervisory conclusions or proposed actions should only be communicated to bank management, the bank board of directors, or other bank staff after such matters have been fully vetted within and between the federal banking agency and home-state banking department. The vetting process should, to the fullest extent possible, adhere to the exit meeting and examination report issuance time frames specified in the agreement. All parties should make every effort to expedite the process in order to deliver timely exam findings and efficient regulatory oversight.
 12. When differences between the agencies arise on important matters, such as examination conclusions or proposed supervisory action, senior management from the home-state banking department and the appropriate federal banking agency should communicate to try to resolve the differences. In the event that the state and federal banking agency cannot reach agreement on important matters affecting the supervised institution, the respective agencies should coordinate the communication of those differences to the management or board of directors of the supervised institution, including the timing thereof and how the differing views will be presented.

EXAMINATION OF INSURED DEPOSITORY INSTITUTIONS BEFORE THEY BECOME OR MERGE INTO STATE MEMBER BANKS

Premembership examinations of state nonmember banks, national banks, and savings associations seeking to convert to state-membership status will not be required if the bank or savings association seeking membership meets the criteria for “eligible bank,” as defined in section 208.2(e) of Regulation H.^{2a} Additionally,

2a. “Eligible bank” is defined to mean a member bank that (1) is well capitalized; (2) has a composite CAMELS rating of 1 or 2; (3) has a CRA rating of Outstanding or Satisfactory; (4) has a rating of 1 or 2 as of its most recent consumer compliance examination; and (5) has no major unresolved supervisory issues outstanding, as determined by the Board or appropriate Federal Reserve Bank in its discretion. A major unresolved supervisory issue could also arise from significant trust or fiduciary activities that are found to be conducted in a less-than-satisfactory manner.

examinations of state nonmember banks, national banks, and savings associations seeking to merge into a state member bank will not be required so long as the state member bank, on an existing and pro forma basis, meets the criteria for eligible bank.

For those institutions not subject to a premembership or premerger examination, risk assessments and supervisory strategies should be completed no later than 30 days after the conversion or merger. To the extent issues or concerns arise, targeted or, if warranted, full-scope examinations of the converted or merged institution should be conducted as soon as possible after the conversion or merger. For a state member bank that was formerly a savings association or that acquired a savings association, the risk assessment and supervisory strategy should pay particular attention to activities conducted by a service corporation subsidiary that may not be permissible activities for a state member bank.

Premembership or premerger examinations should generally be conducted for an insured depository institution that does not meet the criteria for eligible bank. Consistent with a risk-focused approach, these examinations can be targeted, as appropriate, to the identified area (or areas) of weakness. The Reserve Bank may, in its discretion, waive the examination requirement if it is determined that conducting an examination would be (1) inconsistent with a risk-focused approach or (2) unlikely to provide information that would assist materially in evaluating the statutory and regulatory factors that the Federal Reserve is required to consider in acting on the membership or merger application.^{2b} If

If a bank has not yet received compliance or CRA ratings from a bank regulatory authority, the Federal Reserve Board will look to the bank's holding company to determine whether the bank's application should receive expedited processing. If the bank's holding company meets the criteria for expedited processing under section 225.14(c) of Regulation Y, the bank's membership or branch application will be eligible for expedited processing. Banks that (1) have not yet received compliance or CRA ratings and (2) either are not owned by a bank holding company or are owned by a bank holding company that does not meet the criteria for expedited processing are not eligible for expedited treatment.

2b. Since membership in the Federal Reserve System does not confer deposit insurance, the membership applications do not include the requirements of the Community Reinvestment Act (CRA). Nevertheless, a less-than-satisfactory CRA rating, especially if it reflects a chronic record of weak CRA performance, would presumably reflect poorly upon the abilities of the institution's management. Consequently, a determination of whether or not to conduct a premembership CRA examination should be based on a risk-focused assessment of the issues involved, with an institution's CRA performance

an examination is waived, the Reserve Bank should prepare and maintain documentation supporting its decision.

In all circumstances, each Reserve Bank is responsible for ensuring that the examination-frequency time frames established by Federal Reserve policy and section 111 of the Federal Deposit Insurance Corporation Improvement Act (FDICIA) are adhered to. When the statutory deadline for an examination of a depository institution seeking membership is approaching or has passed, a Federal Reserve examination of the institution should be conducted as soon as practicable after the institution becomes a state member bank. (See SR-98-28.)

OBJECTIVES OF THE SUPERVISORY PROCESS

The Federal Reserve is committed to ensuring that the supervisory process for all institutions under its purview meets the following objectives:

- *Provides flexible and responsive supervision.* The supervisory process is dynamic and forward-looking, so it responds to technological advances, product innovation, and new risk-management systems and techniques, as well as to changes in the condition of an individual financial institution and to market developments.
- *Fosters consistency, coordination, and communication among the appropriate supervisors.* Seamless supervision, which reduces regulatory burden and duplication, is promoted. The supervisory process uses examiner resources effectively by using the institution's internal and external risk-assessment and -monitoring systems; making appropriate use of joint and alternating examinations; and tailoring supervisory activities to an institution's condition, risk profile, and unique characteristics.
- *Promotes the safety and soundness of financial institutions.* The supervisory process effectively evaluates the safety and soundness of banking institutions, including the assessment of risk-management systems, financial condition, and compliance with laws and regulations.

being only one of the factors considered from a risk-focused perspective.

- *Provides a comprehensive assessment of the institution.* The supervisory process integrates specialty areas (for example, information technology systems, trust, capital markets, and consumer compliance) and functional risk assessments and reviews, in cooperation with interested supervisors, into a comprehensive assessment of the institution.

RISK-FOCUSED EXAMINATIONS

Historically, examinations relied significantly on transaction-testing procedures when assessing a bank's condition and verifying its adherence to internal policies, procedures, and controls. In a highly dynamic banking market, however, transaction testing by itself is not sufficient for ensuring the continued safe and sound operation of a banking organization. Evolving financial instruments and markets have enabled banking organizations to rapidly reposition their portfolio risk exposures. Therefore, periodic assessments of the condition of a financial institution that are based on transaction testing alone cannot keep pace with the moment-to-moment changes occurring in financial risk profiles.

To ensure that institutions have in place the processes necessary to identify, measure, monitor, and control risk exposures, examinations have increasingly emphasized evaluating the appropriateness of these processes, evolving away from a high degree of transaction testing. Under a risk-focused examination approach, the degree of transaction testing should be reduced when internal risk-management processes are determined to be adequate or when risks are minimal. However, when risk-management processes or internal controls are considered inappropriate, such as by an inadequate segregation of duties or when on-site testing determines processes to be lacking, additional transaction testing must be performed. Testing should be sufficient to fully assess the degree of risk exposure in a particular function or activity. In addition, if an examiner believes that a banking organization's management is being less than candid, has provided false or misleading information, or has omitted material information, then substantial on-site transaction testing should be performed.

Compliance with Laws and Regulations

Compliance with relevant laws and regulations should be assessed at every examination. The steps taken to complete these assessments will vary depending on the circumstances of the institution subject to review. When an institution has a history of satisfactory compliance with relevant laws and regulations or has an effective compliance function, only a relatively limited degree of transaction testing need be conducted to assess compliance. At institutions with a less satisfactory compliance record or that lack a compliance function, more-extensive review will be necessary.

Changes in the General Character of a Bank's Business

In conjunction with assessing overall compliance with relevant laws and regulations, examiners should review for compliance with the requirements of Regulation H, which sets forth the requirements for membership of state-chartered banks in the Federal Reserve System and imposes certain conditions of membership on applicant banks. Under the regulation, a member bank must "at all times conduct its business and exercise its powers with due regard to safety and soundness" and "may not, without the permission of the Board, cause or permit any change in the general character of its business or in the scope of the corporate powers it exercises at the time of admission to membership." (See SR-02-9 and section 208.3(d)(1) and (2) of Regulation H (12 CFR 208.3(d)(1) and (2)).)

State member banks must receive the prior approval of the Board before making any significant change in business plans. The trend toward more-diverse, more-complex, and, at times, riskier activities at some banks has raised the importance of this prior-approval requirement.

Changes in the general character of a bank's business would include, for example, becoming a primarily Internet-focused or Internet-only operation, or concentrating solely on subprime lending or leasing activities. Depending on how they are conducted and managed, these activities can present novel risks for banking organizations and may also present risks to the deposit insurance fund. In many cases, these activities involve aggressive growth plans and may give

rise to significant financial, managerial, and other supervisory issues.

In applications for membership in the Federal Reserve System, careful consideration is given to a bank's proposed business plan to ensure, at a minimum, that appropriate financial and managerial standards are met. Likewise, the other federal banking agencies consider a bank's business plan when they review applications for federal deposit insurance, in the case of the Federal Deposit Insurance Corporation (FDIC), or applications for a national bank or federal thrift charter, in the case of the Office of the Comptroller of the Currency (OCC) or the Office of Thrift Supervision (OTS). The OCC, the FDIC, and the OTS have been conditioning their approvals of applications on a requirement that, during the first three years of operations, the bank or thrift provides prior notice or obtains prior approval of any proposed significant deviations or changes from its original operating plan. Rather than use similar commitments, the Federal Reserve has relied on the provisions of Regulation H to address situations in which a state member bank proposes to materially change its core business plan.

Federal Reserve supervisors will be monitoring changes in the general character of a state member bank's business as part of the Federal Reserve's normal supervisory process to ensure compliance with the requirements of Regulation H and with safe and sound banking practices. This review should be conducted at least annually by the Reserve Bank. A significant change in a bank's business plan without the Board's prior approval would be considered a violation of Regulation H and would be addressed through follow-up supervisory action.

Branches

When reviewing domestic-branch applications, the guidelines in section 208.6(b) of Regulation H are followed. The Board reviews the financial condition and management of the applying bank, the adequacy of the bank's capital and its future earning prospects, the convenience and needs of the community to be served, CRA and Regulation BB performance for those branches that will be accepting deposits, and whether the bank's investment in premises for the branch is consistent with section 208.21 of Regulation H.

A state member bank that desires to establish a new branch facility may be eligible for expedited processing of its application by the Reserve Bank if it is an eligible bank, as defined in section 208.2(e) of Regulation H.

A member bank may also choose to submit an application that encompasses multiple branches that it proposes to establish within one year of the approval date. Unless notification is waived, the bank must notify the appropriate Reserve Bank within 30 days of opening any branch approved under a consolidated application. Although banks are not required to open an approved branch, approvals remain valid for one year. During this period, the Board or the appropriate Reserve Bank may notify the bank that in its judgment, based on reports of condition, examinations, or other information, there has been a change in the bank's condition, financial or otherwise, that warrants reconsideration of the approval. (See Regulation H, section 208.6(d).)

Insured depository institutions that intend to close branches must comply with the requirements detailed in section 42 of the Federal Deposit Insurance Act (the FDI Act) (12 USC 1831r-1). Section 42(e) requires that banks provide 90 days' notice to both customers and, in the case of insured state member banks, the Federal Reserve Board, before the date of the proposed branch closings. The notice must include a detailed statement of the reasons for the decision to close the branch and statistical and other information in support of those stated reasons. A similar notice to customers must be posted in a conspicuous manner on the premises of the branch to be closed, at least 30 days before the proposed closing. There are additional notice, meeting, and consultation requirements for proposed branch closings by interstate banks in low- or moderate-income areas. Finally, the law requires each insured depository institution to adopt policies for branch closings. (See the revised joint policy statement concerning insured depository institutions' branch-closing notices and policies, effective June 29, 1999,^{2c} *Federal Reserve Regulatory Service*, 3-1503.5.) Examiners and supervisors need to be mindful of the section 42 statutory requirements and this joint policy.

Section 208.6(f) of Regulation H states that a branch relocation, defined as a movement that

^{2c}. See also 64 *Fed. Reg.* 34844.

occurs within the immediate neighborhood and does not substantially affect the nature of the branch's business or customers served, is not considered a branch closing. Section 208.2(c)(2)(ii) of Regulation H states (in one of six exclusions) that a branch does not include an office of an affiliated or unaffiliated institution that provides services to customers of the member bank on behalf of the member bank, so long as the institution is not "established or operated" by the bank. For example, a bank could contract with an unaffiliated or affiliated institution to receive deposits; cash and issue checks, drafts, and money orders; change money; and receive payments of existing indebtedness without becoming a branch of that bank. The bank could also (1) have no ownership or leasehold interest in the institution's offices, (2) have no employees who work for the institution, and (3) not exercise any authority or control over the institution's employees or methods of operation.

Prohibition on Branches Being Established Primarily for Deposit Production

Section 109 of the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 (the Interstate Act) (12 USC 1835a) prohibits any bank from establishing or acquiring a branch or branches outside of its home state primarily for the purpose of deposit production. In 1997, the banking agencies published a joint final rule implementing section 109. (See 62 *Fed. Reg.* 47728, September 10, 1997.) Section 106 of the Gramm-Leach-Bliley Act of 1999 expanded the coverage of section 109 of the Interstate Act to include any branch of a bank controlled by an out-of-state bank holding company. On June 6, 2002, the Board and the other banking agencies published an amendment to their joint final rule (effective October 1, 2002) to conform the uniform rule to section 109. (See 67 *Fed. Reg.* 38844.) The amendment expands the regulatory prohibition against interstate branches being used as deposit-production offices to include any bank or branch of a bank controlled by an out-of-state bank holding company, including a bank consisting only of a main office. (See Regulation H, section 208.7(b)(2).)

Minimum Statewide Loan-to-Deposit Ratios

Section 109 sets forth a process to test compliance with the statutory requirements. First, a bank's statewide loan-to-deposit ratio^{2d} is compared with the host-state loan-to-deposit ratio^{2e} for banks in a particular state. If the bank's statewide loan-to-deposit ratio is at least one-half of the published host-state loan-to-deposit ratio, then it has complied with section 109. A second step is conducted if a bank's statewide loan-to-deposit ratio is less than one-half of the published ratio for that state or if data are not available at the bank to conduct the first step. The second step involves determining whether the bank is reasonably helping to meet the credit needs of the communities served by its interstate branches. If a bank fails both of these steps, it has violated section 109 and is subject to sanctions.

RISK-MANAGEMENT PROCESSES AND INTERNAL CONTROLS

The Federal Reserve has always placed significant supervisory emphasis on the adequacy of an institution's management of risk, including its system of internal controls, when assessing the condition of an organization. An institution's failure to establish a management structure that adequately identifies, measures, monitors, and controls the risks involved in its various products and lines of business has long been considered unsafe and unsound conduct. Principles of sound management should apply to the entire spectrum of risks facing a banking institution, including, but not limited to, credit, market, liquidity, operational, legal, and reputational risk. (See SR-97-24 and SR-97-25.)

- *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- *Market risk* is the risk to a financial institution's condition resulting from adverse movements in market rates or prices, such as

2d. The statewide loan-to-deposit ratio relates to an individual bank and is the ratio of a bank's loans to its deposits in a particular state where the bank has interstate branches.

2e. The host-state loan-to-deposit ratio is the ratio of total loans in a state to total deposits from the state for all banks that have that state as their home state. For state-chartered banks, the home state is the state where the bank was chartered.

interest rates, foreign-exchange rates, or equity prices.

- *Liquidity risk* is the potential that an institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as “funding liquidity risk”), or the potential that the institution cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions (referred to as “market liquidity risk”).
- *Operational risk* arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.
- *Legal risk* arises from the potential that unenforceable contracts, lawsuits, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a banking organization.
- *Reputational risk* is the potential that negative publicity regarding an institution’s business practices, whether true or not, will cause a decline in the customer base, costly litigation, or revenue reductions.

In practice, an institution’s business activities present various combinations and concentrations of these risks, depending on the nature and scope of the particular activity. The following discussion provides guidelines for determining the quality of bank management’s formal or informal systems for identifying, measuring, and containing these risks.

Elements of Risk Management

When evaluating the quality of risk management as part of the evaluation of the overall quality of management, examiners should consider findings relating to the following elements of a sound risk-management system:

- active board and senior management oversight
- adequate policies, procedures, and limits
- adequate risk-measurement, risk-monitoring, and management information systems
- comprehensive internal controls

Adequate risk-management programs can vary considerably in sophistication, depending on the size and complexity of the banking organization

and the level of risk that it accepts. For smaller institutions engaged solely in traditional banking activities and whose senior managers and directors are actively involved in the details of day-to-day operations, relatively basic risk-management systems may be adequate. However, large, multinational organizations will require far more elaborate and formal risk-management systems to address their broader and typically more-complex range of financial activities, and to provide senior managers and directors with the information they need to monitor and direct day-to-day activities. In addition to the banking organization’s market and credit risks, risk-management systems should encompass the organization’s trust and fiduciary activities, including investment advisory services, mutual funds, and securities lending.

Active Board and Senior Management Oversight

When assessing the quality of the oversight by boards of directors and senior management, examiners should consider whether the institution follows policies and practices such as those described below:

- The board and senior management have identified and have a clear understanding and working knowledge of the types of risks inherent in the institution’s activities, and they make appropriate efforts to remain informed about these risks as financial markets, risk-management practices, and the institution’s activities evolve.
- The board has reviewed and approved appropriate policies to limit risks inherent in the institution’s lending, investing, trading, trust, fiduciary, and other significant activities or products.
- The board and management are sufficiently familiar with and are using adequate record-keeping and reporting systems to measure and monitor the major sources of risk to the organization.
- The board periodically reviews and approves risk-exposure limits to conform with any changes in the institution’s strategies, reviews new products, and reacts to changes in market conditions.
- Management ensures that its lines of business are managed and staffed by personnel whose

knowledge, experience, and expertise is consistent with the nature and scope of the banking organization's activities.

- Management ensures that the depth of staff resources is sufficient to operate and soundly manage the institution's activities, and ensures that employees have the integrity, ethical values, and competence that are consistent with a prudent management philosophy and operating style.
- Management at all levels provides adequate supervision of the day-to-day activities of officers and employees, including management supervision of senior officers or heads of business lines.
- Management is able to respond to risks that may arise from changes in the competitive environment or from innovations in markets in which the organization is active.
- Before embarking on new activities or introducing new products, management identifies and reviews all risks associated with the activities or products and ensures that the infrastructure and internal controls necessary to manage the related risks are in place.

Adequate Policies, Procedures, and Limits

Examiners should consider the following when evaluating the adequacy of a banking organization's policies, procedures, and limits:

- The institution's policies, procedures, and limits provide for adequate identification, measurement, monitoring, and control of the risks posed by its lending, investing, trading, trust, fiduciary, and other significant activities.
- The policies, procedures, and limits are consistent with management's experience level, the institution's stated goals and objectives, and the overall financial strength of the organization.
- Policies clearly delineate accountability and lines of authority across the institution's activities.
- Policies provide for the review of new activities to ensure that the financial institution has the necessary infrastructures to identify, monitor, and control risks associated with an activity before it is initiated.

Adequate Risk Monitoring and Management Information Systems

When assessing the adequacy of an institution's risk measurement and monitoring, as well as its management reports and information systems, examiners should consider whether these conditions exist:

- The institution's risk-monitoring practices and reports address all of its material risks.
- Key assumptions, data sources, and procedures used in measuring and monitoring risk are appropriate and adequately documented, and are tested for reliability on an ongoing basis.
- Reports and other forms of communication are consistent with the banking organization's activities; are structured to monitor exposures and compliance with established limits, goals, or objectives; and, as appropriate, compare actual versus expected performance.
- Reports to management or to the institution's directors are accurate and timely, and contain sufficient information for decision makers to identify any adverse trends and to evaluate adequately the level of risk faced by the institution.

Adequate Internal Controls

When evaluating the adequacy of a financial institution's internal controls and audit procedures, examiners should consider whether these conditions are met:

- The system of internal controls is appropriate to the type and level of risks posed by the nature and scope of the organization's activities.
- The institution's organizational structure establishes clear lines of authority and responsibility for monitoring adherence to policies, procedures, and limits.
- Reporting lines for the control areas are independent from the business lines, and there is adequate separation of duties throughout the organization—such as duties relating to trading, custodial, and back-office activities.
- Official organizational structures reflect actual operating practices.
- Financial, operational, and regulatory reports are reliable, accurate, and timely, and, when

applicable, exceptions are noted and promptly investigated.

- Adequate procedures exist for ensuring compliance with applicable laws and regulations.
- Internal audit or other control-review practices provide for independence and objectivity.
- Internal controls and information systems are adequately tested and reviewed. The coverage of, procedures for, and findings and responses to audits and review tests are adequately documented. Identified material weaknesses are given appropriate and timely high-level attention, and management's actions to address material weaknesses are objectively verified and reviewed.
- The institution's audit committee or board of directors reviews the effectiveness of internal audits and other control-review activities regularly.

RISK-FOCUSED SUPERVISION OF COMMUNITY BANKS

Understanding the Bank

The risk-focused supervision process for community banks involves a continuous assessment of the bank, which leads to an understanding of the bank that enables examiners to tailor their examination to the bank's risk profile. In addition to examination reports and correspondence files, each Reserve Bank maintains various surveillance reports that identify outliers when a bank is compared to its peer group. Review of this information helps examiners identify a bank's strengths and vulnerabilities, and is the foundation for determining the examination activities to be conducted.

Contact with the organization is encouraged to improve the examiners' understanding of the institution and the market in which it operates. A pre-examination interview or visit should be conducted as a part of each examination. This meeting gives examiners the opportunity to learn about any changes in bank management and changes to the bank's policies, strategic direction, management information systems, and other activities. During this meeting, particular emphasis should be placed on learning about the bank's new products or new markets it may have entered. The pre-examination interview or visit also provides examiners with (1) management's view of local economic conditions,

(2) an understanding of the bank's regulatory compliance practices, and (3) its management information systems and internal and/or external audit function. In addition, Reserve Banks should contact the state banking regulator to determine whether it has any special areas of concern that examiners should focus on.

Reliance on Internal Risk Assessments

As previously discussed in the subsection "Risk-Management Processes and Internal Controls," the entire spectrum of risks facing an institution should be considered when assessing a bank's risk portfolio. Internal audit, loan-review, and compliance functions are integral to a bank's own assessment of its risk profile. If applicable, it may be beneficial to discuss with the bank's external auditor the results of its most recent audit for the bank. Such a discussion gives the examiner the opportunity to review the external auditor's frequency, scope, and reliance on internal audit findings. Examiners should consider the adequacy of these functions in determining the risk profile of the bank, and be alert to opportunities to reduce regulatory burden by testing rather than duplicating the work of internal and external audit functions. See the subsection "Risk-Focused Examinations" for a discussion on transaction testing.

Preparation of a Scope Memorandum

An integral product in the risk-focused methodology, the scope memorandum identifies the central objectives of the examination. The memorandum also ensures that the examination strategy is communicated to appropriate examination staff, which is of key importance, as the scope will likely vary from examination to examination. Examination procedures should be tailored to the characteristics of each bank, keeping in mind its size, complexity, and risk profile. Procedures should be completed to the degree necessary to determine whether the bank's management understands and adequately controls the levels and types of risk that are assumed. In addition, the scope memorandum should address the general banking environment, economic conditions, and any changes foreseen by bank management that could affect

the bank's condition. Some of the key factors that should be addressed in the scope memorandum are described below.

Preliminary Risk Assessment

A summary of the risks associated with the bank's activities should be based on a review of all available sources of information on the bank, including, but not limited to, prior examination reports, surveillance reports, correspondence files, and audit reports. The scope memorandum should include a preliminary assessment of the bank's condition and major risk areas that will be evaluated through the examination process. For detailed discussion of risk assessments and risk matrices, see the subsection "Risk-Focused Supervision of Large, Complex Institutions."

Summary of Pre-Examination Meeting

The results of the pre-examination meeting should be summarized. Meeting results that affect examination coverage should be emphasized.

Summary of Audit and Internal Control Environment

A summary of the scope and adequacy of the audit environment should be prepared, which may result in a modification of the examination procedures initially expected to be performed. Activities that receive sufficient coverage by the bank's audit system can be tested through the examination process. Certain examination procedures could be eliminated if their audit and internal control areas are deemed satisfactory.

Summary of Examination Procedures

As discussed below, examination modules have been developed for the significant areas reviewed during an examination. The modules are categorized as primary or supplemental. The primary modules must be included in each examination. However, procedures within the primary modules can be eliminated or enhanced based on the risk assessment or the adequacy of the audit and internal control environment. The scope memorandum should specifically detail the areas within

each module to be emphasized during the examination process. In addition, any supplemental modules used should be discussed.

Summary of Loan Review

On the basis of the preliminary risk assessment, the anticipated loan coverage should be detailed in the scope memorandum. In addition to stating the percentage of commercial and commercial real estate loans to be reviewed, the scope memorandum should identify which specialty loan reference modules of the general loan module are to be completed. The memorandum should specify activities within the general loan module to be reviewed as well as the depth of any specialty reviews.

Job Staffing

The staffing for the examination should be detailed. Particular emphasis should be placed on ensuring that appropriate personnel are assigned to the high-risk areas identified in the bank's risk assessment.

Examination Modules

Standardized electronic community bank examination modules have been developed and designed to define common objectives for the review of important activities within institutions and to assist in the documentation of examination work. It is expected that full-scope examinations will use these modules.

The modules establish a three-tiered approach for the review of a bank's activities: The first tier is the core analysis, the second tier is the expanded review, and the final tier is the impact analysis. The core analysis includes a number of decision factors that should be considered collectively, as well as individually, when evaluating the potential risk to the bank. To help the examiner determine whether risks are adequately managed, the core analysis section contains a list of procedures that may be considered for implementation. Once the relevant procedures are performed, the examiner should document conclusions in the core analysis decision factors. When significant deficiencies or weaknesses are noted in the core analysis review, the examiner is required to complete the expanded analysis

for those decision factors that present the greatest degree of risk for the bank. However, if the risks are properly managed, the examiner can conclude the review.

The expanded analysis provides guidance for determining if weaknesses are material to the bank's condition and if they are adequately managed. If the risks are material or inadequately managed, the examiner is directed to perform an impact analysis to assess the financial impact to the bank and whether any enforcement action is necessary.

The use of the modules should be tailored to the characteristics of each bank based on its size, complexity, and risk profile. As a result, the extent to which each module should be completed will vary from bank to bank. The individual procedures presented for each level are meant only to serve as a guide for answering the decision factors. Not every procedure requires an individual response, and not every procedure may be applicable at every community bank. Examiners should continue to use their discretion when excluding any items as unnecessary in their evaluation of decision factors.

RISK-FOCUSED SUPERVISION OF LARGE COMPLEX INSTITUTIONS

The Federal Reserve recognizes a difference in the supervisory requirements for community banks and large complex banking organizations (LCBOs). The complexity of financial products, sophistication of risk-management systems (including audit and internal controls), management structure, and geographic dispersion of operations are but a few of the areas in which large institutions may be distinguished from community banks. While close coordination with state banking departments, the Office of the Comptroller of the Currency (OCC), and the Federal Deposit Insurance Corporation (FDIC) is important for fostering consistency among banking supervisors and reducing the regulatory burden for community banks, it is critical for large complex banking organizations.

The examination approaches for both large complex institutions and community banks are risk-focused processes that rely on an understanding of the institution, the performance of risk assessments, the development of a supervisory plan, and examination procedures tailored to the risk profile. However, the two approaches

are implemented differently: The process for complex institutions relies more heavily on a central point of contact and detailed risk assessments and supervisory plans before the on-site examination or inspection. In comparison, for small or noncomplex institutions and community banks, risk assessments and examination activities may be adequately described in the scope memorandum.

Key Elements

To meet the supervisory objectives discussed previously and to respond to the characteristics of large institutions, the framework for risk-focused supervision of large complex institutions contains the following key elements:

- *Designation of a central point of contact.* Large institutions typically have operations in several jurisdictions, multiple charters, and diverse product lines. Consequently, the supervisory program requires that a "central point of contact" be designated for each institution to facilitate coordination and communication among the numerous regulators and specialty areas.
- *Review of functional activities.* Large institutions are generally structured along business lines or functions, and some activities are managed on a centralized basis. As a result, a single type of risk may cross several legal entities. Therefore, the supervisory program incorporates assessments along functional lines to evaluate risk exposure and its impact on safety and soundness. These functional reviews will be integrated into the risk assessments for specific legal entities and used to support the supervisory ratings for individual legal entities.³
- *Focus on risk-management processes.* Large institutions generally have highly developed risk-management systems, such as internal audit, loan review, and compliance. The supervisory program emphasizes each institution's responsibility to be the principal source for detecting and deterring abusive and unsound practices through adequate internal controls and operating procedures. The pro-

3. When functions are located entirely in legal entities that are not primarily supervised by the Federal Reserve, the results of supervisory activities conducted by the primary regulator will be used to the extent possible to avoid duplication of activities.

gram incorporates an approach that focuses on and evaluates the institution's risk-management systems, yet retains transaction testing and supervisory rating systems, such as the CAMELS, bank holding company RFI/C(D), and ROCA rating systems. This diagnostic perspective is more dynamic and forward looking because it provides insight into how effectively an institution is managing its operations and how well it is positioned to meet future business challenges.

- *Tailoring of supervisory activities.* Large institutions are unique, but all possess the ability to quickly change their risk profiles. To deliver effective supervision, the supervisory program incorporates an approach that tailors supervisory activities to the risk profile of an institution. By concentrating on an institution's major risk areas, examiners can achieve a more relevant and penetrating understanding of the institution's condition.
- *Emphasis on ongoing supervision.* Large institutions face a rapidly changing environment. Therefore, the supervisory program emphasizes ongoing supervision through increased planning and off-site monitoring. Ongoing supervision allows for timely adjustments to the supervisory strategy as conditions change within the institution and economy.

Covered Institutions

For purposes of the risk-focused supervision framework, large complex institutions generally have (1) a functional management structure, (2) a broad array of products, (3) operations that span multiple supervisory jurisdictions, and (4) consolidated assets of \$1 billion or more.⁴ These institutions may be state member banks, bank holding companies (including their nonbank and foreign subsidiaries), and branches and agencies of foreign banking organizations. However, if an institution with consolidated assets totaling \$1 billion or more does not have these characteristics, the supervisory process adopted for community banks may be more appropriate. Conversely, the complex-institution process may be appropriate for some organiza-

tions with consolidated assets less than \$1 billion.

Nonbank subsidiaries of large complex domestic institutions are covered by the supervisory program. These institutions include nonbank subsidiaries of the parent bank holding company and those of the subsidiary state member banks; the significant branch operations, primarily foreign branches, of state member banks; and subsidiary foreign banks of the holding company. The level of supervisory activity to be conducted for nonbank subsidiaries and foreign branches and subsidiaries of domestic institutions should be based on their individual risk levels relative to the consolidated organization or the state member bank. The risk associated with significant nonbank subsidiaries or branches should be identified as part of the consolidated risk-assessment process. The scope of Edge Act corporation examinations should also be determined through the risk-assessment process. In addition, specialty areas should be included in the planning process in relation to their perceived level of risk to the consolidated organization or to any state member bank subsidiary.

Coordination of Supervisory Activities

Many large complex institutions have interstate operations; therefore, close cooperation with the other federal and state banking agencies is critical. To facilitate coordination between the Federal Reserve and other regulators, District Reserve Banks have been assigned roles and responsibilities that reflect their status as either the responsible Reserve Bank (RRB) with the central point of contact or the local Reserve Bank (LRB).

The RRB is accountable for all aspects of the supervision of a fully consolidated banking organization, which includes the supervision of all the institution's subsidiaries and affiliates (domestic, foreign, and Edge corporations) for which the Federal Reserve has supervisory oversight responsibility. The RRB is generally expected to work with LRBs in conducting examinations and other supervisory activities, particularly where significant banking operations are conducted in a local District. Thus, for state member banks, the LRB has an important role in the supervision of that subsidiary. However, the RRB retains authority and accountabil-

4. Large institutions are defined differently in other regulatory guidance for regulatory reports and examination mandates.

ity for the results of all examinations and reviews that an LRB may perform on its behalf. See SR-05-27/CA-05-11.

Responsible Reserve Bank

In general, the RRB for a banking institution has been the Reserve Bank in the District where the banking operations of the organization are principally conducted. For domestic banking institutions, the RRB typically will be the Reserve Bank District where the head office of the top-tier institution is located and where its overall strategic direction is established and overseen. For foreign banking institutions, the RRB typically will be the Reserve Bank District where the Federal Reserve has the most direct involvement in the day-to-day supervision of the U.S. banking operations of the institution.

When necessary, the Board's Division of Banking Supervision and Regulation (BS&R), in consultation with the Division of Consumer and Community Affairs (C&CA), may designate an RRB when the general principles set forth above could impede the ability of the Federal Reserve to perform its functions under law, do not result in an efficient allocation of supervisory resources, or are otherwise not appropriate.

Duties of RRBs

The RRB develops the consolidated risk assessment and supervisory plan and ensures that the scope and timing of planned activities conducted by participating Districts and agencies pursuant to the plan are appropriate, given the consolidated risk assessment. The RRB designates the central point of contact or lead examiner and ensures that all safety-and-soundness, information technology, trust, consumer compliance, Community Reinvestment Act (CRA), and other specialty examinations, inspections, and visitations are conducted and appropriately coordinated within the System and with other regulators. In addition, the RRB manages all formal communications with the foreign and domestic supervised entity, including the the communication of supervisory assessments, ratings, and remedial actions.⁵

5. See SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions," and SR-96-33, "State/Federal Protocol and Nationwide Supervisory Agreement."

Sharing of RRB Duties

To take advantage of opportunities to enhance supervisory effectiveness or efficiency, an RRB is encouraged to arrange for the LRB to undertake on its behalf certain examinations or other supervisory activities. For example, an LRB may have relationships with local representatives of the institution or local supervisors; leveraging these relationships may facilitate communication and reduce costs. Additionally, LRBs may provide specialty examination resources—in the case of CRA examinations, LRB staff often provide valuable insights into local communities and lending institutions that should be factored into the CRA assessment. When other Reserve Bank Districts conduct examinations and other supervisory activities for the RRB, substantial reliance should be placed on the conclusions and ratings recommended by the participating Reserve Bank(s).

The RRB retains authority and accountability for the results of all examinations and reviews performed on its behalf and, therefore, must work closely with LRB examination teams to ensure that examination scopes and conclusions are consistent with the supervisory approach and message applied across the consolidated organization. If an LRB identifies major issues in the course of directly conducting supervisory activities on behalf of an RRB, those issues should be brought to the attention of the RRB in a timely manner.

If an RRB arranges for an LRB to conduct supervisory activities on its behalf, the LRB is responsible for the costs of performing the activities. If the LRB is unable to fulfill the request from the RRB to perform the specified activities, the RRB should seek System assistance, if needed, by contacting Board staff or using other established procedures for coordinating resources.

In general, LRBs are responsible for the direct supervision of state member banks located in their district. LRBs and host states will not routinely examine branches of state member banks or issue separate ratings and reports of examination. Similar to the relationship between the RRBs and LRBs, home-state supervisors⁶

6. The State/Federal Supervisory Protocol and Agreement established definitions for home and host states. The home-state supervisor is defined as the state that issued the charter. It will act on behalf of itself and all host-state supervisors (states into which the bank branches) and will be the single state contact for a particular institution.

will coordinate the activities of all state banking departments and will be the state's principal source of contact with federal banking agencies and with the bank itself. Also, host states will not unilaterally examine branches of interstate banks. Close coordination among the Reserve Banks and other appropriate regulators for each organization is critical to ensure a consistent, risk-focused approach to supervision.

Central Point of Contact and Supervisory Teams

A central point of contact is critical to fulfilling the objectives of seamless, risk-focused supervision. The RRB should designate a central point of contact for each large complex institution it supervises. Generally, all activities and duties of other areas within the Federal Reserve, as well as those conducted with other supervisors, should be coordinated through this contact. The central point of contact should—

- be knowledgeable, on an ongoing basis, about the institution's financial condition, management structure, strategic plan and direction, and overall operations;
- remain up-to-date on the condition of the assigned institution and be knowledgeable regarding all supervisory activities; monitoring and surveillance information; applications issues; capital-markets activities; meetings with management; and enforcement issues, if applicable;
- ensure that the objective of seamless, risk-focused supervision is achieved for each institution and that the supervisory products described later are prepared in a timely manner;
- ensure appropriate follow-up and tracking of supervisory concerns, corrective actions, or other matters that come to light through ongoing communications or surveillance; and
- participate in the examination process, as needed, to ensure consistency with the institution's supervisory plan and to ensure effective allocation of resources, including coordination of on-site efforts with specialty examination areas and other supervisors, as appropriate, and to facilitate requests for information from the institution, whenever possible.

A dedicated supervisory team composed of individuals with specialized skills based upon the organization's particular business lines and risk profile will be assigned to each institution. This full-time, dedicated cadre will be supplemented by other specialized System staff, as necessary, to participate in examinations and targeted reviews.

In addition to designing and executing the supervisory strategy for an organization, the central point of contact is responsible for managing the supervisory team. The supervisory team's major responsibilities are to maintain a high level of knowledge of the banking organization and to ensure that supervisory strategies and priorities are consistent with the identified risks and institutional profile.

Sharing of Information

To further promote seamless, risk-focused supervision, information related to a specific institution should be provided, as appropriate, to other interested supervisors. The information to be shared includes the products described in the "Process and Products" subsection. However, sharing these products with the institution itself should be carefully evaluated on a case-by-case basis.

Confidentiality Provisions in Agreements that Prevent or Restrict Notification to the Federal Reserve

The Federal Reserve has stated and clarified its expectations regarding confidentiality provisions that are contained in agreements between a banking organization and its counterparties (for example, mutual funds, hedge funds, and other trading counterparties) or other third parties. It is contrary to Federal Reserve's regulations and policy for agreements to contain confidentiality provisions that (1) restrict the banking organization from providing information to Federal Reserve supervisory staff;^{6a} (2) require or permit, without the prior approval of the Federal Reserve, the banking organization to disclose to a counterparty that any information will be or was provided to Federal Reserve supervisory

^{6a} Supervisory staff include individuals that are on and/or off site.

staff; or (3) require or permit, without the prior approval of the Federal Reserve, the banking organization to inform a counterparty of a current or upcoming Federal Reserve examination or any nonpublic Federal Reserve supervisory initiative or action. Banking organizations that have entered, or enter, into agreements containing such confidentiality provisions are subject to legal risk. (See SR-07-19 and SR-97-17.) For information on the restrictions pertaining to the very limited disclosure of confidential supervisory ratings and other nonpublic supervisory information, see SR-05-4, SR-96-26, and SR-88-37. See also section 5020.1.

Functional Approach and Targeted Examinations

Traditionally, the examination process has been driven largely by a legal-entity approach to banking companies. The basis for risk-focused supervision of large complex institutions relies more heavily on a functional, business-line approach to supervising institutions, while effectively integrating the functional approach into the legal-entity assessment.

The functional approach focuses principally on the key business activities (for example, lending, Treasury, retail banking) rather than on reviewing the legal entity and its balance sheet. This approach does not mean that the responsibility for a legal-entity assessment is ignored, nor should the Federal Reserve perform examinations of institutions that other regulators are primarily responsible for supervising.⁷ Rather, Federal Reserve examiners should integrate the findings of a functional review into the legal-entity assessment and coordinate closely with the primary regulator to gather sufficient information to form an assessment of the consolidated organization. Nonetheless, in some cases, effective supervision of the consolidated organization may require Federal Reserve examiners to perform process reviews and possibly transaction testing at all levels of the organization.

Functional risk-focused supervision is to be achieved by—

7. For U.S. banks owned by FBOs, it is particularly important to review the U.S. bank on a legal-entity basis and to review the risk exposure to the U.S. bank of its parent foreign bank since U.S. supervisory authorities do not supervise or regulate the parent bank.

- planning and conducting joint examinations with the primary regulator in areas of mutual interest, such as nondeposit investment products, interest-rate risk, liquidity, and mergers and acquisitions;
- leveraging off, or working from, the work performed by the primary regulator and the work performed by the institution's internal and external auditors by reviewing and using their workpapers and conclusions to avoid duplication of effort and to lessen the burden on the institution;
- reviewing reports of examinations and other communications to the institution issued by other supervisors; and
- conducting a series of functional reviews or targeted examinations of business lines, relevant risk areas, or areas of significant supervisory concern during the supervisory cycle. Functional reviews and targeted examinations are increasingly necessary to evaluate the relevant risk exposure of a large, complex institution and the effectiveness of related risk-management systems.

The relevant findings of functional reviews or targeted examinations should be—

- incorporated into the annual summary supervisory report, with follow-up on deficiencies noted in the functional reviews or targeted examinations;
- conveyed to the institution's management during a close-out or exit meeting with the relevant area's line management; and
- communicated in a formal written report to the institution's management or board of directors when significant weaknesses are detected or when the finding results in a downgrade of any rating component.

The functional approach to risk assessments and to planning supervisory activities should include a review of the parent company and its significant nonbank subsidiaries. However, the level of supervisory review should be appropriate to the risk profile of the parent company or its nonbank subsidiary in relation to the consolidated organization. Intercompany transactions should continue to be reviewed as part of the examination procedures performed to ensure that these transactions comply with laws and regulations and do not pose safety-and-soundness concerns.

Process and Products

The risk-focused methodology for the supervision program for large, complex institutions reflects a continuous and dynamic process. The methodology consists of six steps, each of which uses certain written products to facilitate communication and coordination.

Table 1—Steps and Products

<i>Steps</i>	<i>Products</i>
1. Understanding the institution	1. Institutional overview
2. Assessing the institution's risk	2. Risk matrix 3. Risk assessment
3. Planning and scheduling supervisory activities	4. Supervisory plan 5. Examination program
4. Defining examination activities	6. Scope memorandum 7. Entry letter
5. Performing examination procedures	8. Functional examination modules
6. Reporting the findings	9. Examination report(s)

The focus of the products should be on fully achieving a risk-focused, seamless, and coordinated supervisory process, not simply on completing the products. The content and format of the products are flexible and should be adapted to correspond to the supervisory practices of the agencies involved and to the structure and complexity of the institution.

Understanding the Institution

The starting point for risk-focused supervision is developing an understanding of the institution. This step is critical to tailoring the supervision program to meet the characteristics of the organization and to adjusting that program on an ongoing basis as circumstances change. Furthermore, understanding the Federal Reserve's

supervisory role in relation to an institution and its affiliates is essential.

Through increased emphasis on planning and monitoring, supervisory activities can focus on the significant risks to the institution and on related supervisory concerns. The technological and market developments within the financial sector and the speed with which an institution's financial condition and risk profile can change make it critical for supervisors to keep abreast of events and changes in risk exposure and strategy. Accordingly, the central point of contact for each large, complex institution should review certain information on an ongoing basis and prepare an institution overview that will communicate his or her understanding of that institution.

Information generated by the Federal Reserve, other supervisory agencies, the institution, and public organizations may assist the central point of contact in forming and maintaining an ongoing understanding of the institution's risk profile and current condition. In addition, the central point of contact should hold periodic discussions with the institution's management to cover, among other topics, credit-market conditions, new products, divestitures, mergers and acquisitions, and the results of any recently completed internal and external audits. When other agencies have supervisory responsibilities for the organization, joint discussions should be considered.

The principal risk-focused supervisory tools and documents, including an institutional overview, risk matrix, and risk assessment for the organization, should be current. Accordingly, the central point of contact should distill and incorporate significant new information into these documents at least quarterly. Factors such as emerging risks; new products; and significant changes in business strategy, management, condition, or ownership may warrant more frequent updates. In general, the more dynamic the organization's operations and risks, the more frequently the central point of contact should update the risk assessment, strategies, and plans.

Preparation of the Institutional Overview

The institutional overview should contain a concise executive summary that demonstrates an understanding of the institution's present condition and its current and prospective risk profiles, as well as highlights key issues and past

supervisory findings. General types of information that may be valuable to present in the overview include—

- a brief description of the organizational structure;
- a summary of the organization's business strategies as well as changes in key business lines, growth areas, new products, etc., since the prior review;
- key issues for the organization, either from external or internal factors;
- an overview of management;
- a brief analysis of the consolidated financial condition and trends;
- a description of the future prospects of the organization;
- descriptions of internal and external audit;
- a summary of supervisory activity performed since the last review; and
- considerations for conducting future examinations.

Assessing the Institution's Risks

To focus supervisory activities on the areas of greatest risk to an institution, the central point of contact should perform a risk assessment. The risk assessment highlights both the strengths and vulnerabilities of an institution and provides a foundation for determining the supervisory activities to be conducted. Further, the assessment should apply to the entire spectrum of risks facing an institution (as previously discussed in the subsection "Risk-Management Processes and Internal Controls").

An institution's business activities present various combinations and concentrations of the noted risks depending on the nature and scope of the particular activity. Therefore, when conducting the risk assessment, consideration must be given to the institution's overall risk environment, the reliability of its internal risk management, the adequacy of its information technology systems, and the risks associated with each of its significant business activities.

Assessment of the Overall Risk Environment

The starting point in the risk-assessment process is an evaluation of the institution's risk tolerance

and of management's perception of the organization's strengths and weaknesses. This evaluation should entail discussions with management and review of supporting documents, strategic plans, and policy statements. In general, management is expected to have a clear understanding of both the institution's markets and the general banking environment, as well as how these factors affect the institution.

The institution should have a clearly defined risk-management structure, which may be formal or informal, centralized or decentralized. However, the greater the risk assumed by the institution, the more sophisticated its risk-management system should be. Regardless of the approach, the types and levels of risk an institution is willing to accept should reflect its risk appetite, as determined by the board of directors.

To assess the overall risk environment, the central point of contact should make a preliminary evaluation of the institution's internal risk management, considering the adequacy of its internal audit, loan-review, and compliance functions. External audits also provide important information on the institution's risk profile and condition, which may be used in the risk assessment.

In addition, the central point of contact should review risk assessments developed by the internal audit department for significant lines of business, and compare those results with the supervisory risk assessment. Management's ability to aggregate risks on a global basis should also be evaluated. This preliminary evaluation can be used when developing the scope of examination activities to determine the level of examiner reliance on the institution's internal risk management.

Risk-monitoring activities must be supported by management information systems that provide senior managers and directors with timely and reliable reports on the financial condition, operating performance, and risk exposure of the consolidated organization. These systems must also provide managers engaged in the day-to-day management of the organization's activities with regular and sufficiently detailed reports for their areas of responsibility. Moreover, in most large, complex institutions, management information systems not only provide reporting systems, but also support a broad range of business decisions through sophisticated risk-management and decision-making tools such as credit-scoring and asset/liability models and automated

trading systems. Accordingly, the institution's risk assessment must consider the adequacy of its information technology systems.

Preparation of the Risk Matrix

A risk matrix is used to identify significant activities, the type and level of inherent risks in these activities, and the adequacy of risk management over these activities, as well as to determine composite-risk assessments for each of these activities and the overall institution. A risk matrix can be developed for the consolidated organization, for a separate affiliate, or along functional business lines. The matrix is a flexible tool that documents the process followed to assess the overall risk of an institution and is a basis for preparation of the narrative risk assessment.

Activities and their significance can be identified by reviewing information from the institution, the Reserve Bank, or other supervisors. After the significant activities are identified, the type and level of risk inherent in them should be determined. Types of risk may be categorized as previously described or by using categories defined either by the institution or other supervisory agencies. If the institution uses risk categories that differ from those defined by the supervisory agencies, the examiner should determine if all relevant types of risk are appropriately captured. If risks are appropriately captured by the institution, the examiner should use the categories identified by the institution.

For the identified functions or activities, the inherent risk involved in that activity should be described as high, moderate, or low for each type of risk associated with that type of activity. The following definitions apply:

- *High inherent risk* exists when the activity is significant or positions are large in relation to the institution's resources or its peer group, when the number of transactions is substantial, or when the nature of the activity is inherently more complex than normal. Thus, the activity potentially could result in a significant and harmful loss to the organization.
- *Moderate inherent risk* exists when positions are average in relation to the institution's resources or its peer group, when the volume of transactions is average, and when the activity is more typical or traditional. Thus, while the activity potentially could result in a

loss to the organization, the loss could be absorbed by the organization in the normal course of business.

- *Low inherent risk* exists when the volume, size, or nature of the activity is such that even if the internal controls have weaknesses, the risk of loss is remote, or, if a loss were to occur, it would have little negative impact on the institution's overall financial condition.

This risk-assessment is made without considering management processes and controls; those factors are considered when evaluating the adequacy of the institution's risk-management systems.

Assessing Adequacy of Risk Management

When assessing the adequacy of an institution's risk-management systems for identified functions or activities, the focus should be on findings related to the key elements of a sound risk-management system: active board and senior management oversight; adequate policies, procedures, and limits; adequate risk-management, monitoring, and management information systems; and comprehensive internal controls. (These elements are described in the earlier subsection "Elements of Risk Management.")

Taking these key elements into account, the contact should assess the relative strength of the risk-management processes and controls for each identified function or activity. Relative strength should be characterized as strong, acceptable, or weak as defined below:

- *Strong risk management* indicates that management effectively identifies and controls all major types of risk posed by the relevant activity or function. The board and management participate in managing risk and ensure that appropriate policies and limits exist, which the board understands, reviews, and approves. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide the necessary information and analysis to make timely and appropriate responses to changing conditions. Internal controls and audit procedures are appropriate to the size and activities of the institution. There are few exceptions to established policies and procedures, and none of these exceptions would likely lead to a significant loss to the organization.

- *Acceptable risk management* indicates that the institution's risk-management systems, although largely effective, may be lacking to some modest degree. It reflects an ability to cope successfully with existing and foreseeable exposure that may arise in carrying out the institution's business plan. While the institution may have some minor risk-management weaknesses, these problems have been recognized and are being addressed. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and management information systems are considered effective in maintaining a safe and sound institution. Risks are generally being controlled in a manner that does not require more than normal supervisory attention.

- *Weak risk management* indicates risk-management systems that are lacking in important ways and, therefore, are a cause for more than normal supervisory attention. The internal control system may be lacking in important respects, particularly as indicated by continued control exceptions or by the failure to adhere to written policies and procedures. The deficiencies associated in these systems could have adverse effects on the safety and soundness of the institution or could lead to a material misstatement of its financial statements if corrective actions are not taken.

The composite risk for each significant activity is determined by balancing the overall level of inherent risk of the activity with the overall strength of risk-management systems for that activity. For example, commercial real estate loans usually will be determined to be inherently high risk. However, the probability and the magnitude of possible loss may be reduced by having very conservative underwriting standards, effective credit administration, strong internal loan review, and a good early warning system. Consequently, after accounting for these mitigating factors, the overall risk profile and level of supervisory concern associated with commercial real estate loans may be moderate.

To facilitate consistency in the preparation of the risk matrix, general definitions of the composite level of risk for significant activities are provided as follows:

- A *high composite risk* generally would be assigned to an activity in which the risk-

management system does not significantly mitigate the high inherent risk of the activity. Thus, the activity could potentially result in a financial loss that would have a significant negative impact on the organization's overall condition, in some cases, even when the systems are considered strong. For an activity with moderate inherent risk, a risk-management system that has significant weaknesses could result in a high composite risk assessment because management appears to have an insufficient understanding of the risk and uncertain capacity to anticipate and respond to changing conditions.

- A *moderate composite risk* generally would be assigned to an activity with moderate inherent risk, which the risk-management systems appropriately mitigate. For an activity with low inherent risk, significant weaknesses in the risk-management system may result in a moderate composite risk assessment. On the other hand, a strong risk-management system may reduce the risks of an inherently high-risk activity so that any potential financial loss from the activity would have only a moderate negative impact on the financial condition of the organization.
- A *low composite risk* generally would be assigned to an activity that has low inherent risks. An activity with moderate inherent risk may be assessed a low composite risk when internal controls and risk-management systems are strong, and when they effectively mitigate much of the risk.

Once the composite risk assessment of each identified significant activity or function is completed, an overall composite risk assessment should be made for off-site analytical and planning purposes. This assessment is the final step in the development of the risk matrix, and the evaluation of the overall composite risk is incorporated into the written risk assessment.

Preparation of the Risk Assessment

A written risk assessment is used as an internal supervisory planning tool and to facilitate communication with other supervisors. The goal is to develop a document that presents a comprehensive, risk-focused view of the institution, delineating the areas of supervisory concern and

servicing as a platform for developing the supervisory plan.

The format and content of the written risk assessment are flexible and should be tailored to the individual institution. The risk assessment reflects the dynamics of the institution; therefore, it should consider the institution's evolving business strategies and be amended as significant changes in the risk profile occur. Input from other affected supervisors and specialty units should be included to ensure that all the institution's significant risks are identified. The risk assessment should—

- include an overall risk assessment of the organization;
- describe the types of risk (credit, market, liquidity, reputational, operational, legal) and their level (high, moderate, low) and direction (increasing, stable, decreasing);
- identify all major functions, business lines, activities, products, and legal entities from which significant risks emanate, as well as the key issues that could affect the risk profile;
- consider the relationship between the likelihood of an adverse event and its potential impact on an institution; and
- describe the institution's risk-management systems. Reviews and risk assessments performed by internal and external auditors should be discussed, as should the institution's ability to take on and manage risk prospectively.

The central point of contact should attempt to identify the cause of unfavorable trends, not just report the symptoms. The risk assessment should reflect a thorough analysis that leads to conclusions about the institution's risk profile, rather than just reiterating the facts.

Planning and Scheduling Supervisory Activities

The supervisory plan forms a bridge between the institution's risk assessment, which identifies significant risks and supervisory concerns, and the supervisory activities to be conducted. In developing the supervisory plan and examination schedule, the central point of contact should minimize disruption to the institution and, whenever possible, avoid duplicative examination efforts and requesting similar information from the other supervisors.

The institution's organizational structure and complexity are significant considerations when planning the specific supervisory activities to be conducted. Additionally, interstate banking and branching activities have implications for planning on-site and off-site review. The scope and location of on-site work for interstate banking operations will depend upon the significance and risk profile of local operations, the location of the supervised entity's major functions, and the degree of its centralization. The bulk of safety-and-soundness examinations for branches of an interstate bank would likely be conducted at the head office or regional offices, supplemented by periodic reviews of branch operations and internal controls. The supervisory plan should reflect the need to coordinate these reviews of branch operations with other supervisors.

Preparation of the Supervisory Plan

A comprehensive supervisory plan should be developed annually, and reviewed and revised at least quarterly to reflect any significant new information or emerging banking trends or risks. The supervisory plan and any revisions should be periodically discussed with representatives of the principal regulators of major affiliates to reconfirm their agreement on the overall plan for coordinating its implementation, when warranted.

The plan should demonstrate that both the supervisory concerns identified through the risk-assessment process and the deficiencies noted in the previous examination are being or will be addressed. To the extent that the institution's risk-management systems are adequate, the level of supervisory activity may be adjusted. The plan should generally address all supervisory activities to be conducted, the scope of those activities (full or targeted), the objectives of those activities (for example, review of specific business lines, products, support functions, legal entities), and specific concerns regarding those activities, if any. Consideration should be given to—

- prioritizing supervisory resources on areas of higher risk;
- pooling examiner resources to reduce the regulatory burden on institutions as well as examination redundancies;
- maximizing the use of examiners who are located where the activity is being conducted;

- coordinating examinations of different disciplines;
- determining compliance with, or the potential for, supervisory action;
- balancing mandated requirements with the objectives of the plan;
- providing general logistical information (for example, a timetable of supervisory activities, the participants, and expected resource requirements); and
- assessing the extent to which internal and external audit, internal loan review, compliance, and other risk-management systems will be tested and relied upon.

Generally, the planning horizon to be covered is 18 months for domestic institutions.⁸ The overall supervisory objectives and basic framework need to be outlined by midyear to facilitate preliminary discussions with other supervisors and to coincide with planning for the Federal Reserve's annual scheduling conferences. The plan should be finalized by the end of the year, for execution in the following year.

Preparation of the Examination Program

The examination program should provide a comprehensive schedule of examination activities for the entire organization and aid in the coordination and communication of responsibilities for supervisory activities. An examination program provides a comprehensive listing of all examination activities to be conducted at an institution for the given planning horizon. To prepare a complete examination program and reflect the institution's current conditions and activities, and the activities of other supervisors, the central point of contact needs to be the focal point for communications on a particular institution. The role includes any communications with the Federal Reserve, the institution's management, and other supervisors. The examination program generally incorporates the following logistical elements:

- a schedule of activities, period, and resource estimates for planned projects

8. The examination plans and assessments of condition of U.S. operations that are used for FBO supervision use a 12-month period.

- an identification of the agencies conducting and participating in the supervisory activity (when there are joint supervisors, indicate the lead agency and the agency responsible for a particular activity) and resources committed by all participants to the area(s) under review
- the planned product for communicating findings (indicate whether it will be a formal report or supervisory memorandum)
- the need for special examiner skills and the extent of participation of individuals from specialty functions
- a statement of the objectives;
- an overview of the activities and risks to be evaluated;
- the level of reliance on internal risk-management systems and internal or external audit findings;
- a description of the procedures that are to be performed, indicating any sampling process to be used and the level of transaction testing, when appropriate;
- identification of the procedures that are expected to be performed off-site; and
- a description of how the findings of targeted reviews, if any, will be used on the current examination.

Defining Examination Activities

Scope Memorandum

The scope memorandum is an integral product in the risk-focused methodology because it identifies the key objectives of the on-site examination. The focus of on-site examination activities, identified in the scope memorandum, follow a top-down approach that includes a review of the organization's internal risk-management systems and an appropriate level of transaction testing. The risk-focused methodology is flexible regarding the amount of on-site transaction testing used. Although the focus of the examination is on the institution's processes, an appropriate level of transaction testing and asset review will be necessary to verify the integrity of internal systems.

After the areas to be reviewed have been identified in the supervisory plan, a scope memorandum should be prepared that documents specific objectives for the projected examinations. This document is of key importance, as the scope of the examination will likely vary from year to year. Thus, it is necessary to identify the specific areas chosen for review and the extent of those reviews. The scope memorandum will help ensure that the supervisory plan for the institution is executed and will communicate the specific examination objectives to the examination staff.

The scope memorandum should be tailored to the size, complexity, and current rating of the institution subject to review. For large but less-complex institutions, the scope memorandum may be combined with the supervisory plan or the risk assessment. The scope memorandum should define the objectives of the examination, and generally should include—

Entry Letter

The entry letter should be tailored to fit the specific character and profile of the institution to be examined and the scope of the activities to be performed. Thus, effective use of entry letters depends on the planning and scoping of a risk-focused examination. To eliminate duplication and minimize the regulatory burden on an institution, entry letters should not request information that is regularly provided to designated central points of contact or that is available within each Federal Reserve Bank. When needed for examinations of larger or more complex organizations, the entry letter should be supplemented by requests for information on specialty activities. The specific items selected for inclusion in the entry letter should meet the following guidelines:

- reflect risk-focused supervision objectives and the examination scope
- facilitate efficiency in the examination process and lessen the burden on financial institutions
- limit, to the extent possible, requests for special management reports
- eliminate items used for audit-type procedures (for example, verifications)
- distinguish between information to be mailed to the examiner-in-charge for off-site examination procedures and information to be held at the institution for on-site procedures
- allow management sufficient lead time to prepare the requested information

Examination Procedures

Examination procedures should be tailored to the characteristics of each institution, keeping in mind size, complexity, and risk profile. They should focus on developing appropriate documentation to adequately assess management's ability to identify, measure, monitor, and control risks. Procedures should be completed to the degree necessary to determine whether the institution's management understands and adequately controls the levels and types of risks that are assumed. For transaction testing, the volume of loans to be tested should be adjusted according to management's ability to accurately identify problems and potential problem credits and to measure, monitor, and control the institution's exposure to overall credit risk. Likewise, the level of transaction testing for compliance with laws and regulations should take into account the effectiveness of management systems to monitor, evaluate, and ensure compliance with applicable laws and regulations.

During the supervisory cycle, the 10 functional areas listed below will be evaluated in most full-scope examinations. To evaluate these functional areas, procedures need to be tailored to fit the risk assessment that was prepared for the institution and the scope memorandum that was prepared for the examination. These functional areas represent the primary business activities and functions of large complex institutions as well as common sources of significant risk to them. Additionally, other areas of significant sources of risk to an institution or areas that are central to the examination assignment will need to be evaluated. The functional areas include the following:

- loan portfolio analysis
- Treasury activities
- trading and capital-markets activities
- internal controls and audit
- supervisory ratings
- information systems
- fiduciary activities
- private banking

- retail banking activities
- payments system risk

Reporting the Findings

At least annually, a comprehensive summary supervisory report should be prepared that supports the organization's assigned ratings and encompasses the results of the entire supervisory cycle. This report should (1) convey the Federal Reserve's view of the condition of the organization and its key risk-management processes, (2) communicate the composite supervisory ratings, (3) discuss each of the major business risks, (4) summarize the supervisory activities conducted during the supervisory cycle and the resulting findings, and (5) assess the effectiveness of any corrective actions taken by the organization. This report will satisfy supervisory and legal requirements for a full-scope examination. Reserve Bank management, as well as Board officials, when warranted, will meet with the organization's board of directors to present and discuss the contents of the report and the Federal Reserve's assessment of the condition of the organization. (See SR-99-15.)

Minimum Timing Standards for Examination Report Completion

Examination reports issued by the Federal Reserve must be completed and filed within a maximum of 60 calendar days, commencing with the day following the examiner's exit meeting. This standard applies to reports for all banks, regardless of the complexity of the organization. Additionally, for institutions with a CAMELS composite rating of 3, 4, or 5, Reserve Banks are encouraged to adopt an internal target of 45 calendar days for processing and filing reports. In cases where reports are issued jointly with other agencies, this standard may be extended at the discretion of senior management at the Reserve Bank. (See SR-93-4.)

Internal Control and Audit Function, Oversight, and Outsourcing

Effective date October 2008

Section 1010.1

This section sets forth the principal aspects of effective internal control and audit and discusses some pertinent points relative to the internal control questionnaires (ICQs). It assists the examiner in understanding and evaluating the objectives of and the work performed by internal and external auditors. It also sets forth the general criteria the examiner should consider to determine if the work of internal and external auditors can be relied on in the performance of the examination. To the extent that audit records can be relied on, they should be used to complete the ICQs implemented during the examination. In most cases, only those questions not fully supported by audit records would require the examiner to perform a detailed review of the area in question.

Effective internal control is a foundation for the safe and sound operation of a financial institution. The board of directors and senior managers of an institution are responsible for ensuring that the system of internal control is effective. Their responsibility *cannot* be delegated to others within or outside the organization. An internal audit function is an important element of an effective system of internal control. When properly structured and conducted, internal audit provides directors and senior management with vital information about the condition of the system of internal control, and it identifies weaknesses so that management can take prompt, remedial action. Examiners are to review an institution's internal audit function and recommend improvements if needed. In addition, under the Interagency Guidelines Establishing Standards for Safety and Soundness,¹ pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831p-1), each institution is required to have an internal audit function that is appropriate to its size and the nature and scope of its activities.

In summary, internal control is a process designed to provide reasonable assurance that the institution will achieve the following objectives: efficient and effective operations, including safeguarding of assets; reliable financial reporting; and compliance with applicable laws and regulations. Internal control consists of five components that are a part of the management

process: control environment, risk assessment, control activities, information and communication, and monitoring activities. The effective functioning of these components, which is brought about by an institution's board of directors, management, and other personnel, is essential to achieving the internal control objectives. This description of internal control is consistent with the Committee of Sponsoring Organizations of the Treadway Commission (COSO) report *Internal Control—Integrated Framework*. In addition, under the COSO framework, financial reporting is defined in terms of published financial statements, which, for these purposes, encompass financial statements prepared in accordance with generally accepted accounting principles and regulatory reports (such as the Reports of Condition and Income). Institutions are encouraged to evaluate their internal control against the COSO framework.

AUDIT COMMITTEE OVERSIGHT

Internal and external auditors will not feel free to assess the bank's operations if their independence is compromised. This can sometimes happen when internal and external auditors report solely to senior management instead of to the board of directors.

The independence of internal and external auditors is increased when they report to an independent audit committee (one made up of external directors who are not members of the bank's management). The auditors' independence is enhanced when the audit committee takes an active role in approving the internal and external audit scope and plan.

The role of the independent audit committee is growing in importance. The audit committee's duties may include (1) overseeing the internal audit function; (2) approving or recommending the appointment of external auditors and the scope of external audits and other services; (3) providing the opportunity for auditors to meet and discuss findings apart from management; (4) reviewing with management and external auditors the year-end financial statements; and (5) meeting with regulatory authorities.

1. For state member banks, see appendix D-1 to 12 CFR 208.

Public Company Accounting Oversight Board

The Sarbanes-Oxley Act of 2002 (the act) became law on July 30, 2002 (Pub. L. No. 107-204). The act addresses weaknesses in corporate governance and the accounting and auditing professions and includes provisions addressing audits, financial reporting and disclosure, conflicts of interest, and corporate governance at publicly owned companies. The act, among other things, requires public companies to have an audit committee made entirely of independent directors. Publicly owned banking organizations that are listed on the New York Stock Exchange (NYSE) and Nasdaq must also comply with those exchanges' listing requirements, which include audit committee requirements.

The act also established a Public Company Accounting Oversight Board (PCAOB) that has the authority to set and enforce auditing, attestation, quality-control, and ethics (including independence) standards for auditors of public companies (subject to Securities and Exchange Commission (SEC) review). (See SR-02-20.) Accounting firms that conduct audits of public companies (registered accounting firms) must register with the PCAOB and be subject to its supervision. The PCAOB is also empowered to inspect the auditing operations of public accounting firms that audit public companies as well as impose disciplinary and remedial sanctions for violations of its rules, securities laws, and professional auditing and accounting standards. (See www.pcaobus.org.)

In May 2003, the Federal Reserve, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision announced that they did not expect to take actions to apply the corporate-governance and other requirements of the Sarbanes-Oxley Act generally to nonpublic banking organizations that are not otherwise subject to them.² (See SR-03-08.) Nonpublic banking organizations are encouraged to periodically review their policies and procedures relating to corporate-governance and auditing matters. This review should ensure that such policies and procedures are consistent with applicable law, regulations, and supervisory guidance

2. Some aspects of the auditor-independence rules established by the Sarbanes-Oxley Act apply to all federally insured depository institutions with \$500 million or more in total assets. See part 363 of the FDIC's regulations.

and remain appropriate in light of the organization's size, operations, and resources. Furthermore, a banking organization's policies and procedures for corporate governance, internal controls, and auditing will be assessed during the supervisory process, and supervisory action may be taken if there are deficiencies or weaknesses in these areas that are inconsistent with sound corporate-governance practices or safety-and-soundness considerations.

DISCIPLINARY ACTIONS AGAINST ACCOUNTANTS AND ACCOUNTING FIRMS PERFORMING CERTAIN AUDIT SERVICES

Section 36 of the Federal Deposit Insurance Act (the FDI Act) authorizes the federal bank and thrift regulatory agencies (the agencies)³ to take disciplinary actions against independent public accountants and accounting firms that perform audit services covered by the act's provisions. Section 36, as implemented by part 363 of the FDIC's rules (12 CFR 363), requires that each federally insured depository institution with total assets of \$500 million or more obtain an audit of its financial statements and a management report. Institutions with assets of \$1 billion or more must provide an attestation on management's assertions concerning internal controls over financial reporting that is performed by an independent public accountant (the accountant). The respective insured depository institution must include the accountant's audit and attestation reports in its annual report, as required. See the section on "Legal Requirements Affecting Banks and the Audit Function."

The agencies amended their rules, pursuant to section 36, that set forth the practices and procedures to implement their authority to remove, suspend, or debar, for good cause,^{3a} an accountant or firm from performing audit and attesta-

3. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision. The Board approved its rules on August 6, 2003 (press release of August 8, 2003). The rules became effective October 1, 2003.

3a. The rules provide that certain violations of law, negligent conduct, reckless violations of professional standards, or lack of qualifications to perform auditing services may be considered good cause.

tion services for insured depository institutions with assets of \$500 million or more.^{3b} Immediate suspensions are permitted in limited circumstances. Also, an accountant or accounting firm is prohibited from performing audit services for the covered institution if an authorized agency has taken such a disciplinary action against the accountant or firm, or if the SEC or the PCAOB has taken certain disciplinary action against the accountant or firm.

The amended rules reflect the agencies' increasing concern about the quality of audits and internal controls for financial reporting at insured depository institutions. The rules emphasize the importance of maintaining high quality in the audits of federally insured depository institutions' financial position and in the attestations of management assessments.

OBJECTIVES OF INTERNAL CONTROL

In general, good internal control exists when no one is in a position to make significant errors or perpetrate significant irregularities without timely detection. Therefore, a system of internal control should include those procedures necessary to ensure timely detection of failure of accountability, and such procedures should be performed by competent persons who have no incompatible duties. The following standards are encompassed within the description of internal control:

Existence of procedures. Existence of prescribed internal control procedures is necessary but not sufficient for effective internal control. Prescribed procedures that are not actually performed do nothing to establish control. Consequently, the examiner must give thoughtful attention not only to the prescribed set of procedures but also to the practices actually followed. This attention can be accomplished through inquiry, observation, testing, or a combination thereof.

Competent performance. For internal control to be effective, the required procedures must be performed by competent persons. Evaluation of competence undoubtedly requires some degree

of subjective judgment because attributes such as intelligence, knowledge, and attitude are relevant. Thus, the examiner should be alert for indications that employees have failed so substantially to perform their duties that a serious question is raised concerning their abilities.

Independent performance. If employees who have access to assets also have access to the related accounting records or perform related review operations (or immediately supervise the activities of other employees who maintain the records or perform the review operations), they may be able to both perpetrate and conceal defalcations. Therefore, duties concerned with the custody of assets are incompatible with recordkeeping duties for those assets, and duties concerned with the performance of activities are incompatible with the authorization or review of those activities.

In judging the independence of a person, the examiner must avoid looking at that person as an individual and presuming the way in which that individual would respond in a given situation. For example, an individual may be the sole check signer and an assistant may prepare monthly bank reconciliation. If the assistant appears to be a competent person, it may seem that an independent reconciliation would be performed and anything amiss would be reported. Such judgments are potentially erroneous. There exist no established tests by which the psychological and economic independence of an individual in a given situation can be judged. The position must be evaluated, not the person. If the position in which the person acts is not an independent one in itself, then the work should not be presumed to be independent, regardless of the apparent competence of the person in question. In the example cited above, the function performed by the assistant should be viewed as if it were performed by the supervisor. Hence, incompatible duties are present in that situation.

PROCEDURES FOR COMPLETING ICQs

The implementation of selected ICQs and the evaluation of internal audit activities provide a basis for determining the adequacy of the bank's control environment. To reach conclusions required by the questionnaires, the examiner

3b. See the Federal Reserve's rules on disciplinary actions against public accountants and accounting firms at 12 CFR 263.94 and 12 CFR 263, subpart J.

assigned to review a given internal control routine or area of bank operations should use any source of information necessary to ensure a full understanding of the prescribed system, including any potential weaknesses. Only when the examiner completely understands the bank's system can an assessment and evaluation be made of the effects of internal controls on the examination.

To reach conclusions concerning a specific section of an ICQ, the examiner should document and review the bank's operating systems and procedures by consulting all available sources of information and discussing them with appropriate bank personnel. Sources of information might include organization charts, procedural manuals, operating instructions, job specifications, directives to employees, and other similar sources of information. Also, the examiner should not overlook potential sources such as job descriptions, flow charts, and other documentation in the internal audit workpapers. A primary objective in the review of the system is to efficiently reach a conclusion about the overall adequacy of existing controls. Any existing source of information that will enable the examiner to quickly gain an understanding of the procedures in effect should be used in order to minimize the time required to formulate the conclusions. The review should be documented in an organized manner through the use of narrative descriptions, flow charts, or other diagrams. If a system is properly documented, the documentation will provide a ready reference for any examiner performing work in the area, and it often may be carried forward for future examinations, which will save time.

Although narrative descriptions can often provide an adequate explanation of systems of internal control, especially in less complex situations, they may have certain drawbacks, such as the following:

- They may be cumbersome and too lengthy.
- They may be unclear or poorly written.
- Related points may be difficult to integrate.
- Annual changes may be awkward to record.

To overcome these problems, the examiner should consider using flow charts, which reduce narrative descriptions to a picture. Flow charts often reduce a complex situation to an easily understandable sequence of interrelated steps.

In obtaining and substantiating the answers to the questions in the ICQ, the examiner should

develop a plan to obtain the necessary information efficiently. Such a plan would normally avoid a direct question-and-answer session with bank officers. A suggested approach to completion of the ICQ is to—

- become familiar with the ICQ,
- review related internal audit procedures, reports, and responses,
- review any written documentation of a bank's system of controls,
- find out what the department does and what the functions of personnel within the department are through conversations with appropriate individuals, and
- answer as many individual questions as possible from information gained in the preceding steps and fill in the remaining questions by direct inquiry.

An effective way to begin an on-site review of internal control is to identify the various key functions applicable to the area under review. For each position identified, the following questions should then be asked:

- Is this a critical position? That is, can a person in this position either make a significant error that will affect the recording of transactions or perpetrate material irregularities of some type?
- If an error is made or an irregularity is perpetrated, what is the probability that normal routines will disclose it on a timely basis? That is, what controls exist that would prevent or detect significant errors or the perpetration of significant irregularities?
- What are the specific opportunities open to the individual to conceal any irregularity, and are there any mitigating controls that will reduce or eliminate these opportunities?

Although all employees within an organization may be subject to control, not all have financial responsibilities that can influence the accuracy of the accounting and financial records or have access to assets. The examiner should be primarily concerned with those positions that have the ability to influence the records and that have access to assets. Once those positions have been identified, the examiners must exercise their professional knowledge of bank operations to visualize the possibilities open to any person holding a particular position. The question is not whether the individual is honest, but rather whether situations exist that might permit an

error to be concealed. By directing attention to such situations, an examiner will also consider situations that may permit unintentional errors to remain undetected.

The evaluation of internal control should include consideration of other existing accounting and administrative controls or other circumstances that might counteract or mitigate an apparent weakness or impair an established control. Controls that mitigate an apparent weakness may be a formal part of the bank's operating system, such as budget procedures that include a careful comparison of budgeted and actual amounts by competent management personnel. Mitigating controls also may be informal. For example, in small banks, management may be sufficiently involved in daily operations to know the purpose and reasonableness of all expense disbursements. That knowledge, coupled with the responsibility for signing checks, may make irregularities by nonmanagement personnel unlikely, even if disbursements are otherwise under the control of only one person.

When reviewing internal controls, an essential part of the examination is being alert to indications that adverse circumstances may exist. Adverse circumstances may lead employees or officers into courses of action they normally would not pursue. An adverse circumstance to which the examiner should be especially alert exists when the personal financial interests of key officers or employees depend directly on operating results or financial condition. Although the review of internal control does not place the examiner in the role of an investigator or detective, an alert attitude toward possible conflicts of interest should be maintained throughout the examination. Also, offices staffed by members of the same family, branches completely dominated by a strong personality, or departments in which supervisors rely unduly on their assistants require special alertness on the part of the examiner. Those circumstances and other similar ones should be considered in preparing the ICQ. It is not the formality of the particular factor that is of importance but rather its effect on the overall operation under review. Circumstances that may affect answers to the basic questions should be noted along with conclusions concerning their effect on the examination.

The ICQs were designed so that answers could be substantiated by (1) inquiry to bank personnel, (2) observation, or (3) testing. However, certain questions are marked with an

asterisk to indicate that they require substantiation through observation or testing. Those questions are deemed so critical that substantiation by inquiry is not sufficient. For those questions substantiated through testing, the nature and extent of the test performed should be indicated adjacent to the applicable step in the ICQ.

The examiner should be alert for deviations by bank personnel from established policies, practices, and procedures. This applies not only to questions marked with an asterisk but also to every question in the ICQ. Examples of such deviations include situations when (1) instructions and directives are frequently not revised to reflect current practices, (2) employees find shortcuts for performing their tasks, (3) changes in organization and activities may influence operating procedures in unexpected ways, or (4) employees' duties may be rotated in ways that have not been previously considered. These and other circumstances may serve to modify or otherwise change prescribed procedures, thus giving the examiner an inadequate basis for evaluating internal control.

Sometimes, when a substantial portion of the accounting work is accomplished by computer, the procedures are so different from conventional accounting methods that the principles discussed here seem inapplicable. Care should be taken to resist drawing this conclusion. This discussion of internal control and its evaluation is purposely stated in terms sufficiently general to apply to any system. Perpetration of defalcations requires direct or indirect access to appropriate documents or accounting records. As such, perpetration requires the involvement of people and, under any system, computerized or not, there will be persons who have access to assets and records. Those with access may include computer operators, programmers, and their supervisors and other related personnel.

The final question in each section of the ICQ requires a composite evaluation of existing internal controls in the applicable area of the bank. The examiner should base that evaluation on answers to the preceding questions within the section, the review and observation of the systems and controls within the bank, and discussion with appropriate bank personnel.

The composite evaluation does, however, require some degree of subjective judgment. The examiner should use all information available to formulate an overall evaluation, fully realizing that a high degree of professional judgment is required.

Applying the ICQ to Different Situations

The ICQs are general enough to apply to a wide range of systems, so not all sections or questions will apply to every situation, depending on factors such as bank size, complexity and type of operations, and organizational structure. When completing the ICQs, the examiner should include a brief comment stating the reason a section or question is not applicable to the specific situation.

For large banking institutions or when multiple locations of a bank are being examined, it may be necessary to design supplements to the ICQs to adequately review all phases of the bank's operations and related internal controls. Because certain functions described in this manual may be performed by several departments in some banks, it also may be necessary to redesign a particular section of the ICQ so that each department receives appropriate consideration. Conversely, functions described in several different sections of this handbook may be performed in a single department in smaller banks. If the ICQ is adapted to fit a specific situation, care should be taken to ensure that its scope and intent are not modified. That requires professional judgment in interpreting and expanding the generalized material. Any such modifications should be completely documented and filed in the workpapers.

LEGAL REQUIREMENTS AFFECTING BANKS AND THE AUDIT FUNCTION

The Federal Deposit Insurance Corporation Improvement Act of 1991 amended section 36 of the FDI Act (12 USC 1831m). Since then, the FDIC has made various revisions to its rules at Part 363 (12 CFR 363) and guidelines. When specific reports are required to be submitted to the FDIC to comply with the provisions of compliance with Part 363, the institution must also submit the report to the appropriate federal banking agency and any appropriate state supervisor.

For the purposes of determining the applicability of this rule, an institution should use total assets as reported on its most recent Report of Condition (the Call Report), the date that coincides with the end of the preceding fiscal year. If the fiscal year ends on a date other than the end

of a calendar quarter, the institution is to use the Call Report for the quarter end immediately preceding the end of the fiscal year.

Institutions with \$500 Million or More but Less Than \$1 Billion in Total Assets

The regulations require these institutions to file an annual report with the FDIC that must include the following:

- Audited comparative annual financial statements;
- The independent public accountant's report on the audited financial statements;
- A management report (comprising its statements and assessments) that is signed by the chief executive officer and chief accounting or chief financial officer. The report should include:
 - A statement of management's responsibilities for:
 - preparing the annual financial statements;
 - establishing and maintaining an adequate internal control structure over financial reporting;
 - complying with the laws and regulations relating to safety and soundness that are designated by the FDIC and the appropriate federal banking agency; and
 - An assessment by management of the institution's compliance with the designated laws and regulations during the fiscal year.

If the institution is a public company or a subsidiary of a public company that would be subject to the provisions of section 404 of the Sarbanes-Oxley Act (Section 404), it must comply with the requirement to file other reports issued by the independent accountant as set forth in section 363.4(c) (12 CFR 363.4(c)). The institutions must provide a copy of the independent accountant's report to the FDIC on the audit of internal control over financial reporting that is required by section 404 with the FDIC within 15 days after receipt. The institutions also are encouraged to submit a copy of management's section 404 report on internal control over financial reporting together with the independent public accountant's internal control report.

Institutions with \$1 Billion or More in Total Assets

Section 36 of the FDI Act and Part 363 of the FDIC's regulations required insured depository institutions with a least \$1 billion in total assets to file an annual report that must include the following:

- Audited comparative annual financial statements;
- The independent public accountant's report on the audited financial statements;
- A management report that contains:
 - A statement of management's responsibilities for:
 - Preparing the annual financial statements;
 - Establishing and maintaining an adequate internal control structure over financial reporting;
 - Complying with the laws and regulations relating to safety and soundness that are designated by the FDIC and the appropriate federal banking agency; and
 - Assessments by management of:
 - the effectiveness of the institution's internal control structure and procedures over financial reporting as of the end of the fiscal year (12 USC 1831m(b)(2)(B)(i); and
 - the institution's compliance with safety and soundness laws and regulations during the year (12 USC 1831n(b)(2)(B)(ii)); and
- The independent public accountant's attestation report—the independent public accountant is to examine, attest to, and report separately in an attestation report, on the assertions by management's concerning the institution's internal control structure and procedures for financial reporting (12 USC 1831m(c)). The attestation is to be made in accordance with generally accepted standards for attestation engagements.

Other Requirements—Institutions with \$500 Million or More in Total Assets

Financial reporting encompasses, for the purposes of Part 363, both financial statements prepared in accordance with generally accepted accounting principles and those prepared for

regulatory reporting purposes. Each institution is to have an independent public accountant perform an audit who reports on the institution's annual financial statements in accordance with generally accepted auditing standards and section 37 of the FDI Act (12 USC 1831n). The scope of the audit engagement must be sufficient to permit the accountant to determine and report whether the financial statements are presented fairly and in accordance with generally accepted accounting principles. The audit is to be performed using procedures that will objectively determine the accuracy of management's assertions on compliance with safety-and-soundness laws and regulations (12 USC 1831m(b)(2)(A)(iii)),

Each institution must file with the FDIC two copies of the annual report within 90 days after the end of its fiscal year. Notwithstanding the 90-day filing period, each institution must file a copy of each audit and attestation report issued by its independent accountant within 15 days of their receipt.

In addition, each institution is required to file a copy of any management letter, qualification, or any other report issued by its independent public accountant with the FDIC within 15 days of receipt of such letter or report. See section 363.4(c) (12 CFR 363.4(c)).

Each institution is required to establish an audit committee of its board of directors. The duties of the audit committee include reviewing with management and the independent public accountant the basis for, and the results of, the annual independent audit reports and the institution's respective reporting requirements. Each institution with total assets of \$1 billion or more, as of the beginning of the fiscal year, is required to have an audit committee, the members of which must be outside directors who are independent of the institution's management. Institutions with total assets of \$500 million, but less than \$1 billion or more, as of the beginning of the fiscal year, must have an audit committee, the members of which are outside directors, the majority of whom must be independent of the institution's management.

For insured institutions having total assets of more than \$3 billion, the audit committee must (1) have members with banking or related financial management expertise, (2) have access to outside legal counsel, and (3) not include any large customers of the institution. The audit committee also may be required to satisfy other audit committee membership criteria (12 USC

831m (g)(1)(c)) and section 363.5(b) (12 CFR 363.5(b)).

Any covered institution with a composite CAMELS rating of 1 or 2 may file the two above-mentioned reports through its parent holding company on a consolidated basis. The Guidelines and Interpretations (appendix A to Part 363) provide that one of the duties of a covered institution's audit committee should include oversight of the internal audit function and its operations. (See SR-96-4.)

INTERAGENCY POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING

The Federal Reserve and other federal banking agencies^{3c} (the agencies) adopted on March 17, 2003, an interagency policy statement addressing the internal audit function and its outsourcing. The policy statement revises and replaces the former 1997 policy statement and incorporates recent developments in internal auditing. In addition, the revised policy incorporates guidance on the independence of accountants who provide institutions with both internal and external audit services in light of the Sarbanes-Oxley Act of 2002 (the act) and associated SEC rules.

The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit services to the company. The policy statement discusses the applicability of this prohibition to institutions that are public companies, to insured depository institutions with assets of \$500 million or more that are subject to the annual audit and reporting requirements of section 36 of the FDI Act, and to nonpublic institutions that are not subject to section 36.

The statement recognizes that many institutions have engaged independent public accounting firms and other outside professionals (outsourcing vendors) to perform work that traditionally has been done by internal auditors. These arrangements are often called "internal audit outsourcing," "internal audit assistance," "audit co-sourcing," and "extended audit ser-

VICES" (hereafter collectively referred to as outsourcing). Typical outsourcing arrangements are more fully described below.

Outsourcing may be beneficial to an institution if it is properly structured, carefully conducted, and prudently managed. However, the structure, scope, and management of some internal audit outsourcing arrangements may not contribute to the institution's safety and soundness. Furthermore, arrangements with outsourcing vendors should not leave directors and senior management with the erroneous impression that they have been relieved of their responsibility for maintaining an effective system of internal control and for overseeing the internal audit function.

Internal Audit Function (Part I)

Board and Senior Management Responsibilities

The board of directors and senior management

3c. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

are responsible for having an effective system of internal control and an effective internal audit function in place at their institution. They are also responsible for ensuring that the importance of internal control is understood and respected throughout the institution. This overall responsibility cannot be delegated to anyone else. They may, however, delegate the design, implementation, and monitoring of specific internal controls to lower-level management and delegate the testing and assessment of internal controls to others. Accordingly, directors and senior management should have reasonable assurance that the system of internal control prevents or detects significant inaccurate, incomplete, or unauthorized transactions; deficiencies in the safeguarding of assets; unreliable financial reporting (which includes regulatory reporting); and deviations from laws, regulations, and the institution's policies.⁴

Some institutions have chosen to rely on so-called management self-assessments or control self-assessments, wherein business-line managers and their staff evaluate the performance of internal controls within their purview. Such reviews help to underscore management's responsibility for internal control, but they are not impartial. Directors and members of senior management who rely too much on these reviews may not learn of control weaknesses until they have become costly problems, particularly if directors are not intimately familiar with the institution's operations. Therefore, institutions generally should also have their internal controls tested and evaluated by units without business-line responsibilities, such as internal audit groups.

Directors should be confident that the internal

audit function addresses the risks of and meets the demands posed by the institution's current and planned activities. To accomplish this objective, directors should consider whether their institution's internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors' (IIA) *Standards for the Professional Practice of Internal Auditing*. These standards address independence, professional proficiency, scope of work, performance of audit work, management of internal audit, and quality-assurance reviews. Furthermore, directors and senior management should ensure that the following matters are reflected in their institution's internal audit function.

Structure. Careful thought should be given to the placement of the audit function in the institution's management structure. The internal audit function should be positioned so that the board has confidence that the internal audit function will perform its duties with impartiality and not be unduly influenced by managers of day-to-day operations. The audit committee,⁵ using objective criteria it has established, should oversee the internal audit function and evaluate its performance.⁶ The audit committee should assign responsibility for the internal audit function to a member of management (that is, the manager of internal audit or internal audit manager) who understands the function and has no responsibility for operating the system of internal control. The ideal organizational arrangement is for this manager to report directly and solely to the audit committee regarding both audit issues and administrative matters, for example, resources, budget, appraisals, and compensation. Institutions are encouraged to consider the IIA's *Practice Advisory 2060-2: Relation-*

4. As noted above, under section 36 of the FDI Act, as implemented by part 363 of the FDIC's regulations (12 CFR 363), FDIC-insured depository institutions with total assets of \$500 million or more must submit an annual management report signed by the chief executive officer (CEO) and chief accounting or chief financial officer. This report must contain (1) a statement of management's responsibilities for preparing the institution's annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with designated laws and regulations relating to safety and soundness, including management's assessment of the institution's compliance with those laws and regulations, and (2) for an institution with total assets of \$1 billion or more at the beginning of the institution's most recent fiscal year, an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such fiscal year. (See 12 CFR 363.2(b) and 70 *Fed. Reg.* 71,232, Nov. 28, 2005.)

5. Depository institutions subject to section 36 of the FDI Act and part 363 of the FDIC's regulations must maintain independent audit committees (i.e., consisting of directors who are not members of management). Consistent with the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations, the agencies also encourage the board of directors of each depository institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors. Where the term *audit committee* is used in this policy statement, the board of directors may fulfill the audit committee responsibilities if the institution is not subject to an audit committee requirement. See *Fed. Reg.*, September 28, 1999 (64 FR 52,319).

6. For example, the performance criteria could include the timeliness of each completed audit, a comparison of overall performance to plan, and other measures.

ship with the Audit Committee, which provides more guidance on the roles and relationships between the audit committee and the internal audit manager.

Many institutions place the manager of internal audit under a dual reporting arrangement: the manager is functionally accountable to the audit committee on issues discovered by the internal audit function, while reporting to another senior manager on administrative matters. Under a dual reporting relationship, the board should consider the potential for diminished objectivity on the part of the internal audit manager with respect to audits concerning the executive to whom he or she reports. For example, a manager of internal audit who reports to the chief financial officer (CFO) for performance appraisal, salary, and approval of department budgets may approach audits of the accounting and treasury operations controlled by the CFO with less objectivity than if the manager were to report to the chief executive officer. Thus, the chief financial officer, controller, or other similar officer should ideally be excluded from overseeing the internal audit activities even in a dual role. The objectivity and organizational stature of the internal audit function are best served under such a dual arrangement if the internal audit manager reports administratively to the CEO.

Some institutions seek to coordinate the internal audit function with several risk-monitoring functions (for example, loan-review, market-risk-assessment, and legal compliance departments) by establishing an administrative arrangement under one senior executive. Coordination of these other monitoring activities with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better utilize available resources, and enhance the institution's ability to comprehensively manage risk. Such an administrative reporting relationship should be designed so as to not interfere with or hinder the manager of internal audit's functional reporting to and ability to directly communicate with the institution's audit committee. In addition, the audit committee should ensure that efforts to coordinate these monitoring functions do not result in the manager of internal audit conducting control activities nor diminish his or her independence with respect to the other risk-monitoring functions. Furthermore, the internal audit manager should have the ability to independently audit these other

monitoring functions.

In structuring the reporting hierarchy, the board should weigh the risk of diminished independence against the benefit of reduced administrative burden in adopting a dual reporting organizational structure. The audit committee should document its consideration of this risk and mitigating controls. The IIA's *Practice Advisory 1110-2: Chief Audit Executive Reporting Lines* provides additional guidance regarding functional and administrative reporting lines.

Management, staffing, and audit quality. In managing the internal audit function, the manager of internal audit is responsible for control risk assessments, audit plans, audit programs, and audit reports.

- A control risk assessment (or risk-assessment methodology) documents the internal auditor's understanding of the institution's significant business activities and their associated risks. These assessments typically analyze the risks inherent in a given business line, the mitigating control processes, and the resulting residual risk exposure of the institution. They should be updated regularly to reflect changes to the system of internal control or work processes and to incorporate new lines of business.
- An internal audit plan is based on the control risk assessment and typically includes a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.
- An internal audit program describes the objectives of the audit work and lists the procedures that will be performed during each internal audit review.
- An audit report generally presents the purpose, scope, and results of the audit, including findings, conclusions, and recommendations. Workpapers that document the work performed and support the audit report should be maintained.

Ideally, the internal audit function's only role should be to independently and objectively evaluate and report on the effectiveness of an institution's risk-management, control, and governance processes. Internal auditors increasingly have taken a consulting role within institutions on new products and services and on mergers, acquisitions, and other corporate reorganiza-

tions. This role typically includes helping design controls and participating in the implementation of changes to the institution's control activities. The audit committee, in its oversight of the internal audit staff, should ensure that the function's consulting activities do not interfere or conflict with the objectivity it should have with respect to monitoring the institution's system of internal control. In order to maintain its inde-

pendence, the internal audit function should not assume a business-line management role over control activities, such as approving or implementing operating policies or procedures, including those it has helped design in connection with its consulting activities. The agencies encourage internal auditors to follow the IIA's standards, including guidance related to the internal audit function acting in an advisory capacity.

The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution's operations and assess whether internal controls are effective. The manager of internal audit should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide the audit staff. The form and content of these policies and procedures should be consistent with the size and complexity of the department and the institution. Many policies and procedures may be communicated informally in small internal audit departments, while larger departments would normally require more formal and comprehensive written guidance.

Scope. The frequency and extent of internal audit review and testing should be consistent with the nature, complexity, and risk of the institution's on- and off-balance-sheet activities. At least annually, the audit committee should review and approve internal audit's control risk assessment and the scope of the audit plan, including how much the manager relies on the work of an outsourcing vendor. It should also periodically review internal audit's adherence to the audit plan. The audit committee should consider requests for expansion of basic internal audit work when significant issues arise or when significant changes occur in the institution's environment, structure, activities, risk exposures, or systems.⁷

Communication. To properly carry out their responsibility for internal control, directors and senior management should foster forthright com-

7. Major changes in an institution's environment and conditions may compel changes to the internal control system and also warrant additional internal audit work. These changes include (1) new management; (2) areas or activities experiencing rapid growth or rapid decline; (3) new lines of business, products, or technologies or disposals thereof; (4) corporate restructurings, mergers, and acquisitions; and (5) an expansion or acquisition of foreign operations (including the impact of changes in the related economic and regulatory environments).

munications and critical examination of issues to better understand the importance and severity of internal control weaknesses identified by the internal auditor and operating management's solutions to these weaknesses. Internal auditors should report internal control deficiencies to the appropriate level of management as soon as they are identified. Significant matters should be promptly reported directly to the board of directors (or its audit committee) and senior management. In periodic meetings with management and the manager of internal audit, the audit committee should assess whether management is expeditiously resolving internal control weaknesses and other exceptions. Moreover, the audit committee should give the manager of internal audit the opportunity to discuss his or her findings without management being present.

Furthermore, each audit committee should establish and maintain procedures for employees of their institution to confidentially and anonymously submit concerns to the committee about questionable accounting, internal accounting control, or auditing matters.⁸ In addition, the audit committee should set up procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.

Contingency planning. As with any other function, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas. Lack of contingency planning for continuing internal audit coverage may increase the institution's level of operational risk.

Small Financial Institution's Internal Audit Function

An effective system of internal control and an independent internal audit function form the foundation for safe and sound operations, regardless of an institution's size. Each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities. The procedures assigned to this function should include adequate testing

8. When the board of directors fulfills the audit committee responsibilities, the procedures should provide for the submission of employee concerns to an outside director.

and review of internal controls and information systems.

It is the responsibility of the audit committee and management to carefully consider the extent of auditing that will effectively monitor the internal control system, after taking into account the internal audit function's costs and benefits. For institutions that are large or have complex operations, the benefits derived from a full-time manager of internal audit or an auditing staff likely outweigh the cost. For small institutions with few employees and less complex operations, however, these costs may outweigh the benefits. Nevertheless, a small institution without an internal auditor can ensure that it maintains an objective internal audit function by implementing a comprehensive set of independent reviews of significant internal controls. The key characteristic of such reviews is that the persons directing and/or performing the review of internal controls are *not* also responsible for managing or operating those controls. A person who is competent in evaluating a system of internal control should design the review procedures and arrange for their implementation. The person responsible for reviewing the system of internal control should report findings directly to the audit committee. The audit committee should evaluate the findings and ensure that senior management has or will take appropriate action to correct the control deficiencies.

Internal Audit Outsourcing Arrangements (Part II)

Examples of Internal Audit Outsourcing Arrangements

An outsourcing arrangement is a contract between an institution and an outsourcing vendor to provide internal audit services. Outsourcing arrangements take many forms and are used by institutions of all sizes. Some institutions consider entering into these arrangements to enhance the quality of their control environment by obtaining the services of a vendor with the knowledge and skills to critically assess, and recommend improvements to, their internal control systems. The internal audit services under contract can be limited to helping internal audit staff in an assignment for which they lack expertise. Such an arrangement is typically under the control of the institution's manager of inter-

nal audit, and the outsourcing vendor reports to him or her. Institutions often use outsourcing vendors for audits of areas requiring more technical expertise, such as electronic data processing and capital-markets activities. Such uses are often referred to as "internal audit assistance" or "audit co-sourcing."

Some outsourcing arrangements may require an outsourcing vendor to perform virtually all the procedures or tests of the system of internal control. Under such an arrangement, a designated manager of internal audit oversees the activities of the outsourcing vendor and typically is supported by internal audit staff. The outsourcing vendor may assist the audit staff in determining risks to be reviewed and may recommend testing procedures, but the internal audit manager is responsible for approving the audit scope, plan, and procedures to be performed. Furthermore, the internal audit manager is responsible for the results of the outsourced audit work, including findings, conclusions, and recommendations. The outsourcing vendor may report these results jointly with the internal audit manager to the audit committee.

Additional Considerations for Internal Audit Outsourcing Arrangements

Even when outsourcing vendors provide internal audit services, the board of directors and senior management of an institution are responsible for ensuring that both the system of internal control and the internal audit function operate effectively. In any outsourced internal audit arrangement, the institution's board of directors and senior management must maintain ownership of the internal audit function and provide active oversight of outsourced activities. When negotiating the outsourcing arrangement with an outsourcing vendor, an institution should carefully consider its current and anticipated business risks in setting each party's internal audit responsibilities. The outsourcing arrangement should not increase the risk that a breakdown of internal control will go undetected.

To clearly distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, often taking the form of an engagement letter.⁹ Contracts between the

9. The engagement-letter provisions described are comparable to those outlined by the American Institute of Certified Public Accountants (AICPA) for financial statement audits.

institution and the vendor typically include provisions that—

- define the expectations and responsibilities under the contract for both parties;
- set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
- set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
- establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and stipulations for default and termination of the contract;
- state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
- specify the locations of internal audit reports and the related workpapers;
- specify the period of time (for example, seven years) that vendors must maintain the workpapers;¹⁰
- state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;
- prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
- state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of

(See AICPA Professional Standards, AU section 310.) These provisions are consistent with the provisions customarily included in contracts for other outsourcing arrangements, such as those involving data processing and information technology. Therefore, the federal banking agencies consider these provisions to be usual and customary business practices.

10. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

management or an employee and, if applicable, will comply with AICPA, U.S. Securities and Exchange Commission (SEC), PCAOB, or regulatory independence guidance.

Vendor competence. Before entering an outsourcing arrangement, the institution should perform due diligence to satisfy itself that the outsourcing vendor has sufficient staff qualified to perform the contracted work. The staff's qualifications may be demonstrated, for example, through prior experience with financial institutions. Because the outsourcing arrangement is a personal-services contract, the institution's internal audit manager should have confidence in the competence of the staff assigned by the outsourcing vendor and receive timely notice of key staffing changes. Throughout the outsourcing arrangement, management should ensure that the outsourcing vendor maintains sufficient expertise to effectively perform its contractual obligations.

Management of the outsourced internal audit function. Directors and senior management should ensure that the outsourced internal audit function is competently managed. For example, larger institutions should employ sufficient competent staff members in the internal audit department to assist the manager of internal audit in overseeing the outsourcing vendor. Small institutions that do not employ a full-time audit manager should appoint a competent employee who ideally has no managerial responsibility for the areas being audited to oversee the outsourcing vendor's performance under the contract. This person should report directly to the audit committee for purposes of communicating internal audit issues.

Communication when an outsourced internal audit function exists. Communication between the internal audit function and the audit committee and senior management should not diminish because the institution engages an outsourcing vendor. All work by the outsourcing vendor should be well documented and all findings of control weaknesses should be promptly reported to the institution's manager of internal audit. Decisions not to report the outsourcing vendor's findings to directors and senior management should be the mutual decision of the internal audit manager and the outsourcing vendor. In deciding what issues should be brought to the board's attention, the

concept of “materiality,” as the term is used in financial statement audits, is generally not a good indicator of which control weakness to report. For example, when evaluating an institution’s compliance with laws and regulations, any exception may be important.

Contingency planning to ensure continuity of outsourced audit coverage. When an institution enters into an outsourcing arrangement (or significantly changes the mix of internal and external resources used by internal audit), it may increase its operational risk. Because the arrangement may be terminated suddenly, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas.

Independence of the Independent Public Accountant (Part III)

The following discussion applies only when a financial institution is considering using a public accountant to provide both external audit and internal audit services to the institution.

When one accounting firm performs both the external audit and the outsourced internal audit function, the firm risks compromising its independence. These concerns arise because, rather than having two separate functions, this outsourcing arrangement places the independent public accounting firm in the position of appearing to audit, or actually auditing, its own work. For example, in auditing an institution’s financial statements, the accounting firm will consider the extent to which it may rely on the internal control system, including the internal audit function, in designing audit procedures.

Applicability of the SEC’s Auditor Independence Requirements

Institutions that are public companies. To strengthen auditor independence, Congress passed the Sarbanes-Oxley Act of 2002 (the act). Title II of the act applies to any public company—that is, any company that has a class of securities registered with the SEC or the appropriate federal banking agency under section 12 of the Securities Exchange Act of 1934 or that is required to file reports with the SEC

under section 15(d) of that act.¹¹ The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit outsourcing services to the company.¹² In addition, if a public company’s external auditor will be providing auditing services and permissible nonaudit services, such as tax services, the company’s audit committee must preapprove each of these services.

According to the SEC’s final rules (effective May 6, 2003) implementing the act’s nonaudit-service prohibitions and audit committee preapproval requirements, an accountant is not independent if, at any point during the audit and professional engagement period, the accountant provides internal audit outsourcing or other prohibited nonaudit services to the public company audit client. The SEC’s final rules generally become effective on May 6, 2003, although there is a one-year transition period if the accountant is performing prohibited nonaudit services and external audit services for a public company pursuant to a contract in existence on May 6, 2003. The services provided during this transition period must not have impaired the auditor’s independence under the preexisting independence requirements of the SEC, the Independence Standards Board, and the AICPA. Although the SEC’s pre-Sarbanes-Oxley independence requirements (issued in November 2000, effective August 2002) did not prohibit the outsourcing of internal audit services to a public company’s independent public account-

11. 15 USC 78l and 78o(d).

12. In addition to prohibiting internal audit outsourcing, the Sarbanes-Oxley Act (15 USC 78j-1) also identifies other nonaudit services that an external auditor is prohibited from providing to a public company whose financial statements it audits. The legislative history of the act indicates that three broad principles should be considered when determining whether an auditor should be prohibited from providing a nonaudit service to an audit client. These principles are that an auditor should not (1) audit his or her own work, (2) perform management functions for the client, or (3) serve in an advocacy role for the client. To do so would impair the auditor’s independence. Based on these three broad principles, the other nonaudit services that an auditor is prohibited from providing to a public company audit client include bookkeeping or other services related to the client’s accounting records or financial statements; financial information systems design and implementation; appraisal or valuation services, fairness opinions, or contribution-in-kind reports; actuarial services; management or human resources functions; broker or dealer, investment adviser, or investment banking services; legal services and expert services unrelated to the audit; and any other service determined to be impermissible by the PCAOB.

tant, they did place conditions and limitations on internal audit outsourcing.

Depository institutions subject to the annual audit and reporting requirements of section 36 of the FDI Act. Under section 36, as implemented by part 363 of the FDIC's regulations, each FDIC-insured depository institution with total assets of \$500 million or more is required to have an annual audit performed by an independent public accountant.¹³ The part 363 guidelines address the qualifications of an independent public accountant engaged by such an institution by stating that "[t]he independent public accountant should also be in compliance with the AICPA's *Code of Professional Conduct* and meet the independence requirements and interpretations of the SEC and its staff."¹⁴

Thus, the guidelines provide for each FDIC-insured depository institution with \$500 million or more in total assets, whether or not it is a public company, and its external auditor to comply with the SEC's auditor independence requirements that are in effect during the period covered by the audit. These requirements include the nonaudit-service prohibitions and audit committee preapproval requirements implemented by the SEC's January 2003 auditor independence rules once these rule come into effect.¹⁵

Institutions not subject to section 36 of the FDI Act that are neither public companies nor subsidiaries of public companies. The agencies have long encouraged each institution not subject to section 36 of the FDI Act that is neither a public company nor a subsidiary of a public company¹⁶ to have its financial statements

audited by an independent public accountant.¹⁷ The agencies also encourage each such institution to follow the internal audit outsourcing prohibition in the Sarbanes-Oxley Act, as discussed above for institutions that are public companies.

As previously mentioned, some institutions seek to enhance the quality of their control environment by obtaining the services of an outsourcing vendor who can critically assess their internal control system and recommend improvements. The agencies believe that a small nonpublic institution with less complex operations and limited staff can, in certain circumstances, use the same accounting firm to perform both an external audit and some or all of the institution's internal audit activities. These circumstances include, but are not limited to, situations in which—

- splitting the audit activities poses significant costs or burden;
- persons with the appropriate specialized knowledge and skills are difficult to locate and obtain;
- the institution is closely held and investors are not solely reliant on the audited financial statements to understand the financial position and performance of the institution; and
- the outsourced internal audit services are limited in either scope or frequency.

In circumstances such as these, the agencies view an internal audit outsourcing arrangement between a small nonpublic institution and its external auditor as not being inconsistent with their safety-and-soundness objectives for the institution.

When a small nonpublic institution decides to hire the same firm to perform internal and external audit work, the audit committee and the external auditor should pay particular attention to preserving the independence of both the internal and external audit functions. Furthermore, the audit committee should document both that it has preapproved the internal audit outsourcing to its external auditor and has considered the independence issues associated with this arrangement.¹⁸ In this regard, the audit

13. 12 CFR 363.3(a). (See FDIC Financial Institutions Letter FIL-17-2003 (Corporate Governance, Audits, and Reporting Requirements), attachment II, March 5, 2003.)

14. Appendix A to part 363, Guidelines and Interpretations, paragraph 14, Independence.

15. If a depository institution subject to section 36 and part 363 satisfies the annual independent audit requirement by relying on the independent audit of its parent holding company, once the SEC's January 2003 regulations prohibiting an external auditor from performing internal audit outsourcing services for an audit client take effect May 6, 2003, or May 6, 2004, depending on the circumstances, the holding company's external auditor cannot perform internal audit outsourcing work for that holding company or the subsidiary institution.

16. FDIC-insured depository institutions with less than \$500 million in total assets are not subject to section 36 of the FDI Act. Section 36 does not apply directly to holding companies but provides that, for an insured depository institution that is a subsidiary of a holding company, the audited financial statements requirement and certain of the statute's other requirements may be satisfied by the holding company.

17. See, for example, the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Institutions.

18. If a small nonpublic institution is considering having its external auditor perform other nonaudit services, its audit committee may wish to discuss the implications of the

committee should consider the independence standards described in parts I and II of the policy statement, the AICPA guidance discussed below, and the broad principles that the auditor should not perform management functions or serve in an advocacy role for the client.

Accordingly, the agencies will not consider an auditor who performs internal audit outsourcing services for a small nonpublic audit client to be independent unless the institution and its auditor have adequately addressed the associated independence issues. In addition, the institution's board of directors and management must retain ownership of and accountability for the internal audit function and provide active oversight of the outsourced internal audit relationship.

A small nonpublic institution may be required by another law or regulation, an order, or another supervisory action to have its financial statements audited by an independent public accountant. In this situation, if warranted for safety-and-soundness reasons, the institution's primary federal regulator may require that the institution and its independent public accountant comply with the auditor-independence requirements of the act.¹⁹

AICPA guidance. As noted above, the independent public accountant for a depository institution subject to section 36 of the FDI Act also should be in compliance with the AICPA's *Code of Professional Conduct*. This code includes professional ethics standards, rules, and interpretations that are binding on all certified public accountants (CPAs) who are members of the AICPA in order for the member to remain in good standing. Therefore, this code applies to each member CPA who provides audit services to an institution, regardless of whether the institution is subject to section 36 or is a public company.

The AICPA has issued guidance indicating that a member CPA would be deemed not independent of his or her client when the CPA acts or appears to act in a capacity equivalent to a member of the client's management or as a client employee. The AICPA's guidance includes illustrations of activities that would be considered to compromise a CPA's independence. Among these are activities that involve the CPA authorizing, executing, or consummating trans-

actions or otherwise exercising authority on behalf of the client. For additional details, refer to Interpretation 101-3, Performance of Other Services, and Interpretation 101-13, Extended Audit Services, in the AICPA's *Code of Professional Conduct*.

Examination Guidance (Part IV)

Review of the Internal Audit Function and Outsourcing Arrangements

Examiners should have full and timely access to an institution's internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. A delay may require examiners to widen the scope of their examination work and may subject the institution to follow-up supervisory actions.

Examiners should assess the quality and scope of an institution's internal audit function, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Specifically, examiners should consider whether—

- the internal audit function's control risk assessment, audit plans, and audit programs are appropriate for the institution's activities;
- the internal audit activities have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
- the internal audit activities are consistent with the long-range goals and strategic direction of the institution and are responsive to its internal control needs;
- the audit committee promotes the internal audit manager's impartiality and independence by having him or her directly report audit findings to it;
- the internal audit manager is placed in the management structure in such a way that the independence of the function is not impaired;
- the institution has promptly responded to significant identified internal control weaknesses;
- the internal audit function is adequately managed to ensure that audit plans are met, programs are carried out, and the results of audits are promptly communicated to senior management and members of the audit committee and board of directors;

performance of these services on the auditor's independence.

19. 15 USC 78j-1.

- workpapers adequately document the internal audit work performed and support the audit reports;
- management and the board of directors use reasonable standards, such as the IIA's *Standards for the Professional Practice of Internal Auditing*, when assessing the performance of internal audit; and
- the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

The examiner should assess the competence of the institution's internal audit staff and management by considering the education, professional background, and experience of the principal internal auditors. In addition, when reviewing outsourcing arrangements, examiners should determine whether—

- the arrangement maintains or improves the quality of the internal audit function and the institution's internal control;
- key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
- the scope of the outsourced work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
- the directors have ensured that the outsourced internal audit activities are effectively managed by the institution;
- the arrangement with the outsourcing vendor satisfies the independence standards described in this policy statement and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant; and
- the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and has adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement.

Examination concerns about the adequacy of the internal audit function. If the examiner concludes that the institution's internal audit

function, whether or not it is outsourced, does not sufficiently meet the institution's internal audit needs; does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, if applicable; or is otherwise inadequate, he or she should determine whether the scope of the examination should be adjusted. The examiner should also discuss his or her concerns with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's concerns, he or she should bring these matters to the attention of senior management and the board of directors or audit committee. If the examiner finds material weaknesses in the internal audit function or the internal control system, he or she should discuss them with appropriate agency staff in order to determine the appropriate actions the agency should take to ensure that the institution corrects the deficiencies. These actions may include formal and informal enforcement actions.

The institution's management and composite ratings should reflect the examiner's conclusions regarding the institution's internal audit function. The report of examination should contain comments concerning the adequacy of this function, significant issues or concerns, and recommended corrective actions.

Concerns about the independence of the outsourcing vendor. An examiner's initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution's and its vendor's adherence to the independence standards described in parts I and II of the policy statement, whether or not the vendor is an accounting firm, and in part III if the vendor provides both external and internal audit services to the institution. In such cases, the examiner first should ask the institution and the outsourcing vendor how the audit committee determined that the vendor was independent. If the vendor is an accounting firm, the audit committee should be asked to demonstrate how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence. If the examiner's concerns are not adequately addressed, the examiner should discuss the matter with appropriate agency staff prior to taking any further action.

If the agency staff concurs that the independence of the external auditor or other vendor

appears to be compromised, the examiner will discuss his or her findings and the actions the agency may take with the institution's senior management, board of directors (or audit committee), and the external auditor or other vendor. In addition, the agency may refer the external auditor to the state board of accountancy, the AICPA, the SEC, the PCAOB, or other authorities for possible violations of applicable independence standards. Moreover, the agency may conclude that the institution's external auditing program is inadequate and that it does not comply with auditing and reporting requirements, including sections 36 and 39 of the FDI Act and related guidance and regulations, if applicable. *Issued jointly by the Board, FDIC, OCC, and OTS on March 17, 2003.*

INDEPENDENCE OF INTERNAL AUDITORS

The ability of the internal audit function to achieve its audit objectives depends, in large part, on the independence maintained by audit personnel. Frequently, the independence of internal auditing can be determined by its reporting lines within the organization and by the person or level to whom these results are reported. In most circumstances, the internal audit function is under the direction of the board of directors or a committee thereof, such as the audit committee. This relationship enables the internal audit function to assist the directors in fulfilling their responsibilities.

The auditor's responsibilities should be addressed in a position description, with reporting lines delineated in personnel policy, and audit results should be documented in audit committee and board of directors' minutes. Examiners should review these documents, as well as the reporting process followed by the auditor, in order to subsequently evaluate the tasks performed by the internal audit function. The internal auditor should be given the authority necessary to perform the job, including free access to any records necessary for the proper conduct of the audit. Furthermore, internal auditors generally should not have responsibility for the accounting system, other aspects of the institution's accounting function, or any operational function not subject to independent review.

Competence of Internal Auditors

The responsibilities and qualifications of internal auditors vary depending on the size and complexity of a bank's operations and on the emphasis placed on the internal audit function by the directorate and management. In many banks, the internal audit function is performed by an individual or group of individuals whose sole responsibility is internal auditing. In other banks, particularly small ones, internal audit may be performed on a part-time basis by an officer or employee.

The qualifications discussed below should not be viewed as minimum requirements but should be considered by the examiner in evaluating the work performed by the internal auditors or audit departments. Examples of the type of qualifications an internal audit department manager should have are—

- academic credentials comparable to other bank officers who have major responsibilities within the organization,
- commitment to a program of continuing education and professional development,
- audit experience and organizational and technical skills commensurate with the responsibilities assigned, and
- oral and written communication skills.

The internal audit department manager must be properly trained to fully understand the flow of data and the underlying operating procedures. Training may come from college courses, courses sponsored by industry groups such as the Bank Administration Institute (BAI), or in-house training programs. Significant work experience in various departments of a bank also may provide adequate training. Certification as a chartered bank auditor, certified internal auditor, or certified public accountant meets educational and other professional requirements. In addition to prior education, the internal auditor should be committed to a program of continuing education, which may include attending technical meetings and seminars and reviewing current literature on auditing and banking.

The internal auditor's organizational skills should be reflected in the effectiveness of the bank's audit program. Technical skills may be demonstrated through internal audit techniques, such as internal control and other questionnaires, and an understanding of the operational

and financial aspects of the organization.

In considering the competence of the internal audit staff, the examiner should review the educational and experience qualifications required by the bank for filling the positions in the internal audit department and the training available for that position. In addition, the examiner must be assured that any internal audit supervisor understands the audit objectives and procedures performed by the staff.

In a small bank, it is not uncommon to find that internal audit, whether full- or part-time, is a one-person department. The internal auditor may plan and perform all procedures personally or may direct staff borrowed from other departments. In either case, the examiner should expect, at a minimum, that the internal auditor possesses qualifications similar to those of an audit department manager, as previously discussed.

The final measure of the competence of the internal auditor is the quality of the work performed, the ability to communicate the results of that work, and the ability to follow up on deficiencies noted during the audit work. Accordingly, the examiner's conclusions with respect to an auditor's competence should also reflect the adequacy of the audit program and the audit reports.

IMPLEMENTATION OF THE INTERNAL AUDIT FUNCTION

The annual audit plan and budgets should be set by the internal audit manager and approved by the board, audit committee, or senior management. In many organizations, the internal audit manager reports to a senior manager for administrative purposes. The senior manager appraises the audit manager's performance, and the directors or an audit committee approves the evaluation.

Risk Assessment

In setting the annual audit plan, a risk assessment should be made that documents the internal audit function's understanding of the institution's various business activities and their inherent risks. In addition, the assessment also evaluates control risk, or the potential that deficiencies in the system of internal control

would expose the institution to potential loss. The assessment should be periodically updated to reflect changes in the system of internal control, work processes, business activities, or the business environment. The risk-assessment methodology of the internal audit function should identify all auditable areas, give a detailed basis for the auditors' determination of relative risks, and be consistent from one audit area to another. The risk assessment can quantify certain risks, such as credit risk, market risk, and legal risk. It can also include qualitative aspects, such as the timeliness of the last audit and the quality of management. Although there is no standard approach to making a risk assessment, it should be appropriate to the size and complexity of the institution. While smaller institutions may not have elaborate risk-assessment systems, some analysis should still be available to explain why certain areas are more frequently audited than others.

Within the risk assessment, institutions should clearly identify auditable units along business activities or product lines, depending on how the institution is managed. There should be evidence that the internal audit manager is regularly notified of new products, departmental changes, and new general ledger accounts, all of which should be factored into the audit schedule. Ratings of particular business activities or corporate functions may change with time as the internal audit function revises its method for assessing risk. These changes should be incremental. Large-scale changes in the priority of audits should trigger an investigation into the reasonableness of changes to the risk-assessment methodology.

Audit Plan

The audit plan is based on the risk assessment. The plan should include a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.

A formal, annual audit plan should be developed based on internal audit's risk assessment. The audit plan should include all auditable areas and set priorities based on the rating determined by the risk assessment. The schedule of planned audits should be approved by the board or its audit committee, as should any subsequent changes to the plan. Many organiza-

tions develop an audit plan jointly with the external auditors. In this case, the audit plan should clearly indicate what work is being performed by internal and external auditors and what aspects of internal audit work the external auditors are relying on.

Typically, the schedule of audit is cyclic; for example, high risks are audited annually, moderate risks every two years, and low risks every three years. In some cases, the audit cycle may extend beyond three years. In reviewing the annual plan, examiners should determine the appropriateness of the institution's audit cycle. Some institutions limit audit coverage of their low-risk areas. Examiners should review areas the institution has labeled "low risk" to determine if the classification is appropriate and if coverage is adequate.

Audit Manual

The internal audit department should have an audit manual that sets forth the standards of work for field auditors and audit managers to use in their assignments. A typical audit manual contains the audit unit's charter and mission, administrative procedures, workpaper-documentation standards, reporting standards, and review procedures. Individual audits should conform to the requirements of the audit manual. As a consequence, the manual should be up-to-date with respect to the audit function's mission and changes to the professional standards it follows.

Performance of Individual Audits

The internal audit manager should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide them. The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution's operations and to assess whether internal controls are effective. While audits vary according to the objective, the area subjected to audit, the standards used as the basis for work performed, and documentation, the audit process generates some common documentation elements, as described below.

Audit Program and Related Workpapers

The audit program documents the audit's objectives and the procedures that were performed. Typically, it indicates who performed the work and who has reviewed it. Workpapers document the evidence gathered and conclusions drawn by the auditor, as well as the disposition of audit findings. The workpapers should provide evidence that the audit program adheres to the requirements specified in the audit manual.

Audit Reports

The audit report is internal audit's formal notice of its assessment of internal controls in the audited areas. The report is given to the area's managers, senior management, and directors. A typical audit report states the purpose of the audit and its scope, conclusions, and recommendations. Reports are usually prepared for each audit. In larger institutions, monthly or quarterly summaries that highlight major audit issues are prepared for senior management and the board.

EXAMINER REVIEW OF INTERNAL AUDIT

The examination procedures section describes the steps the examiner should follow when conducting a review of the work performed by the internal auditor. The examiner's review and evaluation of the internal audit function is a key element in determining the scope of the examination. In most situations, the competence and independence of the internal auditors may be reviewed on an overall basis; however, the adequacy and effectiveness of the audit program should be determined separately for each examination area.

The examiner should assess if the work performed by the internal auditor is reliable. It is often more efficient for the examiner to determine the independence or competence of the internal auditor before addressing the adequacy or effectiveness of the audit program. If the examiner concludes that the internal auditor possesses neither the independence nor the competence deemed appropriate, the examiner must also conclude that the internal audit work performed is not reliable.

The examiner should indicate in the report of examination any significant deficiencies concern-

ing the internal audit function. Furthermore, the examiner should review with management any significant deficiencies noted in the previous report of examination to determine if these concerns have been appropriately addressed.

Program Adequacy and Effectiveness

An examiner should consider the following factors when assessing the adequacy of the internal audit program—

- scope and frequency of the work performed,
- content of the programs,
- documentation of the work performed, and
- conclusions reached and reports issued.

The scope of the internal audit program must be sufficient to attain the audit objectives. The frequency of the audit procedures performed should be based on an evaluation of the risk associated with each targeted area under audit. Among the factors that the internal auditor should consider in assessing risk are the nature of the operation of the specific assets and liabilities under review, the existence of appropriate policies and internal control standards, the effectiveness of operating procedures and internal controls, and the potential materiality of errors or irregularities associated with the specific operation.

To further assess the adequacy and effectiveness of the internal audit program, an examiner needs to obtain audit workpapers. Workpapers should contain, among other things, audit work programs and analyses that clearly indicate the procedures performed, the extent of the testing, and the basis for the conclusions reached.

Although audit work programs are an integral part of the workpapers, they are sufficiently important to deserve separate attention. Work programs serve as the primary guide to the audit procedures to be performed. Each program should provide a clear, concise description of the work required, and individual procedures should be presented logically. The detailed procedures included in the program vary depending on the size and complexity of the bank's operations and the area subject to audit. In addition, an individual audit work program may encompass several departments of the bank, a single department, or specific operations within a department. Most audit programs include procedures such as—

- surprise examinations, where appropriate;
- maintenance of control over records selected for audit;
- review and evaluation of the bank's policies and procedures and the system of internal control;
- reconciliation of detail to related control records; and
- verification of selected transactions and balances through procedures such as examination of supporting documentation, direct confirmation and appropriate follow-up of exceptions, and physical inspection.

The internal auditor should follow the specific procedures included in all work programs to reach audit conclusions that will satisfy the related audit objectives. Audit conclusions should be supported by report findings; such reports should include, when appropriate, recommendations by the internal auditor for any required remedial actions.

The examiner should also analyze the internal reporting process for the internal auditor's findings, since required changes in the bank's internal controls and operating procedures can be made only if appropriate officials are informed of the deficiencies. This means that the auditor must communicate all findings and recommendations clearly and concisely, pinpointing problems and suggesting solutions. The auditor also should submit reports as soon as practical, and the reports should be routed to those authorized to implement the suggested changes.

The final measure of the effectiveness of the audit program is a prompt and effective management response to the auditor's recommendations. The audit department should determine the reasonableness, timeliness, and completeness of management's response to their recommendations, including follow-up, if necessary. Examiners should assess management's response and follow up when the response is either incomplete or unreasonable.

EXTERNAL AUDITS

The Federal Reserve requires bank holding companies with total consolidated assets of \$500 million or more to have annual independent audits. Generally, banks must have external audits for the first three years after obtaining FDIC insurance (an FDIC requirement) and upon becoming a newly chartered national bank (an OCC

requirement). The SEC also has a longstanding audit requirement for all public companies, which applies to bank holding companies that are SEC registrants and to state member banks that are subject to SEC reporting requirements pursuant to the Federal Reserve's Regulation H.

For insured depository institutions with fiscal years beginning after December 31, 1992, FDICIA, through its amendments to section 36 of the FDI Act, requires annual independent audits for all FDIC-insured banks that have total assets in excess of \$500 million. (See SR-94-3 and SR-96-4.) In September 1999, the Federal Financial Institutions Examination Council (FFIEC) issued an interagency policy statement on external auditing programs of banks and savings associations.²⁰ The policy encourages banks and savings associations that have *less than* \$500 million in total assets and that are not subject to other audit requirements to adopt an external auditing program as a part of their overall risk-management process. (See the following subsection for the complete text of the interagency policy statement.)

Independent audits enhance the probability that financial statements and reports to the FRB and other financial-statement users will be accurate and will help detect conditions that could adversely affect banking organizations, the FRB, or the public. The independent audit process also subjects the internal controls and the accounting policies, procedures, and records of each banking organization to periodic review.

Banks often employ external auditors and other specialists to assist management in specialized fields, such as taxation and management information systems. External auditors and consultants often conduct in-depth reviews of the operations of specific bank departments; the reviews might focus on operational procedures, personnel requirements, or other specific areas of interest. After completing the reviews, the auditors may recommend that the bank strengthen controls or improve efficiency.

External auditors provide services at various times during the year. Financial statements are examined annually. Generally, the process commences in the latter part of the year, with the report issued as soon thereafter as possible. Other types of examinations or reviews are performed at various dates on an as-required basis.

The examiner is interested in the work per-

formed by external auditors for three principal reasons. First, situations will arise when internal audit work is not being performed or when such work is deemed to be of limited value to the examiner. Second, the work performed by external auditors may affect the amount of testing the examiner must perform. Third, external audit reports often provide the examiner with information pertinent to the examination of the bank.

The major factors that should be considered in evaluating the work of external auditors are similar to those applicable to internal auditors, namely, the competence and independence of the auditors and the adequacy of the audit program.

The federal banking agencies view a full-scope annual audit of a bank's financial statements by an independent public accountant as preferable to other types of external auditing programs. The September 1999 policy statement recognizes that a full-scope audit may not be feasible for every small bank. It therefore encourages those banks to pursue appropriate alternatives to a full-scope audit. Small banks are also encouraged to establish an audit committee consisting of outside directors. The policy statement provides guidance to examiners on the review of external auditing programs.

The policy statement is consistent with the Federal Reserve's longstanding guidance that encourages the use of external auditing programs, and with its goals for (1) ensuring the accuracy and reliability of regulatory reports, (2) improving the quality of bank internal controls over financial reporting, and (3) enhancing the efficiency of the risk-focused examination process. The Federal Reserve adopted the FFIEC policy statement effective for fiscal years beginning on or after January 1, 2000. (See SR-99-33.)

INTERAGENCY POLICY STATEMENT ON EXTERNAL AUDITING PROGRAMS OF BANKS AND SAVINGS ASSOCIATIONS

Introduction

The board of directors and senior managers of a banking institution or savings association (insti-

20. See 64 *Fed. Reg.* 52319 (September 28, 1999).

tution) are responsible for ensuring that the institution operates in a safe and sound manner. To achieve this goal and meet the safety-and-soundness guidelines implementing section 39 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831p-1),²¹ the institution should maintain effective systems and internal control²² to produce reliable and accurate financial reports.

Accurate financial reporting is essential to an institution's safety and soundness for numerous reasons. First, accurate financial information enables management to effectively manage the institution's risks and make sound business decisions. In addition, institutions are required by law²³ to provide accurate and timely financial reports (e.g., Reports of Condition and Income [call reports] and Thrift Financial Reports) to their appropriate regulatory agency. These reports serve an important role in the agencies'²⁴ risk-focused supervision programs by contributing to their pre-examination planning, off-site monitoring programs, and assessments of an institution's capital adequacy and financial strength. Further, reliable financial reports are necessary for the institution to raise capital. They provide data to stockholders, depositors and other funds providers, borrowers, and potential investors on the company's financial position and results of operations. Such information is critical to effective market discipline of the institution.

To help ensure accurate and reliable financial reporting, the agencies recommend that the board of directors of each institution establish and maintain an external auditing program. An external auditing program should be an important component of an institution's overall risk-management process. For example, an external auditing program complements the internal auditing function of an institution by providing management and the board of directors with an independent and objective view of the reliability of the institution's financial statements and the adequacy of its financial-reporting internal controls. Additionally, an effective external auditing program contributes to the efficiency of the agencies' risk-focused examination process. By

considering the significant risk areas of an institution, an effective external auditing program may reduce the examination time the agencies spend in such areas. Moreover, it can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the Federal Deposit Insurance Corporation (FDIC).

This policy statement outlines the characteristics of an effective external auditing program and provides examples of how an institution can use an external auditor to help ensure the reliability of its financial reports. It also provides guidance on how an examiner may assess an institution's external auditing program. In addition, this policy statement provides specific guidance on external auditing programs for institutions that are holding company subsidiaries, newly insured institutions, and institutions presenting supervisory concerns.

The adoption of a financial statement audit or other specified type of external auditing program is generally only required in specific circumstances. For example, insured depository institutions covered by section 36 of the FDI Act (12 USC 1831m), as implemented by part 363 of the FDIC's regulations (12 CFR 363), are required to have an external audit and an audit committee. Therefore, this policy statement is directed toward banks and savings associations which are exempt from part 363 (i.e., institutions with less than \$500 million in total assets at the beginning of their fiscal year) or are not otherwise subject to audit requirements by order, agreement, statute, or agency regulations.

Overview of External Auditing Programs

Responsibilities of the Board of Directors

The board of directors of an institution is responsible for determining how to best obtain reasonable assurance that the institution's financial statements and regulatory reports are reliably prepared. In this regard, the board is also responsible for ensuring that its external auditing program is appropriate for the institution and adequately addresses the financial-reporting aspects of the significant risk areas and any other areas of concern of the institution's business.

21. See 12 CFR 30 for national banks; 12 CFR 364 for state nonmember banks; 12 CFR 208 for state member banks; and 12 CFR 510 for savings associations.

22. This policy statement provides guidance consistent with the guidance established in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

23. See 12 USC 161 for national banks; 12 USC 1817a for state nonmember banks; 12 USC 324 for state member banks; and 12 USC 1464(v) for savings associations.

24. Terms are defined at the end of the policy statement.

To help ensure the adequacy of its internal and external auditing programs, the agencies encourage the board of directors of each institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors.²⁵ However, if this is impracticable, the board should organize the audit committee so that outside directors constitute a majority of the membership.

Audit Committee

The audit committee or board of directors is responsible for identifying at least annually the risk areas of the institution's activities and assessing the extent of external auditing involvement needed over each area. The audit committee or board is then responsible for determining what type of external auditing program will best meet the institution's needs (see the descriptions under "Types of External Auditing Programs").

When evaluating the institution's external auditing needs, the board or audit committee should consider the size of the institution and the nature, scope, and complexity of its operations. It should also consider the potential benefits of an audit of the institution's financial statements or an examination of the institution's internal control structure over financial reporting, or both. In addition, the board or audit committee may determine that additional or specific external auditing procedures are warranted for a particular year or several years to cover areas of particularly high risk or special concern. The reasons supporting these decisions should be recorded in the committee's or board's minutes.

If, in its annual consideration of the institution's external auditing program, the board or audit committee determines, after considering its inherent limitations, that an agreed-upon procedures/state-required examination is sufficient, they should also consider whether an independent public accountant should perform the work. When an independent public accountant performs auditing and attestation services, the accountant must conduct his or her work under, and may be held accountable for departures from, professional standards. Furthermore, when the external auditing program includes an audit of the financial statements, the board or audit committee obtains an opinion from the independent public accountant stating whether the financial statements are presented fairly, in all material respects, in accordance with generally accepted accounting principles (GAAP). When the external auditing program includes an examination of the internal control structure over financial reporting, the board or audit committee obtains an opinion from the independent public accountant stating whether the financial-reporting process is subject to any material weaknesses.

Both the staff performing an internal audit function and the independent public accountant or other external auditor should have unrestricted access to the board or audit committee without the need for any prior management knowledge or approval. Other duties of an audit committee may include reviewing the independence of the external auditor annually, consulting with management, seeking an opinion on an accounting issue, and overseeing the quarterly regulatory reporting process. The audit committee should report its findings periodically to the full board of directors.

External Auditing Programs

Basic Attributes

External auditing programs should provide the board of directors with information about the institution's financial-reporting risk areas, e.g., the institution's internal control over financial reporting, the accuracy of its recording of transactions, and the completeness of its financial reports prepared in accordance with GAAP.

The board or audit committee of each institution at least annually should review the risks inherent in its particular activities to determine the scope of its external auditing program. For most institutions, the lending and investment-securities activities present the most significant risks that affect financial reporting. Thus, external auditing programs should include specific procedures designed to test at least annually the risks associated with the loan and investment portfolios. This includes testing of internal control over financial reporting, such as management's process to determine the adequacy of the

25. Institutions with \$500 million or more in total assets must establish an independent audit committee made up of outside directors who are independent of management. See 12 USC 1831m(g)(1) and 12 CFR 363.5.

allowance for loan and lease losses and whether this process is based on a comprehensive, adequately documented, and consistently applied analysis of the institution's loan and lease portfolio.

An institution or its subsidiaries may have other significant financial-reporting risk areas such as material real estate investments, insurance underwriting or sales activities, securities broker-dealer or similar activities (including securities underwriting and investment advisory services), loan-servicing activities, or fiduciary activities. The external auditing program should address these and other activities the board or audit committee determines present significant financial-reporting risks to the institution.

Types of External Auditing Programs

The agencies consider an annual audit of an institution's financial statements performed by an independent public accountant to be the preferred type of external auditing program. The agencies also consider an annual examination of the effectiveness of the internal control structure over financial reporting or an audit of an institution's balance sheet, both performed by an independent public accountant, to be acceptable alternative external auditing programs. However, the agencies recognize that some institutions only have agreed-upon procedures/state-required examinations performed annually as their external auditing program. Regardless of the option chosen, the board or audit committee should agree in advance with the external auditor on the objectives and scope of the external auditing program.

Financial statement audit by an independent public accountant. The agencies encourage all institutions to have an external audit performed in accordance with generally accepted auditing standards (GAAS). The audit's scope should be sufficient to enable the auditor to express an opinion on the institution's financial statements taken as a whole.

A financial statement audit provides assurance about the fair presentation of an institution's financial statements. In addition, an audit may provide recommendations for management in carrying out its control responsibilities. For example, an audit may provide management with guidance on establishing or improving accounting and operating policies and recom-

mendations on internal control (including internal auditing programs) necessary to ensure the fair presentation of the financial statements.

Reporting by an independent public accountant on an institution's internal control structure over financial reporting. Another external auditing program is an independent public accountant's examination and report on management's assertion on the effectiveness of the institution's internal control over financial reporting. For a smaller institution with less complex operations, this type of engagement is likely to be less costly than an audit of its financial statements or its balance sheet. It would specifically provide recommendations for improving internal control, including suggestions for compensating controls, to mitigate the risks due to staffing and resource limitations.

Such an attestation engagement may be performed for all internal controls relating to the preparation of annual financial statements or specified schedules of the institution's regulatory reports.²⁶ This type of engagement is performed under generally accepted standards for attestation engagements (GASAE).²⁷

26. Since the lending and investment-securities activities generally present the most significant risks that affect an institution's financial reporting, management's assertion and the accountant's attestation generally should cover those regulatory report schedules. If the institution has trading or off-balance-sheet activities that present material financial-reporting risks, the board or audit committee should ensure that the regulatory report schedules for those activities also are covered by management's assertion and the accountant's attestation. For banks and savings associations, the lending, investment-securities, trading, and off-balance-sheet schedules consist of:

Area	Reports of Condition and Income Schedules	Thrift Financial Report Schedules
Loans and lease-financing receivables	RC-C, Part I	SC, CF
Past-due and nonaccrual loans, leases, and other assets	RC-N	PD
Allowance for credit losses	RI-B	SC, VA
Securities	RC-B	SC, SI, CF
Trading assets and liabilities	RC-D	SO, SI
Off-balance-sheet items	RC-L	SI, CMR

These schedules are not intended to address all possible risks in an institution.

27. An attestation engagement is not an audit. It is performed under different professional standards than an audit of an institution's financial statements or its balance sheet.

Balance-sheet audit performed by an independent public accountant. With this program, the institution engages an independent public accountant to examine and report only on the balance sheet. As with the audit of the financial statements, this audit is performed in accordance with GAAS. The cost of a balance-sheet audit is likely to be less than a financial-statement audit. However, under this type of program, the accountant does not examine or report on the fairness of the presentation of the institution's income statement, statement of changes in equity capital, or statement of cash flows.

Agreed-upon procedures/state-required examinations. Some state-chartered depository institutions are required by state statute or regulation to have specified procedures performed annually by their directors or independent persons.²⁸ The bylaws of many national banks also require that some specified procedures be performed annually by directors or others, including internal or independent persons. Depending upon the scope of the engagement, the cost of agreed-upon procedures or a state-required examination may be less than the cost of an audit. However, under this type of program, the independent auditor does not report on the fairness of the institution's financial statements or attest to the effectiveness of the internal control structure over financial reporting. The findings or results of the procedures are usually presented to the board or the audit committee so that they may draw their own conclusions about the quality of the financial reporting or the sufficiency of internal control.

When choosing this type of external auditing program, the board or audit committee is responsible for determining whether these procedures meet the external auditing needs of the institution, considering its size and the nature, scope, and complexity of its business activities. For example, if an institution's external auditing program consists solely of confirmations of deposits and loans, the board or committee should consider expanding the scope of the auditing work performed to include additional procedures to test the institution's high-risk areas. Moreover, a financial statement audit, an

examination of the effectiveness of the internal control structure over financial reporting, and a balance-sheet audit may be accepted in some states and for national banks in lieu of agreed-upon procedures/state-required examinations.

Other Considerations

Timing. The preferable time to schedule the performance of an external auditing program is as of an institution's fiscal year-end. However, a quarter-end date that coincides with a regulatory report date provides similar benefits. Such an approach allows the institution to incorporate the results of the external auditing program into its regulatory reporting process and, if appropriate, amend the regulatory reports.

External auditing staff. The agencies encourage an institution to engage an independent public accountant to perform its external auditing program. An independent public accountant provides a nationally recognized standard of knowledge and objectivity by performing engagements under GAAS or GASAE. The firm or independent person selected to conduct an external auditing program and the staff carrying out the work should have experience with financial-institution accounting and auditing or similar expertise and should be knowledgeable about relevant laws and regulations.

Special Situations

Holding Company Subsidiaries

When an institution is owned by another entity (such as a holding company), it may be appropriate to address the scope of its external audit program in terms of the institution's relationship to the consolidated group. In such cases, if the group's consolidated financial statements for the same year are audited, the agencies generally would not expect the subsidiary of a holding company to obtain a separate audit of its financial statements. Nevertheless, the board of directors or audit committee of the subsidiary may determine that its activities involve significant risks to the subsidiary that are not within the procedural scope of the audit of the financial statements of the consolidated entity. For example, the risks arising from the subsidiary's

28. When performed by an independent public accountant, "specified procedures" and "agreed-upon procedures" engagements are performed under standards, which are different professional standards than those used for an audit of an institution's financial statements or its balance sheet.

activities may be immaterial to the financial statements of the consolidated entity, but material to the subsidiary. Under such circumstances, the audit committee or board of the subsidiary should consider strengthening the internal audit coverage of those activities or implementing an appropriate alternative external auditing program.

Newly Insured Institutions

Under the FDIC statement of policy on applications for deposit insurance, applicants for deposit insurance coverage are expected to commit the depository institution to obtain annual audits by an independent public accountant once it begins operations as an insured institution and for a limited period thereafter.

Institutions Presenting Supervisory Concerns

As previously noted, an external auditing program complements the agencies' supervisory process and the institution's internal auditing program by identifying or further clarifying issues of potential concern or exposure. An external auditing program also can greatly assist management in taking corrective action, particularly when weaknesses are detected in internal control or management information systems affecting financial reporting.

The agencies may require a financial institution presenting safety-and-soundness concerns to engage an independent public accountant or other independent external auditor to perform external auditing services.²⁹ Supervisory concerns may include—

- inadequate internal control, including the internal auditing program;
- a board of directors generally uninformed about internal control;
- evidence of insider abuse;
- known or suspected defalcations;
- known or suspected criminal activity;
- probable director liability for losses;

- the need for direct verification of loans or deposits;
- questionable transactions with affiliates; or
- the need for improvements in the external auditing program.

The agencies may also require that the institution provide its appropriate supervisory office with a copy of any reports, including management letters, issued by the independent public accountant or other external auditor. They also may require the institution to notify the supervisory office prior to any meeting with the independent public accountant or other external auditor at which auditing findings are to be presented.

Examiner Guidance

Review of the External Auditing Program

The review of an institution's external auditing program is a normal part of the agencies' examination procedures. An examiner's evaluation of, and any recommendations for improvements in, an institution's external auditing program will consider the institution's size; the nature, scope, and complexity of its business activities; its risk profile; any actions taken or planned by it to minimize or eliminate identified weaknesses; the extent of its internal audit program; and any compensating controls in place. Examiners will exercise judgment and discretion in evaluating the adequacy of an institution's external auditing program.

Specifically, examiners will consider the policies, processes, and personnel surrounding an institution's external auditing program in determining whether—

- the board of directors or its audit committee adequately reviews and approves external auditing program policies at least annually;
- the external auditing program is conducted by an independent public accountant or other independent auditor and is appropriate for the institution;
- the engagement letter covering external auditing activities is adequate;
- the report prepared by the auditor on the results of the external auditing program adequately explains the auditor's findings;
- the external auditor maintains appropriate

29. The Office of Thrift Supervision requires an external audit by an independent public accountant for savings associations with a composite rating of 3, 4, or 5 under the Uniform Financial Institution Rating System, and on a case-by-case basis.

independence regarding relationships with the institution under relevant professional standards;

- the board of directors performs due diligence on the relevant experience and competence of the independent auditor and staff carrying out the work (whether or not an independent public accountant is engaged); and
- the board or audit committee minutes reflect approval and monitoring of the external auditing program and schedule, including board or committee reviews of audit reports with management and timely action on audit findings and recommendations.

Access to Reports

Management should provide the independent public accountant or other auditor with access to all examination reports and written communication between the institution and the agencies or state bank supervisor since the last external auditing activity. Management also should provide the accountant with access to any supervisory memoranda of understanding, written agreements, administrative orders, reports of action initiated or taken by a federal or state banking agency under section 8 of the FDI Act (or a similar state law), and proposed or ordered assessments of civil money penalties against the institution or an institution-related party, as well as any associated correspondence. The auditor must maintain the confidentiality of examination reports and other confidential supervisory information.

In addition, the independent public accountant or other auditor of an institution should agree in the engagement letter to grant examiners access to all the accountant's or auditor's workpapers and other material pertaining to the institution prepared in the course of performing the completed external auditing program.

Institutions should provide reports³⁰ issued by the independent public accountant or other auditor pertaining to the external auditing program, including any management letters, to the agencies and any state authority in accordance with their appropriate supervisory office's guidance.³¹ Significant developments regarding the

external auditing program should be communicated promptly to the appropriate supervisory office. Examples of those developments include the hiring of an independent public accountant or other third party to perform external auditing work and a change in, or termination of, an independent public accountant or other external auditor.

Definitions

Agencies. The agencies are the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS).

Appropriate supervisory office. The regional or district office of the institution's primary federal banking agency responsible for supervising the institution or, in the case of an institution that is part of a group of related insured institutions, the regional or district office of the institution's federal banking agency responsible for monitoring the group. If the institution is a subsidiary of a holding company, the term "appropriate supervisory office" also includes the federal banking agency responsible for supervising the holding company. In addition, if the institution is state-chartered, the term "appropriate supervisory office" includes the appropriate state bank or savings association regulatory authority.

Audit. An examination of the financial statements, accounting records, and other supporting evidence of an institution performed by an independent certified or licensed public accountant in accordance with generally accepted

in the audited consolidated financial statements of its parent company, the institution should provide a copy of the audited financial statements of the consolidated company and any other reports by the independent public accountant in accordance with their appropriate supervisory office's guidance. If several institutions are owned by one parent company, a single copy of the reports may be supplied in accordance with the guidance of the appropriate supervisory office of each agency supervising one or more of the affiliated institutions and the holding company. A transmittal letter should identify the institutions covered. Any notifications of changes in, or terminations of, a consolidated company's independent public accountant may be similarly supplied to the appropriate supervisory office of each supervising agency.

30. The institution's engagement letter is not a "report" and is not expected to be submitted to the appropriate supervisory office unless specifically requested by that office.

31. When an institution's financial information is included

auditing standards (GAAS) and of sufficient scope to enable the independent public accountant to express an opinion on the institution's financial statements as to their presentation in accordance with generally accepted accounting principles (GAAP).

Audit committee. A committee of the board of directors whose members should, to the extent possible, be knowledgeable about accounting and auditing. The committee should be responsible for reviewing and approving the institution's internal and external auditing programs or recommending adoption of these programs to the full board.

Balance-sheet audit performed by an independent public accountant. An examination of an institution's balance sheet and any accompanying footnotes performed and reported on by an independent public accountant in accordance with GAAS and of sufficient scope to enable the independent public accountant to express an opinion on the fairness of the balance-sheet presentation in accordance with GAAP.

Engagement letter. A letter from an independent public accountant to the board of directors or audit committee of an institution that usually addresses the purpose and scope of the external auditing work to be performed, period of time to be covered by the auditing work, reports expected to be rendered, and any limitations placed on the scope of the auditing work.

Examination of the internal control structure over financial reporting. See "Reporting by an independent public accountant on an institution's internal control structure over financial reporting."

External auditing program. The performance of procedures to test and evaluate high-risk areas of an institution's business by an independent auditor, who may or may not be a public accountant, sufficient for the auditor to be able to express an opinion on the financial statements or to report on the results of the procedures performed.

Financial statement audit by an independent public accountant. See Audit.

Financial statements. The statements of financial position (balance sheet), income, cash flows,

and changes in equity together with related notes.

Independent public accountant. An accountant who is independent of the institution and registered or licensed to practice, and holds himself or herself out, as a public accountant, and who is in good standing under the laws of the state or other political subdivision of the United States in which the home office of the institution is located. The independent public accountant should comply with the American Institute of Certified Public Accountants' (AICPA) Code of Professional Conduct and any related guidance adopted by the Independence Standards Board and the agencies. No certified public accountant or public accountant will be recognized as independent who is not independent both in fact and in appearance.

Internal auditing. An independent assessment function established within an institution to examine and evaluate its system of internal control and the efficiency with which the various units of the institution are carrying out their assigned tasks. The objective of internal auditing is to assist the management and directors of the institution in the effective discharge of their responsibilities. To this end, internal auditing furnishes management with analyses, evaluations, recommendations, counsel, and information concerning the activities reviewed.

Outside directors. Members of an institution's board of directors who are not officers, employees, or principal stockholders of the institution, its subsidiaries, or its affiliates, and who do not have any material business dealings with the institution, its subsidiaries, or its affiliates.

Regulatory reports. These reports are the Reports of Condition and Income (call reports) for banks, Thrift Financial Reports (TFRs) for savings associations, Federal Reserve (FR) Y reports for bank holding companies, and the H-(b)11 Annual Report for thrift holding companies.

Reporting by an independent public accountant on an institution's internal control structure over financial reporting. Under this engagement, management evaluates and documents its review of the effectiveness of the institution's internal control over financial reporting in the identified risk areas as of a specific report date. Management prepares a written assertion, which

specifies the criteria on which management based its evaluation about the effectiveness of the institution's internal control over financial reporting in the identified risk areas and states management's opinion on the effectiveness of internal control over this specified financial reporting. The independent public accountant is engaged to perform tests on the internal control over the specified financial reporting in order to attest to management's assertion. If the accountant concurs with management's assertion, even if the assertion discloses one or more instances of material internal control weakness, the accountant would provide a report attesting to management's assertion.

Risk areas. Those particular activities of an institution that expose it to greater potential losses if problems exist and go undetected. The areas with the highest financial-reporting risk in most institutions generally are their lending and investment-securities activities.

Specified procedures. Procedures agreed upon by the institution and the auditor to test its activities in certain areas. The auditor reports findings and test results, but does not express an opinion on controls or balances. If performed by an independent public accountant, these procedures should be performed under generally accepted standards for attestation engagements (GASAE).

Issued by the FFIEC on September 28, 1999.

UNSAFE AND UNSOUND USE OF LIMITATION OF LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)³² issued an interagency advisory (the advisory) to address safety-and-soundness concerns that may arise when financial institutions enter into external audit contracts (typically referred to as *engagement letters*) that limit the auditors' liability for audit ser-

vices.³³ The advisory informs financial institutions'³⁴ boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors' liability. Such provisions may weaken the external auditors' objectivity, impartiality, and performance and, thus, reduce the agencies' ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the SEC, the PCAOB, and the AICPA.

The advisory does not apply to previously executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management's assessment of internal control over financial reporting (collectively, *audit* or *audits*).

The advisory does not apply to—

- nonaudit services that may be performed by financial institutions' external auditors,
- audits of financial institutions' 401(k) plans, pension plans, and other similar audits,
- services performed by accountants who are not engaged to perform financial institutions' audits (e.g., outsourced internal audits or loan reviews), and
- other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several

32. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

33. The advisory is effective for audit engagement letters issued on or after February 9, 2006.

34. As used in this advisory, the term *financial institutions* includes banks, bank holding companies, savings associations, savings and loan holding companies, and credit unions.

types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor's liability with respect to audits in an unsafe and unsound manner.

External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution's financial statements. The external auditor's objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution's internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC's *Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations* notes,^{34a} "[a]n institution's internal and external audit programs are critical to its safety and soundness." The policy also states that an effective external auditing program "can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC."

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution's audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As

with all agreements that affect a financial institution's legal rights, the financial institution's legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and provides examples.³⁵ Financial institutions' boards of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors' and officers' liability policies) might not cover losses arising from claims that are precluded by limitation-of-liability provisions.

Limitation-of-Liability Provisions

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

- indemnifies the external auditor against claims made by third parties;
- holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
- limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as *limitation-of-liability-provisions*.

Provisions that waive the right of financial institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agree-

35. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor's liability. However, for those reviewed external audit engagement letters that did have external auditor limited-liability provisions, the agencies noted a significant increase in the types and frequency of the provisions. The provisions took many forms, which made it impractical for the agencies to provide an all-inclusive list. Examples of auditor limitation-of-liability provisions are illustrated in the advisory's appendix A, which can be found in section A.1010.1 of this manual.

34a. See 64 Fed. Reg. 52319 (September 28, 1999).

ments by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with \$500 million or more in total assets are required to have annual independent audits.³⁶ Furthermore, financial institutions that are public companies³⁷ must have annual independent audits. The agencies rely on the results of audits as part of their assessment of a financial institution's safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors' liability, the external auditors' objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors' objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors' adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institu-

tion is public or not, or (3) whether the external audit is required or voluntary.

Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all nonpublic financial institutions that are not required to have annual independent audits, the FDIC's rules, pursuant to part 363, require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution's external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC's regulations, the external auditor should be in compliance with the AICPA's Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.³⁸ In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC's auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor's independence.³⁹ The FAQ is consistent with the SEC's Codification of Financial Reporting Policies, section 602.02.f.i, "Indemnification by Client." (See section A.1010.1 of this manual.)

On the basis of the SEC guidance and the agencies' existing regulations, certain limits on

38. See part 363 of the FDIC's regulation (12 CFR 363), *Appendix A—Guidelines and Interpretations*, Guideline 14, "Role of the Independent Public Accountant-Independence."

39. In contrast to the SEC's position, AICPA Ethics Ruling 94 (ET, section 191.188–189) currently concludes that indemnification for "knowing misrepresentations by management" does *not* impair independence.

36. For banks, see section 36 of the FDI Act (12 USC 1831m) and part 363 of the FDIC's regulations (12 CFR 363).

37. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.

auditors' liability are already inappropriate in audit engagement letters entered into by—

- public financial institutions that file reports with the SEC or with the agencies,
- financial institutions subject to part 363, and
- certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors' liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

Alternative Dispute-Resolution Agreements and Jury-Trial Waivers

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, *mandatory ADR*) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety-and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

- apply equally to all parties,

- provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
- are not imposed in a coercive manner.

The Advisory's Conclusion

Financial institutions' boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution's external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

CERTIFIED PUBLIC ACCOUNTANTS

This section discusses the standards for competence and independence of certified public accountants (CPAs) as well as the standards required in connection with their audits.

Standards of Conduct

The Code of Professional Ethics for CPAs who are members of the American Institute of Certified Public Accountants (AICPA) requires that audits be performed according to generally accepted auditing standards (GAAS). GAAS, as distinct from generally accepted accounting principles, or GAAP, are concerned with the audi-

tor's professional qualifications, the judgment the auditor exercises in the performance of an audit, and the quality of the audit procedures.

On the other hand, GAAP represents all of the conventions, rules, and procedures that are necessary to define accepted accounting practices at a particular time. GAAP includes broad guidelines of general application and detailed practices and procedures that have been issued by the Financial Accounting Standards Board (FASB), the AICPA, the SEC, or other authoritative bodies that set accounting standards. Thus, GAAP provides guidance on financial-reporting and disclosure matters.

Generally Accepted Auditing Standards

GAAS are grouped into three categories: general standards, standards of field work, and standards of reporting.

The *general standards* require that the audit be performed by a person or persons having adequate technical training and proficiency; that independence in mental attitude be maintained; and that due professional care be exercised in the performance of the audit and the preparation of the report.

Standards of field work require that the work be adequately planned; assistants, if any, be properly supervised; a proper study and evaluation of existing internal controls be made for determining the audit scope and the audit procedures to be performed during the audit; and sufficient evidence be obtained to formulate an opinion regarding the financial statements under audit.

Standards of reporting require that the CPA state whether the financial statements are presented in accordance with GAAP. The application of GAAP in audited financial statements and reports must achieve the fundamental objectives of financial accounting, which are to provide reliable financial information about the economic resources and obligations of a business enterprise. In addition, the informative disclosures in the financial statements must follow GAAP, or the CPA must state otherwise in the report.

GAAS recognizes that management—not the CPA—has primary responsibility for the prepa-

ration of the financial statements and the presentations therein. The auditor's responsibility is to express an opinion on the financial statements. GAAS (or the audit requirements previously set forth) require that audits cover the following financial statements: balance sheet, income statement, statement of changes in stockholders' equity, and statement of cash flows.

GAAS require that CPAs plan and perform auditing procedures to obtain reasonable assurance that financial statements are free from material misstatement. Under GAAS, an audit includes examining on a test basis and should include evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial-statement presentation.

Independence

In the performance of their work, CPAs must be independent of those they serve. Traditionally, independence has been defined as the ability to act with integrity and objectivity. In accordance with the rule on independence included in the SEC's independence rules and the Code of Professional Ethics and related AICPA interpretations, the independence of a CPA is considered to be impaired if, during the period of his or her professional engagement, the CPA or his or her firm had any direct or material indirect financial interest in the enterprise or had any loan to or from the enterprise or any officer, director, or principal stockholder thereof. The latter prohibition does not apply to the following loans from a financial institution when made under normal lending procedures, terms, and requirements:

- automobile loans and leases collateralized by the automobile
- loans in the amount of the cash surrender value of a life insurance policy
- borrowings fully collateralized by cash deposits at the same financial institution (for example, passbook loans)
- credit cards and cash advances under lines of credit associated with checking accounts with aggregate unpaid balances of \$5,000 or less

Such loans must, at all times, be kept current by the CPA as to all terms.

Other loans have been grandfathered by the AICPA under recent ethics interpretations. These other loans (mortgage loans, other secured loans, and loans not material to the AICPA member's net worth) must, at all times, be current as to all terms and shall not be renegotiated with the client financial institution after the latest of—

- January 1, 1992;
- the date that the financial institution first becomes a client;
- the date the loans are sold from a nonclient financial institution to the client financial institution; or
- the date of becoming a member in the AICPA.

The examiner may decide under certain circumstances to test the independence of the CPA through reviews of loan listings, contracts, stockholder listings, and other appropriate measures. Concerns about independence should be identified in the report of examination.

The SEC has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if financial, employment, or business relationships exist between auditors and audit clients, and if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC's independence rules is incorporated in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

EXTERNAL AUDIT REPORTS

The external auditor generates various types of reports and other documents. These reports typically include—

- the standard audit report, which is generally a one-page document;
- a “management letter” in which the auditor confidentially presents detailed findings and recommendations to management; and
- an attestation report in which the auditor attests to management's assertion of internal controls and procedures over financial reports (for public companies and institutions subject to section 36 of the FDI Act); and

- other reports from the auditor to regulators during the audit period.

The major types of standard audit reports will never have a heading or other statement in the report that identifies which type it is. Rather, the type of report is identified by certain terminology used in the text of the report. The major types of standard audit reports are described below.

The *unqualified report*, sometimes referred to as a *clean opinion*, states that the financial statements are “presented fairly” in conformity with GAAP and that the necessary audit work was done.

The *qualified report* may generally have the same language as the unqualified report but will use the phrase “except for” or some other qualification to indicate that some problem exists. The types of problems include a lack of sufficient evidential matter, restrictions on the scope of audit work, or departures from GAAP in the financial statements. This type of report is not necessarily negative but indicates that the examiner should ask additional questions of management.

An *adverse report* basically concludes that the financial statements are not presented fairly in conformity with GAAP. This type of report is rarely issued because auditors and management usually work out their differences in advance.

A *disclaimer* expresses no opinion on the financial statements. CPAs may issue a disclaimer when they have concluded that substantial doubt exists about the ability of the institution to continue as a going concern for a reasonable period of time. This disclaimer is intended to indicate that the CPA is not assuming any responsibility for these statements.

REVIEW OF THE EXTERNAL AUDITOR'S INDEPENDENCE AND AUDIT

Because of the professional and ethical standards of the public accounting profession, the Federal Reserve has concluded that the examiner should conduct an in-depth review of the competence and independence of the CPA only

in unusual situations. One such situation would be a recent change in CPAs by a bank, particularly if the change was made after an audit had commenced.

Ordinarily, specific tests to determine independence are not necessary. However, there may be occasions when the examiner has sufficient reason to question the independence of a CPA or the quality of his or her work. For example, the examiner may discover that during the period of a CPA's professional engagement, which includes the period covered by the financial statements on which the CPA has expressed an opinion, the CPA or a member of his or her firm—

- had a direct financial interest in the bank;
- was connected with the bank in a capacity equivalent to that of a member of management or was a director of the bank;
- maintained, completely or in part, the books and records of the bank and did not perform audit tests with respect to such books and records; or
- had a prohibited loan from the bank (as discussed earlier).

In these and similar instances, the CPA would not have complied with professional standards.

The examiner should determine the scope of the CPA's examination by reviewing the most recent report issued by the CPA. If the audit is in progress or is planned to commence in the near future, the examiner should review any engagement letter to the bank from the CPA. The examiner also should obtain and review any adjusting journal entries suggested by the CPA at the conclusion of the examination. This should be done to determine whether such entries were the result of breakdowns in the internal control structure and procedures for financial reporting.

Under certain circumstances, a CPA may issue a qualified or adverse opinion or may disclaim an opinion on a bank's financial statements. In such circumstances, the examiner should first determine the reasons for the particular type of opinion issued. If the matters involved affect specific areas of the bank's operations, a review of the work performed by the CPA may help the examiner understand the problem that gave rise to this opinion. The examination procedures (section 1010.3) describes the steps the examiner should follow when conducting a review of the work performed by the CPA. (See the FFIEC interagency Policy Statement on the External Auditing Pro-

grams of Banks and Savings Associations (effective January 1, 2000) (SR-99-33)).

LIMITATIONS OF AUDITS AND AUDITED FINANCIAL STATEMENTS

Although auditing standards are designed to require the use of due care and objectivity, a properly designed and executed audit does not necessarily guarantee that all misstatements of amounts or omissions of disclosure in the financial statements have been detected. Moreover, a properly designed and executed audit does not guarantee that the auditor addressed FRB safety- and-soundness considerations. Examination personnel should be cognizant of the limitations inherent in an audit. The following examples illustrate some common limitations of audits:

- The auditor is not responsible for deciding whether an institution operates wisely. An unqualified audit report means that the transactions and balances are reported in accordance with GAAP. It does not mean that the transactions made business sense, that the associated risks are managed in a safe and sound manner, or that the balances can be recovered upon disposition or liquidation.
- The auditor's report concerning financial statements does not signify that underwriting standards, operating strategies, loan-monitoring systems, and workout procedures are adequate to mitigate losses if the environment changes. The auditor's report that financial statements fairly present the bank's financial position is based on the prevailing evidence and current environment, and it indicates that reported assets can be recovered in the normal course of business. In determining that reported assets can be recovered in the normal course of business, the auditor attempts to understand financial-reporting internal controls and can substitute other audit procedures when these controls are weak or nonexistent.
- The quality of management and how it manages risk are not considered in determining historical cost and its recoverability. Although certain assets and instruments are marked to market (for example, trading accounts), GAAP generally uses historical cost as the basis of presentation. Historical cost assumes that the entity is a going concern. The going-concern concept allows certain mark-to-market losses

to be deferred because management believes the cost basis can be recovered during the remaining life of the asset.

- GAAP financial statements offer only limited disclosures of risks, uncertainties, and the other safety-and-soundness factors on which the institution's viability depends.
- Under GAAP, loan-loss reserves are provided for "probable losses" currently "inherent" (that is, anticipated future charge-offs are based on current repayment characteristics) in the portfolio. GAAP defines probable as the likelihood that a future event will occur, confirming the fact of the loss. Additionally, the amount of the loss must be reasonably estimable.

COMMUNICATION WITH EXTERNAL AUDITORS

GAAS requires that the external auditor can consider regulatory authorities as a source of competent evidential matter when conducting an audit of the financial statements of a banking organization. Accordingly, an external auditor may review communications from, and make inquiries of, the regulatory authorities.

Generally, the Federal Reserve encourages auditors to attend examination exit conferences upon completion of the examiner's field work or to attend other meetings concerning examination findings between supervisory examiners and an institution's management or board of directors (or a committee thereof). Banks should ensure that their external auditors are informed in a timely manner of scheduled exit conferences and other relevant meetings with examiners and of the FRB's policies regarding auditor attendance at such meetings.

When other conferences between examiners and management are scheduled (those that do not involve examination findings that are relevant to the scope of the external auditor's work), the institution should first obtain the approval of the appropriate Federal Reserve Bank personnel for the auditor to attend the meetings. The interagency policy statement of July 23, 1992, does not preclude the Federal Reserve from holding meetings with the management of banks without auditor attendance or from requiring that the auditor attend only certain portions of the meetings. (See SR-92-28.)

The 1992 interagency policy statement was issued to improve coordination and communica-

tion between external auditors and examiners. Examination personnel should provide banking organizations with advance notice of the starting date of the examination when appropriate, so management can inform external auditors in advance and facilitate the planning and scheduling of their audit work.

Some institutions prefer that audit work be completed at different times than examination work to reduce demands on their staff members and facilities. Other institutions prefer to have audit work and examination work performed during similar periods so the institution's operations are affected only at certain times during the year. By knowing when examinations are planned, institutions have the flexibility to schedule external audit work concurrent with, or separate from, examinations.

Meetings and Discussions Between External Auditors and Examiners

An external auditor may request a meeting with the FRB regulatory authorities involved in the supervision of the institution or its holding company during or after completion of examinations to inquire about supervisory matters relevant to the institution under audit. External auditors should provide an agenda in advance. The FRB regulatory authorities will generally request that management of the institution under audit be represented at the meeting. In this regard, examiners will generally only discuss with an auditor examination findings that have been presented to bank management.

In certain cases, external auditors may wish to discuss with examiners matters relevant to the institution without bank management representation. External auditors may request such confidential meetings with the FRB regulatory authorities, who may also request such meetings with the external auditor.

Information Required to Be Made Available to External Auditors

Section 931 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and section 112 of FDICIA (12 USC 1811) pertain to depository institutions insured by the FDIC that have engaged the services of an external auditor to audit the banking organi-

zation within the past two years. FIRREA and FDICIA require banks to provide the auditor with copies of the most recent Report of Condition (Call Report), report of examination, and pertinent correspondence or reports received from its regulator. This information is to be provided to the external auditor by the bank under audit, not by the FRB. In addition, banking organizations must provide the independent auditor with—

- a copy of any supervisory memorandum of understanding or written agreement between a federal or state banking agency and the bank put into effect during the period covered by the audit, and
- a report of any formal action taken by a federal or state banking agency during such period, or any civil money penalty assessed with respect to the bank or any banking organization–affiliated party.

Regulatory personnel should ascertain if the banking organization is in compliance with the

requirements of section 931 of FIRREA (12 USC 1817(a)) and section 112 of FDICIA and should report instances of noncompliance in the report of examination.

Confidentiality of Supervisory Information

While the policies of the FRB regulatory authorities permit external auditors to have access to the information described above, institutions and their auditors are reminded that information contained in examination reports, inspection reports, and supervisory discussions—including any summaries or quotations—is confidential supervisory information and must not be disclosed to any party without the written permission of the FRB. Unauthorized disclosure of confidential supervisory information may lead to civil and criminal actions and fines and other penalties.

Internal Control and Audit Function, Oversight, and Outsourcing Examination Objectives

Effective date May 2006

Section 1010.2

1. To determine whether internal and external audit functions exist.
2. To determine with reasonable assurance that the bank has an adequate internal audit function that ensures efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
3. To ascertain, through the examination process, that the bank's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the bank's management process—the control environment, risk assessment, control activities, information and communication, and monitoring activities.
4. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor under the standards established by the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.
5. To evaluate the independence and competence of those who provide the internal and external audit functions.
6. To consider the policies, processes, and personnel surrounding the bank's external auditing program and to determine if—
 - a. any engagement letter or other agreement related to external audit activities for the bank (1) provides any assurances of indemnification to the bank's external auditors that relieves them of liability for their own negligent acts (including any losses, claims, damages, or other liabilities) or (2) raises any other safety-and soundness-concerns; and
 - b. the external auditors have maintained appropriate independence in their relationships with the bank, in accordance with relevant professional standards.
7. To determine the adequacy of the procedures performed by the internal and external auditors.
8. To determine, based on the criteria above, if the work performed by internal and external auditors is reliable.

Internal Control and Audit Function, Oversight, and Outsourcing Examination Procedures

Effective date May 2006

Section 1010.3

This examination program must be used in conjunction with the audit function and audit outsourcing questionnaire section to review the bank's internal and external audits and the audit procedures they encompass. The audit guidelines are general and all sections or questions may not be applicable to every bank.

Before reviewing any specific audit procedures, the examiner should first determine the independence and competence of the auditors. If the examiner believes the auditors to be both competent and independent, he or she should then determine the acceptability of their work. Based on the answers to the audit function questions and on the auditor's work, the examiner must then determine the scope of the examination. The program and related supporting documentation should be completed in an organized manner and should be retained as part of the examination workpapers.

Upon completion of the program, the examiner should be able to formulate a conclusion on the adequacy of audit coverage. Conclusions about any weaknesses in the internal or external audit work performed for the bank should be summarized and included in the report of examination. Significant recommendations should be discussed with the audit committee and senior bank management. If recommendations are made orally, a memorandum of the discussion should be prepared and included in the workpapers.

INTERNAL AUDITORS

1. *Organizational structure of the audit department.* Review the bylaws and the organization chart of the bank and the minutes of the board's audit or examining committee to determine how effectively the board of directors is discharging its responsibility.
2. *Independence of the audit function.* Interview the auditor and observe the operation of the audit department to determine its functional responsibilities.
3. *Auditors' qualifications.* Review biographical data and interview the auditor to determine his or her ability to manage the auditor's responsibility in the bank.

4. *Audit staff qualifications.* Review the biographical data and interview the management staff of the audit department to determine their qualifications for their delegated responsibilities.
5. *Content and use of the audit frequency and scope schedule.* Review the organization charts and the bank's chart of accounts to determine the adequacy of the audit program.
6. *Audit department participation in systems design projects.* Determine, through interviews with the internal auditor and appropriate staff members and through the documentation review, the department's role in automated and/or manual systems design.
7. *Audit manual.* Review the audit manuals and associated internal control questionnaires to determine the adequacy of the prescribed procedures for the accomplishing the audit objectives.
8. *Maintenance of audit records.* Review a sample of the audit reports and associated workpapers to determine compliance with prescribed procedures and proper documentation.
9. *Audit department's formal reporting procedures.* Review all auditor's reports to the board of directors (audit or examining committee) and a representative sample of the departmental or functional reports, consider their distribution and follow-up procedures, and determine how effectively the audit department responsibility is discharged.
10. *Use and effectiveness of audit computer programs.* Interview the auditor and/or the appropriate staff members regarding the use of the computer and access to the files for audit purposes.

INTERNAL AUDIT FUNCTION ADEQUACY

1. Adjust the scope of the examination if the bank's internal audit function does not sufficiently meet the bank's internal audit needs (whether or not the audit function is outsourced), does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, or is otherwise inadequate.
2. Discuss supervisory concerns and outstand-

ing internal-external audit report comments with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's comments and concerns, bring these matters to the attention of senior management and the board of directors or the audit committee.

3. If material weaknesses in the internal audit function or the internal control system exist, discuss them with appropriate Federal Reserve Bank supervisory staff to determine the appropriate actions (including formal and informal enforcement actions) that should be taken to ensure that the bank corrects the deficiencies.
4. Incorporate conclusions about the bank's internal audit function into the bank's management and composite supervisory ratings.
5. Include in the report of examination comments concerning the adequacy of the internal audit function, significant issues or concerns, and recommended corrective actions.

INDEPENDENCE OF THE OUTSOURCING VENDOR

1. If the initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, raises questions about the bank's and its vendor's adherence to the independence standards discussed in parts I and II (and also in part III, if the vendor provides both external and internal audit services to the bank) of the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing—
 - a. ask the bank and the outsourcing vendor how the audit committee determined that the vendor was independent;
 - b. if the vendor is an accounting firm, ask the audit committee how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence;
 - c. if the answers to the above supervisory concerns are not adequately addressed, discuss the matter with appropriate Reserve Bank supervisory staff; and
 - d. if the Reserve Bank supervisory staff concurs that the independence of the external auditor or other vendor appears

to be compromised, discuss the examination findings and the supervisory actions that may be taken with the bank's senior management, board of directors (or audit committee), and the external auditor or other vendor.

EXTERNAL AUDITORS

1. If the bank has engaged any external audit firms to conduct audits of its financial statements (including their certification), audits of internal control over financial reporting, attestations on management's assessment of internal control, appraisals of the bank's audit function, any internal audit or audit function or operational review, review any pending or past engagement letters and agreements. Determine if the audit engagement letters or other agreements include unsafe and unsound provisions that—
 - a. indemnify the external auditor against all claims made by third parties;
 - b. hold harmless, release, or indemnify the external auditor from liability for claims or potential claims that the bank may assert (other than claims for punitive damages), thus providing relief from liability for the auditors' own negligent acts, including any losses, claims, damages, or other liabilities; or
 - c. limit the remedies available to the bank (other than punitive damages).
2. Find out whether the bank's board of directors, audit committee, and senior management closely review all of the provisions of audit engagement letters or other agreements for providing external auditing services for the bank before agreeing to sign them, thus indicating the bank's approval and financial commitment.
3. Verify that the bank has documented its business rationale for any engagement letter or other agreement provisions with external audit firms that limit or impair the bank's legal rights.
4. With the cooperation of the audit committee, review and determine the adequacy of the bank's external auditors' reports, letters, or correspondence, including their supporting workpapers, for the audit work performed since the previous examination.

REGULATORY EXAMINATIONS

1. Review any functional regulatory examination or supervisory examination report for work performed since the previous state

member bank examination. Interview any involved auditors to determine their responsibilities and extent of involvement with the work in this area.

Internal Control and Audit Function, Oversight, and Outsourcing

Audit Function Questionnaire

Effective date May 2006

Section 1010.4

Review the documentation as instructed in the examination procedures section to answer the following audit function and audit outsourcing questions. Where appropriate, supporting documentation and pertinent information should be retained or noted under comments.

ORGANIZATIONAL STRUCTURE AND INTERNAL CONTROL ENVIRONMENT OF THE AUDIT DEPARTMENT

1. Has the board of directors delegated responsibility for the audit function? If so, to whom?
2. Has the board of directors established an audit committee? Is it composed solely of outside directors?
3. Are the members of the audit committee qualified for their particular responsibilities?
4. Does the audit committee promote the internal audit manager's impartiality and independence by having him or her directly report audit findings to it? How often does the audit committee meet with and review reports issued by the auditor?
5. Are the audit committee meetings with the auditor closed to bank personnel?
6. Do the minutes of the audit committee indicate an appropriate interest in the activities and findings?
7. Does the auditor report to the board of directors, the audit committee, or an executive officer who is sufficiently high in the bank's hierarchy? If so, which one? If not, to whom does the auditor report?
8. Are the internal audit function's control risk assessment, audit plans, and audit programs appropriate for the bank's activities?
9. Are internal audit activities consistent with the long-range goals and strategic direction of the bank, and are they responsive to its internal control needs?
10. Do management and the board of directors use reasonable standards, such as the IIA's *Standards for the Professional Practice of Internal Auditing*, when assessing the performance of internal audit?
11. Does the audit function provide high-

quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance?

INDEPENDENCE AND MANAGEMENT OF THE AUDIT FUNCTION

1. Is the audit department functionally segregated from operations in the organizational structure?
2. Does the audit committee review or approve the budget and salary of the auditor? If not, who does?
3. Are the reporting procedures of the auditor independent of the influence of any operating personnel?
4. Is the internal audit function adequately managed to ensure that audit plans are accomplished and the audit results are promptly communicated to the audit committee, senior management, and the board of directors?
5. Has the audit staff been relieved of responsibility for conducting continuous audits?
6. Has the audit department been relieved of responsibility for maintaining duplicate records?
7. Do the responsibilities of the audit staff exclude any duties to be performed in lieu of operating personnel, such as preparation or approval of general ledger entries, official checks, daily reconciliements, dual control, etc.?

AUDITOR'S QUALIFICATIONS

1. Are the auditor's academic credentials comparable to other bank officers who have major responsibilities within the organization?
2. Is the auditor certified (or in the process of becoming certified) as a chartered bank auditor, certified internal auditor, or certified public accountant? If yes, which one (or ones)?
3. Is the auditor's experience in both auditing and banking comparable both in quality and

- in duration to that required of the officers assigned major responsibilities?
4. Does the auditor communicate and relate well with all levels of personnel?
 5. Does the auditor demonstrate a commitment to continuing education and a current knowledge of the latest developments in banking and auditing technology?
 6. Is the auditor dedicated to the standards and ethics of his or her profession (such as those published by the Bank Administration Institute, the Institute of Internal Auditors, and the American Institute of Certified Public Accountants)?
6. Does the frequency and scope schedule require approval by the audit committee, the board of directors, regulatory authorities, or others? If so, by whom, and has such approval been obtained?
 7. Does the frequency and scope schedule comply with state statutory requirements, if any, for internal audits, including minimum audit standards?
 8. Does the auditor periodically report his or her progress in completing the frequency and scope schedule to the board's audit committee?
 - a. If not to the board's audit committee, to whom?
 - b. Does the committee approve significant deviations, if any, in the original program?
 9. Does the auditor prepare a time budget? Are budgeted versus actual time analyses used as a guide in forward planning?
 10. Does the depth of coverage appear to be sufficient?
 11. Are different entry dates and time periods between reviews scheduled so as to frustrate reliable anticipation of entry dates by auditees?
 12. Is the bank's possession of all assets owned or managed in fiduciary capacities subjected to verification?
 13. Are controls on opening and closing general ledger and subsidiary accounts adequate and is the auditor formally advised of any changes?
 14. If the bank has automated systems, does the program call for the application of independently prepared computer programs that employ the computer as an audit tool?
 15. Will the audit staff examine the documentation of all bank systems and produce their own documentation?
 16. Are all service-related activities not specifically manifested in general ledger accounts subject to adequate periodic review (for example, supervisory regulations, security, vacation policy, purchases, traveler's checks, and safekeeping)?
 17. Will appraisals of administrative control be made for each function, yielding audit comments and suggestions for improvements of operational efficiency?

AUDIT STAFF QUALIFICATIONS

1. Is the audit staff sufficient in number to perform its tasks adequately?
2. Is the staff adequately experienced in auditing and banking?
3. Are members of the staff experienced in specialized areas, such as EDP, foreign-exchange trading, trust, and subsidiary activities of the bank?
4. Is there a formal audit training program in effect?
5. Is the number of unfilled vacancies on the audit staff considered reasonable?
6. Is the turnover of audit personnel acceptable?
7. Does management have plans to improve its audit capability, if needed?

CONTENT AND USE OF THE AUDIT FREQUENCY AND SCOPE SCHEDULE

1. Is the audit program formalized and therefore on record as a commitment that can be analyzed and reviewed?
2. Are all important bank functions and services identified as subjects of the audits?
3. Does the audit program include procedures necessary to ensure compliance with the Federal Election Campaign Act and the Foreign Corrupt Practices Act?
4. Does the internal audit department have access to all reports, records, and minutes?
5. Are internal audit activities adjusted for significant changes in the bank's environment, structure, activities, risk exposures, or systems?

AUDIT DEPARTMENT PARTICIPATION IN SYSTEMS DESIGN PROJECTS

1. Is there a formal or informal procedure for notifying the auditor of contemplated new systems or systems modifications in the early planning stages?
2. Is the auditor a member of an executive systems planning or steering committee? If not, does the auditor have access to and review the minutes of such committees?
3. Does an audit representative review the activities of systems design teams for audit and internal control requirements? Is the specialized training and experience of the audit staff sufficient to support effective reviews?
4. Does the audit department avoid over-participation in systems design, modification, and conversion?
5. Is the auditor's "sign-off" on new or modified systems restricted to control and audit trail features?

AUDIT MANUAL

1. Has responsibility for the establishment and maintenance of the audit manual been clearly assigned?
2. Does the audit manual require approval by the board of directors, the audit committee, or others? If so, has such approval been obtained?
3. Is the content of the audit manual independent from adverse influence by other interests, such as operating management or independent CPAs?
4. Is the audit manual current, and are procedures for keeping the manual current adequate?
5. Does the audit manual contain the scope and objective of each audit?
6. Does the manual provide for valid deviations from audit procedures to be officially approved by audit management?
7. Do audit procedures provide for the follow-up of exceptions noted in previous audits?
8. Does the manual prescribe that each audit procedure be cross-referenced to the appropriate audit workpapers?
9. Must an auditor initial each program step as testimony of his or her performance?

10. Does the manual prescribe that full control be established at the time of entry over the records selected for audit?
11. Is proof of subsidiary to control records required?
12. Are subsidiary direct verification programs covering all forms of customer deposit, loan, safekeeping, collateral, collection, and trust accounts included?
13. Are flow charts called for as evidence of thorough analytical auditing?
14. Do the procedures employ scientific sampling techniques that have acceptable reliability and precision?
15. Does the audit manual provide for the resolution of exceptions and deficiencies?
16. Does the audit manual contain provisions for report format and content and an expression of the opinion of the auditor regarding the adequacy, effectiveness, and efficiency of internal controls?
17. For each audit, do audit procedures provide for a documented method of assuring audit management that a proper study and evaluation of existing internal controls has been made, such as an internal control questionnaire or memorandum?
18. Does the audit manual contain a provision for a review and update of the procedures for each audit, where required, upon the audit's completion?
19. Does the audit manual provide for the maintenance of a permanent file for audits conducted?
20. Does the audit manual contain provisions for the formal, standardized preparation and maintenance of workpapers?
21. Are applicable statutory and regulatory requirements included in the audit procedures?

MAINTENANCE OF AUDIT RECORDS

1. Are workpapers arranged and maintained for filing and reference in—
 - a. the current file?
 - b. the permanent file?
2. Is a reasonable record-retention schedule and departmental index maintained for audit records?
3. Are audit procedures being complied with during each audit?

4. Do the workpapers contain evidence that all significant deviations from standard audit procedures are documented and have received the approval of audit management?
 5. Are procedures for preparing and maintaining workpapers being adhered to?
 6. Do workpapers adequately document the internal audit work performed and support the audit reports?
 7. Do workpapers contain a copy of the audit report, an adequate index, an internal control questionnaire, audit procedures, and other appropriate material?
 8. Are workpapers numbered, indexed, and cross-referenced to audit procedures and the workpapers index?
 9. Is each workpaper dated and initialed by the preparer?
 - a. Are sources of data clearly shown?
 - b. Are tick marks explained?
 10. From the workpapers, can it be determined how various sample sizes were determined (by judgment or statistical sampling), including the range and confidence level?
 11. Do workpapers contain evidence that supervisory personnel of the audit department have reviewed the workpapers and resultant findings?
 12. Are all significant or unresolved exceptions noted in workpapers required to be included in the report?
 13. Are applicable statutory and regulatory requirements being complied with?
- differences of opinion between audit and operating management effective?
4. Does the auditor maintain a formal record of all audit reports that contain unresolved recommendations and exceptions?
 5. Does the bank promptly respond to significant identified internal control weaknesses? Are exceptions and recommendations generally resolved within 90 days?
 6. Are audit reports submitted promptly?
 7. Are responses received promptly?

USE AND EFFECTIVENESS OF AUDIT COMPUTER PROGRAMS

1. What audit computer programs are used and what are their purposes?
2. Is there a member of the audit staff qualified to write and appraise the quality of audit computer programs?
3. Is the auditor satisfied that he or she has sufficient "free access" to the computer files?
4. Are audit programs run on request?
5. Do direct verification programs allow the auditor flexibility in selecting the criteria to be used in determining the sample?
6. Have procedures been established for the development and maintenance of documentation for audit computer programs? Are they adhered to?
7. Are changes to audit programs controlled?

AUDIT DEPARTMENT'S FORMAL REPORTING PROCEDURES

1. Does the auditor submit formal reports? If so, to whom?
2. Do the reports convey to the reader the auditor's general observation of the condition of the operation of the department or function?
 - a. Do they adequately reflect the scope of the audit?
 - b. Do they contain an opinion of the auditor regarding the adequacy, effectiveness, and efficiency of internal controls?
 - c. Do they call for a prompt response, where appropriate?
3. With regard to audit exceptions and recommendations, is the method of resolving

INTERNAL AUDIT OUTSOURCING ARRANGEMENTS

1. If the bank outsources its internal audit function, does it have a written contract or an engagement letter with the vendor?
2. Does the written contract or engagement letter include provisions that—
 - a. define the expectations and responsibilities under the contract for both parties?
 - b. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor?
 - c. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work?
 - d. establish the process for changing the

- terms of the service contract, especially for expansion of audit work if significant issues are found, and contain stipulations for default and termination of the contract?
- e. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor?
 - f. specify the locations of internal audit reports and the related workpapers?
 - g. specify the period of time (for example, seven years) that vendors must maintain the workpapers?¹
 - h. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor?
 - i. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence?
 - j. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, Public Company Accounting Oversight Board (PCAOB), or regulatory independence guidance?
3. Does the outsourced internal audit arrangement maintain or improve the quality of the internal audit function and the bank's internal control?
 4. Do key employees of the bank and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed?
 5. Is the scope of the outsourced work revised appropriately when the bank's environment, structure, activities, risk exposures, or systems change significantly?
 6. Have the directors ensured that the outsourced internal audit activities are effectively managed by the bank?
 7. Does the arrangement with the outsourcing vendor satisfy the independence standards described in the Policy Statement on the Internal Audit Function and Its Outsourcing and thereby preserve the independence of the internal audit function, whether or not the vendor is also the bank's independent public accountant?
 8. Has the bank performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement, and are there adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement?
 9. Does the bank have a contingency plan to ensure continuity in audit coverage, especially for high-risk areas?

EXTERNAL AUDIT ENGAGEMENT LETTERS AND OTHER AUDIT AGREEMENTS

1. Does the bank's board of directors, audit committee, and senior management closely review all of the provisions in audit engagement letters or other audit work agreements before agreeing to sign them?
2. Does the bank's legal counsel carefully review audit engagement letters to ensure that those charged with engaging the external auditor make a fully informed decision?
3. Does the bank have any engagement letters for audits of financial statements, audits of internal control over financial reporting, or attestations on management's assessment of internal control that include unsafe and unsound provisions that—
 - a. indemnify the external auditor against all claims made by third parties?
 - b. hold harmless or release the external auditor from liability for claims or potential claims that might be asserted by the client financial institution (other than claims for punitive damages)?
 - c. limit the remedies available to the client

1. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

financial institution (other than punitive damages)?

4. Has the bank agreed in any engagement letters or other audit work agreements to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, *mandatory ADR*) or to waive the right to a jury trial. If so—
 - a. has the bank's senior management carefully reviewed mandatory ADR and jury-trial provisions in engagement letters, as well as reviewed any agreements regarding rules of procedure, in order to fully comprehend the ramifications of any agreement to waive any available remedies?
 - b. has the bank's senior management obtained written assurances that its insurance policies (for example, the bank's errors and omissions policies and directors' and officers' liability policies) will cover losses from claims that are precluded by limitation-of-liability provisions in audit engagement letters or other audit agreements?
5. Has the bank's senior management ensured that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—
 - a. apply equally to all parties?
 - b. provide a fair process (e.g., neutral decision makers and appropriate hearing procedures)?
 - c. are not imposed in a coercive manner?
6. Has the bank's board of directors, audit committee, or senior management documented their business rationale for agreeing to any provisions that limit their legal rights?

EXTERNAL AUDIT ACTIVITIES

1. When state, federal, or supervisory regulations or stock-exchange listing require

an independent CPA audit, did the bank comply?

- a. If so, was the opinion rendered by the accounting firm unqualified?
 - b. If not, has the auditor taken appropriate action to resolve any deficiencies?
2. Does the bank policy prohibit loans to its external auditor or the engagement of an external auditor who is a stockholder? If not, has the board considered the materiality of any existing transactions regarding the auditor's independence?
 3. Has an external auditor been engaged to perform special reviews of specific departments or areas of the bank since the previous examination? If deficiencies were cited, have they been corrected?
 4. Has the same public accounting firm been engaged for the prior two years? If not, obtain a reason for change.
 5. Have management letters from the external auditors or other reports from consultants been presented to management since the last examination?
 6. Do deficiencies in management letters receive appropriate attention?
 7. Are the notes pertaining to the financial statements reviewed for any information that may allude to significant accounting or control problems?
 8. Does the report of examination or the management letter submitted by the public accounting firm comprehensively define the scope of the examination conducted?

REGULATORY EXAMINATION ACTIVITIES

1. Does the internal audit department have access to the examination reports?
2. Does the internal audit department investigate the reasons for adverse comments and recommendations in the examination reports?
3. Does the internal audit department monitor the progress in dealing with these comments and recommendations?

The Federal Reserve System (System) maintains a long-standing policy that compels System employees, including examiners, to avoid any action that may result in an employee (or create the appearance that an employee) is—

- using his or her Federal Reserve position for private gain,
- giving preferential treatment to any person or institution,
- losing independence or impartiality, or
- making decisions outside of official channels.

Federal Reserve examiners are also subject to conflict-of-interest rules that are designed to ensure (1) both the objectivity and integrity of bank examinations and (2) that Federal Reserve examiners comply with criminal statutory prohibitions.

The conflict-of-interest rules are set forth in section 5 of the *Federal Reserve Administrative Manual* and in each Reserve Bank's uniform codes of conduct.

EXAMINER BORROWING RULES

A bank examiner is prohibited from accepting a loan or gratuity from any bank examined by the individual (18 USC 213). An officer, director, or employee of a bank is prohibited from making or granting any loan or gratuity to any examiner who examines or has authority to examine the bank (18 USC 212). These statutory provisions may also be applicable to a loan obtained by a System employee who has been issued a special, temporary, or ad hoc examiner credential. An examiner found to be in violation of these provisions can be—

- fined under title 18 of the U.S. Code (Crimes and Criminal Procedure), imprisoned not more than one year, or both;
- further fined a sum equal to the money loaned or gratuity given; and
- disqualified from holding office as an examiner.

On February 3, 2005, the director of the Board's Division of Banking Supervision and Regulation and the Board's general counsel, acting under delegated authority, approved changes to the System's examiner borrowing

rules as a result of the Preserving Independence of Financial Institution Examinations Act of 2003 (18 USC 212–213). The act included provisions that liberalized examiner borrowing restrictions by providing narrow exceptions that enable bank examiners to obtain credit cards and certain home mortgage loans from a broader range of lenders. (See SR-05-2.)

Under the act, a Reserve Bank examiner may accept a credit card or a loan secured by a mortgage on the examiner's principal residence from an institution supervised by the Federal Reserve, as long as the examiner meets the financial requirements to obtain such credit or loan. The terms of the credit or loan cannot be more favorable than the terms that are generally offered to other borrowers. Federal Reserve policy, however, does not permit examiners to participate in the examination of any banking organization from which they have obtained home mortgage loans.

POST-EMPLOYMENT RESTRICTIONS FOR “SENIOR EXAMINERS”

On November 17, 2005, the federal bank regulatory agencies¹ adopted a rule (effective December 17, 2005) to implement the post-employment restriction found in the Intelligence Reform and Terrorism Prevention Act of 2004 (see 12 USC 1820).² (See the Board's rules at 12 CFR 263 and 264, as well as SR-05-26 and its attachments.) The restriction prohibits an examiner who served as a “senior examiner” for a depository institution or depository institution holding company for two or more months during the examiner's final twelve months of employment with a Reserve Bank from knowingly accepting compensation as an employee, an officer, a director, or a consultant from that depository institution or holding company, or from certain related entities.³ *The rule is expected to affect a*

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision.

2. Pub. L. 108-458, 118 Stat. 3638, 3751–53 (December 17, 2004).

3. The Board's rule applies to a covered examiner who leaves the Federal Reserve's service after December 17, 2005. Because the statute has a one-year look-back provision, an

relatively small number of Federal Reserve examiners, primarily the “central points of contact” (CPC) or other examiners in functionally equivalent positions for the largest and most complex institutions. Table 1 summarizes how the restriction applies to “senior examiners” of the different types of organizations within the Federal Reserve’s jurisdiction.

Definition of “Senior Examiner”

For purposes of this rule, an officer or employee of the Federal Reserve is considered to be the “senior examiner” for a particular state member bank, bank holding company, or foreign bank if the individual meets all of the following criteria:

- The officer or employee has been authorized by the Board to conduct examinations or inspections on behalf of the Board.
- The officer or employee has been assigned continuing, broad, and lead responsibility for examining or inspecting that state member bank, bank holding company, or foreign bank.
- The officer’s or employee’s responsibilities for examining, inspecting, and supervising the state member bank, bank holding company, or foreign bank—
 - represent a substantial portion of the officer’s or employee’s assigned responsibilities and
 - require the officer or employee to interact routinely with officers or employees of the

state member bank, bank holding company, or foreign bank or its respective affiliates.

The rule does not cover an examiner who performs only periodic, short-term examinations of a depository institution or holding company and who does not have ongoing, continuing responsibility for the institution or holding company. The rule also does not cover an examiner who spends a substantial portion of his or her time conducting or leading a targeted examination (such as a review of an institution’s credit-risk management, information systems, or internal audit functions) and who does not have broad and lead responsibility for the overall examination program for the institution or holding company.

The restriction applies to a covered individual for one year after the individual terminates his or her employment with the Reserve Bank. If an examiner violates the one-year restriction, the statute requires the appropriate federal banking agency to seek an order of removal and industry-wide employment prohibition, a civil money penalty of up to \$250,000, or both. In special circumstances, the Chairman of the Board of Governors may waive the restriction for the “senior examiner” of the Federal Reserve by certifying in writing that granting the individual a waiver of the restriction would not affect the integrity of the Federal Reserve’s supervisory program.

examiner’s responsibilities from as far back as December 17, 2004, may subject the “senior examiner” to the post-employment restriction.

Table 1—Summary of Prohibited Employment Based on Examination Responsibility

<i>Examiner Responsibility</i>	<i>Restriction</i>
If during two or more months of the last twelve months of service, the examiner serves as the “senior examiner” for a—	Then for one year after leaving the Reserve Bank, the “senior examiner” may not knowingly accept compensation as an employee, officer, director, or consultant from—
State member bank	<ul style="list-style-type: none"> • the state member bank (including any subsidiary of the state member bank) or • any company (including a bank holding company) that controls the state member bank.
Bank holding company	<ul style="list-style-type: none"> • the bank holding company or • any depository institution controlled by the bank holding company (including any subsidiary of the depository institution).

Federal Reserve System Bank Watch List and Surveillance Programs

Effective date May 2006

Section 1020.1

The Federal Reserve System (the System) uses automated screening systems to conduct routine monitoring of the financial condition and performance of state member banks. These surveillance systems rely on Call Reports and other financial regulatory reports, as well as examination data, to identify institutions exhibiting financial deterioration or increased risk profiles. This surveillance process ensures that these banks receive timely supervisory attention and that examination resources can be directed to weak and potentially troubled banks to supplement on-site examinations.

System surveillance screens focus on many areas evaluated in the supervisory process, including capitalization, asset growth, loan quality, loan concentrations, interest-rate risk, and liquidity. In addition, the screens flag banks engaging in new or complex activities. The surveillance information helps identify weak or deteriorating banks and those with changing risk profiles.

Examiners also use the surveillance results in preexamination planning. For example, before an on-site review, the examiner will determine whether a bank is on the System's State Member Bank Watch List (the watch list) and if the bank has failed any surveillance monitoring screens. This information is useful in determining the type of examination scope (full, limited, or targeted) and staff resources that will be needed. The surveillance results can also be used to identify bank activities that may warrant a higher degree of review or focus during an on-site examination. Thus, the surveillance information helps examination and supervision staff plan and schedule more-forward-looking risk-focused examinations.

The surveillance program activities generally consist of the following three supervisory components:

1. *A set of System monitoring screens of financial data.* The process, referred to as "screening," involves a routine monitoring of the financial condition, performance, and risk of banks.
2. *Analysis based on the watch list and other reports.* System staff use the watch list and other data derived from the surveillance process to flag outlier institutions, using mea-

asures that correspond to areas of supervisory concern. The monitoring screens and watch list are designed and used to spot trends and changes in an institution's financial condition and performance to determine if identified companies require further review.

3. *Corrective action and follow-up.* Reserve Bank follow-up action is performed for outlier institutions. The nature and extent of follow-up depend on current conditions at the identified bank. Actions range from completing a written analysis of the factors contributing to the outlier status to conducting an on-site examination. These efforts ensure that identified problems are monitored until they can be corrected or resolved.

SYSTEM BANK WATCH LIST PROGRAM

The State Member Bank Watch List Program, detailed in SR-06-2, "Enhancements to the System's Off-Site Bank Surveillance Program," is the Federal Reserve's primary means for monitoring state member bank performance and condition between on-site examinations. The watch list is a record of banks that failed selected monitoring screens or ratings criteria. The watch list helps the Reserve Banks track and address troubled or potentially weak banks and identify common supervisory issues in the banks meeting watch list criteria. The program consists of five phases: (1) generating, reviewing, and modifying a watch list of banks meeting certain inclusion criteria; (2) analyzing the financial condition and risk profile of each bank on the final watch list and specifying the factors responsible for the bank's appearance on the watch list; (3) determining whether the safety-and-soundness examination schedule should be accelerated for those banks listed on the watch list; (4) preparing or updating a surveillance write-up for each bank listed on the watch list; and (5) developing a suitable supervisory response, including possible corrective action, that addresses identified problems.

The Watch List Program applies to all state member banks and includes both state member banks with known weaknesses and those with characteristics that could affect supervisory

assessments of the quality of bank management or of the overall safety and soundness of a bank. The program helps to ensure that weaknesses existing at supervised banks are being addressed appropriately and that potential emerging problems can be promptly identified in between regularly scheduled on-site safety-and-soundness examinations. State member banks are included on a watch list and require quarterly written analyses when they meet any of the following criteria:

- overall Supervision and Regulation Statistical Assessment of Bank Risk (SR-SABR) surveillance rating of 1D, 1F, 2D, or 2F
- CAMELS composite rating of 3 or worse
- Management or Risk Management component rating of 3 or worse
- composite rating in either of the worst two categories under the Trust, Information Technology, Consumer Compliance, or Community Reinvestment Act rating systems

Reserve Banks and Board staff may add state member banks to the watch list for reasons other than those listed above. For example, they may elect to include selected de novo banks, banks reporting rapid asset or loan growth or significant changes in business mix, and other institutions with financial characteristics that suggest the need for heightened off-site monitoring in between on-site examinations.

SR-SABR Model

The SR-SABR model assigns a two-component surveillance rating to each bank. The first component is the current composite CAMELS rating assigned to the bank. The second component is a letter (A, B, C, D, or F), reflecting the model's assessment of the relative strength or weakness of a bank compared with other institutions within the same CAMELS rating category.¹ An SR-SABR rating that includes an "A" denotes a bank with particularly strong financial and supervisory indicators compared with other banks within its CAMELS rating category. An SR-SABR rating including an "F" indicates that

a bank is reporting poor financial results or showing other signs of significant weakness compared with similarly rated banks. For example, a 1A rating signifies a 1-rated bank that reports strong financial and supervisory indicators when compared with all 1- and 2-rated banks, while a 1F indicates that, while the bank currently maintains the strongest possible composite CAMELS rating, its financial or other supervisory indicators place it among the weakest of the banks currently rated either 1 or 2. SR-SABR ratings that include a "B" generally correspond to banks with financial and supervisory measures that are comparable to most banks in the CAMELS rating category. Those with a "C" have weaker measures than those of most other banks in their CAMELS rating category, and those with a "D" have significantly weaker financial or supervisory measures compared with other banks in their rating category.

Three separate econometric models contribute to SR-SABR surveillance ratings. Two of the models estimate the probability of an adverse supervisory rating change for a bank if it was examined within the next quarter. The first estimates the probability of an adverse rating change for banks currently rated CAMELS 1 or 2. The second estimates the probability of an adverse rating change for banks currently rated 3, 4, or 5.² Together, these models are used to assign an "adverse change" rating. They utilize seven financial variables computed using Call Report data and seven supervisory variables that have been statistically significant in explaining adverse ratings assigned over the past three years. The third model is retained from the System to Estimate Examination Ratings (SEER) framework and estimates the probability that a bank will fail or become critically undercapitalized within the next two years. This model is referred to as the "viability" model and includes 11 financial variables computed using Call Report data. The model was estimated and developed based on the financial results from the large group of banks that failed in the late 1980s and early 1990s.

Quarterly Watch List Procedures

Board staff will distribute a preliminary quarterly watch list to surveillance contacts at each

1. For banks currently rated 1 or 2, "CAMELS rating category" refers to all banks with satisfactory (1 or 2) CAMELS ratings. Banks with less than satisfactory CAMELS ratings are compared only with other banks that have the same CAMELS rating.

2. For 5-rated banks, an adverse rating change is defined as the continuation of the current rating.

Reserve Bank upon the finalization of quarterly Call Report processing. To assist examiners and analysts in interpreting SR-SABR model results, Board staff will also distribute SR-SABR Schedule of Risk Factors (SRFs) reports. The SRFs highlight financial ratios that cause the model to flag a bank as particularly strong or weak. These reports also include peer statistics to highlight the relative position of a bank compared with other institutions that have similar CAMELS composite ratings. In addition, supplemental monitoring screens will be distributed to assist in analyzing watch list banks and in identifying other banks that may require additional supervisory attention.

Upon notification from Board staff that quarterly surveillance materials are ready for review, Reserve Banks should perform the following procedures:

- *Review and modify the watch list.* Review the preliminary watch list and add any other state member banks from their districts that have significant safety-and-soundness weaknesses. For each bank to be added, the Reserve Bank should submit the name, ID RSSD number, location, asset size, and the reasons for its inclusion on the watch list by e-mail to the manager of the Surveillance, Financial Trends, and Analysis Section at the Board within five business days of receiving the preliminary watch list. Reserve Banks also may recommend removal of banks that they previously had added to the watch list and that no longer appear to warrant watch list status. In these cases, the Reserve Bank should also provide a brief written rationale to Board staff for removing any banks from the watch list. Ten days after the distribution of the draft, the watch list will be deemed final, and the time frame for completing all follow-up work will commence.
- *Assess the financial condition and risk profile of each final watch list bank.* Reserve Banks should review each final watch list bank in their Districts to assess the bank's financial condition and risk profile. Reserve Banks should consider recent examination findings for the bank and its affiliates, relevant information included in correspondence between the bank and the Reserve Bank, and other outside sources of information. Reserve Banks also should use all appropriate surveillance tools in evaluating each bank, including the Uniform Bank Performance Report, Bank Holding Company Performance Reports, and results of the System Bank Monitoring Screens and the System BHC Monitoring Screens.
- *Determine whether the safety-and-soundness examination schedule should be accelerated for each watch list bank.* In cases where substantial deterioration in a bank's financial condition is evident or where a bank's risk profile has increased significantly, Reserve Banks should commence an on-site review of the bank no later than 60 days after the release of the final watch list. Unless an on-site examination has been completed within the last six months or the Reserve Bank can document that SR-SABR results do not reflect material safety-and-soundness concerns, Reserve Banks should generally accelerate examinations when a state member bank is assigned an SR-SABR rating of 1F, 2F, or 3F. The scope of on-site reviews conducted for watch list banks may vary, depending on the risk factors present and knowledge about the bank and its management. In some cases, discussing the issues with management may suffice; in others, a full-scope safety-and-soundness examination may be necessary.
- *Prepare surveillance write-ups for each watch list bank.* No more than 30 days after receiving the quarter's final watch list, Reserve Banks should document conclusions on the watch list banks in a write-up posted to the System's Central Data and Text Repository (CDTR) using the Banking Organization National Desktop (BOND) application.³ Each write-up should be posted as a "State Member Bank Watch List Write-Up" and assigned an "as of" date that corresponds to the quarterly surveillance cycle. The write-ups should—
 - briefly summarize the cause for a bank's appearance on the watch list and assess whether it poses risks to the safety and soundness of the bank;

3. In general, Reserve Banks should create a separate quarterly watch list document for each state member bank included on the watch list. However, for bank subsidiaries of the largest banking organizations, which are subject to continuous supervision and already require separate quarterly written analyses, the factors required for a quarterly watch list write-up, if applicable, may be addressed within the standard quarterly documentation posted in the CDTR and BOND. Reserve Bank surveillance contacts, however, should notify the manager of the Surveillance, Financial Trends, and Analysis section of the specific CDTR documents that address these requirements.

- detail the supervisory actions that have been taken in response to safety-and-soundness concerns;
- describe bank management’s response to safety-and-soundness concerns;
- address whether the current CAMELS rating accurately reflects the bank’s condition, considering adverse SR-SABR results when applicable;
- assess whether the timing of the next safety-and-soundness examination should be accelerated; and
- describe the Reserve Bank’s plans for addressing any safety-and-soundness issues over the next quarter.

For state member banks that have been included on the watch list in the prior quarter, write-ups should focus on new developments or changes in the condition or performance of the bank. Key background information, however, should be carried forward so that the write-up serves as a stand-alone summary document of the bank’s current condition and prospects for improvement.

Federal Reserve System Bank Watch List and Surveillance Programs

Examination Objectives

Effective date November 2000

Section 1020.2

1. To identify major changes in the financial condition of the bank between examinations.
2. To assist in determining the scope of the examination and the priority of work to be performed.
3. To check the validity of the data being reported by the bank.
4. To investigate areas where an in-depth review is indicated.

Federal Reserve System Bank Watch List and Surveillance Programs

Examination Procedures

Effective date November 2000

Section 1020.3

1. Obtain any surveillance screening reports, such as the watch list and Federal Reserve System monitoring screens, or other analysis reports prepared by the Reserve Bank or Board that have been generated for the bank.
2. Review the reports obtained in step 1 and discuss with surveillance staff, if necessary, for clarification or for further background information.
3. If a pre-examination analysis has not been prepared, create one from information contained in the bank performance report, current call report, and previous examination report. This analysis should be considered when determining the scope of the examination, and when making staffing decisions.
4. Follow up on unusual aspects revealed in the surveillance screening reports, in analysis reports, or on newly obtained data significantly different from prior information.
5. Perform validity checks necessary to ensure the quality of reported data. This would include such normal examination procedures as validating call report information and confirming the accuracy and soundness of past-due and accrual accounting practices.

INTRODUCTION

Workpapers are the written documentation of the procedures followed and the conclusions reached during the examination of a bank. Accordingly, they include, but are not necessarily limited to, examination procedures and verifications, memoranda, schedules, questionnaires, checklists, abstracts of bank documents and analyses prepared or obtained by examiners.

The definition of workpapers, their purpose, and their quality and organization are important because the workpapers as a whole should support the information and conclusions contained in the related report of examination. The primary purposes of workpapers are to—

- organize the material assembled during an examination to facilitate review and future reference.
- aid the examiner in efficiently conducting the examination.
- document the policies, practices, procedures and internal controls of the bank.
- provide written support of the examination and audit procedures performed during the examination.
- document the results of testing and formalize the examiner's conclusions.
- substantiate the assertions of fact or opinion contained in the report of examination.

They also are useful as—

- a tool for the examiner-in-charge to use in planning, directing, and coordinating the work of the assistants.
- a means of evaluating the quality of the work performed.
- a guide in estimating future personnel and time requirements.
- a record of the procedures used by the bank to assemble data for reports to the Board of Governors of the Federal Reserve System.
- a guide to assist in the direction of subsequent examinations, inquiries and studies.

The initial step in preparing workpapers is to review, where available, the applicable sections of supporting data prepared during the prior examination. When reviewing prior workpapers, the examiner should consider the data prepared in each area for—

- information that is of a continuing or permanent nature.
- guidance in preparation of workpapers for the current examination.
- an indication of changes or inconsistencies in accounting procedures or methods of their application since the last examination.

Accumulation of relevant documentation consistent with prior examinations, however, is often insufficient. Workpapers should be prepared in a manner designed to facilitate an objective review, should be organized to support an examiner's current findings and should document the scope of the current examination. Minimum content necessary for each section of workpapers includes:

Source of Information—This is important, not only in identifying the bank, but also in identifying the preparer. In subsequent examinations, the preparer should be able to readily determine the bank personnel from whom the information was obtained during the previous examination as well as the examiner who prepared the workpapers. Accordingly, each workpaper should include—

- bank name and subdivision thereof, either functional or financial.
- statement of title or purpose of the specific analysis or schedule.
- specific identification of dates, examination date and work performance date.
- initials of preparer and initials indicating review by the examiner designated to perform that function. Although appropriate use may be made of initials, the full names and initials of all examiners should appear on a time and planning summary or on an attachment to the file to facilitate future identification.
- name and title of person, or description of records, that provided the information needed to complete the workpaper.
- an index number identifying the workpaper and facilitating organization of the workpaper files.

Scope of Work—This includes an indication of the nature, timing and extent of testing in application of examination and audit procedures. It also includes the examiner's evaluation of and reliance on internal and external audit

procedures and compliance testing of internal controls. To the extent that this information is contained in other workpapers, such as an examination procedure or a questionnaire, a reference to the appropriate workpaper will be sufficient.

Conclusions—The examiner should develop conclusions, in accordance with the examination objectives, with respect to the information obtained, documentation provided and the results of the examination and audit procedures performed. Such conclusions provide the basis for information contained in the report of examination.

To develop workpapers that have the qualities of clarity, completeness and conciseness, adequate planning and organization of content are essential. Therefore, before the workpaper is prepared, the examiner should determine the following:

- What examination objective will be satisfied by preparing the analysis or workpaper?
- Can preparation of the analysis be avoided by testing the bank's records and indicating the nature and extent of testing in an examination or an audit procedure or by comment on a related schedule or another supporting document?
- Is the analysis necessary to support the information in the report of examination?

Subsequent to the determination that an analysis is required, but before initiating preparation, the examiner should decide if—

- previous examination analyses can be adapted and carried forward to the current examination.
- the analysis can be prepared by an internal auditor or other bank personnel.
- the format of the analysis may be designed in a manner to facilitate its use in future examinations.

Once it has been determined that preparation of an analysis is required, the examiner should consider the following techniques that promote clarity of workpaper preparation:

- Restrict writing to only one side of the paper.
- Use a standard size sheet of paper large enough to avoid overcrowding.

- Condense information for simplicity.

Frequently, time can be saved by carrying forward workpapers from one examination to the next. Thus, when laying out an analysis that might be repeated in future examinations, the examiner should arrange it in a manner to facilitate future use. For example, extra columns may be left blank within an account analysis displaying little activity for insertion of transaction information during future examinations. In such a situation, appropriate space (boxes and column headings) should be provided for the signature or initials of the preparer and reviewer during each examination. When a workpaper is removed from one examination file and carried forward, a notation should be made in the file from which the paper is extracted. This is important in the event workpapers applicable to a particular examination are needed several years after the completion of the examination.

INITIAL PREPARATION BY OTHERS

Although all items included in the report of examination should be supported by workpapers, their preparation may not always require original work by the examiner. Frequently, arrangements can be made for bank personnel, including internal auditors, to prepare workpapers for examination use or to make available papers prepared by them as part of their regular duties. Examples include outstanding checklists, lists of outstanding certificates of deposit, schedules of employee borrowings, and debt maturity schedules. The extent to which examiners can utilize analyses and data prepared by bank personnel increases the efficiency with which examination procedures are completed.

As part of the initial examination planning process, arrangements should be made with appropriate bank management for the timely completion of bank-prepared data and information. The coordinating bank officer(s) must understand what information is being requested and why it is being requested, in order to avoid confusion and unnecessary regulatory burden. Arrangements, however, may have to be made for the bank to supply supporting details or other schedules or items to comply with the requests.

Upon receipt of bank-prepared analyses, an examiner should review the documents for over-

all completeness and note the date of receipt. This facilitates future planning and provides a ready reference as to which analyses have been received from the bank at any given point during the examination. Also, all bank-prepared workpapers should be tested and the nature and extent of testing performed by the examiner should be indicated on the papers.

INITIAL APPROACH IN WORKPAPER PREPARATION

The initial approach in preparing workpapers that support balances in the statement of condition is quantitative. In using this approach, the examiner obtains an analysis of the composition of the account balance as of the examination date. This inventory of the composition may be represented by a trial balance of loans, a listing of outstanding official checks, a listing of individual deposit accounts, or other similar items. Only after determining the composition and insuring that the total agrees with the bank's records is the examiner in a position to perform examination procedures and to arrive at a conclusion about the overall quality of the items comprising the balance.

For certain analyses, however, it is preferable to include account activity (transactions) in the workpapers. Typical examples of such analyses are those of bank premises and equipment and of reserve for possible loan losses. The format for reserve for possible loan losses should include beginning balances (prior examination ending balances), provisions for loan losses, collections, charge-offs, other transactions (transfers to/from undivided profits) and ending balances as of the examination date.

CONTROL AND REVIEW

All examiners assigned to an examination should insure that workpapers are controlled at all times while the examination is in progress. For example, when in the bank's offices, the workpapers should be secured at night and safeguarded during the lunch hour or at other times when no examining personnel are present in the immediate vicinity. It is essential to completely control confidential information provided by the bank. In addition, information relating to the extent of tests and similar details of examination proce-

dures should not be made available to bank employees.

In cases where customary examination practices are not practical, alternative procedures and the extent to which they are applied should be documented. The need for completeness requires that there be no open items, unfinished operations or unanswered questions in the workpapers at the conclusion of the examination.

The clarity of workpapers should be such that an examiner or Federal Reserve official unfamiliar with the work could readily understand it. Handwritten commentaries should be legible, concise and should support the examiner's conclusions. Descriptions of work done, notations of conferences with bankers, conclusions reached and explanations of symbols used should be free from ambiguity or obscurity. Excessive use of symbols usually can be avoided by expanding a comment to include the nature and extent of work performed instead of using separate symbols for each portion of the work performed. In addition, instructions to assisting personnel concerning standards or workpaper content are necessary to ensure that they will meet the quality standards of the Federal Reserve. When workpapers have the necessary qualities of completeness, clarity, conciseness and neatness, a qualified reviewer may easily determine their relative value in support of conclusions and objectives reached. Incomplete, unclear or vague workpapers should, and usually will, lead a reviewer to the conclusion that the examination has not been adequately performed.

REVIEW PROCEDURES

Experienced personnel must review all workpapers prepared during an examination. Usually that review is performed by the examiner-in-charge, although in some cases, the examiner-in-charge may designate other experienced personnel to perform an initial review. An overall review is then performed by the examiner-in-charge. The two primary purposes of a review of workpapers by senior personnel are to determine that the work is adequate given the circumstances, and to ensure that the record is sufficient to support the conclusions reached in the report of examination. The timely review of workpapers and subsequent discussion of them with the individual who prepared them also is one of the more effective procedures for on-the-job training.

Normally, the review should be performed as soon as practicable after the completion of each work area. This review ideally occurs at the bank's office so that if the need for obtaining additional information arises or additional work is required the matter can be promptly attended to with minimum loss of efficiency.

When the review of workpapers is completed, the reviewer should sign or initial the applicable documents. Although all workpapers should be reviewed, the depth and degree of detail depends on factors such as:

- The nature of the work and its relative importance to the overall examination objectives.
- The extent to which the reviewer has been associated with the area during the examination.
- The experience of the examiners who have carried out the various operations.

Professional judgment must be exercised throughout the review process.

ORGANIZATION OF WORKPAPER FILES

Administration of an examination includes—

- organizing the workpaper files.
- delegating authority for completion of all applicable workpaper sections.
- reviewing and assembling the completed workpapers.

To ensure efficiency in locating information contained in the workpapers and completion of all necessary procedures, workpapers should be filed and indexed in a standard manner.

FILES

The file provides the organizational vehicle to assemble workpapers applicable to specific areas of the examination. Files might include detailed workpapers related to—

- management appraisal.
- overall conclusions about the condition of the bank.
- cash accounts.
- investments.

- loans.
- reserve for possible loan losses.
- bank premises and equipment.
- other assets.
- deposits.
- other liabilities.
- capital accounts and dividends.

Each individual file would normally include—

- related examination and audit procedures.
- detailed information and other documentation necessary to indicate the specific procedures performed, the extent of such procedures and the examiner's conclusions for the specific area.
- a summary, in comparative form, of the supporting general ledger balances with appropriate cross-references.

Judgment is required as to what the file should include on any specific examination. Lengthy documents should be summarized or highlighted (underlined) so that the examiner who is performing the work in the related area can readily locate the important provisions, without having to read the entire document. It also may be desirable to have a complete copy of the document in the file to support the summaries or answer questions of a specific legal nature.

Examples of documents that might be contained in the files are—

- a brief history and organization of the bank.
- organization charts of applicable departments within the bank.
- copies of, or excerpts from, the charter and bylaws.
- copies of capital stock certificates, debentures agreements and lease agreements.
- excerpts from minutes or contracts that are of interest beyond the current year.
- a chart of accounts and an accounting manual, if available, supplemented by descriptions of unique accounts and unusual accounting methods.
- lists of names and titles of the board of directors, important committees and relevant departmental personnel.

Indexing and Cross-Referencing

To promote efficiency and help ensure that all

applicable areas of an examination have been considered and documented, the use of an indexing system aids in the organization of workpaper files. A general outline or index including all examination areas provides a basis for organization to which a numbering or other sequential system can be assigned and applied to each workpaper file.

When all workpapers pertinent to a specific area of the examination have been completed, a cover sheet listing the contents of each file should be attached to the front to provide a permanent record for reference. This permits not only efficient location of a set of workpapers pertinent to a specific area of the examination (for example, cash or commercial loans), but also facilitates the location of a specific analysis (or other document) within the set.

Amounts or other pertinent information appearing in more than one place in the workpapers should be cross-referenced between the analyses. A notation on the index, including appropriate cross-referencing of those items removed or filed elsewhere, facilitates location of specific data and records and also helps to prevent inadvertent loss of documents. An example is the cross-referencing of net charge-offs obtained in the review of the reserve for possible loan losses to the amount approved in the board of director's minutes. Proper cross-referencing is important because it—

- serves as a means of locating work performed for a particular account or group of accounts.
- identifies the source of supporting amounts in a particular analysis.
- facilitates the review of the workpapers.
- helps in following the workpapers during the succeeding examination.

WORKPAPER RETENTION

Examiners should retain on a readily available basis those workpapers from—

- the most recent full-scope Federal Reserve examination.
- the most recent general EDP examination.
- examinations of banks requiring or recommended for more than normal or special supervisory attention (composite rating of 3, 4 or 5; consumer compliance rating of 3, 4 or 5; EDP departments rated 4 or 5; or those subject to administrative action such as civil money penalties) until such banks are no longer the subject of such scrutiny.
- examinations disclosing conditions that may lead eventually to more than normal or special supervisory attention, as described above, until the supporting workpapers are no longer appropriate.
- examinations disclosing conditions that lead, or may eventually lead, to a criminal referral or criminal investigation.

These guidelines are the minimum required retention period for workpapers; longer retention periods may be set by individual Reserve Banks.

Cash accounts include U.S. and foreign coin and currency on hand and in transit, clearings, and cash items.

CASH

Every bank maintains a certain amount of U.S. currency and some may have foreign currency on hand. To avoid having excess nonearning assets and to minimize exposure to misappropriation and robbery, each bank should establish a policy to maintain cash balances at the minimum levels necessary to serve its customers. The amount will vary from bank to bank depending on anticipated needs of customers and the availability of replenishment monies, with a reasonable allowance made for unusual demands.

Foreign currency may not be included in cash positions for management purposes when the amounts are not significant. However, the coin and currency of other countries are foreign-currency assets, as are loans or nostro accounts, and should be included in the foreign-currency positions.

CLEARINGS

Clearings are checks, drafts, notes, and other items that a bank has cashed or received for deposit that are drawn on other local banks and cleared directly with them. These items can usually be exchanged more efficiently among local banks than through correspondent banks or the Federal Reserve System. Many communities with two or more banks have formally organized clearinghouse associations, which have adopted rules governing members in the exchange of checks. Clearinghouse associations often extend their check-exchange arrangements to other nearby cities and towns. In most banks, clearings will be found in the department responsible for processing checks.

Proof and transit were once two separate functions in a bank: the proving of work (proof) and the sending of out-of-town cash items (transit) for collection. Most banks have now combined these two functions. Proof and transit may be performed by any combination of tellers or proof clerks, a separate proof and transit depart-

ment, a check-processing department, an out-clearing department, or some other department that is characteristic of the area of the country where the bank operates. The functions may be centralized or decentralized, manual or automated, depending on the size of the bank and the volume of transactions. The volume of clearings may be so great that the bank's proof operations are conducted after time deadlines for transaction posting or courier delivery. In these cases, daily clearings customarily are determined as of a specific cutoff time. Checks processed to that time are carried in one day's totals, and checks processed after that time are carried in the following day's totals. However, no matter who performs the function or how large the bank, the objectives of a proof and transit system are the same:

- to forward items for collection so that funds are available as soon as possible
- to distribute all incoming checks and deposits to their destinations
- to establish whether deposit totals balance with the totals shown on deposit tickets
- to prove the totals of general ledger entries and other transactions
- to collect data for computing the individual customer's service charges and determining the availability of the customer's funds
- to accomplish the assigned functions at the lowest possible cost

CASH ITEMS

Cash items are checks or other items in the process of collection that are payable in cash upon presentation. A separate control of all cash items is usually maintained on the bank's general ledger and, if applicable, on the international division general ledger. The ledger is supported by a subsidiary record of individual amounts and other pertinent data. Cash items and the related records are usually in the custody of one employee at each banking office.

In their normal daily operations, banks have an internal charge, on the general ledger, to total demand deposits not charged to individual accounts because of insufficient funds, computer misreads, or other problems. Commonly known as return items or rejected or unposted debits,

these items may consist of checks received in the ordinary course of business, loan-payment debits, and other debit memos. In some banks, return items are separated by the bookkeepers and an entry is made reclassifying them to a separate asset account entitled “bookkeepers’ return items.” Other banks do not use a separate asset account; instead, the bookkeepers include the items in a subsidiary control account in the individual demand deposit ledgers. In that case, the account would have a debit balance and would be credited when the bank processes items for posting or returns the checks to their source.

Since bookkeepers’ return items are usually processed and posted to an individual account or returned to their source on the next business day, the balance of the bookkeepers’ return items account should represent the total of only one day’s returned items.

When data processing systems are used, the common practice is to post all properly encoded debit items, regardless of whether an overdraft is created. The resulting preliminary overdraft list, together with the items charged, is subsequently reviewed by bank employees, and unapproved items are reversed and separated as bookkeepers’ return items. The total of the resulting final overdraft list becomes the final overdraft figure shown on the general ledger. The examination of overdrafts is discussed in “Deposit Accounts,” section 3000.1. The examination of international overdrafts is discussed in “Due from Banks,” “Borrowed Funds,” and “International—Foreign Exchange,” sections 2010.1, 3010.1, and 7100.1, respectively.

Several types of cash items should be considered “cash items not in the process of collection” and shown in an appropriate “other assets” account. Some examples are (1) items that are payable upon presentation but which the bank has elected to accumulate and periodically forward to the payor, such as Series EE bonds or food stamps; (2) items that are not immediately payable in cash upon presentation; and (3) items that were not paid when presented and require further collection effort.

In addition to those items carried in the separate “cash items” account on the general ledger, most banks will have several sources of internal float in which irregular cash items can be concealed. Such items include any memoranda slips; checks drawn on the bank; checks returned by other banks; checks of directors, officers, employees, and their interests; checks of affiliates; debits purporting to represent currency or coin shipments; notes, usually past due; and all aged and unusual items of any nature that might involve fictitious entries, manipulations, or uncollectible accounts.

CURRENCY TRANSACTIONS

The Financial Recordkeeping and Reporting of Currency and Foreign Transactions regulation, 31 CFR 103, requires financial institutions to maintain records that might be useful in criminal, tax, or regulatory investigations. The regulation also seeks to identify persons who attempt to avoid payment of taxes through transfers of cash to or from foreign accounts. The examination procedures for determining compliance with the regulation require the examiner to ascertain the quality of the bank’s auditing procedures and operating standards relating to financial recordkeeping.¹ Examiners also determine the adequacy of written policies and bank training programs. The Financial Recordkeeping and Reporting of Currency and Foreign Transactions checklist (see the *Bank Secrecy Act Examination Manual*) is to be used in checking compliance and for reporting apparent violations. Any violations noted should be listed with appropriate comments in the report of examination. Inadequate compliance could result in a cease-and-desist order to effect prompt compliance with the statute.

1. Section 208.63 of Regulation H establishes procedures to ensure that state member banks establish and maintain procedures reasonably designed to ensure and monitor compliance with the regulation.

Cash Accounts

Examination Objectives

Effective date May 1996

Section 2000.2

1. To determine if the policies, practices, procedures, and internal controls regarding “cash accounts” are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Cash Accounts

Examination Procedures

Effective date March 1984

Section 2000.3

1. If selected for implementation, complete or update the cash accounts section of the internal control questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal or external auditors from the examiner assigned to that area of examination, and determine if appropriate corrections have been made.
4. Scan the general ledger cash accounts for any unusual items or abnormal fluctuations. Investigate any such items and document any apparent noncompliance with policies, practices and procedures for later review with appropriate management personnel.
5. Obtain teller settlement sheet recap or similar document as of the examination date and agree to the general ledger. Scan for reasonableness and conformity to bank policy.
6. Obtain detailed listings of cash items, including any bank items which are carried in the general ledger under "other assets," agree listings to general ledger balances and scan for propriety and conformity to bank policy.
7. Test compliance with Regulation H (12 CFR 208) by—
 - a. selecting teller and banking office cash-balance sheets and determining that balances are within currency limits established;
 - b. selecting bait money and agreeing serial numbers to applicable records;
 - c. reviewing documentation showing training sessions held since the preceding examination;
 - d. performing any visual inspections deemed appropriate;
 - e. analyzing the bank's system of security and protection against external crimes (Guidance for this analysis is provided in the internal control questionnaire in this section of the manual.); and
 - f. determining, through discreet corroborative inquiry of responsible bank officials and review of documentation, whether a security program that equals or exceeds the standards prescribed by Regulation H (12 CFR 208.61(c)) is in effect and that the annual compliance report and any other reports requested by the Federal Reserve System have been filed.
8. Review compliance with the Financial Recordkeeping and Reporting of Currency and Foreign Transactions Act, 31 CFR 103.
9. Review tellers' over and short accounts for recurring patterns and any large or unusual items and follow up as considered necessary. Investigate differences centered in any one teller or banking office. Determine whether corrective action has been taken, if required.
10. Determine, by discreet corroborative inquiry of responsible bank officials and review of documentation, whether defalcations and/or mysterious disappearances of cash since the preceding examination have been properly reported pursuant to current requirements of the Board of Governors.
11. Review foreign-currency control ledgers and dollar book value equivalents for the following:
 - a. accuracy of calculations and booking procedures
 - b. unusual fluctuations
 - c. concentrations
 - d. unusual items
12. Review international division revaluation calculations and procedures.
13. Review the following items with appropriate management personnel (or prepare a memo to other examining personnel for their use in reviewing with management):
 - a. internal-control exceptions and deficiencies in, or noncompliance with, written policies, practices and procedures
 - b. uncorrected audit deficiencies
 - c. violations of law
 - d. inaccurate booking of U.S. dollar book value equivalents for foreign currencies
 - e. inaccurate revaluation calculations and procedures performed by cash-account operations staff
14. Prepare comments on deficiencies or

- violations of law noted above for inclusion in the examination report.
15. Update the workpapers with any information that will facilitate future examinations.

Cash Accounts

Internal Control Questionnaire

Effective date May 2007

Section 2000.4

Review the bank's internal-control policies, practices, and procedures for cash accounts. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

CASH ON HAND

- *1. Do all tellers, including relief tellers, have sole access to their own cash supply, and are all spare keys kept under dual control?
- *2. Do tellers have their own vault cubicle or controlled cash drawer in which to store their cash supply?
3. When a teller is leaving for vacation or for any other extended period of time, is that teller's total cash supply counted?
4. Is each teller's cash verified periodically on a surprise basis by an officer or other designated official (if so, is a record of such count retained)?
- *5. Are cash drawers or teller cages provided with locking devices to protect the cash during periods of the teller's absence?
6. Is a specified limit in effect for each teller's cash?
- *7. Is each teller's cash checked daily to an independent control from the proof or accounting control department?
8. Are teller differences cleared daily?
9. Is an individual, cumulative over and short record maintained for all persons handling cash, and is the record reviewed by management?
10. Does the teller prepare and sign a daily proof sheet detailing currency, coin, and cash items?
- *11. Are large teller differences required to be reported to a responsible official for clearance?
12. Is there a policy against allowing teller "kitties"?
- *13. Are teller transactions identified through use of a teller stamp?
- *14. Are teller transfers made by tickets or blotter entries which are verified and initialed by both tellers?
15. Are maximum amounts established for tellers' cashing checks or allowing withdrawal from time deposit accounts without officer approval?
16. Does the currency at each location include a supply of bait money?
17. Are tellers provided with operational guidelines on check-cashing procedures and dollar limits?
18. Is a record maintained showing amounts and denominations of reserve cash?
- *19. Is reserve cash under dual custody?
- *20. Are currency shipments—
 - a. prepared and sent under dual control and
 - b. received and counted under dual control?
- *21. If the bank uses teller machines—
 - a. is the master key controlled by someone independent of the teller function,
 - b. is the daily proof performed by someone other than the teller, and
 - c. are keys removed by the teller during any absence?
- *22. Is dual control maintained over mail deposits?
23. Is the night depository box under a dual lock system?
24. Is the withdrawal of night deposits made under dual control?
25. Regarding night depository transactions—
 - a. are written contracts in effect;
 - b. are customers provided with lockable bags; and
 - c. are the following procedures completed with two employees present:
 - opening of the bags
 - initial recording of bag numbers, envelope numbers, and depositors' names in the register
 - counting and verification of the contents
- *26. Regarding vault control—
 - a. is a register maintained which is signed by the individuals opening and closing the vault;
 - b. are time-clock settings checked by a second officer;
 - c. is the vault under dual control; and
 - d. are combinations changed periodically and every time there is a change in custodianship?

27. Are tellers prohibited from processing their own checks?
- *28. Are tellers required to clear all checks from their funds daily?
- *29. Are tellers prevented from having access to accounting department records?
- *30. Are teller duties restricted to teller operations?

CASH-DISPENSING MACHINES

- *31. Is daily access to the automated teller machine (ATM) made under dual control?
- *32. When maintenance is being performed on a machine, with or without cash in it, is a representative of the bank required to be in attendance?
- *33. Are combinations and keys to the machines controlled (if so, indicate controls)?
34. Do the machines and the related system have built-in controls that—
- limit the amount of cash and number of times dispensed during a specified period (if so, indicate detail) and
 - capture the card if the wrong PIN (personal identification number) is consecutively used?
35. Does the machine automatically shut down after it experiences recurring errors?
36. Is lighting around the machine provided?
37. Does the machine capture cards of other banks or invalid cards?
38. If the machine is operated “off line,” does it have negative-file capability for present and future needs, which includes lists of lost, stolen, or other undesirable cards which should be captured?
39. Is use of an ATM by an individual customer in excess of that customer’s past history indicated on a Suspicious Activity Report by Depository Institutions (SAR-DI) form to be checked out by bank management (for example, three uses during past three days as compared with a history of one use per month)?
40. Have safeguards been implemented at the ATM to prevent, during use, the disclosure of a customer’s PIN by others observing the PIN pad?
41. Are “fish-proof” receptacles provided for customers to dispose of printed receipts, rather than insecure trash cans, etc.?
42. Does a communication interruption between an ATM and the central processing unit trigger the alarm system?
43. Are alarm devices connected to all automated teller machines?
44. For on-line operations, are all messages to and from the central processing unit and the ATM protected from tapping, message insertion, modification of message or surveillance by message encryption (scrambling techniques)? (One recognized encryption formula is the National Bureau of Standards Algorithm.)
- *45. Are PINs mailed separately from cards?
- *46. Are bank personnel who have custody of cards prohibited from also having custody of PINs at any stage (issuance, verification, or reissuance)?
47. Are magnetic stripe cards encrypted (scrambled) using an adequate algorithm (formula) including a total message control?
48. Are encryption keys, i.e., scramble plugs, under dual control of personnel not associated with operations or card issuance?
- *49. Are captured cards under dual control of persons not associated with bank operation card issuance or PIN issuance?
- *50. Are blank plastics and magnetic stripe readers under dual control?
51. Are all cards issued with set expiration dates?
52. Are transaction journals provided that enable management to determine every transaction or attempted transaction at the ATM?

CASH ITEMS

- *53. Are returned items handled by someone other than the teller who originated the transaction?
54. Does an officer or other designated individual review the disposition of all cash items over a specified dollar limit?
55. Is a daily report made of all cash items, and is it reviewed and initialed by the bank’s operations officer or other designated individual?
56. Is there a policy requiring that all cash items uncollected for a period of 30 days be charged off?

57. Do the bank's present procedures forbid the holding of overdraft checks in the cash-item account?
58. Are all cash items reviewed at least monthly at an appropriate level of management?
- *59. Are cash items recommended for charge-off reviewed and approved by the board of directors, a designated committee thereof, or an officer with no operational responsibilities?
- this section and are clearing on a timely basis,
- *c. scrutinized for employee items, and
- d. reviewed for large or repeat items?
67. Are holdover items—
- a. appropriately identified in the general ledger,
- *b. handled by an independent section of the department, and
- c. reviewed periodically by responsible supervisory personnel to determine that items are clearing on a timely basis?

PROOF AND TRANSIT

60. Are individuals working in the proof and transit department precluded from working in other departments of the bank?
61. Is the handling of cash letters such that—
- a. they are prepared and sent on a daily basis;
- b. they are photographed before they leave the bank;
- c. copy of proof or hand-run tape is properly identified and retained;
- d. records of cash letters sent to correspondent banks are maintained with identification of the subject bank, date, and amount; and
- e. remittances for cash letters are received by employees independent of those who send out the cash letters?
62. Are all entries to the general ledger either originated or approved by the proof department?
63. Are all entries prepared by the general ledger and/or customer accounts department reviewed by responsible supervisory personnel other than the person preparing the entry?
64. Are errors detected by the proof operator in proving deposits corrected by another employee or designated officer?
65. Are all postings to the general ledger and subsidiary ledgers supported by source documents?
66. Are returned items—
- *a. handled by an independent section of the department or delivered unopened to personnel not responsible for preparing cash letters or handling cash,
- b. reviewed periodically by responsible supervisory personnel to determine that items are being handled correctly by
68. Does the proof and transit department maintain a procedures manual describing the key operating procedures and functions within the department?
- *69. Are items reported missing from cash letter promptly traced and a copy sent for credit?
- *70. Is there a formal system to ensure that work distributed to proof machine operators is formally rotated?
71. Are proof machine operators prohibited from—
- a. filing checks or deposit slips or
- b. preparing deposit account statements?
72. Are proof machine operators instructed to report unusually large deposits or withdrawals to a responsible officer (if so, over what dollar amount \$_____)?

REGULATION H (12 CFR 208)— COMPLIANCE QUESTIONNAIRE

73. Has a security officer been designated by the board of directors in accordance with Regulation H (12 CFR 208.61(b))?
74. Has a security program been developed and implemented in accordance with Regulation H (12 CFR 208.61(c))?
75. Does the bank have security devices that give a general level of protection and that are at least equivalent to the minimum requirements of Regulation H?
76. Has the installation, maintenance, and operation of security devices considered the operating environment of each office and the requirements of Regulation H (12 CFR 206.61(c))?
77. Does the security officer report at least annually to the bank's board of directors on the administration and effectiveness of

the security program in accordance with Regulation H (12 CFR 206.61(d))?

31 CFR 103—COMPLIANCE QUESTIONNAIRE

78. Is the bank in compliance with the financial recordkeeping and reporting regulations?

INTERNATIONAL DIVISION

- *79. Are foreign-currency control ledgers and dollar-book-value equivalents posted accurately?
- *80. Is each foreign currency revalued at least monthly, and are profit and loss entries passed on to the appropriate income accounts?
- *81. Are revaluation calculations, including the rates used, periodically reviewed for accu-

racy by someone other than the foreign-currency tellers?

- *82. Does the internal auditor periodically review for accuracy revaluation calculations, including the verification of rates used and the resulting general ledger entries?

CONCLUSION

83. Is the foregoing information considered an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
84. Based on a composite evaluation as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate). A separate evaluation should be made for each area, i.e., cash on hand, cash items, etc.

Banks maintain deposits in other banks to facilitate the transfer of funds. Those bank assets, known as “due from bank deposits” or “correspondent bank balances”¹ are a part of the primary, uninvested funds of every bank. A transfer of funds between banks may result from the collection of cash items and cash letters, the transfer and settlement of securities transactions, the transfer of participating loan funds, the purchase or sale of federal funds, and many other causes.

In addition to deposits kept at the Federal Reserve Bank and with correspondent banks, a bank may maintain interest-bearing time deposits with international banks. Those deposits are a form of investment, and relevant examination considerations are included in “Investment Securities and End-User Activities,” section 2020.1, and “International—Due from Banks—Time,” section 7070.1.

Banks also use other banks to provide certain services that can be performed more economically or efficiently by another facility because of its size or geographic location. These services include processing of cash letters, packaging loan agreements, performing EDP services, collecting out-of-area items, providing safekeeping for bank and customer securities, exchanging foreign currency, and providing financial advice in specialized loan areas. When the service is one way, the receiving bank usually maintains a minimum balance at the providing bank to compensate in full or in part for the services received.

DEPOSITS WITH OTHER DEPOSITORY INSTITUTIONS

Section 206.3 of Regulation F (12 CFR 206) requires FDIC-insured depository institutions to adopt written policies and procedures to address the risk arising from exposure to a correspondent, and to prevent excessive exposure to any individual correspondent. These policies and procedures should take into account the financial condition of a correspondent and the size,

1. Balances due from such institutions include all interest-bearing and non-interest-bearing balances, whether in the form of demand, savings, or time balances, including certificates of deposit, but excluding certificates of deposit held in trading accounts.

form, and maturity of the exposure. Section 206.4(a) of Regulation F stipulates that any FDIC-insured depository institution must limit its interday credit exposure to an individual correspondent that is not “adequately capitalized”² to 25 percent of the institution’s total capital.³ For a more detailed discussion of Regulation F, refer to sections 2015.1–4 and SR-93-36 (“Examiner Guidelines for Regulation F—Interbank Liabilities”).

BALANCES WITH FEDERAL RESERVE BANKS

All state member banks are required by Regulation D (12 CFR 204) to keep reserves equal to specified percentages of the deposits on their books. These reserves are maintained in the form of vault cash or deposits with the Federal Reserve Bank. The Federal Reserve Bank monitors the deposits of each bank to determine that reserves are kept at required levels. The reserves provide the Federal Reserve System with a means of controlling the nation’s money supply. Changes in the level of required reserves affect the availability and cost of credit in the economy. The examiner must determine that the information supplied to the Federal Reserve Bank for computing reserves is accurate.

The Monetary Control Act of 1980 enables a nonmember financial institution to borrow from the Reserve Bank’s discount window on the same terms and conditions as member banks. For member banks, loan transactions are usually effected through their reserve account. For nonmember banks, the Reserve Bank typically requires the institution to open a special account called a clearing account. The loan transactions are then processed through the clearing account. However, in some instances, the Reserve Bank may allow a nonmember institution to process discount loan transactions through the account of a member bank. In most of these isolated

2. See section 206.5(a) of Regulation F for the capital ratios necessary for a correspondent bank to be considered adequately capitalized.

3. The Board may waive this requirement if the primary federal supervisor of the insured institution advises the Board that the institution is not reasonably able to obtain necessary services, including payment-related services and placement of funds, without incurring exposure to a correspondent in excess of the otherwise applicable limit.

cases, a transaction of a nonmember institution is being processed through the account of the bank with which the nonmember institution has a correspondent relationship.

Under the reserve account charge agreements used by most Federal Reserve Banks, the member bank's reserve account may be charged if the nonmember bank defaults on the loan processed through the member bank's account. Since member banks may not act as the guarantor of the debts of another, member banks may only legally enter into revocable reserve account charge agreements. Revocable agreements allow the member bank, at its option, to revoke the charge and thus avoid liability for the debt of the nonmember correspondent. In contrast, irrevocable charge agreements constitute a binding guarantee of the nonmember correspondent's debt and generally cannot be entered into by a member bank. Banks that enter into revocable charge agreements should establish written procedures to ensure their ability to make prudent, timely decisions.

DEPOSIT BROKERS

On the asset side of the balance sheet, examiners should review the activities of banks that place deposits through money brokers. These banks should have sufficient documentation to, among other things, verify the amounts and terms of individual deposits and the names of depository institutions in which the deposits are placed. Banks should also be able to demonstrate that they have exercised appropriate credit judgment with respect to each depository institution in which they have placed funds. Deficiencies in this area could constitute an unsafe or unsound banking practice. A more detailed discussion of brokered deposits is included in "Deposit Accounts," sections 3000.1–3000.3 of this manual.

DUE FROM FOREIGN BANKS

Due from foreign banks demand or nostro accounts are handled in the same manner as due from domestic bank accounts, except that the balances due are generally denominated in foreign currency.

A bank must be prepared to make and receive payments in foreign currencies to meet the needs

of its international customers. This can be accomplished by maintaining accounts (nostro balances) with banks in foreign countries in whose currencies receipts and payments are made.

Nostro balances may be compared with an inventory of goods and must be supervised in the same manner. For example, payment to import goods manufactured in Switzerland to the United States can be made through a U.S. bank's Swiss franc account with another bank in Switzerland. Upon payment in Switzerland, the U.S. bank will credit its nostro account with the Swiss bank and charge its U.S. customer's dollar account for the appropriate amount in dollars. Conversely, exporting U.S. goods to Switzerland results in a debit to the U.S. bank's Swiss correspondent account. The first transaction results in an outflow of the U.S. bank's "inventory" of Swiss francs, while the second transaction results in an inflow of Swiss francs. The U.S. bank must maintain adequate balances in its nostro accounts to meet unexpected needs and to avoid overdrawing those accounts for which interest must be paid. However, the bank should not maintain excessive idle nostro balances that do not earn interest, causing a loss of income.

The U.S. bank also runs risks by being either long or short in a particular foreign currency or by maintaining undue gaps. Losses could result if that currency appreciates or depreciates significantly or if the bank must purchase or borrow the currency at a higher rate.

Excessive nostro overages and shortages can be avoided by entering into spot and forward exchange contracts to buy or sell such nostro inventories. Those contracts are discussed in "International—Foreign Exchange," section 7100.1. However, all foreign-currency transactions, except over-the-counter cash trades, are settled through nostro accounts. Therefore, the volume of activity in those accounts may be substantial, and the accounts must be properly controlled.

In addition, an account service known as a payable-through account is being marketed by U.S. banks, Edge corporations, and the U.S. branches and agencies of foreign banks to foreign banks that otherwise would not have the ability to offer their customers access to the U.S. banking system. This account service, referred to by other names such as pass-through accounts and pass-by accounts, involves a U.S. banking entity's opening of a deposit account for the foreign bank. Policies and procedures should be

developed to guard against the possible improper or illegal use of payable-through account facilities by foreign banks and their customers.

Examination procedures relating to this area are part of the *FFIEC Bank Secrecy Act/Anti-Money Laundering Examination Manual*.

Due from Banks

Examination Objectives

Effective date May 1996

Section 2010.2

1. To determine if the policies, practices, procedures, and internal controls regarding due from banks are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine that all due from accounts are reasonably stated and represent funds on deposit with other banks.
4. To evaluate the credit quality of banks with whom demand accounts are maintained.
5. To determine the scope and adequacy of the audit coverage.
6. To determine compliance with laws, rulings, and regulations.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law, rulings, or regulations have been noted.

Due From Banks

Examination Procedures

Effective date May 2007

Section 2010.3

1. If selected for implementation, complete or update the Due From Banks Internal Control Questionnaire.
2. Determine the scope of the examination, based on the evaluation of internal controls and the work performed by internal/external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal Control,” and determine if corrections have been accomplished.
4. Scan the most recent bank-prepared reconcilements for any unusual items and determine that closing balances listed on reconcilements agree with the general ledger and with the balance shown on the cut-off statement if one has been obtained.
5. If the bank’s policy for charge-off of old open items provides for exceptions in extenuating circumstances, review excepted items and determine if charge-off is appropriate.
6. If the bank has no policy for charge-off of old open items, review any items which are large or unusual or which have been outstanding for over two months, along with related correspondence, and determine if charge-off is appropriate.
7. Test the bank’s calculation of its Federal Reserve requirement and determine that reports are accurate and complete by:
 - a. Performing a limited review of a sample of line items if the bank has effective operating procedures and has an audit program covering the required reports.
 - b. Performing a detailed review of all line items if the bank has not established operating procedures or does not have an audit program covering the required reports.
8. Confer with the examiner assigned to check for compliance with the laws and regulations relating to insider loans at correspondent banks and loans to insiders of correspondent banks (Regulation O and 12 USC 1972(2)) and either provide a list, or verify a bank supplied list, of correspondent banks. (This effort should be coordinated with the examiner assigned to “Deposit Accounts” to avoid duplication of work.)
9. Review the maximum deposit balance established for each due from bank account and determine if the maximum balance:
 - a. Is established after consideration of compensating balance requirements resulting from commitments or credit lines made available to the bank or its holding company. Coordinate this effort with examiner assigned “Bank-Related Organizations.”
 - b. Appears to be related to loans of executive officers or directors or to loans which have been used to acquire stock control of the bank under examination.
 - If such due from accounts are detected, provide full details of the account to the examiner assigned to check for compliance with the law relating to loans to insiders of correspondent banks (12 USC 1972(2)).
10. Determine the existence of any concentrations of assets with other banks. Include correspondent accounts, time deposits and any federal funds sold in computation. For concentrations exceeding 25 percent of the bank’s capital structure, forward the information to examiners assigned “Concentrations of Credit” for possible inclusion in the report of examination.

Note: Procedures 11 through 21 apply to due from foreign banks—demand (nostro accounts).
11. Obtain or prepare a trial balance (including local currency book values) of due from foreign banks—demand by bank customer and:
 - a. Agree or reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
12. Using the appropriate sampling technique, select demand account banks for examination.
13. Prepare credit line sheets to include:
 - a. Customer’s aggregate due from banks—demand liability in foreign currency

- amount and local currency equivalent.
- b. Amount of customer's line designated by the bank.
 - c. Frequency of recent overdrawn nostro accounts.
- (Overdrawn nostro accounts as they relate to foreign exchange activities are discussed in the International—Foreign Exchange section. Also, the examiner assigned “Borrowed Funds” must obtain (or prepare) a listing of overdrawn nostro accounts for inclusion in the borrowing section of the report of examination.)
- d. Past compliance with customer's line limitation as determined from review of liability ledger records.
14. Obtain from the examiner assigned “International—Loan Portfolio Management,” schedules on the following, if they are applicable to the due from foreign banks—demand:
 - a. Delinquencies.
 - b. Miscellaneous loan debit and credit suspense accounts.
 - c. Criticized shared national credits.
 - d. Interagency Country Exposure Review Committee credits.
 - e. Loans criticized during the previous examination.
 - f. Information on directors, officers and their interests, as contained in statements required under Regulation O (12 CFR 215).
 - g. Specific guidelines in the bank policy relating to due from banks—demand.
 - h. Current listing of due from foreign banks—demand approved customer lines.
 - i. Any useful information resulting from the review of the minutes of the loan and discount committee or any similar committee.
 - j. Reports furnished to the board of directors.
 15. Review the information received and perform the following for:
 - a. Miscellaneous loan debit and credit suspense accounts:
 - Discuss with management any large or old items.
 - Perform additional procedures as deemed appropriate.
 - b. Interagency Country Exposure Review Committee Credits:
 - Compare the schedule to the trial balance to determine which due from foreign banks—demand deposits are portions of Interagency Country Exposure Review Committee credits.
 - For each due from foreign bank—demand deposit so identified, transcribe appropriate information to line sheets and forward the information to the examiner assigned “International—Loan Portfolio Management.”
 - c. Loans criticized during the previous examination (due from foreign banks—demand portion):
 - Determine the disposition of the due from foreign banks—demand so criticized by transcribing:
 - Current balance and payment status, or
 - Date the deposit was paid and the source of repayment.
 16. Transcribe or compare information from the above schedules to credit line sheets, where appropriate, and indicate any cancelled bank lines.
 17. Prepare credit line cards for any due from foreign banks—demand not in the sample which, based on information derived from the above schedules, requires in-depth review.
 18. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts and loan areas and together decide who will review the borrowing relationship. Pass or retain completed credit line cards.
 19. Obtain credit files for all due from foreign banks—demand for whom credit line cards were prepared and complete credit line cards where appropriate. To analyze the loans, perform the procedures set forth in step 14 of the International—Due From Banks—Time section.
 20. By reviewing appropriate bank records, determine that:
 - a. Profit or losses resulting from revaluation adjustment on net open positions spot are passed properly to the respective due from foreign bank—demand (nostro) account (usually monthly).
 - b. At the delivery of the “swap” forward contract, proper entries are made to the respective due from foreign bank—demand (nostro) and swap adjustment accounts.

21. Determine compliance with laws, regulations and rulings pertaining to due from foreign banks—demand activities by performing the following for:
 - a. Reporting of Foreign Exchange Activities:
 - Determine that Foreign Currency Forms FC-1, FC-2, FC-1a and FC-2a, as required, are submitted to the Department of the Treasury under the provisions of 31 CFR 128.
 - Check that copies of those forms are forwarded by each state member bank to the Federal Reserve at each filing time specified in 31 CFR 128.

Note: Due from foreign banks—demand (nostro) deposits will be reviewed, discussed with appropriate bank officers, and prepared in suitable report form by the examiner assigned “International—Due From Banks—Time”, if the bank maintains international due from banks—time and/or call money deposits.
22. Forward list of due from banks accounts to the examiner assigned to “Investment Securities” and to “Loan Portfolio Management.”
23. Consult with the examiner assigned “Asset/Liability Management” and provide the following, if requested:
 - a. A listing, by maturity and amount, of due from banks—time deposits.
 - b. The amounts of due from banks—demand deposits that exceed the required reserve balance at the Federal Reserve Bank and that exceed the working balances at correspondent banks.
24. Discuss with appropriate officer(s) and prepare in suitable report form of:
 - a. Cancelled due from foreign banks—demand deposit lines that are unpaid.
 - b. Violations of laws, regulations and rulings.
 - c. Internal control exceptions and deficiencies, or noncompliance with written policies, practices and procedures.
 - d. Any items to be considered for charge-off.
 - e. Uncorrected audit deficiencies.
 - f. Due from foreign banks—demand deposits not supported by current and complete financial information.
 - g. Due from foreign banks—demand deposits on which documentation is deficient.
 - h. Concentrations.
 - i. Criticized loans (portions applicable to due from foreign banks—demand deposits).
 - j. Due from foreign banks—demand deposits which for any other reason are questionable as to quality and ultimate collection.
 - k. Other matters regarding condition of the department.
25. Update the workpapers with any information that will facilitate future examinations.

Due From Banks

Internal Control Questionnaire

Effective date March 1984

Section 2010.4

Review the bank's internal controls, policies, practices and procedures for due from bank accounts. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES FOR DUE FROM BANK DOMESTIC AND FOREIGN— DEMAND ACCOUNTS

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies for due from bank accounts that:
 - a. Provide for periodic review and approval of balances maintained in each such account?
 - b. Indicate person(s) responsible for monitoring balances and the application of approved procedures?
 - c. Establish levels of check-signing authority?
 - d. Indicate officers responsible for approval of transfers between correspondent banks and procedures for documenting such approval?
 - e. Indicate the supervisor responsible for regular review of reconciliations and reconciling items?
 - f. Indicate that all entries to the accounts are to be approved by an officer or appropriate supervisor and that such approval will be documented?
 - g. Establish time guidelines for charge-off of old open items?
 2. Are the policies for due from bank accounts reviewed at least annually by the board or the board's designee to determine their adequacy in light of changing conditions?
- sign of alteration and are payments or paid drafts compared with such statements by the persons who prepare bank reconcilements (if so, skip question 5)?
- *5. If the answer to question 4 is no, are bank statements and paid drafts or payments handled before reconciliation only by persons who do not also:
 - a. Issue drafts or official checks and prepare, add or post the general or subsidiary ledgers?
 - b. Handle cash and prepare, add or post the general ledger or subsidiary ledgers?
 - *6. Are bank reconcilements prepared by persons who do not also:
 - a. Issue drafts or official checks?
 - b. Handle cash?
 - c. Prepare general ledger entries?
 7. Concerning bank reconcilements:
 - a. Are amounts of paid drafts or repayments compared or tested to entries on the ledgers?
 - b. Are entries or paid drafts examined or reviewed for any unusual features?
 - c. Whenever a delay occurs in the clearance of deposits in transit, outstanding drafts and other reconciling items, are such delays investigated?
 - d. Is a record maintained after an item has cleared regarding the follow-up and reason for any delay?
 - e. Are follow-up and necessary adjusting entries directed to the department originating or responsible for the entry for correction with subsequent review of the resulting entries by the person responsible for reconciliation?
 - f. Is a permanent record of the account reconciliation maintained?
 - g. Are records of the account reconcilements safeguarded against alteration?
 - h. Are all reconciling items clearly described and dated?
 - i. Are details of account reconciliation reviewed and approved by an officer or supervisory employee?
 - j. Does the person performing reconcilements sign and date them?
 - k. Are reconciliation duties for foreign

BANK RECONCILEMENTS

3. Are bank reconcilements prepared promptly upon receipt of the statements?
- *4. Are bank statements examined for any

demand accounts rotated on a formal basis?

DRAFTS

8. Are procedures in effect for the handling of drafts so that:
- *a. All unissued drafts are maintained under dual control?
 - b. All drafts are prenumbered?
 - c. A printer's certificate is received with each supply of new prenumbered drafts?
 - d. A separate series of drafts is used for each bank?
 - e. Drafts are never issued payable to cash?
 - f. Voided drafts are adequately cancelled to prevent possible reuse?
 - *g. A record of issued and voided drafts is maintained?
 - *h. Drafts outstanding for an unreasonable period of time (perhaps six months or more) are placed under special controls?
 - i. All drafts are signed by an authorized employee?
 - *j. The employees authorized to sign drafts are prohibited from doing so before a draft is completely filled out?
 - *k. If a check-signing machine is used, controls are maintained to prevent its unauthorized use?

FOREIGN CASH LETTERS

9. Is the handling of foreign cash letters such that:
- a. They are prepared and sent on a daily basis?
 - b. They are copied or photographed prior to leaving the bank?
 - c. A copy of proof or hand run tape is properly identified and retained?
 - d. Records of foreign cash letters sent to correspondent banks are maintained, identifying the subject bank, date and amount?

FOREIGN RETURN ITEMS

10. Are there procedures for the handling of return items so that:

- *a. They are delivered unopened and reviewed by someone who is not responsible for preparation of cash letters?
- b. All large unusual items or items on which an employee is listed as maker, payee or endorser are reported to an officer?
- c. Items reported missing from cash letters are promptly traced and a copy sent for credit?

FOREIGN EXCHANGE ACTIVITIES

- *11. Are persons handling and reconciling due from foreign bank—demand accounts excluded from performing foreign exchange and position clerk functions?
- *12. Is there a daily report of settlements made and other receipts and payments of foreign currency affecting the due from foreign bank—demand accounts?
- *13. Is each due from foreign bank—demand foreign currency ledger revalued monthly and are appropriate profit or loss entries passed to applicable subsidiary ledgers and the general ledger?
- *14. Does an officer not preparing the calculations review revaluations of due from foreign bank—demand ledgers, including the verification of rates used and the resulting general ledger entries?

OTHER—FOREIGN

- *15. Are separate dual currency general ledger or individual subsidiary accounts maintained for each due from foreign bank—demand account, indicating the foreign currency balance and a U.S. dollar (or local currency) equivalent balance?
- 16. Do the above ledger or individual subsidiary accounts clearly reflect entry and value dates?
- 17. Are the above ledger or individual subsidiary accounts balanced to the general ledger on a daily basis?
- 18. Does international division management receive a daily trial balance of due from foreign bank—demand customer balances by foreign currency and U.S. dollar (or local currency) equivalents?

OTHER

19. Is a separate general ledger account or individual subsidiary account maintained for each due from bank account?
20. Are overdrafts of domestic and foreign due from bank accounts properly recorded on the bank's records and promptly reported to the responsible officer?
21. Are procedures for handling the Federal Reserve account established so that:
 - a. The account is reconciled on a daily basis?
 - b. Responsibility is assigned for assuring that the required reserve is maintained?
 - c. Figures supplied to the Federal Reserve for use in computing the reserve requirement are reviewed to ensure they do not include asset items ineligible for meeting the reserve requirement, and that all liability items are properly classified as required by Regulation D and its interpretations?
22. Does the foregoing information constitute an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
23. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

It is important for a federally insured depository institution¹ (bank) to control and limit the risk exposures posed to it by another domestic bank (whether or not that institution is an insured depository institution) or foreign bank with which it does business (referred to as a *correspondent*). These exposures may include all extensions of credit to a correspondent; deposits or reverse repurchase agreements with a correspondent; guarantees, acceptances, or standby letters of credit on behalf of a correspondent; purchases or acceptance as collateral of correspondent-issued securities; and all similar transactions. A bank needs to develop internal procedures to evaluate and control the risk exposures to the bank from its correspondents. Such procedures would help prevent a situation whereby the failure of a single correspondent could trigger the failure of a federally insured depository institution having claims on the failed correspondent. (See SR-93-36.)

A bank's principal sources of exposure to its correspondent tend to arise from two types of activity. First, banks may become exposed when obtaining services from (such as check-collection services), or providing services to, their correspondents. Second, exposure may arise when banks engage in transactions with correspondents in the financial markets. Each type of exposure has its own characteristics and its own risks.

Correspondent banking services are the primary source of interbank exposure for the majority of banks, particularly small and medium-sized banks. In connection with check-collection services and other trade- or payment-related correspondent services, banks often maintain balances with their correspondents in order to settle transactions and compensate the correspondents for the services provided. These balances give rise to exposure to the correspondents. Although correspondent services are in some cases provided on a fee basis, many correspondents may prefer compensating-balance arrangements, as these balances provide the correspondents with a stable source of funding. Also, some banks may prefer to pay for services with

“soft charges” in the form of balances instead of “hard charges” in the form of fees.

Exposure to a correspondent may be significant, particularly when a bank uses one correspondent for all of its check collections and other payment services; loans excess reserve account balances (federal, or fed, funds) to the correspondent,² or engages in other banking transactions with correspondents.³ This exposure may increase when interest rates fall, as higher levels of compensating balances may be required to provide adequate compensation to the correspondent.

Money-center banks and large regional banks may have significant exposure to correspondents⁴ through their activities in interbank markets, such as the securities, swap, and foreign-exchange markets. Interbank transactions that call for performance in the future (such as swaps, foreign-exchange contracts, and over-the-counter options) give rise to exposure to the correspondents that act as counterparties⁵ in such transactions. In addition to credit risk, such transactions may involve interest-rate risk,

2. In the fed funds market, a loan of fed funds is often referred to as a sale. Borrowing of fed funds is referred to as a purchase.

3. Although a bank's primary correspondent often will borrow (purchase) fed funds as principal directly from the bank, a correspondent may act as agent to place the funds with another institution. In such agency arrangements, a bank may provide its correspondent with a preapproved list of institutions with which the correspondent may place the funds. When a correspondent is acting as the bank's agent in placing fed funds, the bank's exposure would be to the ultimate purchaser of the funds, not to the correspondent placing the funds on its behalf.

Generally, fed funds loans are unsecured. A bank may also provide funds to a correspondent through transactions known as *reverse repurchase agreements*, in which the bank provides funds to the correspondent by buying an asset, generally a government security. The correspondent agrees that it will repurchase the asset from the bank at the expiration of a set period, generally overnight, at a repurchase price calculated to compensate the bank for the use of its funds. Unlike fed funds loans, these transactions are essentially secured transactions.

4. Although the depository institutions that are parties to transactions in the interbank markets discussed above generally are referred to as *counterparties*, the term *correspondent* is used in this discussion to denote any domestic depository institution or a foreign bank to which a bank is exposed. The term *correspondent* does not include a commonly controlled correspondent, as defined in section 206.2(b) of Regulation F.

5. In other banking transactions, such as foreign-exchange, money market, and other permissible transactions, activities, or contractual arrangements, the other party to the transaction is referred to as the counterparty rather than as the correspondent.

1. A federally insured depository institution refers to a bank, as defined in section 3 of the Federal Deposit Insurance Act (12 USC 1813), and includes a federally insured national bank, state bank, District bank, or savings association, and a federally insured branch of a foreign bank.

foreign-exchange risk, and settlement risk. Settlement risk is the risk that a counterparty will fail to make a payment or delivery in a timely manner. Settlement risk may arise from unsecured transactions in the government securities, foreign-exchange, or other markets, and it may result from operational, liquidity, or credit problems.

Lending limits prohibit national banks from lending amounts equal to more than 15 percent of a national bank's unimpaired capital and surplus to a single borrower on an unsecured basis (12 USC 84(a)(1)); these limits also prohibit a national bank from lending an additional 10 percent on a secured basis (12 USC 84(a)(2)). The national bank lending limits apply only to "loans and extensions of credit," and the limits do not include most off-balance-sheet transactions that may provide significant sources of exposure to correspondents. Additionally, the national bank lending limits do not apply to overnight fed funds loans, a significant source of short-term exposure to correspondents. State limits generally do not apply to a broader range of transactions than the national bank limits, although some states include fed funds transactions within their limits.

State-chartered banks generally are subject to lending limits under state law. Almost all states impose lending limits on the banks they charter. Most of these limits are patterned on the national bank lending limits, although the specific percentages or transactions covered vary. The state limits generally do not apply to a broader range of off-balance-sheet transactions, although some states include fed funds transactions within their limits. A number of states, however, exclude interbank transactions from their lending limits entirely.

LIMITS ON INTERBANK LIABILITIES

Regulation F, Limitations on Interbank Liabilities (12 CFR 206), implemented section 308 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), which amended section 23 of the Federal Reserve Act (12 USC 371b-2). Section 23, as amended, requires the Board of Governors of the Federal Reserve System (the Board) to prescribe standards to limit the risks posed by exposure of banks to other domestic depository institutions

and foreign banks. Regulation F sets forth these standards. All depository institutions insured by the FDIC are subject to the Federal Reserve Board's Regulation F.⁶ Regulation F was first adopted in 1992 and has remained substantially the same, except for the technical amendments adopted by the Board on September 10, 2003. (See 68 *Fed. Reg.* 53,283.) Regulation F consists of two primary parts: (1) prudential standards that apply to exposures generally (section 206.3) and (2) special rules that apply to credit exposure under certain circumstances (section 206.4).

The "Prudential Standards" section requires depository institutions to develop and adopt internal policies and procedures to evaluate and control all types of exposures to correspondents with which they do business.⁷ Policies and procedures are to be established and maintained to prevent excessive exposure to any individual correspondent in relation to the condition of the correspondent. The "Prudential Standards" section requires a bank to adopt internal exposure limits when the financial condition of the correspondent and the form or maturity of the exposure create a significant risk that payments will not be made in full or on time. This section also provides that a bank shall structure the transactions of a correspondent or monitor exposures to a correspondent such that the bank's exposure ordinarily does not exceed its internal limits.

The "Credit Exposure" section provides that a bank's internal limit on interday *credit exposure* to an individual correspondent may not be more than 25 percent of the exposed bank's total capital, unless the bank can demonstrate that its correspondent is at least "adequately capitalized," as defined in section 206.5(a) of the rule. No limit is specified for credit exposure to correspondents that are at least adequately capitalized, but prudential standards are required for all correspondents, regardless of capital level. The term *correspondent* includes both domestically chartered depository institutions that are FDIC insured and foreign banks; the term does not include a commonly controlled correspondent.

6. Correspondent is defined in section 206.2(c) of Regulation F to mean a U.S. depository institution or a foreign bank to which a bank has exposure, but does not include commonly controlled correspondents.

7. Banks had to have the internal policies and procedures in place on June 19, 1993.

Prudential Standards

Standards for Selecting Correspondents

Banks are to address the risk arising from exposure to a correspondent, taking into account the financial condition of the correspondent and the size, form, and maturity of its exposure to the correspondent. Banks must adopt internal policies and procedures that evaluate the credit and liquidity risks, including operational risks, in selecting correspondents and terminating those relationships. Depository institutions are permitted to adopt flexible policies and procedures in order to permit resources to be allocated in a manner that will result in real reductions in risk. The policies and procedures must be reviewed annually by the bank's board of directors, but individual correspondent relationships need not be approved by the board. Examiners should determine that the policies and procedures adopted by the board provide for a determination of the credit, liquidity, and operational risks of a correspondent when the relationship with the correspondent is established and as it is maintained.⁸ Additionally, if the bank has significant operational risk—such as relying on a correspondent for extensive data processing—that exposure could also lead to liquidity problems. This exposure may not be an issue for institutions that are not operationally dependent on any particular correspondent. Many banks may also address this exposure elsewhere in their operational procedures.

A bank's policies and procedures should provide for periodic review of the financial condition of any correspondent to which the bank has significant exposure. This review should evaluate whether the size and maturity of the exposure is commensurate with the correspondent's

financial condition.⁹ Factors bearing on the financial condition of the correspondent include, but are not necessarily limited to, (1) the capital level of the correspondent, (2) the level of nonaccrual and past-due loans and leases, and (3) the level of earnings.

Examiners should determine that a bank has periodically reviewed the financial condition of any correspondent to which the bank has significant exposure. The frequency of these reviews will depend on the size and maturity of the exposure and the condition of the correspondent. For example, the policies of many banks provide for an extensive annual review of a correspondent's financial condition; such policies may also provide for less extensive interim reviews under some circumstances, such as when exposure to a correspondent is very high or when a correspondent has experienced financial difficulty. A bank need not require periodic review of the financial condition of all correspondents. For example, periodic reviews would not be necessary for a correspondent to which the bank has only insignificant levels of exposure, such as small balances maintained for clearing purposes.¹⁰ Significant levels of exposure should reflect those amounts that a prudent bank believes deserve analysis for risk of loss.

A bank may base its review of the financial condition of a correspondent on publicly available information, such as bank Call Reports, financial statements or reports, Uniform Bank Performance Reports, or annual reports, or the bank may use financial information obtained from a rating service. A bank generally is not required to obtain nonpublic information to use as the basis for its analysis and review of the financial condition of a correspondent.¹¹ For

8. *Liquidity risk* and *operational risk* are terms used in the definition of exposure. Liquidity risk is the risk that payment will be delayed for some period of time. For example, a bank is subject to the liquidity risk that a payment due from a failed correspondent will not be made on time; the bank's credit risk may be a lesser amount due to later distributions from the correspondent's receiver. Liquidity risk is included in the definition of exposure.

Operational risk is the risk that a correspondent's operational problems may prevent it from making payments, thereby creating liquidity risks for other banks. For example, a computer failure at a correspondent that a bank relies on for extensive data processing support may prevent the correspondent from making payments, and thus may create liquidity problems for the bank and other banks as well. Operational risk is also included in the definition of exposure.

9. Because exposure to a Federal Reserve Bank or Federal Home Loan Bank poses minimal risk to a respondent, Federal Reserve Banks and Federal Home Loan Banks are not included in the definition of correspondent.

10. Other forms of exposure that generally would not be considered significant include (1) a collecting bank's risk that a check will be returned, (2) an originating bank's risk that an automated clearinghouse (ACH) debit transfer will be returned or its settlement reversed, (3) a receiving bank's remote risk that settlement for an automated credit transfer could be reversed, or (4) a credit card transaction. In these types of transactions, the amounts involved are generally small, and the exposed bank usually has prompt recourse to other parties.

11. A bank *is* required to obtain nonpublic information to evaluate a correspondent's condition for those foreign banks for which no public financial statements are available. In these limited circumstances, the bank would need to obtain financial information for its review (including information obtained directly from the correspondent).

correspondents with which a bank has a significant relationship, a bank may have considerable nonpublic information, such as information on the quality of management, general portfolio composition, and similar information, but such information is not always available and is not required.

Regardless of whether public or nonpublic sources of information are used, a bank may rely on another party, such as a bank rating agency, its bank holding company, or another correspondent, to assess the financial condition of or select a correspondent, provided that the board of directors has reviewed and approved the general assessment or selection criteria used by that party. Examiners should ascertain that the bank reviews and approves the assessment criteria used by such other parties. Additionally, when a bank relies on its bank holding company to select and monitor correspondents—or relies on a correspondent, such as a bankers' bank, to choose other correspondents with which to place the bank's federal funds or other deposits—examiners should ensure that the bank has reviewed and approved the selection criteria used.

Internal Limits on Exposure

When the financial condition of the correspondent and the form or maturity of the exposure represent a significant risk that payments will not be made in full or in a timely manner, a bank's policies and procedures must limit its exposure to the correspondent, either by the establishment of internal limits or by other means. Limits are to be consistent with the risks undertaken, considering the financial condition and the form and maturity of the exposure to the correspondent. Limits may specify fixed exposure amounts, or they may be more flexible and be based on factors such as the monitoring of exposure and the financial condition of the correspondent. Different limits may be set for different forms of exposure, different products, and different maturities.

When a bank has exposure to a correspondent that has a deteriorating financial condition, examiners should determine if the bank took that deterioration into account when it evaluated the correspondent's creditworthiness. The examiner should also evaluate if the bank's level of exposure to the correspondent was appropriate.

Examiners need to determine that the bank's

policy and procedural limits are consistent with the risk undertaken, given the maturity of the exposure and the condition of the correspondent. Inflexible dollar limits may not be necessary in all cases. As stated earlier, limits can be flexible and be based on factors such as the level of the bank's monitoring of its exposure and the condition of the correspondent. For example, a bank may choose not to establish a specific limit on exposure to a correspondent when the bank is able to ascertain account balances with the correspondent on a daily basis, because such balances could be reduced rapidly if necessary. In appropriate circumstances, a bank may establish limits for longer-term exposure to a correspondent, while not setting limits for interday (overnight) or intraday (within the day) exposure. Generally, banks do not need to set one overall limit on their exposure to a correspondent. Banks may prefer instead to set separate limits for different forms of exposure, products, or maturities. A bank's evaluation of its overall facility with a correspondent should take into account utilization levels and procedures for further limiting or monitoring overall exposure.

When a bank has established internal limits for its significant exposure, examiners should ensure that the bank either (1) has procedures to monitor its exposure to remain within established limits or (2) structures transactions with the correspondent to ensure that the exposure ordinarily remains within the bank's established internal limits. While some banks may monitor actual overall exposure, others may establish individual lines for significant sources of exposure, such as federal funds sales. For such banks, the examiner should ensure that the bank has established procedures to ensure that exposure generally remains within the established lines. In some instances, a bank may accomplish this objective by establishing limits on exposure that are monitored by a correspondent, such as for sales of federal funds through the correspondent as agent.

When a bank monitors its exposures, the appropriate level of monitoring will depend on (1) the type and volatility of the exposure, (2) the extent to which the exposure approaches the bank's internal limits for the correspondent, and (3) the condition of the correspondent. Generally, monitoring may be conducted retrospectively. Examples of retrospective monitoring include checking close-of-business balances at a correspondent for the prior day or obtaining daily balance records from a correspondent at

the end of each month. Thus, banks are not expected to monitor exposure to correspondents on a real-time basis.

The purpose of requiring banks to monitor or structure their transactions that are subject to limits is to ensure that the bank's exposure generally remains within established limits. However, occasional excesses over limits may result from factors such as unusual market disturbances, unusual favorable market moves, or other unusual increases in activity or operational problems. Unusual late incoming wires or unusually large foreign cash letters (international pouch) would be considered examples of activities that could lead to excesses over internal limits and that would not be considered impermissible under the rule. Examiners should verify that banks have established appropriate procedures to address any excesses over internal limits.

A bank's internal policies and procedures must address intraday exposure. However, as with other exposure of longer maturities (i.e., interday or longer), the rule does not necessarily require that limits be established on intraday exposure. Examiners should expect to see such limits or frequent monitoring of balances only if the size of the intraday exposure and the condition of the correspondent indicate a significant risk that payments will not be made as contemplated. Examiners should keep in mind that intraday exposure may be difficult for a bank to actively monitor and limit. Consequently, like interday exposure, intraday exposure may be monitored retrospectively. In addition, smaller banks may limit their focus on intraday exposure to being aware of the range of peak intraday exposure to particular institutions and the effect that exposure may have on the bank. For example, a bank may receive reports on intraday balances from a correspondent on a monthly basis and would only need to take actions to limit or more actively monitor such exposure if the bank becomes concerned about the size of the intraday exposure relative to the condition of the correspondent.

Credit Exposure

A bank's internal policies and procedures must limit overnight credit exposure to an individual correspondent to not more than 25 percent of the exposed bank's total capital, unless the bank can

demonstrate that its correspondent is at least adequately capitalized.¹² The credit exposure of a bank to a correspondent shall consist of the bank's assets and off-balance-sheet items that are (1) subject to capital requirements under the capital adequacy guidelines of the bank's primary federal supervisor and (2) involve claims on the correspondent or capital instruments issued by the correspondent.¹³ Credit exposure therefore includes items such as deposit balances with a correspondent, fed funds sales, and credit-equivalent amounts of interest-rate and foreign-exchange-rate contracts and other off-balance-sheet transactions. Credit exposure does not include settlement of transactions, transactions conducted in an agency or similar capacity where losses will be passed back to the principal or other party, and other sources of exposure that are not covered by the capital adequacy guidelines or that do not involve exposure to a correspondent.¹⁴ A bank may exclude the following from the calculation of credit exposure to a correspondent: (1) transactions, including reverse repurchase agreements, to the extent that the transactions are secured by government securities or readily marketable collateral; (2) the proceeds of checks and other cash items depos-

12. Total capital is the total of a bank's tier 1 and tier 2 capital calculated according to the risk-based capital guidelines of the bank's primary federal supervisor. For an insured branch of a foreign bank organized under the laws of a country that subscribes to the principles of the Basel Capital Accord, *total capital* means total tier 1 and tier 2 capital as calculated under the standards of that country. For an insured branch of a foreign bank organized under the laws of a country that does not subscribe to the principles of the Basel Capital Accord, *total capital* means total tier 1 and tier 2 capital as calculated under the provisions of the accord. The limit on credit exposure of the insured branch of a foreign bank is based on the foreign bank's total capital, as defined in this section, not on the imputed capital of the branch.

For purposes of Regulation F, an adequately capitalized correspondent is a correspondent with a total risk-based capital ratio of 8.0 percent or greater, a tier 1 risk-based capital ratio of 4.0 percent or greater, and a leverage ratio of 4.0 percent or greater. The leverage ratio does not apply to correspondents that are foreign banks. See section 206.5(e) for definitions of these terms.

13. A bank is required to include with its own credit exposure 100 percent of the credit exposure of any subsidiary that the bank is required to consolidate on its bank Call Report. This provision generally captures the credit exposure of any majority-owned subsidiary of the bank. Therefore, none of a minority-owned subsidiary's exposure and all of a majority-owned subsidiary's exposure would be included in the parent bank's exposure calculation.

14. For example, when assets of a bank, such as securities, are held in safekeeping by a correspondent, there is no exposure to the correspondent, even though the securities themselves may be subject to a capital charge.

ited in an account at a correspondent that are not yet available for withdrawal, (3) quality assets on which the correspondent is secondarily liable, or obligations of the correspondent on which a creditworthy obligor in addition to the correspondent is available; (4) exposure that results from the merger with or acquisition of another bank for one year after that merger or acquisition is consummated; and (5) the portion of the bank's exposure to the correspondent that is covered by federal deposit insurance. (See section 206.4(d) for a more detailed discussion of these exclusions.) This regulatory limit on credit exposure should be implemented as part of the bank's policies and procedures required under the "Prudential Standards" section. Regulation F does not impose regulatory limits for "credit exposure" to adequately or well-capitalized correspondents.

Quarterly monitoring of capital is only required for correspondents to which a bank's potential credit exposure is more than 25 percent of its total capital.¹⁵ If the internal systems of a bank ordinarily limit credit exposure to a correspondent to 25 percent or less of the exposed bank's total capital, no monitoring of the correspondent's capital would be necessary, although periodic reviews of the correspondent's financial condition may be required under the "Prudential Standards" section if exposure to the correspondent is significant. Every effort should be made to allow banks to use existing risk-monitoring and -control systems and practices when these systems and practices effectively maintain credit exposure within the prescribed limits. For smaller institutions, it is relatively easy to determine how their measure of exposure compares with the definition of credit exposure in Regulation F because these institutions have relatively simple types of exposure. Examiners should remember that the regulation emphasizes appropriate levels of exposure based on the exposed bank's analysis of the credit-worthiness of its correspondents. Accordingly, for those correspondents that the bank has not demonstrated are at least adequately capitalized, this limit should be viewed as a maximum

credit-exposure level rather than as a safe-harbor level of credit exposure.

Examiners should ensure that the bank has in place policies and procedures that ensure the quarterly monitoring of the capital of its domestic correspondents. This quarterly schedule allows the bank to pick up information from the correspondent's most recent bank Call Report, financial statement, or bank rating report. Currently, it is difficult to obtain information on the risk-based capital levels of a correspondent. Regulation F requires that a bank must be able to demonstrate only that its correspondent's capital ratios qualify it as at least adequately capitalized.

A bank is not limited to a single source of information for capital ratios. A bank may rely on capital information obtained from a correspondent, a bank rating agency, or another reliable source of information. Further, examiners should anticipate that most banks will receive information on their correspondent's capital ratios either directly from the correspondents or from a bank rating agency. The standard used in the rule is based solely on capital ratios and does not require disclosure of CAMELS ratings. For foreign bank correspondents, monitoring frequency should be related to the frequency with which financial statements or other regular reports are available. Although such information is available quarterly for some foreign banks, financial statements for many foreign banks are generally available only on a semiannual basis.

Information on risk-based capital ratios may not be available for many foreign bank correspondents. As with domestic correspondents, however, examiners should anticipate that in most instances the correspondent will provide the information to the banks with which it does business.

A bank's internal policies and procedures should limit overnight credit exposure to a correspondent to not more than 25 percent of the exposed bank's total capital, unless the bank can demonstrate that its correspondent is at least adequately capitalized, as defined by the rule. However, examiners should not necessarily expect banks to have formal limits on credit exposure to a correspondent for which the bank does not maintain quarterly capital information or that is a less than adequately capitalized correspondent if the banks' policies and procedures effectively limit credit exposure to an amount below the 25 percent limit of total capital. Such situations include those in which

15. Because information on risk-based capital ratios for banks is generally based on the bank Call Report, a bank would be justified in relying on the most recently available reports based on Call Report data. While there may be a significant lag in such data, Call Reports are useful for monitoring trends in the condition of a correspondent—especially when a bank follows the data on a continuing basis.

only small balances are maintained with the correspondent or in which the correspondent has only been approved for a limited relationship. Although in many cases it will be necessary for a bank to establish formal internal limits to meet

the regulatory limit, the provisions of section 206.3 (prudential standards) concerning excesses over internal limits also apply to limits established for the purpose of controlling credit exposure under section 206.4 of Regulation F.

Interbank Liabilities

Examination Objectives

Effective date May 2006

Section 2015.2

The following examination objectives should be considered when examiners are (1) evaluating the bank's interbank liabilities with respect to its credit exposures to correspondents and (2) assessing the bank's compliance with Regulation F.

1. To determine if the policies, practices, procedures, and internal controls for interbank liabilities adequately address the risks posed by the bank's exposure to other domestic depository institutions and foreign banks.
2. To determine if bank officers and employees are operating in compliance with the policies and procedures established by the bank.
3. To determine if the financial condition of correspondents to which the bank has significant exposure—significant both in the size and maturity of the exposure and the financial condition of the correspondent—is reviewed periodically.
4. To determine if internal limits on exposure (1) have been established where necessary and (2) are consistent with the risk undertaken.
5. To determine if (1) exposure ordinarily remains within the established internal limits and (2) appropriate procedures have been established to address excesses over internal limits.
6. To determine that a bank's credit exposure to less than adequately capitalized correspondents is not more than 25 percent of the exposed bank's total capital. (Note that Regulation F places greater emphasis on maintaining appropriate levels of exposure based on a bank's analysis of the creditworthiness of its correspondents as opposed to merely staying within regulatory established limits.)
7. To determine if those correspondents to which the bank has credit exposure exceeding 25 percent of total capital are monitored quarterly to ensure that such correspondents remain at least adequately capitalized.
8. To reach agreement with the board of directors and senior management to initiate corrective action when policies, procedures, or internal controls are deficient, or when there are violations of laws or regulations.

Interbank Liabilities

Examination Procedures

Effective date May 2006

Section 2015.3

Examiners should obtain or prepare the information necessary to perform the appropriate procedural steps.

1. If selected for implementation, complete or update the “Interbank Liabilities” section of the internal control questionnaire.
2. On the basis of an evaluation of the bank’s internal controls, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures.
4. Request bank files relating to its exposure to its correspondents, as exposure is defined in Regulation F and applied and used in the “Prudential Standards” section of the regulation.
 - a. Request documentation demonstrating that the bank has periodically reviewed the financial condition of any correspondent to which the depository institution has significant exposure. Factors bearing on the financial condition of the correspondent that should be addressed by the bank (depository institution) include the capital level of the correspondent, the level of nonaccrual and past-due loans and leases, the level of earnings, and other factors affecting the financial condition of the correspondent.
 - b. Request that the bank provide information indicating its level of exposure to each correspondent, as measured by the bank’s internal control systems (for smaller banks, this information may include correspondent statements and a list of securities held in the investment portfolio).
 - c. Determine if the frequency of the bank’s reviews of its correspondents’ financial condition is adequate for those correspondents to which the bank has very large or long maturities or for correspondents in deteriorating condition.
 - d. If a bank relies on another party (such as a bank rating agency, its bank holding company, or another correspondent) to provide financial analysis of a correspondent, determine if the bank’s board of directors has reviewed and approved the assessment criteria used by the other party.
- e. When the bank relies on its bank holding company or on a correspondent, such as a bankers’ bank, to select and monitor correspondents or to choose other correspondents with which to place the depository institution’s federal funds, ensure that the bank’s board of directors has reviewed and approved the selection criteria used.
- f. If the bank is exposed to a correspondent that has experienced deterioration in its financial condition, ascertain whether the bank has taken the deterioration into account in its evaluation of the credit-worthiness of the correspondent and of the appropriate level of exposure to the correspondent.
- g. When the bank has established internal limits for significant exposure, determine that the bank either monitors its exposure or structures transactions with the correspondent to ensure that exposure ordinarily remains within the bank’s internal limits for the risk undertaken.
- h. If the bank chooses to set separate limits for different forms of exposure, products, or maturities and does not set an overall internal limit on exposure to a correspondent, review information on actual inter-day exposure to determine if the aggregate exposure (especially for less than adequately capitalized correspondents or financially deteriorating correspondents) is consistent with the risk undertaken.
- i. When a bank monitors its exposures, determine if the level of monitoring of significant exposure (especially for less than adequately capitalized correspondents or financially deteriorating correspondents) is adequate, commensurate with the type and volatility of exposure, the extent to which the exposure approaches the bank’s internal limits, and the condition of the correspondent.
- j. Determine if the bank had any occasional excesses in exposure over its internal limits. If so, verify that the bank used appropriate and adequate procedures to address such excesses.
- k. If the size of intraday exposure to a

correspondent and the condition of the correspondent indicate a significant risk that payments will not be made in full or in a timely manner, verify that the bank has established intraday limits consistent with the risk undertaken and that it has monitored its intraday exposure.

5. Request and review a list of the correspondent transaction files for all domestic depository institutions and foreign banks to which the bank regularly has credit exposure (as defined in section 206.4 of Regulation F) exceeding 25 percent of the bank's total capital during a specified time interval. (Where appropriate, every effort should be made to allow banks to use existing risk-

monitoring and -control systems and practices when these systems and practices effectively maintain credit exposure within the prescribed limits). Review the bank's files to—

- a. verify that the correspondent's capital levels are monitored quarterly;
- b. verify that these correspondents are at least adequately capitalized, in compliance with Regulation F; and
- c. determine that the credit exposure to those correspondents that are at risk of dropping below the adequately capitalized capital levels could be reduced to 25 percent or less of the bank's total capital in a timely manner.

Interbank Liabilities

Internal Control Questionnaire

Effective date May 2006

Section 2015.4

Review the bank's internal controls, policies, practices, and procedures for interbank liabilities and compliance with the Board's Regulation F. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. When identifying and resolving any existing deficiencies, examiners should seek the answers to the following key questions.

PRUDENTIAL STANDARDS

1. Has the bank developed written policies and procedures to evaluate and control its exposure to all of its correspondents?
2. Have the written policies and procedures been reviewed and approved by the board of directors annually?
3. Do the written policies and procedures adequately address the bank's exposure(s) to a correspondent, including credit risk, liquidity risk, operational risk, and settlement risk?
4. Has the bank adequately evaluated its intraday exposure? Does the bank have significant exposure to its correspondent from operational risks, such as extensive reliance on a correspondent for data processing? If so, has the bank addressed these operational risks?
5. Do the bank's written policies and procedures establish criteria for selecting a correspondent or terminating that relationship?
6. Do the bank's written policies and procedures require a periodic review of the financial condition of a correspondent whenever the size and maturity of exposure is considered significant in relation to the financial condition of the correspondent?
7. When exposure is considered significant, is the financial condition of a correspondent periodically reviewed?
8. Does the periodic review of a correspondent's financial condition include—
 - a. the level of capital?
 - b. the level of nonaccrual and past-due loans and leases?
 - c. the level of earnings?
 - d. other factors affecting the financial condition of the correspondent?
9. If a party other than bank management conducts the financial analysis of or selects a correspondent, has the bank's board of directors reviewed and approved the general assessment and selection criteria used by that party?
10. If the financial condition of a correspondent, or the form or maturity of the bank's exposure to that correspondent, creates significant risk, do the bank's written policies and procedures establish internal limits or other procedures, such as monitoring, to control exposure?
11. Are the bank's internal limits or controls appropriate for the level of its risk exposure to correspondents? If no internal limits have been established, is this appropriate based on the financial condition of a correspondent and the size, form, and maturity of the bank's exposure? What are your reasons for this conclusion?
12. When internal limits for significant exposure to a correspondent have been set, has the bank established procedures and structured its transactions with the correspondent to ensure that the exposure ordinarily remains within the bank's established internal limits?
13. If not, is actual exposure to a correspondent monitored to ensure that the exposure ordinarily remains within the bank's established internal limits?
14. Is the level (frequency) of monitoring performed appropriate for—
 - a. the type and volatility of the exposure?
 - b. the extent to which the exposure approaches the bank's internal limits?
 - c. the financial condition of the correspondent?
15. Are transactions and monitoring reports on exposure reviewed for compliance with internal policies and procedures? If so, by whom and how often?
16. Do the bank's written policies and procedures address deterioration in a correspondent's financial condition with respect to—
 - a. the periodic review of the correspondent's financial condition?
 - b. appropriate limits on exposure?
 - c. the monitoring of the exposure, or the structuring of transactions with the cor-

respondent, to ensure that the exposure remains within the established internal limits?

Are these measures appropriate and realistic?

17. Do the bank's written procedures establish guidelines to address excesses over its internal limits? (Such excesses could include unusual late incoming wires, unusually large foreign cash letters (international pouch), unusual market moves, or other unusual increases in activity or operational problems.) Are the procedures appropriate?
2. If credit exposure is not limited to 25 percent or less of the bank's total capital, does the bank—
 - a. obtain quarterly information to determine its correspondent's capital levels (if so, determine the source of the information)?
 - b. monitor its overnight credit exposure to its correspondents (if so, determine the frequency)?

CREDIT-EXPOSURE LIMITS

1. Do the bank's written policies and procedures effectively limit overnight credit expo-

This section provides guidance on the management of a depository institution's investment and end-user activities. The guidance applies to (1) all securities in held-to-maturity and available-for-sale accounts as defined in the Statement of Financial Accounting Standards No. 115 (FAS 115), (2) all certificates of deposit held for investment purposes, and (3) all derivative contracts not held in trading accounts (end-user derivative contracts).¹ The guidance also covers all securities used for investment purposes, including money market instruments, fixed- and floating-rate notes and bonds, structured notes, mortgage pass-through and other asset-backed securities, and mortgage-derivative products. All end-user derivative instruments used for non-trading purposes, such as swaps, futures, and options, are also discussed.

Institutions must ensure that their investment and end-user activities are permissible and appropriate within established limitations and restrictions on bank holdings of these instruments. Institutions should also employ sound risk-management practices consistently across these varying product categories, regardless of their legal characteristics or nomenclature. This section provides examiners with guidance on—

- the permissibility and appropriateness of securities holdings by state member banks;
- sound risk-management practices and internal controls used by banking institutions in their investment and end-user activities;
- the review of securities and derivatives acquired by the bank's international division and overseas branches for its own account as well as the bank's foreign equity investments that are held either directly or through Edge Act corporations;
- banking agency policies on certain high-risk mortgage-derivative products; and
- unsuitable investment practices.

1. Derivatives, in general, are financial contracts whose values are derived from the value of one or more underlying assets, interest rates, exchange rates, commodities, or financial or commodity indexes.

LIMITATIONS AND RESTRICTIONS ON SECURITIES HOLDINGS

Many states extend the investment authority that is available to national banks to their chartered banks—often by direct reference. The security investments of national banks are governed in turn by the seventh paragraph of 12 USC 24 (section 5136 of the Revised Statutes) and by the investment securities regulations of the Office of the Comptroller of the Currency (OCC). If state law permits, state member banks are subject to the same limitations and conditions for purchasing, selling, underwriting, and holding investment securities and stocks as national banks under 12 USC 24 (seventh). To determine whether an obligation qualifies as a permissible investment for state member banks, and to calculate the limits with respect to the purchase of such obligations, refer to the OCC's investment securities regulation at 12 CFR 1. (See also section 208.21(b) of Regulation H (12 CFR 208.21(b)).)

Under 12 USC 24, an "investment security" is defined as a debt obligation that is not predominantly speculative. A security is not predominantly speculative if it is rated investment grade. An "investment-grade security" is a security that has been rated in one of the four highest rating categories by two or more nationally recognized statistical rating organizations (one rating may suffice if the security has been rated by only one organization). For example, securities rated AAA, AA, A, and BBB by Standard and Poor's and Aaa, Aa, A or A-1, and Baa-1 or Baa by Moody's are considered investment grade. In the case of split ratings—different ratings from different rating organizations—the lower rating applies. Although the analyses of major rating agencies are basically sound and are updated frequently, bank personnel should keep in mind that ratings are only evaluations of probabilities. To determine appropriate credit limits for a particular counterparty, the bank should supplement bond ratings with its own credit analysis of the issuer. (See table 1 for a summary of the above-mentioned rating systems.)

Table 1—Summary of Rating Systems

<i>Standard & Poor's</i>	<i>Moody's</i>	<i>Description</i>
<i>Bank-quality investments</i>		
AAA	Aaa	Highest-grade obligations
AA	Aa	High-grade obligations
A	A, A-1	Upper-medium grade
BBB	Baa-1, Baa	Medium-grade, on the borderline between definitely sound obligations and those containing predominantly speculative elements
<i>Speculative and defaulted issues</i>		
BB	Ba	Lower-medium grade with only minor investment characteristics
B	B	Low-grade, default probable
CCC, CC, C, D	Caa, Ca, C	Lowest-rated class, defaulted, extremely poor prospects

Bank-Eligible Securities

The OCC's investment securities regulation identifies five basic types of investment securities (types I, II, III, IV, and V) and establishes limitations on a bank's investment in those types of securities based on the percentage of

capital and surplus that such holdings represent. For calculating concentration limits, the term "capital and surplus" includes the balance of a bank's allowance for loan and lease losses not included in tier 2 capital. Table 2 on the next page summarizes bank-eligible securities and their investment limitations.

Table 2—Summary of New Investment-Type Categories

<i>Type Category</i>	<i>Characteristics</i>	<i>Limitations</i>
Type I securities	<ul style="list-style-type: none"> • U.S. government securities • general obligations of a state or political subdivision • municipal bond activities by well-capitalized* banks, other than types II, III, IV, or V securities • obligations backed by the full faith and credit of the U.S. government • FHLB, Fannie Mae, and FHLMC debt or similarly collateralized debt of a state or political subdivision backed by the full faith and credit of the U.S. government 	No limitations on banks' investment, dealing, or underwriting abilities. With respect to all municipal securities, a member bank that is well-capitalized* may deal in, underwrite, purchase, and sell any municipal bond for its own account without any limit tied to the bank's capital and surplus.
Type II securities	<ul style="list-style-type: none"> • state obligations for housing, university, or dormitory purposes that would not qualify as a type I municipal security • obligations of international development banks • debt of Tennessee Valley Authority • debt of U.S. Postal Service • obligations that a national bank is authorized to deal in, underwrite, purchase, or sell under 12 USC 24 (seventh), other than type I securities 	Banks may deal in, underwrite, or invest subject to the limitation that the aggregate par value of the obligation of any one obligor may not exceed 10 percent of a bank's capital and surplus.
Type III securities	<ul style="list-style-type: none"> • an investment security that does not qualify as type I, II, IV, or V • municipal revenue bonds, except those that qualify as a type I municipal security • corporate bonds 	The aggregate par value of a bank's purchases and sales of the securities of any one obligor may not exceed 10 percent of a bank's capital and surplus.

continued

* subject to the statutory prompt-corrective-action standards (12 USC 1831o)

<i>Type Category</i>	<i>Characteristics</i>	<i>Limitations</i>
Type IV securities	<ul style="list-style-type: none"> • small business–related securities that are rated investment-grade or the equivalent and that are fully secured by a loan pool • residential or commercial mortgage–related securities rated AA or Aa or higher 	<p>For securities rated AA or Aa or higher, no investment limitations.</p> <p>For lower-rated investment-grade securities, the aggregate par value of a bank’s purchases and sales of the securities of any one obligor may not exceed 25 percent of a bank’s capital and surplus.</p> <p>For mortgage-related securities, no investment limitations.</p> <p>A bank may deal in type IV securities with limitation.</p>
Type V securities	<ul style="list-style-type: none"> • asset-backed securities (credit card, auto, home equity, student loan, manufactured housing) that are investment-grade and are marketable • residential and commercial mortgage–related securities rated below AA or Aa, but still investment-grade 	<p>The aggregate par value of a bank’s purchases and sales of the securities of any one obligor may not exceed 25 percent of a bank’s capital and surplus.</p>

Type I securities are those debt instruments that national and state member banks can deal in, underwrite, purchase, and sell for their own accounts without limitation. Type I securities are obligations of the U.S. government or its agencies; general obligations of states and political subdivisions; municipal bonds (including municipal revenue bonds) other than a type II, III, IV, or V security by a bank that is well capitalized; and mortgage-related securities. A bank may purchase type I securities for its own account subject to no limitations, other than the exercise of prudent banking judgment. (See 12 USC 24(7) and 15 USC 78(c)(a)(41).)

Type II securities are those debt instruments that national and state member banks may deal in, underwrite, purchase, and sell for their own account subject to a 10 percent limitation of a bank’s capital and surplus for any one obligor. Type II investments include obligations issued by the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the Tennessee Valley Authority, and the U.S. Postal Service, as well as obligations issued by any state or political subdivision for housing, uni-

versity, or dormitory purposes that do not qualify as a type I security and other issuers specifically identified in 12 USC 24(7).

Type III is a residual securities category consisting of all types of investment securities not specifically designated to another security “type” category and that do not qualify as a type I security. Banks cannot deal in or underwrite type III securities, and their holdings of these instruments are limited to 10 percent of the bank’s capital and surplus for any one obligor.

Type IV securities include the following asset-backed securities (ABS) that are fully secured by interests in pools of loans made to numerous obligors:

- investment-grade residential mortgage–related securities that are offered or sold pursuant to section 4(5) of the Securities Act of 1933 (15 USC 77d(5))
- residential mortgage–related securities as described in section 3(a)(41) of the Securities Exchange Act of 1934 (15 USC 78c(a)(41)) that are rated in one of the two highest investment-grade rating categories
- investment-grade commercial mortgage secu-

- rities offered or sold pursuant to section 4(5) of the Securities Act of 1933 (15 USC 77d(5))
- commercial mortgage securities as described in section 3(a)(41) of the Securities Exchange Act of 1934 (15 USC 78c(a)(41)) that are rated in one of the two highest investment-grade rating categories
 - investment-grade, small-business-loan securities as described in section 3(a)(53)(A) of the Securities Exchange Act of 1934 (15 USC 78c(a)(53)(A))

For all type IV commercial and residential mortgage securities and for type IV small-business-loan securities rated in the top two rating categories, there is no limitation on the amount a bank can purchase or sell for its own account. Type IV investment-grade, small-business-loan securities that are not rated in the top two rating categories are subject to a limit of 25 percent of a bank's capital and surplus for any one issuer. In addition to being able to purchase and sell type IV securities, subject to the above limitation, a bank may deal in those type IV securities that are fully secured by type I securities.

Type V securities consist of all ABS that are not type IV securities. Specifically, they are defined as marketable, investment-grade-rated securities that are not type IV and are "fully secured by interests in a pool of loans to numerous obligors and in which a national bank could invest directly." Type V securities include securities backed by auto loans, credit card loans, home equity loans, and other assets. Also included are residential and commercial mortgage securities as described in section 3(a)(41) of the Securities Exchange Act of 1934 (15 USC 78c(a)(41)) that are not rated in one of the two highest investment-grade rating categories but that are still investment grade. A bank may purchase or sell type V securities for its own account provided the aggregate par value of type V securities issued by any one issuer held by the bank does not exceed 25 percent of the bank's capital and surplus.

As mentioned above, type III securities represent a residual category. The OCC requires a national bank to determine (1) that the type III instrument it plans to purchase is marketable and of sufficiently high investment quality and (2) that the obligor will be able to meet all payments and fulfill all the obligations it has undertaken in connection with the security. For example, junk bonds, which are often issued to

finance corporate takeovers, are usually not considered to be of investment quality because they are predominately speculative and have limited marketability.

The purchase of type II and type III securities is limited to 10 percent of equity capital and surplus for each obligor when the purchase is based on adequate evidence of the maker's ability to perform. That limitation is reduced to 5 percent of equity capital and reserves for all obligors in the aggregate when the judgment of the obligor's ability to perform is based predominantly on "reliable estimates." The term "reliable estimates" refers to projections of income and debt-service requirements or conditional ratings when factual credit information is not available and when the obligor does not have a record of performance.

OCC regulations specifically provide for *separate* type I, II, III, IV, and V limits. In the extreme, therefore, national banks can lend 15 percent of their capital to a corporate borrower, buy the borrower's corporate bonds amounting to another 10 percent of capital and surplus (type III securities), and purchase the borrower's ABS up to an additional 25 percent of capital (type V securities), for a total exposure of 50 percent of the bank's capital and surplus. This could be expanded even further if the borrower also issued highly rated type IV securities, upon which there is no investment limitation. However, an exposure to any one issuer of 25 percent or more should be considered a credit concentration, and banks are expected to justify why exposures in excess of 25 percent do not entail an undue concentration. (See table 2 for a summary of the new investment-type categories.)

Municipal Revenue Bonds

Upon enactment of the Gramm-Leach-Bliley Act (the GLB Act), most state member banks were authorized to deal in, underwrite, purchase, and sell municipal revenue bonds (12 USC 24 (seventh)). Effective March 13, 2000, these activities (involving type I securities) could be conducted by well-capitalized^{1a} banks, without limitation as to the level of these activities relative to the bank's capital. Previously, banks were limited to only underwriting, dealing in, or

1a. See the prompt corrective action at 12 USC 1831o and see subpart D of the Federal Reserve's Regulation H (12 CFR 208).

investing in, without limitation, general obligation municipal bonds backed by the full faith and credit of an issuer with general powers of taxation. Member banks could purchase for their own account, but not underwrite or deal in, municipal revenue bonds, but the purchases and sales of such investment securities for any obligor were limited to 10 percent of a member bank's capital and surplus. As a result of the GLB Act amendment, municipal revenue bonds are the equivalent of type I securities for well-capitalized state member banks.^{1b} (See SR-01-13.)

The expanded municipal revenue bond authority under the GLB Act necessitates heightened awareness by banks, examiners, and supervisory staff of the particular risks of municipal revenue bond underwriting, dealing, and investment activities. Senior management of a state member bank has the responsibility to ensure that the bank conducts municipal securities underwriting, dealing, and investment activities in a safe and sound manner, in compliance with applicable laws and regulations. Sound risk-management practices are critical. State member banks engaged in municipal securities activities should maintain written policies and procedures governing these activities and make them available to examiners upon request.

Prudent municipal securities investment involves considering and adopting risk-management policies, including appropriate limitations, on the interest-rate, liquidity, price, credit, market, and legal risks in light of the bank's appetite and tolerance for risk. Historically, municipal revenue bonds have had higher default rates than municipal general obligation bonds. The risks of certain industrial development revenue bonds have been akin to the risks of corporate bonds. Therefore, when bondholders are relying on a specific project or private-sector obligation for repayment, banks should conduct a credit analysis, using their normal credit standards, to identify and evaluate the source of repayment before purchasing the bonds. Banks must also perform periodic credit analyses of those securities that remain in the bank's investment portfolio. Prudent banking practices require that management adopt appropriate exposure limits for individual credits and on credits that rely on a similar repayment

source; these limits help ensure adequate risk diversification. Furthermore, examiners and other supervisory staff should be aware of the extent to which state laws place further restrictions on municipal securities activities but should defer to state banking regulators on questions of legal authority under state laws and regulations.

For underwriting and dealing activities, the nature and extent of due diligence should be commensurate with the degree of risk posed by and the complexity of the proposed activity. Bank dealer activities should be conducted subject to the types of prudential limitations described above but should also be formulated in light of the reputational risk that may accompany underwriting and dealing activities. Senior management and the board of directors should establish credit-quality and position-risk guidelines, including guidelines for concentration risk.

A bank serving as a syndicate manager would be expected to conduct extensive due diligence to mitigate its underwriting risk. Due diligence should include an assessment of the creditworthiness of the issuer and a full analysis of primary and any contingent sources of repayment. Offering documents should be reviewed for their accuracy and completeness, as well as for full disclosure of all of the offering's relevant risks.

UNIFORM AGREEMENT ON THE CLASSIFICATION OF ASSETS AND THE APPRAISAL OF SECURITIES

On June 15, 2004, the agencies^{1c} issued a joint interagency statement that revised the Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts (the uniform agreement). (See SR-04-9.) The uniform agreement amends the examination procedures that were established in 1938 and then revised and issued on July 15, 1949, and on May 7, 1979. The uniform agreement sets forth the definitions of the classification categories and the specific examination procedures and information for classifying bank assets, including securities. The uniform agreement's classi-

^{1b}. The OCC published final amendments to its investment securities regulation (12 CFR 1) on July 2, 2001 (66 *Fed. Reg.* 34784).

^{1c}. The statement was issued by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision (the agencies).

fication of loans remains unchanged from the 1979 revision.

The June 15, 2004, agreement changes the classification standards applied to banks' holdings of debt securities by—

- eliminating the automatic classification of sub-investment-grade debt securities when a banking organization has developed an accurate, robust, and documented credit-risk-management framework to analyze its securities holdings;
- conforming the uniform agreement to current generally accepted accounting principles by basing the recognition of depreciation on all available-for-sale securities on the bank's determination as to whether the impairment of the underlying securities is "temporary" or "other than temporary";
- eliminating the preferential treatment given to defaulted municipal securities;
- clarifying how examiners should address securities that have two or more different ratings, split or partially rated securities, and nonrated debt securities;
- identifying when examiners may diverge from conforming their ratings to those of the rating agencies; and
- addressing the treatment of Interagency Country Exposure Review Committee ratings.

The uniform agreement's classification categories also apply to the classification of assets held by the subsidiaries of banks. *Although the classification categories for bank assets and assets held by bank subsidiaries are the same, the classification standards may be difficult to apply to the classification of subsidiary assets because of differences in the nature and risk characteristics of the assets.* Despite the differences that may exist between assets held directly by a bank and those held by its subsidiary, the standards for classifying investment securities are to be applied directly to securities held by a bank and its subsidiaries.

Classification of Assets in Examinations

Classification units are designated as Substandard, Doubtful, and Loss. A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of

the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected. An asset classified Doubtful has all the weaknesses inherent in one classified Substandard, with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. Assets classified Loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified Loss should be promptly charged off.

Appraisal of Securities in Bank Examinations

In an effort to streamline the examination process and achieve as much consistency as possible, examiners will use the published ratings provided by nationally recognized statistical ratings organizations (NRSROs) as a proxy for the supervisory classification definitions. Examiners may, however, assign a more- or less-severe classification for an individual security, depending on a review of applicable facts and circumstances.

Investment-Quality Debt Securities

Investment-quality debt securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group generally includes investment securities in the four highest rating categories provided by NRSROs and includes unrated debt securities of equivalent quality.

Because investment-quality debt securities do not exhibit weaknesses that justify an adverse classification rating, examiners will generally not classify them. However, published credit ratings occasionally lag demonstrated changes in credit quality, and examiners may, in limited cases, classify a security notwithstanding an

investment-grade rating. Examiners may use such discretion, when justified by credit information the examiner believes is not reflected in the rating, to properly reflect the security's credit risk.

Sub-Investment-Quality Debt Securities

Sub-investment-quality debt securities are those in which the investment characteristics are distinctly or predominantly speculative. This group generally includes debt securities, including hybrid equity instruments (for example, trust preferred securities), in grades below the four highest rating categories; unrated debt securities of equivalent quality; and defaulted debt securities.

In order to reflect asset quality properly, an examiner may in limited cases "pass" a debt security that is rated below investment quality. Examiners may use such discretion when, for example, the institution has an accurate and robust credit-risk-management framework and has demonstrated, based on recent, materially positive credit information, that the security is the credit equivalent of investment grade.

Rating Differences

Some debt securities may have investment-quality ratings by one (or more) rating agencies and sub-investment-quality ratings by others. Examiners will generally classify such securities, particularly when the most recently assigned rating is not investment quality. However, an examiner has discretion to "pass" a debt security with both investment-quality and sub-investment-quality ratings. The examiner may use that discretion if, for example, the institution has demonstrated through its documented credit analysis that the security is the credit equivalent of investment grade.

Split or Partially Rated Securities

Some individual debt securities have ratings for principal but not interest. The absence of a rating for interest typically reflects uncertainty regarding the source and amount of interest the investor will receive. Because of the speculative nature of the interest component, examiners will generally classify such securities, regardless of the rating for the principal.

Nonrated Debt Securities

The agencies expect institutions holding individually large nonrated debt security exposures, or having significant aggregate exposures from small individual holdings, to demonstrate that they have made prudent pre-acquisition credit decisions and have effective, risk-based standards for the ongoing assessment of credit risk. Examiners will review the institution's program for monitoring and measuring the credit risk of such holdings and, if the assessment process is considered acceptable, generally will rely upon those assessments during the examination process. If an institution has not established independent risk-based standards and a satisfactory process to assess the quality of such exposures, examiners may classify such securities, including those of a credit quality deemed to be the equivalent of subinvestment grade, as appropriate.

Some nonrated debt securities held in investment portfolios represent small exposures relative to capital, both individually and in aggregate. While institutions generally have the same supervisory requirements (as applicable to large holdings) to show that these holdings are the credit equivalent of investment grade at purchase, comprehensive credit analysis subsequent to purchase may be impractical and not cost effective. For such small individual exposures, institutions should continue to obtain and review available financial information, and assign risk ratings. Examiners may rely upon the bank's internal ratings when evaluating such holdings.

Foreign Debt Securities

The Interagency Country Exposure Review Committee (ICERC) assigns transfer-risk ratings for cross-border exposures. Examiners should use the guidelines in this uniform agreement rather than ICERC transfer-risk ratings in assigning security classifications, except when the ICERC ratings result in a more-severe classification.

Treatment of Declines in Fair Value Below Amortized Cost on Debt Securities

Under generally accepted accounting principles (GAAP), an institution must assess whether a

decline in fair value^{1d} below the amortized cost of a security is a “temporary” or an “other-than-temporary” impairment. When the decline in fair value on an individual security represents “other-than-temporary” impairment, the cost basis of the security must be written down to fair value, thereby establishing a new cost basis for the security, and the amount of the write-down must be reflected in current-period earnings. If an institution’s process for assessing impairment is considered acceptable, examiners may use those assessments in determining the appropriate classification of declines in fair value below amortized cost on individual debt securities.

Any decline in fair value below amortized cost on defaulted debt securities will be classified as indicated in table 3. Apart from classification, for impairment write-downs or charge-offs on adversely classified debt securities, the existence of a payment default will generally be considered a presumptive indicator of “other-than-temporary” impairment.

Classification of Other Types of Securities

Some investments, such as certain equity holdings or securities with equity-like risk and return profiles, have highly speculative performance characteristics. Examiners should generally classify such holdings based on an assessment of the applicable facts and circumstances.

Summary Table of Debt Security Classification Guidelines

Table 3 outlines the uniform classification approach the agencies will generally use when assessing credit quality in debt securities portfolios.

The general debt security classification guidelines do not apply to private debt and equity holdings in a small business investment company or an Edge Act corporation. The uniform agreement does not apply to securities held in trading accounts, provided the institution dem-

onstrates through its trading activity a short-term holding period or holds the security as a hedge for a customer’s valid derivative contract.

Credit-Risk-Management Framework for Securities

When an institution has developed an accurate, robust, and documented credit-risk-management framework to analyze its securities holdings, examiners may choose to depart from the general debt security classification guidelines in favor of individual asset review in determining whether to classify those holdings. A robust credit-risk-management framework entails appropriate pre-acquisition credit due diligence by qualified staff that grades a security’s credit risk based on an analysis of the repayment capacity of the issuer and the structure and features of the security. It also involves the ongoing monitoring of holdings to ensure that risk ratings are reviewed regularly and updated in a timely fashion when significant new information is received.

The credit analysis of securities should vary based on the structural complexity of the security, the type of collateral, and external ratings. The credit-risk-management framework should reflect the size, complexity, quality, and risk characteristics of the securities portfolio; the risk appetite and policies of the institution; and the quality of its credit-risk-management staff, and should reflect changes to these factors over time. Policies and procedures should identify the extent of credit analysis and documentation required to satisfy sound credit-risk-management standards.

Transfers of Low-Quality Securities and Assets

The purchase of low-quality assets by a bank from an affiliated bank or nonbank affiliate is a violation of section 23A of the Federal Reserve Act. The transfer of low-quality securities from one depository institution to another may be done to avoid detection and classification during regulatory examinations; this type of transfer may be accomplished through participations, purchases or sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Broadly defined, low-quality securities include depreciated or sub-investment-quality securi-

^{1d}. As currently defined under GAAP, the fair value of an asset is the amount at which that asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices are the best evidence of fair value and must be used as the basis for measuring fair value, if available.

Table 3—General Debt Security Classification Guidelines

<i>Type of security</i>	<i>Classification</i>		
	<i>Substandard</i>	<i>Doubtful</i>	<i>Loss</i>
Investment-quality debt securities with “temporary” impairment	—	—	—
Investment-quality debt securities with “other-than-temporary” impairment	—	—	Impairment
Sub-investment-quality debt securities with “temporary” impairment ¹	Amortized cost	—	—
Sub-investment-quality debt securities with “other-than-temporary” impairment, including defaulted debt securities	Fair value	—	Impairment

Note. Impairment is the amount by which amortized cost exceeds fair value.

1. For sub-investment-quality available-for-sale (AFS) debt securities with “temporary” impairment, amortized cost rather than the lower amount at which these securities are carried on the balance sheet, i.e., fair value, is classified Substandard. This classification is consistent with the regulatory capital treatment of AFS debt securities. Under GAAP, unrealized

gains and losses on AFS debt securities are excluded from earnings and reported in a separate component of equity capital. In contrast, these unrealized gains and losses are excluded from regulatory capital. Accordingly, the amount classified Substandard on these AFS debt securities, i.e., amortized cost, also excludes the balance-sheet adjustment for unrealized losses.

ties. Situations in which an institution appears to be concealing low-quality securities to avoid examination scrutiny and possible classification represent an unsafe and unsound activity.

Any situations involving the transfer of low-quality or questionable securities should be brought to the attention of Reserve Bank supervisory personnel who, in turn, should notify the local office of the primary federal regulator of the other depository institution involved in the transaction. For example, if an examiner determines that a state member bank or holding company has transferred or intends to transfer low-quality securities to another depository institution, the Reserve Bank should notify the recipient institution’s primary federal regulator of the transfer. The same notification requirement holds true if an examiner determines that a state member bank or holding company has acquired or intends to acquire low-quality secu-

rities from another depository institution. This procedure applies to transfers involving savings associations and savings banks, as well as commercial banking organizations.

Situations may arise when transfers of securities are undertaken for legitimate reasons. In these cases, the securities should be properly recorded on the books of the acquiring institution at their fair value on the date of transfer. If the transfer was with the parent holding company or a nonbank affiliate, the records of the affiliate should be reviewed as well.

Permissible Stock Holdings

The purchase of securities convertible into stock at the option of the issuer is prohibited (12 CFR 1.6). Other than as specified in table 4, banks are prohibited from investing in stock.

Table 4—Permitted Stock Holdings by Member Banks

<i>Type of stock</i>	<i>Authorizing statute and limitation</i>
Federal Reserve Bank	Federal Reserve Act, sections 2 and 9 (12 USC 282 and 321) and Regulation I (12 CFR 209). Subscription must equal 6 percent of the bank's capital and surplus, 3 percent paid in.
Safe deposit corporation	12 USC 24. 15 percent of capital and surplus.
Corporation holding bank premises	Federal Reserve Act, section 24A (12 USC 371(d)). 100 percent of capital stock. Limitation includes total direct and indirect investment in bank premises in any form (such as loans). Maximum limitation may be exceeded with permission of the Federal Reserve Bank for state member banks and the Comptroller of the Currency for national banks.
Small business investment company	Small Business Investment Act of August 21, 1958, section 302(b) (15 USC 682(b)). Banks are prohibited from acquiring shares of such a corporation if, upon making the acquisition, the aggregate amount of shares in small business investment companies then held by the bank would exceed 5 percent of its capital and surplus.
Edge Act and agreement corporations and foreign banks	Federal Reserve Act, sections 25 and 25A (12 USC 601 and 618). The aggregate amount of stock held in all such corporations may not exceed 10 percent of the member bank's capital and surplus. Also, the member bank must possess capital and surplus of \$1 million or more before acquiring investments pursuant to section 25.
Bank service company	Bank Service Corporation Act of 1958, section 2 (12 USC 1861 and 1862). (Redesignated as Bank Service Company Act.) 10 percent of paid in and unimpaired capital and surplus. Limitation includes total direct and indirect investment in any form. No insured banks shall invest more than 5 percent of their total assets.
Federal National Mortgage Corporation	National Housing Mortgage Association Act of 1934, section 303(f) (12 USC 1718(f)). No limit.
Bank's own stock	12 USC 83. Shares of the bank's own stock may not be acquired or taken as security for loans, except as necessary to prevent loss from a debt previously contracted in good faith. Stock so acquired must be disposed of within six months of the date of acquisition.
Corporate stock acquired through debt previously contracted (DPC) transaction	Case law has established that stock of any corporation debt may be acquired to prevent loss from a debt previously contracted in good faith. See <i>Oppenheimer v. Harriman National Bank & Trust Co. of the City of New York</i> , 301 US 206 (1937). However, if the stock is not disposed of within a reasonable time period, it loses its status as a DPC transaction and becomes a prohibited holding under 12 USC 24(7).
Operations subsidiaries	12 CFR 250.141. Permitted if the subsidiary is to perform, at locations at which the bank is authorized to engage in business, functions that the bank is empowered to perform directly.

<i>Type of stock</i>	<i>Authorizing statute and limitation</i>
State housing corporation incorporated in the state in which the bank is located	12 USC 24. 5 percent of its capital stock, paid in and unimpaired, plus 5 percent of its unimpaired surplus fund when considered together with loans and commitments made to the corporation.
Agricultural credit corporation	12 USC 24. 20 percent of capital and surplus unless the bank owns over 80 percent. No limit if the bank owns 80 percent or more.
Government National Mortgage Association	12 USC 24. No limit.
Student Loan Marketing Association	12 USC 24. No limit.
Bankers' banks	12 USC 24. 10 percent of capital stock and paid-in and unimpaired surplus. Bankers' banks must be insured by the FDIC, owned exclusively by depository institutions, and engaged solely in providing banking services to other depository institutions and their officers, directors, or employees. Ownership shall not result in any bank's acquiring more than 5 percent of any class of voting securities of the bankers' bank.
Mutual funds	12 USC 24(7). Banks may invest in mutual funds as long as the underlying securities are permissible investments for a bank.
Community development corporation	Federal Reserve Act, section 9, paragraph 23 (12 USC 338a). Up to 10 percent of capital stock and surplus ¹ subject to 12 CFR 208.22.

1. Section 208.2(d) of Regulation H defines "capital stock and surplus" to mean tier 1 and tier 2 capital included in a member bank's risk-based capital and the balance of a member bank's allowance for loan and lease losses *not included in its tier 2 capital for calculation of risk-based capital*, based on the bank's most recent consolidated Report of Condition and Income. Section 9 of the Federal Reserve Act (12 USC 338a) provides that the Board has the authority

under this law to approve public-welfare or other such investments, up to the sum of 5 percent of paid-in and unimpaired capital stock and 5 percent of unimpaired surplus, unless the Board determines by order that the higher amount will pose no significant risk to the affected deposit insurance fund, and the bank is adequately capitalized. In no case may the aggregate of such investments exceed 10 percent of the bank's combined capital stock and surplus.

LIMITED EQUITY INVESTMENTS

Investing in the equity of nonfinancial companies and lending to private-equity-financed companies (that is, companies financed by private equity) have emerged as increasingly important sources of earnings and business relationships at a number of banking organizations (BOs). In this guidance, the term *private equity* refers to shared-risk investments outside of publicly quoted securities and also covers activities such as venture capital, leveraged buyouts, mezzanine financing, and holdings of publicly quoted securities obtained through these activities. While private equity securities can contribute substantially to earnings, these activities can give rise to

increased volatility of both earnings and capital. The supervisory guidance in SR-00-9 on private equity investments and merchant banking activities is concerned with a BO's proper risk-focused management of its private equity investment activities so that these investments do not adversely affect the safety and soundness of the affiliated insured depository institutions.

An institution's board of directors and senior management are responsible for ensuring that the risks associated with private equity activities do not adversely affect the safety and soundness of the banking organization or any other affiliated insured depository institutions. To this end, sound investment and risk-management practices and strong capital positions are critical

elements in the prudent conduct of these activities.

Legal and Regulatory Authority

Depository institutions are able to make limited equity investments under the following statutory and regulatory authorities:

- Depository institutions may make equity investments through small business investment corporations (SBICs). Investments made by SBIC subsidiaries are allowed up to a total of 50 percent of a portfolio company's outstanding shares, but can only be made in companies defined as a small business, according to SBIC rules. A bank's aggregate investment in the stock of SBICs is limited to 5 percent of the bank's capital and surplus.
- Under Regulation K, which implements sections 25 and 25A of the Federal Reserve Act (FRA) and section 4(c)(13) of the Bank Holding Company Act of 1956 (BHC Act), a depository institution may make portfolio investments in foreign companies, provided the investments do not in the aggregate exceed 25 percent of the tier 1 capital of the bank holding company. In addition, individual investments must not exceed 19.9 percent of a portfolio company's voting shares or 40 percent of the portfolio company's total equity.^{1e}

Equity investments made under the authorities listed above may be in publicly traded securities or privately held equity interests. The investment may be made as a direct investment in a specific portfolio company, or it may be made indirectly through a pooled investment vehicle, such as a private equity fund.^{1f} In general, private equity funds are investment companies, typically organized as limited partnerships, that pool capital from third-party investors to invest in shares, assets, and ownership interests in companies for resale or other disposition. Private-equity-fund investments may provide seed or early-stage investment funds to start-up companies or may finance changes in

^{1e}. Shares of a corporation held in trading or dealing accounts or under any other authority are also included in the calculation of a depository institution's investment. Portfolio investments of \$25 million or less can be made without prior notice to the Board. See Regulation K for more detailed information.

^{1f}. For additional stock holdings that state member banks are authorized to hold, see table 4.

ownership, middle-market business expansions, and mergers and acquisitions.

Oversight by the Board of Directors and Senior Management

Equity investment activities require the active oversight of the board of directors and senior management of the depository institution that is conducting the private equity investment activities. The board should approve portfolio objectives, overall investment strategies, and general investment policies that are consistent with the institution's financial condition, risk profile, and risk tolerance. Portfolio objectives should address the types of investments, expected business returns, desired holding periods, diversification parameters, and other elements of sound investment-management oversight. Board-approved objectives, strategies, policies, and procedures should be documented and clearly communicated to all the personnel involved in their implementation. The board should actively monitor the performance and risk profile of equity investment business lines in light of the established objectives, strategies, and policies.

The board also should ensure that there is an effective management structure for conducting the institution's equity activities, including adequate systems for measuring, monitoring, controlling, and reporting on the risks of equity investments. The board should approve policies that specify lines of authority and responsibility for both acquisitions and sales of investments. The board should also approve (1) limits on aggregate investment and exposure amounts; (2) the types of investments (for example, direct and indirect, mezzanine financing, start-ups, seed financing); and (3) appropriate diversification-related aspects of equity investments such as industry, sector, and geographic concentrations.

For its part, senior management must ensure that there are adequate policies, procedures, and management information systems for managing equity investment activities on a day-to-day and longer-term basis. Management should set clear lines of authority and responsibility for making and monitoring investments and for managing risk. Management should ensure that an institution's equity investment activities are conducted by competent staff whose technical knowledge and experience are consistent with the scope of the institution's activities.

Management of the Investment Process

Depository institutions engaging in equity investment activities should have a sound process for executing all elements of investment management, including initial due diligence, periodic reviews of holdings, investment valuation, and realization of returns. This process requires appropriate policies, procedures, and management information systems, the formality of which should be commensurate with the scope, complexity, and nature of an institution's equity investment activities. The supervisory review should be risk-focused, taking into account the institution's stated tolerance for risk, the ability of senior management to govern these activities effectively, the materiality of activities in comparison to the institution's risk profile, and the capital position of the institution.

Depository institutions engaging in equity investment activities require effective policies that (1) govern the types and amounts of investments that may be made, (2) provide guidelines on appropriate holding periods for different types of investments, and (3) establish parameters for portfolio diversification. Investment strategies and permissible types of investments should be clearly identified. Portfolio-diversification policies should identify factors pertinent to the risk profile of the investments being made, such as industry, sector, geographic, and market factors. Policies establishing expected holding periods should specify the general criteria for liquidation of investments and guidelines for the divestiture of an underperforming investment. Decisions to liquidate underperforming investments are necessarily made on a case-by-case basis considering all relevant factors. Policies and procedures, however, should require more frequent review and analysis for investments that are performing poorly or that have been in a portfolio for a considerable length of time, as compared with the other investments overall.

Policies and Limits

Policies should identify the aggregate exposure that the institution is willing to accept, by type and nature of investment (for example, direct or indirect, industry sectors). The limits should include funded and unfunded commitments. Formal and clearly articulated hedging policies and

strategies should identify limits on hedged exposures and permissible hedging instruments.

Procedures

Management and staff compensation play a critical role in providing incentives and controlling risks within a private equity business line. Clear policies should govern compensation arrangements, including co-investment structures and staff sales of portfolio company interests.

Institutions have different procedures for assessing, approving, and reviewing investments based on the size, nature, and risk profile of an investment. The procedures used for direct investments may be different than those used for indirect investments made through private equity funds. For example, different levels of due diligence and senior management approvals may be required. When constructing management infrastructures for conducting these investment activities, management should ensure that operating procedures and internal controls appropriately reflect the diversity of investments.

The potential diversity in investment practice should be recognized when conducting supervisory reviews of the equity investment process. The supervisory focus should be on the appropriateness of the process employed relative to the risk of the investments made and on the materiality of this business line to the overall soundness of the depository institution, as well as the potential impact on affiliated depository institutions. The procedures employed should include the following:

- *Investment analysis and approvals, including well-founded analytical assessments of investment opportunities and formal investment-approval processes.*

The methods and types of analyses conducted should be appropriately structured to adequately assess the specific risk profile, industry dynamics, management, specific terms and conditions of the investment opportunity, and other relevant factors. All elements of the analytical and approval processes, from initial review through the formal investment decision, should be documented and clearly understood by the staff conducting these activities.

The evaluation of existing and potential investments in private equity funds should

involve an assessment of the adequacy of a fund's structure. Consideration should be given to the (1) management fees, (2) carried interest and its computation on an aggregate portfolio basis,^{1g} (3) sufficiency of capital commitments that are provided by the general partners in providing management incentives, (4) contingent liabilities of the general partner, (5) distribution policies and wind-down provisions, and (6) performance benchmarks and return-calculation methodologies.

- *Investment-risk ratings.*

Internal risk ratings should assign each investment a rating based on factors such as the nature of the company, strength of management, industry dynamics, financial condition, operating results, expected exit strategies, market conditions, and other pertinent factors. Different rating factors may be appropriate for indirect investments and direct investments.

- *Periodic and timely investment strategy and performance (best, worst, and probable case assessment) reviews of equity investments, conducted at the individual and portfolio levels.*

Management should ensure that periodic and timely review of the institution's equity investments takes place at both individual-investment and portfolio levels. Depending on the size, complexity, and risk profile of the investment, reviews should, when appropriate, include factors such as—

- the history of the investment, including the total funds approved;
- commitment amounts, principal-cash-investment amounts, cost basis, carrying value, major-investment cash flows, and supporting information including valuation rationales and methodologies;
- the current actual percentage of ownership in the portfolio company on both a diluted and undiluted basis;
- a summary of recent events and current outlook;
- the recent financial performance of portfolio companies, including summary compilations of performance and forecasts, historical financial results, current and future plans, key performance metrics, and other relevant items;

- internal investment-risk ratings and rating-change triggers;
- exit strategies, both primary and contingent, and expected internal rates of return upon exit; and
- other pertinent information for assessing the appropriateness, performance, and expected returns of investments.

Portfolio reviews should include an aggregation of individual investment-risk and performance ratings; an analysis of appropriate industry, sector, geographic, and other pertinent concentrations; and total portfolio valuations. Portfolio reports that contain the cost basis, carrying values, estimated fair values, valuation discounts, and other factors summarizing the status of individual investments are integral tools for conducting effective portfolio reviews. Reports containing the results of all reviews should be available to supervisors for their inspection.

Given the inherent uncertainties in equity investment activities, institutions should include in their periodic reviews consideration of the best case, worst case, and probable case assessments of investment performance. These reviews should evaluate changes in market conditions and the alternative assumptions used to value investments—including expected and contingent exit strategies. Major assumptions used in valuing investments and forecasting performance should be identified. These assessments need not be confined to quantitative analyses of potential losses, but may also include qualitative analyses. The formality and sophistication of investment reviews should be appropriate for the overall level of risk the depository institution incurs from this business line.

- *Assessment of the equity investment valuation and accounting policies and the procedures used, their impact on earnings, and the extent of their compliance with generally accepted accounting principles (GAAP).*

Valuation and accounting policies and procedures can have a significant impact on the earnings of institutions engaged in equity investment activities. Many equity investments are made in privately held companies, for which independent price quotations are either unavailable or not available in sufficient volume to provide meaningful liquidity or a market valuation. Valuations of some equity investments may involve a high degree of judgment on the part of management or the

^{1g}. The carried interest is the share of a partnership's return that is received by the general partners or investment advisers.

skillful use of peer comparisons. Similar circumstances may exist for publicly traded securities that are thinly traded or subject to resale and holding-period restrictions, or when the institution holds a significant block of a company's shares. It is of paramount importance that an institution's policies and procedures on accounting and valuation methodologies for equity investments be clearly articulated.

Under GAAP, equity investments held by investment companies, held by broker-dealers, or maintained in the trading account are reported at fair value, with any unrealized appreciation or depreciation included in earnings and flowing to tier 1 capital. For some holdings, fair value may reflect adjustments for liquidity and other factors.

Equity investments that are not held in investment companies, by broker-dealers, or in the trading account and that have a readily determinable fair value (quoted market price) are generally reported as available-for-sale (AFS). They are marked to market with unrealized appreciation or depreciation recognized in GAAP-defined "comprehensive income" but not earnings. Appreciation or depreciation flows to equity, but, for regulatory capital purposes only, depreciation is included in tier 1 capital.^{1h} Equity investments without readily determinable fair values generally are held at cost, subject to write-downs for impairments to the value of the asset. Impairments of value should be promptly and appropriately recognized and written down.

In determining fair value, the valuation methodology plays a critical role. Formal valuation and accounting policies should be established for investments in public companies; direct private investments; indirect fund investments; and, where appropriate, other types of investments with special characteristics. When establishing valuation policies, institutions should consider market conditions, taking account of lockout provisions, the restrictions of Securities and Exchange Commission Rule 144, liquidity features, the dilutive effects of warrants and options, and industry characteristics and dynamics.

Accounting and valuation of equity investments should be subject to regular periodic review. In all cases, valuation reviews should produce documented audit trails that are available to supervisors and auditors. These reviews should assess the consistency of the methodologies used in estimating fair value.

Accounting and valuation treatments should be assessed in light of their potential for abuse, such as through the inappropriate management or manipulation of reported earnings on equity investments. For example, high valuations may produce overstatements of earnings through gains and losses on investments reported at "fair value." On the other hand, inappropriately understated valuations can provide vehicles for smoothing earnings by recognizing gains on profitable investments when an institution's earnings are otherwise under stress. While reasonable people may disagree on valuations given to illiquid private equity investments, institutions should have rigorous valuation procedures that are applied consistently.

Increasingly, equity investments are contributing to an institution's earnings. The potential impact of these investments on the composition, quality, and sustainability of overall earnings should be appropriately recognized and assessed by both management and supervisors.

- *A review of assumed and actual equity-investment exit strategies and the extent of their impact on the returns and reported earnings.*

The principal means of exiting an equity investment in a privately held company include initial public stock offerings, sales to other investors, and share repurchases. An institution's assumptions on exit strategies can significantly affect the valuation of the investment. Management should periodically review investment exit strategies, with particular focus on larger or less-liquid investments.

- *Policies and procedures governing the sale, exchange, transfer, or other disposition of equity investments.*

Policies and procedures to govern the sale, exchange, transfer, or other disposition of the institution's investments should state clearly the levels of management or board approval required for the disposition of investments.

- *Internal methods for allocating capital based on the risk inherent in the equity investment activities, including the methods for identify-*

^{1h}. Under the risk-based capital rule, supplementary (tier 2) capital may include up to 45 percent of pretax unrealized holding gains (that is, the excess, if any, of the fair value over historical cost) on AFS equity securities with readily determinable fair values.

ing all material risks and their potential impact on the safety and soundness of the institution.

Consistent with SR-99-18, depository institutions that are conducting material equity investment activities should have internal methods for allocating economic capital. These methods should be based on the risk inherent in the equity investment activities, including the identification of all material risks and their potential impact on the institution. Organizations that are substantially engaged in these investment activities should have strong capital positions supporting their equity investments. The economic capital that organizations allocate to their equity investments should be well in excess of the current regulatory minimums applied to lending activities. The amount of percentage of capital dedicated to the equity investment business line should be appropriate to the size, complexity, and financial condition of the institution. Assessments of capital adequacy should cover not only the institution's compliance with regulatory capital requirements and the quality of regulatory capital, but should also include an institution's methodologies for internally allocating economic capital to this business line.

Internal Controls

An adequate system of internal controls, with appropriate checks and balances and clear audit trails, is critical to conducting equity investment activities effectively. Appropriate internal controls should address all the elements of the investment-management process. The internal controls should focus on the appropriateness of existing policies and procedures; adherence to policies and procedures; and the integrity and adequacy of investment valuations, risk identification, regulatory compliance, and management reporting. Any departures from policies and procedures should be documented and reviewed by senior management, and this documentation should be available for examiner review.

As with other financial activities, the assessments of an organization's compliance with both written and implied policies and procedures should be independent of line decision-making functions to the fullest extent possible. When fully independent reviews are not pos-

sible in smaller, less-complex institutions, alternative checks and balances should be established. These alternatives may include random internal audits, reviews by senior management who are independent of the function, or the use of outside third parties.

Documentation

Documentation of key elements of the investment process, including initial due diligence, approval reviews, valuations, and dispositions, is an integral part of any private equity investment internal control system. This documentation should be accessible to supervisors.

Legal Compliance

An institution's internal controls should focus on compliance with all federal laws and regulations that are applicable to the institution's investment activities. Regulatory compliance requirements, in particular, should be incorporated into internal controls so managers outside of the compliance or legal functions understand the parameters of permissible investment activities.

To ensure compliance with federal securities laws, institutions should establish policies, procedures, and other controls addressing insider trading. A "restricted list" of securities for which the institution has inside information is one example of a widely used method for controlling the risk of insider trading. In addition, control procedures should be in place to ensure that appropriate reports are filed with functional regulators.

The limitations in sections 23A and 23B of the FRA, which deal with transactions between a depository institution and its affiliates, are presumed by the Gramm-Leach-Bliley Act (GLB Act) to apply to certain transactions between a depository institution and any portfolio company in which an affiliate of the institution owns at least a 15 percent equity interest. This ownership threshold is lower than the ordinary definition of an affiliate, which is typically 25 percent.

Compensation

Often, key employees in the private equity investment units of banking organizations may

co-invest in the direct or fund investments made by the unit. These co-investment arrangements can be an important incentive and risk-control technique, and they can help to attract and retain qualified management. However, “cherry picking,” or selecting only certain investments for employee participation while excluding others, should be discouraged.

The employees’ co-investment may be funded through loans from the depository institution or its affiliates, which, in turn, would hold a lien against the employees’ interests. The administration of the compensation plan should be appropriately governed pursuant to formal agreements, policies, and procedures. Among other matters, policies and procedures should address the terms and conditions of employee loans and the sales of participants’ interests before the release of the lien.

Disclosure of Equity Investment Activities

Given the important role that market discipline plays in controlling risk, institutions should ensure that they adequately disclose the information necessary for the markets to assess the institution’s risk profile and performance in this business line. Indeed, it is in the institution’s interest, as well as that of its creditors and shareholders, to publicly disclose information about earnings and risk profiles. Institutions are encouraged to disclose in public filings information on the type and nature of investments, portfolio concentrations, returns, and their contributions to reported earnings and capital. Supervisors should fully review and use these disclosures, as well as periodic regulatory reports filed by publicly held banking organizations, as part of the information they review routinely. The following topics are relevant for public disclosure, though disclosures on each of these topics may not be appropriate, relevant, or sufficient in every case:

- the size of the portfolio
- the types and nature of investments (for example, direct or indirect, domestic or international, public or private, equity or debt with conversion rights)
- initial cost, carrying value, and fair value of investments and, when applicable, comparisons to publicly quoted share values of portfolio companies

- the accounting techniques and valuation methodologies, including key assumptions and practices affecting valuation and changes in those practices
- the realized gains (or losses) arising from sales and unrealized gains (or losses)
- insights regarding the potential performance of equity investments under alternative market conditions

Lending to or Engaging in Other Transactions with Portfolio Companies

Additional risk-management issues may arise when a depository institution or an affiliate lends to or has other business relationships with (1) a company in which the depository institution or an affiliate has invested (that is, a portfolio company), (2) the general partner or manager of a private equity fund that has also invested in a portfolio company, or (3) a private-equity-financed company in which the banking institution does not hold a direct or indirect ownership interest but which is an investment or portfolio company of a general partner or fund manager with which the banking organization has other investments. Given the potentially higher-than-normal risk attributes of these lending relationships, institutions should devote special attention to ensuring that the terms and conditions of such relationships are at arm’s length and are consistent with the lending policies and procedures of the institution. Similar issues may arise in the context of derivatives transactions with or guaranteed by portfolio companies and general partners. Lending and other business transactions between an insured depository institution and a portfolio company that meet the definition of an affiliate must be negotiated on an arm’s-length basis, in accordance with section 23B of the FRA.

When a depository institution lends to a private-equity-financed company in which it has no equity interest but in which the borrowing company is a portfolio investment of private equity fund managers or general partners with which the institution may have other private-equity-related relationships, care must be taken to ensure that the extension of credit is conducted on reasonable terms. In some cases, lenders may wrongly assume that the general partners or another third party implicitly guar-

antees or stands behind such credits. Reliance on implicit guarantees or comfort letters should not substitute for reliance on a sound borrower that is expected to service its debt with its own resources. As with any type of credit extension, absent a written contractual guarantee, the credit quality of a private equity fund manager, general partner, or other third party should not be used to upgrade the internal credit-risk rating of the borrower company or to prevent the classification or special mention of a loan.

When an institution lends to a portfolio company in which it has a direct or an indirect interest, implications arise under sections 23A and 23B of the FRA, which govern credit-related transactions and asset purchases between a depository institution and its affiliates. Section 23A applies to transactions between a depository institution and any company in which the institution's holding company or shareholders own at least 25 percent of the company's voting shares. The GLB Act extends this coverage by establishing a presumption that a portfolio company is an affiliate of a depository institution if the financial holding company (FHC) uses the merchant banking authority of the GLB Act to own or control more than 15 percent of the equity of the company. Institutions should obtain the assistance of counsel in determining whether such issues exist or would exist if loans were extended to a portfolio company, general partner, or manager. Supervisors, including examiners, should ensure that the institution has conducted a proper review of these issues to avoid violations of law or regulations.

EVALUATING RISK MANAGEMENT AND INTERNAL CONTROLS

Examiners are expected to conduct an adequate evaluation of the risk-management process used to acquire and manage the securities and derivative contracts used in nontrading activities. In conducting this analysis, examiners should evaluate the following four key elements of a sound risk-management process:

- active board and senior management oversight
- adequate risk-management policies and limits
- appropriate risk-measurement and reporting systems
- comprehensive internal controls

This section identifies basic factors that examiners should consider in evaluating these elements for investment and end-user activities; it reiterates and supplements existing guidance and directives on the use of these instruments for non-trading purposes as provided in various supervisory letters and examination manuals.²

In evaluating an institution's risk-management process, examiners should consider the nature and size of its holdings. Examiner judgment plays a key role in assessing the adequacy of an institution's risk-management process for securities and derivative contracts. Examiners should focus on evaluating an institution's understanding of the risks involved in the instruments it holds. Regardless of any responsibility, legal or otherwise, assumed by a dealer or counterparty for a particular transaction, the acquiring insti-

2. Existing policies and examiner guidance on various supervisory topics applicable to securities and off-balance-sheet instruments can be found in this manual, and the *Bank Holding Company Supervision Manual*, as well as in various supervision and regulation (SR) letters, including SR-90-16, "Implementation of Examination Guidelines for the Review of Asset Securitization Activities"; SR-91-4, "Inspection of Investment-Adviser Subsidiaries of Bank Holding Companies"; SR-93-69, "Risk Management and Internal Controls for Trading Activities"; and SR-98-12, "FFIEC Policy Statement on Investment Securities and End-User Derivatives Activities."

tution is ultimately responsible for understanding and managing the risks of the transactions into which it enters. Failure of an institution to adequately understand, monitor, and evaluate the risks involved in its securities or derivative positions, either through lack of internal expertise or inadequate outside advice, constitutes an unsafe and unsound banking practice.

As with all risk-bearing activities, institutions should fully support the risk exposures of non-trading activities with adequate capital. Banking organizations should ensure that their capital positions are sufficiently strong to support all the risks associated with these activities on a fully consolidated basis and should maintain adequate capital in all affiliated entities engaged in these activities. In evaluating the adequacy of an institution's capital, examiners should consider any unrecognized net depreciation or appreciation in an institution's securities and derivative holdings. Further consideration should also be given to the institution's ability to hold these securities and thereby avoid recognizing losses.

Board of Directors and Senior Management Oversight

Active oversight by the institution's board of directors and relevant senior management is critical to a sound risk-management process. Examiners should ensure that these individuals are aware of their responsibilities and that they adequately perform their appropriate roles in overseeing and managing the risks associated with nontrading activities involving securities and derivative instruments.

Board of Directors

The board of directors has the ultimate responsibility for the level of risk taken by the institution. Accordingly, the board should approve overall business strategies and significant policies that govern risk taking, including those involving securities and derivative contracts. In particular, the board should approve policies identifying managerial oversight and articulating risk tolerances and exposure limits for securities and derivative activities. The board should also actively monitor the performance and risk profile of the institution and its various securities and derivative portfolios. Directors should

periodically review information that is sufficiently detailed and timely to allow them to understand and assess the credit, market, and liquidity risks facing the institution as a whole and its securities and derivative positions in particular. These reviews should be conducted at least quarterly and more frequently when the institution holds significant positions in complex instruments. In addition, the board should periodically reevaluate the institution's business strategies and significant risk-management policies and procedures, placing special emphasis on the institution's financial objectives and risk tolerances. The minutes of board meetings and accompanying reports and presentation materials should clearly demonstrate the board's fulfillment of these basic responsibilities. The section of this guidance on managing specific risks provides guidance on the types of objectives, risk tolerances, limits, and reports that directors should consider.

The board of directors should also conduct and encourage discussions between its members and senior management, as well as between senior management and others in the institution, on the institution's risk-management process and risk exposures. Although it is not essential for board members to have detailed technical knowledge of these activities, if they do not, it is their responsibility to ensure that they have adequate access to independent legal and professional advice on the institution's securities and derivative holdings and strategies. The familiarity, technical knowledge, and awareness of directors and senior management should be commensurate with the level and nature of an institution's securities and derivative positions. Accordingly, the board should be knowledgeable enough or have access to independent advice to evaluate recommendations presented by management or investment advisors.

Senior Management

Senior management is responsible for ensuring that there are adequate policies and procedures for conducting investment and end-user activities on both a long-range and day-to-day basis. Management should maintain clear lines of authority and responsibility for acquiring instruments and managing risk, setting appropriate limits on risk taking, establishing adequate systems for measuring risk, setting acceptable standards for valuing positions and measuring per-

formance, establishing effective internal controls, and enacting a comprehensive risk-reporting and risk-management review process. To provide adequate oversight, management should fully understand the institution's risk profile, including that of its securities and derivative activities. Examiners should review the reports to senior management and evaluate whether they provide both good summary information and sufficient detail to enable management to assess the sensitivity of securities and derivative holdings to changes in credit quality, market prices and rates, liquidity conditions, and other important risk factors. As part of its oversight responsibilities, senior management should periodically review the organization's risk-management procedures to ensure that they remain appropriate and sound. Senior management should also encourage and participate in active discussions with members of the board and with risk-management staff regarding risk measurement, reporting, and management procedures.

Management should ensure that investment and end-user activities are conducted by competent staff whose technical knowledge and experience is consistent with the nature and scope of the institution's activities. There should be sufficient depth in staff resources to manage these activities if key personnel are not available. Management should also ensure that back-office and financial-control resources are sufficient to manage and control risks effectively.

Independence in Managing Risks

The process of measuring, monitoring, and controlling risks within an institution should be managed as independently as possible from those individuals who have the authority to initiate transactions. Otherwise, conflicts of interest could develop. The nature and extent of this independence should be commensurate with the size and complexity of an institution's securities and derivative activities. Institutions with large and complex balance sheets or with significant holdings of complex instruments would be expected to have risk managers or risk-management functions fully independent of the individuals who have the authority to conduct transactions. Institutions with less complex holdings should ensure that there is some mechanism for independently reviewing both the level of risk exposures created by securities and deriva-

tive holdings and the adequacy of the process used in managing those exposures. Depending on the size and nature of the institution, this review function may be carried out by either management or a board committee. Regardless of size and sophistication, institutions should ensure that back-office, settlement, and transaction-reconciliation responsibilities are conducted and managed by personnel who are independent of those initiating risk-taking positions.

Policies, Procedures, and Limits

Institutions should maintain written policies and procedures that clearly outline their approach for managing securities and derivative instruments. These policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and general willingness to take risks. They should identify relevant objectives, constraints, and guidelines for both acquiring instruments and managing portfolios. In doing so, policies should establish a logical framework for limiting the various risks involved in an institution's securities and derivative holdings. Policies should clearly delineate lines of responsibility and authority over securities and derivative activities. They should also provide for the systematic review of products new to the firm. Examiners should evaluate the adequacy of an institution's risk-management policies and procedures in relation to its size, its sophistication, and the scope of its activities.

Specifying Objectives

Institutions can use securities and derivative instruments for several primary and complementary purposes.³ Banking organizations should articulate these objectives clearly and identify the types of securities and derivative contracts to be used for achieving them. Objectives also should be identified at the appropriate portfolio and institutional levels. These objectives should guide the acquisition of individual instruments

3. Such purposes include, but are not limited to, generating earnings, creating funding opportunities, providing liquidity, hedging risk exposures, taking risk positions, modifying and managing risk profiles, managing tax liabilities, and meeting pledging requirements.

and provide benchmarks for periodically evaluating the performance and effectiveness of an institution's holdings, strategies, and programs. Whenever multiple objectives are involved, management should identify the hierarchy of potentially conflicting objectives.

Identifying Constraints, Guidelines, and Limits

An institution's policies should clearly articulate the organization's risk tolerance by identifying its willingness to take the credit, market, and liquidity risks involved in holding securities and derivative contracts. A statement of authorized instruments and activities is an important vehicle for communicating these risk tolerances. This statement should clearly identify permissible instruments or instrument types and the purposes or objectives for which the institution may use them. The statement also should identify permissible credit quality, market-risk sensitivity, and liquidity characteristics of the instruments and portfolios used in nontrading activities. For example, in the case of market risk, policies should address the permissible degree of price sensitivity and/or effective maturity volatility, taking into account an instrument's or portfolio's option and leverage characteristics. Specifications of permissible risk characteristics should be consistent with the institution's overall credit-, market-, and liquidity-risk limits and constraints, and should help delineate a clear set of institutional limits for use in acquiring specific instruments and managing portfolios. Limits can be specified either as guidelines within the overall policies or in management operating procedures. Further guidance on managing specific risks and on the types of constraints and limits an institution might use in managing the credit, market, and liquidity risk of securities and derivative contracts is provided later in this section.

Limits should be set to guide acquisition and ongoing management decisions, control exposures, and initiate discussion within the organization about apparent opportunities and risks. Although procedures for establishing limits and operating within them may vary among institutions, examiners should determine whether the organization enforces its policies and procedures through a clearly identified system of risk limits. The organization's policies should also include specific guidance on the resolution of

limit excesses. Positions that exceed established limits should receive the prompt attention of appropriate management and should be resolved according to approved policies.

Limits should implement the overall risk tolerances and constraints articulated in general policy statements. Depending on the nature of an institution's holdings and its general sophistication, limits can be identified for individual business units, portfolios, instrument types, or specific instruments. The level of detail of risk limits should reflect the characteristics of the institution's holdings, including the types of risk to which the institution is exposed. Regardless of their specific form or level of aggregation, limits should be consistent with the institution's overall approach to managing various types of risks. They should also be integrated to the fullest extent possible with institution-wide limits on the same risks as they arise in other activities of the firm. Later in this section, specific examiner considerations for evaluating the policies and limits used in managing each of the various types of risks involved in nontrading securities and derivative activities are addressed.

New-Product Review

An institution's policies should also provide for effective review of any products being considered that would be new to the firm. An institution should not acquire a meaningful position in a new instrument until senior management and all relevant personnel (including those in internal-control, legal, accounting, and auditing functions) understand the product and can integrate it into the institution's risk-measurement and control systems. An institution's policies should define the terms "new product" and "meaningful position" consistent with its size, complexity, and sophistication. Institutions should not be hesitant to define an instrument as a new product. Small changes in the payment formulas or other terms of relatively simple and standard products can greatly alter their risk profiles and justify designation as a new product. New-product reviews should analyze all of the relevant risks involved in an instrument and assess how well the product or activity achieves specified objectives. New-product reviews also should include a description of the relevant accounting guidelines and identify the procedures for mea-

suring, monitoring, and controlling the risks involved.

Accounting Guidelines

The accounting systems and procedures used for general-purpose financial statements and regulatory reporting purposes are critically important to enhancing the transparency of an institution's risk profile. Accordingly, an institution's policies should provide clear guidelines on accounting for all securities and derivative holdings. Accounting treatment should be consistent with specified objectives and with the institution's regulatory requirements. Furthermore, institutions should ensure that they designate each cash or derivative contract for accounting purposes consistent with appropriate accounting policies and requirements. Accounting for non-trading securities and OBS derivative contracts should reflect the economic substance of the transactions. When instruments are used for hedging purposes, the hedging rationale and performance criteria should be well documented. Management should reassess these designations periodically to ensure that they remain appropriate.

Risk-Measurement and Reporting Systems

Clear procedures for measuring and monitoring risks are the foundation of a sound risk-management process. Examiners should ensure that an institution sufficiently integrates these functions into its ongoing management process and that relevant personnel recognize their role and understand the instruments held.

Risk Measurement

An institution's system for measuring the credit, market, liquidity, and other risks involved in cash and derivative contracts should be as comprehensive and accurate as practicable. The degree of comprehensiveness should be commensurate with the nature of the institution's holdings and risk exposures. Exposures to each type of risk (that is, credit, market, liquidity) should be aggregated across securities and derivative contracts and integrated with similar

exposures arising from lending and other business activities to obtain the institution's overall risk profile.

Examiners should evaluate whether the risk measures and the risk-measurement process are sufficient to accurately reflect the different types of risks facing the institution. Institutions should establish clear risk-measurement standards for both the acquisition and ongoing management of securities and derivative positions. Risk-measurement standards should provide a common framework for limiting and monitoring risks and should be understood by relevant personnel at all levels of the institution—from individual managers to the board of directors.

Acquisition standards. Institutions conducting securities and derivative activities should have the capacity to evaluate the risks of instruments before acquiring them. Before executing any transaction, an institution should evaluate the instrument to ensure that it meets the various objectives, risk tolerances, and guidelines identified by the institution's policies. Evaluations of the credit-, market-, and liquidity-risk exposures should be clearly and adequately documented for each acquisition. Documentation should be appropriate for the nature and type of instrument; relatively simple instruments would probably require less documentation than instruments with significant leverage or option characteristics.

Institutions with significant securities and derivative activities are expected either to conduct in-house preacquisition analyses or use specific third-party analyses that are independent of the seller or counterparty. Analyses provided by the originating dealer or counterparty should be used only when a clearly defined investment advisory relationship exists. Less active institutions with relatively uncomplicated holdings may use risk analyses provided by the dealer only if the analyses are derived using standard industry calculators and market conventions. Such analyses must comprehensively depict the potential risks involved in the acquisition, and they should be accompanied by documentation that sufficiently demonstrates that the acquirer understands fully both the analyses and the nature of the institution's relationship with the provider of these analyses. Notwithstanding information and analyses obtained from outside sources, management is ultimately responsible for understanding the nature and

risk profiles of the institution's securities and derivative holdings.

When reviewing an instrument, it is a prudent practice for institutions to obtain and compare price quotes and risk analyses from more than one dealer before acquisition. Institutions should ensure that they clearly understand the responsibilities of any outside parties that provide analyses and price quotes. If analyses and price quotes provided by dealers are used, institutions should assume that each party deals at arm's length for its own account unless a written agreement stating otherwise exists. Institutions should exercise caution when dealers limit the institution's ability to show securities or derivative contract proposals to other dealers to receive comparative price quotes or risk analyses. As a general sound practice, unless the dealer or counterparty is also acting under a specific investment advisory relationship, an investor or end-user should not acquire an instrument or enter into a transaction if its fair value or the analyses required to assess its risk cannot be determined through a means that is independent of the originating dealer or counterparty.

Portfolio-management standards. Institutions should periodically review the performance and effectiveness of instruments, portfolios, and institutional programs and strategies. This review should be conducted at least quarterly and should evaluate the extent to which the institution's securities and derivative holdings meet the various objectives, risk tolerances, and guidelines established by the institution's policies.⁴ Institutions with large or highly complex holdings should conduct reviews more frequently.

For internal measurements of risk, effective measurement of the credit, market, and liquidity risks of many securities and derivative contracts requires mark-to-market valuations. Accordingly, the periodic revaluation of securities and derivative holdings is an integral part of an effective risk-measurement system. Periodic revaluations should be fully documented. When available, actual market prices should be used. For less liquid or complex instruments, institutions with only limited holdings may use properly documented periodic prices and analyses

provided by dealers or counterparties. More active institutions should conduct periodic revaluations and portfolio analyses using either in-house capabilities or outside-party analytical systems that are independent of sellers or counterparties. Institutions should recognize that indicative price quotes and model revaluations may differ from the values at which transactions can be executed.

Stress testing. Analyzing the credit, market, and liquidity risk of individual instruments, portfolios, and the entire institution under a variety of unusual and stressful conditions is an important aspect of the risk-measurement process. Management should seek to identify the types of situations, or the combinations of credit and market events, that could produce substantial losses or liquidity problems. Typically, management considers the institution's consolidated exposures when managing nontrading securities and derivative contracts; therefore, the effect of stress on these exposures should be reviewed. Stress tests should evaluate changes in market conditions, including alternatives in the underlying assumptions used to value instruments. All major assumptions used in stress tests should be identified.

Stress tests should not be limited to quantitative exercises that compute potential losses or gains, but should include qualitative analyses of the tools available to management to deal with various scenarios. Contingency plans outlining operating procedures and lines of communication, both formal and informal, are important products of such qualitative analyses.

The appropriate extent and sophistication of an institution's stress testing depend heavily on the scope and nature of its securities and derivative holdings and on its ability to limit the effect of adverse events. Institutions holding securities or derivative contracts with complex credit, market, or liquidity risk profiles should have an established regime of stress testing. Examiners should consider the circumstances at each institution when evaluating the adequacy or need for stress-testing procedures.

Risk Reporting

An accurate, informative, and timely management information system is essential. Examiners should evaluate the adequacy of an institution's monitoring and reporting of the risks, returns,

4. For example, the performance of instruments and portfolios used to meet objectives for tax-advantaged earnings should be evaluated to ensure that they meet the necessary credit-rating, market-sensitivity, and liquidity characteristics established for this objective.

and overall performance of security and derivative activities to senior management and the board of directors. Management reports should be frequent enough to provide the responsible individuals with adequate information to judge the changing nature of the institution's risk profile and to evaluate compliance with stated policy objectives and constraints.

Management reports should translate measured risks from technical and quantitative formats to formats that can be easily read and understood by senior managers and directors, who may not have specialized and technical knowledge of all financial instruments used by the institution. Institutions should ensure that they use a common conceptual framework for measuring and limiting risks in reports to senior managers and directors. These reports should include the periodic assessment of the performance of appropriate instruments or portfolios in meeting their stated objective, subject to the relevant constraints and risk tolerances.

Management Evaluation and Review

Management should regularly review the institution's approach and process for managing risks. This includes regularly assessing the methodologies, models, and assumptions used to measure risks and limit exposures. Proper documentation of the elements used in measuring risks is essential for conducting meaningful reviews. Limits should be compared with actual exposures. Reviews should also consider whether existing measures of exposure and limits are appropriate in view of the institution's holdings, past performance, and current capital position.

The frequency of the reviews should reflect the nature of an institution's holdings and the pace of market innovations in measuring and managing risks. At a minimum, institutions with significant activities in complex cash or derivative contracts should review the underlying methodologies of the models they use at least annually—and more often as market conditions dictate—to ensure that they are appropriate and consistent. Reviews by external auditors or other qualified outside parties, such as consultants with expertise in highly technical models and risk-management techniques, may often supplement these internal evaluations. Institutions depending on outside parties to provide various risk-measurement capabilities should ensure that the outside institution has personnel with the

necessary expertise to identify and evaluate the important assumptions incorporated in the risk-measurement methodologies it uses.

Comprehensive Internal Controls and Audit Procedures

Institutions should have adequate internal controls to ensure the integrity of the management process used in investment and end-user activities. Internal controls consist of procedures, approval processes, reconciliations, reviews, and other mechanisms designed to provide a reasonable assurance that the institution's risk-management objectives for these activities are achieved. Appropriate internal controls should address all of the various elements of the risk-management process, including adherence to policies and procedures, the adequacy of risk identification, and risk measurement and reporting.

An important element of a bank's internal controls for investment and end-user activities is comprehensive evaluation and review by management. Management should ensure that the various components of the bank's risk-management process are regularly reviewed and evaluated by individuals who are independent of the function they are assigned to review. Although procedures for establishing limits and for operating within them may vary among banks, management should conduct periodic reviews to determine whether the organization complies with its investment and end-user risk-management policies and procedures. Positions that exceed established limits should receive the prompt attention of appropriate management and should be resolved according to the process described in approved policies. Periodic reviews of the risk-management process should also address any significant changes in the nature of instruments acquired, limits, and internal controls that have occurred since the last review.

Examiners should also review the internal controls of all key activities involving securities and derivative contracts. For example, for transaction recording and processing, examiners should evaluate and assess adherence to the written policies and procedures for recording transactions. They should also analyze the transaction-processing cycle to ensure the integrity and accuracy of the institution's records and management reports. Examiners should review

all significant internal controls associated with the management of the credit, market, liquidity, operational, and legal risks involved in securities and derivative holdings.

The examiner should review the frequency, scope, and findings of any independent internal and external auditors relative to the institution's securities and derivative activities. When applicable, internal auditors should audit and test the risk-management process and internal controls periodically. Internal auditors are expected to have a strong understanding of the specific products and risks faced by the organization. In addition, they should have sufficient expertise to evaluate the risks and controls of the institution. The depth and frequency of internal audits should increase if weaknesses and significant issues exist or if portfolio structures, modeling methodologies, or the overall risk profile of the institution has changed.

In reviewing risk management of nontrading securities and derivative activities, internal auditors should thoroughly evaluate the effectiveness of the internal controls used for measuring, reporting, and limiting risks. Internal auditors should also evaluate compliance with risk limits and the reliability and timeliness of information reported to the institution's senior management and board of directors, as well as the independence and overall effectiveness of the institution's risk-management process. The level of confidence that examiners place in an institution's audit programs, the nature of the audit findings, and management's response to those findings will influence the scope of the current examination of securities and derivative activities.

Examiners should pay special attention to significant changes in the nature of instruments acquired, risk-measurement methodologies, limits, and internal controls that have occurred since the last examination. Significant changes in earnings from securities and derivative contracts, in the size of positions, or in the value-at-risk associated with these activities should also receive attention during the examination.

Evaluating Management of Specific Risks

Specific considerations in evaluating the key elements of sound risk-management systems as they relate to the credit, market, liquidity, oper-

ating, and legal risks involved in securities and derivative contracts for nontrading activities are described below.

Credit Risk

Broadly defined, credit risk is the risk that an issuer or counterparty will fail to perform on an obligation to the institution. The policies of an institution should recognize credit risk as a significant risk posed by the institution's securities and derivative activities. Accordingly, policies should identify credit-risk constraints, risk tolerances, and limits at the appropriate instrument, portfolio, and institutional levels. In doing so, institutions should ensure that credit-risk constraints are clearly associated with specified objectives. For example, credit-risk constraints and guidelines should be defined for instruments used to meet pledging requirements, generate tax-advantaged income, hedge positions, generate temporary income, or meet any other specifically defined objective.

As a matter of general policy, an institution should not acquire securities or derivative contracts until it has assessed the creditworthiness of the issuer or counterparty and determined that the risk exposure conforms with its policies. The credit risk arising from these positions should be incorporated into the overall credit-risk profile of the institution to the fullest extent possible. Given the interconnectedness of the various risks facing the institution, organizations should also evaluate the effect of changes in issuer or counterparty credit standing on an instrument's market and liquidity risk. As a matter of policy, the board of directors and responsible senior management should be informed of the institution's total credit-risk exposures at least quarterly.

Selection of securities dealers. In managing their credit risk, institutions also should consider settlement and presettlement credit risk. The selection of dealers, investment bankers, and brokers is particularly important in managing these risks effectively. An institution's policies should identify criteria for selecting these organizations and list all approved firms. The approval process should include a review of each firm's financial statements and an evaluation of its ability to honor its commitments. An inquiry into the general reputation of the dealer is also appropriate. The board of directors or a committee thereof should set limits on the

amounts and types of transactions authorized for each firm. They should also periodically review and reconfirm the list of authorized dealers, investment bankers, and brokers.

The management of a depository institution should have sufficient knowledge about the securities firms and personnel with whom they are doing business. A depository institution should not engage in securities transactions with any securities firm that is unwilling to provide complete and timely disclosure of its financial condition. Management should review the securities firm's financial statements and evaluate the firm's ability to honor its commitments both before entering into transactions with the firm and periodically thereafter. An inquiry into the general reputation of the dealer also is necessary. The board of directors or an appropriate committee of the board should periodically review and approve a list of securities firms with whom management is authorized to do business. The board or an appropriate committee thereof should also periodically review and approve limits on the amounts and types of transactions to be executed with each authorized securities firm. Limits to be considered should include dollar amounts of unsettled trades, safekeeping arrangements, repurchase transactions, securities lending and borrowing, other transactions with credit risk, and total credit risk with an individual dealer.

At a minimum, depository institutions should consider the following in selecting and retaining a securities firm:

- the ability of the securities dealer and its subsidiaries or affiliates to fulfill commitments as evidenced by their capital strength, liquidity, and operating results (This evidence should be gathered from current financial data, annual reports, credit reports, and other sources of financial information.)
- the dealer's general reputation or financial stability and its fair and honest dealings with customers (Other depository institutions that have been or are currently customers of the dealer should be contacted.)
- information available from state or federal securities regulators and securities industry self-regulatory organizations, such as the Financial Industry Regulatory Authority (FINRA), concerning any formal enforcement actions against the dealer, its affiliates, or associated personnel

- in those instances when the institution relies on the advice of a dealer's sales representative, the experience and expertise of the sales representative with whom business will be conducted

In addition, the board of directors (or an appropriate committee of the board) must ensure that the depository institution's management has established appropriate procedures to obtain and maintain possession or control of securities purchased. Purchased securities and repurchase-agreement collateral should only be left in safekeeping with selling dealers when (1) the board of directors or an appropriate committee thereof is completely satisfied as to the credit-worthiness of the securities dealer and (2) the aggregate market value of securities held in safekeeping is within credit limitations that have been approved by the board of directors (or an appropriate committee of the board) for unsecured transactions (see the October 22, 1985, FFIEC policy statement "Repurchase Agreements of Depository Institutions with Securities Dealers and Others").

State lending limits generally do not extend to the safekeeping arrangements described above. Notwithstanding this general principle, a bank's board of directors should establish prudent limits for safekeeping arrangements. These prudential limits generally involve a fiduciary relationship, which presents operational rather than credit risks.

To avoid concentrations of assets or other types of risk, banking organizations should, to the extent possible, try to diversify the firms they use for safekeeping arrangements. Further, while certain transactions with securities dealers and safekeeping custodians may entail only operational risks, other transactions with these parties may involve credit risk that could, under some limited circumstances, be subject to statutory lending limits, depending on applicable state laws. If certain transactions are deemed subject to a state's legal lending limit statute because of a particular safekeeping arrangement, the provisions of the state's statutes would, of course, control the extent to which the safekeeping arrangement complies with an individual state's legal lending limit.

Limits. An institution's credit policies should also include guidelines on the quality and quantity of each type of security that may be held. Policies should provide credit-risk diversifica-

tion and concentration limits, which may define concentrations to a single or related issuer or counterparty, in a geographical area, or in obligations with similar characteristics. Policies should also include procedures, such as increased monitoring and stop-loss limits, for addressing deterioration in credit quality.

Sound credit-risk management requires that credit limits be developed by personnel who are independent of the acquisition function. In authorizing issuer and counterparty credit lines, these personnel should use standards that are consistent with those used for other activities conducted within the institution and with the organization's overall policies and consolidated exposures. To assess the creditworthiness of other organizations, institutions should not rely solely on outside sources, such as standardized ratings provided by independent rating agencies, but should perform their own analysis of a counterparty's or issuer's financial strength. In addition, examiners should review the credit-approval process to ensure that the credit risks of specific products are adequately identified and that credit-approval procedures are followed for all transactions.

For most cash instruments, credit exposure is measured as the current carrying value. In the case of many derivative contracts, especially those traded in OTC markets, credit exposure is measured as the replacement cost of the position, plus an estimate of the institution's potential future exposure to changes in the replacement value of that position in response to market price changes. Replacement costs of derivative contracts should be determined using current market prices or generally accepted approaches for estimating the present value of future payments required under each contract, at current market rates.

The measurement of potential future credit-risk exposure for derivative contracts is more subjective than the measurement of current exposure and is primarily a function of the time remaining to maturity; the number of exchanges of principal; and the expected volatility of the price, rate, or index underlying the contract. Potential future exposure can be measured using an institution's own simulations or, more simply, by using add-ons such as those included in the Federal Reserve's risk-based capital guidelines. Regardless of the method an institution uses, examiners should evaluate the reasonableness of the assumptions underlying the institution's risk measure.

For derivative contracts and certain types of cash transactions, master agreements (including netting agreements) and various credit enhancements (such as collateral or third-party guarantees) can reduce settlement, issuer, and counterparty credit risk. In such cases, an institution's credit exposures should reflect these risk-reducing features only to the extent that the agreements and recourse provisions are legally enforceable in all relevant jurisdictions. This legal enforceability should extend to any insolvency proceedings of the counterparty. Institutions should be prepared to demonstrate sufficient due diligence in evaluating the enforceability of these contracts.

In reviewing credit exposures, examiners should consider the extent to which positions exceed credit limits and whether exceptions are resolved according to the institution's adopted policies and procedures. Examiners should also evaluate whether the institution's reports adequately provide all personnel involved in the acquisition and management of financial instruments with relevant, accurate, and timely information about the credit exposures and approved credit lines.

Market Risk

Market risk is the exposure of an institution's financial condition to adverse movements in the market rates or prices of its holdings before such holdings can be liquidated or expeditiously offset. It is measured by assessing the effect of changing rates or prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution. Although many banking institutions focus on carrying values and reported earnings when assessing market risk at the institutional level, other measures focusing on total returns and changes in economic or fair values better reflect the potential market-risk exposure of institutions, portfolios, and individual instruments. Changes in fair values and total returns directly measure the effect of market movements on the economic value of an institution's capital and provide significant insights into their ultimate effects on the institution's long-term earnings. Institutions should manage and control their market risks using both an earnings and an economic-value approach, and at least on an economic or fair-value basis.

When evaluating capital adequacy, examiners should consider the effect of changes in market rates and prices on the economic value of the institution by evaluating any unrealized losses in an institution's securities or derivative positions. This evaluation should assess the ability of the institution to hold its positions and function as a going concern if recognition of unrealized losses would significantly affect the institution's capital ratios. Examiners also should consider the impact that liquidating positions with unrealized losses may have on the institution's prompt-corrective-action capital category.

Market-risk limits should be established for both the acquisition and ongoing management of an institution's securities and derivative holdings and, as appropriate, should address exposures for individual instruments, instrument types, and portfolios. These limits should be integrated fully with limits established for the entire institution. At the institutional level, the board of directors should approve market-risk exposure limits that specify percentage changes in the economic value of capital and, when applicable, in the projected earnings of the institution under various market scenarios. Similar and complementary limits on the volatility of prices or fair value should be established at the appropriate instrument, product-type, and portfolio levels, based on the institution's willingness to accept market risk. Limits on the variability of effective maturities may also be desirable for certain types of instruments or portfolios.

The scenarios an institution specifies for assessing the market risk of its securities and derivative products should be sufficiently rigorous to capture all meaningful effects of any options. For example, in assessing interest-rate risk, scenarios such as 100, 200, and 300 basis point parallel shifts in yield curves should be considered as well as appropriate nonparallel shifts in structure to evaluate potential basis, volatility, and yield curve risks.

Accurately measuring an institution's market risk requires timely information about the current carrying and market values of its securities and derivative holdings. Accordingly, institutions should have market-risk measurement systems commensurate with the size and nature of these holdings. Institutions with significant holdings of highly complex instruments should ensure that they have independent means to value their positions. Institutions using internal models to measure risk should have adequate

procedures to validate the models and periodically review all elements of the modeling process, including its assumptions and risk-measurement techniques. Institutions relying on third parties for market-risk measurement systems and analyses should fully understand the assumptions and techniques used by the third party.

Institutions should evaluate the market-risk exposures of their securities and derivative positions and report this information to their boards of directors regularly, not less frequently than each quarter. These evaluations should assess trends in aggregate market-risk exposure and the performance of portfolios relative to their established objectives and risk constraints. They also should identify compliance with board-approved limits and identify any exceptions to established standards. Examiners should ensure that institutions have mechanisms to detect and adequately address exceptions to limits and guidelines. Examiners should also determine that management reporting on market risk appropriately addresses potential exposures to basis risk, yield curve changes, and other factors pertinent to the institution's holdings. In this connection, examiners should assess an institution's compliance with broader guidance for managing interest-rate risk in a consolidated organization.

Complex and illiquid instruments often involve greater market risk than broadly traded, more liquid securities. Often, this higher potential market risk arising from illiquidity is not captured by standardized financial-modeling techniques. This type of risk is particularly acute for instruments that are highly leveraged or that are designed to benefit from specific, narrowly defined market shifts. If market prices or rates do not move as expected, the demand for these instruments can evaporate. When examiners encounter such instruments, they should review how adequately the institution has assessed its potential market risks. If the risks from these instruments are material, the institution should have a well-documented process for stress testing their value and liquidity assumptions under a variety of market scenarios.

Liquidity Risk

Banks face two types of liquidity risk in their securities and derivative activities: risks related to specific products or markets and risks related to the general funding of their activities. The

former, market-liquidity risk, is the risk that an institution cannot easily unwind or offset a particular position at or near the previous market price because of inadequate market depth or disruptions in the marketplace. The latter, funding-liquidity risk, is the risk that the bank will be unable to meet its payment obligations on settlement dates. Since neither type of liquidity risk is unique to securities and derivative activities, management should evaluate these risks in the broader context of the institution's overall liquidity.

When specifying permissible securities and derivative instruments to accomplish established objectives, institutions should take into account the size, depth, and liquidity of the markets for specific instruments, and the effect these characteristics may have on achieving an objective. The market liquidity of certain types of instruments may make them entirely inappropriate for achieving certain objectives. Moreover, institutions should consider the effects that market risk can have on the liquidity of different types of instruments. For example, some government-agency securities may have embedded options that make them highly illiquid during periods of market volatility and stress, despite their high credit rating. Accordingly, institutions should clearly articulate the market-liquidity characteristics of instruments to be used in accomplishing institutional objectives.

The funding risk of an institution becomes a more important consideration when its unrealized losses are material; therefore, this risk should be a factor in evaluating capital adequacy. Institutions with weak liquidity positions are more likely to be forced to recognize these losses and suffer declines in their accounting and regulatory capital. In extreme cases, these effects could force supervisors to take prompt corrective actions.

Examiners should assess whether the institution adequately considers the potential liquidity risks associated with the liquidation of securities or the early termination of derivative contracts. Many forms of standardized contracts for derivative transactions allow counterparties to request collateral or terminate their contracts early if the institution experiences an adverse credit event or a deterioration in its financial condition. In addition, under situations of market stress, customers may ask for the early termination of some contracts within the context of the dealer's market-making activities. In these circumstances, an institution that owes

money on derivative transactions may be required to deliver collateral or settle a contract early, possibly at a time when the institution may face other funding and liquidity pressures. Early terminations may also open additional, unintended market positions. Management and directors should be aware of these potential liquidity risks and address them in the institution's liquidity plan and in the broader context of the institution's liquidity-management process. In their reviews, examiners should consider the extent to which such potential obligations could present liquidity risks to the institution.

Operating and Legal Risks

Operating risk is the risk that deficiencies in information systems or internal controls will result in unexpected loss. Some specific sources of operating risk include inadequate procedures, human error, system failure, or fraud. Inaccurately assessing or controlling operating risks is one of the more likely sources of problems facing institutions involved in securities and derivative activities.

Adequate internal controls are the first line of defense in controlling the operating risks involved in an institution's securities and derivative activities. Of particular importance are internal controls to ensure that persons executing transactions are separated from those individuals responsible for processing contracts, confirming transactions, controlling various clearing accounts, approving the accounting methodology or entries, and performing revaluations.

Institutions should have approved policies, consistent with legal requirements and internal policies, that specify documentation requirements for transactions and formal procedures for saving and safeguarding important documents. Relevant personnel should fully understand the requirements. Examiners should also consider the extent to which institutions evaluate and control operating risks through internal audits, stress testing, contingency planning, and other managerial and analytical techniques.

An institution's operating policies should establish appropriate procedures to obtain and maintain possession or control of instruments purchased. Institutions should ensure that transactions consummated orally are confirmed as soon as possible. As noted earlier in this section, banking organizations should, to the extent pos-

sible, seek to diversify the firms used for their safekeeping arrangements to avoid concentrations of assets or other types of risk.

Legal risk is the risk that contracts are not legally enforceable or documented correctly. This risk should be limited and managed through policies developed by the institution's legal counsel. At a minimum, guidelines and processes should be in place to ensure the enforceability of counterparty agreements. Examiners should determine whether an institution is adequately evaluating the enforceability of its agreements before individual transactions are consummated. Institutions should also ensure that the counterparty has sufficient authority to enter into the transaction and that the terms of the agreement are legally sound. Institutions should further ascertain that their netting agreements are adequately documented, have been executed properly, and are enforceable in all relevant jurisdictions. Institutions should know relevant tax laws and interpretations governing the use of netting instruments.

An institution's policies should also provide conflict-of-interest guidelines for employees who are directly involved in purchasing securities from and selling securities to securities dealers on behalf of their institution. These guidelines should ensure that all directors, officers, and employees act in the best interest of the institution. The board of directors may wish to adopt policies prohibiting these employees from engaging in personal securities transactions with the same securities firms the institution uses without the specific prior approval of the board. The board of directors may also wish to adopt a policy applicable to directors, officers, and employees that restricts or prohibits them from receiving gifts, gratuities, or travel expenses from approved securities dealer firms and their personnel.

INTERNATIONAL DIVISION INVESTMENTS

The same types of instruments exist in international banking as in domestic banking. Securities and derivative contracts may be acquired by a bank's international division and overseas branches for its own account, and foreign equity investments may be held by the bank directly or through Edge Act corporations. The investments held by most international divisions are predomi-

nately securities issued by various governmental entities of the countries in which the bank's foreign branches are located. These investments are held for a variety of purposes:

- They are required by various local laws.
- They are used to meet foreign reserve requirements.
- They result in reduced tax liabilities.
- They enable the bank to use new or increased re-discount facilities or benefit from greater deposit or lending authorities.
- They are used by the bank as an expression of "goodwill" toward a country.

The examiner should be familiar with the applicable sections of Regulation K (12 CFR 211) governing a member bank's international investment holdings, as well as other regulations discussed in this section. Because of the mandatory investment requirements of some countries, securities held cannot always be as "liquid" and "readily marketable" as required in domestic banking. However, the amount of a bank's "mandatory" holdings will normally be a relatively small amount of its total investments or capital funds.

A bank's international division may also hold securities strictly for investment purposes; these are expected to provide a reasonable rate of return commensurate with safety considerations. As with domestic investment securities, the bank's safety must take precedence, followed by liquidity and marketability. Securities held by international divisions are considered to be liquid if they are readily convertible into cash at their approximate carrying value. They are marketable if they can be sold in a very short time at a price commensurate with yield and quality. Speculation in marginal foreign securities to generate more favorable yields is an unsound banking practice and should be discouraged.

Banks are generally prohibited from investing in stocks. However, a number of exceptions (detailed earlier in this section) are often applicable to the international division. For example, the bank may, under section 24A of the Federal Reserve Act (12 USC 371d), hold stock in overseas corporations that hold title to foreign bank premises. Both stock and other securities holdings are permissible under certain circumstances and in limited amounts under section 211.4 of Regulation K—Permissible Activities and Investments of Foreign Branches of

Member Banks (12 CFR 211). Other sections of Regulation K permit the bank to make equity investments in Edge Act and agreement corporations and in foreign banks, subject to certain limitations.

Standard & Poor's, Moody's, and other publications from U.S. rating-services rate Canadian and other selected foreign securities that are authorized for U.S. commercial bank investment purposes under 12 USC 24(7). However, in many other countries, securities-rating services are limited or nonexistent. When they do exist, the ratings are only indicative and should be supplemented with additional information on legality, credit soundness, marketability, and foreign-exchange and country-risk factors. The opinions of local attorneys are often the best source of determining whether a particular foreign security has the full faith and credit backing of a country's government.

Sufficient analytical data must be provided to the bank's board of directors and senior management so they can make informed judgments about the effectiveness of the international division's investment policy and procedures. The institution's international securities and derivative contracts should be included on all board and senior management reports detailing domestic securities and derivative contracts received. These reports should be timely and sufficiently detailed to allow the board of directors and senior management to understand and assess the credit, market, and liquidity risks facing the institution and its securities and derivative positions.

MORTGAGE-DERIVATIVE PRODUCTS

Some mortgage-derivative products exhibit considerably more price volatility than mortgages or ordinary mortgage pass-through securities. If not managed in a safe and sound manner, these products can expose investors to significant risk of loss. The price volatility of these products is caused in part by the uncertain cash flows that result from changes in the prepayment rates of the underlying mortgages.

Mortgage-derivative products are complex; a high degree of technical expertise is required to understand how their prices and cash flows may behave in various interest-rate and prepayment scenarios. Moreover, the secondary market for

some of these products can be relatively thin, making them difficult to liquidate if the need arises. Finally, new variants of these instruments continue to be introduced, whose price performance under varying market and economic conditions has not been tested.

Under the February 10, 1992, supervisory policy statement of the Federal Financial Institutions Examination Council (FFIEC), the banking agencies call for special management of mortgage-derivative products. A general principle underlying this policy is that mortgage-derivative products possessing average life or price volatility in excess of a benchmark fixed-rate 30-year mortgage-backed pass-through security are high-risk mortgage securities and are not suitable investments. All high-risk mortgage securities (defined later in this section) acquired by depository institutions after February 10, 1992, must be carried in the institution's trading account or as assets available for sale. Mortgage-derivative products that do not meet the definition of a high-risk mortgage security at the time of purchase may be reported as held-to-maturity, available-for-sale, or held-for-trading, as appropriate. Institutions must ascertain at least annually whether such products have become high-risk mortgage securities. Purchases of high-risk mortgage securities before February 10, 1992, generally will be reviewed in accordance with previously existing supervisory policies.

Institutions generally should hold mortgage-derivative products that meet the definition of a high-risk mortgage security only to reduce interest-rate risk, in accordance with safe and sound practices. Before taking a position in any high-risk mortgage security, an institution should conduct an analysis to ensure that the position will reduce its overall interest-rate risk. Furthermore, depository institutions that purchase high-risk mortgage securities must demonstrate that they understand and are effectively managing the risks associated with these instruments. First, a depository institution must determine whether a mortgage-derivative product is high risk before purchasing it. A prospectus supplement or other supporting analysis that fully details the cash flows covering each of the securities held by the institution should be obtained and analyzed before purchase and retained for examiner review. In any event, a prospectus supplement should be obtained as soon as it becomes available. Levels of activity involving high-risk mortgage securities should be reasonably related to

an institution's capital, capacity to absorb losses, and level of in-house management sophistication and expertise. Appropriate managerial and financial controls must be in place, and the institution must analyze, monitor, and prudently adjust its holdings of high-risk mortgage securities to correspond with changing price and maturity expectations.

An institution should consider the liquidity and price volatility of high-risk mortgage securities before purchasing them. In certain circumstances, the appropriate federal regulatory authority may deem an institution's purchase or retention of high-risk mortgage securities to be contrary to safe and sound practices for depository institutions, which will result in criticism by examiners. Examiners may require the orderly divestiture of high-risk mortgage securities. Securities and other products with risk characteristics similar to those of high-risk mortgage securities, whether carried on or off the balance sheet (such as CMO swaps, but excluding servicing assets), will be subject to the same supervisory treatment as high-risk mortgage securities.

High-Risk Mortgage Securities

In general, any mortgage-derivative product that exhibits greater price volatility than a benchmark fixed-rate 30-year mortgage-backed pass-through security will be deemed to be high risk. For purposes of the FFIEC policy statement, a high-risk mortgage security is defined as any mortgage-derivative product that at the time of purchase, or at a subsequent testing date, meets any of the following tests. (In general, a mortgage-derivative product that does not meet any of the three tests below will be considered to be a non-high-risk mortgage security.)

- *Average-life test.* The mortgage-derivative product has an expected weighted average life greater than 10.0 years.
- *Average-life sensitivity test.* The expected weighted average life of the mortgage-derivative product—
 - extends by more than 4.0 years, assuming an immediate and sustained parallel shift in the yield curve of plus 300 basis points or

- shortens by more than 6.0 years, assuming an immediate and sustained parallel shift in the yield curve of minus 300 basis points.
- *Price-sensitivity test.* The estimated change in the price of the mortgage-derivative product is more than 17 percent, due to an immediate and sustained parallel shift in the yield curve of plus or minus 300 basis points.

In applying any of the above tests, all of the underlying assumptions (including prepayment assumptions) for the underlying collateral must be reasonable. All of the assumptions underlying the analysis must be available for examiner review. For example, if an institution's prepayment assumptions differ significantly from the median prepayment assumptions of several major dealers as selected by examiners, the examiners may use these median prepayment assumptions to determine if a particular mortgage-derivative product is high risk. The above tests may be adjusted to consider significant movements in market interest rates, to fairly measure the risk characteristics of new mortgage-backed products, and to take appropriate action to prevent circumvention of the definition of a high-risk mortgage security and other such standards.

Generally, a CMO floating-rate debt class will not be subject to the average-life and average-life sensitivity tests described above if it bears a rate that, at the time of purchase or at a subsequent testing date, is below the contractual cap on the instrument. (An institution may purchase interest-rate contracts that effectively uncap the instrument.) For purposes of this guidance, a CMO floating-rate debt class is a debt class whose rate adjusts at least annually on a one-for-one basis with the debt class's index. The index must be a conventional, widely used market-interest-rate index such as the London Interbank Offered Rate (LIBOR). Inverse floating-rate debt classes are not included in the definition of a floating-rate debt class.

Holdings of High-Risk Mortgage Securities

An institution generally may only acquire a high-risk mortgage-derivative product to reduce its overall interest-rate risk. (Institutions meeting the previously discussed guidance on the use of these securities in a trading account may

also purchase these securities for trading purposes.) An institution that has acquired high-risk mortgage securities to reduce interest-rate risk needs to frequently assess its interest-rate risk position and the performance of these securities. Since interest-rate positions constantly change, an institution may determine that its high-risk mortgage securities no longer reduce interest-rate risk. Therefore, mortgage-derivative products that are high risk when acquired shall not be reported as held-to-maturity securities at amortized cost.

In appropriate circumstances, examiners may seek the orderly divestiture of high-risk mortgage securities that do not reduce interest-rate risk. Appropriate circumstances are those in which the examiner determines that continued ownership of high-risk mortgage securities represents an undue safety-and-soundness risk to the institution. This risk can arise from (1) the size of a bank's or thrift's holdings of high-risk mortgage securities in relation to its capital and earnings, (2) management's inability to demonstrate an understanding of the nature of the risks inherent in the securities, (3) the absence of internal monitoring systems and other internal controls to appropriately measure the market and cash-flow risks of these securities, (4) management's inability to prudently manage its overall interest-rate risk, or (5) similar factors.

An institution that owns or plans to acquire high-risk mortgage securities must have a monitoring and reporting system in place to evaluate their expected and actual performance. Institutional analysis must show that the proposed acquisition of a high-risk mortgage security will reduce overall interest-rate risk. After purchase, the institution must evaluate at least quarterly whether the high-risk mortgage security has actually reduced interest-rate risk.

Analyses performed before the purchase of high-risk mortgage securities, and subsequent analyses, must be fully documented and will be subject to examiner review. This review will include an analysis of all management assumptions about the interest-rate risk associated with the institution's assets, liabilities, and off-balance-sheet positions. Analyses performed and records constructed to justify purchases on a post-acquisition basis are unacceptable and will be subject to examiner criticism. Reliance on analyses and documentation obtained from a securities dealer or other outside party without

internal analyses by the institution are unacceptable, and reliance on these third-party analyses will be subject to examiner criticism.

Management should also maintain documentation demonstrating it took reasonable steps to ensure that the prices paid for high-risk mortgage securities represented fair market value. Generally, price quotes should be obtained from at least two brokers before executing a trade. If price quotes cannot be obtained from more than one broker, management should document those reasons (such as the unique or proprietary nature of the transaction). In addition, a depository institution that owns high-risk mortgage securities must demonstrate that it has established the following:

- a board-approved portfolio policy that addresses the goals and objectives the institution expects to achieve through its securities activities, including objectives for interest-rate risk reduction with respect to high-risk mortgage securities
- limits on the amounts of funds that may be committed to high-risk mortgage securities
- specific financial-officer responsibility for and authority over securities activities involving high-risk mortgage securities
- adequate information systems
- procedures for periodic evaluation of high-risk mortgage securities and their actual performance in reducing interest-rate risk
- appropriate internal controls

The board of directors or an appropriate committee thereof and the institution's senior management should regularly (at least quarterly) review all high-risk mortgage securities to determine whether they are adequately satisfying the objectives for interest-rate risk reduction set forth in the portfolio policy. The depository institution's senior management should be fully knowledgeable about the risks associated with prepayments and their subsequent impact on its high-risk mortgage securities. Failure to comply with this policy will be viewed as an unsafe and unsound practice.

Non-High-Risk Mortgage Securities

Mortgage-derivative products that do not meet the definition of high-risk mortgage securities at the time of purchase should be reported as

held-to-maturity, available-for-sale, or held-for-trading, as appropriate. Institutions must ascertain and document before purchase and at least annually thereafter that non-high-risk mortgage securities that are held to maturity remain outside the high-risk category. If an institution is unable to make these determinations through internal analysis, it must use information derived from a source that is independent of the party from whom the product is being purchased. Standard industry calculators used in the mortgage-related securities marketplace are acceptable and considered independent sources. If relying on this type of independent analysis, institutions are responsible for ensuring that the assumptions underlying the analysis and the resulting calculation are reasonable. Documentation verifying this determination will be subject to examiner review.

A mortgage-derivative product that was not a high-risk mortgage security when it was purchased as an investment may later fall into the high-risk category. When this occurs, the depository institution may continue to designate the mortgage-derivative product as held-to-maturity, providing that management intends and is able to hold the security to maturity. Furthermore, examiners should consider any unrecognized net depreciation in held-to-maturity high-risk securities when the adequacy of the depository institution's capital adequacy is evaluated.

Once a mortgage-derivative product has been designated as high risk, it may be redesignated as nonhigh risk only if, at the end of two consecutive quarters, it does not meet the definition of a high-risk mortgage security. Upon redesignation as a non-high-risk security, it does not need to be tested for another year.

UNSUITABLE INVESTMENT PRACTICES

Institutions should categorize each of their security activities as trading, available-for-sale, or held-to-maturity consistent with GAAP (that is, Statement of Financial Accounting Standards No. 115, "Accounting for Certain Investments in Debt and Equity Securities," as amended) and regulatory reporting standards. Management should reassess the categorizations of its securities periodically to ensure that they remain appropriate.

Securities that are intended to be held principally for the purpose of selling in the near term should be classified as trading assets. Trading activity includes the active and frequent buying and selling of securities for the purpose of generating profits on short-term fluctuations in price. Securities held for trading purposes must be reported at fair value, with unrealized gains and losses recognized in current earnings and regulatory capital. The proper categorization of securities is important to ensure that trading gains and losses are promptly recognized—which will not occur when securities intended to be held for trading purposes are categorized as held-to-maturity or available-for-sale.

It is an unsafe and unsound practice to report securities held for trading purposes as available-for-sale or held-to-maturity securities. A close examination of an institution's actual securities activities will determine whether securities it reported as available-for-sale or held-to-maturity are, in reality, held for trading. When the following securities activities are conducted in available-for-sale or held-to-maturity accounts, they should raise supervisory concerns. The first five practices below are considered trading activities and should not occur in available-for-sale or held-to-maturity securities portfolios, and the sixth practice is wholly unacceptable under all circumstances.

Gains Trading

"Gains trading" is the purchase of a security and the subsequent sale of that same security at a profit after a short holding period. However, at the same time, securities acquired for this purpose that cannot be sold at a profit are retained in the available-for-sale or held-to-maturity portfolio; unrealized losses on debt securities in these two categories do not directly affect regulatory capital and are not reported in income until the security is sold. Examiners should note institutions that exhibit a pattern or practice of reporting significant amounts of realized gains on sales of nontrading securities (typically, available-for-sale securities) after short holding periods, while continuing to hold other nontrading securities with significant amounts of unrealized losses. In these situations, examiners may designate some or all of the securities reported outside of the trading category as trading assets.

When-Issued Securities Trading

“When-issued” securities trading is the buying and selling of securities in the period between the announcement of an offering and the issuance and payment date of the securities. A purchaser of a when-issued security acquires all of the risks and rewards of owning a security and may sell this security at a profit before having to take delivery and pay for it.

Pair-Offs

“Pair-offs” are security purchases that are closed out or sold at, or before, settlement date. In a pair-off, an institution commits to purchase a security. Then, before the predetermined settlement date, the institution will pair off the purchase with a sale of the same security. Pair-offs are settled net when one party to the transaction remits the difference between the purchase and sale price to the counterparty. Other pair-off transactions may involve the same sequence of events using swaps, options on swaps, forward commitments, options on forward commitments, or other off-balance-sheet derivative contracts.

Extended Settlements

Regular-way settlement for U.S. government and federal-agency securities (except mortgage-backed securities and derivative contracts) is one business day after the trade date. Regular-way settlement for corporate and municipal securities is three business days after the trade date, and settlement for mortgage-backed securities can be up to 60 days or more after the trade date. The use of a settlement period that exceeds the regular-way settlement periods to facilitate speculation is considered a trading activity.

Short Sales

A short sale is the sale of a security that is not owned. Generally, the purpose of a short sale is to speculate on a fall in the price of the security. Short sales should be conducted in the trading portfolio. A short sale that involves the delivery of the security sold short by borrowing it from the depository institution’s available-for-sale or

held-to-maturity portfolio should not be reported as a short sale. Instead, it should be reported as a sale of the underlying security with gain or loss recognized.

Adjusted Trading

Adjusted trading involves the sale of a security to a broker or dealer at a price above the prevailing market value and the simultaneous purchase and booking of a different security, frequently a lower-grade issue or one with a longer maturity, at a price above its market value. Thus, the dealer is reimbursed for its losses on the purchase from the institution and ensured a profit. Adjusted-trading transactions inappropriately defer the recognition of losses on the security sold and establish an excessive reported value for the newly acquired security. Consequently, these transactions are prohibited and may be in violation of 18 USC sections 1001 (False Statements or Entries) and 1005 (False Entries).

ACCOUNTING FOR SECURITIES AND FINANCIAL CONTRACTS

A single class of a financial instrument that can meet trading, investment, or hedging objectives may have a different accounting treatment applied to it, depending on management’s purpose for holding it. Therefore, an examiner reviewing investment or trading activities should be familiar with the different accounting methods to ensure that the particular accounting treatment being used is appropriate for the purpose of holding a financial instrument and the economic substance of the related transaction.

The accounting principles that apply to securities portfolios, including trading accounts, and to off-balance-sheet (OBS) derivative instruments are complex and have evolved over time—both with regard to authoritative standards and related banking practices. The objective of this section is to summarize the major aspects of the accounting principles in this important area to make the accounting guidance for both financial reporting and regulatory reporting purposes understandable and useful to examiners and supervisors. Accordingly, it is not intended to

set forth new accounting policies for investment activities. While this section provides a summary of important accounting principles for financial reporting and regulatory reporting purposes in this area, it does not list or explain the detailed line items of financial reports that must be reported for securities portfolios or OBS derivative instruments in financial reports. Examiners should consult the sources of generally accepted accounting principles (GAAP) and regulatory reporting requirements that are referred to in this section for more detailed guidance in these areas.

Examiners should be aware that accounting practices in foreign countries may differ from the accounting principles followed in the United States. Nevertheless, foreign institutions are required to submit regulatory reports prepared in accordance with U.S. banking agency regulatory reporting instructions, which to a large extent incorporate GAAP. This section will focus on reporting requirements of the United States.

The major topics covered in this section are listed below. The discussion of specific types of balance-sheet instruments (for example, securities) and OBS derivative instruments (for example, swaps, futures, forwards, and options) is interwoven with the discussion of these topic areas:

- overview of the broad framework for accounting for securities portfolios, including the general framework for trading activities
- general framework for OBS derivative instruments, including hedges
- summaries of specific accounting principles for OBS derivative instruments

Accounting for Securities Portfolios

Treatment under FASB Statement No. 115

In May 1993, the Financial Accounting Standards Board issued Statement of Financial Accounting Standards No. 115, “Accounting for Certain Investments in Debt and Equity Securities.”⁵ FASB 115 supersedes FASB 12, “Account-

5. FASB 115 does not apply to investments in equity securities accounted for under the equity method or to investments in consolidated subsidiaries. This statement does not apply to institutions whose specialized accounting practices include accounting for substantially all investments in debt and equity securities at market value or fair value, with changes in value recognized in earnings (income) or in the

ing for Certain Marketable Securities,” and related interpretations. It also amends other standards, including FASB 65, “Accounting for Certain Mortgage-Banking Activities,” to eliminate mortgage-backed securities from that statement’s scope. FASB 115 addresses investments in equity securities that have readily determinable fair values and all investments in debt securities.⁶ The accounting standard was effective for fiscal years beginning after December 15, 1993, for regulatory reporting and financial reporting purposes. It was to be initially applied as of the beginning of an institution’s fiscal year and cannot be applied retroactively to prior years’ financial statements. Investments subject to the standard are to be classified in three categories and accounted for as follows:

- *Held-to-maturity account.* Debt securities that the institution has the positive intent and ability to hold to maturity are classified as held-to-maturity securities and reported at amortized cost.
- *Trading account.* Debt and equity securities that are bought and held principally for the purpose of selling them in the near term are classified as trading securities and reported at fair value, with unrealized gains and losses included in earnings. Trading generally reflects active and frequent buying and selling, and trading securities are generally used with the objective of generating profits on short-term differences in price.
- *Available-for-sale account.* Debt and equity securities not classified as either held-to-maturity securities or trading securities are classified as available-for-sale securities and reported at fair value, with unrealized gains

change in net assets. Examples of those institutions are brokers and dealers in securities, defined-benefit pension plans, and investment companies.

6. FASB 115 states that the fair value of an equity security is readily determinable if sales prices or bid-asked quotations are currently available on a securities exchange registered with the SEC or in the over-the-counter market, provided that those prices or quotations for the over-the-counter market are publicly reported by the FINRA Automated Quotations systems or by the National Quotation Bureau, Inc. Restricted stock does not meet that definition.

The fair value of an equity security traded only in a foreign market is readily determinable if that foreign market is of a breadth and scope comparable to one of the U.S. markets referred to above. The fair value of an investment in a mutual fund is readily determinable if the fair value per share (unit) is determined and published and is the basis for current transactions.

and losses excluded from earnings and reported as a net amount in a separate component of shareholders' equity.

Under FASB 115, mortgage-backed securities that are held for sale in conjunction with mortgage-banking activities should be reported at fair value in the trading account. The standard does not apply to loans, including mortgage loans, that have not been securitized.

Upon the acquisition of a debt or equity security, an institution must place the security into one of the above three categories. At each reporting date, the institution must reassess whether the balance-sheet designation continues to be appropriate. Proper classification of securities is a key examination issue. (See SR-94-25 and SR-93-72; see also SR-96-32.)

FASB 115 recognizes that certain changes in circumstances may cause the institution to change its intent to hold a certain security to maturity without calling into question its intent to hold other debt securities to maturity in the future. Thus, the sale or transfer of a held-to-maturity security due to one of the following changes in circumstances will not be viewed as inconsistent with its original balance-sheet classification:

- evidence of a significant deterioration in the issuer's creditworthiness
- a change in tax law that eliminates or reduces the tax-exempt status of interest on the debt security (but not a change in tax law that revises the marginal tax rates applicable to interest income)
- a major business combination or major disposition (such as the sale of a segment) that necessitates the sale or transfer of held-to-maturity securities to maintain the institution's existing interest-rate risk position or credit risk policy
- a change in statutory or regulatory requirements that significantly modifies either what constitutes a permissible investment or the maximum level of investments in certain kinds of securities, thereby causing an institution to dispose of a held-to-maturity security
- a significant increase by the regulator in the industry's capital requirements that causes the institution to downsize by selling held-to-maturity securities
- a significant increase in the risk weights of

debt securities used for regulatory risk-based capital purposes

Furthermore, FASB 115 recognizes that other events that are isolated, nonrecurring, and unusual for the reporting institution and could not have been reasonably anticipated may cause the institution to sell or transfer a held-to-maturity security without necessarily calling into question its intent to hold other debt securities to maturity. However, all sales and transfers of held-to-maturity securities must be disclosed in the footnotes to the financial statements.

An institution must not designate a debt security as held-to-maturity if the institution has the intent to hold the security for only an indefinite period. Consequently, a debt security should not, for example, be designated as held-to-maturity if the banking organization or other company anticipates that the security would be available to be sold in response to—

- changes in market interest rates and related changes in the security's prepayment risk,
- needs for liquidity (for example, due to the withdrawal of deposits, increased demand for loans, surrender of insurance policies, or payment of insurance claims),
- changes in the availability of and the yield on alternative investments,
- changes in funding sources and terms, or
- changes in foreign-currency risk.

According to FASB 115, an institution's asset-liability management may take into consideration the maturity and repricing characteristics of all investments in debt securities, including those held to maturity or available for sale, without tainting or casting doubt on the standard's criterion that there be a "positive intent to hold until maturity."⁷ However, securities should not be designated as held-to-maturity if they may be sold. Further, liquidity can be derived from the held-to-maturity category by

7. In summary, under FASB 115, sales of debt securities that meet either of the following two conditions may be considered as "maturities" for purposes of the balance-sheet classification of securities: (i) The sale of a security occurs near enough to its maturity date (or call date if exercise of the call is probable)—for example, within three months—that interest-rate risk has been substantially eliminated as a pricing factor. (ii) The sale of a security occurs after the institution has already collected at least 85 percent of the principal outstanding at acquisition from either prepayments or scheduled payments.

the use of repurchase agreements that are designated as financings, but not sales.

Transfers of a security between investment categories should be accounted for at fair value. FASB 115 requires that at the date of the transfer, the security's unrealized holding gain or loss must be accounted for as follows:

- For a security transferred from the trading category, the unrealized holding gain or loss at the date of the transfer will have already been recognized in earnings and should not be reversed.
- For a security transferred into the trading category, the unrealized holding gain or loss at the date of the transfer should be recognized in earnings immediately.
- For a debt security transferred into the available-for-sale category from the held-to-maturity category, the unrealized holding gain or loss at the date of the transfer should be recognized in a separate component of shareholders' equity.
- For a debt security transferred into the held-to-maturity category from the available-for-sale category, the unrealized holding gain or loss at the date of the transfer should continue to be reported in a separate component of shareholders' equity but should be amortized over the remaining life of the security as an adjustment of its yield in a manner consistent with the amortization of any premium or discount.

Transfers from the held-to-maturity category should be rare, except for transfers due to the changes in circumstances that were discussed above. Transfers from the held-to-maturity account not meeting the exceptions indicated above may call into question management's intent to hold other securities to maturity. According to the standard, transfers into or from the trading category should also be rare.

FASB 115 requires that institutions determine whether a decline in fair value below the amortized cost for individual securities in the available-for-sale or held-to-maturity accounts is "other than temporary" (that is, whether this decline results from permanent impairment). For example, if it is probable that the investor will be unable to collect all amounts due according to the contractual terms of a debt security that was not impaired at acquisition, an other-than-temporary impairment should be considered to have occurred. If the decline in fair value

is judged to be other than temporary, the cost basis of the individual security should be written down to its fair value, and the write-down should be accounted in earnings as a realized loss. This new cost basis should not be written up if there are any subsequent recoveries in fair value.

Other Regulatory Reporting Guidance

As mentioned above, FASB 115 has been adopted for regulatory reporting purposes. In January 1992, the Federal Reserve Board issued a policy statement on securities activities that, among other things, provided supervisory accounting guidance for securities portfolios owned by banks. Elements of this policy statement have been incorporated within this section.

Other supervisory accounting guidance on securities portfolios and related matters is presented in—

- the Federal Reserve Board staff's examination guidelines for asset-securitization activities (specifically, volume 2, which addresses related accounting issues), and
- the Call Report instructions, particularly, the glossary entries on—
 - coupon stripping, treasury securities, and STRIPS;
 - trade fails;
 - foreign debt-exchange transactions;
 - market value of securities;
 - nonaccrual status;
 - premiums and discounts;
 - short positions;
 - sales of assets (see also "participations in pools of residential mortgages" for mortgage-backed securities);
 - trading accounts;
 - trade-date and settlement-date accounting;⁸ and
 - when-issued securities.

These sources should be reviewed for more detailed guidance in the above areas involving securities portfolios and related transactions.

8. As described in this glossary entry, for Call Report purposes, the preferred method for reporting securities transactions is recognition on the trade date.

General Framework for OBS Derivative Instruments

As discussed in the previous subsection, the general accounting framework for securities portfolios divides them into three categories: held-to-maturity (accounted for at amortized cost), available-for-sale (accounted for at fair value, with changes in fair value recorded in equity), and trading (accounted for at fair value, with changes in fair value recorded in earnings). On the other hand, the traditional accounting framework (that is, trading, investment, and held-for-sale) continues to be relevant for loans and other assets that are not in the legal form of a security.

In contrast, the general accounting framework for OBS derivative instruments under GAAP is set forth below:

- If the instrument meets certain specified hedge-accounting criteria, the gains or losses (income or expense) associated with the OBS derivative instrument can be deferred and realized on a basis consistent with the income or expense of the item that is being hedged.
- Otherwise, gains or losses must be recognized as they occur, and OBS derivative instruments generally must be marked to market. Of course, any OBS derivative instruments that are used for trading purposes should be placed in a well-supervised trading account and marked to market.

As discussed more fully below, this general framework is derived from FASB 52, “Foreign-Currency Translation,” and FASB 80, “Accounting for Futures Contracts.” Each statement presents different hedging criteria and related guidance. Furthermore, reporting requirements for the call report differ from GAAP with regard to domestic futures and forward contracts and written options. However, the call report follows GAAP for foreign-currency OBS derivative instruments and interest-rate swaps.

It is important to note that while GAAP permits hedge accounting for OBS derivative instruments, both GAAP and the call report prohibit the use of hedge-accounting treatment for securities (sometimes called “cash-market securities”) or other on-balance-sheet items that may serve as economic hedges of other balance-sheet or OBS items. Thus, even if a security or other balance-sheet instrument would serve the

same purpose as an OBS derivative instrument in effectively hedging an institution’s risk exposures, the gains and losses, or income and expense, on that balance-sheet instrument *cannot* be deferred to a future period when the income or expense on the item being hedged is recognized.

The following addresses important GAAP and call report rules for netting of the assets and liabilities arising from OBS derivative instruments.

SPECIFIC ACCOUNTING PRINCIPLES FOR OBS DERIVATIVE INSTRUMENTS

Instruments Covered by Authoritative Accounting Standards

Futures Contracts Not Associated with Foreign-Currency Exposures (“Domestic Futures Contracts”)

Futures contracts are firm (legally binding) commitments to purchase or sell a particular financial instrument or index, foreign currency, or commodity at a specified future date, quantity, and price or yield. Futures contracts have standardized contractual terms, are traded on organized exchanges, and are typically settled in cash rather than actual delivery.

Under GAAP, all futures contracts, except for foreign-currency futures contracts, should be reported in accordance with FASB 80, “Accounting for Futures Contracts.” Foreign-currency futures contracts should be reported in accordance with the guidance contained in FASB 52, “Foreign-Currency Translation.” These statements should be referred to for more detailed accounting guidance in these areas.

Treatment of open contracts. Contracts are outstanding (open) until they have been terminated by either the acquisition or delivery of the underlying financial instruments, or by offset. “Offset” is the purchase and sale of an opposite position using an equal number of futures contracts on the same delivery month executed through the same broker or dealer and executed on the same exchange.

Transactions in futures contracts generally involve a deposit of cash as margin, which will generally be reported within “other assets” on the balance sheet. As discussed below, changes

in the market values of open positions may affect general ledger accounts and related balance-sheet amounts. However, since open positions are executory contracts (firm commitments) for delivery of the underlying financial instrument, the underlying instrument should not be reflected as an asset or liability on the balance sheet.⁹ Only when the closing of an open position results in the acquisition or disposition of the underlying financial instrument would an asset be recorded, or removed from, the balance sheet.

As a prudent management measure, all open positions in futures contracts must be reviewed at least monthly (or more often, if material), and their current market values should be determined using published price quotations. These futures positions must be revalued at their current market value on these valuation dates, and any changes in value should be reported in accordance with the guidance presented below for hedge or non-hedge contracts.

Criteria for hedge-accounting treatment. If certain criteria are met, the accounting under GAAP for a futures contract that is used to hedge an asset, liability, commitment, or anticipated transaction (“hedged item”) should be similar to the method of accounting for the hedged item. This means that changes in the market value of the futures contract are recognized in income when the related changes in the price or interest rate of the hedged item are recognized. Where an anticipated transaction is the hedged item, the change in value of the futures contract is included in the measurement of the anticipated transaction. Realized gains or losses from changes in the market value of futures contracts that qualify as a hedge of an existing asset or liability should be recognized as an adjustment of the carrying amount (often called “book value”) of the hedged item. A change in the market value of a futures contract that is a hedge of a firm commitment should be included in the measurement of the transaction that satisfies the commitment.

Under FASB 80, a futures contract should be accounted for as a hedge when the following conditions are met:

- The institution must have determined that the item to be hedged (that is, an identifiable asset, liability, firm commitment, or anticipated transaction) will expose it to price or interest-rate risk.
- The futures contract must reduce the exposure to risk. This must be demonstrated at the inception of the hedge by an expectation that changes in the prices of both the contract and the hedged item will be highly correlated. Furthermore, ongoing results must show a high degree of correlation, or the hedge will be considered ineffective and consequently marked to market. In other words, the bank must monitor the price movements of both the hedge contract and the hedged item to determine that it is probable (that is, likely to occur) that the results of the futures contract will offset changes in the market value of the hedged item and that these results have done so from inception to the determination date.
- The futures contract must be designated as a hedge by management at the inception of the hedge.

In order for a futures contract to qualify as a hedge of an anticipated transaction, the following two additional criteria must be met:

- Significant characteristics and expected terms of the anticipated transaction must be identified.
- The occurrence of the anticipated transaction must be probable.¹⁰

If the criteria for applying hedge-accounting methods have been met, the gain or loss on a futures contract, instead of being currently recognized in income, is an adjustment to the cost of the asset or liability being hedged. The adjustment, then, will be recognized in income when gain or loss on the hedged asset or liability is determined. For example, if the item being hedged is an interest-bearing liability that is reported at amortized cost, the changes in the market value of the futures contract would be reflected as adjustments to the carrying amount (or book value) of the liability. The historical cost of the liability and the adjustments brought about by the hedge would then be amortized in

9. Although the underlying instruments or notional amounts of these commitments are not reported in the balance sheet, they are disclosed in footnotes to the financial statement. For regulatory reporting purposes, open positions in futures contracts are to be reported in the call report, Schedule RC-L.

10. It will be particularly difficult to meet this criteria when an anticipated transaction is not expected to take place in the near future.

interest expense over the expected remaining life of the liability.

If the hedged asset or liability is marked to market, the hedge position will also be marked to market. There is no deferral of gains or losses in this situation; likewise, there is no deferral of gains or losses if the futures contract hedges an anticipated transaction if the asset to be acquired or liability incurred will be reported at fair value.

If a futures contract qualifying as a hedge is closed before the date of the related anticipated transaction, the accumulated change in value of the contract should be carried forward (assuming high correlation has occurred) and included in the measurement of the related transaction. When it becomes probable that the quantity of the anticipated transaction will be less than that originally hedged, a pro rata portion of the futures results that would have been included in the measurement of the transaction should be recognized as a gain or loss.

If high correlation between price changes of the hedged item and the futures position is no longer evident, the bank should discontinue accounting for the futures contracts as a hedge. If this were to occur, the portion of the change in the market value of the contract that has not offset the market-value changes of the hedged item should be reflected in income. The contract should thereafter be accounted for as a non-hedge contract with subsequent changes in the contract's market value reflected in current income. When a futures position that has been an effective hedge is terminated before disposition of the hedged item, the gain or loss on the terminated contracts must be deferred and amortized over the remaining life of the hedged item. If the contracts do not qualify as hedges, the gain or loss is recognized currently in income or expense, as appropriate.

Call report treatment. Regulatory reporting standards, as a general rule, do not permit the deferral of gains or losses by banks on domestic futures and forwards, whether or not the contracts are used for hedging purposes. All changes in market value of futures and forward contracts are reported in income in the period they occur. The banking agencies adopted this reporting standard as a supervisory policy before the issuance of FASB 80. As exceptions to the general prohibition, hedge accounting in accordance with FASB 80 is permitted by the three banking agencies only for futures and forward

contracts used to hedge mortgage-banking operations, and those foreign-currency futures contracts that are covered by FASB 52.

Foreign-Currency Off-Balance-Sheet Instruments

The primary source of authoritative guidance for accounting for foreign-currency translations and foreign-currency transactions is FASB 52. The standard encompasses futures contracts, forward agreements, and currency swaps as they relate to foreign-currency hedging.

FASB 52 draws a distinction between foreign-exchange translation and transactions. Translation, generally, focuses on the combining of foreign and domestic entities for presentation in the consolidated financial statements and for reporting these financial statements in one currency. Foreign-currency transactions, in contrast, are transactions (such as purchases or sales) by a business operation in currencies other than its functional currency. For U.S. depository institutions, the functional currency will generally be the dollar for its U.S. operations and will typically be the local currency where its foreign operations transact business.¹¹

Foreign-currency translation. Translation is the conversion to U.S. dollars of the financial statement of a foreign operation (branch, division, or subsidiary) that is denominated in the operation's functional currency for inclusion in the parent's consolidated financial statements. The foreign operation's balance sheet is translated at the exchange rate in effect on the statement date, and the income statement is translated at an appropriate weighted-average rate for the reporting period. Gains or losses arising from foreign-currency translation are not recognized currently

11. Detailed guidance of determining the functional currency is set forth in appendix 1 of FASB 52:

"An entity's functional currency is the currency of the primary economic environment in which the entity operates; normally, that is the currency of the environment in which an entity primarily generates and expends cash. The functional currency of an entity is, in principle, a matter of fact. In some cases, the facts will clearly identify the functional currency; in other cases they will not."

FASB 52 indicates the salient economic indicators, and possibly other factors, that should be considered both individually and collectively when determining the functional currency. These factors include cashflow, price and market sales indicators, expense indicators, financing indicators, and intercompany transactions and arrangements.

in income; instead, they are treated as adjustments to a separate component of equity. Recognition in income of these cumulative foreign-currency adjustments will take place when the foreign operation is either sold or substantially liquidated.

An institution may engage in hedging transactions to reduce the risk of exchange losses on translating its net equity investments in foreign operations for presentation in its financial statements, thus avoiding the consequent volatility in its capital position. The effect of the special hedging treatment is to include the change in value of the hedging instrument as a part of the same separate component of equity as the translation adjustment.

Foreign-currency transactions. Gains or losses on foreign-currency transactions, in contrast to translation, are recognized in income as they occur, unless they arise from a qualifying hedge. FASB 52 provides the following guidance about the types of foreign-currency transactions for which gain or loss is not currently recognized in earnings.

Gains and losses on the following foreign-currency transactions should not be included in determining net income but should be reported in the same manner as translation adjustments:

- foreign-currency transactions that are designated as, and are effective as, economic hedges of a net investment in a foreign entity, commencing as of the designation date
- intercompany foreign-currency transactions that are of a long-term-investment nature (that is, settlement is not planned or anticipated in the foreseeable future), when the entities to the transaction are consolidated, combined, or accounted for by the equity method in the reporting institution's financial statements

In addition to hedges of the balance sheet, a gain or loss on a forward contract or other foreign-currency transaction that is intended to hedge an identifiable foreign-currency commitment (for example, a firm commitment to sell or purchase equipment) should be deferred and included in the measurement of the related foreign-currency transaction (as an adjustment to the revenue or cost of the equipment in the example). If a foreign-currency hedge is terminated before the transaction date of the related commitment, any deferred gain or loss is to remain deferred until recognition of gain or loss

on the items that were hedged occurs. Losses should not be deferred, however, if it is estimated that deferral would lead to recognizing losses in later periods. A foreign-currency transaction should be considered a hedge of an identifiable foreign-currency commitment if both of the following conditions are met:

- The foreign-currency transaction is designated as, and is effective as, a hedge of a foreign-currency commitment.
- The foreign-currency commitment is firm.

Thus, FASB 52 is distinguished from FASB 80 in that hedging the risks from arrangements that have not matured into a firm commitment (that is, an anticipated transaction), such as forecasted foreign sales, do not qualify for hedge treatment. Another dissimilarity between FASB 52 and 80 is that the hedge of a foreign-currency exposure can be considered in isolation; there is no requirement that the overall risk of the institution must be reduced by the hedge as there is under FASB 80. Under the latter accounting standard, an institution is, in effect, required to consider the presence of any natural hedges that may be present in its balance sheet. To illustrate, an institution with foreign-currency-denominated receivables has foreign-exchange risk; however, any accounts payable that are denominated in the same currency as the receivables reduce the overall exposure. Under FASB 52, however, the institution could hedge the gross amount of receivables and qualify for deferring gain or loss recognition. Note, however, that by neutralizing the exposure from the receivables, the institution now has exchange risk equal to its payables position. Thus, gains or losses from a hedge of a foreign-currency risk may be deferred, even though the hedge position may increase the overall foreign-exchange risk of the institution.

To qualify for deferral, a foreign-currency-hedge position is required to be denominated in the same currency as the items it is hedging, unless such a hedge is impracticable. "Impracticable" means there are severe impediments to using the currency, such as illiquidity or a limited exchange market in the currency that is to be hedged, not merely that it is uneconomical. Since the foreign-exchange-hedge position is generally denominated in the same currency as the items that are being hedged, there will be perfect correlation (that is, no basis risk) between the hedged items and the hedge position. There-

fore, ongoing monitoring of the correlation between the foreign-exchange hedge and the hedged items is required only if a substitute or proxy currency is being used.

Instruments That Are Not Covered by Authoritative Accounting Standards

Forward Contracts

Domestic forward contracts, including forward-rate agreements, are generally accounted for by analogy to the accounting guidance for futures contracts set forth in FASB 80, which is summarized above. As noted above, the accounting for foreign-currency-forward contracts is addressed by FASB 52. Forward-rate agreements denominated in a foreign currency are generally accounted for by analogy to the accounting guidance for forward contracts set forth in FASB 52. Of course, any such instruments that are used for trading purposes should be placed in a well-supervised trading account and marked to market.

Interest-Rate Swaps

Consistent with the general requirement that trading assets or liabilities be marked to market, a dealer or market maker in swap instruments is required to mark its swap trading book to fair value. While the Emerging Issues Task Force (EITF) has provided limited interpretations on interest-rate swaps used as hedges, authoritative standards from the FASB, AICPA, or SEC do not yet exist. In this vacuum, diverse industry practice has resulted. EITF Issue No. 84-7 applies to the early termination of swaps that hedge some financial instrument. According to this issue, gain or loss from early termination is to be deferred and amortized as a yield adjustment to the underlying financial instrument. Issue No. 84-36 applies if there is an underlying debt obligation on the balance sheet of the company entering into a swap. The company should account for the swap like a hedge of the obligation and record interest expense using the revised interest rate. Situations where the swap does not hedge an asset or liability were excluded from the scope of the two issues, other than to note a diversity of accounting treatment. Some accountants view the EITF's discussion of hedging as

guidance for accounting for "synthetic instruments" (for example, the transformation of fixed-rate debt into floating-rate debt by use of an interest-rate swap) where there is no risk reduction per se. Interest-rate swaps denominated in a foreign currency, including cross-currency interest-rate swaps, are generally accounted for by analogy to the accounting guidance set forth in FASB 52. Financial institutions engaging in swaps should have written policies that govern the accounting for these instruments, and should be consistently following these policies.

Options

Options involve two parties: the writer (or seller) and the purchaser (or holder). The purchaser of an option has the right, but not the obligation, to purchase or sell the option's underlying instrument according to the terms specified in the option. The option writer, in return for receiving the option premium, is obligated to perform according to the terms of the option.

Purchased Options

When held as a trading asset, a purchased option is to be marked to market under GAAP for presentation in the financial statements. For regulatory reporting purposes, the call report instructions state that purchased options are generally not to be reported at market value. For call report purposes, the only purchased options that have specifically been permitted to be marked to market are those that have been used for trading purposes and have been placed in a well-supervised trading account.

Purchased options can be an effective hedge of anticipated transactions, where they can be exercised if the anticipated transaction matures into a firm commitment or can be allowed to lapse if the anticipated transaction does not occur. Alternatively, options can be used to protect against unfavorable price movements, but allow the institution to benefit from favorable price changes of the hedged items. Virtually no authoritative literature has been issued for the accounting of options. The AICPA released an issues paper in 1986 that proposed certain methods of accounting for options that included criteria for hedging that were similar to FASB 80.

The paper, however, is not authoritative. One recommendation of the report was to account for purchased options used for hedging purposes in two discrete amounts: (a) the intrinsic value (that is the difference, if positive, between the option's exercise price and the market price of the underlying instrument) and (b) the time value of the option. The former would be an adjustment to determining the gain or loss on exercise or expiration; the latter would be amortized over the term of the option. Another recommendation was that if the option qualifies as a hedge of an item carried at historical cost, changes in intrinsic value would be included in a separate component of equity. While parts of the issues paper have become industry practice, some of the approaches advocated, such as these two examples, are rarely seen.

For presentation in the call report, purchased options that are held for hedging purposes generally are to be recorded at cost and amortized over the term of the option. No periodic valuation for balance-sheet presentation of open positions is permitted.

Written options. By their inherent risk profile, written options, whether covered or not, do not generally qualify as a hedge for accounting purposes. The premium received by an option's writer should be deferred until the point at which the option either expires or is exercised. If the option is exercised, the premium is an adjustment to the amount realized on the sale of the underlying obligation. If the option expires out of the money, the premium is considered earned and is reported as other fee income. Options that are in the money (and thus an obligation to the writer) are to be marked to market, according to the SEC.

The call report instructions provide guidance for written "standby contracts," which are a form of option. Standby contracts are to be valued at the lower of cost or market (since the written option is a liability, the absolute amount reported is the higher of cost (the premium received) or market value). Market value in this context is the loss exposure, which would be based on the difference between the option's strike price and the market price of the underlying instrument.

Purchased options that hedge foreign-exchange exposures related to anticipated transactions. In issuing guidance on foreign-currency hedges that use options (Issue No. 90-17), the EITF

noted that FASB 52 did not specifically consider options. The EITF used certain elements from FASB 80 in identifying appropriate criteria for applying hedge-accounting treatment: the requirement that overall risk be reduced, that high correlation between the hedge position and the hedged items be present, and that anticipated transactions could be hedged if they are identifiable and probable. This guidance is narrowly applied to strategies using at-the-money options at the inception of the hedge. When it examined other option-based hedge strategies (Issue No. 91-4), the EITF was unable to reach a consensus because of objections by the SEC about the deferral of gains or losses related to anticipated transactions. The SEC also objected to any deferral of losses from written options, since to write options does not, in the SEC's view, reduce risk.

Netting or Offsetting On- and Off-Balance-Sheet Assets and Liabilities

The FASB issued Interpretation 39 in 1992, which went into effect for 1994 financial statements of banks and other companies. This interpretation applies to the netting of assets and liabilities arising from (i) "traditional" activities, such as loans and deposits, and (ii) OBS derivative instruments. The assets and liabilities from derivatives primarily are their fair value, or estimated market value, and the receivables and payables on these instruments. FIN 39 clarifies the definition of a "right of setoff" that GAAP has long indicated must exist before netting of assets and liabilities can occur in the balance sheet. One of the main purposes of FIN 39 was to clarify that FASB's earlier guidance on netting of assets and liabilities (TB 88-2) applies to amounts recognized for OBS derivative instruments as well.

Balance-sheet items arise from off-balance-sheet interest-rate and foreign-currency instruments primarily in two ways. First, those banking organizations and other companies that trade OBS derivative instruments (for example, interest-rate and currency swaps, forwards, and options) are required by GAAP to mark to market these positions by recording their fair values (estimated market values) on the balance sheet and recording any changes in these fair values (unrealized gains and losses) in earnings. Second, interest-rate and currency swaps have

receivables and payables that accrue over time, reflecting expected cash inflows and outflows that must periodically be exchanged under these contracts, and these receivables and payables must be recorded on the balance sheet as assets and liabilities, respectively.¹²

Under FIN 39, setoff, or the netting of assets and liabilities to a particular counterparty, is not permitted unless all of the following four criteria are met:

- Two parties must owe each other determinable amounts.
- The reporting entity must have a right to set off its obligation with the amount due to it.
- The reporting entity must actually intend to set off these amounts.
- The right of setoff must be enforceable at law.

When all four criteria are met, a bank or other company may offset the related asset and liability and report the net amount in its GAAP financial statements. FIN 39 also indicates, without regard to the third criterion (the parties' intent), the netting of fair values of OBS derivative contracts executed with the counterparty under a legally enforceable master netting agreement is permitted. If any one of the other three criteria is not met, the fair value of contracts in a loss position with the counterparty *cannot* be offset against the fair value of contracts in a gain position with that counterparty, and the organization would be required to record gross unrealized gains on such contracts as assets and gross unrealized losses as liabilities.

Call Report Requirements

The call report instructions provide guidance on netting for purposes of reporting risk-based capital information.¹³ Furthermore, the FFIEC,

12. In contrast, the notional amounts of off-balance-sheet derivative instruments, or the principal amounts of the underlying asset or assets to which the values of the contracts are indexed, are not recorded on the balance sheet. Note, however, that if the OBS instrument is carried at market value, that value will include any receivable or payable components. Thus, for those OBS instruments that are subject to a master netting agreement, the accrual components in fair value are also netted.

13. The risk-based capital guidelines provide generally that a credit-equivalent amount is calculated for each individual interest-rate and exchange-rate contract. The credit-equivalent amount is determined by summing the positive mark-to-market values of each contract with an estimate of the

on an interim basis, adopted for the call report the provisions of FIN 39 that are applicable to derivative contracts, effective for 1994 call reports. The general instructions to the call report, however, explicitly prohibit the netting of assets and liabilities by banks *unless* specifically required by the instructions. Thus, FIN 39 is not to be applied to traditional balance-sheet assets and liabilities for call report purposes.

DISCLOSURE FOR SECURITIES AND FINANCIAL CONTRACTS

In addition to issuing authoritative guidance on methods of accounting (that is, how a particular transaction is to be reported on the balance sheet or statements of income or cash flow), the FASB (and SEC) also set standards for minimum disclosure of the financial activities, condition, and other issues that should be incorporated in a company's annual report. Information to meet these disclosure requirements is audited by the company's independent accountants and may be presented either as footnotes to the financial statements or incorporated in management's discussion and analysis (MD&A). In MD&A, management reviews in some detail the company's results from operations, its liquid resources and capital position, significant events occurring after the date of the financial statements, and other matters. MD&A is required for reports filed with the SEC, such as the annual 10-K and quarterly 10-Q. Since it is fixed-form, the call report does not have a direct analogue to MD&A. There is, however, considerable overlap as many of the call report's supporting schedules and memoranda state much of the information required under the disclosure standards of GAAP. The following section briefly describes the GAAP requirements for disclosure relating to financial instruments.

As an interim step in a project to improve the accounting for financial instruments, par-

potential future credit exposure. The credit-equivalent amount is then assigned to the appropriate risk-weight category.

Netting of swaps and similar contracts is recognized for risk-based capital purposes only when accomplished through "netting by novation." This is defined as a written bilateral contract between two counterparties under which any obligation to each other is automatically amalgamated with all other obligations for the same currency and value date, legally substituting one single net amount for the previous gross obligations.

ticularly OBS instruments, the FASB wrote new disclosure standards intended to increase the transparency of contractual terms, risks, and market values of both on- and off-balance-sheet financial instruments. To date, three standards have been written, requiring additional disclosure about instruments having certain risks (including a lack of diversification), the fair market value of financial instruments (including such classes as securities, loans, and deposits), and the discussion of the risk-management strategies when the company uses OBS instruments.

The first standard resulting from the financial instruments project was FASB 105, "Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk." Under the standard, a company is required to describe the notional amounts and significant contractual terms for financial instruments that have off-balance-sheet risk of accounting loss.¹⁴ Secondly, the company is required to disclose the amount of accounting loss that would occur as a result of credit risk.¹⁵ As a part of the disclosure of credit risk, the company is required to discuss its policies for requiring collateral and a description of the collateral or other security supporting the contracts. Lastly, the company is required to report significant credit concentrations across all classes of financial instruments. This may be done by industry, region, or other economic characteristics. FASB 105 was amended by FASB 119 (see below) to require the disclosure of notional amount and significant contract terms of financial instruments without off-balance-sheet risk of loss (for example, purchased options) in addition to the disclosures

described earlier. FASB 105 was required to be followed for annual reports beginning in 1991.

The second standard issued by the FASB was FASB 107, "Disclosures about Fair Value of Financial Instruments," which was effective for the 1993 annual reports of institutions with assets of \$150 million or more and will be effective for the 1996 annual reports of smaller institutions. Under the standard, a company is required to disclose the fair value of virtually all classes of financial instruments. The company should disclose its methods for estimating fair value, such as the use of market quotes or valuation techniques (and disclose the assumptions used if values are estimated) for instruments without active markets. FASB 107 requires that demand deposits be reported at face value and the value of long-term relationships and other intangibles not be taken into account, although these and other nonfinancial assets and liabilities may be separately disclosed. In response to criticisms from industry analysts about the difficulty in following some companies' disclosures, the FASB amended FASB 107 when it issued FASB 119, "Disclosure about Derivative Financial Instruments and Fair Value of Financial Instruments." FASB 119 requires that the fair-value disclosure separate OBS instruments used as hedges from the instruments on the balance sheet being hedged. FASB 107 was also amended to require fair-value disclosure in a single place rather than scattered throughout the annual report.

In response to calls for further improvement in the disclosure of derivatives activities, FASB 119 requires a firm that issues or holds derivatives to differentiate in its disclosures between derivatives that it uses for trading purposes and derivatives used for risk-management or other end-user reasons.

14. An off-balance-sheet accounting loss occurs when there is the potential for loss because of market or credit risks that exceed the amount reported on the balance sheet for the OBS instrument. In other words, the loss in the event of a default or adverse market movement could exceed the reported value of the contract. For example, a purchased-put option does not have accounting risk of loss because the most that could be lost by the holder is the amount of the premium paid (of course, the economic loss would be the fair value of the option). The writer of the put, on the other hand, would have an accounting loss to the writer if it must pay cash to settle the contract in excess of the premium it received. Thus the writer has off-balance-sheet risk of loss while the holder does not.

15. For example, an interest-rate swap accounted for using the accrual method that has a market value of \$1,000 and an accrued net receivable of \$10 has an accounting risk of loss of only \$10.

- *Trading activities.* A dealer is required to report the fair value (both year-end and annual average) of its derivatives positions and to disaggregate derivatives trading profits. This disaggregation may be reported either for derivative instruments alone or broken down by some other method by the firm, such as lines of business, risk exposures (for example, interest-rate or foreign-exchange), or another method as long as trading profits from derivative instruments are disclosed. The FASB encouraged, but did not require, the disclosure of both year-end and average fair values of trading assets and liabilities that are not

derivatives, whether they are financial instruments or nonfinancial items, to give a more comprehensive picture of the firm's trading pursuits.

- *End-user activities.* For derivatives not used in trading, but instead used for hedging or other risk-management purposes, a firm is now required to describe its objectives for using derivatives and discuss its strategies for achieving those objectives. The firm is also required to describe how it reports derivatives in its financial statements as well as give certain details (such as the amount of gains or losses explicitly deferred) about derivatives used to hedge anticipated transactions. The

fair values of end-user derivatives must also be separately disclosed from the fair value of items hedged by the derivatives.

Finally, FASB 119 encourages a firm to disclose quantitative information, consistent with its method for managing risk, that would be useful to financial statement readers in assessing its activities. Suggested approaches include gap analyses, the effect of hypothetical price shocks on reported earnings, and the disclosure of value at risk at the report date and its average during the year. FASB 119 first applied to annual reports for year-end 1994.

Investment Securities and End-User Activities

Examination Objectives

Effective date November 1995

Section 2020.2

1. To determine if policies, practices, procedures, and internal controls regarding investments are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine the overall quality of the investment portfolio and how that quality relates to the soundness of the bank.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures or internal controls are deficient or when violations of laws or regulations have been noted.

Investment Securities and End-User Activities

Examination Procedures

Effective date November 2004

Section 2020.3

1. If used, answer the questions in section 2020.4, the “Investment Securities and End-User Activities” internal control questionnaire.
2. On the basis of an evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the following examination procedures. Also, obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors, and determine if any corrections have been accomplished. Determine the extent and effectiveness of investment-policy supervision by—
 - a. reviewing the abstracted minutes of meetings of the board of directors or appropriate committees;
 - b. determining that proper authorizations have been made for investment officers or committees;
 - c. determining any limitations or restrictions on delegated authorities;
 - d. evaluating the sufficiency of analytical data used by the board or investment committee;
 - e. reviewing the reporting methods used by department supervisors and internal auditors to ensure compliance with established policy; and
 - f. preparing a memo for the examiner who is assigned “Duties and Responsibilities of Directors” and the examiner who is in charge of the international examination, if applicable, stating conclusions on the effectiveness of directors’ supervision of the domestic or international division investment policy. All conclusions should be documented.
4. Obtain the following:
 - a. Trial balances of investment-account holdings and money market instruments, such as commercial paper, banker’s acceptances, negotiable certificates of deposit, securities purchased under agreements to resell, and federal funds sold. Identify any depository instruments placed through money brokers.
 - b. A list of any assets carried in loans, and a list of discounts on which interest is exempt from federal income taxes and which are carried in the investment account on Call Reports.
 - c. A list of open purchase and sale commitments.
 - d. A schedule of all securities, forward placement contracts, futures contracts, contracts on exchange-traded puts and calls, option contracts on futures puts and calls, and standby contracts purchased or sold since the last examination.
 - e. A maturity schedule of securities sold under repurchase agreements.
 - f. A list of pledged assets and secured liabilities.
 - g. A list of the names and addresses of all securities dealers doing business with the bank.
 - h. A list of the bank’s personnel authorized to trade with dealers.
 - i. A list of all U.S. government–guaranteed loans that are recorded and carried as an investment-account security.
 - j. For international division and overseas branches, a list of investments—
 - held to comply with various foreign governmental regulations requiring such investments;
 - used to meet foreign reserve requirements;
 - required as stock exchange guarantees or used to enable the bank to provide securities services;
 - representing investment of surplus funds;
 - used to obtain telephone and telex services;
 - representing club and school memberships;
 - acquired through debts previously contracted;
 - representing minority interests in non-affiliated companies;
 - representing trading-account securities;
 - representing equity interests in Edge Act and agreement corporations and foreign banks;
 - representing portfolio investments made

- pursuant to Regulation K; and
 - held for other purposes.
- 5. Using updated data available from reports of condition, UBPR printouts, and investment adviser and correspondent bank portfolio-analysis reports, obtain or prepare an analysis of investment and money market holdings that includes—
 - a. a month-by-month schedule of par, book, and market values of issues maturing in one year;
 - b. schedules of par, book, and market values of holdings in the investment portfolio (schedules should be indexed by maturity date, and individual schedules should be detailed by maturity dates over the following time periods: over one through five years, over five through 10 years, and over 10 years);
 - c. book-value totals of holdings by obligor or industry; related obligors or industries; geographic distribution; yield; and special characteristics, such as moral obligations, conversion, or warrant features;
 - d. par-value schedules of type I, II, and III investment holdings, by those legally defined types; and
 - e. for the international division, a list of international investment holdings (foreign-currency amounts and U.S. dollar equivalents) to include—
 - descriptions of securities held (par, book, and market values),
 - names of issuers,
 - issuers' countries of domicile,
 - interest rates, and
 - pledged securities.
- 6. Review the reconciliation of investment and money market account (or accounts) trial balances to the general-ledger control account (or accounts).
- 7. Using either an appropriate sampling technique or the asset-coverage method, select from the trial balance (or balances) the international investments, municipal investments, and money market holdings for examination. If transaction volume permits, include all securities purchased since the last general examination in the population of items to be reviewed.
- 8. Perform the following procedures for each investment and money market holding selected in step 7:
 - a. Check appropriate legal opinions or pub-

lished data outlining legal status.

- b. If market prices are provided to the bank by an independent party (excluding affiliates and securities dealers selling investments to the bank) or if they are independently tested as a documented part of the bank's audit program, accept those prices. If the independence of the prices cannot be established, test market values by reference to one of the following sources:
 - published quotations, if available
 - appraisals by outside pricing services, if performed
- c. If market prices are provided by the bank and cannot be verified by reference to published quotations or other sources, test those prices by using the "comparative yield method" to calculate approximate yield to maturity:

approximate yield to maturity =

$$\frac{\text{annual interest} + \frac{\text{par value} - \text{book value}}{\text{number of years to maturity}}}{\frac{1}{2} (\text{bank-provided market price} + \text{par value})}$$

- Compare the bank-provided market price and the examiner-calculated approximate yield to maturity with an independent publicly offered yield or market price for a similar type of investment with similar rating, trading-volume, and maturity or call characteristics.
 - Compare nonrated issues with fourth-rated (BBB, Baa) bonds.
 - Investigate market-value variances in excess of 5 percent.
- d. For investments and money market obligations in the sample that are rated, compare the ratings provided with the most recent published ratings.

Before continuing, refer to steps 16 through 18. They should be performed in conjunction with steps 9 through 15. International division holdings should be reviewed with domestic holdings to ensure compliance, when combined, with applicable legal requirements.

9. To the extent practical under the circumstances, perform credit analyses of—
 - a. the obligors on securities purchased under agreements to resell, when the readily

- marketable value of the securities is not sufficient to satisfy the obligation;
- b. all international investments, nonrated securities, and money market instruments selected in step 7 or acquired since the last examination;
 - c. all previously detailed or currently known speculative issues;
 - d. all defaulted issues; and
 - e. any issues in the current Interagency Country Exposure Review Committee credit schedule obtained from the international loan portfolio manager by—
 - comparing the schedule with the foreign securities trial balance obtained in step 4 to ascertain which foreign securities are to be included in Interagency Country Exposure Review Committee credits;
 - for each security so identified, transcribing the following appropriate information to a separate examiner's line sheet or a related examiner's credit line sheet:
 - amount (and U.S. dollar equivalent if a foreign currency) to include par, book, and fair values
 - how and when acquired
 - maturity date (or dates)
 - default date, if appropriate
 - any pertinent comments; and
 - returning the schedule and the appropriate examiner's line sheet (or sheets) to the examiner who is assigned "International—Loan Portfolio Management."
10. Review the most recent reports of examination of the bank's Edge Act and agreement corporation affiliates and foreign subsidiaries to determine their overall conditions. Also, compile data on Edge Act and agreement corporations and foreign subsidiaries necessary for the commercial report of examination (that is, asset criticisms, transfer risk, and other material examination findings). Review portfolio investments made by Edge and agreement corporations under Regulation K for compliance with the investment limitations in Regulation K.
11. Review the asset quality and the liquidity of all investment securities. Debt securities that have nontemporary impairments should be classified according to the June 15, 2004, interagency Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts. (See SR-04-9.) Classify speculative and defaulted issues according to the sub-investment-quality debt securities category of the agreement. No preferential treatment should be given to defaulted municipal securities. Comments to be included in the examination report are—
- a. a description of the issue;
 - b. how and when each issue was acquired;
 - c. the default date, if appropriate;
 - d. the date up to which interest was paid;
 - e. the rating (or ratings)¹ at time of acquisition; and
 - f. other comments supporting the classification.
12. Review the bank's investment-security maturity program.
- a. Review the maturity schedules.
 - Compare the book values and the fair values and, after considering the gain or loss on year-to-date sales, determine if the costs of selling intermediate and long-term issues appear prohibitive.
 - Determine if recent acquisitions show a trend toward lengthened or shortened maturities. Discuss such trends with management, particularly with regard to investment objectives approved by the investment committee.
 - b. Review the pledged asset and secured liability schedules and isolate pledged securities by maturity segment. Then determine the fair value of securities pledged in excess of net secured liabilities.
 - c. Review the schedule of securities sold under repurchase agreement and determine—
 - whether financing for securities purchases is provided by repurchase agreement by the securities dealer who originally sold the security to the bank;
 - whether funds acquired through the sale of securities under agreement to repurchase are invested in money market assets, or if short-term repurchase agreements are being used to fund longer-term, fixed-rate assets;

1. The June 2004 interagency uniform agreement also addresses multiple ratings, the treatment of foreign debt securities, split or partially rated securities, and nonrated securities.

- the extent of matched asset repo and liability repo maturities and the overall effect on liquidity resulting from unmatched positions;
 - whether the interest rate paid on securities sold under agreement to repurchase is appropriate relative to current money market rates; and
 - whether the repurchase agreement is at the option of the buying or selling bank.
- d. Review the list of open purchase and sale commitments and determine the effect of their completion on maturity scheduling.
- e. Submit investment portfolio information regarding the credit quality and practical liquidity of the investment portfolio to the examiner who is assigned to review the “Asset/Liability Management.”
13. Consult with the examiner responsible for the asset/liability management analysis to determine what information is needed to assess the bank’s sensitivity to interest-rate fluctuations and its ability to meet short-term funding requirements. If requested, compile the information using bank records or other appropriate sources. See section 6000.1, “Instructions for the Report of Examination,” for factors to be taken into account when compiling this information. Information which may be required to be furnished includes—
- a. the fair value of unpledged government and federal-agency securities maturing within one year;
 - b. the fair value of other unpledged government and federal-agency securities which would be sold without loss;
 - c. the fair value of unpledged municipal securities maturing within one year;
 - d. the book value of money market instruments, such as banker’s acceptances, commercial paper, and certificates of deposit (provide amounts for each category); and
 - e. commitments to purchase and sell securities, including futures, forward, and standby contracts. (Provide a description of the security contract, the purchase or sales price, and the settlement or expiration date.)
14. Determine whether the bank’s investment policies and practices are satisfactorily balancing earnings and risk considerations.
- a. Use UBPR or average Call Report data to calculate investments as a percentage of total assets, and use average yields on U.S. government and nontaxable investments to—
 - compare results with peer-group statistics,
 - determine the reasons for significant variances from the norm, and
 - determine if trends are apparent and the reasons for such trends.
 - b. Calculate current market depreciation as a percentage of gross capital funds.
 - c. Review the analysis of municipal and corporate issues by rating classification and—
 - determine the total in each rating class and the total of nonrated issues,
 - determine the total of nonrated investment securities issued by obligors located outside of the bank’s service area (exclude U.S. government-guaranteed issues), and
 - review acquisitions since the prior examination and ascertain reasons for trends that may suggest a shift in the rated quality of investment holdings.
 - d. Review coupon rates or yields (when available) and compare those recently acquired investments and money market holdings with coupon rates or yields that appear high or low with similarly acquired instruments of analogous types, ratings, and maturity characteristics (Discuss significant rate or yield variances with management.)
 - e. Review the schedule of securities, futures, forward, and standby contracts purchased and sold since the last examination, and determine whether the volume of trading is consistent with policy objectives. (If the bank does not have a separate trading account, determine whether such an account should be established, including appropriate record-keeping and controls.)
 - f. If the majority of sales resulted in gains, determine if profit-taking is consistent with stated policy objectives or is motivated by anxiety for short-term income.
 - g. Determine whether the bank has discounted or has plans to discount future investment income by selling interest coupons in advance of interest-payment dates.

- h. Review the list of commitments to purchase or sell investments or money market investments. (Determine the effect

- of completion of these contracts on future earnings.).
15. Review the bank's federal income tax position and
 - a. determine, by discussion with appropriate officer(s), if the bank is taking advantage of procedures to minimize tax liability in view of other investment objectives;
 - b. review or compute actual and budgeted—
 - tax-exempt holdings as a percentage of total assets and
 - applicable income taxes as a percentage of net operating income before taxes; and
 - c. discuss with management the tax implications of losses resulting from securities sales.
 16. Determine that proper risk diversification exists within the portfolio by—
 - a. reviewing totals of holdings by single obligor or industry, related obligors or industries, geographic distribution, yields, and securities that have special characteristics (include individual due from bank accounts from the list received from the bank or from the examiner assigned "Due from Banks" and all money market instruments) and—
 - detail, as concentrations, all holdings equaling 25 percent or more of capital funds and
 - list all holdings equaling at least 10 percent but less than 25 percent of capital funds and submit that information to the examiner assigned "Loan Portfolio Management" (These holdings will be combined with any additional advances in the lending areas.) and
 - b. performing a credit analysis of all non-rated holdings determined to be a concentration if not performed in step 9.
 17. If the bank is engaged in financial futures, exchange-traded puts and calls, forward placement, or standby contracts, determine if—
 - a. the policy is specific enough to outline permissible contract strategies and their relationships to other banking activities;
 - b. recordkeeping systems are sufficiently detailed to permit a determination of whether operating personnel have acted in accordance with authorized objectives;
 - c. the board of directors or its designee has established specific contract position limits and reviews contract positions at least monthly to ascertain conformance with those limits;
 - d. gross and net positions are within authorized positions and limits, and if trades were executed by persons authorized to trade futures; and
 - e. the bank maintains general-ledger memorandum accounts or commitment registers which, at a minimum, include—
 - the type and amount of each contract,
 - the maturity date of each contract,
 - the current market price and cost of each contract, and
 - the amount held in margin accounts:
 - All futures contracts and forward and standby and options contracts are revalued on the basis of market or the lower of cost or market at each month-end.
 - Securities acquired as the result of completed contracts are valued at the lower of cost or market upon settlement.
 - Fee income received by the bank on standby contracts is accounted for properly.
 - Financial reports disclose futures, forwards, options, and standby activity.
 - The bank has instituted a system for monitoring credit-risk exposure in forward and standby contract activity.
 - The bank's internal controls, management reports, and audit procedures are adequate to ensure adherence to policy.
18. If the bank is engaged in financial futures, forward placement, options, or standby contracts, determine if the contracts have a reasonable correlation to the bank's business needs (including gap position) and capacity to fulfill its obligations under the contracts by—
 - a. comparing the contract commitment and maturity dates to anticipated offset,
 - b. reporting significant gaps to the examiner assigned "Asset/Liability Management" (refer to step 13),

- c. comparing the amounts of outstanding contracts to the amounts of the anticipated offset,
 - d. ascertaining the extent of the correlation between expected interest-rate movements on the contracts and the anticipated offset, and
 - e. determining the effect of the loss recognition on future earnings, and, if significant, reporting it to the examiner assigned “Analytical Review and Income and Expense.”
19. On the basis of pricings, ratings, and credit analyses performed above, and using the investments selected in step 7 or from lists previously obtained, test for compliance with applicable laws and regulations by—
- a. determining if the bank holds type II or III investments that are predominantly speculative in nature or securities that are not marketable (12 CFR 1.3(b));
 - b. reviewing the recap of investment securities by legal types, as defined by 12 CFR 1, on the basis of the legal restrictions of 12 USC 24 and competent legal opinions, as follows:
 - If a type II or III security is readily marketable, and if the purchaser’s judgment was based on evidence of the obligor’s ability to perform, determine if the par value of such securities issued by a single obligor, which the bank owns or is committed to purchase, exceeds 10 percent of the bank’s capital funds (12 CFR 1.5(a) and 1.7(a)).
 - If the holding of a type II or III security was based on a reliable estimate of the obligor’s ability to perform, determine if the aggregate par value of such issues exceeds 5 percent of the bank’s capital funds (12 CFR 1.5(b) and 1.7(b));
 - c. for those investment securities that are convertible into stock or which have stock purchase warrants attached—
 - determining if the book value has been written down to an amount that represents the investment value of the security, independent of the conversion or warrant provision (12 CFR 1.10) and
 - determining if the par values of other securities that have been ruled eligible for purchase are within specified capital limitations;
 - d. reviewing pledge agreements and secured liabilities and determining that—
 - proper custodial procedures have been followed,
 - eligible securities are pledged,
 - securities pledged are sufficient to secure the liability that requires securing,
 - Treasury Tax and Loan Remittance Option and Note Option are properly secured, and
 - private deposits are not being secured;

(Information needed to perform the above steps will be contained in the pledge agreement; Treasury circulars 92 and 176, as amended.)
 - e. reviewing accounting procedures to determine that—
 - investment premiums are being extinguished by maturity or call dates (12 CFR 1.11),
 - premium amortization is charged to operating income (12 CFR 1.11),
 - accretion of discount is included in current income for banks required to use accrual accounting for reporting purposes,
 - accretion of bond discount requires a concurrent accrual of deferred income tax payable, and
 - securities gains or losses are reported net of applicable taxes and net gains or losses are reflected in the period in which they are realized;
 - f. determining if securities purchased under agreement to resell are in fact securities (not loans), are eligible for investment by the bank, and are within prescribed limits (12 USC 24 and 12 CFR 1). If not, determine whether the transaction is within applicable state legal lending limits;
 - g. reviewing securities sold under agreement to repurchase and determining whether they are, in fact, deposits (Regulation D, 12 CFR 204.2(a)(1));
 - h. determining that securities and money market investments held by foreign branches comply with section 211.3 of Regulation K—Foreign Branches of Member Banks (12 CFR 211.3) as to—
 - acquiring and holding securities (section 211.3(b)(3)) and

- underwriting, distributing, buying, and selling obligations of the national government of the country in which the branch is located (section 211.3(b)(4)); and

(Further considerations relating to the above are contained in other sections of Regulation K. Also review any applicable sections of Regulation T—Credit by Brokers and Dealers (12 CFR 220), Regulation X—Borrowers of Securities Credit (12 CFR 224), and Board Interpretations 6150 (regarding securities issued or guaranteed by the International Bank for Reconstruction and Development) and 6200 (regarding borrowing by a domestic broker from a foreign broker). Edge Act and agreement corporations are discussed in the Bank-Related Organizations section.

- i. determining that the bank's equity investments in foreign banks comply with the provisions of section 25 of the Federal Reserve Act and section 211.5 of Regulation K as to—
 - investment limitations (section 211.5(b)) and
 - investment procedures (section 211.5(c)).
20. Test for compliance with other laws and regulations as follows:
 - a. Review lists of affiliate relationships and lists of directors and principal officers and their interests.
 - Determine if the bank is an affiliate of a firm that primarily is engaged in underwriting or selling securities (12 USC 377).
 - Determine if directors or officers are engaged in or employed by firms that are engaged in similar activities (12 USC 78, 377, and 378). (It is an acceptable practice for bank officers to act as directors of securities companies not doing business in the United States, the stock of which is owned by the bank as authorized by the Board of Governors of the Federal Reserve System.)
 - Review the list of federal funds sold, securities purchased under agreements to resell, interest-bearing time deposits, and commercial paper, and determine if the bank is investing in money market instruments of affiliated banks or firms (section 23A, Federal Reserve Act, and 12 USC 371(c)).
 - b. Determine if transactions involving affiliates, insiders, or their interests have terms that are less favorable to the bank than transactions involving unrelated parties (sections 23A and 22, Federal Reserve Act, and 12 USC 371c, 375, 375a, and 375b).
 - b. Determine if Federal Reserve stock equals 3 percent of the subject bank's booked capital and surplus accounts (Regulation I, 12 CFR 209).
 - c. Review the nature and duration of federal-funds sales to determine if term federal funds are being sold in an amount exceeding the limit imposed by state legal lending limits.
 21. With regard to potential unsafe and unsound investment practices and possible violations of the Securities Exchange Act of 1934, review the list of securities purchased and/or sold since the last examination and—
 - a. determine if the bank engages one securities dealer or salesperson for virtually all transactions. If so—
 - evaluate the reasonableness of the relationship on the basis of the dealer's location and reputation and
 - compare purchase and sale prices to independently established market prices as of trade dates, if appropriate;
 - b. determine if investment-account securities have been purchased from the bank's own trading department. If so—
 - independently establish the market price as of trade date,
 - review trading-account purchase and sale confirmations and determine if the security was transferred to the investment portfolio at market price, and
 - review controls designed to prevent dumping; and
 - c. determine if the volume of trading activity in the investment portfolio appears unwarranted. If so—
 - review investment-account daily ledgers and transaction invoices to determine if sales were matched by a like amount of purchases,
 - determine whether the bank is financing a dealer's inventory,
 - compare purchase and sale prices with independently established market prices

as of trade dates, if appropriate. The carrying value should be determined by the market value of the securities as of the trade date, and

- cross-reference descriptive details on investment ledgers and purchase confirmations to the actual bonds or safekeeping receipts to determine if the bonds delivered are those purchased.
22. Discuss with appropriate officer(s) and prepare report comments on—
- a. defaulted issues;
 - b. speculative issues;
 - c. incomplete credit information;
 - d. absence of legal opinions;
 - e. significant changes in maturity scheduling;
 - f. shifts in the rated quality of holdings;
 - g. concentrations;
 - h. unbalanced earnings and risk considerations;
 - i. unsafe and unsound investment practices;
 - j. apparent violations of laws, rulings, and regulations and the potential personal liability of the directorate;
 - k. significant variances from peer-group statistics;
 - l. market-value depreciation, if significant;
 - m. weaknesses in supervision;
 - n. policy deficiencies; and
 - o. material problems being encountered by the bank's Edge Act and agreement corporation affiliates, and other related international concerns, that could affect the condition of the bank.
23. The following guidelines are to be implemented while reviewing securities participations, purchases/sales, swaps, or other transfers. The guidelines are designed to ensure that securities transfers involving state member banks, bank holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification and to determine the effect of the transfer on the condition of the institution. In addition, the guidelines are designed to ensure that the primary regulator of the other financial institution involved in the transfer is notified.
- a. Investigate any situations in which securities were transferred before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
 - b. Determine whether any of the securities transferred were nonperforming at the time of transfer, classified at the previous examination, depreciated or sub-investment-grade, or for any other reason were considered to be of questionable quality.
 - c. Review the bank's policies and procedures to determine whether or not securities purchased by the bank are given an independent, complete, and adequate credit evaluation. If the bank is a holding company subsidiary or a member of a chain banking organization, review securities purchases or participations from affiliates or other known members of the chain to determine if the securities purchases are given an *arm's-length* and *independent* credit evaluation by the purchasing bank.
 - d. Determine whether or not any bank purchases of securities from an affiliate are in conformance with section 23A, which generally prohibits purchases of low-quality assets from an affiliate.
 - e. Determine that any securities purchased by the bank are properly reflected on its books at fair market value (fair market value should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-offs are taken on any securities sold by the bank at less than book value.
 - f. Determine that transactions involving transfers of low-quality securities to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.
 - g. If poor-quality securities were transferred to or from another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
 - name of originating and receiving institutions
 - type of securities involved and type of transfer (i.e., participation, purchase/sale, swap)

- date(s) of transfer
 - total number and dollar amount of securities transferred
 - status of the securities when transferred (e.g., rating, depreciation, non-performing, classified, etc.)
 - any other information that would be helpful to the other regulator.
24. Reach a conclusion regarding the quality of department management. Communicate your conclusion to the examiner assigned “Management Assessment” and the examiner who is in charge of the international examination, if applicable.
25. Update workpapers with any information that will facilitate future examination. If the bank has overseas branches, indicate those securities requiring review during the next overseas examination and the reasons for the review.

Investment Securities and End-User Activities

Internal Control Questionnaire

Effective date November 1995

Section 2020.4

Review the bank's internal controls, policies, practices, and procedures regarding purchases, sales, and servicing of the investment portfolio. The bank's system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written investment securities policies, including WI securities, futures, and forward placement contracts, that outline—
 - a. objectives,
 - b. permissible types of investments,
 - c. diversification guidelines to prevent undue concentration,
 - d. maturity schedules,
 - e. limitation on quality ratings,
 - f. policies regarding exceptions to standard policy, and
 - g. valuation procedures and frequency?
2. Are investment policies reviewed at least annually by the board to determine if they are compatible with changing market conditions?
3. Are securities designated at time of purchase as to whether they are investments for the portfolio or trading account?
4. Have policies been established governing the transfer of securities from the trading account to the investment-securities account?
5. Have limitations been imposed on the investment authority of officers?
- *6. Do security transactions require dual authorization?
7. If the bank has due from commercial banks or other depository institutions time, federal funds sold, commercial paper, securities purchased under agreements to resell, or any other money market type of investment—
 - a. is purchase or sale authority clearly defined,
 - b. are purchases or sales reported to the

- board of directors or its investment committee,
- c. are maximums established for the amount of each type of asset,
 - d. are maximums established for the amount of each type of asset that may be purchased from or sold to any one bank,
 - e. do money market investment policies outline acceptable maturities, and
 - f. have credit standards and review procedures been established?

CUSTODY OF SECURITIES

- *8. Do procedures preclude the custodian of the bank securities from—
 - a. having sole physical access to securities;
 - b. preparing release documents without the approval of authorized persons;
 - c. preparing release documents not subsequently examined or tested by a second custodian; and
 - d. performing more than one of the following transactions: (1) execution of trades, (2) receipt or delivery of securities, (3) receipt and disbursement of proceeds?
- *9. Are securities physically safeguarded to prevent loss or unauthorized removal or use?
10. Are securities, other than bearer securities, held only in the name or nominee of the bank?
11. When a negotiable certificate of deposit is acquired, is the certificate safeguarded in the same manner as any other negotiable investment instrument?

RECORDS

12. Do subsidiary records of investment securities show all pertinent data describing the security; its location; pledged or unpledged status; premium amortization; discount accretion; and interest earned, collected, and accrued?

- *13. Is the preparation and posting of subsidiary records performed or reviewed by persons who do not also have sole custody of securities?
- *14. Are subsidiary records reconciled at least monthly to the appropriate general-ledger accounts, and are reconciling items investigated by persons who do not also have sole custody of securities?
15. For international-division investments, are entries for U.S. dollar carrying values of foreign currency-denominated securities rechecked at inception by a second person?
- b. notified in writing of revocation of trading authority?
22. Has the bank established futures and forward trading limits—
- for individual traders,
 - for total outstanding contracts,
 - which are endorsed by the board or an appropriate board committee, and
 - the basis of which is fully explained?
23. Does the bank obtain prior written approval detailing amount of, duration, and reason—
- for deviations from individual limits and
 - for deviations from gross trading limits?
24. Are these exceptions subsequently submitted to the board or an appropriate board committee for ratification?
25. Does the trader prepare a prenumbered trade ticket?
26. Does the trade ticket contain all of the following information:
- trade date
 - purchase or sale
 - contract description
 - quantity
 - price
 - reason for trade
 - reference to the position being matched (immediate or future case settlement)
 - signature of trader
27. Are the accounting records maintained and controlled by persons who cannot initiate trades?
28. Are accounting procedures documented in a procedures manual?
29. Are all incoming trade confirmations—
- received by someone independent of the trading and recordkeeping functions and
 - verified to the trade tickets by this independent party?
30. Does the bank maintain general-ledger control accounts disclosing, at a minimum—
- futures or forward contracts memoranda accounts,
 - deferred gains or losses, and
 - margin deposits?
31. Are futures and forward contracts activities—
- supported by detailed subsidiary records and
 - agreed daily to general-ledger controls by someone who is not authorized to prepare general-ledger entries?

PURCHASES, SALES, AND REDEMPTIONS

- *16. Is the preparation and posting of security and open contractual commitments purchase, sale, and redemption records performed or reviewed by persons who do not also have sole custody of securities or authorization to execute trades?
- *17. Are supporting documents, such as brokers' confirmations and account statements for recorded purchases and sales checked or reviewed subsequently by persons who do not also have sole custody of securities or authorization to execute trades?
- *18. Are purchase confirmations compared to delivered securities or safekeeping receipts to determine if the securities delivered are the securities purchased?

FUTURES CONTRACTS, FORWARD PLACEMENT CONTROLS

19. Do futures and forward contract policies—
- outline specific strategies and
 - relate permissible strategies to other banking activities?
20. Are the formalized procedures used by the trader—
- documented in a manual and
 - approved by the board or an appropriate board committee?
21. Are the bank's futures commission merchant(s) and/or forward brokers—
- notified in writing to trade with only those persons authorized as traders and

32. Do periodic statements received from futures commission merchants reflect—
 - a. trading activity for the period,
 - b. open positions at the end of the period,
 - c. market value of open positions,
 - d. unrealized gains and losses, and
 - e. cash balances in accounts?
33. Are all of these periodic statements—
 - a. received by someone independent of both the trading and recordkeeping functions and
 - b. reconciled to all of the bank's accounting records?
34. Are the market prices reflected on the statements—
 - a. verified with listed prices from a published source and
 - b. used to recompute gains and losses?
35. Are daily reports of unusual increases in trading activity reviewed by senior management?
36. Are weekly reports prepared for an appropriate board committee which reflect—
 - a. all trading activity for the week,
 - b. open positions at the end of the week,
 - c. market value of open positions,
 - d. unrealized gains and losses,
 - e. total trading limits outstanding for the bank, and
 - f. total trading limits for each authorized trader?
37. Is the futures and forward contracts portfolio revalued monthly to market value or to the lower of cost or market?
38. Are revaluation prices provided by persons or sources totally independent of the trading function?

OTHER

39. Does the board of directors receive regular reports on domestic and international-division investment securities which include—
 - a. valuations,
 - b. maturity distributions,
 - c. average yield, and
 - d. reasons for holding and benefits received (international-division and overseas holdings only)?
40. Are purchases, exchanges, and sales of securities and open contractual commitments ratified by action of the board of directors or its investment committee and thereby made a matter of record in the minutes?

CONCLUSION

41. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
42. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

A bank operates as a securities dealer when it underwrites, trades, or deals in securities. These activities may be administered in a separately identifiable trading department or incorporated within the overall treasury department. The organizational structure will generally be a function of the level of activity and the importance of the activity as a product line. If a repetitive pattern of short-term purchases and sales demonstrates that the bank holds itself out to other dealers or investors as a securities dealer, the bank is trading, regardless of what department or section of the bank is engaged in the activity.

The authority under which a bank may engage in securities trading and underwriting is found in section 5136 of the Revised Statutes (12 USC 24 (seventh)). That authority is restricted by limitations on the percentage holding of classes of securities as found in 12 CFR 1.3. This regulation allows banks to deal, underwrite, purchase, and sell (1) type I securities without limit and (2) type II securities subject to a limit of 10 percent of capital and unimpaired surplus per issue. Banks are prohibited from underwriting or dealing in type III securities for their own accounts. See section 2020.1, "Investment Securities and End-User Activities," for further information on types I, II, and III securities.

Banks are involved in three major types of securities transactions. First, the bank, acting as broker, buys and sells securities on behalf of a customer. These are agency transactions in which the agent (bank) assumes no substantial risk and is compensated by a prearranged commission or fee. A second type of securities transaction banks frequently execute is a "riskless-principal" trade. Upon the order of an investor, the dealer buys (or sells) securities through its own account, with the purchase and sale originating almost simultaneously. Because of the brief amount of time the security is held in the dealer's own account, exposure to market risks is limited. Profits result from dealer-initiated markup (the difference between the purchase and sale prices). Finally, as a dealer, the bank buys and sells securities for its own account. This is termed a principal transaction because the bank is acting as a principal, buying or selling qualified securities through its own inventory and absorbing whatever market gain or loss is made on the transaction.

The volume of bank dealer activity and the dealer's capacity in the transaction are critical to an examiner's assessment regarding the examination scope and the required examiner resources and expertise. Dealers engaging primarily in agency or riskless-principal transactions are merely accommodating customers' investment needs. Market risk will be nominal, and the key examination concern will be operational risk and efficiency. Active dealers generally carry larger inventory positions and may engage in some degree of proprietary trading. Their market-risk profile may be moderate to high.

Bank dealers' securities transactions involve customers and other securities dealers. The word "customer," as used in this section, means an investor. Correspondent banks purchasing securities for an investment account would also be considered a customer. Transactions with other dealers are not considered customer transactions unless the dealer is buying or selling for investment purposes.

The following subsections include general descriptions of significant areas of bank trading and underwriting activities. Foreign exchange is covered in detail in the "International" sections of this manual. Additional bank dealer activities, particularly in derivative products, are extensively covered in the *Trading and Capital-Markets Activities Manual*. In addition, many money-center banks and larger regional banks have transferred dealing activities to separately capitalized holding company subsidiaries (known as underwriting affiliates). The *Bank Holding Company Supervision Manual* contains a separate section on nonbank subsidiaries engaged in underwriting and dealing in bank-ineligible securities.

OVERVIEW OF RISK

For bank dealer activities, risk is generally defined as the potential for loss on an instrument or portfolio. Significant risk can also arise from operational weakness and inadequate controls. Risk management is the process by which managers identify, assess, and control all risks associated with a financial institution's activities. The increasing complexity of the financial industry and the range of financial instruments banks use have made risk management more difficult to accomplish and evaluate.

The four fundamental elements for evaluating the risk-management process for bank dealer activities are—

- active board and management oversight,
- adequate risk-management policies and limits,
- appropriate risk measurement and management information systems, and
- comprehensive internal controls and audit procedures.

For risk management to be effective, an institution's board and senior management must be active participants in the process. They must ensure that adequate policies and risk-tolerance limits are developed for managing the risk in bank dealer activities, and they must understand, review, and approve these limits across all established product lines. For policies and limits to be effective and meaningful, risk measures, reports, and management information systems must provide management and the board with the information and analysis necessary to make timely and appropriate responses to changing conditions. Risk management must also be supported by comprehensive internal controls and audit procedures that provide appropriate checks and balances to maintain an ongoing process of identifying any emerging weaknesses in an institution's management of risk.¹ At a minimum, the effectiveness of the institution's policies, limits, reporting systems, and internal controls must be reviewed annually.

In assessing the adequacy of the above elements at individual institutions, examiners should consider the nature and volume of a bank's dealer activities and its overall approach toward managing the various types of risks involved. The sophistication or complexity of policies and procedures used to manage risk depends on the bank dealer's chosen products, activities, and lines of business. Accordingly, examiners should expect risk-management activities to differ among institutions.

As a financial institution's product offerings and geographic scope expand, examiners must review the risk-management process not only by business line, but on a global, consolidated

basis. In more sophisticated institutions, the role of risk management is to identify the risks associated with particular business activities and to aggregate summary data into generic components, ultimately allowing exposures to be evaluated on a common basis. This methodology enables institutions to manage risks by portfolio and to consider exposures in relationship to the institution's global strategy and risk tolerance.

A review of the global organization may reveal risk concentrations that are not readily identifiable from a limited, stand-alone evaluation of a branch, agency, Edge Act institution, nonbank subsidiary, or head office. Consolidated risk management also allows the institution to identify, measure, and control its risks, while giving necessary consideration to the breakdown of exposure by legal entity. Sometimes, if applicable rules and laws allow, identified risks at a branch or subsidiary may be offset by exposures at another related institution. However, risk management across separate entities must be done in a way that is consistent with the authorities granted to each entity. Some financial institutions and their subsidiaries may not be permitted to hold, trade, deal, or underwrite certain types of financial instruments unless they have received special regulatory approval. Examiners should ensure that a financial institution only engages in those activities for which it has received regulatory approval. Furthermore, examiners should verify that the activities are conducted in accordance with any Board conditions or commitments attached to the regulatory approval.

Ideally, an institution should be able to identify its relevant generic risks and should have measurement systems in place to quantify and control these risks. While it is recognized that not all institutions have an integrated risk-management system that aggregates all business activities, the ideal management tool would incorporate a common measurement denominator. Risk-management methodologies in the marketplace and an institution's scope of business are continually evolving, making risk management a dynamic process. Nonetheless, an institution's risk-management system should always be able to identify, aggregate, and control all risks posed by underwriting, trading, or dealing in securities that could have a significant impact on capital or equity.

Trading and market-risk limits should be customized to address the nature of the products

1. Existing policies and examiner guidance on various topics applicable to the evaluation of risk-management systems can be found in SR-93-69, "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations." Many of the managerial and examiner practices contained in this document are fundamental and are generally accepted as sound practices for trading activities.

and any unique risk characteristics. Common types of limits include earnings-at-risk limits, stop-loss limits, limits on notional amounts (both gross and duration-weighted), maturity limits, and maturity-gap limits. The level of sophistication needed within the limit matrix will depend on the type of instrument involved and the relative level of trading activity. Straight-forward notional and tenor limits may be adequate for most dealers; however, dealers involved in a wide array of products and more complex transactions will need stronger tools to measure and aggregate risk across products.

In general, risk from trading and dealing activities can be broken down into the following categories:

- Market or price risk is the exposure of an institution's financial condition to adverse movements in the market rates or prices of its holdings before such holdings can be liquidated or expeditiously offset. It is measured by assessing the effect of changing rates or prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution.
- Funding-liquidity risk refers to the ability to meet investment and funding requirements arising from cash-flow mismatches.
- Market-liquidity risk refers to the risk of being unable to close out open positions quickly enough and in sufficient quantities at a reasonable price.
- Credit risk is the risk that a counterparty to a transaction will fail to perform according to the terms and conditions of the contract, thus causing the security to suffer a loss in cash-flow or market value. Because securities settlements are typically "delivery vs. payment" and settlement periods are relatively short, securities transactions do not involve a significant level of counterparty credit risk. Repurchase transactions, securities lending, and money market transactions, however, involve significantly higher levels of credit risk if not properly controlled. As a result, credit risk is discussed in greater detail in the subsections addressing these products. Credit risk can also arise from positions held in trading inventory. Although U.S. government and agency securities do not generally involve credit risk, other securities (for example, municipal and corporate securities) carried in inventory can decline in price due to a deterioration in credit quality.
- Clearing or settlement risk is (1) the risk that a counterparty who has received a payment or delivery of assets defaults before delivery of the asset or payment or (2) the risk that technical difficulties interrupt delivery or settlement despite the counterparty's ability or willingness to perform.
- Operations and systems risk is the risk of human error or fraud, or the risk that systems will fail to adequately record, monitor, and account for transactions or positions.
- Legal risk is the risk that a transaction cannot be consummated as a result of some legal barrier, such as inadequate documentation, a regulatory prohibition on a specific counterparty, non-enforceability of bilateral and multilateral close-out netting, or collateral arrangements in bankruptcy.

The *Trading and Capital-Markets Activities Manual* contains a comprehensive discussion of these risks, including examination objectives, procedures, and internal control questionnaires by risk category.

GOVERNMENT AND AGENCY SECURITIES

The government securities market is dominated by a number of investment banks, broker-dealers, and commercial banks known as primary dealers in government securities. These dealers make an over-the-counter market in most government and federal-agency securities. Primary dealers are authorized to deal directly with the Open Market Desk of the Federal Reserve Bank of New York. As market makers, primary dealers quote bid-ask prices on a wide range of instruments, and many publish daily quotation sheets or provide live electronic data feeds to larger customers or other dealers.

Government securities trading inventories are generally held with the objective of making short-term gains through market appreciation and dealer-initiated markups. Common factors that affect the markup differential include the size of a transaction, the dealer efforts extended, the type of customer (active or inactive), and the nature of the security. Markups on government securities generally range between $\frac{1}{32}$ and $\frac{4}{32}$ of a point. Long-maturity issues or derivative products may have higher markups due to the higher risk and potentially larger volatility that may be

inherent in these products.

According to industry standards, payments for and deliveries of U.S. government and most agency securities are settled one business day following the trade date, although government dealers and customers can negotiate same-day or delayed settlement for special situations.

When-Issued Trading

A significant potential source of risk to dealers involves “when-issued” (WI) trading in government securities. WI trading is the buying and selling of securities in the one- to two-week interim between the announcement of an offering and the security auction and settlement. Although the vast majority of transactions settle on the next business day, WI trading results in a prolonged settlement period. This could increase both the market risk and counterparty credit risk associated with trading these instruments. The prolonged settlement period also provides an opportunity for a dealer to engage in a large volume of off-balance-sheet trading without having to fund the assets or cover the short positions. In essence, WI trading allows the dealers to create securities. If the overall level of WI trading is significant in relation to the size of the issue, the resulting squeeze on the market could increase volatility and risk. Given these potential risk characteristics, WI trading should be subject to separate sublimits to cap the potential exposure.

Short Sales

Another area of U.S. government securities activity involves short-sale transactions. A short sale is the sale of a security that the seller does not own at the time of the sale. Delivery may be accomplished by buying the security or by borrowing the security. When the security delivered is borrowed, the short seller likely will ultimately have to acquire the security in order to satisfy its repayment obligation. The borrowing transaction is collateralized by a security (or securities) of similar value or cash (most likely the proceeds of the short sale). Reverse repurchase transactions are also used to obtain the security needed to make delivery on the security sold short. Carrying charges on borrowed government securities should be deducted from the short sale and purchase spread to determine net

profit. Short sales are conducted to (1) accommodate customer orders, (2) obtain funds by leveraging existing assets, (3) hedge the market risk of other assets, or (4) allow a dealer to profit from a possible future decline in market price by purchasing an equivalent security at a later date at a lower price.

Government Securities Clearing

Securities-clearing services for the bulk of U.S. government securities transactions and many federal-agency securities transactions are provided by the Federal Reserve as part of its electronic securities-transfer system. The various Federal Reserve Banks will wire-transfer most government securities between the book-entry safekeeping accounts of the seller and buyer. The Federal Reserve’s systems are also used to facilitate security borrowings, loans, and pledges.

Government Securities Act

In response to the failures of a number of unregulated government securities dealers between 1975 and 1985, Congress passed the Government Securities Act of 1986 (GSA). GSA established, for the first time, a federal system for the regulation of the entire government securities market, including previously unregulated brokers and dealers. The primary goal of GSA was to protect investors and ensure the maintenance of a fair, honest, and liquid market.

The GSA granted the Department of the Treasury (Treasury) authority to develop and implement rules for transactions in government and agency securities effected by government securities brokers or dealers (that is, securities firms as well as other financial institutions), and to develop and implement regulations relating to the custody of government securities held by depository institutions. The rules were intended to prevent fraudulent and manipulative acts and practices and to protect the integrity, liquidity, and efficiency of the government securities market. At the same time, the rules were designed to preclude unfair discrimination among brokers, dealers, and customers. Enforcement of the rules for the GSA is generally carried out by an institution’s primary regulatory organization.

The rules for the GSA had the most significant effect on those entities that were not previously subject to any form of federal registration and regulation. These entities included not only firms registered as government securities brokers or dealers but also firms registered as brokers or dealers trading in other securities and financial products. For the first time, the government securities activities of these entities were subject to the discipline of financial responsibility, customer protection, recordkeeping, and advertising requirements. For nonbank dealers, this regulation is enforced by a self-regulatory organization, the Financial Industry Regulatory Authority (FINRA), which conducts routine examinations under the oversight of the Securities and Exchange Commission (SEC).

The provisions of the GSA that had the most significant effect on government securities brokers and dealers (both bank and nonbank broker-dealers) relate to hold-in-custody repurchase agreement rules. Congress targeted this area because of abuses that had resulted in customer losses. Several requirements to strengthen customer protection were imposed: (1) written repurchase agreements must be in place, (2) the risks of the transactions must be disclosed to the customer, (3) specific repurchase securities must be allocated to and segregated for the customer, and (4) confirmations must be made and provided to the customer by the end of the day on which a transaction is initiated and on any day on which a substitution of securities occurs. For a more detailed description of the rules for the GSA requirements, see the procedures for the examination of government securities activities issued by the Board of Governors of the Federal Reserve System, or 17 CFR 400–450 for the actual text of the regulations.

Registration Exemptions

Most banks acting as government securities brokers or dealers are required to file a form known as a G-FIN. This form details the bank's capacity, the locations where government securities activities are performed, and the persons responsible for supervision. However, certain bank government securities activities are exempt from the filing requirements. Banks handling only U.S. savings bond transactions or submitting tender offers on original issue

U.S. Treasury securities are exempt from registration.

Limited government securities brokerage activities are also exempt from registration under certain circumstances. Banks that engage in fewer than 500 government securities transactions annually (excluding savings bond transactions and Treasury tender offers) are exempt. Similarly, banks are exempt if they deal with a registered broker-dealer under a "networking" arrangement, assuming they meet the following conditions: (1) the transacting broker must be clearly identified, (2) bank employees perform only clerical or administrative duties and do not receive transaction-based compensation, and (3) the registered broker-dealer receives and maintains all required information on each customer. Exempt networking arrangements must be fully disclosed to the customer. Finally, banks are exempt from registration requirements if their activities are limited to purchases and sales in a fiduciary capacity or purchases and sales of repurchase or reverse repurchase agreements.

The preceding exemptions provide relief from registration, but exempt banks must comply (if applicable) with regulations addressing custodial holdings for customers (17 CFR 450). Additionally, banks effecting repurchase/reverse repurchase agreements must comply with repurchase-transaction requirements detailed in 17 CFR 403.5(d).

MUNICIPAL SECURITIES

Municipal securities are debt obligations issued by state and local governments and certain agencies and authorities. There are two broad categories of municipal bonds: general obligation bonds and revenue bonds. General obligation bonds (GOs) are backed by the full faith and credit and taxing authority of the government issuer. General obligation bonds are either limited or unlimited tax bonds. Limited tax bonds are issued by government entities whose taxing authority is limited to some extent by law or statute. For instance, a local government may face restrictions on the level of property taxes it can levy on property owners. State and local entities may also issue special tax bonds, which are supported by a specific tax. For instance, a highway project may be financed by a special gasoline tax levied to pay for the bonds. Unlimited tax bonds are issued by government

entities that are not restricted by law or statute in the amount of taxes they can levy; however, there may be some political limitations.

Municipal revenue bonds are backed by a specific project or government authority, and they are serviced by fees and revenues paid by users of the government entity. Revenue bonds are backed by public power authorities, non-profit hospitals, housing authorities, transportation authorities, and other public and quasi-public entities.

Effective March 13, 2000, well-capitalized state member banks were authorized by the Gramm-Leach-Bliley Act (GLB Act) to deal in, underwrite, purchase, and sell municipal revenue bonds without any limitations based on the bank's capital. (See 12 USC 24 (seventh).) Previously, banks were limited to only underwriting, dealing in, or investing in, without limitation, general obligation municipal bonds backed by the full faith and credit of an issuer with general powers of taxation. Member banks could invest in, but not underwrite or deal in, municipal revenue bonds, but the purchases and sales of such investment securities for any obligor were limited to 10 percent of a member bank's capital and surplus. As a result of the GLB Act amendment, municipal revenue bonds are the equivalent of type I securities for well-capitalized state member banks.² (See SR-01-13.) Banks that are not well capitalized may engage in more limited municipal securities activities relating to type II and type III securities. For example, banks may also deal in, underwrite, or invest in revenue bonds that are backed by housing, university, or dormitory projects.

In addition to municipal bonds, state and local governments issue obligations to meet short-term funding needs. These obligations are normally issued in anticipation of some specific revenue. The types of debt issued include tax-anticipation notes (TANs), revenue-anticipation notes (TRANs), grants-anticipation notes (GANs), bond-anticipation notes (BANs), commercial paper, and others.

Because of the large number and diverse funding needs of state and local governments (over 50,000 state and local governments have issued debt in the United States), there is a wide variety of municipal securities. Some municipal

security issues have complex structures that require an increased level of technical expertise to evaluate. As with all areas of banking, dealers who invest in complex instruments are expected to understand the characteristics of the instruments and how these instruments might affect their overall risk profile. While there are some large issuers, like the states of New York and California, most issuers are small government entities that place modest amounts of debt. Many of these issues are exempt from federal, state, and local income taxes; these exemptions, in part, determine the investor base for municipal bonds.

The customer base for tax-exempt municipal securities is investors who benefit from income that is exempt from federal income tax. This group includes institutional investors, such as insurance companies, mutual funds, and retail investors, especially individuals in high income-tax brackets.

Credit Risk

Municipal securities activities involve differing degrees of credit risk depending on the financial capacity of the issuer. Larger issuers of municipal securities are rated by nationally recognized rating agencies (Moody's, S&P, etc.). Other municipalities achieve an investment-grade rating through the use of credit enhancements, usually in the form of a standby letter of credit issued by a financial institution. Banks are also involved in underwriting and placing nonrated municipal securities. Nonrated issues are typically small and are placed with a limited number of investors. Liquidity in the secondary market is limited, and bank dealers rarely carry nonrated issues in trading inventory.

Management should take steps to limit undue concentrations of credit risk arising from municipal-security underwriting and dealing. Exposure to nonrated issuers should be approved through the bank's credit-approval process with appropriate documentation to support the issuer's financial capacity. Activity in nonrated issues outside the bank's target or geographic market should also be avoided. In addition,

2. The Office of the Comptroller of the Currency published final amendments to its investment securities regulation (12 CFR 1) on July 2, 2001. (See 66 *Fed. Reg.* 34784.)

exposure should be aggregated on a consolidated basis, taking into account additional credit risk arising from traditional banking products (loans, letters of credit, etc.).

Municipal Securities Rulemaking Board

The Securities Act Amendments of 1975 (15 USC 78o-4) extended a comprehensive network of federal regulation to the municipal securities markets. Pursuant to the act, municipal securities brokers and dealers are required to register with the SEC. The act also created a separate, self-regulatory body, the Municipal Securities Rulemaking Board (MSRB), to formulate working rules for the regulation of the municipal securities industry. The Federal Reserve is required to ensure compliance with those rules as they apply to state member banks.

A bank engaged in the business of buying and selling municipal securities must register with the SEC as a municipal securities dealer if it is involved in—

- underwriting or participating in a syndicate or joint account for the purpose of purchasing securities;
- maintaining a trading account or carrying dealer inventory; or
- advertising or listing itself as a dealer in trade publications, or otherwise holding itself out to other dealers or investors as a dealer.

Generally, a bank that buys and sells municipal securities for its investment portfolio or in a fiduciary capacity is not considered a dealer.

If a bank meets the SEC's criteria for registering as a municipal securities dealer, it must maintain a separately identifiable department or division involved in municipal securities dealing that is under the supervision of officers designated by the bank's board of directors. These designated officers are responsible for municipal securities dealer activities and should maintain separate records.

The Federal Reserve conducts a separate examination of the municipal securities dealer activities in banks that engage in such activities. This examination is designed to ensure compliance with the rules and standards formulated by the MSRB. For a complete description of the activities of a municipal securities dealer and

detailed procedures performed by the Federal Reserve examiners, see the *Municipal Securities Dealer Bank Examination Manual* issued by the Board of Governors of the Federal Reserve System.

REPURCHASE AGREEMENTS AND SECURITIES LENDING

Repurchase agreements (repos) play an important role in the securities markets. A repo is the simultaneous agreement to sell a security and repurchase it at a later date. Reverse repos are the opposite side of the transaction, securities purchased with a later agreement to resell. From the dealer's perspective, a repo is a financing transaction (liability), and a reverse repo is a lending transaction (asset). Overnight repos are a one-day transaction; anything else is referred to as a "term repo." Approximately 80 percent of the repo market is overnight. Although any security can be used in a repurchase transaction, the overwhelming majority of transactions involve government securities.

Securities dealers use repos as an important source of liquidity. The majority of government securities trading inventory will typically be financed with repos. Reverse repos are used to obtain securities to meet delivery obligations arising from short positions or from the failure to receive the security from another dealer. Reverse repos also are an effective and low-risk means to invest excess cash on a short-term basis.

The repo rate is a money market rate that is lower than the federal funds rate due to the collateralized nature of the transaction. Opportunities also arise to obtain below-market-rate financing. This situation arises when demand exceeds supply for a specific bond issue and it goes on "special." Dealers who own the bond or control it under a reverse repo transaction can earn a premium by lending the security. This premium comes in the form of a below-market-rate financing cost on a repo transaction.

Many of the larger dealers also engage in proprietary trading of a matched book, which consists of a moderate to large volume of offsetting repos and reverse repos. The term "matched book" is misleading as the book is rarely perfectly matched. Although profit may be derived from the capture of a bid/ask spread on matched transactions, profit is more often

derived from maturity mismatches. In a falling-rate environment, traders lend long (reverse repos) and borrow short (repos). It is more difficult to profit in rising-rate environments because of the shape of the yield curve, which is usually upward-sloping. The overall size of the matched book and the length of the maturity mismatches will generally decline in a rising environment. Matched books are also used to create opportunities to control securities that may go on special, resulting in potential profit opportunities. Dealers engaging in matched-book trading provide important liquidity to the repo market.

Risk in a matched book should be minimized by establishing prudent limits on the overall size of the book, size of maturity mismatches, and restrictions on the maximum tenor of instruments. The overall risk of a matched book is usually small in relation to other trading portfolios. Maturity mismatches are generally short-term, usually 30 to 60 days, but may extend up to one year. Risk can be quickly neutralized by extending the maturity of assets or liabilities. Financial instruments (futures and forward rate agreements) can also be used to reduce risk.

Securities dealers may also engage in “dollar-roll” transactions involving mortgage-backed securities, which are treated as secured financings for accounting purposes. The “seller” of the security agrees to repurchase a “substantially identical” security from the “buyer,” rather than the same security. Many of the supervisory considerations noted above for repurchase agreements also apply to dollar-roll transactions. However, if the security to be repurchased is not substantially identical to the security sold, the transaction generally should be accounted for as a sale and not as a financing arrangement. The accounting guidance for “substantially identical” is described in American Institute of Certified Public Accountants (AICPA) Statement of Position 90-3, which generally requires debt instruments to have the same primary obligor or guarantor, the same form and type, the identical contractual interest rate, the same maturity or weighted average maturity, and other factors.

In addition, securities dealers may engage in securities lending or borrowing transactions. In substance, these transactions are very similar to repo transactions except the transactions have no stated maturity. The transactions are conducted through open-ended “loan” agreements that may be terminated on short notice by the lender or borrower. Although lending transac-

tions have historically been centered in corporate debt and equity obligations, the market increasingly involves loans of large blocks of U.S. government and federal-agency securities. To participate in this market, a bank may lend securities held in its investment account or trading account. Like repos, securities are lent to cover fails (securities sold but not available for delivery) and short sales. Collateral for the transactions can consist of other marketable securities or standby letters of credit; however, the large majority of transactions are secured by cash. Investors are willing to lend securities due to the additional investment income that can be earned by investing the cash collateral. When a securities loan is terminated, the securities are returned to the lender and the collateral to the borrower.

Credit Risk

Since repurchase agreements and securities lending transactions are collateralized, credit risk is relatively minor if properly controlled. Some dealers have underestimated the credit risk associated with the performance of the counterparty and have not taken adequate steps to ensure their control of the securities serving as collateral. The market volatility of the securities held as collateral can also add to the potential credit risk associated with the transaction.

As an added measure of protection, dealers require customers to provide excess collateral. This excess is referred to as “margin.” The size of the margin will be a function of the volatility of the instrument serving as collateral and the length of the transaction. In addition to initial margin, term repos and security lending arrangements require additional margin if the value of the collateral declines below a specified level. Excess margin is usually returned to the counterparty if the value of the collateral increases. A daily “mark-to-market” or valuation procedure must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should be independent of the trader and take into account the value of accrued interest on debt securities. It is important to point out that credit risk can arise from both asset transactions (reverse repos and securities borrowed) and liability transactions (repos and securities lent) because of market fluctua-

tions in collateral provided and received. Dealers should take steps to ensure that collateral provided is not excessive.

Policies and procedures should be in place to ensure transactions are conducted only with approved counterparties. Credit-limit approvals should be based on a credit analysis of the borrower. An initial review should be performed before establishing a relationship, with periodic reviews thereafter. Credit reviews should include an analysis of the borrower's financial statement, capital, management, earnings, business reputation, and any other relevant factors. Analyses should be performed in an independent department of the lender institution, by persons who routinely perform credit analyses. Analyses performed solely by the person managing the repo or securities lending programs are not sufficient. Credit and concentration limits should take into account other extensions of credit by other departments of the bank or affiliates. Procedures should be established to ensure that credit and concentration limits are not exceeded without proper authorization from management.

Other Uses and Implications of Securities Lending

In addition to lending their own securities, financial institutions have become increasingly involved in lending customers' securities held in custody, safekeeping, trust, or pension accounts. These activities are typically organized within the bank's trust department. Not all institutions that lend securities or plan to do so have relevant experience. Because the securities available for lending often greatly exceed the demand, inexperienced lenders may be tempted to ignore commonly recognized safeguards. Bankruptcies of broker-dealers have heightened regulatory sensitivity to the potential for problems in this area.

Fees received on securities loans are divided between the custodial institution and the customer account that owns the securities. In situations involving cash collateral, part of the interest earned on the temporary investment of cash is returned to the borrower and the remainder is divided between the lender institution and the customer account that owns the securities.

In addition to a review of controls, examiners

should take steps to ensure that cash collateral is invested in appropriate instruments. Cash should be invested in high-quality, short-term money market instruments. Longer-term floating-rate instruments may also be appropriate; however, illiquid investments and products with customized features (for example, structured notes with imbedded options) should be avoided. Several banks have reported significant losses associated with inappropriate investments in securities lending areas.

Securities-Lending Capacity

Securities lending may be done in various capacities and with differing associated liabilities. It is important that all parties involved understand in what capacity the lender institution is acting. The relevant capacities are described below.

Principal

A lender institution offering securities from its own account is acting as principal. A lender institution offering customers' securities on an undisclosed basis is also considered to be acting as principal.

Agent

A lender institution offering securities on behalf of a customer-owner is acting as an agent. To be considered a bona fide or "fully disclosed" agent, the lending institution must disclose the names of the borrowers to the customer-owners and the names of the customer-owners to the borrowers (or give notice that names are available upon request). In all cases, the agent's compensation for handling the transaction should be disclosed to the customer-owner. Undisclosed agency transactions, that is, "blind brokerage" transactions in which participants cannot determine the identity of the contra party, are treated as if the lender institution were the principal.

Directed Agent

A lender institution that lends securities at the

direction of the customer-owner is acting as a directed agent. The customer directs the lender institution in all aspects of the transaction, including to whom the securities are loaned, the terms of the transaction (rebate rate and maturity/call provisions on the loan), acceptable collateral, investment of any cash collateral, and collateral delivery.

Fiduciary

A lender institution that exercises discretion in offering securities on behalf of and for the benefit of customer-owners is acting as a fiduciary. For supervisory purposes, the underlying relationship may be as agent, trustee, or custodian.

Finder

A finder brings together a borrower and a lender of securities for a fee. Finders do not take possession of the securities or collateral. Delivery of securities and collateral is directly between the borrower and the lender, and the finder does not become involved. The finder is simply a fully disclosed intermediary.

MONEY MARKET INSTRUMENTS

In addition to bank-eligible securities activities, banks may engage in a substantial volume of trading in money market instruments. Federal funds, banker's acceptances, commercial paper, and certificates of deposit are forms of money market instruments. While these instruments may be used as part of the overall funding strategy, many firms actively engage in discretionary or proprietary trading in these instruments. As in matched-book repo activities, profits from trading money market instruments are derived from the bid/ask spread on matched transactions and the net interest spread from maturity mismatches.

This activity may result in overall money market arbitrage. Arbitrage is the coordinated purchase and sale of the same security or its equivalent, for which there is a relative price imbalance in the market. The objective of such activity is to obtain earnings by taking advantage of changing yield spreads. Arbitrage can

occur with items such as Eurodollar CDs, banker's acceptances, and federal funds, and with financial instruments such as futures and forwards.

Although the risk of money market trading is relatively straightforward, the potential risk can be significant based on the volume of trading and size of the mismatches. Despite the potential risk, these activities may offer attractive profit opportunities if effectively controlled. Short-term interest-rate markets are very liquid, and risk can be quickly neutralized by changing the maturity profile of either assets or liabilities. Financial instruments (such as futures and forward rate agreements) can also be an effective tool to manage risk. Money market trading may be managed as a separate product line or may be integrated with trading in other interest-rate products (such as swaps, caps, or floors). Examiners should take steps to ensure that appropriate limits are in place for money market trading, including restrictions on aggregate notional size, the size of maturity mismatches, and the maximum tenor of instruments.

Federal Funds

Commercial banks actively use the federal funds market as a mechanism to manage fluctuations in the size and composition of their balance sheet. Federal funds are also an efficient means to manage reserve positions and invest excess cash on a short-term basis. Although transactions are generally unsecured, they can also be secured. The majority of transactions are conducted overnight; however, term transactions are also common. Federal funds trading will often involve term transactions in an attempt to generate positive net interest spread by varying the maturities of assets and liabilities.

Banks have traditionally engaged in federal funds transactions as principal, but an increasing number of banks are conducting business as agent. These agency-based federal funds transactions are not reported on the agent's balance sheet. Dealer banks may also provide federal funds clearing services to their correspondent banks.

Banker's Acceptances

Banker's acceptances are time drafts drawn on

and accepted by a bank. They are the customary means of effecting payment for merchandise sold in import-export transactions, as well as a source of financing used extensively in international trade. Banker's acceptances are an obligation of the acceptor bank and an indirect obligation of the drawer. They are normally secured by rights to the goods being financed and are available in a wide variety of principal amounts. Maturities are generally less than nine months. Acceptances are priced like Treasury bills, with a discount figured for the actual number of days to maturity based on a 360-day year. The bank can market acceptances to the general public but must guarantee their performance.

Commercial Paper

Commercial paper is a generic term that is used to describe short-term, unsecured promissory notes issued by well-recognized and generally sound corporations. The largest issuers of commercial paper are corporations, bank holding companies, and finance companies, which use the borrowings as a low-cost alternative to bank financing. Commercial paper is exempt from registration under the Securities Act of 1933 if it meets the following conditions:

- prime quality and negotiable
- not ordinarily purchased by the general public
- issued to facilitate current operational business requirements
- eligible for discounting by a Federal Reserve Bank
- maturity does not exceed nine months

Actively traded commercial paper is ordinarily issued in denominations of at least \$100,000 and often in excess of \$1 million. Commercial paper issuers usually maintain unused bank credit lines to serve as a source of back-up liquidity or contingency financing, principally in the form of standby letters of credit. Major commercial paper issuers are rated by nationally recognized rating agencies (Moody's, S&P, and others). Other issuers achieve higher ratings through the use of a credit enhancement, usually in the form of a standby letter of credit issued by a financial institution.

Based on Supreme Court rulings, commercial paper was considered a security for purposes of

the former Glass-Steagall Act. As a result, banks were generally prohibited from underwriting and dealing in commercial paper. Despite this restriction, banks participated in this market in an "agency capacity." When establishing a commercial paper dealership, many of the larger banks pursued business through an aggressive interpretation of an agency-transaction role. In practice, bank dealers engage in riskless-principal or best-efforts placement of commercial paper. Taking this logic a step further, others actively engage in competitive bidding and intraday distribution of newly issued paper. Because the paper settles on a same-day basis, the transactions are never part of the official end-of-day records of the bank. Although this technical point has been the subject of discussion, the practice has not been subject to regulatory challenge.

Commercial paper may be issued as an interest-bearing instrument or at a discount. Market trades are priced at a current yield, net of accrued interest due the seller or, if the commercial paper was issued at a discount, at a discount figured for the actual number of days to maturity based on a 360-day year.

The sale of commercial paper issued by bank affiliates must conform to legal restrictions and avoid conflicts of interest. Each certificate and confirmation should disclose the facts that the commercial paper is not a deposit and is not insured by the Federal Deposit Insurance Corporation.

Certificates of Deposit

Negotiable certificates of deposit (CDs) issued by money-center banks are actively traded in denominations of \$100,000 to \$1 million. Interest generally is calculated on a 360-day year and paid at maturity. Secondary-market prices are computed based on current yield, net of accrued interest due the seller. Eurodollar CDs trade like domestic CDs except their yields are usually higher and their maturities are often longer.

Credit-Risk and Funding Concentrations

In addition to market risk, money market policies and guidelines should recognize the credit risk

inherent in these products. Federal funds sold and deposit placements are essentially unsecured advances. To avoid undue concentrations of credit risk, activity with these products should be limited to approved counterparties. Limits should be established for each prospective counterparty. Tenor limits should also be considered to reduce the potential for credit deterioration over the life of the transaction. The size of limits should be based on both anticipated activity and the counterparty's financial capacity to perform. The credit analysis should be performed by qualified individuals in a credit department that is independent from the money market dealing function. In assessing the creditworthiness of other organizations, institutions should not rely solely on outside sources, such as standardized ratings provided by independent rating agencies, but should perform their own analysis of a counterparty's or issuer's financial strength. At a minimum, limits should be reassessed and credit analyses updated annually. Once established, limits should be monitored with exceptions documented and approved by the appropriate level of senior management. Exposure should also be aggregated on a consolidated basis with any other credit exposure arising from other product areas. Exposure to foreign bank counterparties should also be aggregated by country of domicile to avoid country-risk concentrations. The limit structure should be reviewed to ensure compliance with the requirements of Regulation F, Limitations on Interbank Liabilities, which places prudent limits on credit exposure to correspondent banks.

Maintaining a presence in the wholesale funding markets requires a strong reputation and increases potential liquidity risk. The prolonged use of a large volume of purchased funds to support a money market trading operation could also reduce the capacity to tap this market, if needed, for core funding. Guidelines should be in place to diversify sources of funding. Contingency plans should include strategies to exit or reduce the profile in these markets if the situation warrants.

OPERATIONS AND INTERNAL CONTROLS

A bank dealer's operational functions should be designed to regulate the custody and movement of securities and to adequately account for

trading transactions. Because of the dollar volume and speed of trading activities, operational inefficiencies can quickly result in major problems.

Sound Practices for Front- and Back-Office Operations

Bank dealer activities vary significantly among financial institutions, depending on the size and complexity of the trading products; trading, back-office, and management expertise; and the sophistication of systems. As a result, practices, policies, and procedures in place in one institution may not be necessary in another. The adequacy of internal controls requires sound judgment on the part of the examiner. The following is a list of policies and procedures that should be reviewed:

- Every organization should have comprehensive policies and procedures in place that describe the full range of bank dealer activities performed. These documents, typically organized into manuals, should at a minimum address front- and back-office operations; reconciliation guidelines and frequency; revaluation and accounting guidelines; descriptions of accounts; broker policies; a code of ethics; and the risk-measurement and -management methods, including a comprehensive limit structure.
- Every institution should have existing policies and procedures to ensure the segregation of duties among the trading, control, and payment functions.
- Revaluation sources should be independent from the traders for accounting purposes, risk oversight, and senior management reporting, although revaluation of positions may be conducted by traders to monitor positions.
- Trader and dealer telephone conversations should be taped to facilitate the resolution of disputes and to serve as a valuable source of information to auditors, managers, and examiners.
- Trade tickets and blotters (or their electronic equivalents) should be timely and complete to allow for easy reconciliation and for appropriate position and exposure monitoring. The volume and pace of trading may warrant virtually simultaneous creation of these records in some cases.

- Computer hardware and software applications must have the capacity to accommodate the current and projected level of trading activity. Appropriate disaster-recovery plans should be tested regularly.
- Every institution should have a methodology to identify and justify any off-market transactions. Ideally, off-market transactions would be forbidden.
- A clear institutional policy should exist for personal trading. If such trading is permitted at all, procedures should be established to avoid even the appearance of conflicts of interest.
- Every institution should ensure that the management of after-hours and off-premises trading, if permitted at all, is well documented so that transactions are not omitted from the automated blotter or the bank's records.
- Every institution should ensure that staff is both aware of and complies with internal policies governing the trader-broker relationship.
- Every institution that uses brokers should monitor the patterns of broker usage, be alert to possible undue concentrations of business, and review the list of approved brokers at least annually.
- Every institution that uses brokers should establish a policy that minimizes name substitutions of brokered transactions. All such transactions should be clearly designated as switches, and relevant credit authorities should be involved.
- Every institution that uses brokers for foreign-exchange transactions should establish a clear statement forbidding the lending or borrowing of brokers' points as a method to resolve discrepancies.
- Every organization should have explicit compensation policies to resolve disputed trades for all traded products. Under no circumstances should "soft-dollar" (the exchange of services in lieu of dollar compensation) or off-the-books compensation be permitted for dispute resolution.
- Every institution should have know-your-customer policies, and they should be understood and acknowledged by trading and sales staff.
- The designated compliance officer should perform a review of trading practices at least annually. In institutions with a high level of trading activity, interim reviews may be warranted.
- The organization should have an efficient confirmation-matching process that is fully independent from the dealing function. Documentation should be completed and exchanged as close to completion of a transaction as possible.
- Auditors should review trade integrity and monitoring on a schedule in accordance with its appropriate operational-risk designation.
- Organizations that have customers who trade on margin should establish procedures for collateral valuation and segregated custody accounts.

Fails

In some cases, a bank may not receive or deliver a security by settlement date. "Fails" to deliver for an extended time or a substantial number of cancellations are sometimes characteristic of poor operational control or questionable trading activities.

Fails should be controlled by prompt reporting and follow-up procedures. The use of multi-copy confirmation forms enables operational personnel to retain and file a copy by settlement date and should allow for prompt fail reporting and resolution.

Revaluation

The frequency of independent revaluation should be driven by the level of an institution's trading activity. Trading operations with high levels of activity may need to perform daily revaluation; however, it is important to note that independent revaluations are less critical when inventory is turning over quickly or end-of-day positions are small. In these situations, the majority of profit and loss is realized rather than unrealized. Only unrealized profit and loss on positions carried in inventory are affected by a revaluation. At a minimum, every institution should conduct an independent revaluation at the end of each standard accounting period (monthly or quarterly). There will be situations when certain securities will be difficult to price due to lack of liquidity or recent trading activity. If management relies on trader estimates in these situa-

tions, a reasonableness test should be performed by personnel who are independent from the trading function. A matrix-pricing approach may also be employed. This involves the use of prices on similar securities (coupon, credit quality, and tenor) to establish market prices.

Control of Securities

Depository institutions need to adopt procedures to ensure that ownership of securities is adequately documented and controlled. While this documentation and control once involved taking physical possession of the securities either directly or through a third-party custodian, the securities markets are quickly moving to a book-entry system. In this context, safekeeping is more of a concept than a reality. As the markets change, documenting the chain of ownership becomes the primary mechanism to prevent losses arising from a counterparty default. This documentation involves the matching of incoming and outgoing confirmations and frequent reconciliations of all accounts holding securities (Federal Reserve, customer, custodian, and other dealers). When the dealer holds securities on behalf of its customers, similar safeguards also need to be in place. Although this documentation process can be burdensome, it is necessary to protect a dealer's interest in securities owned or controlled. Many active dealers have automated the reconciliation and matching process. This reduces the potential for human error and increases the likelihood that exceptions can be uncovered and resolved quickly.

Because of the relatively short periods of actual ownership associated with repurchase agreements, potential losses could be significant if prudent safeguards are not followed. Significant repo volume or matched-book trading activities only heighten this concern. To further protect their interests, dealers should enter into written agreements with each prospective repurchase-agreement counterparty. Although the industry is moving toward standardized master agreements, some degree of customization may occur. The agreements should be reviewed by legal counsel for their content and compliance with established minimum documentation standards. In general, these agreements should specify the terms of the transaction and the duties of both the buyer and seller. At a mini-

mum, provisions should cover the following issues:

- acceptable types and maturities of collateral securities
- initial acceptable margin for collateral securities of various types and maturities
- margin maintenance, call, default, and sellout provisions
- rights to interest and principal payments
- rights to substitute collateral
- individuals authorized to transact business on behalf of the depository institution and its counterparty

Written agreements should be in place before commencing activities.

TRADING AND CAPITAL-MARKETS ACTIVITIES MANUAL

The *Trading and Capital-Markets Activities Manual*, developed by the Federal Reserve System, is a valuable tool to help examiners understand the complex and often interrelated risks arising from capital-markets activities. The products addressed in the previous subsections and their associated risks are covered in greater detail in the manual.

As noted in the preceding sections, and further addressed in the *Trading and Capital-Markets Activities Manual*, other trading instruments could be included in the bank dealer or money market trading operation. Financial instruments such as futures and forward rate agreements are often used to modify or hedge the risk associated with cash instruments (dealer inventory and money market positions). The bank dealer may also be involved in other instruments including asset-backed securities (mortgage-backed and consumer-receivable-backed). Other departments of the bank may also use securities products as part of an unrelated trading activity. For example, interest-rate-swap traders often use cash bonds to hedge or modify market-risk exposure. In this capacity, the swap desk would be a customer of the government securities dealer. These overlaps in product focus and usage make it critical for examiners to understand the organizational structure and business strategies before establishing examination scope.

OTHER ISSUES

Intercompany Transactions

Examiners should review securities and repurchase-agreement transactions with affiliates to determine compliance with sections 23A and 23B of the Federal Reserve Act. Money market transactions may also be subject to limitations under section 23A; however, these restrictions generally do not apply to transactions between bank subsidiaries that are 80 percent or more commonly owned by a bank holding company. Intercompany transactions between securities underwriting affiliates and their bank affiliates should be carefully reviewed to ensure compliance with Board operating standards and sections 23A and 23B.

Agency Relationships

Many dealer banks engage in securities transactions only in an agency capacity. Acting as an agent means meeting customers' investment needs without exposing the firm to the price risk associated with dealing as principal. Risk is relatively low as long as appropriate disclosures are made and the bank does not misrepresent the nature or risk of the security.

Agency-based federal funds transactions are also becoming more common. By serving only as an agent to facilitate the transaction, a bank can meet its correspondent's federal funds needs without inflating the balance sheet and using capital. Examiners should review agency-based

money market transactions to ensure that the transactions are structured in a manner that insulates the bank from potential recourse, either moral or contractual. If legal agreements are not structured properly, the courts could conclude that the agent bank was acting a principal. In this situation, the loss could be recognized by the agent bank, not its customer.

Although no single feature can determine whether an agency relationship really exists, the courts have recognized a variety of factors in distinguishing whether the persons to whom “goods” were transferred were buyers or merely agents of the transferor. Although some of these distinguishing factors may not apply to federal-funds transactions because they involve the transfer of funds rather than material goods, some parallels can be drawn. An agency relationship would appear to encompass, although not necessarily be limited to, the following elements:

- The agent bank must agree to act on behalf of the seller of the federal funds (“seller”) and not on its own behalf.
- The agent should fully disclose to all parties to the transaction that it is acting as agent on behalf of the seller and not on its own behalf.
- The seller, not the agent bank, must retain title to the federal funds before their sale to a purchasing institution.
- The seller, not the agent bank, must bear the risk of loss associated with the federal-funds sale.
- The agent bank’s authority in selling federal funds and accounting for these sales to the seller should be controlled by the seller or by some guidelines to which the seller has agreed. The agent bank should sell only to those banks stipulated on a list of banks approved, reviewed, and confirmed periodically by the seller bank.
- The agent bank should be able to identify the specific parties (sellers and purchasers) to a federal-funds sale and the amount of each transaction for which the agent has acted.
- The agent bank’s compensation should generally be based on a predetermined fee schedule or percentage rate (for example, a percentage based on the number or size of transactions). The agent should generally not receive compensation in the form of a spread over a predetermined rate that it pays to the seller. (If the agent bank’s compensation is in the form of a spread over the rate it pays to the seller,

this situation would appear to be more analogous to acting as a principal and suggests that the transactions should be reported on the “agent’s” balance sheet.)

By structuring agency agreements to include provisions that encompass these factors and by conducting agency activities accordingly, agent banks can lower the possibility that they would be considered a principal in the event of a failure of a financial institution that had purchased funds through the agent. Generally, as a matter of prudent practice, each bank acting as an agent should have written agreements with principals encompassing the above elements and have a written opinion from legal counsel as to the bona fide nature of the agency relationships.

Selling through an agent should not cause a bank to neglect a credit evaluation of the ultimate purchasers of these funds. Under the more traditional mode of conducting federal-funds transactions, banks sell their federal funds to other banks, which in many instances are larger regional correspondents. These correspondent banks in turn may resell the federal funds to other institutions. Since the correspondent is acting as a principal in these sales, the banks selling the funds to the correspondent are generally not concerned about the creditworthiness of those purchasing the federal funds from the correspondent/principal. Rather, the original selling banks need to focus solely on the creditworthiness of their correspondent banks, with which they should be quite familiar.

However, when conducting federal-funds sales through an agent, selling banks, in addition to considering the financial condition of their agent, should also subject the ultimate purchasing banks to the same type of credit analysis that would be considered reasonable and prudent if the seller banks were lending directly to the ultimate borrowers rather than through agents. Banks selling federal funds through agents should not relinquish their credit-evaluation responsibilities to their agent banks.

REPORTING

Securities held for trading purposes and the income and expense that results from trading activities should be isolated by specific general ledger or journal accounts. The balances in those accounts should be included in the

appropriate reporting categories for regulatory reporting.

Instructions for the Consolidated Report of Condition and Income (call report) require that securities, derivative contracts, and other items held in trading accounts be reported consistently at market value, or at the lower of cost or market value, with unrealized gains and losses recognized in current income. For further detail, refer to the glossary section of the call report instructions under “trading account.” With either method, the carrying values of trading-security inventories should be evaluated periodically (monthly or quarterly), based on current market prices. The increase or decrease in unrealized appreciation or depreciation resulting from that revaluation should be credited or charged to income. Periodic independent revaluation is the most effective means of measuring the trading decisions of bank management.

For reporting purposes, the trading department’s income should include not only revaluation adjustments, but also profits and losses from the sale of securities, and other items related to the purchase and sale of trading securities. Interest income from trading assets, salaries, commissions, and other expenses should be excluded from trading income for reporting purposes; however, these items should be considered by management when evaluating the overall profitability of the business.

When the lender institution is acting as a fully disclosed agent, securities-lending activities need not be reported on the call report. However, lending institutions offering indemnification against loss to their customer-owners should report the associated contingent liability gross in Schedule RC-L as “other significant commitments and contingencies.”

Recordkeeping and Confirmation Rules

Regulation H contains rules establishing uniform standards for bank recordkeeping, confirmation, and other procedures in executing securities transactions for bank customers. The regulation applies, in general, to those retail commercial activities where the bank effects securities transactions at the direction and for the account of customers. The purpose of the rules is to ensure that purchasers of securities are provided adequate information concerning a

transaction and that adequate records and controls are maintained for securities transactions. Under the rules, banks are required to maintain certain detailed records concerning securities transactions, to provide written confirmations to customers under certain circumstances, and to establish certain written policies and procedures. The requirements generally do not apply to banks that make 200 or fewer securities transactions a year for customers (exclusive of transactions in U.S. government and agency obligations) and to transactions subject to the requirements of the MSRB.

Due Bills

A “due bill” is an obligation that results when a firm sells a security or money market instrument and receives payment, but does not deliver the item sold. Due bills issued should be considered as borrowings by the issuing firm, and alternatively, due bills received should be considered as lending transactions. Dealers should not issue due bills as a means of obtaining operating funds or when the underlying security can be delivered at settlement. Customers of the dealer enter transactions with an implicit understanding that securities transactions will be promptly executed and settled unless there is a clear understanding to the contrary. Consequently, dealers should promptly disclose the issuance of a due bill to a customer when funds are taken but securities or money market instruments are not delivered to the customer. Such disclosure should reference the applicable transaction; state the reason for the creation of a due bill; describe any collateral securing the due bill; and indicate that to the extent the market value of the collateral is insufficient, the customer may be an unsecured creditor of the dealer.

Due bills that are outstanding for more than three days and are unsecured could be construed as funding and should be reported as “liabilities for borrowed monies” on the call report. These balances are subject to reserve requirements imposed by Regulation D.

ESTABLISHING SCOPE

Obtaining an overview of the organization, management structure, products offered, and control

environment is a critical step in the examination process. Based on this assessment, an examiner should determine the appropriate resources and skill level. In situations where an institution is active in either the government or municipal securities markets, it is essential to allocate additional resources for GSA and MSRB com-

pliance. The assigned examiners should be familiar with the provisions of GSA and MSRB as well as with the related examination procedures. For active proprietary trading units, it is important to assign examiners who have a reasonable working knowledge of the concepts outlined in the *Trading Activities Manual*.

Bank Dealer Activities

Examination Objectives

Effective date November 1995

Section 2030.2

1. To determine if the policies, practices, procedures, and internal controls regarding bank dealer activities are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the trading portfolio for credit quality and marketability.
4. To determine the scope and adequacy of the audit compliance functions.
5. To determine compliance with applicable laws and regulations.
6. To ensure investor protection.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

Bank Dealer Activities

Examination Procedures

Effective date December 1985

Section 2030.3

1. If selected for implementation, complete or update the Bank Dealer Activities section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if corrections have been accomplished.
4. Request that the bank provide the following schedules:
 - a. An aged schedule of securities that have been acquired as a result of underwriting activities.
 - b. An aged schedule of trading account securities and money market instruments held for trading or arbitrage purposes. Reflect commitments to purchase and sell securities and all joint account interests.
 - c. A schedule of short-sale transactions.
 - d. An aged schedule of due bills.
 - e. A list of bonds borrowed.
 - f. An aged schedule of "fails" to receive or deliver securities on unsettled contracts.
 - g. A schedule of approved securities borrowers and approved limits.
 - h. A schedule of loaned securities.
 - i. A schedule detailing account names and/or account numbers of the following customer accounts:
 - Own bank trust accounts.
 - Own bank permanent portfolio.
 - Affiliated banks' permanent portfolio accounts.
 - Personal accounts of employees of other banks.
 - Accounts of brokers or other dealers.
 - Personal accounts of employees of other brokers or dealers.
 - j. A list of all joint accounts entered into since the last examination.
 - k. A list of underwriting since the last examination and whether such securities were acquired by negotiation or competitive bid.
 1. A list of all financial advisory relationships.
5. Agree balances of appropriate schedules to general ledger and review reconciling items for reasonableness.
6. Determine the extent and effectiveness of trading policy supervision by:
 - a. Reviewing the abstracted minutes of meetings of the board of directors and/or of any appropriate committee.
 - b. Determining that proper authorization for the trading officer or committee has been made.
 - c. Ascertaining the limitations or restrictions on delegated authorities.
 - d. Evaluating the sufficiency of analytical data used in the most recent board or committee trading department review.
 - e. Reviewing the methods of reporting by department supervisors and internal auditors to ensure compliance with established policy and law.
 - f. Reaching a conclusion about the effectiveness of director supervision of the bank's trading policy. Prepare a memo for the examiner assigned "Duties and Responsibilities of Directors" stating your conclusions. All conclusions should be supported by factual documentation.

(Before continuing, refer to steps 14 and 15. They should be performed in conjunction with the remaining examination steps.)
7. Ascertain the general character of underwriting and direct placement activities and the effectiveness of department management by reviewing underwriter files and ledgers, committee reports and offering statements to determine:
 - a. The significance of underwriting activities and direct placements of type III securities as reflected by the volume of sales and profit or loss on operations. Compare current data to comparable prior periods.
 - b. Whether there is a recognizable pattern in:
 - The extent of analysis of material

- information relating to the ability of the issuer to service the obligation.
- Rated quality of offerings.
 - Point spread of profit margin for unrated issues.
 - Geographic distribution of issuers.
 - Syndicate participants.
 - Bank's trust department serving as corporate trustee, paying agent and transfer agent for issuers.
 - Trustee, paying agent and transfer agent business being placed with institutions that purchase a significant percentage of the underwriter or private placement offering.
- c. The volume of outstanding bids. Compare current data to comparable prior periods.
- d. The maturity, rated quality and geographic distribution of takedowns from syndicate participations.
- e. The extent of transfer to the bank's own or affiliated investment or trading portfolios or to trust accounts and any policies relating to this practice.
8. Determine the general character of trading account activities and whether the activities are in conformance with stated policy by reviewing departmental reports, budgets and position records for various categories of trading activity and determining:
- a. The significance of present sales volume compared to comparable prior periods and departmental budgets.
- b. Whether the bank's objectives are compatible with the volume of trading activity.
9. Review customer ledgers, securities position ledgers, transaction or purchase and sales journals and analyze the soundness of the bank's trading practices by:
- a. Reviewing a representative sample of agency and contemporaneous principal trades and determining the commission and price mark-up parameters for various sizes and types of transactions.
- b. Selecting principal transactions that have resulted in large profits and determining if the transaction involved:
- "Buy-backs" of previously traded securities.
 - Own bank or affiliated bank portfolios.
 - A security that has unusual quality and maturity characteristics.
- c. Reviewing significant inventory positions taken since the prior examination and determining if:
- The quality and maturity of the inventory position was compatible with prudent banking practices.
 - The size of the position was within prescribed limits and compatible with a sound trading strategy.
- d. Determining the bank's exposure on off-setting repurchase transactions by:
- Reviewing the maturities of offsetting re-po and reverse re-po agreements to ascertain the existence, duration, amounts and strategy used to manage unmatched maturity "gaps" and extended (over 30 days) maturities.
 - Reviewing records since the last examination to determine the aggregate amounts of:
 - Matched repurchase transactions.
 - Reverse re-po financing extended to one or related firms(s).
 - Performing credit analysis of significant concentrations with any single or related entity(ies).
 - Reporting the relationship of those concentrations to the examiners assigned "Concentration of Credits" and "Funds Management."
10. Determine the extent of risk inherent in trading account securities which have been in inventory in excess of 30 days and:
- a. Determine the dollar volume in extended holdings.
- b. Determine the amounts of identifiable positions with regard to issue, issuer, yield, credit rating, and maturity.
- c. Determine the current market value for individual issues which show an internal valuation mark-down of 10 percent or more.
- d. Perform credit analyses on the issuers of non-rated holdings identified as significant positions.
- e. Perform credit analyses on those issues with valuation write-downs considered significant relative to the scope of trading operations.
- f. Discuss plans for disposal of slow moving inventories with management and determine the reasonableness of those plans in light of current and projected market trends.
11. Using an appropriate technique, select issues

- from the schedule of trading account inventory. Test valuation procedures by:
- a. Reviewing operating procedures and supporting workpapers and determining if prescribed valuation procedures are being followed.
 - b. Comparing bank prepared market prices, as of the most recent valuation date, to an independent pricing source (use trade date “bid” prices).
 - c. Investigating any price differences noted.
12. Using an appropriate technique, select transactions from the schedule of short sales and determine:
- a. The degree of speculation reflected by basis point spreads.
 - b. Present exposure shown by computing the cost to cover short sales.
 - c. If transactions are reversed in a reasonable period of time.
 - d. If the bank makes significant use of due-bill transactions to obtain funds for its banking business:
 - Coordinate with the examiner assigned “Review of Regulatory Reports” to determine if the bank’s reports of condition reflect due bill transactions as “liabilities for borrowed money.”
 - Report amounts, duration, seasonal patterns and budgeted projections for due bills to the examiner assigned “Funds Management.”
13. If the bank is involved in agency-based federal funds activity:
- a. At the beginning or in advance of each examination of a banking organization which has been acting as an agent in the purchase and sale of federal funds for other institutions, examiners should obtain certain information which will help them determine the nature and extent of this activity. The information should include:
 - A brief description of the various types of agency relationships (i.e., involving federal funds or other money market activities) and the related transactions.
 - For each type of agency relationship, copies of associated forms, agency agreements, documents, reports and legal opinions. In addition, if the banking organization has documented its analysis of the risks associated with the activity, a copy of the analysis should be requested by the examiner.
 - b. For each type of agency relationship, a summary of the extent of the activity including:
 - The number of institutions serviced as principals.
 - The size range of the institutions (i.e., institutions serviced have total assets ranging from \$_____ to \$_____).
 - General location of sellers and purchasers serviced under agency relationships (i.e., New York State, Midwest, etc.)
 - Estimate of average daily volume of federal funds or money market instruments purchased and sold under agency relationships and the high and low volume over the period since the last examination inquiry (or since activity was begun, if more recent).
 - Names of individuals in the bank that are responsible for these agency relationships.
 - c. A historical file of this information should be maintained in order to determine the nature, extent and growth of these activities over time.
 - b. Once the examination work in this area has been started, the examiner should attempt to discern any situation, activity or deficiency in this area that might suggest that an agency relationship does *not* actually exist. A negative response to the following examination guidelines section dealing with agency agreements may signal such a deficiency. In addition, any other money market agency relationships that involve new or unusual financial transactions should be evaluated to determine the nature of the risks involved and compliance, to the extent applicable, with the guidelines.
 - c. The examiner should determine that the banking organization’s written policies, procedures, and other documentation associated with this activity are consistent with the Federal Reserve System’s Examination Guidelines. If the bank does not have written policies the examiner should strongly advise that they be developed due to the complex nature of this activity and the potential risks associated with it.
 - d. After reviewing the policies, procedures,

and appropriate documentation, the examiner should be able to respond positively to the following questions:

- Banking organizations acting as *agents in the sale of federal funds*¹

- Has this form of activity been approved by the board of directors?
- Are the bank's individual agency arrangements and transactions:
 - supported by written agency agreements, and
 - reviewed and approved by appropriate officers?
- Do the written agency agreements that support this activity include provisions indicating that (a negative answer may indicate that the bank is not in fact an agent):
 - the agent bank will be acting *on behalf of the original or principal seller of federal funds ("seller")* in conducting these activities and not on the agent bank's own behalf?
 - the agency relationship will be fully disclosed to all banks involved in the transactions?
 - the seller, and not the agent bank, must retain legal title to the federal funds before they are sold to a third party bank?
 - the seller, and not the agent bank, bears the risk of loss?
 - the agent bank's authority in selling federal funds and in accounting for this activity to the seller should be controlled by the seller or by standards to which it has agreed? To implement this, does the agreement or its attachments include the following seller-approved items:
 1. lists of banks to whom the agent may sell federal funds,² and

2. limits on the amounts that can be sold to these banks?

- Does the agent have a written opinion from its legal counsel as to the bona fide nature of the agency relationship?
- Does the accounting and reporting system of the agent bank *enable* it to account for the federal funds transactions on a period basis (i.e., at least weekly) to the sellers? (Although more frequent accounting may not be required by the sellers, the agent on any day should have the capacity to identify for the seller the banks to whom the seller's funds have been sold.)
- Does the agent's accounting system identify *each bank* which has purchased federal funds from a particular seller bank and include (at least) the following information for *each bank* in which the funds are being invested?³
 - information to clearly identify the name and location of the bank (or other entity)
 - amount of federal funds sold and amount of interest earned
 - terms of transaction, and maturity date
 - lending limits agreed to
- Does the agent bank actually disclose to banks or other organizations that are part of these agency-based transactions that it is acting as agent?
- Is the agent bank's compensation in the form of a predetermined fee schedule or percentage rate based, for example, on the size of transactions, as opposed to compensation in the form of a spread over the rate that it pays to the seller bank? (If the agent bank's compensation is in the form of a spread over the rate it pays to the selling bank, this situation would appear to be more akin to acting as an intermediary and suggests that the

1. Although it is conceivable that a purchaser could engage an agent to *obtain* federal funds on its behalf, these guidelines focus primarily on situations where the seller has engaged an agent to sell federal funds on its behalf because the associated risks of such transactions are borne by the sellers and their agents.

2. Seller banks could conceivably design their lists of approved banks to encompass a large number of financially sound institutions and still be considered to be fulfilling this supervisory requirement.

3. The entities referred to as "ultimate purchasers" or "ultimate borrowers" are those that have the *responsibility to repay* the original seller bank, and not any intervening agents that may pass on the federal funds to these purchasers.

- transactions should be reported on its balance sheet.)
- Banking organizations that are involved in agency-based federal funds relationships as *sellers*
 - Does the bank support its transactions with written agency agreements?
 - Does the seller bank evaluate the credit worthiness of the ultimate borrowers of federal funds and establish limits for each and are these limits periodically reviewed at least every six months?^{3,4}
 - Does the bank periodically (i.e., at least weekly) receive an accounting from the agent which includes the following information for *each bank* to whom the seller bank's federal funds were sold?
 - information to identify name and location of bank
 - amount of federal funds sold and interest earned
 - federal funds sales limits agreed to (if the seller bank is a principal)
 - Is the bank's management and board of directors aware of and have they approved the agency relationship?
 - Do internal and/or external auditors periodically review the policies, procedures, and internal controls associated with this activity and the activity's impact on the earnings and financial condition of the banking organization? Is their evaluation reported to management? (Applies to banks acting as *agents* in the sale of federal funds, and those banks involved as *sellers* of federal funds.)
 - In addition to the items considered above, the examiner should determine what the impact of these transactions has been on the bank's earnings and financial condition. If the impact has been negative, or if the answer to any of the above questions is negative, the
- examiner should discuss these matters with bank management and seek remedial action.
14. Analyze the effectiveness of operational controls by reviewing recent cancellations and fail items that are a week or more beyond settlement date and determine:
 - a. The amount of extended fails.
 - b. The planned disposition of extended fails.
 - c. If the control system allows a timely, productive follow-up on unresolved fails.
 - d. The reasons for cancellations.
 - e. The planned disposition of securities that have been inventoried prior to the recognition of a fail or a cancellation.
 15. Determine compliance with applicable laws, rulings, and regulations by performing the following for:
 - a. *12 CFR 1.3—Eligible Securities:*
 - Review inventory schedules of underwriting and trading accounts and determine if issues whose par value is in excess of 10 percent of the bank's capital and unimpaired surplus are type I securities.
 - Determine that the total par value of type II investments does not exceed 10 percent of the bank's capital and unimpaired surplus, based on the combination of holdings and permanent portfolio positions in the same securities.
 - Elicit management's comments and review underwriting records on direct placement of type III securities, and determine if the bank is dealing in type III securities for its own account by ascertaining if direct placement issues have been placed in own bank or affiliated investment portfolios or if underwriting proceeds were used to reduce affiliate loans.
 - b. *Section 23A of the Federal Reserve Act (12 USC 371(c) and 375)—Preferential Treatment:* Obtain a list of domestic affiliate relationships and a list of directors and principal officers and their business interests from appropriate examiners and determine whether transactions, include securities clearance services, involving affiliates, insiders or their interests are on terms less favorable to the bank than those transactions involving unrelated parties.
 - c. *Regulation D (12 CFR 204.2)—Due Bills:*

4. This requirement is intended to mean that seller banks should conduct the type of credit analysis that would be considered reasonable and prudent for a direct federal funds activity (i.e., those federal funds activities not conducted through agents).

- Review outstanding due bills and determine if:
 - The customer was informed that a due bill would be issued instead of the purchased security.
 - Safekeeping receipts are sent to safekeeping customers only after the purchased security has been delivered.
 - Review due bills outstanding over three business days and determine if they are collateralized or properly reserved.
 - Review collateralized due bills and determine if the liability is secured by securities of the same type and of comparable maturity and with a market value at least equal to that of the security that is the subject of the due bill.
- d. *Regulation H (12 CFR 208.8(k))—Recordkeeping and Confirmation Requirements:* If the bank effects securities transactions at the direction and for the account of customers, determine if it is in compliance with this regulation by substantiating Internal Control questions 24–35.
16. Test for unsafe and unsound practices and possible violations of the Securities Exchange Act of 1934 by:
- a. Reviewing customer account schedules of own bank and affiliated bank permanent portfolios, trusts, other broker-dealers, employees of own or other banks and other broker-dealers. Use an appropriate technique to select transactions and compare trade prices to independently established market prices as of the date of trade.
 - b. Reviewing transactions, including U.S. government tender offer subscription files, involving employees and directors of own or other banks and determine if the funds used in the transactions were misused bank funds or the proceeds of reciprocal or preferential loans.
 - c. Reviewing sales to affiliated companies to determine that the sold securities were not subsequently repurchased at an additional mark-up and that gains were not recognized a second time.
 - d. Reviewing commercial paper sales journals or confirmations to determine if the bank sells affiliate commercial paper. If so, determine if:
 - The bank sells affiliate-issued commercial paper to institutions and financially sophisticated individuals only.
 - Sales are generally denominated in amounts of \$25,000 or more.
 - Each sale confirmation discloses that the affiliate-issued commercial paper is not an insured bank deposit.
- e. Reviewing securities position records and customer ledgers with respect to large volume repetitive purchase and sales transactions and:
- Independently testing market prices of significant transactions which involve the purchase and resale of the same security to the same or related parties.
 - Investigating the purchase of large blocks of securities from dealer firms just prior to month end and their subsequent resale to the same firm just after the beginning of the next month.
- f. Reviewing lists of approved dealer firms and determining that the approval of any firm that handles a significant volume of agency transactions is based on competitive factors rather than deposit relationships.
- g. Reviewing customer complaint files and determining the reasons for such complaints.
17. Discuss with an appropriate officer and prepare report comments concerning:
- a. The soundness of trading objectives, policies and practices.
 - b. The degree of legal and market risk assumed by trading operations.
 - c. The effectiveness of analytical, reporting and control systems.
 - d. Violations of law.
 - e. Internal control deficiencies.
 - f. Apparent or potential conflicts of interest.
 - g. Other matters of significance.
18. Reach a conclusion regarding the quality of department management and state your conclusions on the management brief provided by the examiner assigned “Management Assessment.”
19. Update workpapers with any information that will facilitate future examinations.

Bank Dealer Activities

Internal Control Questionnaire

Effective date December 1985

Section 2030.4

Review the bank's internal controls, policies, practices and procedures regarding bank dealer activities. The bank's system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

This section applies to all bank dealer activities except those involving municipal securities, which are reviewed as part of a separate and distinct Municipal Bond Dealer Examination.

SECURITIES UNDERWRITING TRADING POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written securities underwriting/trading policies that:
 - a. Outline objectives?
 - b. Establish limits and/or guidelines for:
 - Price mark-ups?
 - Quality of issues?
 - Maturity of issues?
 - Inventory positions (including when issued (WI) positions)?
 - Amounts of unrealized loss on inventory positions?
 - Length of time an issue will be carried in inventory?
 - Amounts of individual trades or underwriter interests?
 - Acceptability of brokers and syndicate partners?
 - c. Recognize possible conflicts of interest and establish appropriate procedures regarding:
 - Deposit and service relationships with municipalities whose issues have underwriting links to the trading department?
 - Deposit relationships with securities firms handling significant volumes of agency transactions or syndicate participations?
 - Transfers made between trading account inventory and investment portfolio(s)?
 - The bank's trust department acting as trustee, paying agent, and transfer agent for issues which have an underwriting relationship with the trading department?
 - d. State procedures for periodic, monthly or quarterly, valuation of trading inventories to market value or to the lower of cost or market price?
 - e. State procedures for periodic independent verification of valuations of the trading inventories?
 - f. Outline methods of internal review and reporting by department supervisors and internal auditors to insure compliance with established policy?
 - g. Identify permissible types of securities?
 - h. Ensure compliance with the rules of fair practice that:
 - Prohibit any deceptive, dishonest or unfair practice?
 - Adopt formal suitability checklists?
 - Monitor gifts and gratuities?
 - Prohibit materially false or misleading advertisements?
 - Adopt a system to determine the existence of possible control relationships?
 - Prohibit the use of confidential, non-public information without written approval of the affected parties?
 - Prohibit improper use of funds held on another's behalf?
 - Allocate responsibility for transactions with own employees and employees of other dealers?
 - Require disclosure on all new issues?
 - i. Provide for exceptions to standard policy?
2. Are the underwriting/trading policies reviewed at least quarterly by the board to determine their adequacy in light of changing conditions?
 3. Is there a periodic review by the board to assure that the underwriting/trading department is in compliance with its policies?

OFFSETTING RESALE AND REPURCHASE TRANSACTIONS

4. Has the board of directors, consistent with its duties and responsibilities, adopted written offsetting repurchase transaction policies that:
 - a. Limit the aggregate amount of offsetting repurchase transactions?
 - b. Limit the amounts in unmatched or extended (over 30 days) maturity transactions?
 - c. Determine maximum time gaps for unmatched maturity transactions?
 - d. Determine minimally acceptable interest rate spreads for various maturity transactions.
 - e. Determine the maximum amount of funds to be extended to any single or related firms through reverse re-po transactions, involving unsold (through forward sales) securities?
 - f. Require firms involved in reverse re-po transactions to submit corporate resolutions stating the names and limits of individuals, who are authorized to commit the firm?
 - g. Require submission of current financial information by firms involved in reverse re-po transactions?
 - h. Provide for periodic credit reviews and approvals for firms involved in reverse re-po transactions?
 - i. Specify types of acceptable offsetting repurchase transaction collateral (if so, indicate type _____).
5. Are written collateral control procedures designed so that:
 - a. Collateral assignment forms are used?
 - b. Collateral assignments of registered securities are accompanied by powers of attorney signed by the registered owner?
 - Registered securities are registered in bank or bank's nominee name when they are assigned as collateral for extended maturity (over 30 days) reverse re-po transactions?
 - c. Funds are not disbursed until reverse re-po collateral is delivered into the physical custody of the bank or an independent safekeeping agent?
 - d. Funds are only advanced against pre-

determined collateral margins or discounts?

- If so, indicate margin or discount percentage _____.
- e. Collateral margins or discounts are predicated upon:
 - The type of security pledged as collateral?
 - Maturity of collateral?
 - Historic and anticipated price volatility of the collateral?
 - Maturity of the reverse re-po agreements?
 - f. Maintenance agreements are required to support predetermined collateral margin or discount?
 - g. Maintenance agreements are structured to allow margin calls in the event of collateral price declines?
 - h. Collateral market value is frequently checked to determine compliance with margin and maintenance requirements (if so, indicate frequency _____)?

CUSTODY AND MOVEMENT OF SECURITIES

- *6. Are the bank's procedures such that persons do not have sole custody of securities in that:
 - a. They do not have sole physical access to securities?
 - b. They do not prepare disposal documents that are not also approved by authorized persons?
 - c. For the security custodian, supporting disposal documents are examined or adequately tested by a second custodian?
 - d. No person authorizes more than one of the following transactions: execution of trades, receipt and delivery of securities, and collection or disbursement of payment?
7. Are securities physically safeguarded to prevent loss, unauthorized disposal or use? And:
 - a. Are negotiable securities kept under dual control?
 - b. Are securities counted frequently, on a surprise basis, reconciled to the securities record, and the results of such counts reported to management?

- c. Does the bank periodically test for compliance with provisions of its insurance policies regarding custody of securities?
- d. For securities in the custody of others:
- Are custody statements agreed periodically to position ledgers and any differences followed up to a conclusion?
 - Are statements received from brokers and other dealers reconciled promptly, and any differences followed up to a conclusion?
 - Are positions for which no statements are received confirmed periodically, and stale items followed up to a conclusion?
8. Are trading account securities segregated from other bank owned securities or securities held in safekeeping for customers?
- *9. Is access to the trading securities vault restricted to authorized employees?
10. Do withdrawal authorizations require countersignature to indicate security count verifications?
11. Is registered mail used for mailing securities, and are adequate receipt files maintained for such mailings (if registered mail is used for some but not all mailings, indicate criteria and reasons)?
12. Are prenumbered forms used to control securities trades, movements and payments?
13. If so, is numerical control of prenumbered forms accounted for periodically by persons independent of those activities?
14. Do alterations to forms governing the trade, movement, and payment of securities require:
- *a. Signature of the authorizing party?
 - b. Use of a change of instruction form?
15. With respect to negotiability of registered securities:
- a. Are securities kept in non-negotiable form whenever possible?
 - b. Are all securities received, and not immediately delivered, transferred to the name of the bank or its nominee and kept in non-negotiable form whenever possible?
 - c. Are securities received checked for negotiability (endorsements, signature, guarantee, legal opinion, etc.) and for completeness (coupons, warrants, etc.) before they are placed in the vault?

RECORDS MAINTENANCE

16. Does the bank maintain:
- a. Order tickets which include:
 - Capacity as principal or agent?
 - If order is firm or conditional?
 - Terms, conditions or instructions and modifications?
 - Type of transaction (purchase or sale)?
 - Execution price?
 - Description of security?
 - Date and time of order receipt?
 - Date and time of execution?
 - Dealer's or customer's name?
 - Delivery and payment instructions?
 - Terms, conditions, date and time of cancellation of an agency order?
 - b. Customer confirmations:
 - Bank dealer's name, address and phone number?
 - Customer's name?
 - Designation of whether transaction was a purchase from or sale to the customer?
 - Par value of securities?
 - Description of securities, including at a minimum:
 - Name of issuer?
 - Interest rate?
 - Maturity date?
 - Designation, if securities are subject to limited tax?
 - Subject to redemption prior to maturity (callable)?
 - Designation, if revenue bonds and the type of revenue?
 - The name of any company or person in addition to the issuer who is obligated, directly or indirectly, to pay debt service on revenue bonds? (In the case of more than one such obligor, the phrase "multiple obligors" will suffice.)
 - Dated date, if it affects price or interest calculations?
 - First interest payment date, if other than semi-annual?
 - Designation, if securities are "fully registered" or "registered as principal"?
 - Designation, if securities are "pre-refunded"?

- Designation, if securities have been “called,” maturity date fixed by call notice and amount of call price?
 - Denominations of bearer bonds, if other than denominations of \$1,000 and \$5,000 par value?
 - Denominations of registered bonds, if other than multiples of \$1,000 par value up to \$100,000 par value?
 - Denominations of municipal notes?
 - Trade date and time of execution, or a statement that time of execution will be furnished upon written request of the customer?
 - Settlement date?
 - Yield and dollar price? Only the dollar price need to be shown for securities traded at par.
 - For transactions in callable securities effected on a yield basis, the resulting price calculated to the lowest of price to call premium, par option (callable at par) or to maturity, and if priced to premium call or par option, a statement to that effect and the call or option date and price used in the calculation?
 - Amount of accrued interest?
 - Extended principal amount?
 - Total dollar amount of transaction?
 - The capacity in which the bank dealer effected the transaction:
 - As principal for own account?
 - As agent for customer?
 - As agent for a person other than the customer?
 - As agent for both the customer and another person (dual agent)?
 - If a transaction is effected as agent for the customer or as dual agent:
 - Either the name of the contra-party or a statement that the information will be furnished upon request?
 - The source and amount of any commission or other remuneration to the bank dealer?
 - Payment and delivery instructions?
 - Special instructions, such as:
 - “Ex-legal” (traded without legal opinion)?
 - “Flat” (traded without interest)?
 - “In default” as to principal or interest?
- c. Dealer confirmations:
- Bank dealer’s name, address and telephone number?
 - Contra-party identification?
 - Designation of purchase from or sale to?
 - Par value of securities?
 - Description of securities, including at a minimum:
 - Name of issuer?
 - Interest rate?
 - Maturity date?
 - Designation, if securities are limited tax?
 - Subject to redemption prior to maturity (callable)?
 - Designation, if revenue bonds and the type of revenue?
 - Dated date, if it affects price or interest calculations?
 - First interest payment date, if other than semi-annual?
 - Designation, if securities are “fully registered” or “registered as principal”?
 - Designation, if securities are “pre-refunded”?
 - Designation, if securities have been “called,” maturity date fixed by call notice and amount of call price?
 - Denominations of bearer bonds, if other than denominations of \$1,000 and \$5,000 par value?
 - Denominations of registered bonds, if other than multiples of \$1,000 par value up to \$100,000 par value?
 - CUSIP number, if assigned (effective January 1, 1979)?
 - Trade date?
 - Settlement date?
 - Yield to maturity and resulting dollar price? Only the dollar price need be shown for securities traded at par or on a dollar basis.
 - For transactions in callable securities effected on a yield basis, the resulting price calculated to the lowest of price to call premium, par option (callable at par) or to maturity?

- If applicable, the fact that securities are priced to premium call or par option and the call or option date and price used in the calculation?
- Amount of accrued interest?
- Extended principal amount?
- Total dollar amount of transaction?
- Payment and delivery instructions?
- Special instructions, such as:
 - “Ex-legal” (traded without legal opinion)?
 - “Flat” (traded without interest)?
 - “In default” as to principal or interest?
- d. Purchase and sale journals or blotters which include:
 - Trade date?
 - Description of securities?
 - Aggregate par value?
 - Unit dollar price or yield?
 - Aggregate trade price?
 - Accrued interest?
 - Name of buyer or seller?
 - Name of party received from or delivered to?
 - Bond or note numbers?
 - Indication if securities are in registered form?
 - Receipts or disbursements of cash?
 - Specific designation of “when issued” transactions?
 - Transaction or confirmation numbers recorded in consecutive sequence to insure that transactions are not omitted?
 - Other references to documents of original entry?
- e. Short sale ledgers which include:
 - Sale price?
 - Settlement date?
 - Present market value?
 - Basis point spread?
 - Description of collateral?
 - Cost of collateral or cost to acquire collateral?
 - Carrying charges?
- f. Security position ledgers, showing separately for each security positioned for the bank’s own account:
 - Description of the security?
 - Posting date (either trade or settlement date, provided posting date is consistent with other records of original entry)?
- Aggregate par value?
- Cost?
- Average cost?
- Location?
- Count differences classified by the date on which they were discovered?
- g. Securities transfer or validation ledgers which include:
 - Address where securities were sent?
 - Date sent?
 - Description of security?
 - Aggregate par value?
 - If registered securities:
 - Present name of record?
 - New name to be registered?
 - Old certificate or note numbers?
 - New certificate or note numbers?
 - Date returned?
- h. Securities received and delivered journals or tickets which include:
 - Date of receipt or delivery?
 - Name of sender and receiver?
 - Description of security?
 - Aggregate par value?
 - Trade and settlement dates?
 - Certificate numbers?
- i. Cash or wire transfer receipt and disbursement tickets which include:
 - Draft or check numbers?
 - Customer accounts debited or credited?
 - Notation of the original entry item that initiated the transaction?
- j. Cash or wire transfer journals which additionally include:
 - Draft or check reconcilements?
 - Daily totals of cash debits and credits?
 - Daily proofs?
- k. Fail ledgers which include:
 - Description of security?
 - Aggregate par value?
 - Price?
 - Fail date?
 - Date included on fail ledger?
 - Customer or dealer name?
 - Resolution date?
 - A distinction between a customer and a dealer fail?
 - Follow-up detail regarding efforts to resolve the fail?
- l. Securities borrowed and loaned ledgers which include:
 - Date of transaction?
 - Description of securities?

- Aggregate par value?
 - Market value of securities?
 - Contra-party name?
 - Value at which security was loaned?
 - Date returned?
 - Description of collateral?
 - Aggregate par value of collateral?
 - Market value of collateral?
 - Collateral safekeeping location?
 - Dates of periodic valuations?
- m. Records concerning written or oral put options, guarantee and repurchase agreements which include:
- Description of the securities?
 - Aggregate par value?
 - Terms and conditions of the option, agreement or guarantee?
- n. Customer account information which includes:
- Customer's name and residence or principal business address?
 - Whether customer is of legal age?
 - Occupation?
 - Name and address of employer? And:
 - Whether customer is employed by a securities broker or dealer or by a municipal securities dealer?
 - Name and address of beneficial owner or owners of the account if other than customer? And:
 - Whether transactions are confirmed with such owner or owners?
 - Name and address of person(s) authorized to transact business for a corporate, partnership or trustee account? And:
 - Copy of powers of attorney, resolutions or other evidence of authority to effect transactions for such an account?
 - With respect to borrowing or pledging securities held for the accounts of customers:
 - Written authorization from the customer authorizing such activities?
 - Customer complaints including:
 - Records of all written customer complaints?
 - Record of actions taken concerning those complaints?
- o. Customer and the bank dealer's own account ledgers which include:
- All purchases and sales of securities?
 - All receipts and deliveries of securities?
 - All receipts and disbursements of cash?
 - All other charges or credits?
- p. Records of syndicates' joint accounts or similar accounts formed for the purchase of municipal securities which include:
- Underwriter agreements? And:
 - Description of the security?
 - Aggregate par value of the issue?
 - Syndicate or selling group agreements? And:
 - Participants' names and percentages of interest?
 - Terms and conditions governing the formation and operation of the syndicate?
 - Date of closing of the syndicate account?
 - Reconciliation of syndicate profits and expenses?
 - Additional requirements for syndicate or underwriting managers which include:
 - All orders received for the purchase of securities from the syndicate or account, except bids at other than the syndicate price?
 - All allotments of securities and the price at which sold?
 - Date of settlement with the issuer?
 - Date and amount of any good faith deposit made with the issuer?
- q. Files which include:
- Advertising and sales literature
 - Prospectus delivery information?
- r. Internal supervisory records which include:
- Account reconciliation and follow-up?
 - Profit analysis by trader?
 - Sales production reports?
 - Periodic open position reports computed on a trade date or when issued basis?
 - Reports of own bank credit extensions used to finance the sale of trading account securities?

PURCHASE AND SALES TRANSACTIONS

17. Are all transactions promptly confirmed in writing to the actual customers or dealers?
 18. Are confirmations compared or adequately tested to purchase and sales memoranda and reports of execution of orders, and any differences investigated and corrected (including approval by a designated responsible employee)?
 - a. Are confirmations and purchase and sale memoranda checked or adequately tested for computation and terms by a second individual?
 19. Are comparisons received from other dealers or brokers compared with confirmations, and any differences promptly investigated?
 - a. Are comparisons approved by a designated individual (if so, give name _____)?
- a. The account or customer for which each such transaction was effected?
 - b. The description of the securities?
 - c. The unit and aggregate purchase or sale price (if any)?
 - d. The trade date?
 - e. The name or other designation of the broker-dealer or other person from whom purchased or to whom sold?
- If the bank has had an average of 200 or more securities transactions per year for customers over the prior three-calendar-year period, exclusive of transactions in U.S. government and federal agency obligations, answer questions 26, 27 and 28.

CUSTOMER AND DEALER ACCOUNTS

20. Do account bookkeepers periodically transfer to different account sections or otherwise rotate posting assignments?
 21. Are letters mailed to customers requesting confirmation of changes of address?
 22. Are separate customer account ledgers maintained for:
 - Employees?
 - Affiliates?
 - Own bank's trust accounts?
 23. Are customer inquiries and complaints handled exclusively by designated individuals who have no incompatible duties?
26. Does the bank maintain account records for each customer which reflect:
 - a. All purchases and sales of securities?
 - b. All receipts and deliveries of securities?
 - c. All receipts and disbursements of cash for transactions in securities for such account?
 - d. All other debits and credits pertaining to transactions in securities?
 27. Does the bank maintain a separate memorandum (order ticket) of each order to purchase or sell securities (whether executed or cancelled) which includes:
 - a. The account(s) for which the transaction was effected?
 - b. Whether the transaction was a market order, limit order, or subject to special instructions?
 - c. The time the order was received by the trader or other bank employee responsible for affecting the transaction?
 - d. The time the order was placed with the broker-dealer, or if there was no broker-dealer, the time the order was executed or cancelled?
 - e. The price at which the order was executed?
 - f. The broker-dealer used?

RECORDKEEPING AND CONFIRMATION REQUIREMENTS FOR CUSTOMER SECURITIES TRANSACTIONS (REGULATION H)

24. Are chronological records of original entry containing an itemized daily record of all purchases and sales of securities maintained?
25. Do the original entry records reflect:
 28. Does the bank maintain a record of all broker-dealers selected by the bank to effect securities transactions and the amount of commissions paid or allocated to each such broker during the calendar year?
 29. Does the bank, subsequent to effecting a securities transaction for a customer, mail or otherwise furnish to such customer either a copy of the confirmation of a broker-dealer relating to the securities transaction or a written trade confirmation

- of a broker-dealer relating to the securities transaction or a written trade confirmation prepared by the bank?
30. If customer notification is provided by furnishing the customer with a copy of the confirmation of a broker-dealer relating to the transaction, and if the bank is to receive remuneration from the customer or any other source in connection with the transaction, and the remuneration is not determined pursuant to a written agreement between the bank and the customer, does the bank also provide a statement of the source and amount of any remuneration to be received?
31. If customer notification is provided by furnishing the customer with a trade confirmation prepared by the bank, does the confirmation disclose:
- The name of the bank?
 - The name of the customer?
 - Whether the bank is acting as agent for such customer, as principal for its own account, or in any other capacity?
 - The date of execution and a statement that the time of execution will be furnished within a reasonable time upon written request of such customer?
 - The identity, price and number of shares of units (or principal amount in the case of debt securities) of such securities purchased or sold by such customer?
32. For transactions which the bank effects in the capacity of agent, does the bank, in addition to the above, disclose:
- The amount of any remuneration received or to be received, directly or indirectly, by any broker-dealer from such customer in connection with the transaction?
 - The amount of any remuneration received or to be received by the bank from the customer and the source and amount of any other remuneration to be received by the bank in connection with the transaction, unless remuneration is determined pursuant to a written agreement between the bank and the customer?
 - The name of the broker-dealer used. Where there is no broker-dealer, the name of the person from whom the security was purchased or to whom it was sold, or the fact that such information will be furnished within a reasonable time upon written request?
33. Does the bank maintain the above records and evidence of proper notification for a period of at least three years?
34. Does the bank furnish the written notification described above within five business days from the date of the transaction, or if a broker-dealer is used, within five business days from the receipt by the bank of the broker-dealer's confirmation? If not, does the bank use one of the alternative procedures described in Regulation H?
35. Unless specifically exempted in Regulation H, does the bank have established written policies and procedures ensuring:
- That bank officers and employees who make investment recommendations or decisions for the accounts of customers, who participate in the determination of such recommendations or decisions, or who, in connection with their duties, obtain information concerning which securities are being purchased or sold or recommended for such action, report to the bank, within 10 days after the end of the calendar quarter, all transactions in securities made by them or on their behalf, either at the bank or elsewhere in which they have a beneficial interest (subject to certain exemptions)?
 - That in the above required report the bank officers and employees identify the securities purchased or sold and indicate the dates of the transactions and whether the transactions were purchases or sales?
 - The assignment of responsibility for supervision of all officers or employees who (1) transmit orders to or place orders with broker-dealers, or (2) execute transactions in securities for customers?
 - The fair and equitable allocation of securities and prices to accounts when orders for the same security are received at approximately the same time and are placed for execution either individually or in combination?
 - Where applicable, and where permissible under local law, the crossing of buy and sell orders on a fair and equitable basis to the parties to the transaction?

OTHER

36. Are the preparation, additions, and posting of subsidiary records performed and/or adequately reviewed by persons who do not also have sole custody of securities?
37. Are subsidiary records reconciled, at least monthly, to the appropriate general ledger accounts and are reconciling items adequately investigated by persons who do not also have sole custody of securities?
38. Are fails to receive and deliver under a separate general ledger control?
 - a. Are fail accounts periodically reconciled to the general ledger, and any differences followed up to a conclusion?
 - b. Are periodic aging schedules prepared (if so, indicate frequency _____)?
 - c. Are stale fail items confirmed and followed up to a conclusion?
 - d. Are stale items valued periodically and, if any potential loss is indicated, is a particular effort made to clear such items or to protect the bank from loss by other means?
39. With respect to securities loaned and borrowed positions:

- a. Are details periodically reconciled to the general ledger, and any differences followed up to a conclusion?
 - b. Are positions confirmed periodically (if so, indicate frequency _____)?
40. Is the compensation of all department employees limited to salary and a non-departmentalized bonus or incentive plan?
 - a. Are sales representatives' incentive programs based on sales volume and not department income?

CONCLUSION

41. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
42. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

This section will help the examiner perform two separate, but related, functions:

- evaluate the depth and scope of the formalized policies and procedures the bank uses to manage and control its loan portfolio
- form an overview of the performance of the entire lending operation by consolidating the results of the examination programs from the various lending departments

BANK LOAN POLICY

The purpose of a bank's lending policy is to establish the authority, rules, and framework to operate and administer its loan portfolio effectively, that is, to ensure profitability while managing risk. The policy serves as a framework to set basic standards and procedures in a clear and concise manner. The policy's guidelines should be derived from a careful review of internal and external factors that affect the institution, such as the bank's market position, historical experience, present and prospective trade area, probable future loan and funding trends, facilities, staff capabilities, and technology. Such guidelines, however, must be void of any discriminatory policies or practices.

The complexity and scope of the lending policy and procedures should be appropriate to the size of the institution and the nature of its activities and should be consistent with prudent banking practices and relevant regulatory requirements. Examiners should keep in mind that a loan policy that is appropriate for one bank is not necessarily suitable for another bank. Each bank's policy will differ, given the institution's strategic goals and objectives, coupled with factors such as economic conditions, the experience and ability of the lending personnel, and competition. The policy should be reviewed at least annually to ensure that it is not outdated or ineffective, remains flexible, and continues to meet the needs of the community. Changes in federal and other regulatory requirements also must be incorporated into the policy.

The policy should be broad and not overly restrictive. If carefully formulated and administered by senior management, and clearly com-

municated and understood through each level of the organization, it greatly helps bank management (1) maintain sound credit-underwriting standards; (2) control and manage risk; (3) evaluate new business opportunities; and (4) identify, administer, and collect problem loans.

The lending policy must clearly state the philosophies and principles that govern safe and sound banking practices and procedures, as well as the mission and objectives of the particular institution. Throughout this manual, considerable emphasis is placed on formal written policies established by the board of directors that management can implement, administer, and amplify. The board of directors, in discharging its duty to both depositors and shareholders, must ensure that loans in the bank's portfolio are made based on the following three objectives:

- to grant loans on a sound and collectible basis
- to invest the bank's funds profitably for the benefit of shareholders and the protection of depositors
- to serve the legitimate credit needs of the bank's community

The written loan policy is the cornerstone for sound lending and loan administration. An adequate loan policy promotes—

- a bank's business and lending philosophy, despite changes in management;
- stability, as it provides a reference for lenders;
- clarity, to minimize confusion concerning lending guidelines; and
- sound objectives for evaluating new business opportunities.

The loan policy should define who will receive credit, what type, and at what price, as well as what credit documentation will be permitted or required. Other internal factors to be addressed include who will grant the credit and in what amount, as well as what organizational structure will ensure compliance with the bank's guidelines and procedures. Because loan authority is spread throughout the organization, the bank must have an efficient internal review and reporting system to monitor adherence to established guidelines. This system should adequately inform the directorate and senior management of how policies are being carried out and should

provide them with sufficient information to evaluate the performance of lending officers and the condition of the loan portfolio.

The loan policy should establish (1) what information will be required from the borrower during the application process, (2) what information the borrower will be required to submit while the credit remains outstanding, and (3) which bank personnel are responsible for obtaining the information. In addition, the policy should specify who is responsible for reviewing the adequacy of loan documentation and for citing and correcting documentation exceptions. A high level of documentation exceptions indicates a deficiency in the bank's policy, procedures, monitoring, or enforcement.

A loan policy will differ from loan procedures. A policy represents a plan, guiding principle, or course of action designed to establish a framework for handling decisions, actions, and other matters, thereby influencing them. A procedure is a set of established methods or steps for performing a task. The lending policy should include issues relevant to all departments of the bank. Written procedures approved and enforced in various departments should be referenced in the bank's general lending policy. The policy must be flexible enough to allow for fast adaptation to changing conditions in the bank's earning assets mix and trade area.

Components of a Sound Lending Policy

As mentioned previously, a bank's loan policy should be appropriate to its size and complexity. Sound loan policy generally is based on the components described below.

Allowance for loan and lease losses. A sound lending policy establishes a systematic loan-review program to detect and identify problem loans and other portfolio weaknesses. (See the "Internal Loan Review" subsection for the requirements of a loan-review program.) Guidelines and methodologies need to be established to determine the adequacy of the bank's allowance for loan and lease losses (ALLL), and they should be based on a conservative analysis of the risk in the loan portfolio. This analysis should ensure that an appropriate ALLL is maintained. The 2006 Interagency Policy Statement on the Allow-

ance for Loan and Lease Losses¹ stipulates that federally insured depository institutions must maintain an ALLL at an appropriate level to absorb estimated credit losses associated with the loan and lease portfolio.

Examiners must evaluate management's estimate of losses existing in the bank's loan portfolio as well as the methodologies and procedures used in making and documenting the estimate. That evaluation provides the basis for determining the appropriateness and reasonableness of a bank's ALLL.

Collections and charge-offs. The lending policy should define the criteria and procedures for reporting relevant information concerning delinquent obligations to the board of directors. The policy should establish the mechanism for presenting problem loans to the directorate. Reports submitted to the board of directors should include sufficient detail for it to determine the risk factor, loss potential, and alternative courses of action. The policy should outline a follow-up collection notice procedure that is systematic and progressively stronger. Guidelines should be established to ensure that all accounts are presented to and reviewed by the board of directors or a board committee for charge-off.

Concentrations of credit. The lending policy should encourage both diversification within the portfolio and a balance between maximum yield and minimum risk. Concentrations of credit depend heavily on a key factor, and when weaknesses develop in that key factor, every individual loan within the concentration is affected. The directorate should evaluate the additional risk involved in various concentrations and determine which concentrations should be avoided or limited. The lending policy also should establish thresholds for acceptable concentrations of credit and require that all concentrations be reviewed and reported to the board on a periodic basis.

Institutions that have effective controls to manage and reduce undue concentrations over time need not refuse credit to sound borrowers simply because of the borrower's industry or geographic location. This principle applies to

1. See section 2070.1 (SR-06-17) and section 2072.1 (SR-01-17).

prudent loan renewals and rollovers, as well as to new extensions of credit that are underwritten in a sound manner. (See section 2050 for further details.)

Consumer and equal credit opportunity laws. Compliance with the many consumer-related laws, regulations, rulings, interpretations, and policy statements requires complex and detailed policies and procedures that should be addressed in a separate policy. However, the loan policy should require adherence to the Federal Reserve's Regulation B, 12 CFR 202, which implements the Equal Credit Opportunity Act. This regulation prohibits creditors from discriminating against loan applicants on the basis of age, race, color, religion, national origin, sex, marital status, or receipt of income from public assistance programs. As additional prohibitions are added under the regulation, they should be incorporated into the policy statement. Also, the loan policy should include a requirement that the bank give applicants a written notification of rejection of a loan application, a statement of the applicant's rights under the Equal Credit Opportunity Act, and a statement either of the reasons for rejection or of the applicant's right to such information.

Credit files. Obtaining and maintaining complete and accurate information on every relevant detail of a borrower's financial condition is essential to approving credit in a safe and sound manner. The loan policy should establish what information will be required from the borrower during the application process and what information the borrower will be required to submit while the credit remains outstanding. Credit files should be maintained on all borrowing relationships, regardless of size, with the exception of the latitude provided by the Interagency Policy Statement on Documentation of Loans. A current credit file should provide the loan officer, loan committee, and internal and external reviewers with all information necessary to analyze the credit before it is granted and to monitor and evaluate the credit during its life. Such information should (1) identify the borrower's business or occupation; (2) document the borrower's past and current financial condition; (3) state the purposes of all loans granted to the borrower, the sources of repayment, and the repayment programs; and (4) identify the collateral and state its value and the source of the valuation.

Credit files should include all financial statements, credit reports, collateral-inspection documents, reference letters, past loan applications, memoranda, correspondence, and appraisals. In many cases, particularly those involving real estate loans, appraisals and other collateral documentation may be maintained in a separate collateral file.

Documentation requirements will vary according to the type of loan, borrower, and collateral. For example, a bank may not require financial statements from borrowers whose loans are fully secured by certificates of deposit it issues. In a more general sense, information requirements between amortizing consumer loans and commercial or real estate loans vary greatly. More specific examples of the types and frequency of financial information often obtained for various types of credit are detailed in the following paragraphs.

For many consumer installment and residential mortgage loan borrowers, the borrowers' financial information generally is collected only at the time of loan application. The underwriting process for these types of loans emphasizes factors such as the borrower's income and job stability, credit history, and debt load, as well as the loan-to-value requirements for obtained collateral.

In factoring and other asset-backed lending activities, while financial information is a significant part of the underwriting process, collateral is the key component of the lending decision. Close monitoring of the collateral's existence, value, and marketability are essential to sound underwriting of these types of loans.

For typical commercial, commercial real estate, and agricultural loans, significant emphasis is placed on the financial strength, profitability, and cash flow of the core business for loan repayment. Close monitoring of the business's financial condition and profitability throughout the life of the loan is key to the sound administration of these types of credits. Other pertinent information requirements, such as collateral-inspection documentation for agricultural credits or lease/rental information for income-producing commercial real estate credits, may also be necessary to properly administer these loans. As part of the sound underwriting process for these loans, a bank may include loan covenants requiring the business to maintain financial soundness, submit periodic financial statements, and provide other needed information.

As a practice, a bank should not ask for information it does not need to adequately underwrite and monitor the quality of its loans. With proper use of loan covenants, a bank can protect its right to receive additional or more frequent information if a borrower's financial condition deteriorates or collateral values decline. When determining the financial and other information to request from the borrower, bankers should consider the requirements of the underwriting process for particular types of loans and the repayment risks. A bank's loan policy should clearly delineate the type and frequency of such information requirements.

The lending policy also should define the financial-statement requirements for businesses and individuals at various borrowing levels. Specifically, requirements for audited, unaudited, annual, or interim balance sheets; income and cash-flow statements; statements of changes in capital accounts; and supporting notes and schedules should be included, as appropriate. In addition, the lending policy should require external credit checks as appropriate, at the inception of the loan and during periodic updates. The loan policy should be written so that credit-data exceptions would be a violation of the policy.

Distribution by category. Limitations based on aggregate percentages of total loans in commercial, real estate, consumer, or other categories are common. Aggregate percentages for loans to deposits, assets, and capital (with regard to concentrations of credit) would provide guidance for effective portfolio management. Such policies are beneficial but should allow for deviations, with the approval by the board or a board committee. This allows credit to be distributed in response to the community's changing needs. During times of heavy loan demand in one category, an inflexible loan-distribution policy would cause that category to be slighted in favor of another.

Exceptions to the loan policy. A lending policy should require loan officers to present credits they believe are fundamentally sound and worthy of consideration, even though they may not conform with the bank's written lending policy or procedures. The reason for the exception should be detailed in writing and submitted for approval to a designated authority. The directors' loan committee or a similar body should review and approve all exceptions at reasonable intervals. The frequency of exceptions granted

may indicate a lessening of underwriting standards on the one hand, or a need to adjust the policy to allow flexibility within safe and sound parameters on the other. The underlying reasons behind frequently granted exceptions should be assessed, and appropriate recommendations should be made accordingly.

Financing other real estate. If the bank wants to finance a parcel of other real estate that it owns, special accounting rules may apply. Consequently, the lending policy should include an outline of certain provisions of Financial Accounting Standards Board (FASB) Statement No. 66, "Accounting for Sales of Other Real Estate."

Geographic limits. A bank's trade area should be clearly delineated and consistent with defined Community Reinvestment Act (CRA) criteria. Loan officers and directors should be fully aware of specific geographic limitations for lending purposes. The bank's defined trade area should not be so large that, given its resources, the bank cannot properly and adequately monitor and administer its credits. A sound loan policy restricts or discourages loan approval for customers outside the trade area. The bank's primary trade area should be distinguished from any secondary trade area, which is especially important for new banks. Specific restrictions or exceptions should be listed separately.

Lender liability. Banking organizations must be careful that their actions to make, administer, and collect loans—including assessing and controlling environmental liability—cannot be construed as taking an active role in the management or day-to-day operations of the borrower's business. Such actions could lead to potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). (See the "Environmental Liability" subsection.)

Limitation on aggregate outstanding loans. Banks should establish guidelines limiting the total amount of loans outstanding in relation to other balance-sheet accounts. This type of control over the loan portfolio usually is expressed relative to deposits and total assets. In setting such limitations, various factors, such as the credit demands of the community, the volatility of deposits, and the credit risks involved, must be considered.

Loan authority. The lending policy should establish limits for all lending officers and ensure controls are in place to monitor compliance with the bank's legal lending limit. An individual officer's lending limit is usually based on his or her experience, tenure, and past adherence to the bank's loan policy. Lending limits also should be set for group authority, thereby allowing a combination of officers or a committee to approve larger loans than the members would be permitted to approve individually. The loan policy should describe the manner in which loans will be approved and ultimately reported to the board of directors, as well as the frequency of any loan committee meetings, as applicable.

Loan pricing. At a minimum, interest rates on loans must be sufficient to cover (1) the cost of the funds loaned, (2) the bank's loan services (including general overhead), and (3) probable losses—while providing for a reasonable profit margin. Policymakers must know these costs before establishing rates. Periodic review allows rates to be adjusted in response to changes in costs, competitive factors, or risks of a particular type of extension of credit. Specific guidelines for other relevant factors, such as compensating-balance requirements and fees on commitments, are also germane to pricing credit.

Loan purchases and sales. If sufficient loan demand exists, lending within the bank's trade area is safer and less expensive than purchasing paper from a dealer or a correspondent bank. Direct lending promotes customer relationships, serves the credit needs of customers, and develops additional business. Occasionally, a bank may not be able to advance a loan to a customer for the full amount requested because of individual state lending limitations or other reasons. In such situations, the bank may extend credit to a customer up to its internal or legal lending limit and sell a participation to a correspondent bank for the amount exceeding the bank's lending limit or the amount it wishes to extend on its own. Generally, such sales arrangements are established before the credit is ultimately approved. These sales should be on a non-recourse basis by the bank, and the originating and purchasing banks should share in the risks and contractual payments on a pro rata basis. Selling or participating out portions of loans to accommodate the credit needs of customers promotes goodwill and enables a bank to retain customers

who might otherwise seek credit elsewhere.

Conversely, many banks purchase loans or participate in loans originated by others. In some cases, such transactions are conducted with affiliates or members of a chain-banking organization, with the goal of benefiting the whole organization. A purchasing bank may also wish to supplement its loan portfolio when loan demand is weak. In still other cases, a bank may purchase or participate in a loan to accommodate an unrelated originating bank with which it has an ongoing business relationship.

Purchasing or selling loans, if done properly, can have a legitimate role in a bank's overall asset and liability management and can contribute to the efficient functioning of the financial system. In addition, these activities help a bank diversify its risks and improve its liquidity.

Banks should avoid purchases of loans that generate unacceptable concentrations of credit. Such concentrations may arise solely from the bank's purchases, or they may arise when loans or participations purchased are aggregated with loans originated and retained by the purchasing bank. The policy should state the limits (1) for the aggregate amount of loans purchased from and sold to any one outside source and (2) of all loans purchased and sold. It should also establish limits for the aggregate amount of loans to particular types of industries. The extent of contingent liability, holdback and reserve requirements, and the manner in which loans will be handled and serviced should be clearly defined. In addition, the policy should require that loans purchased from another source be evaluated in the same manner as loans originated by the bank itself. Guidelines should be established for the type and frequency of credit and other information the bank needs to obtain from the originating institution to keep itself continually updated on the status of the credit. Guidelines should also be established for supplying complete and regularly updated credit information to the purchasers of loans originated and sold by the bank.

Loans to employees, officers, directors, principal shareholders, and their related interests. Loans to insiders are strictly defined in federal statutes and require close supervision to ensure compliance. Federal and state statutes provide the basis for defining insider loans, and they specify requirements and limitations that should be incorporated in the policy. (See the Federal Reserve's Regulation O, 12 CFR 215.)

The policy should ensure, through a system of controls over authority and funding, that extensions of credit to insiders are legally permissible and that they are made on substantially the same terms and conditions as those prevailing at the time for comparable transactions with other borrowers. Furthermore, the policy should contain guidelines for loans to employees who are not subject to the provisions of Regulation O.

Maximum maturities. Loans should be granted with realistic repayment plans, with the maturity related to the anticipated source of repayment, the purpose of the loan, and the useful life of the collateral. For term loans, a lending policy should state the maximum number of months over which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and modification of original loan terms. If the bank requires a cleanup (out-of-debt) period for lines of credit, it should be stated explicitly.

Maximum ratio of loan amount to collateral value. The loan policy should set forth procedures for ordering, preparing, and reviewing appraisals for real or personal property pledged as collateral. The bank's lending policy should outline guidelines for appraisals or internal evaluations, including regulatory requirements, and, in the case of renewals or extensions, procedures for possible reappraisals or re-evaluations. Acceptable types of appraisals or evaluations should be outlined. Circumstances requiring the use of in-house staff appraisers instead of fee appraisers should be identified. Maximum loan-to-value ratios and the methods of valuation to be used for various types of collateral should be detailed. (See sections 2090 and 2100 for further details.)

The maximum ratio of loan amount to the market value of pledged securities is restricted by the Federal Reserve's Regulation U, 12 CFR 221. The lending policy should set forth margin requirements for all types of securities acceptable as collateral. Margin requirements should be related to the marketability of the security, that is, whether it is actively traded, over the counter, or closely held. The policy also should assign responsibility and set a frequency for periodic pricing of the collateral.

Prohibitions against tying arrangements. In a tying arrangement, the extension of credit, provision of a service, or consideration for credit or

service generally is varied or conditioned upon a customer's obtaining or providing some additional product or service from or to the bank or an affiliate. Section 106(b) of the Bank Holding Company Act Amendments of 1970 generally prohibits a bank from tying a product or service to any of its other products or services, including those offered by its affiliates. Certain tying arrangements are permissible when the two products tied are loans, deposits, or trust services available from the same bank or when the Board has determined that a particular tying arrangement is permissible.² To the extent possible, examiners should ascertain that member banks have not extended credit voluntarily or involuntarily based on impermissible tying arrangements.

Types of loans. The lending policy should state the types of loans management considers desirable or prohibited. It also should set forth guidelines for extensions-of-credit types such as commercial loans; real estate loans; secured and unsecured loans; and off-balance-sheet activities, such as letters of credit and loan commitments. The decision about the types of loans granted should be based on the expertise of the lending officers, the deposit structure of the bank, and the community's anticipated credit demands. Credits involving complex structures or repayment arrangements, or loans secured by collateral that requires more-than-normal monitoring, should be avoided unless the bank has the personnel, policies, controls, and systems necessary to administer such advances properly. Types of credits that have caused an abnormal loss to the bank should be identified, scrutinized, and controlled within the framework of stated policy. A bank also should consider its overall exposure to term lending relative to its stable funds.

Continued rigorous credit-risk assessment during favorable economic conditions. Internal processes and requirements for loan-underwriting decisions should be consistent with the nature, size, and complexity of the banking organization's activities and with the institution's lending policies. Any departures therefrom can have serious consequences for institutions of all sizes. (See SR-99-23.) Departures can be evident in three pivotal and related areas:

2. See SR-95-32.

1. *An undue reliance on optimistic outlooks for prospective borrowers and for continued favorable economic and financial market conditions.* A long and continuing economic expansion can lead banks to more frequently base their decision to lend on a very optimistic assessment of the borrower's operating prospects. Timely principal repayment may often be based on the assumption that the borrower will have ready access to financial markets in the future. Such reliance, especially if across a significant volume of loans, is not consistent with sound credit-risk management. Undue reliance on continued favorable economic conditions can be demonstrated by—

- dependence on very rapid growth in a borrower's revenue as the "most likely" case;
- heavy reliance on favorable collateral appraisals and valuations that may not be sustainable over the longer term;
- greater willingness to make loans without scheduled amortization before the loan's final maturity; or
- ready willingness to waive violations of key covenants, release collateral, or guarantee requirements, or even to restructure loan agreements, without corresponding concessions on the part of the borrower on the assumption that a favorable environment will allow the borrower to recover quickly.

Among the adverse effects of undue reliance on a favorable economy is the possibility of delay in properly identifying problem loans. Timely identification of problem loans is critical for providing a full awareness of the institution's risk position, informing management and directors of that position, taking steps to mitigate risk, and properly assessing the adequacy of the allowance for credit losses and capital.^{2a}

2a. With respect to these issues, see SR-98-25, "Sound Credit Risk Management and the Use of Internal Credit Risk Rating Systems at Large Banking Organizations"; SR-99-22, "Joint Interagency Letter on the Loan Loss Allowance"; and SR-99-18, "Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles." As discussed therein, the Federal Reserve's guidance on credit-risk management and mitigation covers both loans and other forms of on- and off-balance-sheet credit exposure.

Underlying a banking organization's (BO) overly optimistic assessment of a borrower's prospects may be an overreliance on its continued ready access to financial markets on favorable terms. Examples of overreliance include the following:

- explicit reliance on future, public market debt or equity offerings or on other sources of refinancing as the ultimate source of principal repayment, which presumes that market liquidity and the appetite for such instruments will be favorable at the time that the facility is to be repaid
- ambiguous or poorly supported BO analysis of the repayment sources of the loan's principal (This results in an implicit reliance, for repayment, on some realization of the implied market valuation of the borrower (for example, through refinancing, asset sales, or some form of equity infusion) and presumes, as above, that markets will be receptive to such transactions at the time that the facility is to be repaid.)
- measuring a borrower's leverage (for example, debt-to-equity) based solely on the market capitalization of the firm without regard to "book" equity, and thereby implicitly assuming that currently unrealized appreciation in the value of the firm can be readily realized if needed
- more generally, extending bank loans with a risk profile that more closely resembles that of an equity investment and under circumstances in which additional bank credit or default are the borrower's only resort if favorable expectations are not met

As a result of this overreliance, some banking organizations may find themselves with a potentially significant concentration of credit exposure that is at risk to a possible reversal in financial markets. Turmoil in financial markets, however, may contribute to significant liquidity pressures in some sectors of the economy and prevent ready access to financial markets by certain borrowers. Moreover, there is no assurance that any such market turmoil will quickly resolve itself. Under these circumstances, a borrower's ability to raise new funds in public debt or equity markets to repay maturing bank loans is far from guaranteed.

2. *Insufficient consideration of stress testing.*

An institution's lending policies should prescribe meaningful stress testing of the prospective borrower's ability to meet its obligations. Failure to recognize the potential for adverse events—whether specific to the borrower or its industry (for example, a change in the regulatory climate or the emergence of new competitors) or to the economy as a whole (for example, a recession)—can prove costly to a banking organization.

Mechanical reliance on threshold financial ratios (and the “cushion” they imply) is generally not sufficient, particularly for complex loans and loans to leveraged borrowers or others that must perform exceptionally well to meet their financial obligations successfully. Scenario analysis specific to the borrower, its industry, and its business plan is critical to identify the key risks of a loan. Such analysis should have a significant influence on both the decision to extend credit at all and, if credit is extended, on decisions on appropriate loan size, repayment terms, collateral or guarantee requirements, financial covenants, and other elements of the loan's structure.

When properly conducted, meaningful stress testing includes assessing the effect on the borrower when the following situations or events occur:

- unexpected reductions or reversals in revenue growth, including shocks to revenue of the type (or types) and magnitude that would normally be experienced during a recession
- unfavorable movements in market interest rates, especially for firms with high debt burdens
- unplanned increases in capital expenditures due to technological obsolescence or competitive factors
- deterioration in the value of collateral, guarantees, or other potential sources of principal repayment
- adverse developments in key product or input markets
- reversals in or reduced access by the borrower to public debt and equity markets

Proper stress testing typically incorporates an evaluation of the borrower's alternatives for meeting its financial obligations under each scenario, including asset sales, access to alternative funding or refinancing, or ability

to raise new equity. In particular, the evaluation should focus not only on the borrower's ability to meet near-term interest obligations, but also on its ability to repay the principal of the obligation.

3. *Weakening of key internal controls in the lending process.* An institution's lending policy should require the use of adequate internal controls within the lending process. Internal controls such as loan review or credit audit are critical for maintaining proper incentives for bank staff to be rigorous and disciplined in their credit analysis and lending decisions. A bank's credit analyses, loan terms and structures, credit decisions, and internal rating assignments should be reviewed in detail by experienced and independent loan-review staff. These reviews provide both motivation for better credit discipline within an institution and greater comfort for examiners—and management—that internal policies are being followed and the institution continues to adhere to sound lending practice.

Economic prosperity and relatively low levels of problem loans and credit losses should not encourage institutions to dramatically or suddenly reduce staff resources or portfolio coverage for the loan-review function. Likewise, thorough reviews of individual loans should continue. When economic prosperity and relatively low levels of problem loans and credit losses exist, there may be increasing internal pressure within the institution to reduce loan-review staff, to conduct more limited loan portfolio reviews, and to perform less thorough reviews of individual loans. Although some useful efficiencies may be desired, the danger is that the scope and depth of loan-review activities may be reduced beyond prudent levels over a longer horizon. If reduced too far, the integrity of the lending process and the discipline of identifying unrealistic assumptions and discerning problem loans in a timely fashion may deteriorate, particularly as a result of a downturn in a credit cycle.

Other. Management should establish appropriate policies, procedures, and information systems to ensure that the impact of the bank's lending activities on its interest-rate exposure is carefully analyzed, monitored, and managed. In this regard, consideration should also be given to

off-balance-sheet instruments that may be associated with lending arrangements, including commitments, letters of credit, or swaps. (See section 4110.1 for further details.)

Under the provisions of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), a financial institution is required to develop, adopt, and maintain policies, procedures, and guidelines consistent with safe and sound banking practices. The federal banking agencies have issued interagency guidelines based on the provisions. Taken together, these guidelines should strengthen supervision of financial institutions and provide guidance in developing and maintaining policies:

- Regulation H—subpart E, 12 CFR 208.50–51
- Regulation Y—subpart G, 12 CFR 225.61–67
- Interagency Statement on Independent Appraisal and Evaluation Functions (See SR-03-18.)
- Uniform Standards of Professional Appraisal Practice promulgated by the Appraisal Standards Board of the Appraisal Foundation
- Interagency Policy Statement on Appraisal and Evaluation Guidelines (See SR-94-55 and SR-94-35.)
- Interagency Guidance on Accounting for Disposition of Other Real Estate Owned (See SR-93-42.)
- Interagency Policy Statement for Loan and Lease Losses (See SR-06-17.)
- Interagency Policy Statement on Supervisory Initiatives/Credit Availability (See SR-93-30.)
- Interagency Policy Statement on Documentation of Loans (See SR-93-26.)
- Regulation Y, section 225.7 “Tying Restrictions” (12 CFR 225.7.)

An institution’s policies and procedures as they relate to interagency statements should be reviewed as part of the examination of the institution’s overall lending activities.

PROHIBITIONS AGAINST TYING ARRANGEMENTS

Section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 USC 1972(b)) generally prohibits a bank from conditioning the availability or price of one product or service

(the *tying product*) on a requirement that the customer obtain another product or service (the *tied product*) from the bank or an affiliate of the bank. The central purpose of section 106(b) is to prevent banks from using their market power in banking products, including credit, to gain an unfair competitive advantage in other products. The restrictions of section 106(b) on banks are broader than those of the antitrust laws, as no proof of economic power in the tying-product (or desired-product) market or anticompetitive effects in the tied-product market are required for a violation to occur. Although banks, like their nonbank competitors, are subject to general antitrust prohibitions on tying, section 106 was enacted because Congress concluded that special restrictions were necessary given the unique role of banks in the economy.

The intent behind section 106(b) is to affirm the principles of fair competition by eliminating the use of tying arrangements that have the potential to suppress competition. A prohibited tie-in can occur if a bank (1) varies the consideration (that is, the amount charged) for a bank product or service (the *tying product*) on the condition that a customer obtain another product or service (the *tied product*) from the bank or its affiliate or (2) requires a customer to purchase another product or service from the bank or any of its affiliates as a condition for providing a product or service to the customer.

Section 106(b) of the Bank Holding Company Act Amendments has five restrictions that are applicable to banks. The first two restrictions prohibit conditions constituting traditional tying arrangements; restrictions three and four prohibit reciprocal-dealing arrangements; and the fifth, with certain exceptions, prohibits an exclusive-dealing arrangement. Exempted from these prohibited conditional transactions are *traditional bank products*. Specifically, section 106(b) prohibits a bank, in any manner, from fixing or varying the consideration for extending credit, leasing or selling property of any kind, or furnishing any service on the condition or requirement that the customer—

- obtain additional credit, property, or service from the bank, other than a loan, discount, deposit, or trust service (a *traditional bank product*);
- obtain additional credit, property, or service from the bank’s parent holding company or other subsidiaries;
- provide additional credit, property, or service

to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;

- provide additional credit, property, or service to the bank's parent holding company or any of the holding company's other subsidiaries; or
- not obtain other credit, property, or service from the competitors of the bank, the bank's parent holding company, or the holding company's other subsidiaries, except that the lending bank may reasonably impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

As stated above, section 106(b) prohibits reciprocity arrangements. In a reciprocity arrangement, a bank conditions the availability of, or varies the consideration of, one product on a customer's provision of another product to the bank or one of its affiliates. The statutory prohibition on reciprocity arrangements contains an exception intended to preserve traditional banking practices. The exception provides that a bank may condition the availability of a product or service on a customer's providing to the bank some product or service "related to and usually provided in connection with" a loan, discount, deposit, or trust service.³

Because a subsidiary of a bank is considered to be part of the bank for most supervisory and regulatory purposes under the federal banking laws, the restrictions in section 106(b) generally apply to tying arrangements imposed by a subsidiary of a bank in the same manner that the statute applies to the parent bank itself. Thus, a subsidiary of a bank is generally prohibited from conditioning the availability or price of a product on a customer's purchase of another product from the subsidiary, its parent bank, or any affiliate of its parent bank. Section 106(b) generally does not apply to tying arrangements imposed by a nonbank *affiliate* of the bank.

Exceptions

Statutory Exception

There is a statutory exception to the anti-tying restrictions. The statutory *traditional-bank-*

3. The 1997 Regulation Y revisions extended this statutory exception to cover reciprocity requirements imposed by banks that require customers to provide a "usually related" product or service to an affiliate of the bank.

product exception of section 106(b) permits a bank to tie any product to a traditional bank product (a loan, discount, deposit, or trust service) offered by that bank, but not by any affiliated bank or nonbank. For example, a bank could condition the use of its messenger service on a customer's maintaining a deposit account at the bank. Section 106(b) also grants the Board the authority to prescribe exceptions by regulation or order when it determines that an exception will not be contrary to the purposes of this section.

Regulatory Exceptions

Traditional-bank-product exception. The traditional-bank-product exception of Regulation Y (12 CFR 225.7(b)(1)) permits a bank to extend credit, lease or sell property, provide any service, or fix or vary its consideration on the condition that a customer obtain a traditional bank product (a loan, discount, deposit, or trust service) from an affiliate of the bank. This regulatory exception is a limited extension of the traditional-bank-product exception provided in section 106(b) and is coextensive with the statutory exception.

Combined-balance discount. On April 19, 1995 (effective May 26, 1995), the Board issued a revised rule on the anti-tying provisions of section 106 of the Bank Holding Company Act Amendments of 1970.⁴ The rule established a *combined-balance discount* safe harbor for a banking organization offering varieties of services to its customers and wishing to offer them discounts based on the customers' overall relationship with the bank or its holding company and subsidiaries. A bank may vary the consideration for any product or package of products based on a customer's maintaining a combined minimum balance in certain products specified by the bank (eligible products)⁵ if—

4. With the Board's approval of the 1997 revisions to Regulation Y, tie-in prohibitions were eliminated for BHCs and their nonbank subsidiaries, except when electronic benefit transfer services are provided. BHCs and their nonbank subsidiaries are still subject to anti-tying restrictions with respect to electronic benefit transfer services, as set forth in section 7(i)(11) of the Food Stamp Act of 1977 (7 USC 2016(i)(11)).

5. Eligible products under the safe harbor are those "products specified by the bank" as part of the combined-balance discount program. (See 12 CFR 225.7(b)(2).)

- the bank offers deposits, and all such deposits are eligible products, and
- balances in deposits count at least as much as nondeposit products toward the minimum balance.

Board Staff Opinions on Exceptions to the Anti-tying Restrictions

Offering insurance products in a combined-balance discount program. A question was raised as to whether insurance products may be included among the products offered by a bank as part of a combined-balance discount program (eligible products) operated pursuant to the Board's safe harbor, if the program otherwise meets the requirements of the safe harbor. If insurance products are deemed to be eligible products, it was also questioned whether the principal amount of annuity products may be counted towards the minimum balance, and whether insurance premiums may be counted towards the minimum balance for non-annuity insurance products.

Board staff issued the following response to the questions: To qualify for the Board's safe harbor, all deposits must be eligible products under the combined-balance discount program, and deposit balances must be weighed at least as much as nondeposit products towards the minimum balance.⁶ The Board's requirement that deposit balances be weighed at least as much as nondeposit products towards the minimum balance was included in the safe harbor to allow banks and their affiliates to price products they include in a combined-balance program in an economically rational way—while limiting the bank's ability to use product weighting to require the purchase of certain nontraditional products. This requirement specifically provides for the inclusion of certain products with values that could be greater than the typical retail deposit, while allowing deposits to remain a viable way for customers to reach the minimum balance.

On this basis, any financial products offered by a bank or its affiliates, including insurance products, may be properly included among the eligible products in that bank's combined-balance discount program. The principal amount of an annuity may be counted in determining the

size of the customer's balance in eligible products, as may the premiums paid in a given policy year on non-annuity insurance products. The principal amount of an annuity is closely analogous to the principal amount of a deposit, as both represent a customer's initial cash investment with the relevant financial institution. Similarly, insurance premiums are money actually paid by the customer to the insurance underwriter.

Combined-balance discount—Members of a household or family, taken together, may constitute a "customer." A BHC's legal counsel raised a question as to whether members of a household or family, taken together, may be considered a "customer" for purposes of the combined-balance discount safe harbor set forth in section 225.7(b) of Regulation Y. The BHC desired to offer its customers discounts on the products and services of its subsidiary banks if a customer's household maintains a specific minimum balance with its banks and their affiliates. The minimum balance would be computed by adding the balances held by an individual customer in products (both bank and nonbank) specified by the company's affiliated bank, including deposits, to balances held in the same products by all other members of that customer's household.

Board staff noted that the safe harbor would be available only if all deposits are eligible products under the combined-balance discount program and deposit balances are weighed at least as much as nondeposit products towards the minimum balance. Board staff also noted that aggregating balances held at the BHC's affiliates by members of a family or household would make it easier for customers to achieve the minimum balance necessary to receive the favorable pricing on bank products and services, and thus appears to be pro-consumer and not anticompetitive.

Accordingly, Board staff opined in a November 26, 2002, letter that the term *customer*, as used in section 225.7(b)(2) of Regulation Y, may include separate individuals who (1) are all members of the same immediate family (as defined in section 225.41(b)(3) of Regulation Y) and (2) reside at the same address. Staff also indicated that the program must not be operated in an anticompetitive manner.

A BHC's subsidiary banks issuing securities-based credit can require borrowers to keep the securities collateral in an account at the BHC's

6. As previously noted, eligible products are those "products specified by the bank" as part of the combined-balance discount program.

broker-dealer affiliate. A BHC's legal counsel requested that the Board grant an exception to the anti-tying prohibitions of section 106 of the Bank Holding Company Act Amendments of 1970. The exception would allow the subsidiary banks (the banks) of the BHC to require borrowers whose bank loans are secured with publicly traded securities to keep those securities in accounts at the BHC's broker-dealer affiliate.

The request stated that the banks often make loans that are collateralized by marketable securities, and that these securities are generally held in accounts at broker-dealers unaffiliated with the BHC, subject to collateral agreements. The BHC requested its subsidiary banks be granted an exception from section 106 that would allow them to require borrowers to keep securities pledged as loan collateral from the banks in an account at a broker-dealer affiliate. The requirement would give the BHC more control over the collateral (for example, to prevent it from being sold or exchanged for different securities) and would allow the BHC to monitor the value of the collateral more closely than when the securities are held at an unaffiliated institution.

The Board's August 18, 2003, response to the request was as follows: Section 106 allows the banks to require borrowers to place securities pledged as collateral in trust accounts at the banks. A specific exception in section 106 allows banks to condition the availability of any product, including credit, on the customer's obtaining a trust service. The BHC preferred, however, to use the systems for holding and monitoring securities in brokerage accounts at its broker-dealer affiliate for reasons based on cost, efficiency, and improved monitoring. The banks, it was contended, would receive more cooperation when inquiring about the status of securities pledged as collateral from the BHC's broker-dealer affiliate than they would receive from unaffiliated broker-dealers, who have little incentive to help the banks protect their collateral.

The BHC made the following representations in support of its request: (1) The banks would only require the customer to use an account of the BHC's broker-dealer affiliate for the purpose of holding securities that collateralize a loan from the banks; (2) no securities other than those pledged as collateral for a loan from the banks *could* be held in these accounts; and (3) securities held in these accounts could not be traded by the customer without the prior approval of the BHC's credit department for

each trade.⁷ These restrictions would both protect the banks' interest in and the value of the collateral pledged and ensure that the banks do not require customers to establish brokerage accounts for a purpose other than protecting bank collateral. The BHC proposed to require the use of affiliated broker-dealer accounts solely for the purpose of securing and monitoring collateral pledged for loans extended by the banks to their account holders.

The Board's response letter stated that (1) section 106 permits this practice when securities collateralizing a loan are maintained in trust accounts in the banks or their affiliates or are otherwise provided to and held by the banks; (2) the proposal would not appear to give the BHC any competitive advantage over other broker-dealers in obtaining general securities brokerage business from customers; and (3) the described restrictions would cause the securities accounts at the broker-dealer to be the functional equivalent of bank trust accounts, in which the banks currently may require borrowers to place securities used to collateralize loans. The Board's response also stated that the Board continues to evaluate whether the BHC's proposed program is prohibited by section 106. Subject to this potential determination, the Board believed that granting an exception for the program would not be contrary to the purposes of section 106. The response noted that the limitations on when an affiliated broker-dealer account would be required and how the account would be used help ensure that the accounts at the BHC's broker-dealer affiliate would only be used to preserve customers' collateral pledged for loans and would not be used to gain a competitive advantage over the broker-dealer affiliate's competitors, particularly because a customer's ability to trade in the account would be severely restricted. Accordingly, on this basis, the Board granted an exception to the restrictions of section 106 for the BHC's proposed program. Approval of the exception was subject to the restrictions on the relevant accounts at the BHC's broker-dealer affiliate described in the BHC's request and in its correspondence, and to the Board's potential determination that the proposed requirement is not in fact subject to section 106. Any changes in the facts and representations are to be reported to Board staff.

7. The BHC will not give customers permission to trade generally through these accounts.

Bank customers receiving securities-based credit can be required to hold securities collateral at a broker-dealer affiliate account. A bank's external legal counsel inquired about the application of section 106 to certain lending programs offered by the bank and its broker-dealer affiliate. In a letter dated February 2, 2004, Board staff responded that section 106 does not prohibit a bank from requiring borrowers that obtain securities-based credit from the bank to keep the securities collateral in an account at a bank's broker-dealer affiliate, so long as the collateral requirement is limited in scope.

The inquiry stated that the bank and its broker-dealer affiliate offer securities-based loans—that is, loans collateralized by securities or other marketable investment assets (securities)—subject to the requirement that the securities collateralizing the loans be kept in collateral accounts with their broker-dealer affiliate.⁸ The inquiry also stated that customers are (1) not charged for establishing or maintaining the collateral accounts or for transferring securities to the collateral accounts; (2) not obligated to trade in the collateral accounts or any other accounts or to purchase any other products or services from the bank, its affiliate, or the broker-dealer affiliate, or any of their affiliates; (3) not required to maintain any securities in the collateral accounts beyond those necessary, in the bank's credit judgment or that of its affiliate, as the case may be, to support the credit extensions;⁹ (4) required to obtain prior approval from the bank or its affiliate, as appropriate, before withdrawing assets from the collateral accounts; (5) not charged a fee for effecting such withdrawals; and (6) required to ensure that the value of the securities in the collateral account equals or exceeds the lender's (the bank or its broker-dealer affiliate) collateral requirement for the loan on an ongoing basis.

Board staff responded by stating that section 106 generally prohibits a bank from conditioning the availability or price of a product on a

requirement that the customer obtain another separate product from, or provide another separate product to, the bank or an affiliate of the bank. Board staff stated that it believed the securities-based lending programs, when conducted in the manner described in the inquiry and in the bank's correspondence with the Board, are permissible under and consistent with the purposes of section 106. In support of this determination, Board staff stated that (1) by requiring collateral for a securities-based loan, the bank and its broker-dealer affiliate are not requiring that the customer obtain any product separate from the loan itself and (2) the fact that the bank and its affiliate require the pledged securities to be held in an account at an affiliate does not make the collateral or the account a product separate from the loan that the collateral secures. The Board's staff opinion was not altered by the fact that (1) borrowers are permitted to hold securities in the collateral account beyond those minimally required to satisfy the lender's collateral requirement and to trade securities in the collateral;^{9a} (2) a customer must pay the broker-dealer affiliate its standard brokerage commission if the customer decided to effect trades in the collateral account;^{9b} or (3) in the event that the value of the securities in the collateral account falls below the lender's collateral requirement for the related loan, the customer must eliminate the collateral shortfall.

LOAN ADMINISTRATION

Loan administration is a term that refers to several aspects of lending. It can be used to describe the entire credit-granting process, as well as the monitoring of various lending activities, such as ensuring that loans remain adequately collateralized, properly graded, and appropriately serviced (administered). The ser-

8. The inquiry stated that the bank and its broker-dealer affiliate generally allow customers to trade securities held in the collateral accounts (however, see footnote 3 of the response letter) and that the broker-dealer affiliate charges customers its standard brokerage fee for any trades made by customers that involve securities held in the collateral accounts. Customers are also not restricted in their ability to maintain brokerage accounts with other securities firms not affiliated with the bank or its affiliate.

9. All securities in the collateral accounts are pledged as collateral to support the securities-based loans extended by the bank or its affiliate.

9a. Allowing a customer to trade securities or to place excess securities in a collateral account underlying a securities-based loan enhances customer choice without reducing the integral connection between the loan and the collateral account. The inquiry represented that the customer is *allowed* to trade and deposit excess securities in the account, and the customer is not *required* to trade or deposit excess securities. Thus, any trading in the account or placement of excess securities in the account is voluntary.

9b. A customer is not required to trade in the account, and trades effected by the customer in the account generally would be unrelated to the loan.

vicing of an extension of credit involves tasks ranging from obtaining current financial information to sending out renewal notices and preparing loan agreements. In addition to facilitating the entire lending process, the individual tasks also serve as controls (checks and balances) over the lending activities. Given the wide breadth of responsibilities that the loan-administration function encompasses, its organizational structure varies with the size and sophistication of the bank. In larger banks, responsibilities for the various components of loan administration are usually assigned to different departments, while in smaller institutions, a few individuals might handle several of the functional areas. For example, a large bank's independent credit department may be responsible for analyzing borrowers' financial information, making a determination or recommendation as to the quality of the loan (its risk rating or grade), or obtaining/following up on credit-related information and documentation. On the other hand, smaller banks may assign each of these tasks to individual loan officers.

Examiners will encounter many different organizational structures for loan administration. Therefore, when considering the safety and soundness of a bank, they should determine whether it has effective and appropriate internal controls in place. The assessment of loan administration and related internal controls involves evaluating the bank's operations by reviewing the—

- efficiency and effectiveness of loan-administration operations;
- ability of the different components to safeguard assets, primarily loans and leases;
- adequacy of the management information systems and the accuracy of their reporting;
- adequacy and accuracy of its loan-review function (discussed in the next subsection); and
- compliance with prescribed management policies, procedures, applicable laws, and regulations.

For the components of loan administration to function appropriately, management must understand and demonstrate that it recognizes the importance of controls. This includes not only establishing appropriate policies and procedures but also enforcing them and ensuring that the bank's organizational structure is suitable for its

size and complexity. Managers should emphasize integrity and ethical values, as well as hire competent staff. In addition, the following factors positively influence loan-administration control:

- a board of directors and/or senior management that takes an active role in monitoring lending policies and practices
- a reporting system that provides the bank with the information needed to manage the lending function and make sound credit decisions
- a well-defined lending-approval and -review system that includes established credit limits; limits and controls over the types of loans made and their minimum collateral requirements (for example, loan-to-collateral-value ratios); limits on maturities of loans; and policies on interest rates, pricing, and fee charges
- an independent loan-review function that identifies and evaluates existing and potential problem loans in a timely manner
- an independent reporting system that notifies appropriate personnel when financial information, insurance policies, or other loan documentation needs to be obtained
- a system of procedures that correct documentation exceptions

Loan administration is responsible for mitigating the operational risks associated with loan-related transactions, such as approving credit, disbursing loan proceeds, receiving loan payments, recording accrued interest and fee income, posting to subsidiary ledgers, and reconciling subsidiary and general ledgers. Typically, employees working with these types of activities have the capability to transfer funds between accounts on the bank's and the customer's behalf, which opens up an area of potential abuse. Additional potential areas for unethical employee behavior include the maintenance of loan notes and related documentation, as well as the credit and collateral files on borrowers. The bank must ensure it has adequate controls in place to avoid any improprieties; controls might include having separate departments for loan activities within a large organizational structure or rotating and/or segregating loan duties in smaller community banks. Some specific issues related to these responsibilities are described below.

Applications and Loan-Approval Process

The bank should have written policies and procedures for obtaining and reviewing loan applications and for ensuring sufficient borrower information (both financial and collateral-related) is required and analyzed in support of the loan approval. Approvals should be made in accordance with the bank's written guidelines and should also address the disbursement of loan proceeds. Additional issues that bank policies and procedures should address include—

- the requirement that loan commitments be in writing;
- requirements for letters of credit;
- the requirement for an annual review of borrowers, including a reassessment of the appropriateness of credit lines; and
- the requirement for a process for extending or renewing loans and credit lines.

Exceptions to the bank's written policies and procedures should reflect the appropriate level of approval and should be documented in writing.

Account Records

Bank staff should compare the approved terms for new and renewed extensions of credit (amount, maturity, interest rate, payment schedule) to the note or loan agreement for accuracy. The former should then be compared with the trial balance, if it is automated. If a manual system is used, the approved amount of the extension of credit should be checked against deposit tickets to ensure the correct amount was transferred to the borrower's account. Adjustments to loan accounts or accrued interest receivable accounts should be checked and tested by an individual independent of the loan-processing area. Subsidiary records should be routinely reconciled with the appropriate general ledger accounts.

Payments

Regardless of the type of payment, principal, interest, or fee, certain controls are necessary to ensure the effectiveness of operations, as well as the safeguarding of bank assets. An individual who cannot originate loan entries should perform an independent test of interest, commis-

sions, and fee computations to confirm their accuracy. Payment notices should be prepared by someone other than a loan teller. In addition, loan officers should be prohibited from process-

ing loan payments. Payments received by mail, tellers, or other departments should be separate from the loan-recording function. Supervisory approvals should be required for processing payments that are less than the amount contractually due, pertain to delinquent loans, are received irregularly, or involve waiving late fees. Collection notices should also be handled by someone not associated with loan processing.

Credit File Documentation

The bank should establish and maintain credit files for all borrowers. The bank's written loan policy should detail the minimum acceptable amount of information to be included in a borrower's credit file. The credit file should contain information on the extension of credit that identifies its purpose, source of repayment, repayment terms, and disposition of loan proceeds. Additionally, information should be on file relating to and/or analyzing the borrower's financial condition, including tax returns as appropriate; collateral, its valuation and related hazard insurance; the loan officer's contact with the borrower; and other pertinent documents, such as guarantor information, loan agreements, and loan covenant check sheets. Banks should maintain this information to support their evaluation of the borrower's creditworthiness and to leave a paper trail for auditors. The bank should also implement a file documentation tickler system to help bank personnel obtain updated information on borrowers, thereby facilitating continuous assessment and monitoring of credit risk.

Collateral Records

Banks should maintain a register to document collateral received from and released to borrowers, which should correspond to the actual collateral being held. Negotiable collateral should be maintained under dual control in a fireproof vault. The receiving and releasing of collateral to customers should be handled by individuals other than those who make entries in the collateral register. The bank should issue a receipt to customers for each item of collateral it is holding in safekeeping. Signed customer receipts should be obtained and filed after the collateral is released.

Management Information Systems

Management information systems, an increasingly important component of the loan administration function, allow a bank to manage its lending decisions more efficiently and effectively. Whether the bank uses a computerized or manual system to manage its loan portfolio, the following types of information should be readily available and routinely reviewed by management:

- total loans and commitments
- loans in excess of existing credit limits
- new extensions of credit, credit renewals, and restructured credits
- a listing of all delinquent and/or nonaccrual loans
- credits adversely graded or requiring special attention
- credits to insiders and their related interests
- credits not in compliance with policies, laws, or regulations
- specific lending activity aspects, including automated financial statement spreads of borrowers and analyses of the bank's credit exposure by type, geographic areas, collateral, and large employers

INTERNAL LOAN REVIEW

The internal loan review function should not be merely an after-the-fact, loan-by-loan review, but a process to detect weaknesses in the various levels of an institution's credit approval and monitoring system.

The nature of loan review systems may vary based on an institution's size, complexity, and management practices. For example, a loan review system may include components of a traditional loan review function that is independent of the lending function. Or, it may place some reliance on loan officers. While the former method is preferred, reliance on the lending staff could be appropriate if the loan officers are not permitted sole discretion to assign credit-quality ratings. In addition, the term "loan review system" can refer to various responsibilities assigned to credit administration, loan administration, problem-loan workout, or other areas. These responsibilities may range from administering the internal problem loan-reporting process to maintaining the integrity of the credit-grading process (for example, ensuring that

changes are made in credit grades as needed) and coordinating the information necessary to assess ALLL adequacy. Regardless of the structure of the loan review function, an effective system should—

- ensure consistent application of the credit-grading system,
- promptly and accurately identify loans with potential or well-defined credit weaknesses and ensure the development and implementation of an appropriate action plan to minimize credit losses,
- project relevant trends that affect the collectibility of the portfolio and isolate potential problem areas,
- act as an information source concerning emerging trends in the portfolio and the bank's area economy,
- provide senior management and the board of directors with an objective and timely assessment of the overall quality of the loan portfolio,
- provide essential information to determine the adequacy of the ALLL,
- assess the adequacy of and adherence to internal credit policies and loan administration procedures, and monitor compliance with relevant laws and regulations,
- ensure that relevant supporting loan documentation has been obtained,
- help develop and revise lending policy and procedures,
- evaluate the activities of lending personnel, and
- provide management with accurate and timely information related to credit quality that can be used for financial and regulatory reporting purposes.

Characteristics of Loan Review Program

To accomplish the preceding loan review objectives effectively, the program must possess the following components:

- a policy that clearly defines responsibilities of the loan review function and that communicates directorate and management support to all personnel involved in the lending function
- a policy that explicitly describes the bank's credit-grading system and grading definitions
- the capacity for objective judgment of loan quality and the autonomy to exercise it

- the freedom to communicate directly, without fear of reprisal, with senior management and the bank's board of directors
- skilled personnel who are experienced in credit analysis and knowledgeable of sound lending operations
- training and continuing education resources for the loan review staff

Credit-Grading Systems

The foundation of any loan review system is accurate and timely credit grading (also referred to as risk rating), which involves assessing credit quality and, ultimately, identifying problem loans. An effective credit-grading system provides that the bank's risk ratings on "non-pass" credits be updated periodically (at least quarterly) so that (1) the ALLL is appropriate for the risk contained in the portfolio and (2) strategies relative to workout action plans are up-to-date. Regardless of the type of loan review system employed, an effective credit-grading framework generally places primary reliance on loan officers to identify emerging loan problems. However, given the importance and the subjective nature of credit grading, a loan officer's judgment on the assignment of a particular credit grade to a loan should be subject to review by (1) peers, superiors, or loan committees; (2) an independent, qualified part-time or full-time person(s); (3) an internal department staffed with credit review specialists; or (4) outside credit review consultants. A review of the credit-quality assessment independent of the lending function is preferred because it typically provides a more conservative and realistic assessment of credit quality. Accurate and timely credit grading is a critical component of an effective loan review system. Each institution should ensure that its loan review system includes the following attributes:

- a formal credit-grading system that can be reconciled with the framework used by the federal regulatory agencies¹⁰

10. An institution may have a credit-grading system that differs from the credit-grading framework used by the Federal Reserve. However, each institution that maintains a credit-grading system that differs from the Federal Reserve's framework should maintain documentation that translates its credit-grading system into the pass/special mention/substandard/doubtful/loss credit-grading framework used by the Federal Reserve. This documentation should be sufficient to enable

- an identification or grouping of loans that warrants the special attention of management, with documentation supporting the reasons a particular loan deserves special attention
- a mechanism for direct, periodic, and timely reporting to senior management and the board of directors on the status of loans identified as needing special attention, and the actions taken by management
- appropriate documentation of the institution's credit loss experience for various components of its loan and lease portfolio¹¹

An institution should maintain a written description of its credit-grading system, including a discussion of the factors used to assign appropriate credit grades to loans. Loan grades should reflect the risk of credit losses. In addition, the loan review program should be in writing, and the board of directors should review and approve it at least annually to evidence its endorsement.

Loan Review System Elements

An institution's written policy and documentation of its loan review system should address the following elements:

- qualifications of loan review personnel
- independence of loan review personnel
- frequency of reviews
- scope of reviews
- depth of reviews
- review of findings and follow-up
- workpaper and report distribution, including distribution of reports to senior management and the board of directors

Qualifications of Loan Review Personnel—Persons involved in the loan review function should be selected based on level of education, experience, and extent of formal credit training. They should be knowledgeable of both sound lending practices and the institution's lending guidelines for the types of loans it offers. In

examiners to reconcile the totals for the various credit grades under the institution's system to the Federal Reserve's categories listed above.

11. Institutions are encouraged to maintain records of net credit loss experience for credits in each of the following categories: pass, special mention, substandard, doubtful, and loss.

addition, loan review personnel should be aware of relevant laws and regulations affecting lending activities.

Independence of Loan Review Personnel—An effective loan review system uses (1) a loan officer's initial identification of emerging problem loans and (2) the credit review of loans by individuals independent of the credit approval decisions. The first element of an effective system recognizes the loan officer's responsibility to continually analyze his or her portfolio and to promptly identify and report problem loans. Due to their frequent contact with borrowers, loan officers can usually identify potential problems before they become apparent to the nonlending staff. However, banks should not rely completely on loan officers for identification of problem loans because they may not be entirely objective in assessing the borrower's credit quality. The second element of an effective loan review system recognizes that loans should be reviewed by individuals that do not have responsibility for the loans they review and that the evaluation of the credit should not be influenced by anyone associated with the loan approval/management process.

While larger institutions typically establish a separate department of credit review specialists, cost and volume considerations may not justify such a system in smaller institutions. As a result, in many smaller institutions, management, a loan committee, or even loan officers may fill this role—or it may be filled by outside consultants who periodically come to the bank and review parts or all of the loan portfolio. Whether or not the institution has an independent loan review department, the loan review function should report directly to the board of directors or a board committee. (Senior management may be responsible for appropriate administrative functions as long as the independence of the loan review function is not compromised.)

Frequency of Reviews—Optimally, the loan review function provides useful, continual feedback on the effectiveness of the lending process to identify any emerging problems. For example, significant credits should be reviewed at least annually, upon renewal, or more frequently when internal or external factors indicate a potential for deteriorating credit quality of a borrower or a particular type of loan or pool of loans. A system of ongoing or periodic portfolio reviews is particularly important to the ALLL

determination process, which depends on the accurate and timely identification of problem loans.

Scope of Reviews—The review should cover all borrowers whose exposure is significant to the size of the bank. Additionally, each review should typically include the following components of the portfolio under review: a sample of smaller loans; past-due, nonaccrual, renewed, and restructured loans; loans previously classified or designated as special mention by the institution or its examiners; insider loans; and concentrations of credit, including other loans affected by common repayment factors. It is important that the scope-related information indicates that these components have been included in the review of the portfolio and that the percentage of the portfolio selected for review provides reasonable assurance that review results identify major problems in that portion of the portfolio and accurately reflect its quality. On a larger scale, the scope of management's review of the entire loan portfolio should attest to the fact that its reviews identify problem loans significant to the bank and accurately reflect portfolio quality on an ongoing basis. The scope of loan reviews should be approved annually by the institution's board of directors or when significant changes are made to the scope.

Depth of Reviews—Reviews should analyze a number of important aspects of selected loans, including—

- credit quality;
- sufficiency of credit and collateral documentation;
- proper lien perfection;
- proper approval by the loan officer and loan committee(s);
- adherence to any loan-agreement covenants;
- compliance with laws, regulations, and internal policies and procedures; and
- the appropriateness and timeliness of problem-loan identification by loan officers.

Review of Findings and Follow-Up—Findings should be reviewed with appropriate loan officers, department managers, and members of senior management. Management's responses to all noted deficiencies and identified weaknesses should include existing or planned corrective actions and the timeframes for correction. Significant noted deficiencies and identified weak-

nesses that remain unresolved beyond the assigned correction timeframes should be promptly reported to senior management and, if still unresolved, to the board of directors.

Workpaper and Report Distribution—Workpapers should contain a list of the borrowers included in the scope of the review and all supporting information needed to substantiate the findings. Reports to management discussing the findings of a portfolio review should indicate the "as of" review date; address the credit grading (risk rating) of the individual borrowers (loans) reviewed, as well as of the specific portfolio; assess the adequacy of and adherence to internal policies and procedures; indicate loan, credit file, and collateral deficiencies; and evaluate compliance with laws and regulations. The reports also should include summary analyses supporting the assignment of special-mention or classified designations to borrowers (loans). A summary report to the board of directors should be submitted at least quarterly and include findings relative to the areas previously mentioned for all reviews conducted during that timeframe (more frequently if material adverse trends are noted.) This summary report might include, in addition to the issues found in the reports to management, comparative trends identifying significant changes in the overall quality of the portfolio.

Examination Scope Guidance

An effective loan review function can greatly assist examiners in their review of the bank's loan portfolio. The examination process should evaluate the internal loan-review function by assessing the scope and depth of the review and the quality of the output. While examiners should not rely entirely on the bank's findings, they can limit the scope of their loan examination by developing a comfort level with the bank's internal loan-review function. To determine the reliability, if any, of the internal loan-review function, examiners should assess the adequacy of management's ability to identify problem loans. Two issues should be evaluated in this regard: timeliness and accuracy. The first issue deals with the ability of loan review to distinguish a problem loan and/or borrower from a nonproblem one when it initially becomes a problem. The second issue deals with the accuracy of loan review in identifying the

severity of the problem. The Extent that examiners rely on an internal loan-review function depends upon their comfort level with the bank in the aforementioned regard.

The examiner will be able to determine the degree to which the bank's loan review function can be relied upon by reviewing prior examination criticisms, as well as management's response to them, and a sufficient sample of the bank's portfolio. Whether the borrower being reviewed as a part of the sampling process is a pass or nonpass credit, examiners should consider narrowing the scope of the pass credits included in the loan examination if they concur with the bank's risk ratings. However, examiners still should continue their analysis of all "nonpass" credits due to their importance to the adequacy of the ALLL.

NONACCRUAL LOANS

Loans and lease-financing receivables are to be placed on nonaccrual status if (1) principal or interest has been in default for 90 days or more, unless the loan is both well secured and in the process of collection; (2) payment in full of principal or interest is not expected; or (3) they are maintained on a cash basis because the financial condition of the borrower has deteriorated.

Definition of "well secured" and "in the process of collection"—A debt is "well secured" if it is secured (1) by collateral in the form of liens on or pledges of real or personal property, including securities, that have a realizable value sufficient to discharge the debt (including accrued interest) in full or (2) by the guarantee of a financially responsible party. A debt is "in the process of collection" if collection of the asset is proceeding in due course either (1) through legal action, including judgment enforcement procedures, or (2) through collection efforts (not involving legal action) that are reasonably expected to result in repayment of the debt or in its restoration to a current status in the near future. Statutory bad debt, "A paper," is defined in section 5204 of the U.S. Revised Statutes (12 USC 56) as all debts to a bank on which interest is past due and unpaid for six months, unless the same is well secured and in the process of collection. Delinquent loans that are not covered under the definition of statutory bad debt are designated "B paper."

Exceptions—A loan does *not* need to be placed on nonaccrual status if (1) the criteria for amortization specified in AICPA Practice Bulletin No. 6 are met with respect to a loan acquired at a discount from an unaffiliated third party, including those that the seller has maintained on nonaccrual status, or (2) the loan is a consumer loan or secured by a one- to four-family residential property. However, the bank may elect to carry these loans on a nonaccrual status. Also, if a bank has a significant consumer or residential mortgage loan portfolio in relation to its total loans and tier 1 capital, a thorough review of the delinquency status should be performed to ensure that the bank has not materially misstated its financial condition and earnings.

Treatment of Cash Payments and Criteria for the Cash-Basis Treatment of Income—When a bank places a loan on nonaccrual status, it must consider how to account for subsequent payments. When the collectibility of the remaining book balance of a loan on nonaccrual status is uncertain, any payments received must be applied to reduce principal to the extent necessary to eliminate such doubt. Placing an asset on nonaccrual status does not require a charge-off, in whole or in part, of the asset's principal. However, *any identified loss* must be charged off.

When a loan is on nonaccrual status, some or all of the cash interest payments received may be treated as interest income on a cash basis, as long as the remaining book balance of the asset after the charge-off, if any, is deemed fully collectible. A bank's determination of the collectibility of an asset's remaining book balance must be supported by a current, well-documented credit evaluation of the borrower's financial condition and repayment prospects.

When recognition of interest income on a cash basis is appropriate, the amount of income recognized should be limited to what would have been accrued on the loan's remaining book balance at the contractual rate. Any cash interest payments received over this limit (and not applied to reduce the loan's remaining book balance) should be recorded as recoveries of prior charge-offs until these charge-offs have been fully recovered. (A bank should have a well-defined policy governing the treatment of interest income and the charge-off of accrued interest receivables.)

Treatment of Previously Accrued But Uncollected Interest—When a bank places a loan on nonaccrual status, its policy should address an appropriate treatment of previously accrued but uncollected interest. One acceptable method is to reverse all previously accrued but uncollected interest against appropriate income and balance-sheet accounts. For interest accrued in the current accounting period, the entry is made directly against the interest income account. For prior accounting periods, if accrued-interest provisions to the ALLL were not made, the amount of accrued but uncollected interest should be charged against current earnings. Also for prior accounting periods when provisions to the ALLL for possible loss of interest had been made, the bank generally reverses the accrued but uncollected interest by charging the ALLL to the extent of those specific provisions. Generally accepted accounting principles do not require the write-off of previously accrued interest if principal and interest are ultimately protected by sound collateral values. A bank is expected to have a well-defined policy, subject to examiner review, governing the write-off of accrued interest.

Treatment of Multiple Extensions of Credit to One Borrower—As a general rule, nonaccrual status for an asset should be determined by assessing its collectibility, repayment ability, and performance. Thus, when one loan to a borrower is placed in nonaccrual status, a bank does not automatically have to place all of that borrower's other extensions of credit in nonaccrual status. The bank should evaluate its other extensions of credit to that borrower to determine if one or more of them also should be placed in nonaccrual status.

Restoration to Accrual Status—As a general rule, a nonaccrual loan may be restored to accrual status when (1) its principal and interest are no longer past due and unpaid, and the bank expects repayment of the remaining principal and interest, or (2) when it otherwise becomes well secured and in the process of collection. Before restoring a loan to accrual status, the bank should consider the borrower's prospects for continuing future contractual payments. If reasonable doubt exists, reinstatement may not be appropriate.

To meet the first test, the bank must have received payment of the past-due principal and

interest, unless the loan has been formally restructured and qualifies for accrual status under the restructured terms, or the asset has been acquired at a discount from an unaffiliated third party due to uncertainty about the amounts or timing of future cash flows and meets the amortization criteria (that is, accretion of discount) specified in AICPA Practice Bulletin No. 6.

A nonaccrual loan is considered in the process of collection if the borrower has resumed paying contractual interest and principal payments, even if the past-due amount has not been brought totally current. These loans may be returned to accrual status provided two criteria are met: All principal and interest amounts due (including arrearages) are reasonably assured of repayment within a reasonable period, and the borrower has a sustained period of performance (generally a minimum of six months) in accordance with the contractual terms.

Until the loan is restored to accrual status, cash payments received must be treated according to the criteria stated above. In addition, after a formal restructuring, if the loan that has been returned to accrual status later meets the criteria for placement in nonaccrual status (as a result of past-due status based on its modified terms or for any other reason), the asset must be placed on nonaccrual status.

Treatment of Nonaccrual Loans with Partial Charge-Offs—GAAP and regulatory reporting requirements do not explicitly address whether partial charge-offs associated with a nonaccrual loan (that has not been formally restructured) must be fully recovered before a loan can be restored to accrual status.

According to call report instructions, restoration to accrual status is permitted when (1) the loan has been brought fully current with respect to principal and interest and (2) the bank expects the loan's full contractual balance (including any amounts charged off), plus interest, will be fully collectible under the terms of the loan. Thus, to return a partially charged-off loan that has been brought fully current to accrual status, the bank should determine if it expects to receive the full amount of principal and interest called for by the loan's terms.

When the contractual principal and interest of a loan have been brought fully current, and the borrower's financial condition and repayment prospects have improved so that the full contractual principal (including any amounts charged

off) and interest is expected to be repaid, the loan may be restored to accrual status *without* having to first recover the charge-off. Conversely, this treatment would be inappropriate when the charge-off indicates continuing doubt about the collectibility of principal or interest.

The reasons for restoring a partially charged-off loan to accrual status must be documented. These actions should be supported by a current, well-documented credit evaluation of the borrower's financial condition and prospects for full repayment of contractual principal (including any amounts charged off) and interest. This documentation will be subject to review by examiners.

Examiner Review—Some states have promulgated regulations or adopted policies for non-accrual of interest on delinquent loans that may differ from the above procedures. In these cases, the bank should comply with the more restrictive policy. The examiner should ensure that the bank is complying with such guidelines. In all cases, each bank should formulate its own policies to ensure that net income is not being overstated. These policies are subject to examiner review.

RESTRUCTURED OR RENEGOTIATED “TROUBLED” DEBT

In a “troubled-debt restructuring,” a bank grants a borrower concessions (for example, a reduction of interest or principal payments) that it would not otherwise consider for economic or legal reasons related to a borrower's financial difficulties. Renegotiated “troubled” debt includes those loans and lease-financing receivables restructured or renegotiated to provide concessions to the borrower. A loan extended or renewed at a stated rate equal to the current interest rate for new debt with similar risk is not considered renegotiated debt. For further information, see the instructions for the Reports of Condition and Income; FASB Statement No. 15, “Accounting by Debtors and Creditors for Troubled Debt Restructurings”; and FASB Statement No. 114, “Accounting by Creditors for Impairment of Loan,” which amends FASB 15 to require creditors to measure all loans that are restructured in a troubled-debt restructuring

involving only a modification of terms in accordance with FASB 114.¹²

A bank should develop a policy for renegotiated troubled debt to ensure that such items are identified, monitored, and properly accounted for and controlled. These restructurings should occur infrequently. If not, the bank is probably experiencing significant problems. Before troubled-debt concessions are made to a borrower, it is a good practice to have the transactions receive prior approval of the board of directors or a board committee. All these transactions should be reported to the board of directors upon enactment.

Bankers may be involved in formally restructuring loans when borrowers experience financial difficulties or in light of the borrower's condition and repayment prospects.^{12a} These actions, if consistent with prudent lending principles and supervisory practices, can improve a bank's collection prospects. GAAP and regulatory reporting requirements provide a reporting framework that may alleviate some of the lender's concerns about working constructively with borrowers experiencing financial difficulties. The accounting standards for troubled-debt restructurings are set forth in FASB Statement No. 15.

The interagency policy statement on credit availability, issued March 1, 1991, clarifies a number of supervisory policies on restructured-

12. FASB establishes a new approach for recognizing impairment on problem loans and new disclosure requirements for impaired loans for financial reporting purposes. FASB 118 amends FASB 114 to allow creditors to use existing methods for recognizing interest income on impaired loans. This statement also clarifies the existing accounting for in-substance foreclosure. Under the new impairment standard and related amendments to FASB 15, a collateral-dependent real estate loan (that is, a loan for which repayment is expected to be provided solely by the underlying collateral) would be reported as OREO only if the lender has taken possession of the collateral. For other collateral-dependent real estate loans, loss recognition would be based on the fair value of the collateral if foreclosure is probable. However, these loans would no longer be reported as OREO. Rather, they would remain in the loan category. In light of the significance of these changes to accounting standards, the Federal Reserve is reevaluating regulatory disclosure and nonaccrual requirements and expects to issue revised policies at a later date. (See SR-93-30 (FIS).) FASB 15 is also amended by FASB statements 71, 111, 121, 141, 145, and 149. (See FASB's current text.)

12a. For further guidance on loan restructuring and work-out arrangements, refer to the Interagency Supervisory Guidance for Financial Institutions Affected by Hurricane Katrina (see SR-06-3 and SR-07-3) and the Statement on Working with Mortgage Borrowers that was issued by the Federal Reserve and the other federal financial institution regulatory agencies (see SR-07-6).

loan issues. Two of these clarifications indicate that when certain criteria are met, (1) nonaccrual assets can be restored to accrual status when subject to formal restructurings in accordance with FASB Statement No. 15 and (2) restructurings that yield a market rate of interest would not have to be included in restructured loan amounts reported in the years following the restructuring. These clarifications, which are consistent with GAAP, have been fully incorporated into the instructions for the Reports of Condition and Income (Call Reports).

Nonaccrual Assets Subject to FASB Statement No. 15 Restructurings

A loan or other debt instrument that has been formally restructured to ensure repayment and performance need not be maintained in nonaccrual status. In deciding whether to return an asset to accruing status, payment performance that had been sustained for a reasonable time before the restructuring may be considered. For example, a loan may have been restructured, in part, to reduce the amount of the borrower's contractual payments. It may be that the amount and frequency of payments under the restructured terms do not exceed those of the payments that the borrower had made over a sustained period within a reasonable time before the restructuring. In this situation, if the lender is reasonably assured of repayment and performance according to the modified terms, the loan can be immediately restored to accrual status.

Clearly, a period of sustained performance, whether before or after the date of the restructuring, is very important in determining whether there is reasonable assurance of repayment and performance. In certain circumstances, other information may be sufficient to demonstrate an improvement in the borrower's condition or in economic conditions that may affect the borrower's ability to repay. This information may reduce the need to rely on the borrower's performance to date in assessing repayment prospects. For example, if the borrower has obtained substantial and reliable sales, lease, or rental contracts or if other important developments are expected to significantly increase the borrower's cash flow and debt-service capacity and strength, then the borrower's commitment to repay may be sufficient. A preponderance of such evidence may

be sufficient to warrant returning a restructured loan to accrual status. The restructured terms must reasonably ensure performance and full repayment.

It is imperative that the reasons for restoring restructured debt to accrual status be documented. A restoration should be supported by a current, well-documented evaluation of the borrower's financial condition and prospects for repayment. This documentation will be reviewed by examiners.

The formal restructuring of a loan or other debt instrument should be undertaken in ways that will improve the likelihood that the credit will be repaid in full in accordance with reasonably restructured repayment terms. A restructured loan may not be restored to accrual status unless there is reasonable assurance of repayment and performance under its modified terms in accordance with a reasonable repayment schedule. Regulatory reporting requirements and GAAP do *not* require a banking organization that restructures a loan to grant excessive concessions, forgive principle, or take other steps not commensurate with the borrower's ability to repay to use the reporting treatment specified in FASB Statement No. 15. Furthermore, the restructured terms may include prudent contingent payment provisions that permit an institution to obtain appropriate recovery of concessions granted in the restructuring, if the borrower's condition substantially improves.

Moreover, while restructured debt that qualifies for accrual status and yields a market rate of interest must be disclosed as a FASB Statement No. 15 troubled debt in the year of the restructuring, it need not be disclosed in subsequent years. This clarification was particularly important because, while this guidance is derived from FASB Statement No. 15 and is generally followed for Securities and Exchange Commission reporting purposes, previously it was not clear that this treatment could be followed for Call Report purposes.

Reporting Guidance on Loan Fees and Interest

The accounting standards for nonrefundable fees and costs associated with lending, committing to lend, and purchasing a loan or group of loans are set forth in FASB Statement No. 91, "Accounting for Nonrefundable Fees and Costs Associ-

ated with Originating or Acquiring Loans and Initial Direct Costs of Leases.” In general, this statement says loan-origination fees should be deferred and recognized over the life of the related loan as an adjustment of yield. The statement applies to all types of loans, as well as to debt securities (but not to loans or securities carried at market value), and to all types of

lenders. It must be applied to all lending and leasing transactions in fiscal years beginning after December 15, 1987. Earlier application is encouraged, and retroactive application is permitted. For further information, see FASB Statement No. 91 and instructions for preparing the Report of Condition and Income.

TRANSFER OF LOW-QUALITY LOANS OR OTHER ASSETS

Low-quality loans include those classified or specially mentioned at the most recent examination or loans that would most likely be classified or specially mentioned if subjected to a review. In addition, low-quality loans include past-due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower's poor financial condition, and any other loans the examiner believes are questionable. Other assets of questionable quality include depreciated or subinvestment-grade securities and other real estate. A low-quality asset shall not be acceptable as collateral for a loan or extension of credit to, or guarantee, acceptance, or letter of credit issued on behalf of an affiliate. Furthermore, a low-quality asset cannot be involved in a loan participation or an asset swap.

The transfer of low-quality loans or other assets from one depository institution to another may raise supervisory concerns. These transfers may be made to avoid detection and classification during regulatory examinations and may be accomplished through participation, purchases/sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Section 23A of the Federal Reserve Act, 12 USC 371c, prohibits bank purchases of low-quality assets from an affiliate. Examiners should be alert to situations in which an institution's intention appears to be concealing low-quality assets to avoid examiners' scrutiny and possible classification.

During bank examinations, examiners are requested to identify situations when low-quality assets have been transferred between the institution being examined and another depository institution. The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and, if an affiliate is involved, is a violation of section 23A of the Federal Reserve Act. If necessary, it should be addressed through formal supervisory enforcement action.

Any transfers of low-quality or questionable assets should be brought to the attention of Reserve Bank supervisory personnel. In turn, these individuals should notify the local offices of primary federal and state regulators (if applicable) of the other depository institutions involved in the transaction. For example, Reserve Banks should notify the primary federal and state regulators (if applicable) of any depository institution to which a state member bank or holding company is transferring or has transferred low-quality loans. Reserve Banks should also notify the primary federal and state regulators (if applicable) of any depository institution from which a state member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations, savings banks, and commercial banking organizations.

If the examiner determines a permissible transfer of assets was undertaken, he or she should ensure the assets have been properly recorded at fair market value on the books of the acquiring institution. If the transfer involved the parent holding company or a nonbank affiliate, the examiner should determine if the transaction also was recorded properly on the affiliate's books.¹³

Whenever asset transfers occur, examiners should determine whether the assets in question were independently and completely evaluated for conformance with bank policy and procedures. Examiners should be guided by the inspection procedures outlined in section 2020.7.2 of the *Bank Holding Company Supervision Manual*.

ENVIRONMENTAL LIABILITY

Banks may be liable for cleaning up hazardous substance contamination under both federal and state environmental liability statutes. This liability can arise through a bank's ownership or acquisition of real estate, in its role as a creditor, or in a fiduciary role. Banks may also be exposed to environmental liability indirectly through the increased possibility that a borrower's creditworthiness may be impaired by a liability to pay for cleanup of contaminated property, even if the property does not secure bank debt.

13. See SR-83-24 (FIS).

The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), the federal superfund statute, authorizes the Environmental Protection Agency (EPA) to clean up hazardous waste sites and to recover costs associated with the cleanup from entities specified in the statute. While the superfund statute is the primary federal law dealing with hazardous substance contamination, numerous other federal and state statutes establish environmental liability that could place banks at risk.

CERCLA defines who is subject to liability for the costs of cleaning up hazardous substance contamination. The definition includes “. . . the owner and operator of a vessel or a facility, (or) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of”¹⁴ Under the statute, a person or entity that transports or arranges to transport hazardous substances can also be held liable for cleaning up contamination.

The superfund statute imposes a standard of strict liability, which means the government does not have to prove that the owners or operators knew about or caused the hazardous substance contamination in order for them to be liable for the cleanup costs. Moreover, liability under the statute is joint and several, which allows the government to seek recovery of the entire cost from any individual party that is liable for those costs under CERCLA.

CERCLA provides an exemption for secured creditors in the definition of “owner and operator” by stating that these terms do not include “. . . a person, who, without participating in the management of a vessel or facility, holds indicia of ownership primarily to protect his security interest in the vessel or facility.”¹⁵ However, this exception has not provided banks with an effective defense from liability because courts have limited its applicability. Specifically, courts have held that some lenders’ actions to protect their security interests have resulted in the bank “participating in the management of a vessel or facility,” thereby voiding the exemption. Additionally, once the title to a foreclosed property passes to the bank, some courts have held that the exemption no longer applies and that the bank is liable under the superfund statute as an “owner” of the property. Under some circumstances, CERCLA may exempt landowners who

acquire property without knowing about existing conditions (the “innocent landowner defense”). However, the courts have applied a stringent standard to qualify for this defense. Since the statute provides little guidance as to what constitutes the appropriate timing and degree of due diligence to successfully employ this exemption, banks should exercise caution before relying on it.

Overview of Environmental Hazards

Environmental risk can be characterized as adverse consequences that result from generating or handling hazardous substances or from being associated with the aftermath of contamination.

Hazardous substance contamination is most often associated with industrial or manufacturing processes that involve chemicals as ingredients or waste products. For years, these types of hazardous substances were frequently disposed of in landfills or dumped on industrial sites. However, hazardous substances are also found in many other lines of business. The following examples demonstrate the diverse sources of hazardous substances, but by no means cover them all:

- farmers and ranchers (fuel, fertilizers, herbicides, insecticides, and feedlot runoff)
- dry cleaners (various cleaning solvents)
- service station and convenience store operators (underground storage tanks)
- fertilizer and chemical dealers and applicators (storage and transportation of chemicals)
- lawn care businesses (application of lawn chemicals)
- trucking firms (transportation of substances such as fuel or chemicals)

Environmental liability has had the greatest impact on the real estate industry. Not only has land itself been contaminated with toxic substances, construction methods for projects such as commercial buildings have used materials that have been subsequently determined to be hazardous—resulting in significant declines in project values. For example, asbestos was commonly used in commercial construction from the 1950s to the late 1970s. Asbestos has since been found to be a health hazard and now, in many cases, must be removed or its effects abated by

14. CERCLA, section 107(a).

15. CERCLA, section 101(20)(A).

enclosing or otherwise sealing off the contaminated areas.

Another common source of hazardous substance contamination is underground storage tanks. Leaks from these tanks not only contaminate the surrounding ground, but often flow into ground water and travel a significant distance from the original contamination site. As contamination spreads to other sites, cleanup costs escalate.

Effect on Banks—A bank may encounter losses from environmental liability through direct ownership, lending and trust activities, or mergers or acquisitions of borrowers. The greatest risk to a bank is the possibility of being held solely liable for costly environmental cleanups. Under the doctrine of joint and several liability, a bank may find itself solely responsible for cleaning up a contaminated site at a cost that exceeds any outstanding loan balance or property value.

Direct Ownership

A bank may be held liable for the cleanup of hazardous substance contamination in situations when it—

- takes title to property through foreclosure or acquires property to satisfy debts previously contracted;
- owns or acquires for future expansion premises that have been contaminated by hazardous substances; or
- owns, acquires, or merges with another entity involved in activities that might result in a finding of environmental liability.

Lending Activity—While real estate loans present the greatest risk, almost any type of loan, unsecured or secured, can expose a bank to the effects of environmental liability. A borrower who is required to pay for the cleanup of a contaminated property may be unable to provide the necessary funds both to remove contaminated materials and to service the debt. Even if the bank does not have a security interest in the borrower's real estate, it must be aware that significant cleanup costs could threaten the borrower's solvency and net worth (and jeopardize the collection of working-capital or equipment loans). If the loan is secured by the contaminated real estate, the bank may find that the property value has declined dramatically, depending on the degree of contamination. In

determining whether to foreclose, the bank must compare the estimated cleanup costs against the value of the collateral. In many cases, this estimated cost has been well in excess of the outstanding loan balance, and the bank has elected to abandon its security interest in the property and charge off the loan. This situation occurs because some courts have not allowed banks that have foreclosed on a property to avail themselves of the secured-creditor exemption. These rulings have been based on a strict reading of the superfund statute that provides the exemption to "security interests" only.

A bank may also expose itself to environmental liability in its role as a secured or unsecured creditor if it involves bank personnel or contractors engaged by the bank in day-to-day management of the facility or takes actions designed to make the contaminated property salable, possibly resulting in further contamination.

Bank Premises—Banks may also be exposed to environmental liability for property held as bank premises. A review of historical uses of properties to be acquired for relocation or future expansion should provide insight into the likelihood that contamination may have occurred and whether additional steps may be warranted.

Mergers and Acquisitions of Borrowers—Borrowers may face environmental risk through the activities of subsidiaries or by merging with or acquiring other companies whose activities result in environmental liability. Some courts have held that for the purposes of determining liability under the superfund statute, the corporate veil may not protect parent companies that participate in the day-to-day operations of their subsidiaries from environmental liability and court-imposed cleanup costs. Additionally, borrowers and, ultimately, banks can be held liable for contamination that occurred before they owned or used the real estate.

Protection Against Environmental Liability

Banks may avoid or mitigate potential environmental liability by having sound policies and procedures designed to identify, assess, and control environmental liability. The following discussion briefly describes methods that banks may employ to minimize potential environmental liability.

Loan policies and procedures should address methods for identifying potential environmental problems relating to credit requests. The loan policy should describe an appropriate degree of due diligence investigation required for credit requests. Borrowers in high-risk industries or localities should be investigated more stringently than borrowers in low-risk industries or localities.

After a loan is granted, periodic credit analysis of the borrower's ability to repay should include an assessment of environmental risk. If the credit is secured by real property collateral, the bank should remain aware of the property's uses and the potential environmental risk associated with those uses. Even if the credit is not secured by real property, periodic credit reviews should determine whether repayment prospects may be jeopardized by any activities that might expose the borrower to environmental liability.

The first step in identifying environmental risk is an environmental review. These reviews may be performed by loan officers or others. They typically identify past uses of the property; evaluate regulatory compliance, if applicable; and identify potential problems. The reviewer should interview persons familiar with present and past uses of the facility and property, review relevant records and documents, and inspect the site.

When the environmental review reveals possible hazardous substance contamination, an environmental assessment or audit may be required. Environmental assessments are made by personnel trained in identifying potential environmental hazards and provide a more thorough inspection of the facility and property. Environmental audits differ markedly from environmental assessments because independent environmental engineers are employed to investigate the property in great detail. Engineers test for hazardous substance contamination, which might require collecting and analyzing air samples, surface soil samples, or subsurface soil samples or drilling wells to sample ground water.

Other measures some banks use to help identify and minimize environmental liability to the bank include obtaining indemnities from borrowers for any cleanup costs incurred by the bank and writing affirmative covenants into loan agreements (and attendant default provisions) that require the borrower to comply with all applicable environmental regulations. Although these measures may provide some aid in identi-

fying and minimizing potential environmental liability, their effectiveness depends on the financial strength of the borrower and does not represent a substitute for environmental reviews, assessments, and audits.

Banks must be careful that any policies and procedures undertaken to assess and control environmental liability cannot be construed as taking an active role in the management or day-to-day operations of the borrower's business. Some activities that courts could consider active participation in the management of the borrower's business and that could subject the bank to potential liability include—

- having bank employees serve as members of the borrower's board of directors or actively participate in board decisions,
- assisting in day-to-day management and operating decisions, and
- actively determining management changes.

These considerations are especially important when the bank is actively involved in loan workouts or debt restructuring.

LOAN PROBLEMS

The failure of directors to establish a sound lending policy, require management to establish adequate written procedures, and monitor and administer the lending function within established guidelines has resulted in substantial problems for many institutions. Loan problems may be caused by a number of factors affecting the bank or its borrowers. For a discussion of the indicators of troubled commercial real estate loans, see the 2090 sections of this manual. The major sources and causes of problem credits are explained below.

Competition—Competition among banks for size and community influence may result in compromising credit principles and making or acquiring unsound loans. The ultimate cost of unsound loans always outweighs temporary gains in growth and influence.

Complacency—The following items manifest complacency and should always be guarded against:

- lack of adequate supervision of long-term and familiar borrowers

- dependence on oral information the borrower furnished in lieu of reliable and verifiable financial data
- optimistic interpretation of known credit weaknesses based on past survival of recurrent hazards and distress
- ignorance or disregard of warning signs about the borrower, economy, region, industry, or other related factors

Compromise of credit principles. For various reasons, bank management may grant loans carrying undue risks or unsatisfactory terms, with full knowledge of the violation of sound credit principles. The reasons management may compromise basic credit principles include timidity in dealing with individuals with dominating personalities or influential connections, friendships, or personal conflicts of interest. Self-dealing, salary incentives, and bonuses based on loan portfolio growth, as well as competitive pressures, may also lead to a compromise of credit principles.

Failure to obtain or enforce repayment agreements. Loans granted without a clear repayment agreement are, at the very least, a departure from fundamental banking principles. These loans are likely to become significant problems. A more common problem, but just as undesirable, occurs when the bank and borrower agree on repayment or progressive liquidation of a loan, but the bank fails to collect the principal payments when and how it should. A study of loan losses will show that, in many cases, amortization never equaled the principal payments the borrower agreed to make. Good lending and good borrowing both require consistent liquidation.

Incomplete credit information. Complete credit information is necessary to make a reasonable and accurate determination of a borrower's financial condition and repayment capacity. Adequate and comparative financial statements, operating statements, and other pertinent statistical data should be available. Other essential information, such as the purpose of the borrowing and the intended plan and repayment source, progress reports, inspections, and memoranda of outside information and loan conferences, should be contained in the bank's credit files. The lack of adequate credit information can limit management's ability to react quickly and effectively when problems develop.

Lack of supervision. Many loans that are sound at their inception develop into problems and losses because of ineffective supervision. This lack of supervision usually results from a lack of knowledge about the borrower's affairs over the lifetime of the loan.

Overlending. In one sense, overlending could come under the heading of technical incompetence. However, overlending is a weakness found in some lenders that are otherwise competent. Loans beyond the borrower's reasonable capacity to repay are unsound. Nowhere are technical competence and credit judgment more important than in determining a sound borrower's safe, maximum loan level.

Poor selection of risks. When banks are willing to assume more-than-normal risk levels, they often experience serious loan problems. The following general loan types may fall within the category of poor risk selection:

- loans in which the bank advances an excessive proportion of the required capital relative to the borrower's equity investment
- loans based more on the expectation of successfully completing a business transaction than on the existing net worth and repayment capacity
- loans for the speculative purchase of securities or goods
- loans collateralized by marketable assets carried without adequate margins of security
- loans made for other benefits, such as control of large deposit balances in the bank, instead of sound net worth, collateral, or repayment capacity
- loans secured solely by the nonmarketable stock of a local corporation, made in conjunction with loans directly to that corporation (The bank may consider itself forced to finance the corporation far beyond warranted limits to avoid loss on a loan that relies on the corporation's stock.)
- loans predicated on collateral of uncertain liquidation value (A moderate amount of these loans, when recognized by bank management as subject to inherent weakness, may cause few problems. However, the bank can encounter trouble if this practice becomes the rule.)

Revenue-driven lending. The loan portfolio is usually a bank's most important revenue-producing asset. The earnings factor, however,

must never compromise sound credit judgment and allow credits carrying undue risks or unsatisfactory repayment terms to be granted. Unsound loans usually cost far more than the revenue they produce.

Self-Dealing. Self-dealing is found in many serious problem banks. Self-dealing often takes the form of an overextension of credit on an unsound basis to directors or principal shareholders, or to their related interests, who have improperly used their positions to obtain funds in the form of unjustified loans (or sometimes as fees, salaries, or payments for goods or services). Officers, who hold their positions at the pleasure of the board, may be pressured to approve loan requests by insiders that, coming from customers, would have been rejected. In that situation, management may attempt to defend unsound loans or other self-dealing practices by bank insiders.

Technical incompetence. All able and experienced bankers should possess the technical ability to analyze financial statements and to obtain and evaluate other credit information. When this ability is absent, unwarranted losses are certain to develop. Credit incompetence of management should be discussed promptly with the board of directors.

REGULATION O

The Federal Reserve's Regulation O (12 CFR 215) governs any extension of credit, including overdrafts, by a member bank to an executive officer, director, or principal shareholder of (1) the member bank, (2) a bank holding company of which the member bank is a subsidiary, and (3) any other subsidiary of that bank holding company. The regulation also applies to any extension of credit by a member bank to (1) a company controlled by such a person and (2) a political or campaign committee that benefits or is controlled by such a person. Regulation O also implements the reporting requirements for credit extensions by a member bank to its executive officers, directors, or principal shareholders or to the related interests of such persons (insiders).

Business transactions between a member bank and insiders require close supervisory review. Most of these transactions are soundly struc-

ured and have a legitimate business purpose so that all parties are treated equitably. However, absent the protection of an arm's-length transaction, the potential for or appearance of abuse is greater and requires intensified regulatory review. Examiners should pay close attention to all credit extensions of a member bank to its insiders and their related interests. The terms of the credit, particularly interest-rate and collateral terms, may not be preferential, and the credit may not involve more than a normal repayment risk. Examiners must also ensure that the amount of credit extended to an insider or a related interest, both to a single borrower and in the aggregate, conforms to the provisions of Regulation O.

A member bank's extension of credit may be considered abusive or self-serving if its terms are unfavorable to the lender or if the credit would not have been extended on the same terms absent the official relationship. That is, it would be improbable that each party to the credit would have entered into the credit transaction under the same terms if the relationship did not exist. When a transaction appears questionable, a complete inquiry into the facts and circumstances should be undertaken so that a legal determination can be obtained. If credit extensions appear to circumvent the intent of Regulation O, they should be identified and discussed with management and disclosed in the examination report for follow-up review and possible formal corrective action by regulatory authorities. (See Regulation O for further details.)

Insider Use of a Bank-Owned Credit Card

Board staff issued a May 22, 2006, legal opinion in response to an FDIC request for clarification on the application of the Board's Regulation O (12 CFR 215) to credit cards that are issued to bank insiders for the bank's business purposes. The FDIC asked whether, and under what circumstances, an insider's use of a bank-owned credit card would be deemed an extension of credit by the bank to the insider for purposes of Regulation O.

The FDIC indicated that insiders of a bank often use a bank-owned credit card to purchase goods and services for the bank's business purposes. A bank-owned credit card is a credit card that is issued by a third-party financial

institution to a bank to enable the bank (through its employees) to finance the purchase of goods and services for the bank's business. Board staff commented that it was understood that (1) a bank that provides a bank-owned credit card to its employees typically forbids or discourages use of the card by employees for their personal purposes and that an employee who uses the card for personal purposes is obligated to promptly reimburse the bank and (2) a bank is liable to the card-issuing institution for all extensions of credit made under the card (whether for the bank's business purposes or for an employee's personal purposes).^{15a}

Although section 215.3(a) of Regulation O broadly defines an extension of credit broadly to include "a making or renewal of a loan, a granting of a line of credit, or an extending of credit in any manner whatsoever," the rule also provides several important exceptions to the definition that are relevant to the FDIC's inquiry. Section 215.3(b)(1) of Regulation O excludes from the definition of extension of credit any advance by a bank to an insider for the payment of authorized or other expenses incurred or to be incurred on behalf of the bank. Also, section 215.3(b)(5) of Regulation O excludes from the definition of extension of credit indebtedness of up to \$15,000 incurred by an insider with a bank under an ordinary credit card.

Considering the provisions of Regulation O and the purposes of the insider lending restrictions in the Federal Reserve Act, Board legal staff opined that a bank does not make an extension of credit to an insider for purposes of Regulation O at the time of issuance of a bank-owned credit card to the insider (regardless of whether the line of credit associated with the card is greater than \$15,000). The opinion states also that a bank does not extend credit to an insider for the purposes of Regulation O when the insider uses the card to purchase goods or services for the bank's business purposes. However, when an insider uses the card to purchase goods or services for the insider's personal purposes, the bank may be making an extension of credit to the insider. The opinion states that an extension of credit would occur for the purposes

of Regulation O if—and to the extent that—the amount of outstanding personal charges made to the card, when aggregated with all other indebtedness of the insider that qualifies for the credit card exception in section 215.3(b)(5) of Regulation O, exceeds \$15,000.

The FDIC also asked whether incidental personal expenses charged by an insider to a bank-owned credit card are per se violations of the market-terms requirement in section 215.4(a) of Regulation O because non-insiders do not have access to this form of credit from the bank. In response, Board staff stated that section 215.4(a) requires extensions of credit by a bank to its insiders to (1) be on substantially the same terms (including interest rates and collateral) as, and subject to credit underwriting standards that are not less stringent than, those prevailing at the time for comparable transactions with non-insiders and (2) not involve more than the normal risk of repayment or other features unfavorable to the bank.

The opinion states that a bank may be able to satisfy the market-terms requirement, however, if the bank approves an insider for use of a bank-owned credit card only if (1) the insider meets the bank's normal credit underwriting standards and (2) the card does not have preferential terms (or the card does not have preferential terms in connection with uses of the card for personal purposes). Nonetheless, use of a bank-owned credit card by an insider for personal purposes may violate the market-terms requirement of Regulation O if the card carries a lower interest rate or permits a longer repayment period than comparable consumer credit offered by the bank.

The Board staff's legal opinion applies only to the specific issues and circumstances described in the letter and does not address any other issues or circumstances.

EXAMINATION OF THE LENDING FUNCTION

Banks are expected to clearly delineate their lending objectives, policies, and procedures in writing. Lending practices are then expected to adhere to policies and procedures, with exceptions properly justified and documented. The complexity and scope of a bank's lending policy and procedures should be appropriate to the bank's size and the nature of its activities, and

15a. In the responding letter, Board legal staff notes that it was understood that some banks directly issue credit cards to their employees to enable the employees to finance the purchase of goods and services for the bank's business (bank-issued credit cards). Also, the letter states that the principles set forth with regard to bank-owned credit cards also would apply to bank-issued credit cards.

they should be consistent with prudent banking practices and relevant regulatory requirements.

Historically, examiners have primarily identified loan-portfolio-management concerns through a detailed review of credits and credit documentation. This approach remains valid, but it must be combined with a full evaluation of a bank's

lending objectives, policy, and procedures. Therefore, the scope of each examination should encompass a review of the bank's lending policy and procedures and an assessment of how lending practices adhere to the policy and procedures.

When conducting a review of loan portfolio management, examiners should pay particular attention to management's approach to and handling of the following:

- monitoring of lending practices by individual lending officers
- identification of concentrations of credit
- documentation of credit and collateral exceptions
- identification of problem credits
- accounting for nonaccrual loans and for renegotiated and restructured loans
- collection of past-due loans

In addition, examiners should be aware of any evidence of self-dealing in lending transactions.

An examiner's final assessment of a bank's lending function should consider the adequacy of internal policy and procedures, the effectiveness of management oversight and control, and the overall quality of the loan portfolio. Moreover, consideration should be given to all pertinent internal and external factors, including the continuity of management; bank's historical lending experience; and current and projected economic condition for the bank's market area, particularly for any industries in which the bank has concentrations of credit.

Supervisors and examiners should watch for indications of insufficiently rigorous risk assessment. In particular, examiners should be alert to circumstances indicating excessive reliance on strong economic conditions and robust financial markets, such as (1) borrowers whose financial capacity is inadequate to service their debts or (2) inadequate stress testing. Examiners also should be attentive when reviewing an institution's assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead the institution to delay recognition of emerging weaknesses in some loans.¹⁶

If examiners observe significant and undue

16. Examiners should recognize that an increase in classified or special-mention loans is not per se an indication of lax lending standards. Examiners should review and consider the nature of such increases and surrounding circumstances as they reach their conclusions about the asset quality and risk management of an institution.

reliance on favorable assumptions about borrowers or the economy and about financial markets more generally—or observe that this reliance has slowed the institution's recognition of loan problems—they should carefully consider downgrading, under the applicable supervisory rating framework, an institution's risk-management, management, or asset-quality ratings (or all three). If those assumptions are deemed sufficiently significant to the institution, examiners should also consider downgrading its capital adequacy rating. Similarly, if supervisors or examiners find that loan-review activities or other internal-control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, or inadequate training, such findings should be considered in supervisory ratings as well.

When developing their findings, examiners should review internal risk-management loan-review systems, conduct sufficient loan reviews, and perform transaction testing of the lending function to determine accurately the quality of bank loan portfolios and other credit exposures. If deficiencies in lending practices or credit discipline are indicated as a result of the pre-examination risk assessment or of performing the examination, sufficient supervisory resources should be committed to in-depth reviews, including transaction testing. Adequate, in-depth reviews and transaction testing should be performed to ensure that the Reserve Bank achieves a full understanding of the nature, scope, and implications of the deficiencies.

Important findings should be noted in the examination or report. Plans for remedial actions should be discussed with bank management and the boards of directors, as appropriate. In addition, any identified weaknesses or deficiencies that could adversely affect affiliated insured depository institutions should be conveyed to the insured institution's primary federal or state supervisor.

MORTGAGE BANKING

Loan-Brokerage and -Servicing Activities

Loan-brokerage and -servicing activities are undertaken by mortgage banking enterprises and the mortgage banking operations of commercial banks. Mortgage banking activities consist pri-

marily of two separate but related activities: (1) the origination or acquisition of mortgage loans and the sale of the loans to permanent investors and/or (2) the subsequent long-term servicing of the loans. A mortgage banking enterprise usually retains the right to service mortgage loans it sells to permanent investors. An enterprise's right to service mortgage loans other than its own is an intangible asset that may be acquired separately. The rights to service mortgage loans are purchased and sold frequently. Mortgage loans are acquired to sell to permanent investors from a variety of sources, including applications received directly from borrowers (in-house originations), purchases from brokers, purchases from investors, and conversions of various forms of interim financing to permanent financing. A service fee, usually based on a percentage of the outstanding principal balance of the mortgage loan, is received for performing loan-administration functions. When servicing fees exceed the cost of performing servicing functions, the existing contractual right to service mortgage loans has economic value.

A number of bank services may result in assets and liabilities that do not have to be entered on the general ledger. These services are considered off-balance-sheet activities and may include the origination, sale, and servicing of various loans. Servicing and accounting activities cover functions related to initially recording the loan, collecting and recording payments, and reporting loan transactions and balances (including reporting past-due loans). Unlike the other activities in this section, servicing and accounting activities are not directly related to credit risk. However, some aspects of accounting and servicing activities, such as the accounting system's ability to produce accurate past-due loan reports, indirectly contribute to controlling credit risk. Also, poorly designed or ineffective servicing and accounting activities can contribute to increased risk in areas besides credit, such as fraud and insider abuse.

The origination, sale, and servicing of various types of loans usually have been associated with mortgage loans. But increasingly, origination and servicing activity has also been observed in government-guaranteed loans (or portions thereof), consumer loans, and commercial loans. Improper management and control of these activities by the servicer presents certain supervisory concerns. If the bank servicer is continually originating additional loans to be serviced,

the bank may find itself responsible for servicing more loans than it can prudently manage. Failure to properly administer loans may lead to legal or financial liabilities that could adversely affect the bank's capital.

Accounting Guidance

The following accounting pronouncements issued by the Financial Accounting Standards Board (FASB) apply to mortgage banking activities:

- FAS 5, Accounting for Contingencies
- FAS 65, Accounting for Certain Mortgage Banking Activities
- FAS 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases
- FAS 115, Accounting for Certain Investments in Debt and Equity Securities (paragraph 7 was amended by FAS 140)
- FAS 133, Accounting for Derivative Instruments and Hedging Activities (amended by FAS 140)
- FAS 134, Accounting for Mortgage-Backed Securities Retained After the Securitization of Mortgage Loans Held for Sale by a Mortgage Banking Enterprise
- FAS 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities
- FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities
- FAS 149, Amendment of Statement 133 on Derivative Instruments and Hedging Activities
- FAS 154, Accounting Changes and Error Corrections

The accounting standards for nonrefundable fees and costs associated with lending, committing to lend, and purchasing a loan or group of loans are set forth in FASB Statement No. 91, "Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases," (FAS 91). A summary of the statement follows. The statement applies to all types of loans as well as to debt securities (but not to loans or debt securities carried at market value if the changes in market value are included in earnings) and all types of lenders.

Nonrefundable loan fees paid by the borrower to the lender may have many different names, such as origination fees, points, placement fees, commitment fees, application fees, management fees, restructuring fees, and syndication fees. FAS 91 applies to both a lender and a purchaser and should be applied to individual loan contracts. Aggregation of similar loans for purposes of recognizing net fees or costs, purchase premiums, or discounts is permitted under certain circumstances specified in FAS 91, or if the result does not differ materially from the amount that would have been recognized on an individual loan-by-loan basis. In general, FAS 91 specifies the following:

- Loan-origination fees should be deferred and recognized over the life of the related loan as an adjustment of yield (interest income). Once a bank adopts FAS 91, recognizing a portion of loan fees as revenue to offset all or part of origination costs in the reporting period in which a loan is originated is no longer acceptable.
- Certain direct loan-origination costs specified in FAS 91 should be deferred and recognized over the life of the related loan as a reduction of the loan's yield. Loan-origination fees and related direct loan-origination costs for a given loan should be offset and only the net amount deferred and amortized.
- Direct loan-origination costs should be offset against related commitment fees and the net amounts should be deferred except for—
 - commitment fees (net of costs) when the likelihood that the commitment will be exercised is remote; in these cases, the fees should generally be recognized as service-fee income on a straight-line basis over the loan-commitment period, and
 - retrospectively determined fees, which are recognized as service-fee income when the amount of the fees are determined.

All other commitment fees (net of costs) are to be deferred over the entire commitment period and recognized as an adjustment of yield over the related loan's life or, if the commitment expires unexercised, recognized in income upon expiration of the commitment.

- Loan-syndication fees should be recognized by the bank managing a loan syndication (the syndicator) when the syndication is complete unless a portion of the syndication loan is

retained. If the yield on the portion of the loan retained by the syndicator is less than the average yield to the other syndication participants after considering the fees passed through by the syndicator, the syndicator should defer a portion of the syndication fee to produce a yield on the portion of the loan retained that is not less than the average yield on the loans held by the other syndication participants.

- Loan fees, certain direct loan-origination costs, and purchase premiums and discounts on loans are to be recognized as an adjustment of yield generally by the interest method based on the contractual term of the loan. However, if the bank holds a large number of similar loans for which prepayments are probable and if the timing and amount of prepayments can be reasonably estimated, the bank may consider estimates of future principal prepayments in the calculation of the constant effective yield necessary to apply the interest method. Fees should not be recognized over the estimated average life of a group of loans.

Examiners should review the extent and nature of servicing activities to ensure that they are conducted in a safe and sound manner. Loan-origination fees and related direct loan-origination costs of loans held for sale should be accounted for in accordance with FAS 91, as discussed above. Improper practices should be criticized.

Risk Management and the Valuation and Hedging of Mortgage-Servicing Assets Arising from Mortgage Banking Activities

A bank's board of directors and senior management are expected to take into account the potential exposure of both earnings and capital to changes in a bank's mortgage banking assets and operations under expected and stressed market conditions. Banks are expected to have comprehensive documentation that adequately substantiates and validates the carrying values of its mortgage-servicing assets (MSAs) and the underlying assumptions used to derive those values. The analyses and processes should be fully documented to support the amortization and timely recognition of impairment of the bank's MSAs. (See SR-03-4.)

The guidance that follows focuses on the risks associated with these aspects of mortgage banking: valuation and modeling processes, hedging activities, management information systems, and internal audit processes. When banks originate mortgage loans, they often sell the loans into the secondary market. Yet banks often retain and recognize the servicing of those MSAs, which are complex and volatile assets that are subject to interest-rate risk. MSAs can become impaired as interest rates fall and borrowers refinance or prepay their mortgage loans. This impairment can lead to earnings volatility and the erosion of capital, if the risks inherent in the MSAs are not properly hedged.

Banks are expected to follow Financial Accounting Standards Board Statement No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," when accounting for MSAs. In summary, FAS 140 requires the following accounting treatment for servicing assets (including MSAs):¹⁷

- initially record servicing assets at fair value, presumably the price paid if purchased, or at their allocated carrying amount based on relative fair values if retained in a sale or securitization;¹⁸
- amortize servicing assets in proportion to, and over the period of, estimated net servicing income; and
- stratify servicing assets based on one or more of the predominant risk characteristics of the underlying financial assets, assess the strata for impairment based on fair value, and report them on the balance sheet at the lower of unamortized cost or fair value through the use of valuation allowances.

Fair value is defined in FAS 140 as the amount at which an asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale.

17. Further guidance on the accounting for servicing assets and liabilities can be found in the instructions for the Reports of Condition and Income (call report); FAS 140 FASB Staff Implementation Guide; and the AICPA Statement on Auditing Standards 101, "Auditing Fair Value Measurements and Disclosures."

18. FAS 140 indicates: "Typically, the benefits of servicing are expected to be more than adequate compensation to a servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate a servicer for performing the servicing, the contract results in a servicing liability."

Quoted market prices in active markets for similar assets provide the best evidence of fair value and must be used as the basis for the measurement, if available. If quoted market prices are not available, the estimate of fair value must be based on the best information available. The estimate of fair value must consider prices for similar assets and the results of valuation techniques to the extent available.

Examination Concerns on the Valuation of Mortgage-Servicing Assets

Banks involved in mortgage-servicing operations should use market-based assumptions that are reasonable and supportable in estimating the fair value of servicing assets. Specifically, bulk, flow, and daily MSA/loan pricing activities observed in the market should be evaluated to ensure that a bank's MSA valuation assumptions are reasonable and consistent with market activity for similar assets. Many banks also use models to estimate the fair value of their MSAs and substantiate their modeled estimate of MSA fair value by comparing the model output with general or high-level peer surveys. Such a comparison, however, is often performed without adequate consideration of the specific attributes of the bank's own MSAs.

Examiners should consider the following concerns as an indication that additional scrutiny is necessary:

- *The use of unsupported prepayment speeds, discount rates, and other assumptions in MSA valuation models.*
(Assumptions are unsupported when they are not benchmarked to market participants' assumptions and the bank's actual portfolio performance across each product type.)
- *Questionable, inappropriate, or unsupported items in the valuation models (examples include retention benefits,¹⁹ deferred tax benefits, captive reinsurance premiums, and income from cross-selling activities).*

(The inclusion of these items in the MSA valuation must be appropriate under generally accepted accounting principles (GAAP) and must also be consistent with what a willing

19. Retention benefits arise from the portion of the serviced portfolio that is expected to be refinanced with the bank in the future.

buyer would pay for the mortgage-servicing contract. For example, when the inclusion of retention benefits as part of the MSA valuation is not adequately supported with market data, such inclusion will result in an overstatement of reported mortgage-servicing assets. Therefore, the inclusion will be deemed an unsafe and unsound practice.)

- *Disregard of comparable market data coupled with overreliance on peer-group surveys as a means of supporting assumptions and the fair value of MSAs.*

(Management may use survey data for comparative purposes; however, such data are not a measure of or substitute for fair value.)

- *Frequent changing of assumptions from period to period for no compelling reason, and undocumented policies and procedures relating to the MSA valuation process and oversight of that process.*
- *Inconsistencies in the MSA valuation assumptions used in valuation, bidding, pricing, and hedging activities as well as, where relevant, in mortgage-related activities in other aspects of a bank's business.*
- *Poor segregation of duties from an organizational perspective between the valuation, hedging, and accounting functions.*
- *Failure to properly stratify MSAs for impairment-testing purposes.*
(FAS 140 requires MSAs to be stratified based on one or more of the predominant risk characteristics of the underlying mortgage loans. Such characteristics may include financial asset type, size, interest rate, origination date, term, and geographic location. Banks are expected to identify a sufficient number of risk characteristics to adequately stratify each MSA and provide for a reasonable and valid impairment assessment. Stratification practices that ignore predominant risk characteristics are a supervisory concern.)
- *Inadequate amortization of the remaining cost basis of MSAs, particularly during periods of high prepayments.*
(Inadequate amortization often occurs because prepayment models are not adequately calibrated to periods of high prepayments. When these models underestimate runoff, the amount and period of estimated net servicing income are overstated.)

- *Continued use of a valuation allowance for the impairment of a stratum of MSAs when repayment of the underlying loans at a rate faster than originally projected indicates the*

existence of an impairment for which a direct write-down should be recorded.

- *Failure to assess actual cash-flow performance.*
(The actual cash flows received from the serviced portfolio must be established in order to determine the benefit of MSAs to the bank.)
- *Failure to validate or update models for new information.*
(Inaccuracies in valuation models can result in erroneous MSA values and affect future hedging performance. Models should be inventoried and periodically revalidated, including an independent assessment of all key assumptions.)

Risk Management of Mortgage Banking Activities

The Federal Reserve expects state member banks to perform mortgage banking operations in a safe and sound manner. Management should ensure that detailed policies and procedures are in place to monitor and control mortgage banking activities, including loan production, pipeline (unclosed loans) and warehouse (closed loans) administration, secondary-market transactions, servicing operations, and management (including hedging) of mortgage-servicing assets. Reports and limits should focus on key risks, profitability, and proper accounting practices.

MSAs possess interest rate–related option characteristics that may weaken a bank's earnings and capital strength when interest rates change. Accordingly, banks engaged in mortgage banking activities should fully comply with all aspects of the federal banking agencies' policy on interest-rate risk.²⁰ In addition, banks with significant mortgage banking operations or mortgage-servicing assets should incorporate these activities into their critical planning processes and risk-management oversight. The planning process should include careful consideration of how the mortgage banking activities affect the bank's overall strategic, business, and asset-liability plans. Risk-management considerations include the potential exposure of both earnings and capital to changes in the value and performance of mortgage banking assets under expected and stressed market conditions. Furthermore, a bank's board of directors should

20. See SR-96-13, Joint Agency Policy Statement on Interest Rate Risk (June 26, 1996), and section 4090.1.

establish limits on investments in mortgage banking assets and evaluate and monitor such investment concentrations (on the basis of both asset and capital levels) on a regular basis.

During examinations of mortgage banking activities, examiners should review mortgage banking policies, procedures, and management information systems to ensure that the directors, managers, and auditors are adequately addressing the following matters.

Valuation and Modeling Processes

- *Comprehensive documentation standards for all aspects of mortgage banking, including mortgage-servicing assets.*
(In particular, management should substantiate and validate the initial carrying amounts assigned to each pool of MSAs and the underlying assumptions, as well as the results of periodic reviews of each asset's subsequent carrying amount and fair value. The validation process should compare actual performance with predicted performance. Management should ensure proper accounting treatment for MSAs on a continuing basis.)
- *MSA impairment analyses that use reasonable and supportable assumptions.*
(Analyses should employ realistic estimates of adequate compensation,²¹ future revenues, prepayment speeds, market-servicing costs, mortgage-default rates, and discount rates. Fair values should be based on market prices and underlying valuation assumptions for transactions in the marketplace involving similar MSAs. Management should avoid relying solely on peer-group surveys or the use of unsupported assumptions. The Federal Reserve encourages banks to obtain periodic third-party valuations by qualified market professionals to support the fair values of their MSAs and to update internal models.)
- *Comparison of assumptions used in valuation models to the bank's actual experience in order to substantiate the value of MSAs.*
(Management should measure the actual performance of MSAs by analyzing gross monthly cash flows of servicing assets relative to the

assumptions and projections used in each quarterly valuation. In addition, a comparison of the first month's actual cash received on new MSAs with the projected gross cash flows can help validate the reasonableness of initial MSA values prior to the impact of prepayments and discount rates. "Economic value" analysis is a critical tool in understanding the profitability of mortgage servicing to a bank; however, it is *not* a substitute for the estimation of the fair value of MSAs under GAAP.)

- *Review and approval of results and assumptions by management.*
(Given the sensitivity of the MSA valuation to changes in assumptions and valuation policy, any such changes should be reviewed and approved by management and, where appropriate, by the board of directors.)
- *Comparison of models used throughout the company including valuation, hedging, pricing, and bulk acquisition.*
(Companies often use multiple models and assumption sets in determining the values for MSAs depending on their purpose—pricing versus valuation. Any inconsistencies between these values should be identified, supported, and reconciled.)
- *Appropriate amortization practices.*
(Amortization of the remaining cost basis of MSAs should reflect actual prepayment experience. Amortization speeds should correspond to and be adjusted to reflect changes in the estimated remaining net servicing income period.)
- *Timely recognition of impairment.*
(Banks must evaluate MSAs for impairment at least quarterly to ensure amounts reported in the call report²² are accurately stated. Banks will generally be expected to record a direct write-down of MSAs when, and for the amount by which, any portion of the unamortized cost of a mortgage-servicing asset is not likely to be recovered in the future.)

Mortgage Banking Hedging Activities

- *Systems to measure and control interest-rate risk.*
(Hedging activities should be well developed and communicated to responsible personnel. Successful hedging systems will mitigate the

21. As defined in FAS 140, "adequate compensation" is "the amount of benefits of servicing [i.e., revenues from contractually specified servicing fees, late charges, and other ancillary sources] that would fairly compensate a substitute servicer should one be required, which includes the profit that would be demanded in the marketplace."

22. Schedule RC-M, Memoranda, Item 2a.

impact of prepayments on MSA values and the effects of interest-rate risk in the mortgage pipeline and warehouse.)

- *Approved hedging products and strategies.* (Management should ensure appropriate systems and internal controls are in place to oversee hedging activities, including monitoring the effectiveness of hedging strategies and reviewing concentrations of hedge instruments and counterparties.)
- *Hedge accounting policies and procedures.* (Banks should ensure their hedge accounting methods are adequately documented and consistent with GAAP.)

Management Information Systems

- *Accurate financial reporting systems, controls, and limits.* (At a minimum, the board should receive information on hedged and unhedged positions, mark-to-market analyses, warehouse aging, the valuation of MSAs, various rate shock-scenario and risk exposures, the creation of economic value, and policy exceptions whenever material exposure to MSAs exists.)
- *Systems that track quality-control exceptions.* (Quality-control reports should be analyzed to determine credit quality, loan characteristics and demographics, trends, and sources of problems. Sound quality-control programs are also beneficial in the early detection of deteriorating production quality and salability, as well as in the prevention and detection of fraudulent activities.)
- *Systems that track and collect required mortgage loan documents.* (Management should ensure adequate control processes are in place for both front-end-closing and post-closing loan documents. If mortgages are not properly documented, a bank may be forced to hold unsold mortgages for extended periods or repurchase mortgages that have been sold. Further, management should ensure that adequate analyses are performed and allowances are established for estimated probable losses arising from documentation deficiencies on closed loans.)
- *Systems that monitor and manage the risks associated with third-party originated loans.* (Banks often originate loans through broker and correspondent channels. Management should ensure that prudent risk-management

systems are in place for broker and correspondent approvals and ongoing monitoring, including controls on the appraisal and credit-underwriting process of third-party originated loans. Adequate due diligence of third-party relationships is necessary to help prevent the origination of loans that are of poor credit quality or are fraudulent. Delegated underwriting to brokers or correspondents warrants close supervision from senior management.)

Internal Audit

- *Adequate internal audit coverage.* (Because of the variety of risks inherent in mortgage banking activities, internal auditors should evaluate the risks of and controls over their bank's mortgage banking operations. They should report audit findings, including identified control weaknesses, directly to the audit committee of the board or to the board itself. Board and management should ensure that internal audit staff possess the necessary qualifications and expertise to review mortgage banking activities or obtain assistance from qualified external sources.)

INTERAGENCY ADVISORY ON ACCOUNTING AND REPORTING FOR COMMITMENTS TO ORIGINATE AND SELL MORTGAGE LOANS

On May 3, 2005, the Federal Reserve and the other federal financial institution regulatory agencies²³ (the agencies) issued an Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans. (See SR-05-10.)

The advisory provides guidance on the appropriate accounting and reporting for commitments to—

- originate mortgage loans that will be *held for resale*, and
- sell mortgage loans under mandatory-delivery and best-efforts contracts.

23. The agencies are the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

Commitments to originate mortgage loans that will be held for resale are derivatives and must be accounted for at fair value on the balance sheet by the issuer. All loan-sales agreements, including both mandatory-delivery and best-efforts contracts, must be evaluated to determine whether the agreements meet the definition of a derivative under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities," as amended by Statement of Financial Accounting Standards No. 149, "Amendment of Statement 133 on Derivative Instruments and Hedging Activities" (collectively, FAS 133). A financial institution should also account for loan-sales agreements that meet the definition of a derivative at fair value on the balance sheet.

The advisory discusses the characteristics that should be considered in determining whether mandatory-delivery and best-efforts contracts are derivatives and the accounting and regulatory reporting treatment for both commitments to originate mortgage loans that will be held for resale and those loan-sales agreements that meet the definition of a derivative. The advisory also addresses the guidance that should be considered in determining the fair value of derivatives.

The advisory provides additional guidance on the application of FAS 133. Financial institutions are expected, including those that are *not* required to file reports with the Securities and Exchange Commission (SEC), to follow the guidance in SEC Staff Accounting Bulletin No. 105, "Application of Accounting Principles to Loan Commitments" (SAB 105).²⁴

A financial institution is expected to account for and report derivative loan commitments and forward loan-sales commitments as derivatives in accordance with GAAP, which includes the use of valuation techniques that are reasonable and supportable in the determination of fair value. An institution's failure to account for and report derivative loan commitments and forward loan-sales commitments in regulatory reports in accordance with GAAP may be an unsafe and unsound practice.

24. Staff accounting bulletins (SAB) summarize the views of the SEC's staff regarding the application of generally accepted accounting principles.

Accounting and Reporting

Accounting Policies

Well-managed financial institutions have written and consistently applied accounting policies for commitments to originate mortgage loans that will be held for resale and to sell mortgage loans under mandatory-delivery and best-efforts contracts, including approved valuation methodologies and procedures to formally approve changes to those methodologies. The methodologies should be reasonable, objectively supported, and fully documented. Procedural discipline and consistency are key concepts in any valuation measurement technique. Institutions should ensure that internal controls, including effective independent review or audit, are in place to provide integrity to the valuation process. Institutions' practices should, therefore, reflect these concepts to ensure the reliability of their valuations of derivative loan commitments and forward loan-sales commitments.

Derivative Loan Commitments

A financial institution should account for derivative loan commitments at fair value on the balance sheet, regardless of the manner in which the intended sale of the mortgage loans will be executed (e.g., under a best-efforts contract, a mandatory-delivery contract, or the institution's own securitization). An institution should report each fixed, adjustable, and floating derivative loan commitment as an "other asset" or an "other liability" in their regulatory reports based upon whether the individual commitment has a positive (asset) or negative (liability) fair value.²⁵

With respect to floating derivative loan commitments, because the interest rate on such a commitment "floats" on a daily basis with market interest rates, the fair value of a floating derivative loan commitment approximates zero as long as the creditworthiness of the borrower has not changed. However, as with other derivative loan commitments, an institution must report the entire gross notional amount of floating

25. When preparing Reports of Condition and Income (Call Reports), fixed, adjustable, and floating derivative loan commitments should not be reported as unused commitments in Schedule RC-L, Derivatives and Off-Balance Sheet Items, because such commitments are to be reported as derivatives in this schedule.

derivative loan commitments in its regulatory reports.

Commitments to originate mortgage loans that will be held for investment purposes and commitments to originate other types of loans are not within the scope of FAS 133 and, therefore, are not accounted for as derivatives.²⁶ An institution should report the unused portion of these types of commitments, which are *not* considered derivatives, as “unused commitments” in its regulatory reports.

Forward Loan-Sales Commitments

A financial institution should account for forward loan-sales commitments for mortgage loans as derivatives at fair value on the balance sheet. Each forward loan-sales commitment should be reported as an “other asset” or an “other liability” based upon whether the individual commitment has a positive (asset) or negative (liability) fair value.²⁷

Netting of Contracts

For balance-sheet-presentation purposes, FAS 133 does not provide specific guidance on financial-statement presentation.²⁸ A financial institution may not offset derivatives with negative fair values (liabilities) against those with positive fair values (assets), unless the criteria for “netting” under GAAP have been satisfied.²⁹ In addition, an institution may not offset

the fair value of forward loan-sales commitments against the fair value of derivative loan commitments (the pipeline) or mortgage loans held for sale (warehouse loans). Rather, forward loan-sales commitments must be accounted for separately at fair value, and warehouse loans must be accounted for at the lower of cost or market (commonly referred to as “LOCOM”)³⁰ (that is, “fair value”) with certain adjustments to the cost basis of the loans if hedge accounting is applied.

Hedge Accounting

A financial institution should follow the guidance in FAS 133 when applying hedge accounting to its mortgage banking activities. If the FAS 133 qualifying criteria are met, an institution may apply—

- fair-value hedge accounting in a hedging relationship between forward loan-sales commitments (hedging instrument) and fixed-rate warehouse loans (hedged item), or
- cash-flow hedge accounting in a hedging relationship between forward loan-sales commitments (hedging instrument) and the forecasted sale of the warehouse loans and/or the loans to be originated under derivative loan commitments (forecasted transaction).³¹

If a financial institution does not apply hedge accounting, either because the FAS 133 hedge criteria are not met or the institution chooses not to apply hedge accounting, forward loan-sales commitments should be treated as nonhedging derivatives. If hedge accounting is not applied, an institution will account for its warehouse loans at the lower of cost or fair value. Because nonhedging forward loan-sales commitments are accounted for at fair value through earnings, such an approach causes volatility in reported earnings if the fair value of the warehouse loans increases above their cost basis. In this situation, the volatility is a result of recognizing the full

condition, fair-value amounts recognized for derivative contracts executed with the same counterparty under a master netting arrangement may be offset.

30. See Statement of Financial Accounting Standards No. 65, “Accounting for Certain Mortgage Banking Activities” (FAS 65), paragraph 4.

31. See FAS 133, paragraphs 20–21, and related FAS 133 guidance for hedging instruments, hedged items, and forecasted transactions that qualify for fair-value and cash-flow hedge accounting.

26. See FAS 133, paragraph 10(i).

27. Regardless of whether the underlying mortgage loans will be held for investment or for resale, commitments to purchase mortgage loans from third parties under either mandatory-delivery contracts or best-efforts contracts are derivatives if, upon evaluation, the contracts meet the definition of a derivative under FAS 133. An institution should report its loan-purchase commitments that meet the definition of a derivative at fair value on the balance sheet.

28. That is, FAS 133 does not provide specific guidance where, in the financial statements, the fair value of derivatives or the changes in the fair value of derivatives should be classified and presented on the financial statement.

29. When an institution has two (or more) derivatives with the same counterparty, contracts with positive fair values and negative fair values may be netted if the conditions set forth in FASB Interpretation No. 39, “Offsetting of Amounts Related to Certain Contracts” (FIN 39), are met. Those conditions are as follows: (1) each of the parties owes the other determinable amounts; (2) the reporting party has the right to set off the amount owed with the amount owed by the other party; (3) the reporting party intends to set off; and (4) the right of setoff is enforceable at law. In addition, without regard to the third

amount of any decline in the fair value of the forward loan-sales commitments in earnings while not adjusting the carrying amount of the warehouse loans above their cost basis.

Income-Statement Effect

Unless cash-flow hedge accounting is applied, a financial institution should include the periodic changes in the fair value of derivative loan commitments and forward loan-sales commitments in current-period earnings. An institution should report these changes in fair value in either “other noninterest income” or “other noninterest expense,” but not as trading revenue, in their regulatory reports. However, an institution’s decision as to whether to report the changes in fair value in its regulatory reports in an income or expense line item should be consistent with its presentation of these changes in its general-purpose external financial statements (including audited financial statements)³² and should be consistent from period to period.

Valuation

Fair Value

FAS 133 indicates that the guidance in Statement of Financial Accounting Standards No. 107, “Disclosures about Fair Value of Financial Instruments” (FAS 107), should be followed in determining the fair value of derivatives.³³ That guidance provides that quoted market prices are the best evidence of the fair value of financial instruments. However, when quoted market prices are not available, which is typically the case for derivative loan commitments and forward loan-sales commitments, estimates of fair value should be based on the best information available in the circumstances (e.g., valuation techniques based on estimated expected future cash flows). When expected future cash flows are used, they should be the institution’s best estimate based on reasonable and supportable assumptions and projections.

Estimates of fair value should consider prices for similar assets or similar liabilities and the results of valuation techniques to the extent available in the circumstances. In the absence of (1) quoted market prices in an active market,

(2) observable prices of other current market transactions, or (3) other observable data supporting a valuation technique, the transaction price represents the best information available with which to estimate fair value at the inception of an arrangement.

A financial institution should not recognize an unrealized gain or loss at inception of a derivative instrument unless the fair value of that instrument is obtained from a quoted market price in an active market or is otherwise evidenced by comparison to other observable current market transactions or based on a valuation technique incorporating observable market data.³⁴ Based on this guidance, derivative loan commitments generally would have a zero fair value at inception.³⁵ However, subsequent changes in the fair value of a derivative loan commitment must be recognized in financial statements and regulatory reports (e.g., changes in fair value attributable to changes in market interest rates).

When estimating the fair value of derivative loan commitments and those best-efforts contracts that meet the definition of a derivative, a financial institution should consider predicted “pull-through” (or, conversely, “fallout”) rates. A pull-through rate is the probability that a derivative loan commitment will ultimately result in an originated loan. Some factors that may be considered in arriving at appropriate pull-through rates include (but are not limited to) the origination channel [which may be either internal (retail) or external (wholesale or correspondent, to the extent the institution rather than the correspondent closes the loan³⁶)], current mortgage interest rates in the market versus the interest rate incorporated in the derivative loan commitment, the purpose of the mortgage (purchase versus refinancing), the stage of completion of the underlying application and underwriting process, and the time remaining until the

34. See footnote 3 in Emerging Issues Task Force Issue No. 02-3 (EITF 02-3), “Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities.”

35. If a potential borrower pays the lender a fee upon entering into a derivative loan commitment (e.g., a rate-lock fee), there is a transaction price, and the lender should recognize the derivative loan commitment as a liability at inception using an amount equal to the fee charged to the potential borrower.

36. If an institution commits to purchase a loan that will be closed by a correspondent in the correspondent’s name, the institution would have a loan-purchase commitment rather than a derivative loan commitment. Refer to footnote 27.

32. See footnote 28 above.

33. See FAS 133, paragraph 17.

expiration of the derivative loan commitment. Estimates of pull-through rates should be based on historical information for each type of loan product adjusted for potential changes in market interest rates that may affect the percentage of loans that will close. An institution should not consider the pull-through rate when reporting the notional amount of derivative loan commitments in regulatory reports but, rather, must report the entire gross notional amount.

SAB 105

In March 2004, the SEC issued SAB 105 to provide guidance on the proper accounting and disclosures for derivative loan commitments. SAB 105 is effective for derivative loan commitments entered into after March 31, 2004. SAB 105 indicates that the expected future cash flows related to the associated servicing of loans should not be considered in recognizing derivative loan commitments. Incorporating expected future cash flows related to the associated servicing of the loan essentially results in the immediate recognition of a servicing asset. Servicing assets should only be recognized when the servicing asset has been contractually separated from the underlying loan by sale or securitization of the loan with servicing retained.³⁷ Further, no other internally developed intangible assets (such as customer-relationship intangible assets) should be recognized as part of derivative loan commitments. Recognition of such assets would only be appropriate in a third-party transaction (for example, the purchase of a derivative loan commitment either individually, in a portfolio, or in a business combination).

Standard-Setter Activities

Financial institutions should be aware that the SEC or the Financial Accounting Standards Board (FASB) may issue additional fair-value, measurement, or recognition guidance in the future (e.g., a fair-value measurement statement). To the extent that additional guidance is issued, institutions must also consider the guidance in developing fair-value-estimate method-

ologies for derivative loan commitments and forward loan-sales commitments as well as measuring and recognizing such derivatives.

Changes in Accounting for Derivative Loan Commitments and Loan-Sales Agreements

Financial institutions should follow Accounting Principles Board Opinion No. 20 (APB 20), "Accounting Changes,"³⁸ if a change in their accounting for derivative loan commitments, best-efforts contracts, or mandatory-delivery contracts is necessary. APB 20 defines various types of accounting changes and addresses the reporting of corrections of errors in previously issued financial statements. APB 20 states, "[e]rrors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared."

For regulatory reporting purposes, a financial institution must determine whether the reason for a change in its accounting meets the APB 20 definition of an accounting error. If the reason for the change meets this definition, the error should be reported as a prior-period adjustment if the amount is material. Otherwise, the effect of the correction of the error should be reported in current earnings.

If the effect of the correction of the error is material, a financial institution should also consult with its primary federal regulatory agency to determine whether any of its prior regulatory reports should be amended. If amended regulatory reports are not required, the institution should report the effect of the correction of the error on prior years' earnings, net of applicable taxes, as an adjustment to the previously reported beginning balance of equity capital. For the Call Report, the institution should report the amount of the adjustment in Schedule RI-A, item 2, "Restatements due to corrections of material accounting errors and changes in accounting principles," with an explanation in Schedule RI-E, item 4.

The effect of the correction of the error on income and expenses since the beginning of the

37. See Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," paragraph 61.

38. Effective December 15, 2005, APB 20 will be replaced by FASB Statement No. 154, "Accounting Changes and Error Corrections-A replacement of APB Opinion No. 20 and FASB Statement No. 3."

year in which the error is corrected should be reflected in each affected income and expense account on a year-to-date basis beginning in the next quarterly income statement (Call Report) to be filed and not as a direct adjustment to retained earnings.

Definitions of Terms Used in the Advisory

Derivative Loan Commitment

The term *derivative loan commitment* refers to a lender's commitment to originate a mortgage loan that will be held for resale. Notwithstanding the characteristics of a derivative set forth in FAS 133, these commitments to originate mortgage loans *must* be accounted for as derivatives by the issuer under FAS 133 and include, but are not limited to, those commonly referred to as *interest-rate-lock commitments*.

In a derivative loan commitment, the lender agrees to extend credit to a borrower under certain specified terms and conditions in which the interest rate and the maximum amount of the loan³⁹ are set prior to or at funding. Under the agreement, the lender commits to lend funds to a potential borrower (subject to the lender's approval of the loan) on a fixed- or adjustable-rate basis, regardless of whether interest rates change in the market, or on a floating-rate basis. In a typical derivative loan commitment, the borrower can choose to—

- “lock in” the current market rate for a fixed-rate loan (i.e., a fixed derivative loan commitment);
- “lock in” the current market rate for an adjustable-rate loan that has a specified formula for determining when and how the interest rate will adjust (i.e., an adjustable derivative loan commitment); or
- wait until a future date to set the interest rate and allow the interest rate to “float” with market interest rates until the rate is set (i.e., a floating derivative loan commitment).

Derivative loan commitments vary in term and expire after a specified time period (e.g., 60 days

after the commitment date). Additionally, derivative loan commitments generally do not bind the potential borrower to obtain the loan, nor do they guarantee that the lender will approve the loan once the creditworthiness of the potential borrower has been determined.

Forward Loan-Sales Commitment

The term *forward loan-sales commitment* refers to either (1) a mandatory-delivery contract or (2) a best-efforts contract that, upon evaluation under FAS 133, meets the definition of a derivative.

Mandatory-Delivery Contract

A *mandatory-delivery contract* is a loan-sales agreement in which a financial institution commits to deliver a certain principal amount of mortgage loans to an investor at a specified price on or before a specified date. If the institution fails to deliver the amount of mortgages necessary to fulfill the commitment by the specified date, it is obligated to pay a “pair-off” fee, based on then-current market prices, to the investor to compensate the investor for the shortfall. Variance from the originally committed principal amount is usually permitted, but typically may not exceed 10 percent of the committed amount.

All loan-sales agreements must be evaluated to determine whether they meet the definition of a derivative under FAS 133.⁴⁰ A mandatory-delivery contract has a specified underlying (the contractually specified price for the loans) and notional amount (the committed loan-principal amount), and requires little or no initial net investment. Additionally, a mandatory-delivery contract requires or permits net settlement or the equivalent thereof as the institution is obligated under the contract to either deliver mortgage loans or pay a pair-off fee (based on the then-current market prices) on any shortfall on the delivery of the committed loan-principal amount. Since the option to pay a pair-off fee accomplishes net settlement, it is irrelevant as to whether the mortgage loans to be delivered are considered readily convertible to cash.⁴¹ Based

39. In accordance with the “Background Information and Basis for Conclusions” in Statement of Financial Accounting Standards No. 149 (FAS 149), the notional amount of a derivative loan commitment is the maximum amount of the borrowing. See FAS 149, paragraph A27.

40. See FAS 133, paragraph 6, for the characteristics of a financial instrument or other contract that meets the definition of a derivative.

41. See FAS 133, paragraph 57(c)(1), for a description of

on these characteristics, a mandatory-delivery contract meets the definition of a derivative at the time an institution enters into the commitment.

Best-Efforts Contract

The term *best-efforts contract* refers to a loan-sales agreement in which a financial institution commits to deliver an individual mortgage loan of a specified principal amount and quality to an investor if the loan to the underlying borrower closes. Generally, the price the investor will pay the seller for an individual loan is specified prior to the loan being funded (e.g., on the same day the lender commits to lend funds to a potential borrower). A best-efforts contract that has all of the following characteristics would meet the definition of a derivative:

- an underlying (e.g., the price the investor will pay the seller for an individual loan is specified in the contract)
- a notional amount (e.g., the contract specifies the principal amount of the loan as an exact dollar amount or as a principal range with a determinable maximum amount⁴²)
- requires little or no initial net investment (e.g., no fees are exchanged between the seller and investor upon entering into the agreement, or a fee that is similar to a premium on other option-type contracts is exchanged)
- requires or permits net settlement or the equivalent thereof (for example, the seller is contractually obligated to either deliver the loan to the investor if the loan closes or pay a pair-off fee, based on then-current market prices, to the investor to compensate the investor if the loan closes and is not delivered. Since the option to pay a pair-off fee accomplishes net settlement, it is irrelevant as to whether the loan to be delivered is considered readily convertible to cash.).

Master Agreement

A financial institution may enter into one of several types of arrangements with an investor

contracts that have terms that implicitly or explicitly require or permit net settlement.

42. The use of a maximum amount as the notional amount of a best-efforts contract is consistent with the loan-commitment discussion in the "Background Information and Basis for Conclusions" in FAS 149. See FAS 149, paragraph A27.

to govern the relationship between the institution and the investor and set the parameters under which the institution will deliver individual mortgage loans through separate best-efforts contracts. Such an arrangement might include, for example, a *master agreement* or an *umbrella contract*. These arrangements may specify an overall maximum principal amount of mortgage loans that the institution may deliver to the investor during a specified time period, but generally they do not specify the price the investor will pay for individual loans. Further, while these arrangements may include pair-off-fee provisions for loans to be sold under individual best efforts contracts covered by the arrangements, the seller is neither contractually obligated to deliver the amount of mortgages necessary to fulfill the maximum principal amount specified in the arrangement nor required to pay a pair-off fee on any shortfall. Because these arrangements generally either do not have a specified underlying or determinable notional amount or do not require or permit net settlement or the equivalent thereof, the arrangements typically do not meet the definition of a derivative. As discussed above, an individual best-efforts contract governed by one of these arrangements may, however, meet the definition of a derivative.

As the terms of individual best-efforts contracts and master agreements or umbrella contracts vary, a financial institution must carefully evaluate such contracts to determine whether the contracts meet the definition of a derivative in FAS 133.

Example of the Accounting for Commitments to Originate and Sell Mortgage Loans⁴³

ABC Mortgage Financial Institution (Best-Efforts Contracts and No Application of Fair-Value Hedge Accounting)

The following simplified example was developed to provide a financial institution that has a limited number of derivative loan commitments

43. This example uses the definitions and concepts presented in the body of the Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans (the interagency advisory). Reference should be made to the interagency advisory for clarification of the terms and concepts used in this example.

general guidance on one approach that may be used to value such commitments.⁴⁴ This example also illustrates the regulatory reporting requirements for derivative loan commitments and forward loan-sales commitments.

The guidance in this example is for illustrative purposes only as there are several ways that a financial institution might estimate the fair value of its derivative loan commitments. A second approach to valuing derivative loan commitments is described in *Derivative Loan Commitments Task Force Illustrative Disclosures on Derivative Loan Commitments*, a practice aid developed by staff of the American Institute of Certified Public Accountants (AICPA) and a task force comprising representatives from the financial services, mortgage banking, and public accounting communities.⁴⁵ As indicated in the body of the interagency advisory, a financial institution must consider the guidance in FAS 133, FAS 107, EITF 02-3, and SAB 105 in measuring and recognizing derivative loan commitments and forward loan-sales commitments. In addition, an institution should be aware that the SEC or the FASB may issue additional guidance in the future that may alter certain aspects of this example.

Background. ABC Mortgage Financial Institution (ABC) enters into fixed, adjustable, and floating derivative loan commitments to originate mortgage loans that it intends to sell. The institution accounts for the commitments as derivative financial instruments as required under FAS 133.

ABC enters into best-efforts contracts with a mortgage investor under which it commits to deliver certain loans that it expects to originate under derivative loan commitments (i.e., the pipeline) and loans that it has already originated and currently holds for sale (i.e., warehouse loans). ABC and the mortgage investor agree on the price that the investor will pay ABC for an individual loan with a specified principal amount prior to the loan being funded. Once the price that the mortgage investor will pay ABC for an

individual loan and the notional amount of the loan are specified, and ABC is obligated to deliver the loan to the investor if the loan closes, the contract represents a forward loan-sales commitment. Under FAS 133, ABC accounts for these forward loan-sales commitments as derivative financial instruments.

At December 31 of a given year, the notional amounts of ABC's mortgage banking derivative loan commitments and forward loan-sales commitments are as follows:

Table 1—Notional Amounts of Derivative Loan Commitments and Forward Loan-Sales Commitments

	<i>Notional amount</i>
<i>Derivative loan commitments</i>	
Fixed-rate commitments	\$ 8,500,000
Adjustable-rate commitments	1,500,000
Floating-rate commitments	2,000,000
Total derivative loan commitments	\$12,000,000 [A] ⁴⁶
<i>Forward loan-sales commitments</i>	
Pipeline loan commitments	\$12,000,000
Warehouse loan commitments	8,000,000
Total forward loan-sales commitments	\$20,000,000 [B]

Market interest rates have changed throughout the time period that ABC's derivative loan commitments and forward loan-sales commitments have been outstanding. Some of the fixed-rate commitments are at rates above current market rates while others are at rates at or below current market rates. All of ABC's adjustable-rate commitments are at rates below current market rates.

Based on its past experience, ABC estimates a pull-through rate of 70 percent on its fixed-rate commitments for which the locked-in rate is

44. Estimating fair values when quoted market prices are unavailable requires considerable judgment. Valuation techniques using simplified assumptions may sometimes be used (with appropriate disclosure in the financial statements) to provide a reliable estimate of fair value at a reasonable cost. See FAS 107, paragraphs 60–61.

45. The practice aid is available at www.aicpa.org/download/members/div/acctstd/ Illustrative_Disclosure_on_Derivative_Loan_Commitments.pdf.

46. Alpha references in table 1 and the text of this example refer to the "Reference" column in table 3.

above current market rates (i.e., 70 percent of the commitments will actually result in loan originations) and a pull-through rate of 85 percent for its fixed-rate commitments for which the locked-in rate is at or below current market rates. ABC also estimates a pull-through rate of 85 percent for all of its adjustable-rate commitments that are below market rates.

The pull-through-rate assumptions in this example have been simplified for illustrative purposes. In determining appropriate pull-through rates, a financial institution must consider all factors that affect the probability that derivative loan commitments will ultimately result in originated loans. Therefore, an institution is expected to have more granularity (i.e., stratification) in its application of pull-through-rate assumptions to its derivative loan commitments.

Discussion of ABC’s approach to valuing derivative loan commitments and forward loan-sales commitments. ABC estimates the fair value of its derivative loan commitments using the best information available in the circumstances because quoted market prices are not available. In this case, ABC uses valuation techniques that take into account current secondary-market loan-pricing information.⁴⁷ ABC had noted the

47. In general, source data for secondary-market loan-pricing information may include, for example, quotations from rate sheets; brokers; or electronic systems such as those provided by third-party vendors, market makers, or mortgage

appropriate reference price for the underlying loans on the day that each derivative loan commitment was given to a borrower and assigned an initial fair value of zero to each loan commitment consistent with the guidance in SAB 105 and EITF 02-3. At the end of the month, ABC compares the current reference price of each underlying loan with its initial reference price and calculates the price difference. ABC then calculates the fair value of these derivatives by multiplying the price difference by the estimated pull-through rate. This approach is illustrated in table 2 below.

As illustrated in table 2, ABC excludes time value from its fair-value-estimate methodology due to the short-term nature of the derivative loan commitments. As the exclusion of time value is not appropriate for all fair-value estimates, an institution must consider the terms of its specific agreements in determining an appropriate estimation methodology.

In the example in table 2, ABC estimated the initial reference price of the underlying loan to be originated under the commitment, excluding the value of the associated servicing rights, to be \$100,000. That is, at the date it entered into the fixed derivative loan commitment with the borrower, ABC estimated it would receive \$100,000, excluding the value of the associated servicing

loan investors. When secondary-market loan-pricing information that includes the value of servicing rights is used, the fair value of the derivative loan commitments ultimately must exclude any value attributable to servicing rights.

Table 2—ABC’s Calculation of the Fair Value of Derivative Loan Commitments: An Example of a Fixed Derivative Loan Commitment for Which the Locked-In Rate Is Above the Current Market Rate*

<i>Notional amount of loan</i>	<i>Initial reference price of loan to be originated under commitment—excluding servicing rights</i>	<i>Current reference price of loan to be originated under commitment—excluding servicing rights</i>	<i>Price difference</i>	<i>Pull-through rate</i>	<i>Fair value of derivative loan commitment</i>
(1)	(2)	(3)	[(3) - (2)]	(4)	[(3) - (2)] × (4)
\$100,000	\$100,000	\$100,500	\$500	70%	\$350

* The example in this table presents the fair-value calculation for one derivative loan commitment. The fair value of this derivative, which is positive, would be added to all the other derivative loan commitments with positive fair values. Netting derivatives with positive fair values (assets) against derivatives with negative fair values (liabilities) is not permitted unless the conditions stipulated in FIN 39 are met. Refer to footnote 29 of the interagency advisory.

rights, if the underlying loan was funded and sold in the secondary market on that day. Because this amount is equal to the notional amount of the loan, ABC would not experience a gain or loss on the sale of the underlying loan (before considering the effect of the loan-origination fees and costs associated with the loan). As such, the fair value of this derivative loan commitment would be zero, and there would not be any unrealized gain or loss at the inception of the derivative loan commitment. This may not be true for all derivative loan commitments.

ABC defers all unrealized gains and losses at the inception of its derivative loan commitments until the underlying loans are sold. ABC's policy is based on the short-term nature of its derivative loan commitments and was adopted in order to not accelerate the timing of gain recognition. As this practice may not be appropriate for all derivative loan commitments or other derivatives initially accounted for under EITF 02-3, and due to the lack of authoritative guidance in this area, an institution should consult with its accounting advisers concerning the appropriate accounting for its specific agreements.

After applying the methodology described above to individual derivative loan commitments, ABC aggregates the fair values of the derivative loan commitments by type (i.e., fixed, adjustable, and floating) and by whether the commitments have above-, at-, or below-market rates. The fair values of the fixed derivative loan commitments with above-market rates, adjusted for the appropriate pull-through rate, total \$21,000 [C], which represents an asset. The aggregate fair value of the fixed derivative loan commitments that have at- or below-market rates, adjusted for the appropriate pull-through rate, sums to (\$31,000) [D], which represents a liability. For the adjustable derivative loan commitments, the aggregate fair value, adjusted for the pull-through rate, is approximately (\$2,000) [E], which is also a liability. The fair value of the floating derivative loan commitments approximates zero.

ABC also estimates the fair value of its forward loan-sales commitments outstanding at the end of the month using a similar methodology as that described above. Based upon this information, ABC determines that the estimated fair value of the forward loan-sales commitments related to its derivative loan commitments and warehouse loans with above-market rates is approximately (\$45,000) [F], which represents a

liability, because current market interest rates for comparable mortgage loans are lower than the rates in effect when the derivative loan commitments were initiated. (Consequently, current offered delivery prices for similar commitments are greater than the delivery prices of ABC's existing forward loan-sales commitments. Therefore, the change in the fair value of ABC's forward loan-sales commitments since they were entered into represents a loss.) The fair value of ABC's forward loan-sales commitments related to its derivative loan commitments and warehouse loans with at- or below-market rates is estimated to be \$50,000, which is an asset.⁴⁸

Regulatory reporting. The following table illustrates the regulatory reporting requirements for the derivative-related dollar amounts cited in the example.

48. The absolute value of the fair value of the forward loan-sales commitments is greater than the absolute value of the fair value of the related derivative loan commitments because the forward loan-sales commitments also apply to, and act as an economic hedge of, ABC's warehouse loans. ABC accounts for its warehouse loans at the lower of cost or fair value in accordance with FAS 65. In this example, ABC does not apply hedge accounting to its warehouse loans.

Table 3—Regulatory Reporting Implications for Derivative Loan Commitments and Forward Loan-Sales Commitments

	<i>Amount</i>	<i>Reference</i>
<i>Derivative loan commitments</i>		
Notional amount of “over-the-counter written options” ⁴⁹	\$12,000,000	[A]
Derivatives with a <i>positive</i> fair value held for purposes other than trading (asset)	\$21,000	[C]
Derivatives with a <i>negative</i> fair value held for purposes other than trading (liability)	\$33,000	[D + E]
<i>Forward loan-sales commitments</i>		
Notional amount of “forward contracts”	\$20,000,000	[B]
Derivatives with a <i>positive</i> fair value held for purposes other than trading (asset)	\$50,000	[G]
Derivatives with a <i>negative</i> fair value held for purposes other than trading (liability)	\$45,000	[F]
<i>Derivative loan commitments and forward loan-sales commitments</i>		
Total notional amount of derivative contracts held for purposes other than trading	\$32,000,000	[A + B]

As illustrated in table 3, depending upon particular market circumstances, individual derivative loan commitments and forward loan-sales commitments may have either positive or negative fair values, which ABC properly reports gross as assets or liabilities on its balance sheet.

49. Because derivative loan commitments are in certain respects similar to options, they are reported with “over-the-counter written options” for regulatory reporting purposes.

In addition, for regulatory reporting purposes, ABC consistently reports the periodic *changes* in the fair value of its derivative contracts in “other noninterest expense” in its income statement. Alternatively, ABC could have chosen to consistently report these fair-value changes in “other noninterest income” in its regulatory reports.

Loan Portfolio Management

Examination Objectives

Effective date November 2005

Section 2040.2

1. To determine if policies, practices, procedures, and internal controls for loan portfolio management are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit and loan-review functions.
4. To determine the overall quality of the loan portfolio and how that quality relates to the soundness of the bank.
5. To be alert to indications of insufficiently rigorous risk assessment at banking institutions, particularly excessive reliance on strong economic conditions and robust financial markets to support the capacity of borrowers to service their debts, and inadequate stress testing.
6. To be attentive when reviewing an institution's lending policies and its assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead to the delayed recognition of emerging weaknesses in some loans.
7. To ascertain whether there has been significant and undue reliance by the institution on favorable assumptions about borrowers or the economy and financial markets. If so, to carefully consider downgrading, under the applicable supervisory rating framework, an institution's risk-management, management, or asset-quality ratings (or all three). If the institution's assumptions are deemed sufficiently significant, to consider downgrading its capital adequacy rating.
8. To determine if the bank has adequate policies, procedures, internal controls, and internal or external audit reviews that ensure its compliance (and its subsidiaries' compliance) with section 106(b) of the Bank Holding Company Act Amendments, the Board's regulations and orders, and the Board's interpretations for tying arrangements.
9. To ascertain, to the extent possible, that the bank's credit extensions did not include impermissible tying arrangements.
10. To determine that management has implemented satisfactory policies, procedures, and controls to address the risks inherent in mortgage banking activities.
11. To find out if the bank accounted for and reported the following transactions at their fair value: (1) its commitments to originate mortgage loans that were held for resale (derivatives) and (2) its loan-sales agreements that are derivatives. If so, to ascertain if these transactions were accounted for and reported—
 - a. in accordance with the instructions for the bank Call Report; generally accepted accounting principles (GAAP); SR-05-10 and its attached May 3, 2005, Inter-agency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans; and
 - b. based on reasonable and supportable valuation techniques, as prescribed by the above-mentioned guidance.
12. To determine if the banking organization's loan-review activities or other internal control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, inadequate training, and reduced-scope or less-thorough internal loan reviews. To incorporate such findings into the determination of supervisory ratings.
13. To prepare, in a concise, reportable format, information on the bank's lending function.
14. To determine compliance with laws and regulations, including sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.
15. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

Loan Portfolio Management

Examination Procedures

Effective date May 2007

Section 2040.3

FIRST-DAY LETTER, PRE-EXAMINATION ANALYSIS

1. If selected for implementation, complete or update the loan portfolio management section of the internal control questionnaire.
2. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining procedures.
3. Request reports on the following from the bank, by department, as of the examination date, unless otherwise specified:

- a. past-due loans covering—
 - single-payment notes 30 days or more past maturity;
 - single-payment notes with interest due at specified intervals and demand notes on which interest is due and unpaid for 30 days or more; and
 - consumer, mortgage, or term loans, payable in regular installments in which one installment is due and unpaid for 30 days or more.

The following information should be included:

- name of the obligor
- original amount of the loan
- outstanding amount of the loan
- date the loan was made
- due date
- terms of the loan
- number of payments the loan is delinquent
- date of the borrower's last payment
- interest billing cycle
- date up to which interest is paid

For larger loans, the report should also include the purpose of the loan and any action being taken.

- b. loans in a nonaccrual status
- c. loans on which interest is not being collected in accordance with the terms of the loan
- d. loans whose terms have been modified by a reduction of interest rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
- e. since the previous examination, loans transferred, either in whole or in part, to

another lending institution as a result of a sale, participation, or asset swap

- f. since the previous examination, loans acquired from another lending institution as a result of a purchase, participation, or asset swap
 - g. loans considered "problem loans" by management (This report may be either as of the examination date or as submitted to the officer's loan-review committee, loan and discount committee, or board of directors.)
 - h. loan commitments and contingent liabilities
 - i. loans secured by stock of other banks and loans secured by rights, interests, or powers of a savings and loan association
 - j. extensions of credit (including outstanding balances and any bank or personal charges on bank-owned or bank-issued credit cards) that have been issued to employees, officers, directors, and principal shareholders and their interests, specifying which officers are considered executive officers
 - k. for correspondent banks, extensions of credit to executive officers, directors, and principal shareholders and their interests
 - l. a list of correspondent banks
 - m. miscellaneous loan debit-and-credit suspense accounts
 - n. current interest-rate structure
 - o. officers' current lending authority
 - p. the nature and extent of servicing activities, including—
 - the aggregate volume and types of serviced loans,
 - the dollar volume of loans originated from out of territory,
 - the number of originations and sales year-to-date compared with the same period in the previous year, and
 - fee income from sales and servicing year-to-date compared with the same period in the previous year.
 - q. extensions of credit in the form of overnight overdrafts resulting from wire transfer activities
4. Obtain the following information:
 - a. a copy of written policies covering all lending functions

- b. a statement of whether a standing committee administers the lending function
 - c. copies of reports furnished to the board for meetings
 - d. lists of directors, executive officers, and principal shareholders and their interests
 - e. a summary of the officer's borrowing report (debts to own and other banks)
5. Obtain a copy of the latest reports furnished to the loan and discount committee.
 6. Review the lending policies and updates thereto and determine, as loans and other extensions of credit are being reviewed, whether the institution's lending practices adhere to the board-of-directors lending policies and procedures and if they require continued compliance with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W.
 7. Abstract appropriate excerpts of the lending policies and updates on the following:
 - a. distribution of loans by category
 - b. geographic limitations
 - c. industrial concentration limitations
 - d. allowable or desirable ratios of loans to other balance-sheet accounts
 - e. lending authorities of committees and officers
 - f. any prohibited types of loans
 - g. maximum maturities for various types of loans
 - h. interest-rate structure
 - i. minimum downpayments for various types of loans
 - j. collateral-appraisal policies including—
 - persons authorized to perform appraisals and
 - lending values of various types of property
 - k. financial information requirements by types of loans
 - l. limitations and guidelines for purchasing and selling loans either directly or through participations or swaps
 - m. guidelines for supplying complete and regularly updated credit information to purchasers of loans that the bank originated
 - n. guidelines for obtaining complete and regularly updated credit information on loans purchased from others
 - o. guidelines for loans to major stockholders, directors, officers, or their interests
 - p. guidelines for determining the creditworthiness of any institution or customer on whose behalf the bank executes funds transfers
 - q. loan-pricing policies and practices indicating that the institution may be unduly weighting the short-term benefit of retaining or attracting new customers through price concessions, while not giving sufficient consideration to potential longer-term consequences
 - r. policies reflecting any indications of insufficiently rigorous risk assessments, and, in particular, an excessive reliance on strong economic conditions and robust financial markets to support the capacity of borrowers to service their debts, as well as inadequate stress testing of the assumptions underlying the risk assessment
 - s. policies involving the institution's assessments and monitoring of credit risk to ensure that an undue reliance on favorable conditions does not lead the institution to delay recognition of emerging weaknesses in some loans

LENDING POLICIES AND PROCEDURES, ASSET-LIABILITY MANAGEMENT

1. When more than one lending policy exists, determine that policies are internally consistent by reviewing the guidelines previously obtained.
2. Review minutes of the bank's loan and discount committee meetings to obtain—
 - a. present members and their attendance record,
 - b. the scope of work performed, and
 - c. any information deemed useful in the examination of specific loan categories or other areas of the bank.
3. Compare reports furnished to the board and the loan and discount committee and those received from the bank in step 3 of the "First-Day Letter, Pre-examination Analysis" section to determine any material differences and that they are transmitted to the board in a timely manner.
4. Perform the following steps for past-due loans:
 - a. Compare the following to determine any material inconsistencies:
 - the past-due loan schedule received in

- step 3 of the “First-Day Letter, Pre-examination Analysis” section
- delinquency reports submitted to the board

- list of loans considered “problem” loans by management
 - delinquency lists submitted for regulatory purposes
- b. Scan the delinquency lists submitted to the board to determine that reports are sufficiently detailed to evaluate risk factors.
 - c. Compile current aggregate totals of past-due paper including unplanned overdrafts not paid in 30 days.
5. Perform the following using the loan commitments and contingent liabilities schedule obtained in step 3 of the “First-Day Letter, Pre-examination Analysis” section:
 - a. Reconcile appropriate contingencies totals to memorandum ledger controls.
 - b. Review reconciling items for reasonableness.
 6. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, have the examiners assigned to the various loan areas compile the information using bank records or other appropriate sources. See “Instructions for the Report of Examination,” section 6000.1, for considerations to be taken into account when compiling maturity information for the gap analysis.

LOAN PORTFOLIO REVIEW AND ANALYSIS

1. Review the information received and perform the following procedures.
 - a. *Loan participations, loan purchases or sales, loan swaps.* The procedures are designed to ensure that loan transfers involving state member banks, bank holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification and to determine the effect of the transfer on the condition of the institution. In addition, the procedures are designed to ensure that the primary regulator of the other financial institution involved in the transfer is notified.
 - Check participation certificates and records and determine that the parties share in the risks and contractual payments on a pro rata basis.
 - Ascertain whether loans are purchased on a recourse basis and that loans are sold on a nonrecourse basis.
- Determine that the bank does not buy back or pay interest on defaulted loans in contradiction of the underlying agreement.
 - Compare the volume of loans purchased and sold with the total portfolio.
 - Determine that the bank has sufficient expertise to properly evaluate the volume of loans purchased and sold.
 - Determine if loans are sold primarily to accommodate overline needs of customers or to generate fee income.
 - Determine if loans are purchased or sold to affiliates or other companies in a chain banking organization; if so, determine that the purchasing companies are given sufficient information to properly evaluate the credit. (Section 23A of the Federal Reserve Act prohibits transfers of low-quality assets between affiliates. See section 4050.1, “Bank-Related Organizations.”)
 - Investigate any situations in which assets were transferred before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
 - Determine whether any of the loans transferred were nonperforming at the time of transfer, classified at the previous examination, or for any other reason considered to be of questionable quality.
 - Review the bank’s policies and procedures to determine whether assets or participations purchased by the bank are given an independent, complete, and adequate credit evaluation. If the bank is a holding company subsidiary or a member of a chain banking organization, review asset purchases or participations from affiliates or other known members of the chain to determine if the asset purchases are given an *arm’s-length* and *independent* credit evaluation by the purchasing bank.
 - Determine that any assets purchased by the bank are properly reflected on its books at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-

offs are taken on any assets sold by the bank at less than book value.

- Determine that transactions involving transfers of low-quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.
- If poor-quality assets were transferred to or from another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
 - name of originating and receiving institutions
 - type of assets involved and type of transfer (i.e., participation, purchase or sale, swap)
 - date (or dates) of transfer
 - total number and dollar amount of assets transferred
 - status of the assets when transferred (e.g., nonperforming, classified, etc.)
 - any other information that would be helpful to the other regulator
- Review the sale and purchase of U.S. government-guaranteed loans and sale premiums.
 - Recommendations for originating and selling institutions:
 - (1) Examiners should review the extent and nature of activities in connection with the sale of government-guaranteed loans. Lax or improper management of the selling institution's servicing responsibilities should be criticized. Out-of-trade-area lending for the purpose of resale of any portion of U.S. government-guaranteed loans should be carefully reviewed to ensure that the practice is conducted in a safe and sound manner.
 - (2) All income, including servicing fees and premiums charged in lieu of servicing fees, asso-

ciated with the sale of U.S. government-guaranteed loans should be recognized only as earned and amortized to appropriate income accounts over the life of the loan.

— Recommendations for purchasing institutions:

- (1) Purchasers of U.S. government-guaranteed loans should be aware that the purchase premiums are not guaranteed and are not paid by the guaranteeing federal agency when the loans are prepaid. Because payment of premiums that do not reasonably relate to the yield on the loan can distort published financial reports by overstating the value of a financial institution's assets, it will generally be viewed as an unsafe and unsound banking practice for a financial institution to pay purchase premiums that result in a significant overstatement in the value of bank assets.

- (2) Many government-guaranteed loans currently being originated and sold are variable rate. These variable-rate loans normally should not trade at anything more than a modest premium or discount from par. Examiners should carefully review any loans being sold or purchased at significant premiums and criticize any involvement with excessive premiums as an unsafe and unsound business practice. Excessive purchase premiums will be classified loss. The loans will be required to be revalued to the market value at the time of the acquisition and the excessive premiums will be charged against current earnings.

In addition, any unamortized loan premium on a government-guaranteed loan must be immediately charged against income if the loan is prepaid, regardless of whether payment is received from the borrower or the guaranteeing agency.

- b. *Loans serviced.*
- Determine that the bank exercises similar controls and procedures over loans serviced for others as it does for loans in its own portfolio.
 - Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as it does for loans in its own portfolio.
 - Ascertain whether the serviced loans are subject to a repurchase agreement or are backed by a standby letter of credit from the originating bank.
 - Compare the volume of serviced loans with the total portfolio.
 - Determine if out-of-territory originations are significant relative to loans serviced.
 - Determine if the volume of loans originated, sold, and serviced is consistent with the loan-servicing capabilities of management.
 - Ascertain that servicing fees and premiums charged in lieu of fees are amortized over the life of the loan.
2. Obtain the listing of Uniform Review of Shared National Credits, and update the listing based on information obtained in step 3 of the “First-Day Letter, Pre-examination Analysis” section.
3. Distribute the applicable schedules and other information obtained in the preceding steps to the examiners performing the loan examination procedures. Request that the examiners test the accuracy of the information. Also, request that they perform the appropriate steps in section 2050.3, “Concentrations of Credit.”
4. Determine the general distribution characteristics of the loan portfolio by—
- a. determining the percentage of total loans in specific classes and
 - b. comparing loan-category distributions with policy guidelines.
5. Obtain the results of the internal loan reviews of the loan department, and perform the following:
- a. Determine any nonadherence to internally established policies, practices, procedures, and controls.
 - b. Compare the various department results to determine the extent of nonadherence and if it is systemwide.
 - c. Organize internal-guideline exceptions in order of their relative importance.
 - d. Determine the aggregate amount of statutory bad debts. (See section 4070.1, “Dividends.”)
 - e. Organize and prepare a listing of violations of law and regulations.
 - f. Review loan classifications and assets listed for special mention to determine—
 - inclusion of all necessary information and
 - substantiation of classification.
 - g. Determine the aggregate amount of paper criticized in each of the four levels of criticism.
 - h. Compile a listing of all loans not supported by current and satisfactory credit information.
 - i. Compile a listing of all loans not supported by complete collateral documentation.
 - j. Determine the aggregate amount of out-of-area paper.
 - k. Compile a listing of low-quality loans transferred to or from another lending institution through purchases or sales or participations or swaps. Submit the listing to Reserve Bank supervisory personnel.
 - l. Review the separate procedures in section 2050.3 “Concentrations of Credit,” and determine—
 - if all necessary data are included,
 - if there is substantiation for including specific items in the report of examination as a concentration, and
 - if the concentration is undue or unwarranted.
 - m. Compute the following ratios, and compare them with computations from prior examinations:
 - aggregate classified paper to primary capital
 - weighted classified paper to primary capital
 - aggregate past-due paper to loans outstanding

TYING ARRANGEMENTS

1. Evaluate compliance with section 106(b) of the Bank Holding Company Act Amendments, the Board's regulations (section 225.7 of Regulation Y (12 CFR 225.7)), and the Board's interpretations of the prohibitions against tying arrangements. During the course of the bank's examination, examiners should focus on the bank's responsibility to oversee and safeguard against potentially illegal tying arrangements by the bank and its subsidiaries. Examiners are to thoroughly review and evaluate the following areas:
 - a. the bank's monitoring and oversight of compliance with section 106(b) and the Board's regulations
 - b. the bank's establishment and monitoring of internal controls and procedures that are intended to prevent illegal tie-ins by the bank and its subsidiaries (Determine if management and its internal auditors have periodically confirmed that there is full compliance with such an internal policy.)
 - c. the adequacy of the bank's written policies (including policy statements) and procedures pertaining to prohibited tying arrangements (Policies and procedures include statements that many tying arrangements are illegal, as well as specific examples of prohibited tie-in practices that are relevant to particular current product lines.)
 - d. documentation for the training of management and staff who are responsible for monitoring the bank and its subsidiaries for compliance with anti-tying provisions (Also review the adequacy of training on compliance with anti-tying requirements that is provided to the bank's other employees.)
 - e. the adequacy of the bank's internal loan reviews of pertinent bank extensions of credit to borrowers whose credit facilities or services may be susceptible to improperly imposed tying arrangements in violation of section 106(b) or the Board's regulations (See "Prohibitions Against Tying Arrangements" in section 2040.1 for the statutory and regulatory provisions and their exceptions.) The internal loan reviews should—
 - include reviews of insurance applications, particularly if the bank's insurance subsidiary maintains a consistently high penetration rate on credits granted by the bank or its bank subsidiaries, which could indicate the presence of voluntary or involuntary tying arrangements;
 - verify that the bank's internal loan-review policies require a periodic review of actual transactions that involve tying arrangements to ensure the permissibility of the tying arrangements under section 106(b), section 225.7 of the Board's Regulation Y, the Board's orders, and the Board's interpretations on tying arrangements;
 - evaluate the nature, terms, and conditions of all services provided to customers; and
 - review billing arrangements, the frequency of billing, the method of computation, and the basis for such fees.
2. During the examination review of borrowers' loans, review those extensions of credit whose credit facilities or services may result in tying arrangements imposed by the bank or its subsidiaries that are impermissible or in violation of section 106(b) or the Board's regulations. (See "Prohibitions Against Tying Arrangements" in section 2040.1.)
3. Review the adequacy of external and internal audits, including the audit's workpapers and procedures, to determine if the auditors adequately ensured compliance with the prohibitions on tying arrangements in section 106(b).
4. On the "Matters Requiring Board Attention," the "Comments and Conclusions," and the "Violations of Laws and Regulations" report pages (or their equivalent), report any significant comments on observed noncompliance with the prohibitions against tying arrangements. (Comments would also be appropriate if controls to prevent tie-ins had not been established.)

MORTGAGE BANKING ACTIVITIES

1. Review the mortgage banking policies, procedures, and management information systems.

2. Determine whether the directors, managers, and auditors are adequately evaluating, monitoring, and maintaining internal controls over the valuation and modeling processes, hedging activities, management information systems, and the internal audit function.
3. Review the bank's mortgage-servicing operations, and determine if market-based assumptions are used and if they are reasonable and supportable for estimating the fair value of servicing assets.
 - a. Ascertain whether management uses bulk, flow, and daily mortgage-servicing asset (MSA) or loan-pricing activities observed in the market to evaluate the bank's MSA valuation assumptions.
 - b. Determine if those assumptions are reasonable and consistent with the market activity for similar assets.
4. With respect to management, determine—
 - a. if detailed policies and procedures are in place to monitor and control mortgage banking activities, including loan production, pipeline (unclosed loans) and warehouse (closed loans) administration, secondary-market transactions, servicing operations, and management (including hedging) of mortgage-servicing assets, and
 - b. if reports and limits focus on key risks, profitability, and proper accounting practices.
5. Determine whether the bank has written and has consistently applied accounting policies to its commitments to originate mortgage loans that are held for resale and its commitments to sell mortgage loans under mandatory-delivery and best-efforts contracts.
6. Find out if the bank has developed and uses approved valuation methodologies and procedures to obtain formal approval for changes to those methodologies.
 - a. Ascertain whether the valuation methodologies are reasonable, objectively supported, and fully documented.
 - b. Determine if the bank has internal controls, including an effective independent review or audit, in place that give integrity to the valuation process.
7. If the bank issues fixed-, adjustable-, and floating-rate derivative loan commitments or forward loan-sales commitments, review an adequate sample that evidences the full coverage of these types of transactions.
 - a. Ascertain if these transactions were properly reported on the balance sheet as an “other asset” or an “other liability,” based on whether the individual commitment has a positive (asset) or negative (liability) fair value in accordance with the bank Call Report instructions.
8. Report to the central point of contact (CPC) or examiner-in-charge (EIC) any failure of bank management to follow (1) the bank's accounting and valuation policies for its commitments to originate mortgage loans that are held for resale and its commitments to sell mortgage loans, (2) the instructions for the bank Call Report, (3) the May 3, 2005, interagency advisory, or (4) GAAP.
9. When additional examination scrutiny is needed, based on the examination findings, the supervisory concerns discussed in section 2040.1, the February 23, 2003, Interagency Advisory on Mortgage Banking (see SR-03-4 and its attachment), and the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans (see SR-05-10 and its attachment), perform the comprehensive mortgage banking examination procedures found in the appendix section A.2040.3. (Section A.2040.3 is located behind the “Appendix” tab in the back of the manual.)

PROBLEM LOANS AND CLASSIFICATION

1. Forward the total loss and doubtful classifications and the total of statutory bad debts (“A” paper) to the examiner assigned to analyze the adequacy of capital.
2. Compare management’s list of “problem” loans from step 3 (under “First-Day Letter, Pre-examination Analysis”) with the listing of classified loans to determine the extent of management’s knowledge of its own loan problems.
3. Through information previously generated, determine the causes of existing problems or weaknesses within the system that have the potential to be future problems.

ALLOWANCE FOR LOAN AND LEASE LOSSES (ALLL)

1. Forward the following information to the examiner assigned to review the ALLL:
 - a. a listing of loans considered “problem loans” by management
 - b. a listing of classified loans

DISCUSSIONS WITH MANAGEMENT

1. Discuss results of the examination of the lending function with senior management of the bank.
2. During discussions with senior management, structure inquiries to—
 - a. gain insight into the general management lending philosophy, and
 - b. elicit management responses for correction of deficiencies.

REGULATION O

1. During the course of all examinations of the lending activities of state member banks, determine whether the bank and its executive officers, directors, principal shareholders, and related interests of such persons have complied with the substantive restrictions as well as the reporting and disclosure requirements of Regulation O (12 CFR 215), the appropri-

ate statutes (12 USC 375a and 375b, 12 USC 1972(2)), and the board of directors’ lending and other policies. Civil money penalties may be assessed for noncompliance. Specific matters that should be addressed are as follows:

a. *Reports of examination.*

- Each report of examination on the lending activities of state member banks should contain information as to the bank’s compliance with the lending restrictions found at 12 USC 375a and 375b, 12 USC 1972(2), and Regulation O. Violations should be reported, as appropriate, in the following report pages of the Commercial Bank Report of Examination:
 - Matters Requiring Board Attention
 - Examination Conclusions and Comments
 - Violations of Law and Regulations

b. *Schedule RC-M.*

- The information from this schedule should be reviewed to verify the accuracy and completeness of the information reported in the Consolidated Report of Condition and Income (Call Report). Complete and accurate preparation of this schedule is particularly important because Schedule RC-M provides important data on possible insider abuse. It also contains information that will be used to respond to public requests for information concerning loans to executive officers, directors, principal shareholders, and to related interests of such persons.
 - Examiners should verify that the bank has established procedures for compliance with the requirements of Regulation O for disclosing information on extensions of credit to its executive officers, directors, principal shareholders, and to related interests of such persons. The bank should maintain records of all public requests for information and the disposition of such requests.
 - Records of requests for information and the disposition of such requests may be disposed of by banks after two years from the date of request.
2. The examination procedures for checking compliance with the relevant law and regu-

lation covering bank insider lending activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):

When reviewing the bank's information on its loans to its insiders (that is, information on all types of loans including loan participations, loans purchased and sold, and loan swaps) perform the examination procedures listed below:

- Test the accuracy and completeness of the information on the bank's extended loans by comparing it with the trial balance or loans sampled.
- Review credit files on insider loans to determine that required information is available.
- Determine that loans to insiders do not contain terms that are more favorable than those afforded to other borrowers.
- Determine that loans to insiders do not involve more-than-normal risk of repayment or present other unfavorable features.
- Determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the imposed lending limits.
- If prior approval by the bank's board of directors was required for a loan to an insider, determine that such approval was obtained.
- Determine that there is compliance with the various reporting requirements for insider loans.
- Determine that the bank has made provisions to comply with the public disclosure requirements of Regulation O.
- Determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years after the dates of the requests.
- Review the adequacy of the bank's policies and procedures that it uses to ensure that loans to insiders of the bank and its correspondent banks comply with 12 USC 1972(2), which prohibits extending loans with preferential terms.¹ Although the statutory and regulatory *reporting* require-

ments associated with 12 USC 1972(2) have been eliminated, the bank must still comply with the existing *substantive* restrictions in 12 USC 1972(2). In doing so, a bank may select any reasonably prudent method to ensure its compliance with the restrictions.

3. During the examinations of correspondent banks, loans to executive officers, directors, principal shareholders, and to related interests of such persons of respondent banks should be reviewed for any evidence of preferential lending. Such loans should be reviewed to—
 - determine whether they were made on substantially the same terms, including interest rates and collateral, as those prevailing at the time for comparable transactions with other persons;
 - involve more-than-normal risk of repayment; or
 - have other unfavorable features, such as not being supported by adequate credit information or being in violation of state lending limitations.

Although Regulation O no longer contains information related to the restrictions on lending to the insiders of correspondent banks, the statutory limitations still remain at 12 USC 1972(2).² Banks must still comply with these *substantive* restrictions. In doing so, a bank may select any reasonably prudent method to ensure compliance with the restrictions.

4. Determine if the bank provides employees or other insiders with bank-owned or bank-issued credit cards for use in conducting the bank's business.
 - a. Verify that the bank has a written policy that forbids or discourages an employee or other insider from using a bank-owned or bank-issued credit card for the insider's personal purposes and that the policy obligates the insider to promptly reimburse the bank.
 - b. To ascertain the bank's compliance with Regulation O, verify that the bank monitors the amount of personal charges outstanding on its bank-owned or bank-issued credit cards that are held by insiders

1. Based on an interim rule, effective December 11, 2006, Regulation O will no longer contain information related to restrictions on lending to the insiders of correspondent banks. (See 71 *Fed. Reg.* 71,472, December 11, 2006.)

2. The statutory and regulatory *reporting* requirements previously associated with 12 USC 1972 and Regulation O have been eliminated.

- so that the outstanding charges, when aggregated with all of an insider's other indebtedness owed to the bank, do not exceed \$15,000.
- c. To verify the bank's compliance with the market-terms requirement of Regulation O, determine if—
 - the bank requires employees and other insiders who use bank-owned or bank-issued credit cards for personal purposes to meet the bank's normal credit underwriting standards and
 - the bank has verified that its bank-owned or bank-issued credit cards do not have more preferential terms (for example, a lower interest rate or a longer repayment period) than the consumer credit cards offered by the bank.

EXAMINATION REPORTING, RATINGS ASSIGNMENT, AND WORKPAPER RETENTION

1. In the appropriate report format, write general remarks, which may include—
 - a. the scope of the examination of the lending function;
 - b. the quality of internal policies, practices, procedures, and controls over the lending function;
2. If appropriate and after careful consideration, recommend downgrading, under the applicable supervisory rating framework, the institution's risk-management, management, or asset-quality ratings (or all three). Recommend downgrading its capital adequacy rating (if assumptions are sufficiently significant) when there is significant and undue reliance on favorable assumptions about borrowers, the economy, and financial markets, or when that reliance has slowed the recognition of loan problems.
3. Compile or prepare all information that provides substantiation for the general remarks.
4. Update the workpapers with any information that will facilitate future examinations.

Loan Portfolio Management

Internal Control Questionnaire

Effective date November 2005

Section 2040.4

Review the bank's internal controls, policies, practices, and procedures for managing the bank's loan portfolio. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

LENDING POLICIES AND PROCEDURES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written loan portfolio management policies and objectives that—
 - a. establish suggested guidelines for the distribution of loans in the commercial, real estate, and installment categories?
 - b. establish geographic limits for loans?
 - c. establish suggested guidelines for aggregate outstanding loans in relation to other balance-sheet categories?
 - d. establish the loan authority of committees and individual lending officers?
 - e. define acceptable types of loans?
 - f. establish maximum maturities for various types of loans?
 - g. establish loan pricing?
 - h. establish an appraisal policy?
 - i. establish the minimum financial information required at the inception of credit?
 - j. establish limits and guidelines for purchasing paper?
 - k. establish guidelines for loans to bank directors, officers, principal shareholders, and their related interests?
 - l. establish collection procedures?
 - m. define the duties and responsibilities of loan officers and loan committees?
 - n. outline loan portfolio management objectives that acknowledge—
 - concentrations of credit within specific industries?
 - the need to employ personnel with specialized knowledge and experience?
 - community service obligations?
 - possible conflicts of interests?
 - o. ensure that all of the bank's loan portfolios are monitored and reviewed to ensure continued compliance with sections 23A and 23B of the Federal Reserve Act and Regulation W.
2. Are loan portfolio management policies and objectives reviewed at least annually to determine if they are compatible with changing market conditions?
3. Are the following reported to the board of directors or its committees (indicate which) at their regular meetings (at least monthly):
 - a. past-due single-payment notes? (If so, indicate the minimum days past due for them to be included _____.)
 - b. notes on which interest only is past due? (If so, indicate the minimum days past due for them to be included _____.)
 - c. term loans on which one installment is past due? (If so, indicate the minimum days due for them to be included _____.)
 - d. total outstanding loan commitments?
 - e. loans requiring special attention?
 - f. new loans and loan renewals or restructured loans?
4. Are reports to be submitted to the board or its committees rechecked by a designated individual for possible omissions before the reports are submitted?
5. Are written applications required for all loans?
6. Does the bank maintain credit files for all borrowers?
7. Does the credit file contain information on—
 - a. the purpose of the loan?
 - b. the planned repayment schedule?
 - c. the disposition of loan proceeds?
8. Does the bank require periodic submission of financial statements by all borrowers whose loans are not fully secured by readily marketable collateral?
9. Is a tickler file maintained to ensure that current financial information is requested and received?
10. Does the bank require submission of audited financial statements based on the dollar amount of the commitment? (If so, state the dollar minimum for requiring \$_____.)
11. Does the bank perform a credit investigation on proposed and existing borrowers for new loan applications?

12. Is it required that all loan commitments be in writing?
13. Are lines of credit reviewed and updated at least annually?
14. Are borrowers' outstanding liabilities checked to appropriate lines of credit before granting the borrowers additional advances?
15. Does the bank employ a procedure for disclosure of a loan or combination of loans that are or will be secured by 25 percent of another insured financial institution's stock?
16. Does the bank employ procedures to ensure compliance with the requirements of the Lost and Stolen Securities Program (17 CFR 240.17f-1)? (See Internal Control Questionnaire questions 6–15 of section 4150.4 "Review of Regulatory Reports.")
17. Is there an internal review system (it may be a function of the internal audit department) that covers each department, and does it—
 - a. recheck interest, discount, and maturity-date computations?
 - b. reexamine notes for proper execution, receipt of all required supporting papers, and proper disclosure forms?
 - c. determine that loan approvals are within the limits of the bank's lending authorities?
 - d. determine that notes bear the initial of the loan officer?
 - e. ascertain that new loans are within the limitations set for the borrower by corporate resolution?
 - f. recheck the liability ledger to determine that new loans have been accurately posted?
18. Does the bank have a loan-review section or the equivalent?
19. Is the loan-review section independent of the lending function?
20. Are the initial results of the loan-review process submitted to a person or committee that is also independent of the lending function?
21. Are all loans exceeding a certain dollar amount selected for review?
22. Do lending officers recommend loans for review?
23. Is a method, other than those detailed in steps 21 or 22, used to select loans for review? (If so, provide details.)
24. Are internal reviews conducted at least annually for all lending areas?
25. In an officer-identification system, are guidelines in effect that define the consequences of an officer's withholding a loan from the review process?
26. Is the bank's problem-loan list periodically updated by the lending officers?
27. Does the bank maintain a list of loans reviewed, indicating the date of the review and the credit rating?
28. Does the loan-review section prepare summations to substantiate credit ratings, including pass loans?
29. Are loan-review summations maintained in a central location or in appropriate credit files?
30. Are follow-up procedures in effect for internally classified loans, including an update memorandum to the appropriate credit file?
31. Are officers and employees prohibited from holding blank signed notes in anticipation of future borrowings?
32. Are paid and renewed notes cancelled and promptly returned to customers?
33. Are loan records retained in accordance with the record-retention policy and legal requirements?
34. Are new notes microfilmed daily?
35. Is a systematic and progressively stronger follow-up-notice procedure used for delinquent loans?
36. Does the bank maintain loan interest-rate schedules for various types of loans?
37. Does the bank periodically update interest-rate schedules? If so, state the normal frequency of updates _____.
38. Does the bank maintain records in sufficient detail to generate the following information by type of advance:
 - a. the cost of funds loaned?
 - b. the cost of servicing loans, including overhead?
 - c. the cost factor of probable losses?
 - d. the programmed profit margin?
39. Has the bank conducted industry studies for those industries in which it is a substantial lender?
40. Are loan proceeds either credited to customers' accounts or released through issuance of official bank checks payable to the borrower?
41. Is a record of charged-off loans maintained by a person other than the one who has custody of the notes or receives payment? Is this record checked against the notes at least annually?

42. Are adequate procedures in effect with respect to recoveries?

MORTGAGE BANKING ACTIVITIES

1. Are the assumptions used in the bank's valuation models supported when these assumptions are not benchmarked to market participants' assumptions and to the bank's actual portfolio performance across each product type?
2. Are there questionable, inappropriate, or unsupported items in the valuation models (for example, retention benefits, deferred tax benefits, captive reinsurance premiums, or income from cross-selling activities). The inclusion of such items in the bank's mortgage-servicing asset (MSA) valuation must be appropriate under generally accepted accounting principles (GAAP) and must also be consistent with what a willing buyer would pay for the mortgage-servicing contract.
3. Does bank management use comparable market data as a means of supporting model assumptions and the fair value of MSAs?
4. Does bank management frequently change the assumptions it uses in its MSA valuation models from period to period for no compelling reason?
5. Are there inconsistencies in the MSA valuation assumptions used in valuation, bidding, pricing, and hedging activities as well as, where relevant, in mortgage-related activities in other aspects of the bank's business?
6. Is there satisfactory segregation of duties from an organizational perspective between the valuation, hedging, and accounting functions for the bank's mortgage banking activities?
7. Does bank management use appropriate amortization practices for its MSAs?
8. Does the bank properly stratify MSAs for impairment-testing purposes?
9. Do the bank's MSA impairment analyses use reasonable and supportable assumptions?
10. Does bank management use a valuation allowance for the impairment of a stratum of MSAs when repayment of the underlying loans at a rate faster than originally projected indicates the existence of an impairment for which a direct write-down should be recorded?
11. Does bank management evaluate MSAs for impairment at least quarterly to ensure that amounts reported in the call report are accurately stated?
12. Does bank management measure the actual performance of MSAs by analyzing gross monthly cash flows of servicing assets relative to the assumptions and projections used in each quarterly valuation?
13. Does bank management validate or update models for new information?
14. Does bank management periodically inventory and revalidate its MSA valuation models, including an independent assessment of all key assumptions?
15. Does the bank obtain periodic third-party valuations by qualified market professionals to support the fair values of its MSAs and to update its internal models?
16. Does the bank have comprehensive documentation standards for all aspects of mortgage banking, including mortgage-servicing assets?
17. Does bank management and, where appropriate, the board of directors, review and approve results and assumptions of the bank's MSA valuation models?
18. Does bank management compare models used throughout the company, including valuation, hedging, pricing, and bulk acquisition, to identify inconsistencies? Are identified inconsistencies satisfactorily supported?
19. Does the bank have systems to measure and control interest-rate risk?
20. Does bank management ensure that appropriate systems and internal controls are in place to oversee hedging activities, including monitoring the effectiveness of hedging strategies and reviewing concentrations of hedge instruments and counterparties?
21. Does bank management ensure that the bank's hedge accounting methods are adequately documented and consistent with GAAP?
22. Does the bank's board receive information on hedged and unhedged positions, mark-to-market analyses, warehouse aging, the valuation of MSAs, various rate shock scenarios and risk exposures, the creation of economic value, and policy exceptions?

- whenever material exposure to MSAs exists?
23. Does the bank have written and consistently applied accounting policies for its commitments to originate mortgage loans that are held for resale and its commitments to sell mortgage loans under mandatory-delivery and best-efforts contracts?
 24. Has the bank developed, and does it use, approved valuation methodologies and procedures to obtain formal approval for the changes to those methodologies?
 - a. Are the valuation methodologies reasonable, objectively supported, and fully documented?
 - b. Does the bank have internal controls, including an effective independent review or audit, in place that give integrity to the valuation process?
 25. If the bank issues fixed-, adjustable-, and floating-rate derivative loan commitments or forward loan-sales commitments, does it review an adequate sample that evidences the full coverage of these types of transactions?
 - a. Are these types of transactions properly reported on the balance sheet as an “other asset” or an “other liability” according to whether the individual commitment has a positive (asset) or negative (liability) fair value, in accordance with the bank Call Report instructions?
 - b. Are floating-rate derivative loan commitments and other derivative loan commitments reported at their entire gross notional amount in the bank Call Report?
 - c. Is the bank’s balance-sheet presentation of all such transactions (including the netting of contracts, the application of hedge accounting to mortgage banking activities, the valuation of derivatives, and any material or other accounting changes for derivative loan commitments and loan-sales agreements) accounted for and reported in accordance with the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans and in accordance with generally accepted accounting principles (GAAP)?
 - d. Are periodic changes in the fair value of derivative loan commitments and forward loan-sales commitments reported in current-period earnings in either “other noninterest income” or “noninterest expense,” as appropriate?
 26. Has the bank’s management failed to follow the bank’s accounting and valuation policies for its commitments to originate mortgage loans that are held for sale and its commitments to sell mortgage loans, according to the instructions in the bank Call Report, the May 3, 2005, interagency advisory, or GAAP?
 27. Does the bank have satisfactory systems that track quality-control exceptions?
 28. Does bank management analyze the bank’s quality-control reports to determine credit quality, loan characteristics and demographics, trends, and sources of problems?
 29. Does the bank have satisfactory systems that track and collect required mortgage loan documents?
 30. Does bank management ensure that adequate control processes are in place for both front-end-closing and post-closing loan documents?
 31. Does the bank have satisfactory systems that monitor and manage the risks associated with third-party-originated loans?
 32. Does bank management ensure prudent risk-management systems are in place for broker and correspondent approvals and for ongoing monitoring, including controls on the appraisal and credit-underwriting process of third-party-originated loans?
 33. Is the bank’s internal audit coverage of its mortgage banking activities adequate?

CONCLUSION

1. Is the foregoing information considered an adequate basis for evaluating internal control; that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
2. Based on a composite evaluation as evidenced by answers to the foregoing questions, is internal control considered adequate?

The Federal Reserve and the other federal banking and thrift regulatory agencies (the agencies)¹ issued the Interagency Guidance on Nontraditional Mortgage Product Risks on September 29, 2006. The guidance addresses both risk-management and consumer disclosure practices that institutions² should employ to effectively manage the risks associated with closed-end residential mortgage products that allow borrowers to defer repayment of principal and, sometimes, interest (referred to as nontraditional mortgage loans). (See SR-06-15.)

Residential mortgage lending has traditionally been a conservatively managed business with low delinquencies and losses and reasonably stable underwriting standards. However, during the past few years consumer demand has been growing, particularly in high-priced real estate markets, for nontraditional mortgage loans. These mortgage products include such products as “interest-only” mortgages, where a borrower pays no loan principal for the first few years of the loan, and “payment-option” adjustable-rate mortgages (ARMs), where a borrower has flexible payment options with the potential for negative amortization.³

While some institutions have offered nontraditional mortgages for many years with appropriate risk management and sound portfolio performance, the market for these products and the number of institutions offering them has expanded rapidly. Nontraditional mortgage loan products are now offered by more lenders to a wider spectrum of borrowers; these borrowers may not otherwise qualify for more traditional mortgage loans and may not fully understand the risks associated with nontraditional mortgage loans.

Many of these nontraditional mortgage loans are underwritten with less stringent income and asset verification requirements (reduced documentation) and are increasingly combined with simultaneous second-lien loans.⁴ Such risk layering, combined with the broader marketing of nontraditional mortgage loans, exposes financial institutions to increased risk relative to traditional mortgage loans.

Given the potential for heightened risk levels, management should carefully consider and appropriately mitigate exposures created by these loans. To manage the risks associated with nontraditional mortgage loans, management should—

- ensure that loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower’s repayment capacity;
- ensure that consumers have sufficient information to clearly understand loan terms and associated risks prior to making a product choice; and
- recognize that many nontraditional mortgage loans, particularly when they have risk-layering features, are untested in a stressed environment. As evidenced by experienced institutions, these products warrant strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses (ALLL) that reflects the collectibility of the portfolio. The Federal Reserve expects institutions to effectively assess and manage the risks associated with nontraditional mortgage loan products.⁵

Institutions should use the guidance to ensure that risk-management practices adequately address these risks. Risk-management processes, policies, and procedures in this area will be carefully scrutinized. Institutions that do not adequately manage these risks will be asked to take remedial action.

This guidance focuses on the higher risk elements of certain nontraditional mortgage products, not the product type itself. Institutions with sound underwriting, adequate risk management,

1. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

2. The term *institution(s)* is used in the interagency guidance. As used in this section, *institutions* applies to Federal Reserve-supervised state member banks and their subsidiaries, and bank holding companies and their nonbank subsidiaries.

3. Interest-only and payment-option ARMs are variations of conventional ARMs, hybrid ARMs, and fixed-rate products. Refer to the appendix for additional information on interest-only and payment-option ARM loans. This guidance does not apply to reverse mortgages; home equity lines of credit (HELOCs), other than as discussed in the Simultaneous Second-Lien Loans section; or fully amortizing residential mortgage loan products.

4. Refer to the appendix for additional information on reduced documentation and simultaneous second-lien loans.

5. Refer to the Interagency Guidelines Establishing Standards for Safety and Soundness in 12 CFR 208, appendix D-1.

and acceptable portfolio performance will not be subject to criticism merely for offering such products.

NONTRADITIONAL MORTGAGE LOAN TERMS AND UNDERWRITING STANDARDS

When an institution offers nontraditional mortgage loan products, underwriting standards should address the effect of a substantial payment increase on the borrower's capacity to repay when loan amortization begins. Underwriting standards should also comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines.⁶

Central to prudent lending is the internal discipline to maintain sound loan terms and underwriting standards despite competitive pressures. Institutions are strongly cautioned against ceding underwriting standards to third parties that have different business objectives, risk tolerances, and core competencies. Loan terms should be based on a disciplined analysis of potential exposures and compensating factors to ensure that risk levels remain manageable.

Qualifying Borrowers for Nontraditional Loans

Payments on nontraditional loans can increase significantly when the loans begin to amortize. Commonly referred to as *payment shock*, this increase is of particular concern for payment-option ARMs where the borrower makes minimum payments that may result in negative amortization. Some institutions manage the potential for excessive negative amortization and payment shock by structuring the initial terms to limit the spread between the introductory interest rate and the fully indexed rate. Nevertheless, an institution's qualifying standards should recognize the potential impact of payment shock, especially for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores. Recognizing that an institution's underwriting criteria are based on multiple factors, an institution should consider these factors jointly in the qualification process and potentially it may de-

6. Refer to 12 CFR 208.51 subpart E and appendix C and 12 CFR 225 subpart G.

velop a range of reasonable tolerances for each factor. However, the criteria should be based upon prudent and appropriate underwriting standards, considering both the borrower's characteristics and the product's attributes.

For all nontraditional mortgage loan products, an institution's analysis of a borrower's repayment capacity should include an evaluation of the borrower's ability to repay the debt by final maturity at the fully indexed rate,⁷ assuming a fully amortizing repayment schedule.⁸ In addition, for products that permit negative amortization, the repayment analysis should be based upon the initial loan amount plus any balance increase that may accrue from the negative amortization provision.⁹

Furthermore, the analysis of repayment capacity should avoid overreliance on credit scores as a substitute for income verification in the underwriting process. The higher a loan's credit risk, either from loan features or borrower characteristics, the more important it is to verify

7. The fully indexed rate equals the index rate prevailing at origination plus the margin that will apply after the expiration of an introductory interest rate. The index rate is a published interest rate to which the interest rate on an ARM is tied. Some commonly used indices include the 1-Year Constant Maturity Treasury Rate (CMT), the 6-Month London Interbank Offered Rate (LIBOR), the 11th District Cost of Funds (COFI), and the Moving Treasury Average (MTA), a 12-month moving average of the monthly average yields of U.S. Treasury securities adjusted to a constant maturity of one year. The margin is the number of percentage points a lender adds to the index value to calculate the ARM interest rate at each adjustment period. In different interest-rate scenarios, the fully indexed rate for an ARM loan based on a lagging index (for example, the MTA rate) may be significantly different from the rate on a comparable 30-year fixed-rate product. In these cases, a credible market rate should be used to qualify the borrower and determine repayment capacity.

8. The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a loan with a 5-year interest-only period and a 30-year term would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

9. The balance that may accrue from the negative amortization provision does not necessarily equate to the full negative amortization cap for a particular loan. The spread between the introductory or "teaser" rate and the accrual rate will determine whether a loan balance has the potential to reach the negative amortization cap before the end of the initial payment-option period (usually five years). For example, a loan with a 115 percent negative amortization cap but only a small spread between the introductory rate and the accrual rate may reach a 109 percent maximum loan balance before the end of the initial payment-option period, even if only minimum payments are made. The borrower could be qualified based on this lower maximum loan balance.

the borrower's income, assets, and outstanding liabilities.

Collateral-Dependent Loans

Institutions should avoid the use of loan terms and underwriting practices that may heighten the need for a borrower to rely on the sale or refinancing of the property once amortization begins. Loans to individuals who do not demonstrate the capacity to repay, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound.¹⁰ Institutions that originate collateral-dependent mortgage loans may be subject to criticism, corrective action, and higher capital requirements.

Risk Layering

Institutions that originate or purchase mortgage loans that combine nontraditional features, such as interest-only loans with reduced documentation or a simultaneous second-lien loan, face increased risk. When features are layered, an institution should demonstrate that mitigating factors support the underwriting decision and the borrower's repayment capacity. Mitigating factors could include higher credit scores, lower LTV and DTI ratios, significant liquid assets, mortgage insurance, and other credit enhancements. While higher pricing is often used to address elevated risk levels, it does not replace the need for sound underwriting.

Reduced Documentation

Institutions increasingly rely on reduced documentation, particularly unverified income, to qualify borrowers for nontraditional mortgage loans. Because these practices essentially substitute assumptions and unverified information for analysis of a borrower's repayment capacity and general creditworthiness, they should be used with caution. As the level of credit risk increases, the Federal Reserve expects an institution to more diligently verify and document a borrower's income and debt-reduction capacity.

¹⁰ A loan will not be determined to be "collateral-dependent" solely through the use of reduced documentation.

Clear policies should govern the use of reduced documentation. For example, stated income should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. For many borrowers, institutions generally should be able to readily document income using recent W-2 statements, pay stubs, or tax returns.

Simultaneous Second-Lien Loans

Simultaneous second-lien loans reduce owner equity and increase credit risk. Historically, as combined loan-to-value ratios rise, so do defaults. A delinquent borrower with minimal or no equity in a property may have little incentive to work with a lender to bring the loan current and avoid foreclosure. In addition, second-lien HELOCs typically increase borrower exposure to increasing interest rates and monthly payment burdens. Loans with minimal or no owner equity generally should not have a payment structure that allows for delayed or negative amortization without other significant risk-mitigating factors.

Introductory Interest Rates

As a marketing tool for payment-option ARM products, many institutions offer introductory interest rates set well below the fully indexed rate. When developing nontraditional mortgage product terms, an institution should consider the spread between the introductory rate and the fully indexed rate. Since initial and subsequent monthly payments are based on these low introductory rates, a wide initial spread means that borrowers are more likely to experience negative amortization, severe payment shock, and an earlier-than-scheduled recasting of monthly payments. Institutions should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates.

Lending to Subprime Borrowers

Mortgage programs that target subprime borrowers through tailored marketing, underwriting standards, and risk selection should follow the applicable interagency guidance on subprime

lending.¹¹ Among other things, the subprime guidance discusses circumstances under which subprime lending can become predatory or abusive. Institutions designing nontraditional mortgage loans for subprime borrowers should pay particular attention to this guidance. They should also recognize that risk-layering features in loans to subprime borrowers may significantly increase risks for the institution and the borrower.

Non-Owner-Occupied Investor Loans

Borrowers financing non-owner-occupied investment properties should qualify for loans based on their ability to service the debt over the life of the loan. Loan terms should reflect an appropriate combined LTV ratio that considers the potential for negative amortization and maintains sufficient borrower equity over the life of the loan. Further, underwriting standards should require evidence that the borrower has sufficient cash reserves to service the loan, considering the possibility of extended periods of property vacancy and the variability of debt service requirements associated with nontraditional mortgage loan products.

PORTFOLIO AND RISK-MANAGEMENT PRACTICES

Institutions should ensure that risk-management practices keep pace with the growth and changing risk profile of their nontraditional mortgage loan portfolios and changes in the market. Active portfolio management is especially important for institutions that project or have already experienced significant growth or concentration levels. Institutions that originate or invest in nontraditional mortgage loans should adopt more robust risk-management practices and manage these exposures in a thoughtful, systematic manner. To meet these expectations, institutions should—

- develop written policies that specify acceptable product attributes, production and portfolio limits, sales and securitization practices,

11. See SR-99-6, Subprime Lending and its attachment, Interagency Guidance on Subprime Lending, March 1, 1999, and SR-01-4, Subprime Lending and its attachment, interagency Expanded Guidance for Subprime Lending Programs, January 31, 2001.

and risk-management expectations;

- design enhanced performance measures and management reporting that provide early warning for increasing risk;
- establish appropriate ALLL levels that consider the credit quality of the portfolio and conditions that affect collectibility; and
- maintain capital at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility. Institutions should hold capital commensurate with the risk characteristics of their nontraditional mortgage loan portfolios.

Nontraditional Mortgage Loan Policies

An institution's policies for nontraditional mortgage lending activity should set acceptable levels of risk through its operating practices, accounting procedures, and policy exception tolerances. Policies should reflect appropriate limits on risk layering and should include risk-management tools for risk-mitigation purposes. Further, an institution should set growth and volume limits by loan type, with special attention for products and product combinations in need of heightened attention due to easing terms or rapid growth.

Concentrations in Nontraditional Mortgage Products

Institutions with concentrations in nontraditional mortgage products should have well-developed monitoring systems and risk-management practices. Monitoring systems should keep track of concentrations in key portfolio segments such as loan types, third-party originations, geographic area, and property occupancy status. Concentrations also should be monitored by key portfolio characteristics such as non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers below established thresholds, and (5) risk-layered features. Further, institutions should consider the effect of employee incentive programs that could produce higher concentrations of nontraditional mortgage loans. Concentrations that are not effectively managed will be subject

to elevated supervisory attention and potential examiner criticism to ensure timely remedial action.

Controls

An institution's quality control, compliance, and audit procedures should focus on mortgage lending activities posing high risk. Controls to monitor compliance with underwriting standards and exceptions to those standards are especially important for nontraditional loan products. The quality control function should regularly review a sample of nontraditional mortgage loans from all origination channels and a representative sample of underwriters to confirm that policies are being followed. When control systems or operating practices are found deficient, business-line managers should be held accountable for correcting deficiencies in a timely manner.

Since many nontraditional mortgage loans permit a borrower to defer principal and, in some cases, interest payments for extended periods, institutions should have strong controls over accruals, customer service, and collections. Policy exceptions made by servicing and collections personnel should be carefully monitored to confirm that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk. Customer service and collections personnel should receive product-specific training on the features and potential customer issues with these products.

Third-Party Originations

Institutions often use third parties, such as mortgage brokers or correspondents, to originate nontraditional mortgage loans. Institutions should have strong systems and controls in place for establishing and maintaining relationships with third parties, including procedures for performing due diligence. Oversight of third parties should involve monitoring the quality of originations so that they reflect the institution's lending standards and compliance with applicable laws and regulations.

Monitoring procedures should track the quality of loans by both origination source and key borrower characteristics. This will help institutions identify problems such as early payment

defaults, incomplete documentation, and fraud. If problems involving appraisals, loan documentation, credit, or consumer complaints are discovered, the institution should take immediate action. Remedial action could include more thorough application reviews, more frequent re-underwriting, and even termination of the third-party relationship.

Risk Management of Secondary-Market Activity

The sophistication of an institution's secondary-market risk-management practices should be commensurate with the nature and volume of activity. Institutions with significant secondary-market activities should have comprehensive, formal strategies for managing risks.¹² Contingency planning should include how the institution will respond to reduced demand in the secondary market.

While third-party loan sales can transfer a portion of the credit risk, an institution remains exposed to reputation risk when credit losses on sold mortgage loans or securitization transactions exceed expectations. As a result, an institution may determine that it is necessary to repurchase defaulted mortgages to protect its reputation and maintain access to the markets. In the Federal Reserve's view, the repurchase of mortgage loans beyond the selling institution's contractual obligation is implicit recourse. Under the risk-based capital rules, a repurchasing institution would be required to maintain risk-based capital against the entire pool or securitization.¹³ Institutions should familiarize themselves with these guidelines before deciding to support mortgage loan pools or buying back loans in default.

Management Information and Reporting

Reporting systems should allow management to detect changes in the risk profile of its nontraditional mortgage loan portfolio. The structure and content should allow the isolation of key

12. Refer to SR-02-16, dated May 23, 2002, Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations and its attachment.

13. Refer to 12 CFR 208 and 225, appendix A, III.B.3.

loan products, risk-layering loan features, and borrower characteristics. Reporting should also allow management to recognize deteriorating performance in any of these areas before it has progressed too far. At a minimum, information should be available by (1) loan type (for example, interest-only mortgage loans and payment-option ARMs); (2) risk-layering features (for example, payment-option ARMs with stated income and interest-only mortgage loans with simultaneous second-lien mortgages); (3) underwriting characteristics (for example, LTV, DTI, and credit score); and (4) borrower performance (for example, payment patterns, delinquencies, interest accruals, and negative amortization).

Portfolio volume and performance should be tracked against expectations, internal lending standards, and policy limits. Volume and performance expectations should be established at the subportfolio and aggregate portfolio levels. Variance analyses should be performed regularly to identify exceptions to policies and prescribed thresholds. Qualitative analysis should occur when actual performance deviates from established policies and thresholds. Variance analysis is critical to the monitoring of a portfolio's risk characteristics and should be an integral part of establishing and adjusting risk-tolerance levels.

Stress Testing

Based on the size and complexity of their lending operations, institutions should perform sensitivity analysis on key portfolio segments to identify and quantify events that may increase risks in a segment or the entire portfolio. The scope of the analysis should generally include stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the institution's immediate control. Stress tests typically assume rapid deterioration in one or more factors and attempt to estimate the potential influence on default rates and loss severity. Stress testing should aid an institution in identifying, monitoring, and managing risk, as well as developing appropriate and cost-effective loss-mitigation strategies. The stress testing results should provide direct feedback in determining underwriting standards, product terms, portfolio concentration limits, and capital levels.

Capital and the Allowance for Loan and Lease Losses

Institutions should establish an appropriate ALLL for the estimated credit losses inherent in their nontraditional mortgage loan portfolios. They should also consider the higher risk of loss posed by layered risks when establishing their ALLL.

Moreover, institutions should recognize that their limited performance history with these products, particularly in a stressed environment, increases performance uncertainty. Capital levels should be commensurate with the risk characteristics of the nontraditional mortgage loan portfolios. Lax underwriting standards or poor portfolio performance may warrant higher capital levels.

When establishing an appropriate ALLL and considering the adequacy of capital, institutions should segment their nontraditional mortgage loan portfolios into pools with similar credit-risk characteristics. The basic segments typically include collateral and loan characteristics, geographic concentrations, and borrower qualifying attributes. Segments could also differentiate loans by payment and portfolio characteristics, such as loans on which borrowers usually make only minimum payments, mortgages with existing balances above original balances, and mortgages subject to sizable payment shock. The objective is to identify credit quality indicators that affect collectibility for ALLL measurement purposes. In addition, understanding characteristics that influence expected performance also provides meaningful information about future loss exposure that would aid in determining adequate capital levels.

Institutions with material mortgage banking activities and mortgage servicing assets should apply sound practices in valuing the mortgage servicing rights for nontraditional mortgages. The valuation process should follow generally accepted accounting principles and use reasonable and supportable assumptions.¹⁴

CONSUMER PROTECTION ISSUES

While nontraditional mortgage loans provide flexibility for consumers, the Federal Reserve is

14. See SR-03-4, dated February 25, 2003, Interagency Advisory on Mortgage Banking and its attachment, which has the same title.

concerned that consumers may enter into these transactions without fully understanding the product terms. Nontraditional mortgage products have been advertised and promoted based on their affordability in the near term; that is, their lower initial monthly payments compared with traditional types of mortgages. In addition to apprising consumers of the benefits of nontraditional mortgage products, institutions should take appropriate steps to alert consumers to the risks of these products, including the likelihood of increased future payment obligations. This information should be provided in a timely manner—before disclosures may be required under the Truth in Lending Act or other laws—to assist the consumer in the product selection process.

Concerns and Objectives

More than traditional ARMs, mortgage products such as payment-option ARMs and interest-only mortgages can carry a significant risk of payment shock and negative amortization, neither of which may be fully understood by consumers. For example, consumer payment obligations may increase substantially at the end of an interest-only period or upon the “recast” of a payment-option ARM. The magnitude of these payment increases may be affected by factors such as the expiration of promotional interest rates, increases in the interest-rate index, and negative amortization. Negative amortization also results in lower levels of home equity as compared with a traditional amortizing mortgage product. When borrowers go to sell or refinance the property, they may find that negative amortization has substantially reduced or eliminated their equity in the property—even when the property has appreciated. The concern that consumers may not fully understand these products is exacerbated by marketing and promotional practices that emphasize potential benefits without also providing clear and balanced information about material risks.

In light of these considerations, communications with consumers, including advertisements, oral statements, promotional materials, and monthly statements, should provide clear and balanced information about the relative benefits and risks of these products, including the risks of payment shock and of negative amortization. Clear, balanced, and timely communication to consumers of the risks of these products will

provide consumers with useful information at crucial decision-making points, such as when they are shopping for loans or deciding which monthly payment amount to make. Such communication should help minimize potential consumer confusion and complaints, foster good customer relations, and reduce legal and other risks to the institution.

Legal Risks

Institutions that offer nontraditional mortgage products must ensure that they do so in a manner that complies with all applicable laws and regulations. With respect to the disclosures and other information provided to consumers, applicable laws and regulations include the following:

- Truth in Lending Act (TILA) and its implementing regulation, Regulation Z
- Section 5 of the Federal Trade Commission Act (FTC Act)

TILA and Regulation Z contain rules governing disclosures that institutions must provide for closed-end mortgages (1) in advertisements, (2) with an application,¹⁵ (3) before loan consummation, and (4) when interest rates change. Section 5 of the FTC Act prohibits unfair or deceptive acts or practices.¹⁶

Other federal laws, including the fair-lending laws and the Real Estate Settlement Procedures Act (RESPA), also apply to these transactions. Moreover, the Federal Reserve notes that the sale or securitization of a loan may not affect an institution’s potential liability for violations of TILA, RESPA, the FTC Act, or other laws in connection with its origination of the loan. State laws, including laws regarding unfair or deceptive acts or practices, also may apply.

Recommended Practices

Recommended practices for addressing the risks

15. These program disclosures apply to ARM products and must be provided at the time an application is provided or before the consumer pays a nonrefundable fee, whichever is earlier.

16. The Board of Governors enforces this provision under the FTC Act and section 8 of the Federal Deposit Insurance Act. See the joint Board and FDIC guidance titled *Unfair or Deceptive Acts or Practices by State-Chartered Banks*, March 11, 2004.

raised by nontraditional mortgage products include the following:¹⁷

Communications with Consumers

When promoting or describing nontraditional mortgage products, institutions should provide consumers with information that is designed to help them make informed decisions when selecting and using these products. Meeting this objective requires appropriate attention to the timing, content, and clarity of information presented to consumers. Thus, institutions should provide consumers with information at a time that will help consumers select products and choose among payment options. For example, institutions should offer clear and balanced product descriptions when (1) a consumer is shopping for a mortgage (such as when the consumer makes an inquiry to the institution about a mortgage product and receives information about nontraditional mortgage products) or (2) when marketing relating to nontraditional mortgage products is provided by the institution to the consumer. Clear and balanced information should not be offered by the institution only upon the submission of an application or at consummation.¹⁸ The provision of such information would serve as an important supplement to the disclosures currently required under TILA and Regulation Z as well as other laws.¹⁹

Promotional Materials and Product Descriptions

To assist other consumers in their product selec-

17. Institutions should review the recommendations relating to mortgage lending practices set forth in other supervisory guidance from their respective primary regulators, as applicable, including guidance on abusive lending practices.

18. Institutions also should strive to (1) focus on information important to consumer decision making; (2) highlight key information to make it more prominent; (3) employ a user-friendly and readily navigable format for presenting the information; and (4) use plain language, with concrete and realistic examples. Comparative tables and information describing key features of available loan products, including reduced documentation programs, also may be useful for consumers who are considering the nontraditional mortgage products and other loan features described in this guidance.

19. Institutions may not be able to incorporate all of the practices recommended in this guidance when advertising nontraditional mortgages through certain forms of media, such as radio, television, or billboards. Nevertheless, institutions should provide clear and balanced information about the risks of these products in all forms of advertising.

tion decisions, promotional materials and other product descriptions should provide information about the costs, terms, features, and risks of nontraditional mortgages (including information about the matters discussed below).

Payment Shock. Institutions should apprise consumers of potential increases in payment obligations for these products, including circumstances in which interest rates or negative amortization reach a contractual limit. For example, product descriptions could state the maximum monthly payment a consumer would be required to pay under a hypothetical loan example once amortizing payments are required and the interest rate and negative amortization caps have been reached.²⁰ Such information also could describe when structural payment changes will occur (for example, when introductory rates expire or when amortizing payments are required) and what the new payment amount would be or how it would be calculated. As applicable, these descriptions could indicate that a higher payment may be required at other points in time due to factors such as negative amortization or increases in the interest-rate index.

Negative Amortization. When negative amortization is possible under the terms of a nontraditional mortgage product, consumers should be apprised of the potential for increasing principal balances and decreasing home equity, as well as other potential adverse consequences of negative amortization. For example, product descriptions should disclose the effect of negative amortization on loan balances and home equity, and could describe the potential consequences to the consumer of making minimum payments that cause the loan to negatively amortize. (One possible consequence is that it could be more difficult to refinance the loan or to obtain cash upon a sale of the home.)

Prepayment Penalties. If the institution may impose a penalty in the event that the consumer prepays the mortgage, consumers should be alerted to this fact and to the need to ask the lender about the amount of any such penalty.

Cost of Reduced Documentation Loans. If an institution offers both reduced and full documen-

20. Consumers also should be apprised of other material changes in payment obligations, such as balloon payments.

tation loan programs and there is a pricing premium attached to the reduced documentation program, consumers should be alerted to this fact.

Monthly Statements on Payment-Option ARMs. Monthly statements that are provided to consumers on payment-option ARMs should provide information that enables consumers to make informed payment choices, including an explanation of each payment option available and the impact of that choice on loan balances. For example, the monthly payment statement should contain an explanation, as applicable, next to the minimum payment amount that making this payment would result in an increase to the consumer's outstanding loan balance. Payment statements also could provide the consumer's current loan balance, what portion of the consumer's previous payment was allocated to principal and to interest, and, if applicable, the amount by which the principal balance increased. Institutions should avoid leading payment-option ARM borrowers to select a nonamortizing or negatively amortizing payment (for example, through the format or content of monthly statements).

Practices to Avoid. Institutions also should avoid practices that obscure significant risks to the consumer. For example, if an institution advertises or promotes a nontraditional mortgage by emphasizing the comparatively lower initial payments permitted for these loans, the institution also should provide clear and comparably prominent information alerting the consumer to the risks. Such information should explain, as relevant, that these payment amounts will increase, that a balloon payment may be due, and that the loan balance will not decrease and may even increase due to the deferral of interest or principal payments. Similarly, institutions should avoid promoting payment patterns that are structurally unlikely to occur.²¹ Such practices could raise legal and other risks for institutions, as described more fully above.

Institutions also should avoid such practices as (1) giving consumers unwarranted assurances

or predictions about the future direction of interest rates (and, consequently, the borrower's future obligations); (2) making one-sided representations about the cash savings or expanded buying power to be realized from nontraditional mortgage products in comparison with amortizing mortgages; (3) suggesting that initial minimum payments in a payment-option ARM will cover accrued interest (or principal and interest) charges; and (4) making misleading claims that interest rates or payment obligations for these products are "fixed."

Control Systems

Institutions should develop and use strong control systems to monitor whether actual practices are consistent with their policies and procedures relating to nontraditional mortgage products. Institutions should design control systems to address compliance and consumer information concerns as well as the safety and soundness considerations discussed in this guidance. Lending personnel should be trained so that they are able to convey information to consumers about product terms and risks in a timely, accurate, and balanced manner. As products evolve and new products are introduced, lending personnel should receive additional training, as necessary. Lending personnel should be monitored to determine whether they are following these policies and procedures. Institutions should review consumer complaints to identify potential compliance, reputation, and other risks. Attention should be paid to appropriate legal review and to using compensation programs that do not improperly encourage lending personnel to direct consumers to particular products.

With respect to nontraditional mortgage loans that an institution makes, purchases, or services using a third party, such as a mortgage broker, correspondent, or other intermediary, the institution should take appropriate steps to mitigate risks relating to compliance and consumer information concerns discussed in this guidance. These steps would ordinarily include, among other things, (1) conducting due diligence and establishing other criteria for entering into and maintaining relationships with such third parties, (2) establishing criteria for third-party compensation designed to avoid providing incentives for originations inconsistent with this guidance, (3) setting requirements for agree-

21. For example, marketing materials for payment-option ARMs may promote low predictable payments until the recast date. Such marketing should be avoided in circumstances in which the minimum payments are so low that negative amortization caps would be reached and higher payment obligations would be triggered before the scheduled recast, even if interest rates remain constant.

ments with such third parties, (4) establishing procedures and systems to monitor compliance with applicable agreements, bank policies, and laws, and (5) implementing appropriate corrective actions in the event that the third party fails to comply with applicable agreements, bank policies, or laws.

APPENDIX (Terms Used in This Document)

Interest-Only Mortgage Loan. An interest-only mortgage loan refers to a nontraditional mortgage in which, for a specified number of years (for example, three or five years), the borrower is required to pay only the interest due on the loan, during which time the rate may fluctuate or may be fixed. After the interest-only period, the rate may be fixed or it may fluctuate based on the prescribed index and payments, including both principal and interest.

Payment-Option ARM. A payment-option ARM is a nontraditional adjustable-rate mortgage that allows the borrower to choose from a number of different payment options. For example, each month, the borrower may choose a minimum payment option based on a “start” or introductory interest rate, an interest-

only payment option based on the fully indexed interest rate, or a fully amortizing principal and interest payment option based on a 15- or 30-year loan term, plus any required escrow payments. The minimum payment option can be less than the interest accruing on the loan, resulting in negative amortization. The interest-only option avoids negative amortization but does not provide for principal amortization. After a specified number of years, or if the loan reaches a certain negative amortization cap, the required monthly payment amount is recast to require payments that will fully amortize the outstanding balance over the remaining loan term.

Reduced Documentation. Reduced documentation is a loan feature that is commonly referred to as “low doc/no doc,” “no income/no asset,” “stated income,” or “stated assets.” For mortgage loans with this feature, an institution sets reduced or minimal documentation standards to substantiate the borrower’s income and assets.

Simultaneous Second-Lien Loan. A simultaneous second-lien loan is a lending arrangement where either a closed-end second lien or a home equity line of credit is originated simultaneously with the first-lien mortgage loan, typically in lieu of a higher down payment.

Nontraditional Mortgages—Associated Risks Examination Objectives

Effective date May 2007

Section 2043.2

1. To ascertain if the bank has adequate risk-management processes, policies, and procedures to address the risk associated with its nontraditional mortgage loans.
2. To evaluate whether the bank's nontraditional mortgage loan terms are supported by a disciplined analysis of its potential exposures versus the mitigating factors that ensure that risk levels are adequately managed.
3. To determine if the underwriting standards for nontraditional mortgage loans comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines.
4. To evaluate whether the bank's management carefully considers and appropriately assesses and mitigates the risk exposures created by the nontraditional mortgage loans by ensuring that—
 - a. its loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower's repayment capacity;
- b. its nontraditional mortgage loan products have strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
- c. its consumers have sufficient information to clearly understand the loan terms and associated risks prior to making a nontraditional mortgage loan product choice.
5. To determine if the bank has borrower qualification criteria that include an evaluation of a borrower's repayment capacity and ability to repay the debt—the full amount of the credit extended, including any balance increase that may accrue from negative amortization—by the final maturity date at the fully indexed rate.

Nontraditional Mortgages—Associated Risks Examination Procedures

Effective date May 2007

Section 2043.3

RISK MITIGATION

1. Assess the bank's management procedures to mitigate the risk created by nontraditional mortgage products. Determine that—
 - a. underwriting standards and terms are consistent with prudent lending practices, including consideration of each borrower's repayment capacity;
 - b. products are supported by strong risk-management standards, capital levels that are commensurate with their risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
 - c. borrowers have sufficient information to clearly understand the terms of their loans and their associates risks.
4. Determine whether originated or purchased mortgage loans that combine nontraditional features (such as interest-only loans with reduced documentation and second-lien loans) have mitigating factors (that is, higher credit scores, lower LTVs and DTI repayment ratios, significant liquid assets, mortgage insurance, or other credit enhancements) that support the underwriting decisions and the borrower's repayment capacities.
5. Verify that the bank has clear loan underwriting policies governing the use of—
 - a. reduced documentation of the borrower's financial capacity (for example, non-verification of reported income when the borrower's income can be documented based on recent W-2 statements, pay stubs, or tax returns);
 - b. minimal or no owner's equity for second-lien home equity lines of credit (such loans generally should not have a payment structure allowing for delayed or negative amortization without other significant risk-mitigating factors);
 - c. introductory interest rates (banks should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates);
 - d. subprime lending (adherence to the inter-agency guidance on subprime lending);¹ and
 - e. non-owner-occupied investor loans (qualifications should be based on the borrower's ability to service the debt over the life of the loan, which would include a combined LTV ratio that considers negative amortization and sufficient borrower equity, and continuing cash reserves).

UNDERWRITING STANDARDS

1. Determine if the bank's underwriting standards—
 - a. address the effect of a substantial payment increase on the borrower's capacity to repay when loan amortization begins,
 - b. comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines, and
 - c. require that loan terms are based on a disciplined analysis of potential exposures and mitigating factors, which will ensure that risk levels remain manageable.
2. Verify that the bank's nontraditional mortgage loan qualification standards recognize the potential impact of payment shock (particularly for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores).
3. Ascertain that the analysis of a borrower's repayment capacity includes—
 - a. an evaluation of the borrower's ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule,
 - b. a repayment schedule that is based on the initial loan amount plus any balance increase that may accrue from a negative amortization provision, and
 - c. avoiding an overreliance on credit scores

PORTFOLIO AND RISK-MANAGEMENT PRACTICES

1. If the bank originates or invests in nontraditional mortgage loans, determine if more

¹ See SR-01-4 and SR-99-6.

robust risk-management practices have been adopted to manage the exposures.

- a. Verify that there are appropriate written lending policies that have been adopted and are being used and monitored, specifying acceptable product attributes, production and portfolio limits (growth and volume limits by loan type), sales and securitization practices, and risk-management expectations (acceptable levels of risk).
 - b. Determine if enhanced performance measures have been designed and if there is management reporting that provides an early warning for increasing risk.
 - c. Find out if the appropriate levels for the allowance for loan and lease losses (ALLL) have been established that consider the credit quality of the portfolio and the conditions that affect collectibility.
 - d. Evaluate whether adequate capital is maintained at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility.
 - e. Determine if capital is held commensurate with the risk characteristics of the bank's nontraditional mortgage loan portfolios.
2. If the bank has concentrations in nontraditional mortgage products, determine if there are—
 - a. well-developed monitoring systems and risk-management practices that monitor and keep track of concentrations in key portfolio segments, such as by loan type, third-party originations, geographic area, and property occupancy status, and
 - b. systems that also monitor key portfolio characteristics: non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features.
 3. Determine if the bank has adequate quality controls as well as compliance and audit procedures that focus on mortgage lending activities posing high risk.
 - a. Determine if the bank has strong internal controls over accruals, customer service, and collections.
 - b. Verify that policy exceptions made by servicing and collections personnel are carefully monitored and that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk.
 - c. Find out if the quality control function regularly reviews (1) a sample of nontraditional mortgage loans from all origination channels and (2) a representative sample of underwriters confirming that underwriting policies are followed.
4. Bank oversight of third-party originators—
 - a. determine if the bank has strong systems and controls in place for establishing and maintaining relationships with third-party nontraditional mortgage loan originators, including procedures for due diligence, and
 - b. find out if the oversight of third-party mortgage loan origination lending practices includes monitoring the quality of originations (that is, the quality of origination sources, key borrower characteristics, appraisals, loan documentations, and credit repayment histories) so that they are reflective of the bank's lending standards and in compliance with applicable laws and regulations.
 5. Determine if the bank's risk-management practices are commensurate with the nature, volume, and risk of its secondary-market activities.
 - a. Find out if there are comprehensive formal strategies for managing the risks arising from significant secondary-market activities.
 - b. Ascertain if contingency planning includes how the bank will respond to a decline in loan demand in the secondary market.
 - c. Determine if there were any repurchases of defaulted mortgages and if the bank complies with its risk-based capital guidelines.
 6. Evaluate the appropriateness of management information and reporting systems for the level and nature of the bank's mortgage lending activity.
 - a. Verify that the reporting allows management to detect changes in the risk profile, or deteriorating performance, of its nontraditional mortgage loan portfolio.
 - b. Determine if management information is reported and available by loan type, risk-layering features, underwriting characteristics, and borrower performance.
 - c. Find out if—
 - 1) portfolio volume and performance are

- tracked against expectations, internal lending standards, and policy limits;
- 2) volume and performance expectations are established at the subportfolio and aggregate portfolio levels;
 - 3) variance analyses are regularly performed to identify exceptions to policies and prescribed thresholds; and
 - 4) qualitative analyses are performed when actual performance deviates from established policies and thresholds.
- d. Determine if the bank, based on the size and complexity of its lending operations, performs sensitivity analysis on its key portfolio segments to identify and quantify events that may increase its risks in a segment or the entire portfolio.
 - e. Verify that the scope of the sensitivity analysis includes stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the bank's immediate control.
 - f. Find out if the stress testing results provide direct feedback for determining underwriting standards, product terms, portfolio concentration limits, and capital levels.
 - g. Determine if the bank has established an appropriate ALLL for the estimated credit losses and commensurate capital levels for the risk inherent in its nontraditional mortgage loan portfolios (considering the higher risk of loss posed by the layered risks).
 - h. If the bank has material mortgage banking activities and mortgage servicing assets—
 - a. evaluate whether sound practices were applied in valuing the mortgage servicing rights for its nontraditional mortgages and
 - b. ascertain if the valuation process followed the nontraditional mortgage and other interagency guidance and generally accepted accounting principles, and whether reasonable and supportable assumptions were used.

Nontraditional Mortgages—Associated Risks Internal Control Questionnaire

Effective date May 2007

Section 2043.4

Review the bank's internal controls, policies, procedures, and practices for making and servicing nontraditional mortgage loans. The bank's internal control system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

RISK MANAGEMENT AND RISK MITIGATION

1. Are there procedures established to control, limit, and monitor the authorization of nontraditional mortgage loan transactions and to establish the appropriate supervision and preliminary review of nontraditional mortgage loan decisions?
2. For nontraditional mortgage loans, is there an appropriate separation of the employees' duties involving (1) the authorizing, executing, recording, and adjusting of loans, (2) receiving payments, (3) reconciling the accounts, and (4) maintaining clear title to, and custody of, pledged collateral—all to safeguard against the possible misappropriation of the bank's funds?
3. Has the bank's management developed risk-mitigation procedures for nontraditional mortgage products? If so, do the risk-mitigation procedures—
 - a. set forth underwriting standards and terms that are consistent with prudent lending practices, including the consideration of each borrower's repayment capacity, third-party credit reports, pledged collateral valuations, and regularly timed follow-up reviews thereon?
 - b. require that nontraditional mortgage products be supported by appropriate supervisory oversight and review, strong risk-management standards, capital levels that are commensurate with their risk, and an adequate allowance for loan and lease losses (ALLL) that reflects the collectibility of the portfolio?
 - c. require that borrowers be provided with sufficient information so they can clearly understand the terms of their loans and their associated risks?

UNDERWRITING STANDARDS

1. Do the bank's underwriting standards—
 - a. appropriately address and assess the effect of a substantial payment increase in the borrower's capacity to repay when loan amortization begins?
 - b. establish practices consistent with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines?
 - c. require that loan terms be based on a disciplined analysis of potential exposures and mitigating factors, which will ensure that risk levels will remain manageable?
2. Does the bank's nontraditional mortgage loan qualification standards recognize the potential impact of payment shock, particularly for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores?
3. Does the analysis of a borrower's repayment capacity include—
 - a. an evaluation of the borrower's ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule?
 - b. a repayment schedule that is based on the initial loan amount plus any balance increase that may accrue from a negative amortization provision?
 - c. an avoidance of overreliance on credit scores as a substitute for income verification or reliance on the sale or refinancing of the property when amortization begins?
4. Do originated or purchased mortgage loans that combine nontraditional features (such as interest-only loans with reduced documentation and second-lien loans) have mitigating factors (that is, higher credit scores, lower LTVs and DTI repayment ratios, significant liquid assets, mortgage insurance, or other credit enhancements) that support the underwriting decisions and the borrower's repayment capacities?
5. Are there clear bank loan underwriting policies governing the use of—
 - a. reduced documentation of the borrower's financial capacity (for example, non-

- verification of reported income when the borrower's income can be documented based on recent W-2 statements, pay stubs, or tax returns)?
- b. minimal or no owner's equity for second-lien home equity lines of credit (such loans generally should not have a payment structure allowing for delayed or negative amortization without other significant risk-mitigating factors)?
 - c. introductory interest rates (banks should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates)?
 - d. subprime lending (including underwriting policies that are consistent with the interagency guidance on subprime lending)¹?
 - e. non-owner-occupied investor loans (the qualifications should be based on the borrower's ability to service the debt over the life of the loan, which would include a combined LTV ratio that would consider negative amortization and sufficient borrower equity, and continuing cash reserves)?
2. If the bank has concentrations in nontraditional mortgage products, are there—
 - a. well-developed monitoring systems and risk-management practices that monitor and keep track of concentrations in key portfolio segments, such as by loan type, third-party originations, geographic area, and property occupancy status?
 - b. systems that also monitor key portfolio characteristics: non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features?
 3. Does the bank have adequate quality controls, including an independent internal loan review staff, that will consider and review loan documentation and other compliance and audit procedures that focus on mortgage lending activities posing high risk? Are there—
 - a. strong internal controls over accruals, customer service, and collections?
 - b. reviews of policy exceptions, conducted by servicing and collections personnel, which are carefully monitored, and are practices such as re-aging, payment deferrals, and loan modifications regularly reviewed to ensure that they are not inadvertently increasing risk?
 - c. regular reviews conducted by the quality control function that focus on (1) a sample of nontraditional mortgage loans from all origination channels and (2) a representative sample of underwriters to confirm that underwriting policies are followed?
 4. Bank oversight of third-party originators—
 - a. Does the bank have strong internal systems and controls in place for establishing and maintaining relationships with third-party nontraditional mortgage loan originators, including procedures for due diligence?

PORTFOLIO AND RISK-MANAGEMENT PRACTICES

1. If the bank originates or invests in nontraditional mortgage loans—
 - a. has the bank adopted risk-management practices to keep pace with the growth and changing risk profile of its nontraditional loan portfolio?
 - b. are there appropriate bank-adopted (and monitored) written lending policies in use that specify—
 - acceptable product attributes?
 - production and portfolio limits (growth and volume limits by loan type)?
 - sales and securitization practices?
 - risk-management expectations (acceptable levels of risk)?
 - c. have enhanced performance measures been designed and is there management reporting that will provide an early warning of increasing risk?
 - d. are there appropriate ALLL levels estab-

1. See SR-01-4 and SR-99-6.

- b. Are there staff designated to provide bank oversight of third-party mortgage loan origination lending practices, which include the monitoring of the quality of originations (that is, the quality of origination sources, key borrower characteristics, appraisals, loan documentations, and credit repayment histories) to ensure that the originations (1) reflect adherence to the bank's lending standards and (2) compliance with applicable laws and regulations?
5. Are the bank's risk-management practices for nontraditional mortgage loans commensurate with the nature, volume, and risk of its secondary-market activities? If so, are there—
 - a. comprehensive formal strategies for managing the risks arising from significant secondary-market activities?
 - b. bank contingency plans that include how the bank will respond to a decline in loan demand in the secondary market?
 - c. repurchases of defaulted mortgages and, if so, is the bank in compliance with its riskbased capital guidelines?
- d. qualitative analyses performed when actual performance deviates from established policies and thresholds?
5. Does the bank's MIS provide reports consisting of a trial balance of the borrower's loan balances, and an aged trial balance (based on the borrower's loan repayment terms), for the entire loan portfolio (the totals of which agree with the bank's respective general ledger balance[s]), but with nontraditional mortgage loan balances segregated and subtotaled (or totaled)?
6. Does the bank, based on the size and complexity of its lending operations, perform sensitivity analysis on its key portfolio segments to identify and quantify events that may increase its risks in a segment or the entire portfolio?
7. Does the scope of the sensitivity analysis include stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the bank's immediate control?
8. Do the stress testing results provide direct feedback for determining underwriting standards, product terms, portfolio concentration limits, and capital levels?
9. Has the bank established and maintained an appropriate ALLL for the estimated credit losses on nontraditional mortgage loans?
10. Do designated supervisory personnel periodically review adjustments to, and of, past due and charged-off nontraditional mortgage loans to confirm that appropriate actions have been taken, including collections and recoveries?
11. Does the bank have commensurate capital levels for the risk inherent in its nontraditional mortgage loan portfolios (considering the higher risk of loss posed by the layered risks)?
12. If the bank has material mortgage banking activities and mortgage servicing assets—
 - a. has it evaluated whether sound practices were applied in valuing the mortgage servicing rights for its nontraditional mortgages?
 - b. does the bank's valuation process follow the nontraditional mortgage and other interagency guidance and generally accepted accounting principles, and have reasonable and supportable assumptions been used?

MANAGEMENT INFORMATION SYSTEM

1. Are the bank's management information system (MIS) and reports appropriate for the level and nature of the bank's nontraditional mortgage lending activity?
2. Do the systems and reports allow management to detect changes in the risk profile of, or deteriorating performance in, its nontraditional mortgage loan portfolio?
3. For the bank's nontraditional loan portfolio, is management information reported and available by loan type, risk-layering features, underwriting characteristics, and borrower performance?
4. Is the bank's nontraditional mortgage portfolio's—
 - a. volume and performance tracked against expectations, internal lending standards, and policy limits?
 - b. volume and performance expectations established at the sub portfolio and aggregate portfolio levels?
 - c. variance analyses regularly performed to identify exceptions to policies and prescribed thresholds?

CONCLUSION

1. With respect to the bank's management of its nontraditional mortgage loan portfolio, is there adequate separation of duties, proper authorization of transactions and activities, adequate documents and records, physical control over assets and records, and independent checks on performance?
2. Have any responses to the forgoing information revealed any significant deficiencies and weaknesses in the bank management's system of internal controls over its nontraditional mortgage loan portfolio—weaknesses that effect controls over risk management and assessment, the reliability of financial reporting, the accounting information and communication system, efficiency and effectiveness of operations, compliance with laws and regulations, and monitoring of internal control performance?
3. Are there any internal control deficiencies in areas that are not covered within this questionnaire that impair any controls? Explain any additional examination procedures that are, or would be, necessary to draw conclusions about the adequacy of the internal controls over the bank's nontraditional mortgage loans.
4. Based on an overall evaluation, as evidenced by your answers to the foregoing questions, are internal controls over the bank's nontraditional mortgage loans adequate or inadequate?

INTRODUCTION

A concentration of credit generally consists of direct or indirect (1) extensions of credit and (2) contingent obligations that, when aggregated, exceed 25 percent of the bank's capital structure (tier 1 capital plus the allowance for loan and lease losses). A concentration exists when the extensions of credit or other obligations possess similar risk characteristics. Typically, loans to related groups of borrowers, loans collateralized by a single security or securities with common characteristics, and loans to borrowers with common characteristics within an industry have been included in homogeneous risk groupings when assessing asset concentrations. Furthermore, a concentration may include the aggregate of all types of credit to or investment in a particular homogeneous risk grouping.

Limitations imposed by the various state and federal legal lending limits were intended to prevent an individual or a relatively small group from borrowing an undue amount of the bank's resources and to safeguard the bank's depositors by spreading the loans among a relatively large number of persons engaged in different businesses. However, lending limits alone are not sufficient to prevent and control concentrations of credit. Policy guidance for risk diversification should be formulated in conformity with both legal and prudent investment restrictions. Before bank management can limit the bank's involvement or perform the necessary review, it must recognize the various types of concentrations and implement systems to retrieve the information necessary to monitor and report concentrations. The Federal Reserve expects management to identify, measure, monitor, and control concentrations.

TYPES OF CREDIT CONCENTRATIONS

There are numerous possibilities for determining concentrations within a loan portfolio. In evaluating a potential concentration, it is important to determine the key factors germane to the credits. Concentrations that are commonly identified in a loan portfolio include the following:

- Loans to a group of borrowers, perhaps unrelated, predicated on the collateral support

afforded by a debt or equity issue of a corporation. Regardless of whether the issuing entity is a listed concern or a closely held enterprise, a concentration may exist in the underlying collateral.

- Loans that are dependent on a particular agricultural crop or livestock herd. Banking institutions located in farming, dairying, or livestock areas may grant substantially all their loans to individuals or concerns engaged in and dependent on the agricultural industry. Concentrations of this type are commonplace and may be necessary if these banks are to adequately serve the needs of their communities.
- The aggregate amount of interim construction loans that do not have firm, permanent take-out commitments. In the event that permanent financing is not obtainable, the bank will have to continue financing the projects. This longer term financing subjects the bank to additional liquidity and possibly interest-rate risks, as well as to risks associated with the real estate itself.
- Loans to groups of borrowers who handle a product from the same industry. Although the borrowers may appear to be independent from one another, their financial conditions may be affected similarly if a slowdown occurs in their economic sector.

Concentrations may also occur in banks located in towns that are economically dominated by one or only a few business enterprises. In these situations, banks may extend a substantial amount of credit to these companies and to a large percentage of the companies' employees. If economic or other events cause the enterprise's operations to slow down or stop, heavy unemployment may result—with other job opportunities in the area limited or nonexistent.

In identifying asset concentrations, commercial and residential real estate loans can be viewed separately when their performance is not subject to similar economic or financial risks. In the same vein, commercial real estate development loans need not be grouped with residential real estate development loans, especially when the residential developer has firm, reliable purchase contracts for the sale of the homes upon their completion. Even within the commercial development and construction sector, distinctions for concentration purposes may be made,

when appropriate, between those loans that have firm take-out commitments and those that do not. Groups or classes of real estate loans should, of course, be combined and viewed as concentrations when they do share significant common characteristics and are similarly affected by adverse economic, financial, or business developments.

IDENTIFYING LOAN CONCENTRATIONS

The examiner should understand and evaluate the effectiveness of the internal policies, systems, and controls that an institution uses to monitor and manage the risk associated with asset concentrations. Every institution should maintain adequate records that may be used to identify asset concentrations. The degree of sophistication of the reporting records will vary by the size of institution. For example, larger institutions may have the automated capability to segregate loans by Standard Industrial Classification (SIC) codes, while smaller institutions may generate asset concentration listings manually.

Regardless of the identification system used by the institution, the accuracy of listed concentrations, as well as the appropriateness of concentrations, should be verified during the examination. All new and any existing asset concentrations should be reported monthly to the institution's board of directors or other appropriate committee for review.

RISK MANAGEMENT OF ASSET CONCENTRATIONS

Institutions with asset concentrations are expected to have in place effective policies, systems, and internal controls to monitor and manage this risk. The bank's board of directors is responsible for establishing appropriate risk parameters and for monitoring exposure, as well as for evaluating the methods used by management to manage and control concentration risk. Furthermore, the Board's Regulation F addresses exposure that may arise from a bank's relationship with its correspondents. Concentrations that involve excessive or undue risks require close scrutiny by the bank and should be reduced over a reasonable period of time. Banking organizations with a need to reduce asset concentrations are normally expected to develop a plan that is

realistic, prudent, and achievable in view of their particular circumstances and market conditions.

The purpose of an institution's policies should be to improve the overall quality of its portfolio. Institutions that have effective internal controls to manage and reduce excessive concentrations over a reasonable period of time need not automatically refuse credit to sound borrowers because of their particular industry or geographic location. Furthermore, a bank may be able to reduce the risks associated with concentrations through the strengthening of individual credits. For example, the bank may be able to obtain additional collateral or guarantees. In the event of deterioration, the bank's position would be improved because the additional collateral or guarantees provide a cushion against losses.

When concentration levels have been built up over an extended period, it may take time, in some cases several years, to achieve a more balanced and diversified portfolio mix. Given the institution's trade area, lack of economic diversity, or geographic location, reducing the existing concentration in the near term may be impossible. If a concentration does exist, the banking organization should have adequate systems and controls for reducing undue or excessive concentrations in accordance with a prudent plan. Strong credit policies and loan administration standards should provide adequate control for the risks associated with new loans. The institution should also maintain adequate capital to protect the institution while its portfolio is being restructured. For identified asset concentrations, bank management should be aware of not only the particular company's or industry's recent trends, but also of its future prospects.

Alternatives for Reducing Concentrations

Some alternatives for institutions whose asset concentrations are not likely to be reduced in the near term are described below.

Increased Holdings of Capital

To compensate for the additional risk that may be associated with an asset concentration, a bank may elect to maintain a higher capital ratio than would be required under the risk-based capital guidelines. This additional capital would provide support in the event the concentration

adversely affects the organization's financial position.

Increased Allowance for Loan and Lease Losses

The banking organization may choose to factor a cushion for loan concentrations into its determination of an adequate allowance for loan and lease losses a basis-point cushion for loan concentrations in determining the minimum level. This cushion would be available to absorb some deterioration in loan concentrations.

Loan Participations

If a banking institution has a concentration, it

may be possible to sell a portion of the loan portfolio in the secondary market to reduce its dependency on an asset group. If the institution is not large enough to participate in the secondary market, an alternative might be to sell loans, without recourse, to a correspondent bank that is also attempting to diversify its loan portfolio.

Government Guarantee Programs

Another possible solution to reduce the risk associated with a loan concentration is to seek government guarantees of originated loans. In some cases, a government agency may be willing to guarantee (or insure) a portion of agricultural or small-business loans, thereby reducing the risk to the originating bank.

Concentrations of Credit

Examination Objectives

Effective date May 1996

Section 2050.2

1. To determine if the policies, practices, procedures, and internal controls regarding concentrations of credit are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the existence of any concentrations of credit.
4. To determine if any concentrations of credit represent a hazard to the soundness of the bank.
5. To determine that concentrations of credit do not violate applicable banking statutes.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient.

Concentrations of Credit Examination Procedures

Effective date March 1984

Section 2050.3

Examiners should obtain or prepare the information necessary to perform the appropriate procedural steps.

1. If selected for implementation, complete or update the Concentrations of Credits section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures.
4. Request the bank's schedules of concentrations that are reported to the board of directors and/or senior management at regular intervals and—
 - a. if schedules are not current, update and/or have bank personnel update them as of the examination date and
 - b. request that other examiners review the schedules for reasonableness relative to information developed in performing the examination procedures for the various departments.
5. If schedules of concentrations are not maintained or if the listing is incomplete, prepare or obtain the following schedules of obligations that exceed 25 percent of the bank's capital structure—
 - a. loans collateralized by a common security
 - b. loans, contingent liabilities, and/or other obligations to one borrower or a related group of borrowers
 - c. loans dependent upon a particular crop or herd
 - d. aggregate loans to major employers in the service area, their employees, and their major suppliers
 - e. loans within industry groups
 - f. out-of-normal territory loans
 - g. all construction or development loans without firm takeout commitments.
6. If the schedules were prepared by others, review them for reasonableness relative to information developed in performing the examination procedures for the various loan areas.
7. Obtain a listing of due from bank accounts.
8. Obtain from the examiner assigned "Investment Securities" the schedule of investments and money market instruments that exceed 10 percent of the bank's capital structure.
9. Combine the schedules obtained in steps 4 through 8 and determine concentrations that equal or exceed 25 percent of the bank's capital structure. The remaining procedures apply only to these concentrations.
10. From the schedule of loans collateralized by a common security, eliminate all borrowers for whom the common security can be considered excess collateral, then review—
 - a. the trend in market prices and
 - b. current financial information, if appropriate.
11. For loans dependent upon a particular crop or herd—
 - a. review the bank's files for information on market conditions, future markets, and estimated prices and
 - b. determine any adverse trends that might affect payment of the concentrations.
12. For loans dependent upon major employers—
 - a. review financial and other available information on the company and evaluate its ability to continue as an ongoing entity,
 - b. review excerpts from trade papers or periodicals in bank files to determine that bank management is adequately informed on the business activity of the company, and
 - c. note any adverse trends that might affect the collectibility of the loans in the concentrations.
13. For loans within industry groups—
 - a. review financial and other available information on each industry and evaluate its ability to continue as a viable industry,
 - b. review the bank's files to determine that management is adequately informed on the activities of the industry, and
 - c. determine any adverse trends that might affect the collectibility of the loans included in the concentrations.
14. For due from bank accounts, inquire as to the reasonableness of the account relative to the activity and services provided.
15. Discuss with management—

- a. the adequacy of written policies regarding concentrations of credit,
 - b. the manner in which the bank's officers are operating in conformance with established policies,
 - c. concentrations that will appear in the report of examination, and
 - d. any matter requiring immediate attention.
16. Prepare, in appropriate form, all information regarding concentrations for inclusion in the report of examination. A comment should be made regarding each concentration, particularly regarding the percentage of the bank's capital accounts (total capital) that the total of each concentration represents. Examiners should avoid direct requests for reduction in the concentration unless facts are included that would support this action.
17. Update the workpapers with any information that will facilitate future examinations.

Concentrations of Credit

Internal Control Questionnaire

Effective date March 1984

Section 2050.4

Review the bank's internal controls, policies, practices, and procedures relating to concentrations of credit. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

POLICIES

1. Has a policy been adopted that specifically addresses concentrations of credits?
2. Does the policy include deposits and other financial transactions with financial institutions?
3. Have controls been instituted to monitor the following types of concentrations:
 - a. loans and other obligations of one borrower
 - b. loans predicated on the collateral support afforded by a debt or equity issue of a corporation
 - c. loans to a company dominant in the local economy, its employees, and major suppliers
 - d. loans dependent upon one crop or herd
 - e. loans dependent upon one industry group
 - f. loans considered out of normal territory
4. Are periodic reports of concentrations required to be submitted to the board or its committee for review (if so, state frequency _____)?

5. Are the periodic reports checked for accuracy by someone other than the preparer before being submitted to the board or its committee?
6. When concentrations exist predicated upon a particular crop or herd of livestock, does the bank attempt to diversify the inherent potential risk by means of—
 - a. participations or
 - b. arrangements with governmental agencies such as—
 - guarantees or
 - lending arrangements?
7. When concentrations exist predicated upon a particular industry, does the bank make a periodic review of industry trends?

CONCLUSION

8. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
9. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

The criteria used to assign quality ratings to extensions of credit that exhibit potential problems or well-defined weaknesses are primarily based upon the degree of risk and the likelihood of orderly repayment, and their effect on a bank's safety and soundness. Extensions of credit that exhibit potential weaknesses are categorized as "special mention," while those that exhibit well-defined weaknesses and a distinct possibility of loss are assigned to the more general category of "classified." The term "classified" is subdivided into more specific subcategories ranging from least to most severe: "substandard," "doubtful," and "loss." The amount of classified extensions of credit as a percent of capital represents the standard measure of expressing the overall quality of a bank's loan portfolio.

These classification guidelines are only applied to individual credits, even if entire portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each extension of credit should be based upon the fundamental characteristics affecting the collectibility of that particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits in the same industry that are not affected by the problems of the troubled sector(s).

ASSESSMENT OF CREDIT QUALITY

The evaluation of each credit should be based upon the fundamentals of the particular credit, including, at a minimum—

- the overall financial condition and resources of the borrower, including the current and stabilized cash flow (capacity);
- the credit history of the borrower;
- the borrower's or principal's character;
- the purpose of the credit relative to the source of repayment; and
- the types of secondary sources of repayment available, such as guarantor support and the collateral's value and cash flow, when they are not a primary source of repayment. (Undue

reliance on secondary sources of repayment should be questioned, and the bank's policy about permitting such a practice should be reviewed.)

The longer the tenure of the borrower's extension of credit or contractual right to obtain funds, the greater the risk of some adverse development in the borrower's ability to repay the funds. This is because confidence in the borrower's repayment ability is based upon the borrower's past financial performance as well as projections of future performance. Failure of the borrower to meet its financial projections is a credit weakness, but does not necessarily mean the extension of credit should be considered as special mention or be classified. On the other hand, the inability to generate sufficient cash flow to service the debt is a well-defined weakness that jeopardizes the repayment of the debt and, in most cases, merits classification. When determining which credit-quality rating category is appropriate, the examiner should consider the extent of the shortfall in the operating figures, the support provided by any pledged collateral, and/or the support provided by cosigners, endorsers, or guarantors.

Delinquent Extensions of Credit

One of the key indicators of a problem credit is a borrower's inability to meet the contractual repayment terms of an extension of credit. When this occurs, the extension of credit is identified as past due or delinquent. Examiners divide delinquent credits into two main categories for the purpose of a bank examination: "A" delinquent extensions of credit and "B" delinquent extensions of credit. Extensions of credit are also referred to as "paper" because the legal obligation, for example the note, loan, or credit agreement, is typically recorded on a paper form. The designation of "A" paper is given to any extension of credit that is considered to be a statutory bad debt. Statutory bad debts are defined in section 5204 of the Revised Statutes (12 USC 56) as all debts due to a bank on which interest is past due and unpaid for a period of six months, unless the extension of credit is well secured and in the process of collection. Delinquent credits that are not covered under the

definition of statutory bad debt are designated as “B” paper. In either case, special mention or classified extensions of credit are often found to be delinquent. An extension of credit that is *not* delinquent also may be identified as special mention or classified. Nondelinquent extensions of credit (also referred to as “performing” or “current”) should be classified when well-defined weaknesses exist that jeopardize repayment. Examples of well-defined weaknesses include the lack of credible support for full repayment from reliable sources, or a significant departure from the intended source of repayment. This latter weakness warrants concern because a delinquent credit may have been brought current through loan or credit modifications, refinancing, or additional advances.

SPECIAL MENTION CATEGORY

A special mention extension of credit is defined as having potential weaknesses that deserve management’s close attention. If left uncorrected, these potential weaknesses may, *at some future date*, result in the deterioration of the repayment prospects for the credit or the institution’s credit position. Special mention credits are not considered as part of the classified extensions of credit category and do not expose an institution to sufficient risk to warrant classification.

Extensions of credit that might be detailed in this category include those in which—

- the lending officer may be unable to properly supervise the credit because of an inadequate loan or credit agreement;
- questions exist regarding the condition of and/or control over collateral;
- economic or market conditions may unfavorably affect the obligor in the future;
- a declining trend in the obligor’s operations or an imbalanced position in the balance sheet exists, but not to the point that repayment is jeopardized; and
- other deviations from prudent lending practices are present.

The special mention category should not be used to identify an extension of credit that has as its sole weakness credit-data or documentation exceptions not material to the repayment of the credit. It should also not be used to list exten-

sions of credit that contain risks usually associated with that particular type of lending. Any extension of credit involves certain risks, regardless of the collateral or the borrower’s capacity and willingness to repay the debt.

For example, an extension of credit secured by accounts receivable has a certain degree of risk, but the risk must have increased beyond that which existed at origination to categorize the credit as special mention. Other characteristics of accounts receivable warranting identification as special mention include a rapid increase in receivables without bank knowledge of the causative factors, concentrations in receivables lacking proper credit support, or lack of on-site audits of the bank’s borrower.

CLASSIFICATION CATEGORIES

Split Classifications

When classifying a particular credit, it may not be appropriate to list the entire balance under one credit-quality category. This situation is commonly referred to as a “split classification” and may be appropriate in certain instances, especially when there is more certainty regarding the collectibility of one portion of an extension of credit than another. Split classifications may also involve special mention as well as “pass” credits, those that are neither special mention nor classified. Extensions of credit that exhibit well-defined credit weaknesses may warrant classification based on the description of the following three classification categories.¹

Substandard Extensions of Credit

A “substandard” extension of credit is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Extensions of credit so classified must have a well-defined weakness or

1. Guidelines for the uniform classification of consumer-installment extensions of credit and credit card plans, as well as classification guidelines for troubled commercial real estate credits, are discussed in detail in sections 2130.1 and 2090.1, respectively.

weaknesses that jeopardize the liquidation² of the debt. They are characterized by the distinct possibility that the bank will sustain some loss if the deficiencies are not corrected. Loss potential, while existing in the aggregate amount of substandard credits, does not have to exist in individual extensions of credit classified substandard.

Doubtful Extensions of Credit

An extension of credit classified “doubtful” has all the weaknesses inherent in one classified substandard, with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. The possibility of loss is extremely high, but because of certain important and reasonably specific pending factors that may work to the advantage of and strengthen the credit, its classification as an estimated loss is deferred until its more exact status may be determined. Pending factors may include a proposed merger or acquisition, liquidation proceedings, capital injection, perfecting liens on additional collateral, or refinancing plans.

Examiners should avoid classifying an entire credit as doubtful when collection of a specific portion appears highly probable. An example of proper use of the doubtful category is the case of a company being liquidated, with the trustee-in-bankruptcy indicating a minimum disbursement of 40 percent and a maximum of 65 percent to unsecured creditors, including the bank. In this situation, estimates are based on liquidation-value appraisals with actual values yet to be realized. By definition, the only portion of the credit that is doubtful is the 25 percent difference between 40 and 65 percent. A proper classification of such a credit would show 40 percent substandard, 25 percent doubtful, and 35 percent loss.

Examiners should generally avoid repeating a doubtful classification at subsequent examinations, as the time between examinations should be sufficient to resolve pending factors. This is not to say that situations do not occur when

continuation of the doubtful classification is warranted. However, the examiner should avoid undue continuation if repeatedly, over the course of time, pending events do not occur and repayment is again deferred awaiting new developments.

Loss Extensions of Credit

Extensions of credit classified “loss” are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the credit has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified loss should be promptly charged off. (See SR-04-9 and its attachment.)

Banks should not be allowed to attempt long-term recoveries while the credit remains on the bank’s books. Losses should be taken in the period in which they surface as uncollectible.

In some cases, examiners should determine a reasonable carrying value for a distressed extension of credit and require a write-down through a charge to the allowance for loan and lease losses, or to other operating expenses in the case of an “other asset.” Such a determination should be based on tangible facts recorded in the bank’s credit file and contained in reports on problem credits submitted to the board of directors or its committee, and not solely on verbal assurances from a bank officer.

SITUATIONS NOT REQUIRING CLASSIFICATION

It is generally not necessary to classify extensions of credit and contingent liabilities that are adequately protected by the current sound worth and debt-service capacity of the borrower, guarantor, or the underlying collateral. Further, a performing extension of credit should not automatically be identified as special mention, classified, or charged off solely because the value of the underlying collateral has declined to an amount that is less than the balance outstanding. Extensions of credit to sound borrowers that are refinanced or renewed in accordance with prudent underwriting standards should not be cat-

2. This terminology is used in the original classification definitions as set forth in the 1938 accord and its amendments. The term “liquidation” refers to the orderly repayment of the debt and not to a forced sale of the loan or its underlying collateral.

egorized as special mention unless a potential weakness exists, or classified unless a well-defined weakness exists that jeopardizes repayment. The existence of special mention or classified extensions of credit should not be identified as an imprudent banking practice, as long as the institution has a well-conceived and effective workout plan for such borrowers, and effective internal controls to manage the level of these extensions of credit.

Partially Charged-Off Extensions of Credit

When an institution has charged off a portion of a credit and the remaining recorded balance of the credit (1) is being serviced (based upon reliable sources) and (2) is reasonably assured of collection, categorization of the remaining recorded balance as special mention or classified may not be appropriate.³ For example, when the remaining recorded balance of an extension of credit is secured by readily marketable collateral, the portion that is secured by this collateral would generally not be identified as special mention or classified. This would be appropriate, however, if potential or well-defined weaknesses, respectively, continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally receive a credit rating no more severe than substandard.

A more severe credit rating than substandard for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined, for example, when significant risk exposures are perceived, such as might be the case in bankruptcy or for credits collateralized by properties subject to environmental hazards. In addition, classification of the remaining recorded balance would be appropriate when sources of repayment are considered unreliable.

3. The accrual/nonaccrual status of the credit must continue to be determined in accordance with the glossary section of the Instructions for the Consolidated Reports of Condition and Income (Call Report). Thus, while these partially charged-off credits may qualify for nonaccrual treatment, cash-basis recognition of income will be appropriate when the criteria specified in the Call Report guidance are met.

Formally Restructured Extensions of Credit

Restructured troubled debt should be identified in the institution's internal credit-review system and closely monitored by management. When analyzing a formally restructured extension of credit, the examiner should focus on the ability of the borrower to repay the credit in accordance with its *modified terms*.⁴ With formally restructured credits, it is frequently necessary to charge off a portion of the principal, due to the borrower's difficulties in meeting the contractual payments. In these circumstances, the same credit-risk assessment given to nonrestructured credits with partial charge-offs (see the previous subsection) would also generally be appropriate for a formally restructured credit. This includes *not* identifying the remaining recorded balance as special mention or classified if unwarranted. The assignment of special mention status to a formally restructured credit would be appropriate, if, after the restructuring, potential weaknesses remained. It would also be appropriate to classify a formally restructured extension of credit when well-defined weaknesses exist that jeopardize the orderly repayment of the credit, based upon its reasonable modified terms. For a further discussion of troubled debt restructurings, see the glossary section of the Instructions for the Consolidated Reports of Condition and Income and "Loan Portfolio Management," section 2040.1.

ROLE OF GUARANTEES

The primary focus of a review of an extension of credit's quality is the original source of repayment and the borrower's ability and intent to fulfill the obligation without reliance on guarantors.⁵ In situations involving troubled credits, however, the assessment of credit quality should also be based upon the support provided by guarantees. As a result, the lending institution

4. An example of a restructured commercial real estate credit that does *not* have reasonable modified terms would be a mortgage that requires interest payments *only*, but no principal payments, despite the fact that the underlying collateral generates sufficient cash flow to pay both.

5. Some credits are originated based primarily upon the financial strength of the guarantor, who is, in substance, the primary source of repayment. In such circumstances, examiners generally assess the collectibility of the credit based upon the guarantor's ability to repay the credit.

must have sufficient information concerning the guarantor's financial condition, income, liquidity, cash flow, contingent liabilities, and other relevant factors (including credit ratings, when available) to demonstrate the guarantor's financial capacity to fulfill the obligation.

Examiner Treatment of Guarantees

A guarantee should provide support for repayment of indebtedness, in whole or in part, and be legally enforceable. It is predicated upon both the guarantor's financial capacity and willingness to provide support for a credit.

To assess the financial capacity of a guarantor and determine whether the guarantor can honor its contingent liabilities in the event required, examiners normally rely on their own analysis of a guarantor's financial strength. This includes an evaluation of the financial statements and the number and amount of guarantees currently committed to.

A guarantor's willingness to perform is assumed, unless there is evidence to the contrary. Since a guarantee is obtained with the intent of improving the repayment prospects of a credit, a guarantor may add sufficient strength to preclude or reduce the severity of the risk assessment.

Examiners should consider and analyze the following guarantee-related factors during the course of their review of extensions of credit:

- The degree to which the guarantors have demonstrated their ability and willingness to fulfill previous guarantees.
- Whether previously required performance under guarantees was voluntary or was the result of legal or other actions by the lender. Examiners should give limited credence, if any, to guarantees from obligors who have reneged on obligations in the past, unless there is clear evidence that the guarantor has the ability and intent to honor the specific guarantee under review.
- The economic incentives for performance by guarantors. This includes—
 - guarantors who have already partially performed under the guarantee;
 - guarantors who have other significant investments in the project;
 - guarantors whose other sound projects are

cross-collateralized or otherwise intertwined with the credit; or

- guarantees collateralized by readily marketable assets that are under the control of a third party.
- The extent to which guarantees are legally enforceable, although in general this is the only type of guarantee that should be relied upon.
 - Collection of funds under a guarantee should not be subject to significant delays or undue complexities or uncertainties that might render legal enforceability questionable.
 - Although the bank may have a legally enforceable guarantee, it may decide not to enforce it. The examiner's judgment should be favorably affected by previous extensions of credit evidencing the timely enforcement and successful collection of guarantees.
- The type of the guarantee. Some guarantees for real estate projects are limited in that they only pertain to the development and construction phases of a project. As such, these limited guarantees cannot be relied upon to support a troubled credit after the completion of these phases.

OFF-BALANCE-SHEET ITEMS

The principal off-balance-sheet credit-related transactions likely to be encountered during loan reviews are loan commitments, commercial letters of credit, and standby letters of credit. When evaluating off-balance-sheet credit transactions for the purpose of assigning a credit-quality rating, the examiner should carefully consider whether the bank is irrevocably committed to advance additional funds under the credit agreement. If the bank must continue to fund the commitment and a potential weakness exists that, if left uncorrected, may at some future date result in the deterioration of repayment prospects or the bank's credit position, the amount of the commitment may be categorized as special mention. If there is a well-defined weakness that jeopardizes repayment of a commitment, classification may be warranted. If an amount is classified, it should be separated into two components: the direct amount (the amount that has already been advanced) and the indirect amount

(the amount that must be advanced in the future).

Loan Commitments

Loan commitments are defined as legally binding obligations to extend credit (other than in the form of retail credit cards, check credit, and related plans) for which a fee or other compensation is typically received. Different types of loan commitments vary based upon the nature of the credit granted. Loan-commitment credit risk stems from the possibility that the creditworthiness of the customer will deteriorate between the time the commitment is made and the funds are advanced. (See “Contingent Claims from Off-Balance-Sheet Activities,” section 4110.1.)

Commercial Letters of Credit

Commercial letters of credit involve a buyer of goods and a seller of goods and are instruments issued by a bank serving as an intermediary between the two for the resultant payment for the goods. Commercial letters of credit are customarily used to facilitate international trade due to the distances involved, as well as differences in legal, political, and business practices. Additionally, there may be a lack of familiarity between the buyer and seller. As a result, the bank substitutes its credit in place of the buyer's credit and promises on behalf of its customer to pay predetermined amounts of money to the seller against the delivery of documents indicating shipment of goods and representing title to those goods. If the shipping documents are in order, the bank is obligated to pay the seller through the issuance of a sight or time draft. The bank is then reimbursed by its customer for the amount of the shipment plus a fee for conducting the transaction.

Given the nature of the bank's commitment to pay for the goods on behalf of its customer, a commercial letter of credit is typically irrevocable. This means that it cannot be cancelled or revoked without the consent of all parties concerned. As a result, there is added credit risk for the issuing bank since it cannot cancel its commitment in the event the credit standing of its customer deteriorates, even if the deterioration occurs before the shipment of the goods.

Standby Letters of Credit

Most standby letters of credit (SLCs) are unsecured and involve substituting the bank's credit standing for that of the bank's customer on behalf of a beneficiary. This occurs when the beneficiary needs to ensure that the bank's customer is able to honor its commitment to deliver the goods or services by the agreed-upon time and with the agreed-upon quality. For credit-analysis purposes, SLCs are to be treated like loans and represent just one type of extension of credit relative to the overall exposure extended by the bank to the borrower. SLCs can be divided into two main groups: “financial SLCs” and “nonfinancial SLCs.” Financial SLCs essentially guarantee repayment of financial instruments and are commonly used to “guarantee” payment on behalf of customers, issuers of commercial paper, or municipalities (relative to tax-exempt securities). Nonfinancial SLCs are essentially used as bid and performance bonds to “guarantee” completion of projects, such as building or road construction, or to guarantee penalty payment in case a supplier is unable to deliver goods or services under a contract.

REQUIRED LOAN WRITE-UPS

A full loan write-up (see criteria below) is required for all significant or material classified or specially mentioned assets if (1) management disagrees with the disposition accorded by the examiner, or (2) the institution will be rated composite 3, 4, or 5. The write-ups will be used to support the classifications to management and, in the case of problem banks, to support any necessary follow-up supervisory actions.

An abbreviated write-up may be appropriate for other loans to illustrate a credit-administration weakness or to formalize certain decisions, document agreements, and clarify action plans for management. For example, bank management may have agreed to either collect or charge off a loan classified doubtful by the next call report date or to reverse interest accruals and place the loan on nonaccrual status. These agreements may be expressed in the report through a brief comment under the classification write-up.

The examiner may find it beneficial to list extensions of credit alphabetically by depart-

ment and/or branch. When more than one borrower is relevant to a single write-up, the alphabetization of the prime borrower or the parent corporation should determine the credit's position in the list. All other parties to the credit, including cosigners, endorsers, and guarantors, should be indicated directly under the maker of the notes or embodied within the write-up.

Although classifications and items listed for special mention may be listed alphabetically on the report page, examiners may elect to format the listing or write-ups in other ways to illustrate examination findings or conclusions. For example, examiners may wish to group classifications into categories of weakness and to use these listings to support loan-administration comments without providing a write-up for each classified item.

Notwithstanding this guidance, examiners have the flexibility of writing up more than the criticized assets, including any special mention credits, if deemed necessary. The decision to increase the number of write-ups should be based on factors such as the overall financial condition of the bank, quality of the loan portfolio, or adequacy of loan portfolio administration.

It is important that a sufficient number of write-ups with appropriate content be provided to support the examiner's assessment of the bank's problem loans, leases, and other extensions of credit. The write-ups should also support any comments pertaining to credit-administration policies and practices as they relate to this component of the bank's loan portfolio.

General Guidelines for Write-Ups of Special Mention and Classified Extensions of Credit

Extension of credit write-ups may be in a narrative or bullet format, similar to the write-ups of shared national credits, where appropriate. When the special mention or classified credit consists of numerous extensions of credit to one borrower, or when multiple borrowers are discussed in one write-up, the write-up should be structured to clearly identify the credit facilities being discussed. For example, each extension of credit could be numbered when multiple credits are involved.

Before a write-up is prepared, the examiner should recheck central information files or other sources in the bank to determine that all of the obligor's debt, including related debt,⁶ has been noted and included. The examiner should consider identifying accrued interest receivable as special mention or classified, especially when the cumulative effect on classified percentages is significant or the accrued interest is appropriately classified loss.

Even though the length of a write-up may be limited, the information and observations contained in the write-up must substantiate the credit's treatment as a special mention or classified credit. To prepare a write-up that brings out pertinent and fundamental facts, an examiner needs to have a thorough understanding of all the factors relative to the extension of credit. An ineffective presentation of the facts weakens a write-up and frequently casts doubt on the accuracy of the risk assessment. The examiner might consider emphasizing deviations from prudent banking practices as well as loan policy and procedure deficiencies that are pertinent to the credit's problems. When portions of a borrower's indebtedness are assigned to different risk categories, including portions identified as "pass," the examiner's comments should clearly set forth the reason for the split-rating treatment. A full write-up on items adversely classified or listed as special mention must provide sufficient detail to support the examiner's judgment concerning the rating assigned. To ensure that the write-ups provide a clear, concise, and logical discussion of material credit weaknesses, the following minimum categories of information should be presented, preferably in the order listed (see SR-99-24):

1. A general description of the obligation.

- Amount of exposure (both outstanding and contingent or undrawn) as follows:
 - Summarize total related and contingent borrowings, including amounts previously charged off and recovered.
 - List the borrower's total related liabilities outstanding. Amounts making up this total refer to credits in which the borrower may have a related interest and is directly or indirectly obligated to repay, such as partnerships and joint ventures. The rule for determining what

6. The term "related" refers to direct and indirect obligations.

is included in related debt (aggregating debt), which ultimately has to do with ascertaining compliance with legal lending limits, is governed by state law.

- List and identify the obligor's contingent liabilities to the bank under examination. Contingent liabilities include items such as unadvanced portions of a line of credit or extension of credit (commitments), guarantees or endorsements, and commercial and standby letters of credit. Although contingent liabilities to other lenders represent an important component of the financial analysis of the obligor, they should not be listed in the write-up unless they are particularly relevant to the situation, or are portions of both related and contingent liabilities that represent participations purchased from and sold to other lenders. The latter example should be listed even though the entire relationship may not have been identified as special mention or classified. Additionally, only the classified portion of extensions of credit or contingent liabilities of the bank under examination should be listed in the appropriate column(s) of the classified asset page.
 - *The obligor and the obligor's location and type of business or occupation.* For the type of business or occupation of the obligor, indicate whether the business is a proprietorship, partnership, joint venture, or corporation. This information can be used to compare the purpose of the credit with the source(s) of repayment, and to compare the credit's structure with the obligor's repayment ability. The general identification of occupation, such as professional or wage earner, may not be definitive enough, so it may be necessary to indicate that, for example, the extension of credit is to a medical doctor.
- Types of businesses may be clearly indicated in the borrower's business name and may not require additional comment. For example, Apex Supermarket and Ajax Sporting Goods Store imply a retail supermarket and a retail sporting goods store. However, examiners should not be misled in their analysis of the credit; likewise, the write-up reviewer should not be misled by

assuming that a borrower is necessarily in the same line of business indicated by the borrower's business name. In the preceding example, if the borrower is primarily a wholesale grocery or sporting goods supplier, or if it radically deviates from the type of business indicated in its business name, the situation should be clarified. It is important to state the borrower's position in the marketing process—manufacturer, wholesaler, or retailer—and to indicate the types of goods or services.

- *Description and value of collateral.* The type of lien, collateral description and its condition and marketability, as well as the collateral's current value, date of valuation, and basis for the valuation, should be included. If values are estimated, the write-up should indicate the source of the valuation, such as the obligor's recent financial statement, an independent appraisal, or an internal management report. If valuations are not available, a statement to that effect should be included. A bank's failure to obtain collateral valuations, when available, is cause for criticism. Also include any other pertinent information that might impede or facilitate the possible sale of the collateral to repay the extension of credit.

When problem borrowers are involved, the sale of the collateral often becomes the sole or primary source of repayment. As a result, the valuation of the collateral becomes especially important when describing the credit, as described in the specific examples below.

If real estate is pledged to secure the credit, the write-up should provide a description of the property, the lien status, the amount of any prior lien, and the appraised value. If multiple parcels are securing the credit, appraised values should be listed for each parcel, including the date of the appraisal and the basis for the value. When bank staff or examiners' challenges to appraisal assumptions are supported, the resulting adjustment in value for credit-analysis purposes should be indicated. If the property held as collateral has tenants, its cash flow should be noted and the financial strength of the major lessees commented upon, if appropriate.

If the collateral represents shares of or an interest in a closely held company, the

shares or ownership interest held should be indicated in relation to the total shares outstanding, and the financial condition of the closely held company should be summarized in the write-up. Additionally, the approximate value of the closely held company, as indicated by its financial statements, should be compared for consistency with the value of the company as indicated on the principal's or partner's personal financial statement. The values often do not correlate to the extent they should, which typically indicates overvaluation of the asset on the balance sheet of the entity owning the shares or ownership interest.

If a blanket lien on assets, such as receivables, inventory, or equipment, is pledged as collateral, the current estimated value of each asset type should be shown separately. The basis for these values can come from various sources, which should be indicated:

- If receivables are pledged as collateral for an asset-based extension of credit, a current aging report and an assessment of the appropriateness of the advance ratio is usually necessary to determine their collectibility and value.
- If inventory is pledged as collateral for an asset-based extension of credit, an assessment of the appropriateness of the advance ratio is necessary. Additionally, the value varies with the condition and marketability of the inventory.
- If listed securities or commodities are pledged as collateral, the market value and date of valuation should be noted.
- *Notation if borrower is an insider or a related interest of an insider.*
- *Guarantors and a brief description of their ability to act as a source of repayment.* If the financial strength of guarantors has changed significantly since the initial guarantee of the credit facility, this should be noted. The relationship of the guarantors to the borrower should be identified, including a brief description of the guarantors' ability (financial strength) to serve as a source of repayment independent of the borrower. Any collateral supporting the guarantees should also be stated. See the previous subsection, "Role of Guarantees," and SR-91-24 for further guidance on considering guarantees for credit-analysis purposes.

- *Amounts previously classified.*
- *Repayment terms and historical performance, including prior charge-offs, and current delinquency status (with notation if the credit is currently on nonaccrual status).* Any changes to the original repayment terms, whether initiated by bank management or the obligor, should be detailed with an appropriate analysis of the changes included in the write-up. Renewals, extensions, and rewritten notes that deviate from the stated purpose and repayment expectations, as approved by management, should be discussed in light of their effect on the quality of the credit. Restructurings should be discussed in terms of their reasonable objectives, focusing on the prospects for full repayment in accordance with the modified terms.

It may be prudent to state the purpose of the credit. The purpose can be compared with the intended source of repayment for appropriateness. For example, a working capital extension of credit generally should not depend on the sale of real estate for repayment. Additionally, the obligor's prior business experience should correlate to the credit's purpose.

2. *A summary listing of weaknesses resulting in classification or special mention treatment.*
3. *A reference to any identified deficiencies in the item that will support loan-administration or violation comments elsewhere in the report.* This information may consist of deficiencies in credit and collateral documentation or violations of law that have a material impact on credit quality. Loan-portfolio-administration performance includes, but is not limited to—
 - changes in asset quality since the last examination;
 - the appropriateness of loan-underwriting standards;
 - the adequacy of—
 - loan documentation;
 - management information systems;
 - internal control systems; and
 - loan-loss reserves;
 - the accuracy of internal loan-rating systems;
 - the ability and experience of lending officers, as well as other personnel managing the lending function; and
 - changes in lending policies or procedures since the last examination.

4. *If management disagrees with the classification, a statement to that effect along with management's rationale.* Information could include selected data from the most recent fiscal and interim financial statements (discussion of items such as leverage, liquidity, and cash flow) when the primary reason for the write-up relates to the borrower's financial condition or operating performance. Cost of goods sold, nonrecurring expenses, dividends, or other items indicating deterioration in the credit quality may also be highlighted. Any stated value of the borrower's encumbered assets should be set off against specific debt to arrive at the unprotected balance, if applicable. In addition, the examiner should identify encumbered assets that are pledged elsewhere.
5. *A concise description of any management action taken or planned to address the weakness in the asset.* The action plan should focus on a concise description of management's workout or action plan to improve the credit's collectibility or to liquidate the debt. Review of the bank's documented workout plan should give an examiner a clear idea of past efforts to improve the prospect of collectibility and management's current efforts and future strategy. The plan should clearly state the bank's goals and corresponding timetable as they appear at that point, including items such as the degree of repayment envisioned and the proceeds anticipated from the sale of the collateral. Based on this information, the examiner should succinctly summarize in the write-up the bank's collection efforts to date and its ongoing plans to address the situation.

Optional Information for Write-ups

At the examiner's discretion, other information may be included in loan write-ups. For example the examiner may want to include current financial information on the borrower, cosigners, and guarantors. The additional information may consist of discussions regarding current balance sheets and operating statements. If discussed, the examiner should indicate whether the financial statements have been audited, reviewed, compiled, or prepared by the borrower, and whether they are fiscal or interim statements. If the statements are audited, the examiner should indicate the type of opinion expressed—unqualified, qualified, disclaimer, or adverse—and whether the auditor is a certified public accountant. If the opinion is qualified, note the reason(s) given by the auditor.

When the examiner includes comments regarding the borrower's financial condition, the comments should always highlight credit weaknesses in a manner that supports the risk assessment. It is important that sufficient detail is provided to identify unfavorable factors. A trend analysis or details of balance-sheet, income-statement, or cash-flow items can be included. The examiner may also include comments when special mention or classified credits may exhibit favorable as well as unfavorable financial characteristics. Both types of pertinent factors may be included in the write-up as long as they are placed in the proper perspective to demonstrate the credit's inherent weaknesses.

The allowance for loan and lease losses (ALLL) is presented on the balance sheet as a contra-asset account that reduces the amount of the loan portfolio reported on the balance sheet. The purpose of the ALLL is to reflect *estimated credit losses* within a bank's portfolio of loans and leases. Estimated credit losses are estimates of the current amount of loans that are probable that the bank will be unable to collect given the facts and circumstances since the evaluation date (generally the balance sheet date). That is, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans as of the evaluation date.

All federally insured depository institutions must maintain an ALLL, except for federally insured branches and agencies of foreign banks. A bank determines the appropriate balance or level of the ALLL at least each quarter by evaluating the collectibility of its loan and lease portfolio, including any accrued and unpaid interest. Increases or decreases to the ALLL are to be made through charges (debits) or credits to the "provision for loan and lease losses" (provision), an expense account on the bank's Consolidated Report of Income or income statement, and not through transfers from retained earnings or any segregation of retained earnings or other components of equity capital.

When there is information available to confirm that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL. Under no circumstances can loan or lease losses be charged directly to "retained earnings" and capital. Any subsequent recoveries on loans or leases previously charged off must be credited to the ALLL, provided, however, that the total amount credited to the allowance as recoveries of an individual loan (which may include amounts representing principal, interest, and fees) is limited to the amount previously charged off against the ALLL on that loan. Any amounts collected in excess of this limit should be recognized as income.

To illustrate these concepts, assume that Bank A has a loan and lease portfolio totaling \$100 million at the end of year 1 and an ALLL of \$1.25 million; thus, its net carrying amount for the loan portfolio on the balance sheet is \$98.75 million. Based on its most recent analysis, Bank A has determined that an ALLL of \$1.5 million is necessary to cover its estimated

credit losses as of the end of the fourth quarter. Therefore, in the fourth quarter of year 1, Bank A should record a provision for \$250,000, debiting this expense and crediting the ALLL for this amount to bring the ALLL to the appropriate level of \$1.5 million. Assume further that during the first quarter of year 2, Bank A identifies \$750,000 in uncollectible loans. It must charge off this amount against the ALLL by debiting the ALLL and crediting the individual loans for a total of \$750,000. Also assume that in the same first quarter of year 2, Bank A receives \$100,000 in cash recoveries on previously charged-off loans. These recoveries must be credited to the ALLL in that quarter. Thus, in the first quarter of year 2, Bank A's ALLL, which began the year at \$1.5 million, will have been reduced \$850,000 ($\$1,500,000 - \$750,000 + \$100,000 = \$850,000$). However, management's ALLL analysis for the first quarter of year 2 indicates that an ALLL of \$1.2 million is appropriate. To bring the recorded ALLL to this level, Bank A must make a debit to the provision for loan and lease losses of \$350,000 ($\$850,000 + \$350,000 = \1.2 million).

While the overall responsibility for maintaining the ALLL at an appropriate level rests with the bank's senior management and board of directors, the appropriateness of the ALLL and management's analysis of it are subject to examiner review. The examiner should make every effort to fully understand a bank's methods for determining the needed balance of its ALLL. During the process of conducting the examination, the examiner should take these methods into account when making a final determination on the appropriateness (adequacy) of the balance of the ALLL. The examiner may confer with bank management and any outside consultant or auditor that has advised management on its ALLL-review policies or practices.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner's comments should cite any departures from generally accepted accounting principles (GAAP) and any contraventions of the following 2006 Interagency

Policy Statement on the Allowance for Loan and Lease Losses as well as the 2001 policy statement (see section 2072.1). Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

INTERAGENCY POLICY STATEMENT ON THE ALLOWANCE FOR LOAN AND LEASE LOSSES

This 2006 policy statement¹ revises and replaces the 1993 policy statement on the ALLL. It reiterates key concepts and requirements included in generally accepted accounting principles (GAAP) and existing ALLL supervisory guidance.² The principal sources of guidance on accounting for impairment in a loan portfolio under GAAP are Statement of Financial Accounting Standards No. 5, “Accounting for Contingencies” (FAS 5), and Statement of Financial Accounting Standards No. 114, “Accounting by Creditors for Impairment of a Loan” (FAS 114). In addition, the Financial Accounting Standards Board Viewpoints article that is included in Emerging Issues Task Force Topic D-80 (EITF D-80), “Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio,” presents questions and answers that provide specific guidance on the interaction between these two FASB statements and may be helpful in applying them.

In July 1999, the banking agencies and the Securities and Exchange Commission (SEC) issued a Joint Interagency Letter to Financial Institutions. The letter stated that the banking

agencies and the SEC agreed on the following important aspects of loan loss allowance practices:

- Arriving at an appropriate allowance involves a high degree of management judgment and results in a range of estimated losses.
- Prudent, conservative—but not excessive—loan loss allowances that fall within an acceptable range of estimated losses are appropriate. In accordance with GAAP, an institution should record its best estimate within the range of credit losses, including when management’s best estimate is at the high end of the range.
- Determining the allowance for loan losses is inevitably imprecise, and an appropriate allowance falls within a range of estimated losses.
- An “unallocated” loan loss allowance is appropriate when it reflects an estimate of probable losses, determined in accordance with GAAP, and is properly supported.
- Allowance estimates should be based on a comprehensive, well-documented, and consistently applied analysis of the loan portfolio.
- The loan loss allowance should take into consideration all available information existing as of the financial statement date, including environmental factors such as industry, geographical, economic, and political factors.

In July 2001, the banking agencies issued the Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions (2001 Policy Statement). The policy statement is designed to assist institutions in establishing a sound process for determining an appropriate ALLL and documenting that process in accordance with GAAP.³ (See section 2072.1.)

In March 2004, the agencies also issued the Update on Accounting for Loan and Lease Losses. This guidance provided reminders of longstanding supervisory guidance as well as a listing of the existing allowance guidance that institutions should continue to apply.

1. This policy statement was adopted on December 13, 2006, by, and applies to, all depository institutions (institutions), except U.S. branches and agencies of foreign banks, that are supervised by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision (the banking agencies) and to institutions insured and supervised by the National Credit Union Administration (NCUA) (collectively, the agencies). U.S. branches and agencies of foreign banks continue to be subject to any separate guidance that has been issued by their primary supervisory agency.

2. As discussed more fully below in the “Nature and Purpose of the ALLL” section, this policy statement and the ALLL generally do not address loans carried at fair value or loans held for sale. In addition, this policy statement provides only limited guidance on “purchased impaired loans.”

3. See section 2072.1 for the 2001 Policy Statement. The SEC staff issued parallel guidance in July 2001, which is found in Staff Accounting Bulletin No. 102, “Selected Loan Loss Allowance Methodology and Documentation Issues” (SAB 102), which has been codified as Topic 6.L in the SEC’s Codification of Staff Accounting Bulletins. Both SAB 102 and the codification are available on the SEC’s web site.

Nature and Purpose of the ALLL

The ALLL represents one of the most significant estimates in an institution's financial statements and regulatory reports. Because of its significance, each institution has a responsibility for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses (PLLL). To fulfill this responsibility, each institution should ensure controls are in place to consistently determine the ALLL in accordance with GAAP, the institution's stated policies and procedures, management's best judgment, and relevant supervisory guidance. As of the end of each quarter, or more frequently if warranted, each institution must analyze the collectibility of its loans and leases held for investment⁴ (hereafter referred to as "loans") and maintain an ALLL at a level that is appropriate and determined in accordance with GAAP. An appropriate ALLL covers estimated credit losses on individually evaluated loans that are determined to be impaired as well as estimated credit losses inherent in the remainder of the loan and lease portfolio. The ALLL does not apply, however, to loans carried at fair value, loans held for sale,⁵ off-balance-sheet credit exposures⁶ (for example, financial instruments such as off-balance-sheet loan commitments, standby letters of credit, and guarantees), or general or unspecified business risks.

For purposes of this policy statement, the term *estimated credit losses* means an estimate of the current amount of loans that it is probable the institution will be unable to collect given

facts and circumstances since the evaluation date. Thus, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans. These estimated credit losses should meet the criteria for accrual of a loss contingency (that is, through a provision to the ALLL) set forth in GAAP.⁷ When available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL. For "purchased impaired loans,"⁸ GAAP prohibits "carrying over" or creating an ALLL in the initial recording of these loans. However, if, upon evaluation subsequent to acquisition, it is probable that the institution will be unable to collect all cash flows expected at acquisition on a purchased impaired loan (an estimate that considers both timing and amount), the loan should be considered impaired for purposes of applying the measurement and other provisions of FAS 5 or, if applicable, FAS 114.

Estimates of credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. For loans within the scope of FAS 114 that

7. FAS 5 requires the accrual of a loss contingency when information available prior to the issuance of the financial statements indicates it is probable that an asset has been impaired at the date of the financial statements and the amount of loss can be reasonably estimated. These conditions may be considered in relation to individual loans or in relation to groups of similar types of loans. If the conditions are met, accrual should be made even though the particular loans that are uncollectible may not be identifiable. Under FAS 114, an individual loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. It is implicit in these conditions that it must be probable that one or more future events will occur confirming the fact of the loss. Thus, under GAAP, the purpose of the ALLL is not to absorb all of the risk in the loan portfolio, but to cover probable credit losses that have already been incurred.

8. A *purchased impaired loan* is defined as a loan that an institution has purchased, including a loan acquired in a purchase business combination, that has evidence of deterioration of credit quality since its origination and for which it is probable, at the purchase date, that the institution will be unable to collect all contractually required payments. When reviewing the appropriateness of the reported ALLL of an institution with purchased impaired loans, examiners should consider the credit losses factored into the initial investment in these loans when determining whether further deterioration—for example, decreases in cash flows expected to be collected—has occurred since the loans were purchased. The bank's consolidated reports of condition and income and the disclosures in the bank's financial statements may provide useful information for examiners in reviewing these loans. Refer to the AICPA's Statement of Position 03-3, "Accounting for Certain Loans or Debt Securities Acquired in a Transfer," for further guidance on the appropriate accounting.

4. Consistent with the American Institute of Certified Public Accountants' (AICPA) Statement of Position 01-6, "Accounting by Certain Entities (Including Entities With Trade Receivables) That Lend to or Finance the Activities of Others," loans and leases held for investment are those loans and leases that the institution has the intent and ability to hold for the foreseeable future or until maturity or payoff.

5. See "Interagency Guidance on Certain Loans Held for Sale" (March 26, 2001) for the appropriate accounting and reporting treatment for certain loans that are sold directly from the loan portfolio or transferred to a held-for-sale account. Loans held for sale are reported at the lower of cost or fair value. Declines in value occurring after the transfer of a loan to the held-for-sale portfolio are accounted for as adjustments to a valuation allowance for held-for-sale loans and not as adjustments to the ALLL.

6. Credit losses on off-balance-sheet credit exposures should be estimated in accordance with FAS 5. Any allowance for credit losses on off-balance-sheet exposures should be reported on the balance sheet as an "other liability," and not as part of the ALLL.

are individually evaluated and determined to be impaired,⁹ these estimates should reflect consideration of one of the standard's three impairment measurement methods as of the evaluation date: (1) the present value of expected future cash flows discounted at the loan's effective interest rate,¹⁰ (2) the loan's observable market price, or (3) the fair value of the collateral if the loan is collateral dependent.

An institution may choose the appropriate FAS 114 measurement method on a loan-by-loan basis for an individually impaired loan, except for an impaired collateral-dependent loan. The agencies require impairment of a collateral-dependent loan to be measured using the fair value of collateral method. As defined in FAS 114, a loan is collateral dependent if repayment of the loan is expected to be provided solely by the underlying collateral. In general, any portion of the recorded investment in a collateral-dependent loan (including any capitalized accrued interest, net deferred loan fees or costs, and unamortized premium or discount) in excess of the fair value of the collateral that can be identified as uncollectible, and is therefore deemed a confirmed loss, should be promptly charged off against the ALLL.¹¹

All other loans, including individually evaluated loans determined not to be impaired under FAS 114, should be included in a group of loans that is evaluated for impairment under FAS 5.¹² While an institution may segment its loan portfolio into groups of loans based on a variety of factors, the loans within each group should have similar risk characteristics. For example, a loan that is fully collateralized with risk-free assets should not be grouped with uncollateralized

loans. When estimating credit losses on each group of loans with similar risk characteristics, an institution should consider its historical loss experience on the group, *adjusted for changes in trends, conditions, and other relevant factors* that affect repayment of the loans as of the evaluation date.

For analytical purposes, an institution should attribute portions of the ALLL to loans that it evaluates and determines to be impaired under FAS 114 and to groups of loans that it evaluates collectively under FAS 5. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

Responsibilities of the Board of Directors and Management

Appropriate ALLL Level

Each institution's management is responsible for maintaining the ALLL at an appropriate level and for documenting its analysis according to the standards set forth in the 2001 policy statement. Thus, management should evaluate the ALLL reported on the balance sheet as of the end of each quarter or more frequently if warranted, and charge or credit the PLLL to bring the ALLL to an appropriate level as of each evaluation date. The determination of the amounts of the ALLL and the PLLL should be based on management's current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the evaluation date. Management's evaluation is subject to review by examiners. An institution's failure to analyze the collectibility of the loan portfolio and maintain and support an appropriate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound practice.

In carrying out its responsibility for maintaining an appropriate ALLL, management is expected to adopt and adhere to written policies and procedures that are appropriate to the size of the institution and the nature, scope, and risk of its lending activities. At a minimum, these policies and procedures should ensure that—

- the institution's process for determining an appropriate level for the ALLL is based on a comprehensive, well-documented, and consis-

9. FAS 114 does not specify how an institution should identify loans that are to be evaluated for collectibility nor does it specify how an institution should determine that a loan is impaired. An institution should apply its normal loan review procedures in making those judgments. Refer to the ALLL interpretations for further guidance.

10. The "effective interest rate" on a loan is the rate of return implicit in the loan (that is, the contractual interest rate adjusted for any net deferred loan fees or costs and any premium or discount existing at the origination or acquisition of the loan).

11. For further information, refer to the illustration in Appendix B of the 2001 Policy Statement (the appendix in section 2072.1).

12. An individually evaluated loan that is determined not to be impaired under FAS 114 should be evaluated under FAS 5 when specific characteristics of the loan indicate that it is probable there would be estimated credit losses in a group of loans with those characteristics. For further guidance, refer to the frequently asked questions (FAQs) that were distributed with this policy statement.

tently applied analysis of its loan portfolio.¹³ The analysis should consider all significant factors that affect the collectibility of the portfolio and should support the credit losses estimated by this process.

- the institution has an effective loan review system and controls (including an effective loan classification or credit grading system) that identify, monitor, and address asset quality problems in an accurate and timely manner.¹⁴ To be effective, the institution's loan review system and controls must be responsive to changes in internal and external factors affecting the level of credit risk in the portfolio.
- the institution has adequate data capture and reporting systems to supply the information necessary to support and document its estimate of an appropriate ALLL.
- the institution evaluates any loss estimation models before they are employed and modifies the models' assumptions, as needed, to ensure that the resulting loss estimates are consistent with GAAP. To demonstrate this consistency, the institution should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with the models or other estimation tools. The institution should also document and support any adjustments made to the models or to the output of the models in determining the estimated credit losses.
- the institution promptly charges off loans, or portions of loans, that available information confirms to be uncollectible.
- the institution periodically validates the ALLL methodology. This validation process should include procedures for a review, by a party who is independent of the institution's credit approval and ALLL estimation processes, of the ALLL methodology and its application in order to confirm its effectiveness. A party who

13. As noted in the 2001 Policy Statement, an institution with less complex lending activities and products may find it more efficient to combine a number of procedures while continuing to ensure that the institution has a consistent and appropriate ALLL methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios.

14. Loan review and loan classification or credit grading systems are discussed in attachment 1 of this policy statement. In addition, state member banks should refer to the asset quality standards in the Interagency Guidelines Establishing Standards for Safety and Soundness, which were adopted by the Federal Reserve Board (see Appendix D-1, 12 CFR 208).

is independent of these processes could be the internal audit staff, a risk management unit of the institution, an external auditor (subject to applicable auditor independence standards), or another contracted third party from outside the institution. One party need not perform the entire analysis as the validation can be divided among various independent parties.

The board of directors is responsible for overseeing management's significant judgments and estimates pertaining to the determination of an appropriate ALLL. This oversight should include but is not limited to—

- reviewing and approving the institution's written ALLL policies and procedures at least annually;
- reviewing management's assessment and justification that the loan review system is sound and appropriate for the size and complexity of the institution;
- reviewing management's assessment and justification for the amounts estimated and reported each period for the PLLL and the ALLL; and
- requiring management to periodically validate and, when appropriate, revise the ALLL methodology.

For purposes of the Consolidated Reports of Condition and Income for a Bank (Call Report), an appropriate ALLL (after deducting all loans and portions of loans confirmed loss) should consist only of the following components (as applicable),¹⁵ the amounts of which take into account *all relevant facts and circumstances as of the evaluation date*:

- For loans within the scope of FAS 114 that are individually evaluated and found to be impaired, the associated ALLL should be based upon one of the three impairment measurement methods specified in FAS 114.¹⁶
- For all other loans, including individually evaluated loans determined not to be impaired under FAS 114,¹⁷ the associated ALLL should

15. A component of the ALLL that is labeled "unallocated" is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported and documented.

16. As previously noted, the use of the fair value of collateral method is required for an individually evaluated loan that is impaired if the loan is collateral dependent.

17. See footnote 12.

be measured under FAS 5 and should provide for all estimated credit losses that have been incurred on groups of loans with similar risk characteristics.

- For estimated credit losses from transfer risk on cross-border loans, the impact to the ALLL should be evaluated individually for impaired loans under FAS 114 or evaluated on a group basis under FAS 5. See . . . this policy statement's . . . attachment 2 for further guidance on considerations of transfer risk on cross-border loans.
- For estimated credit losses on accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution's balance sheet, the associated ALLL should be evaluated under FAS 114 or FAS 5 as appropriate, if not already included in one of the preceding components.

Because deposit accounts that are overdrawn (that is, overdrafts) must be reclassified as loans on the balance sheet, overdrawn accounts should be included in one of the first two components above, as appropriate, and evaluated for estimated credit losses.

Determining the appropriate level for the ALLL is inevitably imprecise and requires a high degree of management judgment. Management's analysis should reflect a prudent, conservative, but not excessive ALLL that falls within an acceptable range of estimated credit losses. When a range of losses is determined, institutions should maintain appropriate documentation to support the identified range and the rationale used for determining the best estimate from within the range of loan losses.

As discussed more fully in attachment 1 of this policy statement, it is essential that institutions maintain effective loan review systems. An effective loan review system should work to ensure the accuracy of internal credit classification or grading systems and, thus, the quality of the information used to assess the appropriateness of the ALLL. The complexity and scope of an institution's ALLL evaluation process, loan review system, and other relevant controls should be appropriate for the size of the institution and the nature of its lending activities. The evaluation process should also provide for sufficient flexibility to respond to changes in the factors that affect the collectibility of the portfolio.

Credit losses that arise from the transfer risk associated with an institution's cross-border lending activities require special consideration. In

particular, for banks with cross-border lending exposure, management should determine that the ALLL is appropriate to cover estimated losses from transfer risk associated with this exposure over and above any minimum amount that the Interagency Country Exposure Review Committee requires to be provided in the Allocated Transfer Risk Reserve (or charged off against the ALLL). These estimated losses should meet the criteria for accrual of a loss contingency set forth in GAAP. (See attachment 2 for factors to consider.)

Factors to Consider in the Estimation of Credit Losses

Estimated credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. Normally, an institution should determine the historical loss rate for each group of loans with similar risk characteristics in its portfolio based on its own loss experience for loans in that group. While historical loss experience provides a reasonable starting point for the institution's analysis, historical losses—or even recent trends in losses—do not by themselves form a sufficient basis to determine the appropriate level for the ALLL. Management also should consider those qualitative or environmental factors that are likely to cause estimated credit losses associated with the institution's existing portfolio to differ from historical loss experience, including but not limited to—

- changes in lending policies and procedures, including changes in underwriting standards and collection, charge-off, and recovery practices not considered elsewhere in estimating credit losses;
- changes in international, national, regional, and local economic and business conditions and developments that affect the collectibility of the portfolio, including the condition of various market segments;¹⁸
- changes in the nature and volume of the portfolio and in the terms of loans;
- changes in the experience, ability, and depth

18. Credit loss and recovery experience may vary significantly depending upon the stage of the business cycle. For example, an over reliance on credit loss experience during a period of economic growth will not result in realistic estimates of credit losses during a period of economic downturn.

- of lending management and other relevant staff;
- changes in the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;¹⁹
 - changes in the quality of the institution's loan review system;
 - changes in the value of underlying collateral for collateral-dependent loans;
 - the existence and effect of any concentrations of credit, and changes in the level of such concentrations; and
 - the effect of other external factors such as competition and legal and regulatory requirements on the level of estimated credit losses in the institution's existing portfolio.

In addition, changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses, keeping in mind the characteristics of an institution's loan portfolio. For example, if declining credit quality trends relevant to the types of loans in an institution's portfolio are evident, the ALLL level as a percentage of the portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the portfolio should generally decrease.

Measurement of Estimated Credit Losses

FAS 5. When measuring estimated credit losses on groups of loans with similar risk characteristics in accordance with FAS 5, a widely used method is based on each group's historical net charge-off rate adjusted for the effects of the qualitative or environmental factors discussed previously. As the first step in applying this method, management generally bases the historical net charge-off rates on the "annualized" historical gross loan charge-offs, less recoveries, recorded by the institution on loans in each group.

Methodologies for determining the historical net charge-off rate on a group of loans with similar risk characteristics under FAS 5 can range from the simple average of, or a determi-

nation of the range of, an institution's annual net charge-off experience to more complex techniques, such as migration analysis and models that estimate credit losses.²⁰ Generally, institutions should use at least an "annualized" or twelve-month average net charge-off rate that will be applied to the groups of loans when estimating credit losses. However, this rate could vary. For example, loans with effective lives longer than twelve months often have workout periods over an extended period of time, which may indicate that the estimated credit losses should be greater than that calculated based solely on the annualized net charge-off rate for such loans. These groups may include certain commercial loans as well as groups of adversely classified loans. Other groups of loans may have effective lives shorter than twelve months, which may indicate that the estimated credit losses should be less than that calculated based on the annualized net charge-off rate.

Regardless of the method used, institutions should maintain supporting documentation for the techniques used to develop the historical loss rate for each group of loans. If a range of historical loss rates is developed instead for a group of loans, institutions should maintain documentation to support the identified range and the rationale for determining which rate is the best estimate within the range of loss rates. The rationale should be based on management's assessment of which rate is most reflective of the estimated credit losses in the current loan portfolio.

After determining the appropriate historical loss rate for each group of loans with similar risk characteristics, management should consider those current qualitative or

¹⁹ For banks, adversely classified or graded loans are loans rated "Substandard" (or its equivalent) or worse under its loan classification system.

²⁰ Annual charge-off rates are calculated over a specified time period (for example, three years or five years), which can vary based on a number of factors including the relevance of past periods' experience to the current period or point in the credit cycle. Also, some institutions remove loans that become adversely classified or graded from a group of nonclassified or nongraded loans with similar risk characteristics in order to evaluate the removed loans individually under FAS 114 (if deemed impaired) or collectively in a group of adversely classified or graded loans with similar risk characteristics under FAS 5. In this situation, the net charge-off experience on the adversely classified or graded loans that have been removed from the group of nonclassified or nongraded loans should be included in the historical loss rates for that group of loans. Even though the net charge-off experience on adversely classified or graded loans is included in the estimation of the historical loss rates that will be applied to the group of nonclassified or nongraded loans, the adversely classified or graded loans themselves are no longer included in that group for purposes of estimating credit losses on the group.

environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group's historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate standalone adjustments within the FAS 5 component of the ALLL.²¹ Both methods are consistent with GAAP, provided the adjustments for qualitative or environmental factors are reasonably and consistently determined, are adequately documented, and represent estimated credit losses. For each group of loans, an institution should apply its adjusted historical loss rate, or its historical loss rate and separate standalone adjustments, to the recorded investment in the group when determining its estimated credit losses.

Management must exercise significant judgment when evaluating the effect of qualitative factors on the amount of the ALLL because data may not be reasonably available or directly applicable for management to determine the precise impact of a factor on the collectibility of the institution's loan portfolio as of the evaluation date. Accordingly, institutions should support adjustments to historical loss rates and explain how the adjustments reflect current information, events, circumstances, and conditions in the loss measurements. Management should maintain reasonable documentation to support which factors affected the analysis and the impact of those factors on the loss measurement. Support and documentation includes descriptions of each factor, management's analysis of how each factor has changed over time, which loan groups' loss rates have been adjusted, the amount by which loss estimates have been adjusted for changes in conditions, an explanation of how management estimated the impact, and other available data that supports the reasonableness of the adjustments. Examples of underlying supporting evidence could include, but are not limited to, relevant articles from newspapers and other publications that describe economic events affecting a particular geo-

21. An overall adjustment to a portion of the ALLL that is not attributed to specific segments of the loan portfolio is often labeled "unallocated." Regardless of what a component of the ALLL is labeled, it is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported.

graphic area, economic reports and data, and notes from discussions with borrowers.

There may be times when an institution does not have its own historical loss experience upon which to base its estimate of the credit losses in a group of loans with similar risk characteristics. This may occur when an institution offers a new loan product or when it is a newly established (that is, *de novo*) institution. If an institution has no experience of its own for a loan group, reference to the experience of other enterprises in the same lending business may be appropriate, provided the institution demonstrates that the attributes of the group of loans in its portfolio are similar to those of the loan group in the portfolio providing the loss experience. An institution should only use another enterprise's experience on a short-term basis until it has developed its own loss experience for a particular group of loans.

FAS 114. When determining the FAS 114 component of the ALLL for an individually impaired loan,²² an institution should consider estimated costs to sell the loan's collateral, if any, on a discounted basis, in the measurement of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the institution bases its measure of loan impairment on the present value of expected future cash flows discounted at the loan's effective interest rate, the estimates of these cash flows should be the institution's best estimate based on reasonable and supportable assumptions and projections. All available evidence should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. The likelihood of the possible outcomes should be considered in determining the best estimate of expected future cash flows.

22. As noted in FAS 114, some individually impaired loans have risk characteristics that are unique to an individual borrower and the institution will apply the measurement methods on a loan-by-loan basis. However, some impaired loans may have risk characteristics in common with other impaired loans. An institution may aggregate those loans and may use historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate as a means of measuring impairment of those loans.

Analyzing the Overall Measurement of the ALLL

Institutions also are encouraged to use ratio analysis as a supplemental tool for evaluating the overall reasonableness of the ALLL. Ratio analysis can be useful in identifying divergent trends (compared with an institution's peer group and its own historical experience) in the relationship of the ALLL to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs. Based on such analysis, an institution may identify additional issues or factors that previously had not been considered in the ALLL estimation process, which may warrant adjustments to estimated credit losses. Such adjustments should be appropriately supported and documented.

While ratio analysis, when used prudently, can be helpful as a supplemental check on the reasonableness of management's assumptions and analyses, it is not a sufficient basis for determining the appropriate amount for the ALLL. In particular, because an appropriate ALLL is an institution-specific amount, such comparisons do not obviate the need for a comprehensive analysis of the loan portfolio and the factors affecting its collectibility. Furthermore, it is inappropriate for the board of directors or management to make adjustments to the ALLL when it has been properly computed and supported under the institution's methodology for the sole purpose of reporting an ALLL that corresponds to the peer group median, a target ratio, or a budgeted amount. Institutions that have high levels of risk in the loan portfolio or are uncertain about the effect of possible future events on the collectibility of the portfolio should address these concerns by maintaining higher equity capital and not by arbitrarily increasing the ALLL in excess of amounts supported under GAAP.²³

23. It is inappropriate to use a "standard percentage" as the sole determinant for the amount to be reported as the ALLL on the balance sheet. Moreover, an institution should not simply default to a peer ratio or a "standard percentage" after determining an appropriate level of ALLL under its methodology. However, there may be circumstances when an institution's ALLL methodology and credit risk identification systems are not reliable. Absent reliable data of its own, management may seek data that could be used as a short-term proxy for the unavailable information (for example, an industry average loss rate for loans with similar risk characteristics). This is only appropriate as a short-term remedy until the institution creates a viable system for estimating credit losses

Estimated Credit Losses in Credit Related Accounts

Typically, institutions evaluate and estimate credit losses for off-balance-sheet credit exposures at the same time that they estimate credit losses for loans. While a similar process should be followed to support loss estimates related to off-balance-sheet exposures, these estimated credit losses are not recorded as part of the ALLL. When the conditions for accrual of a loss under FAS 5 are met, an institution should maintain and report as a separate liability account, an allowance that is appropriate to cover estimated credit losses on off-balance-sheet loan commitments, standby letters of credit, and guarantees. In addition, recourse liability accounts (that arise from recourse obligations on any transfers of loans that are reported as sales in accordance with GAAP) should be reported in regulatory reports as liabilities that are separate and distinct from both the ALLL and the allowance for credit losses on off-balance-sheet credit exposures.

When accrued interest and fees are reported separately on an institution's balance sheet from the related loan balances (that is, as other assets), the institution should maintain an appropriate valuation allowance, determined in accordance with GAAP, for amounts that are not likely to be collected unless management has placed the underlying loans in nonaccrual status and reversed previously accrued interest and fees.²⁴

Responsibilities of Examiners

Examiners should assess the credit quality of an institution's loan portfolio, the appropriateness of its ALLL methodology and documentation, and the appropriateness of the reported ALLL in the institution's regulatory reports. In their review and classification or grading of the loan portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio, including the value of any collateral. In reviewing the appropriateness of the ALLL, examiners should do the following:

- Consider the effectiveness of board oversight

within its loan portfolio.

24. See the Call Report instructions for further guidance on placing a loan in nonaccrual status.

as well as the quality of the institution's loan review system and management in identifying, monitoring, and addressing asset quality problems. This will include a review of the institution's loan review function and credit grading system. Typically, this will involve testing a sample of the institution's loans. The sample size generally varies and will depend on the nature or purpose of the examination.²⁵

- Evaluate the institution's ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL, including whether management's assumptions, valuations, and judgments appear reasonable and are properly supported. If a range of credit losses has been estimated by management, evaluate the reasonableness of the range and management's best estimate within the range. In making these evaluations, examiners should ensure that the institution's historical loss experience and all significant qualitative or environmental factors that affect the collectibility of the portfolio (including changes in the quality of the institution's loan review function and the other factors previously discussed) have been appropriately considered and that management has appropriately applied GAAP, including FAS 114 and FAS 5.
- Review management's use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review the appropriateness and reasonableness of the overall level of the ALLL. In some instances this may include a quantitative analysis (for example, using the types of ratio analysis previously discussed) as a preliminary check on the reasonableness of the ALLL. This quantitative analysis should demonstrate whether changes in the key ratios from prior periods are reasonable based on the examiner's knowledge of the

collectibility of loans at the institution and its current environment.

- Review the ALLL amount reported in the institution's regulatory reports and financial statements and ensure these amounts reconcile to its ALLL analyses. There should be no material differences between the consolidated loss estimate, as determined by the ALLL methodology, and the final ALLL balance reported in the financial statements. Inquire about reasons for any material differences between the results of the institution's ALLL analyses and the institution's reported ALLL to determine whether the differences can be satisfactorily explained.
- Review the adequacy of the documentation and controls maintained by management to support the appropriateness of the ALLL.
- Review the interest and fee income accounts associated with the lending process to ensure that the institution's net income is not materially misstated.²⁶

As noted in the "Responsibilities of the Board of Directors and Management" section of this policy statement, when assessing the appropriateness of the ALLL, it is important to recognize that the related process, methodology, and underlying assumptions require a substantial degree of management judgment. Even when an institution maintains sound loan administration and collection procedures and an effective loan review system and controls, its estimate of credit losses is not a single precise amount due to the wide range of qualitative or environmental factors that must be considered.

An institution's ability to estimate credit losses on specific loans and groups of loans should improve over time as substantive information accumulates regarding the factors affecting repayment prospects. Therefore, examiners should generally accept management's estimates when assessing the appropriateness of the institution's reported ALLL, and not seek adjustments to the ALLL, when management has—

- maintained effective loan review systems and controls for identifying, monitoring, and

25. In an examiner's review of an institution's loan review system, the examiner's loan classifications or credit grades may differ from those of the institution's loan review system. If the examiner's evaluation of these differences indicates problems with the loan review system, especially when the loan classification or credit grades assigned by the institution are more liberal than those assigned by the examiner, the institution would be expected to make appropriate adjustments to the assignment of its loan classifications or credit grades to the loan portfolio and to its estimated credit losses. Furthermore, the institution would be expected to improve its loan review system. (This policy statement's attachment 1 discusses effective loan review systems.)

26. As noted previously, accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution's balance sheet should be evaluated for estimated credit losses. The accrual of the interest and fee income should also be considered. Refer to GAAP and the Call Report instructions for further guidance on income recognition.

addressing asset quality problems in a timely manner;

- analyzed all significant qualitative or environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner;
- established an acceptable ALLL evaluation process for both individual loans and groups of loans that meets the GAAP requirements for an appropriate ALLL; and
- incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner's comments should cite any departures from GAAP and any contraventions of this policy statement and the 2001 policy statement, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

ALLL Level Reflected in Regulatory Reports

The agencies believe that an ALLL established in accordance with this policy statement and the 2001 policy statement, as applicable, falls within the range of acceptable estimates determined in accordance with GAAP. When the reported amount of an institution's ALLL is not appropriate, the institution will be required to adjust its ALLL by an amount sufficient to bring the ALLL reported on its Call Report to an appropriate level as of the evaluation date. This adjustment should be reflected in the current period provision or through the restatement of prior period provisions, as appropriate in the circumstances.

Attachment 1 to Policy Statement—Loan Review Systems

The nature of loan review systems may vary based on an institution's size, complexity, loan types, and management practices.²⁷ For example, a loan review system may include components of a traditional loan review function that is independent of the lending function, or it may place some reliance on loan officers. In addition, the use of the term "loan review system" can refer to various responsibilities assigned to credit administration, loan administration, a problem loan workout group, or other areas of an institution. These responsibilities may range from administering the internal problem loan reporting process to maintaining the integrity of the loan classification or credit grading process (for example, ensuring that timely and appropriate changes are made to the loan classifications or credit grades assigned to loans) and coordinating the gathering of the information necessary to assess the appropriateness of the ALLL. Additionally, some or all of this function may be outsourced to a qualified external loan reviewer. Regardless of the structure of the loan review system in an institution, an effective loan review system should have, at a minimum, the following objectives:

- to promptly identify loans with potential credit weaknesses;
- appropriately grade or adversely classify loans, especially those with well-defined credit weaknesses that jeopardize repayment, so that timely action can be taken and credit losses can be minimized;
- identify relevant trends that affect the collectibility of the portfolio and isolate segments of the portfolio that are potential problem areas;
- assess the adequacy of and adherence to

27. The loan review function is not intended to be performed by an institution's internal audit function. However, as discussed in the banking agencies' March 2003 Interagency Policy Statement on the Internal Audit Function and Its Outsourcing, some institutions seek to coordinate the internal audit function with several risk monitoring functions such as loan review. The policy statement notes that coordination of loan review with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better utilize available resources, and enhance the institution's ability to comprehensively manage risk. However, the internal audit function should maintain the ability to independently audit other risk monitoring functions, including loan review, without impairing its independence with respect to these other functions.

internal credit policies and loan administration procedures and to monitor compliance with relevant laws and regulations;

- evaluate the activities of lending personnel including their compliance with lending policies and the quality of their loan approval, monitoring, and risk assessment;
- provide senior management and the board of directors with an objective and timely assessment of the overall quality of the loan portfolio; and
- provide management with accurate and timely credit quality information for financial and regulatory reporting purposes, including the determination of an appropriate ALLL.

Loan Classification or Credit-Grading Systems

The foundation for any loan review system is accurate and timely loan classification or credit grading, which involves an assessment of credit quality and leads to the identification of problem loans. An effective loan classification or credit grading system provides important information on the collectibility of the portfolio for use in the determination of an appropriate level for the ALLL.

Regardless of the type of loan review system employed, an effective loan classification or credit grading framework generally places primary reliance on the institution's lending staff to identify emerging loan problems. However, given the importance and subjective nature of loan classification or credit grading, the judgment of an institution's lending staff regarding the assignment of particular classification or grades to loans should be subject to review by: (1) peers, superiors, or loan committee(s); (2) an independent, qualified part-time or full-time employee(s); (3) an internal department staffed with credit review specialists; or (4) qualified outside credit review consultants. A loan classification or credit grading review that is independent of the lending function is preferred because it typically provides a more objective assessment of credit quality. Because accurate and timely loan classification or credit grading is a critical component of an effective loan review system, each institution should ensure that its loan review system includes the following attributes:

- a formal loan classification or credit grading

system in which loan classifications or credit grades reflect the risk of default and credit losses and for which a written description is maintained, including a discussion of the factors used to assign appropriate classifications or credit grades to loans;²⁸

- an identification or grouping of loans that warrant the special attention of management²⁹ or other designated "watch lists" of loans that management is more closely monitoring;
- documentation supporting the reasons why particular loans merit special attention or received a specific adverse classification or credit grade and management's adherence to approved workout plans;
- a mechanism for direct, periodic, and timely reporting to senior management and the board of directors on the status of loans identified as meriting special attention or adversely classified or graded and the actions taken by management; and
- appropriate documentation of the institution's historical loss experience for each of the groups of loans with similar risk characteristics into which it has segmented its loan portfolio.³⁰

Elements of Loan Reviews

Each institution should have a written policy that is reviewed and approved at least annually by the board of directors to evidence its support of and commitment to maintaining an effective loan review system. The loan review policy should address the following elements that are described in more detail below: the qualifications and independence of loan review person-

28. A bank may have a loan classification or credit grading system that differs from the framework used by the banking agencies. However, each institution that maintains a loan classification or credit grading system that differs from the banking agencies' framework should maintain documentation that translates its system into the framework used by the banking agencies. This documentation should be sufficient to enable examiners to reconcile the totals for the various loan classifications or credit grades under the institution's system to the banking agencies' categories.

29. For banks, loans that have potential weaknesses that deserve management's close attention are designated "special mention" loans.

30. In particular, institutions with large and complex loan portfolios are encouraged to maintain records of their historical loss experience for credits in each of the categories in their loan classification or credit grading framework. For banks, these categories should either be those used by, or should be categories that can be translated into those used by, the banking agencies.

nel; the frequency, scope, and depth of reviews; the review of findings and follow-up; and work-paper and report distribution.

Qualifications of loan review personnel. Persons involved in the loan review or credit grading function should be qualified based on their level of education, experience, and extent of formal credit training. They should be knowledgeable in both sound lending practices and the institution's lending guidelines for the types of loans offered by the institution. In addition, they should be knowledgeable of relevant laws and regulations affecting lending activities.

Independence of loan review personnel. An effective loan review system uses both the initial identification of emerging problem loans by loan officers and other line staff, and the credit review of loans by individuals independent of the credit approval process. An important requirement for an effective system is to place responsibility on loan officers and line staff for continuous portfolio analysis and prompt identification and reporting of problem loans. Because of frequent contact with borrowers, loan officers and line staff can usually identify potential problems before they become apparent to others. However, institutions should be careful to avoid overreliance upon loan officers and line staff for identification of problem loans. Institutions should ensure that loans are also reviewed by individuals who do not have control over the loans they review and who are not part of, and are not influenced by anyone associated with, the loan approval process.

While larger institutions typically establish a separate department staffed with credit review specialists, cost and volume considerations may not justify such a system in smaller institutions. In some smaller institutions, an independent committee of outside directors may fill this role. Whether or not the institution has an independent loan review department, the loan review function should report *directly* to the board of directors or a committee thereof (although senior management may be responsible for appropriate administrative functions so long as they do not compromise the independence of the loan review function).

Some institutions may choose to outsource the credit review function to an independent outside party. However, the responsibility for maintaining a sound loan review process cannot be delegated to an outside party. Therefore,

institution personnel who are independent of the lending function should assess control risks, develop the credit review plan, and ensure appropriate follow-up of findings. Furthermore, the institution should be mindful of special requirements concerning independence should it consider outsourcing the credit review function to its external auditor.

Frequency of reviews. Loan review personnel should review significant credits³¹ at least annually, upon renewal, or more frequently when internal or external factors indicate a potential for deteriorating credit quality in a particular loan, loan product, or group of loans. Optimally, the loan review function can be used to provide useful continual feedback on the effectiveness of the lending process in order to identify any emerging problems. A system of ongoing or periodic portfolio reviews is particularly important to the ALLL determination process because this process is dependent on the accurate and timely identification of problem loans.

Scope of reviews. Reviews by loan review personnel should cover all loans that are significant and other loans that meet certain criteria. Management should document the scope of its reviews and ensure that the percentage of the portfolio selected for review provides reasonable assurance that the results of the review have identified any credit quality deterioration and other unfavorable trends in the portfolio and reflect its quality as a whole. Management should also consider industry standards for loan review coverage consistent with the size and complexity of its loan portfolio and lending operations to verify that the scope of its reviews is appropriate. The institution's board of directors should approve the scope of loan reviews on an annual basis or when any significant interim changes to the scope of reviews are made. Reviews typically include—

- loans over a predetermined size;
- a sufficient sample of smaller loans;
- past due, nonaccrual, renewed, and restructured loans;
- loans previously adversely classified or graded and loans designated as warranting the special

31. Significant credits in this context may or may not be loans individually evaluated for impairment under FAS 114.

attention of management³² by the institution or its examiners;

- insider loans; and
- loans constituting concentrations of credit risk and other loans affected by common repayment factors.

Depth of reviews. Reviews should analyze a number of important aspects of the loans selected for review, including—

- credit quality, including underwriting and borrower performance;
- sufficiency of credit and collateral documentation;
- proper lien perfection;
- proper approval by the loan officer and loan committee(s);
- adherence to any loan agreement covenants;
- compliance with internal policies and procedures (such as aging, nonaccrual, and classification or grading policies) and laws and regulations; and
- appropriate identification of individually impaired loans, measurement of estimated loan impairment, and timeliness of charge-offs.

Furthermore, these reviews should consider the appropriateness and timeliness of the identification of problem loans by loan officers.

Review of findings and follow-up. Loan review personnel should discuss all noted deficiencies and identified weaknesses and any existing or planned corrective actions, including time frames for correction, with appropriate loan officers and department managers. Loan review personnel should then review these findings and corrective actions with members of senior management. All noted deficiencies and identified weaknesses that remain unresolved beyond the scheduled time frames for correction should be promptly reported to senior management and the board of directors.

Credit classification or grading differences between loan officers and loan review personnel should be resolved according to a prearranged process. That process may include formal appeals procedures and arbitration by an independent party or may require default to the assigned classification or grade that indicates lower credit quality. If an outsourced credit review concludes

that a borrower is less creditworthy than is perceived by the institution, the lower credit quality classification or grade should prevail unless internal parties identify additional information sufficient to obtain the concurrence of the outside reviewer or arbiter on the higher credit quality classification or grade.

Workpaper and report distribution. The loan review function should prepare a list of all loans reviewed (including the date of the review) and documentation (including a summary analysis) that substantiates the grades or classifications assigned to the loans reviewed. A report that summarizes the results of the loan review should be submitted to the board of directors at least quarterly.³³ In addition to reporting current credit quality findings, comparative trends can be presented to the board of directors that identify significant changes in the overall quality of the portfolio. Findings should also address the adequacy of and adherence to internal policies and procedures, as well as compliance with laws and regulations, in order to facilitate timely correction of any noted deficiencies.

Attachment 2 to the Policy Statement—International Transfer Risk Considerations

With respect to international transfer risk, an institution with cross-border exposures should support its determination of the appropriateness of its ALLL by performing an analysis of the transfer risk, commensurate with the size and composition of the institution's exposure to each country. Such analyses should take into consideration the following factors, as appropriate:

- the institution's loan portfolio mix for each country (for example, types of borrowers, loan maturities, collateral, guarantees, special credit facilities, and other distinguishing factors);
- the institution's business strategy and its debt management plans for each country;
- each country's balance of payments position;
- each country's level of international reserves;
- each country's established payment performance record and its future debt servicing prospects;

³³ The board of directors should be informed more frequently than quarterly when material adverse trends are noted.

³² See footnote 29.

-
- each country's socio-political situation and its effect on the adoption or implementation of economic reforms, in particular those affecting debt servicing capacity;
 - each country's current standing with multilateral and official creditors;
 - the status of each country's relationships with other creditors, including institutions; and
 - the most recent evaluations distributed by the banking agencies' Interagency Country Exposure Review Committee.

Allowance for Loan and Lease Losses

Examination Objectives

Effective date November 1995

Section 2070.2

1. To determine if the policies, practices, procedures and internal controls regarding loan and lease losses and the allowance for loan and lease losses are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Allowance for Loan and Lease Losses

Examination Procedures

Effective date November 1999

Section 2070.3

1. If selected for implementation, complete or update the Allowance for Loan and Lease Losses section of the Internal Control Questionnaire. To do so, obtain a description of the methods and procedures employed by management to determine the adequacy of the bank's allowance for loan and lease losses and the supporting records maintained.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures and obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if appropriate corrections have been made.
4. Obtain or prepare an analysis of the allowance for loan and lease losses (valuation reserve) and the related deferred tax and capital accounts (in prior years referred to as the deferred tax and contingency portions of the reserve) for the period from the last examination date to the current one. Agree beginning and ending balances to the general ledger and review the appropriateness of changes in those accounts.
5. Obtain from the appropriate examiner a list of problem loans as of the examination date, that is, loans which are or may become less than 100 percent collectible, possess more than the normal degree of credit risk, are past due, or require more than normal management supervision.
6. Obtain from the appropriate examiner a detailed list of classified loans identified in the various loan departments.
7. Determine whether the reserve for possible loan losses has been adjusted through the most recent quarter and, if not, suggest that management make such adjustment.
8. If, in the opinion of management, significant changes in the collectibility of loans have occurred since the allowance was last adjusted, suggest that management adjust the allowance through examination date.
9. Evaluate management's determination of the amount necessary to adequately provide for estimated loan losses as of the examination date by considering the following:
 - a. known probable losses as determined by a review of the lists of loans obtained in steps 5 and 6 and other pertinent information
 - b. information included in the Uniform Bank Performance Report including—
 - historical losses as a percentage of loans outstanding and other relevant factors; and
 - comparison of the allowance ratios of banks of similar loan portfolio size and composition
 - c. other procedures necessary in the circumstances
10. Review the following items with appropriate management personnel, or prepare a memo to other examining personnel, for their use in reviewing with management:
 - a. internal control exceptions and deficiencies in or noncompliance with written policies, practices, and procedures
 - b. uncorrected audit deficiencies
 - c. inadequate allowance for possible loan and lease losses, if any
11. Request that management make appropriate adjustments to the allowance for loan and lease losses.
 - a. Determine the materiality of the change and the need to file amended financial reports.
 - b. Provide information to the examiner reviewing regulatory reports, if appropriate.
12. Prepare comments for the examination report regarding the allowance for loan and lease losses, and include any deficiencies reviewed with management and any remedial actions recommended.
13. Update the workpapers with any information that will facilitate future examinations.

Allowance for Loan and Lease Losses

Internal Control Questionnaire

Effective date December 1986

Section 2070.4

Review the bank's internal controls, policies, practices and procedures relating to the allowance for loan and lease losses (valuation reserve) and the determination of its adequacy. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow-charts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies which:
 - a. Establish criteria for determining when a loan is to be charged-off?
 - b. Establish procedures for charging off loans?
 - c. Establish procedures for periodically reviewing and documenting the adequacy of the valuation portion of the allowance?
 - d. Define collection efforts to be undertaken after a loan is charged-off?

LOAN CHARGE-OFFS

- *2. Is the preparation and posting of any subsidiary records of loans charged-off performed or reviewed by persons who do not also:
 - a. Issue official checks and drafts?
 - b. Handle cash?
- *3. Are all loans charged-off reviewed and approved by the board of directors as evidenced by the minutes of board meetings?
- *4. Are notes for loans charged-off maintained under dual custody?
5. Are collection efforts continued for loans charged-off until the potential for recovery is exhausted?
6. Are periodic progress reports prepared and reviewed by appropriate management personnel for all loans charged-off for which collection efforts are continuing?

7. Are adequate procedures in effect relative to recoveries?

OTHER

- *8. Does management review the adequacy of the valuation portion of the allowance and make necessary adjustments prior to preparing public financial statements (at a minimum, on a quarterly basis)?
9. Does management's review encompass and give adequate consideration to:
 - a. Past loan loss experience and other pertinent historical data?
 - b. Assessment of the effectiveness of lending policies and procedures?
 - c. Identification, on an individual loan basis, of significant potential weaknesses within the current loan portfolio and an estimate of related amount of loss?
 - d. Changes in the character of the loan portfolio?
 - e. Current economic conditions?
 - f. Amount of past-due loans on which interest is not being collected in accordance with the terms of the loans, and loans whose terms have been modified by reducing interest rates or deferring interest?
 - g. Other information appropriate to the circumstances (if so, explain briefly)?
10. Does management retain documentation of their review?
11. Is accrued interest on loans charged-off also charged-off against the allowance account or reversed against interest income, as appropriate?

CONCLUSION

12. Is the foregoing information considered an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

13. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

OVERVIEW

A supplemental interagency Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions¹ was issued by the Federal Financial Institutions Examination Council (FFIEC) on July 2, 2001.² The policy statement clarifies the agencies' expectations for documentation that supports the ALLL methodology. Additionally, the statement emphasizes the need for appropriate ALLL policies and procedures, which should include an effective loan-review system. The guidance also provides examples of appropriate supporting documentation, as well as illustrations on how to implement this guidance. The policy statement, by its terms, applies only to depository institutions insured by the Federal Deposit Insurance Corporation. Examiners should apply the policy during the examination of state member banks and their subsidiaries. (See SR-01-17.)

The guidance requires that a financial institution's ALLL methodology be in accordance with generally accepted accounting principles (GAAP) and all outstanding supervisory guidance. An ALLL methodology should be systematic, consistently applied, and auditable. The methodology should be validated periodically and modified to incorporate new events or findings, as needed. The guidance specifies that management, under the direction of the board of directors, should implement appropriate procedures and controls to ensure compliance with the institution's ALLL policies and procedures. Institution management should (1) segment the portfolio to evaluate credit risks; (2) select loss rates that best reflect the probable loss; and (3) be responsive to changes in the organization, the economy, or the lending environment by changing the methodology, when appropriate. Furthermore, supporting information should be included on summary schedules, whenever feasible. Under this policy, institutions with less complex loan products or portfolios, such as community banks, may use a more streamlined approach to implement this guidance.

The policy statement is consistent with the Federal Reserve's long-standing policy to promote strong internal controls over an institution's ALLL process. In this regard, the new policy statement recognizes that determining an appropriate allowance involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. In accordance with GAAP, an institution should record its best estimate within the range of credit losses.

The policy statement is provided below. Some wording has been slightly modified for this manual, as indicated by asterisks or text enclosed in brackets. Some footnotes have also been renumbered.

2001 POLICY STATEMENT ON ALLL METHODOLOGIES AND DOCUMENTATION

Boards of directors of banks * * * are responsible for ensuring that their institutions have controls in place to consistently determine the allowance for loan and lease losses (ALLL) in accordance with the institutions' stated policies and procedures, generally accepted accounting principles (GAAP), and ALLL supervisory guidance.³ To fulfill this responsibility, boards of directors instruct management to develop and maintain an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provisions for loan losses. Management should create and implement suitable policies and procedures to communicate the ALLL process internally to all applicable personnel. Regardless of who develops and implements these policies, procedures, and underlying controls, the board of directors should assure themselves that the policies specifically address the institution's unique goals, systems, risk profile, personnel, and other resources before approving them. Additionally, by creating an environment that encourages personnel to fol-

1. See 66 *Fed. Reg.* 35629–35639 (July 6, 2001).

2. The guidance was developed in consultation with Securities and Exchange Commission staff, who are issuing parallel guidance in the form of Staff Accounting Bulletin No. 102.

3. The actual policy statement includes a bibliography that lists applicable ALLL GAAP guidance, interagency statements, and other reference materials that may assist in understanding and implementing an ALLL in accordance with GAAP. See the appendix for additional information on applying GAAP to determine the ALLL.

low these policies and procedures, management improves procedural discipline and compliance.

The determination of the amounts of the ALLL and provisions for loan and lease losses should be based on management's current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the reporting date. The amounts reported each period for the provision for loan and lease losses and the ALLL should be reviewed and approved by the board of directors. To ensure the methodology remains appropriate for the institution, the board of directors should have the methodology periodically validated and, if appropriate, revised. Further, the audit committee⁴ should oversee and monitor the internal controls over the ALLL-determination process.⁵

The [Federal Reserve and other] banking agencies⁶ have long-standing examination policies that call for examiners to review an institution's lending and loan-review functions and recommend improvements, if needed. Additionally, in 1995 and 1996, the banking agencies adopted interagency guidelines establishing standards for safety and soundness, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act).⁷ The interagency asset-quality guidelines and [this guidance will assist] an institution in estimating and establishing a sufficient ALLL supported by adequate documentation, as required under the FDI Act. Additionally, the guidelines require operational and managerial standards that are appropriate for an institution's size and the nature and scope of its activities.

For financial-reporting purposes, including regulatory reporting, the provision for loan and lease losses and the ALLL must be determined

in accordance with GAAP. GAAP requires that allowances be well documented, with clear explanations of the supporting analyses and rationale.⁸ This [2001] policy statement describes but does not increase the documentation requirements already existing within GAAP. Failure to maintain, analyze, or support an adequate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound banking practice.⁹

This guidance [the 2001 policy statement] applies equally to all institutions, regardless of the size. However, institutions with less complex lending activities and products may find it more efficient to combine a number of procedures (e.g., information gathering, documentation, and internal-approval processes) while continuing to ensure the institution has a consistent and appropriate methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios. For example, simplified documentation can include spreadsheets, checklists, and other summary documents that many institutions currently use. Illustrations A and C provide specific examples of how less complex institutions may determine and document portions of their loan-loss allowance.

Documentation Standards

Appropriate written supporting documentation for the loan-loss provision and allowance facili-

4. All institutions are encouraged to establish audit committees; however, at small institutions without audit committees, the board of directors retains this responsibility.

5. Institutions and their auditors should refer to Statement on Auditing Standards No. 61, "Communication with Audit Committees" (as amended by Statement on Auditing Standards No. 90, "Audit Committee Communications"), which requires certain discussions between the auditor and the audit committee. These discussions should include items, such as accounting policies and estimates, judgments, and uncertainties that have a significant impact on the accounting information included in the financial statements.

6. The [other] banking agencies are the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

7. Institutions should refer to the guidelines *** for state member banks, appendix D to part 208***.

8. The documentation guidance within this [2001] policy statement is predominantly based upon the GAAP guidance from Financial Accounting Standards Board (FASB) Statement No. 5 and No. 114 (FAS 5 and FAS 114, respectively); Emerging Issues Task Force Topic No. D-80 (EITF Topic D-80 and attachments), "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio" (which includes the *Viewpoints* article—an article issued in 1999 by FASB staff providing guidance on certain issues regarding the ALLL, particularly on the application of FAS 5 and FAS 114 and how these statements interrelate); Chapter 7, "Credit Losses," the American Institute of Certified Public Accountants' (AICPA) Audit and Accounting Guide, *Banks and Savings Institutions*, 2000 edition (AICPA Audit Guide); and the Securities and Exchange Commission's (SEC) Financial Reporting Release No. 28 (FRR 28).

9. Failure to maintain adequate supporting documentation does not relieve an institution of its obligation to record an appropriate ALLL.

tates review of the ALLL process and reported amounts, builds discipline and consistency into the ALLL-determination process, and improves the process for estimating loan and lease losses by helping to ensure that all relevant factors are appropriately considered in the ALLL analysis. An institution should document the relationship between the findings of its detailed review of the loan portfolio and the amount of the ALLL and the provision for loan and lease losses reported in each period.¹⁰

At a minimum, institutions should maintain written supporting documentation for the following decisions, strategies, and processes:

- policies and procedures—
 - over the systems and controls that maintain an appropriate ALLL and
 - over the ALLL methodology
- loan-grading system or process
- summary or consolidation of the ALLL balance
- validation of the ALLL methodology
- periodic adjustments to the ALLL process

Policies and Procedures

Financial institutions utilize a wide range of policies, procedures, and control systems in their ALLL process. Sound policies should be appropriately tailored to the size and complexity of the institution and its loan portfolio.

In order for an institution's ALLL methodology to be effective, the institution's written policies and procedures for the systems and controls that maintain an appropriate ALLL should address but not be limited to—

- the roles and responsibilities of the institution's departments and personnel (including the lending function, credit review, financial reporting, internal audit, senior management, audit committee, board of directors, and others, as applicable) who determine, or review, as applicable, the ALLL to be reported in the financial statements;
- the institution's accounting policies for loans, [leases, and their loan losses], including the

policies for charge-offs and recoveries and for estimating the fair value of collateral, where applicable;

- the description of the institution's systematic methodology, which should be consistent with the institution's accounting policies for determining its ALLL;¹¹ and
- the system of internal controls used to ensure that the ALLL process is maintained in accordance with GAAP and supervisory guidance.

An internal-control system for the ALLL-estimation process should—

- include measures to provide assurance regarding the reliability and integrity of information and compliance with laws, regulations, and internal policies and procedures;
- reasonably assure that the institution's financial statements (including regulatory reports) are prepared in accordance with GAAP and ALLL supervisory guidance;¹² and
- include a well-defined loan-review process containing—
 - an effective loan-grading system that is consistently applied, identifies differing risk characteristics and loan-quality problems accurately and in a timely manner, and prompts appropriate administrative actions;
 - sufficient internal controls to ensure that all relevant loan-review information is appropriately considered in estimating losses. This includes maintaining appropriate reports, details of reviews performed, and identification of personnel involved; and
 - clear formal communication and coordination between an institution's credit-administration function, financial-reporting group, management, board of directors,

11. Further explanation is presented in the "Methodology" section that appears below.

12. In addition to the supporting documentation requirements for financial institutions, as described in interagency asset-quality guidelines, public companies are required to comply with the books and records provisions of the Securities Exchange Act of 1934 (Exchange Act). Under sections 13(b)(2)–(7) of the Exchange Act, registrants must make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of assets of the registrant. Registrants also must maintain internal accounting controls that are sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with GAAP. See also SEC Staff Accounting Bulletin No. 99, *Materiality*.

10. This position is fully described in the SEC's FRR 28, in which the SEC indicates that the books and records of public companies engaged in lending activities should include documentation of the rationale supporting each period's determination that the ALLL and provision amounts reported were adequate.

and others who are involved in the ALLL-determination or -review process, as applicable (e.g., written policies and procedures, management reports, audit programs, and committee minutes).

Methodology

An ALLL methodology is a system that an institution designs and implements to reasonably estimate loan and lease losses as of the financial statement date. It is critical that ALLL methodologies incorporate management's current judgments about the credit quality of the loan portfolio through a disciplined and consistently applied process.

An institution's ALLL methodology is influenced by institution-specific factors, such as an institution's size, organizational structure, business environment and strategy, management style, loan-portfolio characteristics, loan-administration procedures, and management information systems. However, there are certain common elements an institution should incorporate in its ALLL methodology. A summary of common elements is provided in [the appendix].¹³

Documentation of ALLL Methodology in Written Policies and Procedures

An institution's written policies and procedures should describe the primary elements of the institution's ALLL methodology, including portfolio segmentation and impairment measurement. In order for an institution's ALLL methodology to be effective, the institution's written policies and procedures should describe the methodology—

- for segmenting the portfolio:
 - how the segmentation process is performed (i.e., by loan type, industry, risk rates, etc.),
 - when a loan-grading system is used to segment the portfolio:
 - the definitions of each loan grade,
 - a reconciliation of the internal loan grades to supervisory loan grades, and
 - the delineation of responsibilities for the loan-grading system.

- for determining and measuring impairment under FAS 114:
 - the methods used to identify loans to be analyzed individually;
 - for individually reviewed loans that are impaired, how the amount of any impairment is determined and measured, including—
 - procedures describing the impairment-measurement techniques available and
 - steps performed to determine which technique is most appropriate in a given situation.
 - the methods used to determine whether and how loans individually evaluated under FAS 114, but not considered to be individually impaired, should be grouped with other loans that share common characteristics for impairment evaluation under FAS 5.
- for determining and measuring impairment under FAS 5—
 - how loans with similar characteristics are grouped to be evaluated for loan collectibility (such as loan type, past-due status, and risk);
 - how loss rates are determined (e.g., historical loss rates adjusted for environmental factors or migration analysis) and what factors are considered when establishing appropriate time frames over which to evaluate loss experience; and
 - descriptions of qualitative factors (e.g., industry, geographical, economic, and political factors) that may affect loss rates or other loss measurements.

The supporting documents for the ALLL may be integrated in an institution's credit files, loan-review reports or worksheets, board of directors' and committee meeting minutes, computer reports, or other appropriate documents and files.

ALLL Under FAS 114

An institution's ALLL methodology related to FAS 114 loans begins with the use of its normal loan-review procedures to identify whether a loan is impaired as defined by the accounting standard. Institutions should document—

- the method and process for identifying loans to be evaluated under FAS 114 and

¹³ Also, refer to paragraph 7.05 of the AICPA Audit Guide.

- the analysis that resulted in an impairment decision for each loan and the determination of the impairment-measurement method to be used (i.e., present value of expected future cash flows, fair value of collateral less costs to sell, or the loan's observable market price).

Once an institution has determined which of the three available measurement methods to use for an impaired loan under FAS 114, it should maintain supporting documentation as follows:

- When using the present-value-of-expected-future-cash-flows method—
 - the amount and timing of cash flows,
 - the effective interest rate used to discount the cash flows, and
 - the basis for the determination of cash flows, including consideration of current environmental factors and other information reflecting past events and current conditions.
- When using the fair-value-of-collateral method—
 - how fair value was determined, including the use of appraisals, valuation assumptions, and calculations,
 - the supporting rationale for adjustments to appraised values, if any,
 - the determination of costs to sell, if applicable, and

- appraisal quality, and the expertise and independence of the appraiser.
- When using the observable-market-price-of-a-loan method—
 - the amount, source, and date of the observable market price.

Illustration A describes a practice used by a small financial institution to document its FAS 114 measurement of impairment using a comprehensive worksheet.¹⁴ [Examples 1 and 2 provide examples of applying and documenting impairment-measurement methods under FAS 114. Some loans that are evaluated individually for impairment under FAS 114 may be fully collateralized and therefore require no ALLL. Example 3 presents an institution whose loan portfolio includes fully collateralized loans. It describes the documentation maintained by that institution to support its conclusion that no ALLL was needed for those loans.]

14. The [referenced] illustrations are presented to assist institutions in evaluating how to implement the guidance provided in this document. The methods described in the illustrations may not be suitable for all institutions and are not considered required processes or actions. For additional descriptions of key aspects of ALLL guidance, a series of [numbered examples is provided. These examples were included in appendix A of the policy statement as questions and answers. The wording of the examples has been slightly modified for this format.]

Illustration A

Documenting an ALLL Under FAS 114

Comprehensive worksheet for the impairment-measurement process

A small institution utilizes a comprehensive worksheet for each loan being reviewed individually under FAS 114. Each worksheet includes a description of why the loan was selected for individual review, the impairment-measurement technique used, the measurement calculation, a comparison to the current loan balance, and the amount of the ALLL for that loan. The rationale for the impairment-measurement technique used (e.g., present value of expected future cash flows, observable market price of the loan, fair value of the collateral) is also described on the worksheet.

Example 1: ALLL Under FAS 114—Measuring and Documenting Impairment

Facts. Approximately one-third of Institution A's commercial loan portfolio consists of large-balance, nonhomogeneous loans. Due to their large individual balances, these loans meet the criteria under Institution A's policies and procedures for individual review for impairment under FAS 114. Upon review of the large-balance loans, Institution A determines that certain of the loans are impaired as defined by FAS 114.

Analysis. For the commercial loans reviewed under FAS 114 that are individually impaired, Institution A should measure and document the impairment on those loans. For those loans that are reviewed individually under FAS 114 and considered individually impaired, Institution A must use one of the methods for measuring impairment that is specified by FAS 114 (that is, the present value of expected future cash flows,

the loan's observable market price, or the fair value of collateral).

An impairment-measurement method other than the methods allowed by FAS 114 cannot be used. For the loans considered individually impaired under FAS 114, under the circumstances described above, it would not be appropriate for Institution A to choose a measurement method not prescribed by FAS 114. For example, it would not be appropriate to measure loan impairment by applying a loss rate to each loan based on the average historical loss percentage for all of its commercial loans for the past five years.

Institution A should maintain, as sufficient, objective evidence, written documentation to support its measurement of loan impairment under FAS 114. If it uses the present value of expected future cash flows to measure impairment of a loan, it should document (1) the amount and timing of cash flows, (2) the effective interest rate used to discount the cash flows, and (3) the basis for the determination of cash flows, including consideration of current environmental factors¹⁵ and other information reflecting past events and current conditions. If Institution A uses the fair value of collateral to measure impairment, it should document (1) how it determined the fair value, including the use of appraisals, valuation assumptions and calculations; (2) the supporting rationale for adjustments to appraised values, if any, and the determination of costs to sell, if applicable; (3) appraisal quality; and (4) the expertise and independence of the appraiser. Similarly, Institution A should document the amount, source, and date of the observable market price of a loan, if that method of measuring loan impairment is used.

*Example 2: ALLL Under FAS 114—
Measuring Impairment for a
Collateral-Dependent Loan*

Facts. Institution B has a \$10 million loan outstanding to Company X that is secured by real estate, which Institution B individually evaluates under FAS 114 due to the loan's size. Company X is delinquent in its loan payments under the terms of the loan agreement. Accordingly, Institution B determines that its loan to

Company X is impaired, as defined by FAS 114. Because the loan is collateral dependent, Institution B measures impairment of the loan based on the fair value of the collateral. Institution B determines that the most recent valuation of the collateral was performed by an appraiser 18 months ago and, at that time, the estimated value of the collateral (fair value less costs to sell) was \$12 million.

Institution B believes that certain of the assumptions that were used to value the collateral 18 months ago do not reflect current market conditions and, therefore, the appraiser's valuation does not approximate current fair value of the collateral. Several buildings, which are comparable to the real estate collateral, were recently completed in the area, increasing vacancy rates, decreasing lease rates, and attracting several tenants away from the borrower. Accordingly, credit-review personnel at Institution B adjust certain of the valuation assumptions to better reflect the current market conditions as they relate to the loan's collateral.¹⁶ After adjusting the collateral-valuation assumptions, the credit-review department determines that the current estimated fair value of the collateral, less costs to sell, is \$8 million. Given that the recorded investment in the loan is \$10 million, Institution B concludes that the loan is impaired by \$2 million and records an allowance for loan losses of \$2 million.

Analysis. Institution B should maintain documentation to support its determination of the allowance for loan losses of \$2 million for the loan to Company X. It should document that it measured impairment of the loan to Company X by using the fair value of the loan's collateral, less costs to sell, which it estimated to be \$8 million. This documentation should include (1) the institution's rationale and basis for the \$8 million valuation, including the revised valuation assumptions it used; (2) the valuation calculation; and (3) the determination of costs to sell, if applicable. Because Institution B arrived at the valuation of \$8 million by modifying an earlier appraisal, it should document its rationale and basis for the changes it made to the valuation assumptions that resulted in the collateral value declining from \$12 million 18

15. Question 16 in Exhibit D-80A of EITF Topic D-80 and [its] attachments indicates that environmental factors include existing industry, geographical, economic, and political factors.

16. When reviewing collateral-dependent loans, Institution B may often find it more appropriate to obtain an updated appraisal to estimate the effect of current market conditions on the appraised value instead of internally estimating an adjustment.

months ago to \$8 million in the current period.¹⁷

Example 3: ALLL Under FAS 114—Fully Collateralized Loans

Facts. Institution C has \$10 million in loans that are fully collateralized by highly rated debt securities with readily determinable market values. The loan agreement for each of these loans requires the borrower to provide qualifying collateral sufficient to maintain a loan-to-value ratio with sufficient margin to absorb volatility in the securities' market prices. Institution C's collateral department has physical control of the debt securities through safekeeping arrangements. In addition, Institution C perfected its security interest in the collateral when the funds were originally distributed. On a quarterly basis, Institution C's credit-administration function determines the market value of the collateral for each loan using two independent market quotes and compares the collateral value to the loan carrying value. If there are any collateral deficiencies, Institution C notifies the borrower and requests that the borrower immediately remedy the deficiency. Due in part to its efficient operation, Institution C has historically not incurred any material losses on these loans. Institution C believes these loans are fully collateralized and therefore does not maintain any ALLL balance for these loans.

Analysis. To adequately support its determina-

17. In accordance with the FFIEC's *Federal Register* notice, Implementation Issues Arising from FASB No. 114, "Accounting by Creditors for Impairment of a Loan," published February 10, 1995 (60 *Fed. Reg.* 7966, February 10, 1995), impaired, collateral-dependent loans must be reported at the fair value of collateral, less costs to sell, in regulatory reports. This treatment is to be applied to all collateral-dependent loans, regardless of type of collateral.

tion that no allowance is needed for this group of loans, Institution C must maintain the following documentation:

- The management summary of the ALLL must include documentation indicating that, in accordance with the institution's ALLL policy, (1) Institution C has verified the collateral protection on these loans, (2) no probable loss has been incurred, and (3) no ALLL is necessary.
- The documentation in Institution C's loan files must include (1) the two independent market quotes obtained each quarter for each loan's collateral amount, (2) the documents evidencing the perfection of the security interest in the collateral and other relevant supporting documents, and (3) Institution C's ALLL policy, including guidance for determining when a loan is considered "fully collateralized," which would not require an ALLL. Institution C's policy should require the following factors to be considered and fully documented:
 - volatility of the market value of the collateral
 - recency and reliability of the appraisal or other valuation
 - recency of the institution's or third party's inspection of the collateral
 - historical losses on similar loans
 - confidence in the institution's lien or security position including appropriate—
 - type of security perfection (e.g., physical possession of collateral or secured filing);
 - filing of security perfection (i.e., correct documents and with the appropriate officials);
 - relationship to other liens; and
 - other factors as appropriate for the loan type.

ALLL Under FAS 5

Segmenting the Portfolio

For loans evaluated on a group basis under FAS 5, management should segment the loan portfolio by identifying risk characteristics that are common to groups of loans. Institutions typically decide how to segment their loan portfolios based on many factors, which vary with their business strategies as well as their information system capabilities. Smaller institutions

that are involved in less complex activities often segment the portfolio into broad loan categories. This method of segmenting the portfolio is likely to be appropriate in only small institutions offering a narrow range of loan products. Larger institutions typically offer a more diverse and complex mix of loan products. Such institutions may start by segmenting the portfolio into major loan types but typically have more detailed information available that allows them to further segregate the portfolio into product-line segments based on the risk characteristics of each

portfolio segment. Regardless of the segmentation method used, an institution should maintain documentation to support its conclusion that the loans in each segment have similar attributes or characteristics.

As economic and other business conditions change, institutions often modify their business

strategies, which may result in adjustments to the way in which they segment their loan portfolio for purposes of estimating loan losses. Illustration B presents an example in which an institution refined its segmentation method to more effectively consider risk factors and maintains documentation to support this change.

Illustration B

Documenting Segmenting Practices

Documenting a refinement in a segmentation method

An institution with a significant portfolio of consumer loans performed a review of its ALLL methodology. The institution had determined its ALLL based upon historical loss rates in the overall consumer portfolio. The ALLL methodology was validated by comparing actual loss rates (charge-offs) for the past two years to the estimated loss rates. During this process, the

institution decided to evaluate loss rates on an individual-product basis (e.g., auto loans, unsecured loans, or home equity loans). This analysis disclosed significant differences in the loss rates on different products. With this additional information, the methodology was amended in the current period to segment the portfolio by product, resulting in a better estimation of the loan losses associated with the portfolio. To support this change in segmentation practice, the credit-review committee records contain the analysis that was used as a basis for the change and the written report describing the need for the change.

Institutions use a variety of documents to support the segmentation of their portfolios. Some of these documents include—

- loan trial balances by categories and types of loans,
- management reports about the mix of loans in the portfolio,
- delinquency and nonaccrual reports, and
- a summary presentation of the results of an internal or external loan-grading review.

Reports generated to assess the profitability of a loan-product line may be useful in identifying areas in which to further segment the portfolio.

Estimating Loss on Groups of Loans

Based on the segmentation of the loan portfolio, an institution should estimate the FAS 5 portion of its ALLL. For those segments that require an ALLL,¹⁸ the institution should estimate the loan and lease losses, on at least a quarterly basis, based upon its ongoing loan-review process and analysis of loan performance. The institution

should follow a systematic and consistently applied approach to select the most appropriate loss-measurement methods and support its conclusions and rationale with written documentation. Regardless of the methods used to measure losses, an institution should demonstrate and document that the loss-measurement methods used to estimate the ALLL for each segment are determined in accordance with GAAP as of the financial statement date.¹⁹

One method of estimating loan losses for groups of loans is through the application of loss rates to the groups' aggregate loan balances. Such loss rates typically reflect the institution's historical loan-loss experience for each group of loans, adjusted for relevant environmental factors (e.g., industry, geographical, economic, and political factors) over a defined period of time. If an institution does not have loss experience of its own, it may be appropriate to reference the loss experience of other institutions, provided that the institution demonstrates that the attributes of the loans in its portfolio segment are similar to those of the loans included in the portfolio of the institution providing the loss experience.²⁰ Institutions should maintain supporting docu-

18. An example of a loan segment that does not generally require an ALLL is loans that are fully secured by deposits maintained at the lending institution.

19. Refer to paragraph 8(b) of FAS 5***.

20. Refer to paragraph 23 of FAS 5.

mentation for the technique used to develop their loss rates, including the period of time over which the losses were incurred. If a range of loss is determined, institutions should maintain documentation to support the identified range and the rationale used for determining which estimate is the best estimate within the range of loan losses. An example of how a small institution performs a comprehensive historical loss analysis is provided as the first item in Illustration C.

Before employing a loss-estimation model, an institution should evaluate and modify, as needed, the model's assumptions to ensure that the resulting loss estimate is consistent with GAAP. In order to demonstrate consistency with GAAP, institutions that use loss-estimation models typically document the evaluation, the conclusions regarding the appropriateness of estimating loan losses with a model or other loss-estimation tool, and the support for adjustments to the model or its results.

In developing loss measurements, institutions should consider the impact of current environmental factors and then document which factors were used in the analysis and how those factors affected the loss measurements. Factors that should be considered in developing loss measurements include the following:²¹

- levels of and trends in delinquencies and impaired loans

- levels of and trends in charge-offs and recoveries
- trends in volume and terms of loans
- effects of any changes in risk-selection and underwriting standards, and other changes in lending policies, procedures, and practices
- experience, ability, and depth of lending management and other relevant staff
- national and local economic trends and conditions
- industry conditions
- effects of changes in credit concentrations

For any adjustment of loss measurements for environmental factors, the institution should maintain sufficient, objective evidence to support the amount of the adjustment and to explain why the adjustment is necessary to reflect current information, events, circumstances, and conditions in the loss measurements.

The second item in illustration C provides an example of how an institution adjusts its commercial real estate historical loss rates for changes in local economic conditions. Example 4 provides an example of maintaining supporting documentation for adjustments to portfolio-segment loss rates for an environmental factor related to an economic downturn in the borrower's primary industry. Example 5 describes one institution's process for determining and documenting an ALLL for loans that are not individually impaired but have characteristics indicating there are loan losses on a group basis.

21. Refer to paragraph 7.13 in the AICPA Audit Guide.

Illustration C

Documenting the Setting of Loss Rates

Comprehensive loss analysis in a small institution

A small institution determines its loss rates based on loss rates over a three-year historical period. The analysis is conducted by type of loan and is further segmented by originating branch office. The analysis considers charge-offs and recoveries in determining the loss rate. The institution also considers the loss rates for each loan grade and compares them to historical losses on similarly rated loans in arriving at the historical loss factor. The institution maintains supporting documentation for its loss-factor

analysis, including historical losses by type of loan, originating branch office, and loan grade for the three-year period.

Adjustment of loss rates for changes in local economic conditions

An institution develops a factor to adjust loss rates for its assessment of the impact of changes in the local economy. For example, when analyzing the loss rate on commercial real estate loans, the assessment identifies changes in recent commercial building occupancy rates. The institution generally finds the occupancy statistics to be a good indicator of probable losses on these types of loans. The institution maintains documentation that summarizes the relationship between current occupancy rates and its loss experience.

*Example 4: ALLL Under FAS 5—
Adjusting Loss Rates*

Facts. Institution D's lending area includes a metropolitan area that is financially dependent upon the profitability of a number of manufacturing businesses. These businesses use highly specialized equipment and significant quantities of rare metals in the manufacturing process. Due to increased low-cost foreign competition, several of the parts suppliers servicing these manufacturing firms declared bankruptcy. The foreign suppliers have subsequently increased prices, and the manufacturing firms have suffered from increased equipment maintenance costs and smaller profit margins. Additionally, the cost of the rare metals used in the manufacturing process increased and has now stabilized at double last year's price. Due to these events, the manufacturing businesses are experiencing financial difficulties and have recently announced downsize plans.

Although Institution D has yet to confirm an increase in its loss experience as a result of these events, management knows that it lends to a significant number of businesses and individuals whose repayment ability depends upon the long-term viability of the manufacturing businesses. Institution D's management has identified particular segments of its commercial and consumer customer bases that include borrowers highly dependent upon sales or salary from the manufacturing businesses. Institution D's management performs an analysis of the affected portfolio segments to adjust its historical loss rates used to determine the ALLL. In this particular case, Institution D has experienced similar business and lending conditions in the past that it can compare to current conditions.

Analysis. Institution D should document its support for the loss-rate adjustments that result from considering these manufacturing firms' financial downturns. It should document its identification of the particular segments of its commercial and consumer loan portfolio for which it is probable that the manufacturing business' financial downturn has resulted in loan losses. In addition, it should document its analysis that resulted in the adjustments to the loss rates for the affected portfolio segments. As part of its documentation, Institution D should maintain copies of the documents supporting the

analysis, including relevant newspaper articles, economic reports, economic data, and notes from discussions with individual borrowers.

Since Institution D has had similar situations in the past, its supporting documentation should also include an analysis of how the current conditions compare to its previous loss experiences in similar circumstances. As part of its effective ALLL methodology, a summary should be created of the amount and rationale for the adjustment factor, which management presents to the audit committee and board for their review and approval prior to the issuance of the financial statements.

*Example 5: ALLL Under FAS 5—
Estimating Losses on Loans Individually
Reviewed for Impairment but Not
Considered Individually Impaired*

Facts. Institution E has outstanding loans of \$2 million to Company Y and \$1 million to Company Z, both of which are paying as agreed upon in the loan documents. The institution's ALLL policy specifies that all loans greater than \$750,000 must be individually reviewed for impairment under FAS 114. Company Y's financial statements reflect a strong net worth, good profits, and ongoing ability to meet debt-service requirements. In contrast, recent information indicates Company Z's profitability is declining and its cash flow is tight. Accordingly, this loan is rated substandard under the institution's loan-grading system. Despite its concern, management believes Company Z will resolve its problems and determines that neither loan is individually impaired as defined by FAS 114.

Institution E segments its loan portfolio to estimate loan losses under FAS 5. Two of its loan portfolio segments are Segment 1 and Segment 2. The loan to Company Y has risk characteristics similar to the loans included in Segment 1, and the loan to Company Z has risk characteristics similar to the loans included in Segment 2.²²

In its determination of the ALLL under FAS 5, Institution E includes its loans to Company Y

22. These groups of loans do not include any loans that have been individually reviewed for impairment under FAS 114 and determined to be impaired as defined by FAS 114.

and Company Z in the groups of loans with similar characteristics (i.e., Segment 1 for Company Y's loan and Segment 2 for Company Z's loan). Management's analyses of Segment 1 and Segment 2 indicate that it is probable that each segment includes some losses, even though the losses cannot be identified to one or more specific loans. Management estimates that the use of its historical loss rates for these two segments, with adjustments for changes in environmental factors, provides a reasonable estimate of the institution's probable loan losses in these segments.

Analysis. Institution E should adequately document an ALLL under FAS 5 for these loans that were individually reviewed for impairment but

are not considered individually impaired. As part of its effective ALLL methodology, Institution E documents the decision to include its loans to Company Y and Company Z in its determination of its ALLL under FAS 5. It should also document the specific characteristics of the loans that were the basis for grouping these loans with other loans in Segment 1 and Segment 2, respectively. Institution E maintains documentation to support its method of estimating loan losses for Segment 1 and Segment 2, including the average loss rate used, the analysis of historical losses by loan type and by internal risk rating, and support for any adjustments to its historical loss rates. The institution also maintains copies of the economic and other reports that provided source data.

Consolidating the Loss Estimates

To verify that ALLL balances are presented fairly in accordance with GAAP and are auditable, management should prepare a document that summarizes the amount to be reported in the financial statements for the ALLL. The board of directors should review and approve this summary.

Common elements in such summaries include—

- the estimate of the probable loss or range of loss incurred for each category evaluated (e.g., individually evaluated impaired loans, homogeneous pools, and other groups of loans that are collectively evaluated for impairment);
- the aggregate probable loss estimated using the institution's methodology;
- a summary of the current ALLL balance;
- the amount, if any, by which the ALLL is to be adjusted;²³ and
- depending on the level of detail that supports the ALLL analysis, detailed subschedules of loss estimates that reconcile to the summary schedule.

23. Subsequent to adjustments, there should be no material differences between the consolidated loss estimate, as determined by the methodology, and the final ALLL balance reported in the financial statements.

Illustration D describes how an institution documents its estimated ALLL by adding comprehensive explanations to its summary schedule.

Generally, an institution's review and approval process for the ALLL relies upon the data provided in these consolidated summaries. There may be instances in which individuals or committees that review the ALLL methodology and resulting allowance balance identify adjustments that need to be made to the loss estimates to provide a better estimate of loan losses. These changes may be due to information not known at the time of the initial loss estimate (e.g., information that surfaces after determining and adjusting, as necessary, historical loss rates, or a recent decline in the marketability of property after conducting a FAS 114 valuation based upon the fair value of collateral). It is important that these adjustments are consistent with GAAP and are reviewed and approved by appropriate personnel. Additionally, the summary should provide each subsequent reviewer with an understanding of the support behind these adjustments. Therefore, management should document the nature of any adjustments and the underlying rationale for making the changes. This documentation should be provided to those making the final determination of the ALLL amount. Example 6 addresses the documentation of the final amount of the ALLL.

Illustration D

Summarizing Loss Estimates

Descriptive comments added to the consolidated ALLL summary schedule

To simplify the supporting documentation process and to eliminate redundancy, an institution adds detailed supporting information to its summary schedule. For example, this institution's board of directors receives, within the body of the ALLL summary schedule, a brief description of the institution's policy for selecting loans for evaluation under FAS 114. Additionally, the institution identifies which FAS 114 impairment-measurement method was used for each individually reviewed impaired loan. Other items on the schedule include a brief description of the loss factors for each segment of the loan portfolio, the basis for adjustments to loss rates, and explanations of changes in ALLL amounts from period to period, including cross-references to more detailed supporting documents.

Example 6: Consolidating the Loss Estimates—Documenting the Reported ALLL

Facts. Institution F determines its ALLL using an established systematic process. At the end of each period, the accounting department prepares a summary schedule that includes the amount of each of the components of the ALLL, as well as the total ALLL amount, for review by senior management, the credit committee, and, ultimately, the board of directors. Members of senior management and the credit committee meet to discuss the ALLL. During these discussions, they identify changes that are required by GAAP to be made to certain of the ALLL

estimates. As a result of the adjustments made by senior management, the total amount of the ALLL changes. However, senior management (or its designee) does not update the ALLL summary schedule to reflect the adjustments or reasons for the adjustments. When performing their audit of the financial statements, the independent accountants are provided with the original ALLL summary schedule that was reviewed by senior management and the credit committee, as well as a verbal explanation of the changes made by senior management and the credit committee when they met to discuss the loan-loss allowance.

Analysis. Institution F's documentation practices supporting the balance of its loan-loss allowance, as reported in its financial statements, are not in compliance with existing documentation guidance. An institution must maintain supporting documentation for the loan-loss allowance amount reported in its financial statements. As illustrated above, there may be instances in which ALLL reviewers identify adjustments that need to be made to the loan-loss estimates. The nature of the adjustments, how they were measured or determined, and the underlying rationale for making the changes to the ALLL balance should be documented. Appropriate documentation of the adjustments should be provided to the board of directors (or its designee) for review of the final ALLL amount to be reported in the financial statements. For institutions subject to external audit, this documentation should also be made available to the independent accountants. If changes frequently occur during management or credit committee reviews of the ALLL, management may find it appropriate to analyze the reasons for the frequent changes and to reassess the methodology the institution uses.

Validating the ALLL Methodology

An institution's ALLL methodology is considered valid when it accurately estimates the amount of loss contained in the portfolio. Thus, the institution's methodology should include procedures that adjust loss-estimation methods to reduce differences between estimated losses and actual subsequent charge-offs, as necessary.

To verify that the ALLL methodology is valid and conforms to GAAP and supervisory guid-

ance, an institution's directors should establish internal-control policies, appropriate for the size of the institution and the type and complexity of its loan products. These policies should include procedures for a review, by a party who is independent of the ALLL-estimation process, of the ALLL methodology and its application in order to confirm its effectiveness.

In practice, financial institutions employ numerous procedures when validating the reasonableness of their ALLL methodology and

determining whether there may be deficiencies in their overall methodology or loan-grading process. Examples are—

- a review of trends in loan volume, delinquencies, restructurings, and concentrations;
- a review of previous charge-off and recovery history, including an evaluation of the timeliness of the entries to record both the charge-offs and the recoveries;
- a review by a party that is independent of the ALLL-estimation process (this often involves the independent party reviewing, on a test basis, source documents and underlying assumptions to determine that the established methodology develops reasonable loss estimates); and
- an evaluation of the appraisal process of the underlying collateral. (This may be accomplished by periodically comparing the appraised value to the actual sales price on selected properties sold.)

Supporting Documentation for the Validation Process

Management usually supports the validation process with the workpapers from the ALLL-review function. Additional documentation often includes the summary findings of the independent reviewer. The institution's board of directors, or its designee, reviews the findings and acknowledges its review in its meeting minutes. If the methodology is changed based upon the findings of the validation process, documentation that describes and supports the changes should be maintained.

Appendix—Application of GAAP

[This appendix was designated appendix B in the policy statement.] An ALLL recorded pursuant to GAAP is an institution's best estimate of the probable amount of loans and lease-financing receivables that it will be unable to collect based on current information and events.²⁴

24. This appendix provides guidance on the ALLL and does not address allowances for credit losses for off-balance-sheet instruments (e.g., loan commitments, guarantees, and standby letters of credit). Institutions should record liabilities for these exposures in accordance with GAAP. Further guidance on this topic is presented in the American Institute of Certified Public Accountants' Audit and Accounting Guide,

A creditor should record an ALLL when the criteria for accrual of a loss contingency as set forth in GAAP have been met. Estimating the amount of an ALLL involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. An institution should record its best estimate within the range of loan losses.²⁵

Under GAAP, Statement of Financial Accounting Standards No. 5, "Accounting for Contingencies" (FAS 5), provides the basic guidance for recognition of a loss contingency, such as the collectibility of loans (receivables), when it is probable that a loss has been incurred and the amount can be reasonably estimated. Statement of Financial Accounting Standards No. 114, "Accounting by Creditors for Impairment of a Loan" (FAS 114) provides more specific guidance about the measurement and disclosure of impairment for certain types of loans.²⁶ Specifically, FAS 114 applies to loans that are identified for evaluation on an individual basis. Loans are considered impaired when, based on current information and events, it is probable that the creditor will be unable to collect all interest and principal payments due according to the contractual terms of the loan agreement.

For individually impaired loans, FAS 114 provides guidance on the acceptable methods to measure impairment. Specifically, FAS 114 states that when a loan is impaired, a creditor should measure impairment based on the present value of expected future principal and interest cash flows discounted at the loan's effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan's observable market price or the fair value of collateral, if the loan is collateral dependent. When developing the estimate of expected future cash flows for a loan, an institution should

Banks and Savings Institutions, 2000 edition (AICPA Audit Guide). Additionally, this appendix does not address allowances or accounting for assets or portions of assets sold with recourse, which is described in Statement of Financial Accounting Standards No. 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities—A Replacement of FASB Statement No. 125" (FAS 140).

25. Refer to FASB Interpretation No. 14, "Reasonable Estimation of the Amount of a Loss," and Emerging Issues Task Force Topic No. D-80, "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio" (EITF Topic D-80).

26. EITF Topic D-80 includes additional guidance on the requirements of FAS 5 and FAS 114 and how they relate to each other.***

consider all available information reflecting past events and current conditions, including the effect of existing environmental factors. The

following illustration provides an example of an institution estimating a loan's impairment when the loan has been partially charged off.

Illustration

Interaction of FAS 114 with an Adversely Classified Loan, Partial Charge-Off, and the Overall ALLL

An institution determined that a collateral-dependent loan, which it identified for evaluation, was impaired. In accordance with FAS 114, the institution established an ALLL for the amount that the recorded investment in the loan exceeded the fair value of the underlying collateral, less costs to sell.

Consistent with relevant regulatory guidance, the institution classified as "Loss," the portion

of the recorded investment deemed to be the confirmed loss and classified the remaining recorded investment as "Substandard." For this loan, the amount classified "Loss" was less than the impairment amount (as determined under FAS 114). The institution charged off the "Loss" portion of the loan. After the charge-off, the portion of the ALLL related to this "Substandard" loan (1) reflects an appropriate measure of impairment under FAS 114, and (2) is included in the aggregate FAS 114 ALLL for all loans that were identified for evaluation and individually considered impaired. The aggregate FAS 114 ALLL is included in the institution's overall ALLL.

Large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment are not included in the scope of FAS 114.²⁷ Such groups of loans may include, but are not limited to, credit card, residential mortgage, and consumer installment loans. FAS 5 addresses the accounting for impairment of these loans. Also, FAS 5 provides the accounting guidance for impairment of loans that are not identified for evaluation on an individual basis and loans that are individually evaluated but are not individually considered impaired. Institutions should ensure that they do not layer their loan-loss allowances. Layering is the inappropriate practice of recording in the ALLL more than one amount for the same probable loan loss. Layering can happen when an institution includes a loan in one segment, determines its best estimate of loss for that loan either individually or on a group basis (after taking into account all appropriate environmental factors, conditions, and events), and then includes the loan in another group, which receives an additional ALLL amount.²⁸

While different institutions may use different methods, there are certain common elements that should be included in any loan-loss allowance methodology. Generally, an institution's methodology should—

- include a detailed analysis of the loan portfolio, performed on a regular basis;
- consider all loans (whether on an individual or group basis);
- identify loans to be evaluated for impairment on an individual basis under FAS 114 and segment the remainder of the portfolio into groups of loans with similar risk characteristics for evaluation and analysis under FAS 5;
- consider all known relevant internal and external factors that may affect loan collectibility;
- be applied consistently but, when appropriate, be modified for new factors affecting collectibility;
- consider the particular risks inherent in different kinds of lending;
- consider current collateral values (less costs to sell), where applicable;
- require that analyses, estimates, reviews, and other ALLL methodology functions be performed by competent and well-trained personnel;
- be based on current and reliable data;

27. In addition, FAS 114 does not apply to loans measured at fair value or at the lower of cost or fair value, leases, or debt securities.

28. According to the Federal Financial Institutions Examination Council's *Federal Register* notice, Implementation Issues Arising from FASB Statement No. 114, "Accounting by Creditors for Impairment of a Loan," published February 10, 1995, institution-specific issues should be reviewed when estimating loan losses under FAS 114. This analysis should be

conducted as part of the evaluation of each individual loan reviewed under FAS 114 to avoid potential ALLL layering.

- be well documented, in writing, with clear explanations of the supporting analyses and rationale; and
- include a systematic and logical method to consolidate the loss estimates and ensure the ALLL balance is recorded in accordance with GAAP.²⁹

A systematic methodology that is properly

29. Refer to paragraph 7.05 of the AICPA Audit Guide.

designed and implemented should result in an institution's best estimate of the ALLL. Accordingly, institutions should adjust their ALLL balance, either upward or downward, in each period for differences between the results of the systematic determination process and the unadjusted ALLL balance in the general ledger.³⁰

30. Institutions should refer to the guidance on materiality in SEC Staff Accounting Bulletin No. 99, *Materiality*.

ALLL Methodologies and Documentation

Examination Objectives

Effective date November 2002

Section 2072.2

1. To evaluate internal controls over the loan-loss estimation process by evaluating the ALLL written policy and the process used to create and maintain the policy, loan-grading systems, and other associated internal controls over credit risk.
2. To determine the existence of an ALLL balance and review the summary schedule supporting it.
3. To analyze and review the evaluation for Statement of Financial Accounting Standards No. 114 (FAS 114) (for individually listed loans).
4. To analyze and review the evaluation for Statement of Financial Accounting Standards No. 5 (FAS 5) (for groups of loans).
5. To determine if the bank has adequately developed a range of loss and a margin for imprecision.
6. To determine that the ALLL reflects estimated credit losses for specifically identified loans (or groups of loans) and any estimated *probable* credit losses inherent in the remainder of the loan portfolio at the balance-sheet date.
7. To analyze and review the ALLL-documentation support.
8. To determine the adequacy of the bank's process to evaluate the ALLL methodology and to adjust the methodology, as needed.

ALLL Methodologies and Documentation Examination Procedures

Effective date November 2002

Section 2072.3

1. Determine if the board of directors has developed and maintained an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provision for loan losses, or if it has instructed management to do so. Determine if the ALLL policies specifically address the bank's goals, risk profile, personnel, and other resources.
2. Determine if the board of directors has approved the written ALLL policy.
3. Determine if the bank's loan-loss estimate, in accordance with its methodology, is consistent with generally accepted accounting principles and supervisory guidance. Additionally, ensure that the bank's loan-loss estimate is materially consistent with the reported balance of the bank's ALLL account.
4. Determine if the ALLL methodology is periodically validated by an independent party and, if appropriate, revised.
5. Ascertain whether the audit committee is overseeing and monitoring the internal controls over the ALLL-documentation process.
6. Ascertain that the bank maintains adequate written documentation of its ALLL, including clear explanations of the supporting analyses and rationale. The documentation should consist of—
 - policies and procedures over the systems and controls that maintain an appropriate ALLL and over the ALLL methodology,
 - the loan-grading system or process,
 - a summary or consolidation (including losses) of the ALLL balance,
 - a validation of the ALLL methodology, and
 - periodic adjustments to the ALLL process.
7. Determine if the amount reported for the ALLL for each period and the provisions for loan and leases losses are reviewed and approved by the board of directors.

INTRODUCTION

The term “commercial and industrial loan” is commonly used to designate loans to a corporation, commercial enterprise, or joint venture that are not ordinarily maintained in either the real estate or consumer installment loan portfolios. Generally, commercial loans are the largest asset concentration of a state member bank, offer the most complexity, and require the greatest commitment from bank management to monitor and control risks. Proper management of these assets requires a clearly articulated credit-policy that imposes discipline and sound loan administration. Since lenders are subject to pressures related to productivity and competition, they may be tempted to relax prudent credit-underwriting standards to remain competitive in the marketplace, thus increasing the potential for risk. Examiners need to understand the unique characteristics of the varying types of commercial and industrial loans, as well as how to properly analyze their quality.

Commercial loans are extended on a secured or unsecured basis with a wide range of purposes, terms, and maturities. While the types of commercial and industrial loans can vary widely depending on the purpose of loans made and market characteristics where the bank operates, most commercial and industrial loans will primarily be made in the form of a seasonal or working-capital loan, term business loan, or loan to an individual for a business purpose. This section will provide examiners with a fundamental understanding of secured and unsecured transactions, loan evaluation and coverage techniques, the key principles for assessing credit quality, minimum documentation standards for loan line sheets, and basic bankruptcy law, as well as an overview of sections 23A and 23B of the Federal Reserve Act and tie-in arrangements. Other sections of this manual discuss more specific types of lending.

PRIMARY TYPES OF COMMERCIAL AND INDUSTRIAL LOANS

Seasonal or Working-Capital Loans

Seasonal or working-capital loans provide a business with short-term financing for inven-

tory, receivables, the purchase of supplies, or other operating needs during the business cycle. These types of loans are often appropriate for businesses that experience seasonal or short-term peaks in current assets and current liabilities, such as a retailer who relies heavily on a holiday season for sales or a manufacturing company that specializes in summer clothing. These types of loans are often structured in the form of an advised line of credit or a revolving credit. An advised revocable line of credit is a revocable commitment by the bank to lend funds up to a specified period of time, usually one year. Lines of credit are generally reviewed annually by the bank, do not have a fixed repayment schedule, and may not require fees or compensating balances. In the case of unadvised lines of credit, the bank has more control over advances and may terminate the facility at any time, depending on state law or legal precedents. A revolving credit is valid for a stated period of time and does not have a fixed repayment schedule, but usually it has a required fee. The lender has less control over a revolving credit since there is an embedded guarantee to make advances within the prescribed limits of the loan agreement. The borrower may receive periodic advances under the line of credit or the revolving credit. Repayment of the loans is generally accomplished through conversion or turnover of short-term assets. Interest payments on seasonal loans are usually paid throughout the term of the loan, such as monthly or quarterly.

Seasonal or working-capital loans are intended to be repaid through the cash flow derived from converting the financed assets to cash. The structure of the loans can vary, but they should be closely tied to the timing of the conversion of the financed assets. In most cases, seasonal or working-capital facilities are renewable at maturity, are for a one-year term, and include a clean-up requirement for a period sometime during the low point or contraction phase of the business cycle. The clean-up period is a specified period (usually 30 days) during the term of the loan in which the borrower is required to pay off the loan. While this requirement is becoming less common, it provides the bank with proof that the borrower is not dependent on the lender for permanent financing. It is important to note, however, that an expanding business may not be able to clean up its facility since it may be increasing its current assets.

Analysis of Seasonal and Working-Capital Loans

The analysis of a seasonal loan is best accomplished by a monthly or quarterly review of a company's balance sheet and income statements to identify the peak and contraction phases of the business cycle. The lender should know when the peak and contraction phases are, and the loan should be structured accordingly. The lender's primary objective is to determine whether the advances are being used for the intended purposes (inventories or payables) and not for the acquisition of fixed assets or payments on other debts. Repayments on the facility should also be consistent with the conversion of assets. If the borrower has other loan facilities at the bank, all credit facilities should be reviewed at the same time to ensure that the activity with the seasonal or working-capital facility is not linked to other loans in the bank. Projections of sources and uses of funds are also a valuable tool for reviewing a seasonal or working-capital line of credit and determining the sales cycle.

Quarterly balance-sheet and income statements are very helpful when a comparison is made with the original projections. Other helpful information can be obtained from a review of an aging of accounts receivable for delinquencies and concentrations, a current list of inventory, an accounts-payable aging, and accruals made during the quarter. This information can be compared with the outstanding balance of the facility to ensure that the loan is not overextended and that the collateral margins are consistent with borrowing-base parameters. A borrowing base is the amount the lender is willing to advance against a dollar value of pledged collateral; for example, a bank will only lend up to a predetermined specified percentage of total outstanding receivables less all past-due accounts more than a certain number of days delinquent. A borrowing-base certificate should be compiled at least monthly or more often during peak activity in the facility. When reviewing seasonal loans, examiners should remember that a bank relies heavily on inventory as collateral in the beginning of a company's business cycle and on receivables toward the end of the business cycle. However, in traditional working-capital loans, greater emphasis is usually placed on accounts receivable as collateral throughout the loan's tenure.

Normally, a bank is secured by a perfected blanket security interest on accounts receivable, inventory, and equipment and on the proceeds from the turnover of these assets. Well-capitalized companies with a good history of seasonal payout or cleanup may be exceptions. An annual lien search, however, would be prudent under this type of lending relationship to detect any purchase-money security interest that may have occurred during the business cycle.

The following are potential problems associated with working-capital and seasonal loans:

- *Working-capital advances used for funding losses.* A business uses advances from a revolving line of credit to fund business losses, including the funding of wages, business expenses, debt service, or any other cost not specifically associated with the intended purpose of the facility.
- *Working-capital advances funding long-term assets.* A business will use working-capital funds to purchase capital assets that are normally associated with term business loans.
- *Trade creditors not paid out at end of business cycle.* While the bank may be paid out, some trade creditors may not get full repayment. This can cause a strained relationship as unpaid trade creditors may be less willing to provide financing or offer favorable credit terms in the future. In turn, the business will become more reliant on the bank to support funding needs that were previously financed by trade creditors.
- *Overextension of collateral.* The business does not have the collateral to support the extension of credit, causing an out-of-borrowing-base situation. Examiners should review borrowing-base certificates to verify that coverage meets the prescribed limitations established by the bank's credit policy for the specific asset being financed.
- *Value of inventory declines.* If a business does not pay back the bank after inventory is converted to cash or accounts receivable, the value of the inventory declines. Other causes of inventory devaluation include obsolescence; a general economic downturn; or, in the case of a commodity, market volatility. Declines in inventory value will commonly put a working-capital facility in an out-of-borrowing-base situation and require the excess debt to be amortized and repaid through future profits of the business.

- *Collectibility of accounts receivable declines.* The increasingly past-due status of accounts receivable or deteriorating credit quality of account customers both result in the noncollection of receivables. This can also cause an out-of-borrowing-base situation for the lending institution.
- *Working-capital advances used to fund long-term capital.* Funds may be inappropriately used to repurchase company stock, pay off subordinated debt holders, or even pay dividends on capital stock.

These situations may cause a loan balance to be remaining at the end of the business cycle. If this should occur, the bank generally has one of three options: (1) Require the unpaid balance to be amortized. This option is, however, dependent on the ability of the business to repay the debt through future profits. (2) Request the borrower to find another lender or require an infusion of capital by the borrower. This is not always a feasible option because of the probable weakened financial condition of the business and ownership under these circumstances. (3) Liquidate the collateral. Foreclosing on the collateral should only be executed when it becomes obvious that the business can no longer function as a going concern. The problem with this option is that once the bank discovers that the business is no longer a viable concern, realizing the full value of the collateral is in jeopardy. The need to resort to any of these options may prompt criticism of the credit.

Term Business Loans

Term business loans are generally granted at a fixed or variable rate of interest, have a maturity in excess of one year, and are intended to provide an organization with the funds needed to acquire long-term assets, such as physical plants and equipment, or finance the residual balance on lines of credit or long-term working capital. Term loans are repaid through the business's cash flow, according to a fixed-amortization schedule, which can vary based on the cash-flow expectations of the underlying asset financed or the anticipated profitability or cash flow of the business. Term business loans involve greater risk than short-term advances because of the length of time the credit is extended. As a result of this greater risk, term

loans are often secured. Loan interest may be payable monthly, quarterly, semiannually, or annually.

In most cases, the terms of these loans are detailed in formal loan agreements with affirmative and negative covenants that place certain conditions on the borrower throughout the term of the loan. Generally, loan agreements substantially enhance a borrower/banker relationship because they encourage and promote more frequent communication between the parties. In affirmative covenants, the borrower pledges to fulfill certain requirements, such as maintain adequate insurance coverage, make timely loan repayments, or ensure the financial stability of the business. Negative or restrictive covenants prohibit or require the borrower to refrain from certain practices, such as selling or transferring assets, defaulting, falling below a minimum debt coverage ratio, exceeding a maximum debt-to-equity ratio, or taking any action that may diminish the value of collateral or impair the collectibility of the loan. Covenants should not be written so restrictively that the borrower is constantly in default over trivial issues; however, violations should be dealt with immediately to give credibility to the agreement. Violations of these covenants can often result in acceleration of the debt maturity. A formal loan agreement is most often associated with longer-term loans. If a formal agreement does not exist, the term loans should be written with shorter maturities and balloon payments to allow more frequent review by bank management.

Analysis of Term Business Loans

While a seasonal or working-capital loan analysis emphasizes the balance sheet, the analysis of term loans will focus on both the balance sheet and the income statement. Because a term loan is repaid from excess cash flow, the long-term viability of the business is critical in determining the overall quality of the credit. In evaluating long-term earnings, the examiner must develop a fundamental understanding of the company's industry and competitive position in the marketplace. Most of the analysis will be conducted based on the historical performance of the business and its history of making payments on its debt. Any historical record of inconsistencies or inability to perform on existing debt should prompt an in-depth review to determine the ability of the borrower to meet the

loan's contractual agreements. One of the most critical determinations that should be made when evaluating term debt is whether the term of the debt exceeds the useful life of the underlying asset being financed.

While cash flow of the business is the primary source of repayment for a term loan, a secondary source would be the sale of the underlying collateral. Often, if circumstances warrant a collateral sale, the bank may face steep discounts and significant expenses related to the sale. Examiners should carefully consider these issues when evaluating the underlying value of collateral under a liquidation scenario.

The following are potential problems associated with term business loans:

- The term of the loan is not consistent with the useful life of collateral.
- Cash flow from operations does not allow for adequate debt amortization, a fundamental problem that can only be solved by improved performance.
- The gross margin of the business is narrowing, which requires the business to sell more product to produce the same gross profit. Higher sales volume could require more cash for expansion of current assets, leaving less cash for debt amortization. This situation is a common by-product of increased competition.
- Sales are lower than expected. In the face of lower sales, management is unable or unwilling to cut overhead expenses, straining cash flow and resulting in diminished debt-servicing ability.
- Fixed assets that are financed by term loans become obsolete before the loans are retired, likely causing the value of underlying collateral to deteriorate.
- The business's excess cash is spent on higher salaries or other unnecessary expenses.
- The payments on term debt have put a strain on cash flow, and the business is unable to adequately operate or allow natural expansion.
- The balance sheet of the business is weakening. The overall financial condition of the business is deteriorating because of poor performance or unforeseen occurrences in the industry.

Shared National Credits

The Federal Reserve System participates in a program for the uniform review of shared

national credits (SNCs). An SNC is defined as any loan or commitment in an original amount of \$20 million or more that is (1) shared at its inception by two or more supervised institutions under a formal loan agreement and (2) sold in part to one or more supervised institutions with the purchasing bank assuming its pro rata share of the credit risk. Loans sold to affiliate banks of the same holding company are not part of the SNC program. If the outstanding balance or commitment of an SNC credit falls below \$20 million after its inception, and it is not criticized, the credit will not be reviewed at the next review date. Therefore, the examiner should conduct an individual review of the credit at the bank under examination. However, if the former SNC facility fell below the threshold through a charge-off, and was classified or specially mentioned at the most recent SNC review, the credit relationship would continue to be reviewed under the SNC program until such time that the balance falls below \$10 million. The Federal Deposit Insurance Corporation (FDIC), the state agencies, and the Office of the Comptroller of the Currency (OCC) also participate in this program. The Federal Reserve carries out the examination of SNCs at the lead or agent banks that are state member banks, state-chartered foreign branches, and credit-extending nonbank subsidiaries of domestic and foreign organizations. The FDIC is primarily responsible for any SNC credits at state nonmember banks, and the OCC supervises the review of those SNCs in which the lead bank is a national bank or an OCC-chartered foreign branch.

SNCs should not be analyzed or reviewed during the examination of the individual participating bank. If the examiner is uncertain whether the credit was reviewed under the SNC program, the respective Reserve Bank coordinator should be contacted. If credits eligible for the program are found but have not been reviewed (other than new SNCs since the time of the last SNC program review), the examiner should submit a memorandum detailing those credits to the respective Reserve Bank coordinator to be forwarded to the SNC coordinator at the Federal Reserve Bank of New York.

SECURED AND UNSECURED TRANSACTIONS

This subsection is intended to be a general reference for an examiner's review of a credit

file to determine whether the bank's collateral position is properly documented. Examiners should be aware that secured transactions encompass an extensive body of law that is rather technical in nature. The following discussion contains general information for examiners on the basic laws that govern a bank's security interest in property and on the documentation that needs to be in a loan file to properly document a perfected security interest in a borrower's assets.

Secured Transactions

Most secured transactions in personal property and fixtures are governed by article 9 of the Uniform Commercial Code (UCC). The UCC has been adopted by all 50 states, the District of Columbia, and the Virgin Islands. Timing differences as well as filing locations differ from state to state. Failure to file a financing statement in a timely manner or in the proper location will compromise a lender's security interest in the collateral.

Article 9 of the UCC applies to any transaction that is intended to create a security interest in personal property. Mortgage transactions are not covered, marine mortgages are filed with the Coast Guard, and aircraft liens are filed with the Federal Aviation Administration. A "security interest" is defined in the UCC as "an interest in personal property or fixtures which secures payment or performance of an obligation." A secured transaction requires that there be an *agreement* between the parties indicating the parties' intention to create a security interest for the benefit of the creditor or secured party. This agreement is commonly referred to as a security agreement.

Article 9 of the UCC refers to two different concepts related to security interests: attachment and perfection. Attachment is the point in time at which the security interest is created and becomes enforceable against the debtor. Perfection refers to the steps that must be taken in order for the security interest to be enforceable against third parties who have claims against collateral.

Attachment of Security Interest

The three requirements for the creation of a security interest are stated in UCC section

9-203(1). Once the following requirements are met, the security interest attaches:

- The collateral is in the possession of the secured party pursuant to agreement, or the debtor has signed a security agreement that contains a description of the collateral and, when the security interest covers crops now growing or to be grown or timber to be cut, a description of the land concerned.
- Value has been given to the debtor.
- The debtor has rights in the collateral.

Thus, unless the collateral is in the possession of the secured party, there must be a written security agreement that describes the collateral. The description does not have to be very specific or detailed—"any description of personal property . . . is sufficient whether or not it is specific if it reasonably identifies what is described" (see section 9-110). The agreement must also be signed by the debtor. The creditor may sign it, but its failure to do so does not affect the agreement's enforceability against the debtor.

"Giving value" is any consideration that supports a contract. Value can be given by a direct loan, a commitment to grant a loan in the future, the release of an existing security interest, or the sale of goods on contract.

While the debtor must have "rights" in the collateral, he or she does not necessarily have to have title to the property. For example, the debtor may be the beneficiary of a trust (the trustee has title of trust assets) or may lease the collateral. The debtor, in such cases, has rights in the collateral, but does not hold the title to the collateral. The secured party, however, only obtains the debtor's limited interest in the collateral on default if the debtor does not have full title to the collateral.

Perfection of Security Interest in Property

Perfection represents the legal process by which a bank secures an interest in property. Perfection provides the bank assurance that it has an interest in the collateral. The category of collateral will dictate the method of perfection to be used. The most common methods of perfection are (1) automatic perfection when the security interest attaches (such as in the case of purchase-money security interests applicable to consumer goods other than vehicles); (2) perfection by possession; (3) the filing of a financing state-

ment in one or more public filing offices (The financing statement is good for five years, and the lender must file for a continuation within the six-month period before expiration of the original statement.) and (4) compliance with a state certificate of title law or central filing under a state statute other than the UCC, such as registration of vehicles.

The most common method of perfecting a security interest is public filing. Public filing serves as a constructive notice to the rest of the world that the bank claims a security interest in certain property of the debtor described in both the security agreement and the financing statement. Public filing is accomplished by filing a financing statement (UCC-1) in a public office, usually the county recorder or secretary of state. The system of filing required by the UCC provides for a notice filing whereby potential creditors can determine the existence of any outstanding liens against the debtor's property.

The form of the financing statement and where to file it varies from state to state. While the filing of a nonstandard form will generally be accepted, the failure to file in the proper public office can jeopardize the priority of the lender's security interest. The UCC provides three alternative filing systems:

- *Alternative System One.* Liens on minerals, timber to be cut, and fixtures are filed in the county land records. All other liens are filed in the office of the secretary of state.
- *Alternative System Two.* The majority of states have adopted this version. It is the same as system one, except liens on consumer goods, farm equipment, and farm products are filed in the county where the debtor resides or in the county where the collateral is located if it is owned by a nonresident.
- *Alternative System Three.* In a minority of states, filings made with the secretary of state must also be filed in the county of the borrower's business (or residence if there is no place of business in that state). Otherwise, the requirement in these states is the same as system two.

As each state may select any of the above three alternatives or a modified version of them, it is important that the examiner ascertain the filing requirements of the state(s) where the bank's customer operates. Most importantly, it is the location of the borrower, not the bank, that

determines where the financing statement must be filed.

Evaluation of Security Interest in Property

Key items to look for in evaluating a security interest in property include the following:

- *Security agreement.* There should be a proper security agreement, signed and dated by the borrower, that identifies the appropriate collateral to be secured. It should include a description of the collateral and its location in sufficient detail so the lender can identify it, and should assign to the lender the right to sell or dispose of the collateral if the borrower is unable to pay the obligation.
- *Collateral possession.* If the institution has taken possession of the collateral to perfect its security interest, management of the institution should have an adequate record-keeping system and proper dual control over the property.
- *Financing statement.* If the institution has filed a financing statement with the state or local authority to perfect its security interest in the collateral, in general, it should contain the following information:
 - names of the secured party and debtor
 - the debtor's signature
 - the debtor's mailing address
 - the address of the secured party from which information about the security interest may be obtained
 - the types of the collateral and description of the collateral (Substantial compliance with the requirements of UCC section 9-402 is sufficient if errors are only minor and not seriously misleading. Some states require the debtor's tax ID number on the financing statement.)
- *Amendments.* Not all amendments require the borrower's signature, and banks may file an amendment for the following reasons:
 - borrower's change of address
 - creditor's change of address
 - borrower's name change
 - creditor's name change
 - correction of an inaccurate collateral description
 - addition of a trade name for the borrower that was subsequently adopted

- *Where to file a financing statement.* In general, financing statements filed in good faith or financing statements not filed in all of the required places are effective with respect to any collateral covered by the financing statement against any person with knowledge of the statement's contents. If a local filing is required, the office of the recorder in the county of the debtor's residence is the place to file. If state filing is required, the office of the secretary of state is the place to file.
- *Duration of effectiveness of a financing statement.* Generally, effectiveness lapses five years after filing date. If a continuation statement is filed within six months before the lapse, effectiveness is extended five years after the last date on which the filing was effective. Succeeding continuation statements may be filed to further extend the period of effectiveness.

Perfection of Security Interest in Real Estate

As previously mentioned, real estate is expressly excluded from coverage under the UCC. A separate body of state law covers such interests. However, for a real estate mortgage to be enforceable, the mortgage must be recorded in the county where the real estate covered by the mortgage is located.

Real estate mortgage or deed of trust. When obtaining a valid lien on real estate, only one document is used, the mortgage or deed of trust. The difference between a mortgage and a deed of trust varies from state to state; however, the primary difference relates to the process of foreclosure. A mortgage generally requires a judicial foreclosure, whereas, in some states, a foreclosure on a deed of trust may not. Nearly all matters affecting the title to the real estate, including the ownership thereof, are recorded in the recorder's office.

When determining the enforceability of a real estate mortgage or deed of trust, the examiner should be aware of the following requirements:

- The mortgage must be in writing.
- To be recordable, the mortgage must be acknowledged. There are different forms of acknowledgments for various situations depending on whether individuals, corporations, partnerships, or other entities are execut-

ing the mortgage. Make sure that the form of the acknowledgment used is in accordance with the type of individual or entity executing the mortgage.

- If a corporation is the mortgagor, its articles of incorporation or bylaws often will specifically state which officers have authority to sign an instrument affecting real estate. In these instances, the designated officer should be required to sign. If the corporation has a seal, that also must be affixed. If the corporation does not have a seal, this fact must be shown in the acknowledgment.
- As soon as possible after the mortgage is executed, it should be recorded in the office of the recorder for each county in which the property described in the mortgage is located. In most cases, the borrower signs an affidavit that indicates, in part, that he or she will not attempt to encumber the property while the lender is waiting for the mortgage to be recorded. In smaller community banks, common practice may be not to advance any of the money under the loan until the mortgage has been recorded and the later search completed. In larger banks or cities, however, this practice is often not practical.
- If the mortgagor is married, the spouse must join in the execution of the mortgage to subject his or her interest to the lien of the mortgage. If the mortgagor is single, the mortgage should indicate that no spouse exists who might have a dower interest or homestead interest in the property.
- If the mortgagor is a partnership, it must be determined whether the title is in the name of the partnership or in the names of the individual partners. If the title is in the names of the individual partners, their spouses should join in executing the mortgage. If the title is in the name of the partnership, those partners who are required to sign under the partnership agreement should sign.

Unsecured Transactions

Unsecured transactions are granted based on the borrower's financial capacity, credit history, earnings potential, and liquidity. Assignment of the borrower's collateral is not required, and repayment is based on the terms and conditions of the loan agreement. While unsecured loans often represent the bank's strongest borrowers,

the unsecured loan portfolio can represent its most significant risk. One of the primary concerns related to unsecured credit is that if the borrower's financial condition deteriorates, the lender's options to work out of the lending relationship deteriorate as well. In general, if a credit is unsecured, the file should contain reliable and current financial information that is sufficient to indicate that the borrower has the capacity and can be reasonably expected to repay the debt.

Problem Loans

The following are key signals of an emerging problem loan:

- *Outdated or inaccurate financial information on the borrower.* The borrower is unwilling to provide the financial institution with a current, complete, and accurate financial statement at least annually. Management should also be requesting a personal tax return (and all related schedules) on the borrower. While borrowers will usually present their personal financial statements in the most favorable light, their income tax return provides a more conservative picture.
- *The crisis borrower.* The borrower needed the money yesterday, so the bank advanced unsecured credit.
- *No specific terms for repayment.* The unsecured loan has no structure for repayment, and it is commonly renewed or extended at maturity.
- *Undefined source of repayment.* These types of loans are often repaid through excess cash flow of the borrower, sale of an asset(s), or loan proceeds from another financial institution. These repayment sources are often not identified and are unpredictable.

LOAN-SAMPLING AND COVERAGE REQUIREMENTS

A thorough review of a bank's commercial loan portfolio is one of the most important elements of a bank examination. Credit reviews are an examiner's primary means for evaluating the effectiveness of internal loan-review and credit-grading systems, determining that credit is being extended in compliance with internal policies

and credit standards, and evaluating the adequacy of the allowance for loan and lease losses. Credit reviews also help the examiner to ascertain a bank's compliance with applicable laws and regulations, judge the safety and soundness of the bank's lending and credit-administration functions, and, most important, evaluate directly the quality of the bank's loan portfolio. Since examiners need to make the most efficient use of their time during their on-site review of the loan portfolio, it is not practical to review every loan in the bank's loan portfolio. Instead, examiners must select for review a sample of loans¹ that is sufficient in size and scope to enable them to reach reliable conclusions about the bank's overall lending function. At a minimum, examiners should include in their sample a group of loans referred to as the "core group,"² as described below.

SR-02-19 describes an alternative to the traditional statistical sampling procedures (see SR-94-13) found in this section. (See also section 2082.1.) The alternative statistical sampling procedures of SR-02-19 may only be used for reviewing loans at certain community banks—those rated CAMELS composite and asset quality 1 or 2 with assets of less than \$1 billion. The statistical sampling approach is not recommended for use at de novo banks and other banks with unusually high or low capital ratios. If the statistical sampling procedures of SR-02-19 are *not* used, the minimum loan-review coverage is still 40 percent of the core group of loans.

Core Group

Commercial and industrial loans and commercial real estate loans subject to examiner review should include the following:

- All problem loans, including loans that have been previously classified or specially mentioned by the respective Reserve Bank or state banking department during the most recent

1. For the purposes of this section, the term "loans" includes all sources of credit exposure arising from loans and leases. This exposure includes guarantees, letters of credit, and other loan commitments.

2. If the examiner decides it is practical, the requirements and fundamental guidance set forth in this section can be applied to all types of commercial and industrial loans, as well as to commercial real estate loans or any other type of loan made by the bank.

examinations, loans that are past due as of the date of examination, loans that are on non-accrual status, loans that have been designated as impaired according to the guidelines set forth in Statement No. 114 of the Financial Accounting Standards Board, loans that are considered renegotiated or restructured debt, and loans that are included on the bank's most recent internal watch list.

- All large loans, defined as loans or aggregations of loans to the same or related borrowers that exceed a dollar cutoff level established by the examiner-in-charge. This cutoff will typically be equal to about 1 percent of a bank's

equity capital, but a higher or lower percentage may be warranted depending on the circumstances of the bank being examined.

- Insider loans, as defined by the Board's Regulation O (12 CFR 215).

This core group of loans (problem loans, special-mention loans, insider loans, and large loans) should represent a substantial portion of the dollar volume of a bank's total commercial and industrial loans and commercial real estate loans. Nevertheless, in the majority of cases, the examiner should select additional loans from the remaining portfolio to be reasonably assured of making an accurate and comprehensive assessment of the condition of the bank's overall loan portfolio and lending activities.³

In determining the size and nature of additional loans to be reviewed, the examiner should consider the coverage ratio of the core group of loans.⁴ If the core group of loans reviewed constitutes a substantial portion of the total dollar volume of loans (at least 40 to 50 percent), then sufficient additional loans should be reviewed to raise the coverage ratio another 10 percent. If, on the other hand, the coverage ratio of the core group of loans reviewed is lower, primarily because the bank has fewer large loans, then a greater number and higher dollar volume of loans outside the core group should be reviewed. For example, if the coverage of the core group of loans amounts to only 20 to 30 percent, then the loans reviewed in the remaining portfolio should raise the coverage ratio to a minimum of 40 to 50 percent. Loan coverage at the lower end of this range (40 percent) would be appropriate only if the bank—

- is in satisfactory condition,
- has strong asset quality,

- is well-managed, and
- has effective internal risk controls and underwriting standards.

Furthermore, the examiner should not have identified any other matters of significant concern during the examination. In other words, coverage of the core group of loans could be 40 percent only for a bank that received a composite CAMELS rating of 1 or 2 and an asset-quality rating of 1 on its last examination, provided the findings of the current review of the core group of loans appears consistent with these ratings. For banks that have high overall ratings (CAMELS 1 and 2) but a coverage ratio for its core group of loans that is significantly below 40 percent, additional loans should be selected to bring the coverage ratio for all loans reviewed to a minimum 40 percent.

Banking organizations with less than satisfactory composite supervisory ratings or other significant areas of supervisory concern should have loan coverage ratios of at least 55 to 60 percent to fully determine the financial condition of the organization. Any divergence from these guidelines should be fully documented in the confidential section of the examination report.

The examiner should use his or her conclusions from the review of the core group of loans to determine the extent to which additional loans should be selected for review, as these loans will provide the most up-to-date indications of the general condition of the bank's loan portfolio and the adequacy of the bank's credit-administration practices. For example, if the review of the core group of loans reveals that an undue proportion of a bank's problem assets are concentrated in a particular type of loan or if a portion of the portfolio is growing rapidly, the additional loans to be reviewed should be selected from that group.

In determining the extent of additional loans to be reviewed, the effectiveness of the bank's internal credit-review and -grading system should also be considered. If, for example, the examiner's review of the core group of loans provides essentially the same results as those from these systems, then the number and dollar size of the remaining sample reviewed can be kept relatively low (unless the review of the remaining sample raises questions about the integrity of the system with respect to the remaining portfolio).

In addition to the coverage ratio of the core group of loans, an examiner should take into

3. One approach to selecting the additional sample of loans to be reviewed is to lower the cutoff level of larger loans subject to review. Alternatively, other methods (including random sampling or selecting recent loans or specific loan types) may be used to select the sample when these methods appear more suited to the bank's circumstances.

4. A loan-review-coverage ratio should be calculated by dividing the dollar volume of commercial and industrial loans and commercial real estate loans reviewed during the examination by a bank's total dollar volume of such credits. For the purposes of this calculation, loans are defined as all sources of credit exposure arising from loans and leases, including guarantees, letters of credit, and other loan commitments. Credit exposures arising from trading and derivatives activities are not generally included in this coverage ratio.

account other factors, including the overall condition of the bank at its last examination and, most importantly, that examination's findings on the quality of the loan portfolio and the adequacy of loan-administration activities (that is, the accuracy of internal loan-rating systems, the appropriateness of underwriting standards, the adequacy of documentation in files, the adequacy of management information and internal control systems, and the adequacy of loan-loss reserves). Other important factors are the ability and experience of the lending officers and personnel managing the lending function, any changes in asset quality or lending policies since the last examination, and significant concentrations identified in the preliminary review of the loan portfolio. Regardless of the total coverage of the core-group review and the additional sample of loans, the examiner must select a sufficient number, volume, and variety of loans to accurately judge the condition of the bank's entire loan and lease portfolio and the effectiveness of its credit-administration policies and practices.

Commercial Loan Sampling Techniques

Sampling techniques are a valid and efficient method for reviewing the commercial loan portfolios at banks during on-site examinations. Sampling enables the examiner to draw conclusions regarding the condition of the entire loan portfolio by reviewing only a selected portion. These techniques make more efficient use of examination resources and allow examiners to devote more of their time and efforts to other areas of the examination.

Generally, a judgmental sampling technique is used for reviewing commercial loans. This technique enables examiners to evaluate the portfolio by reviewing a desired percentage of all the loans over a preselected cutoff amount. In addition to the judgmental sampling approach, statistical sampling techniques can also be valid methods for evaluating loan portfolios. Two statistical sampling techniques that may be selectively implemented during on-site examinations are attributes sampling and proportional sampling. Attributes sampling is especially well-suited for large banks that have formal loan review programs; proportional sampling may be better suited for smaller or regional banks without internal loan-review programs.

In statistical sampling, the examiner uses the concepts of probability to apply sampling techniques to the design, selection, and evaluation of loan samples. Statistical sampling eliminates (or at least minimizes) potential selection biases because each item in the sample-loan population must have an equal or otherwise determinable probability of being included in the examined portion. This probability provides the examiner with a quantitative, controllable measure of risk.

Generally, statistical sampling techniques may be implemented only in those banks (1) that were found to be in financially sound condition, (2) that were without any undue loan portfolio problems at the latest examination, and (3) where it was determined that the systems and controls were appropriate for implementing such techniques. Moreover, if during an examination, the examiner determines that the statistical sampling results are unsatisfactory, the traditional judgmental sampling technique should be implemented.

The two recommended statistical sampling techniques are described below:

- *Attributes Sampling.* The objective of attributes sampling is to determine from a sample, within specified reliability limits, the validity of the bank's internal loan-review program. The reliability limits are determined by the examiner, who formulates a hypothesis about the bank's loan-review program when evaluating its policies, practices, and procedures for loan extensions. The population to be sampled consists of all loans between certain dollar parameters, except for loans reviewed under the shared national credit program and loans to identified problem industries (the latter are reviewed separately during the examination). The lower dollar parameter is an amount that the examiner deems sufficient to achieve the desired coverage of the loan portfolio and is selected in much the same manner as a cutoff line is chosen in judgmental sampling. The upper dollar parameter is an amount over which all loans must be reviewed because of the significant effect each could have on the bank's capital. Loans are selected from the sample population by using a random digit table.

When the selected loans are reviewed, the examiner compares his or her grading with those of the bank's loan-review program. An "error" generally exists if the examiner's grading of a particular loan is significantly

more severe than the bank's grading. If the error rate in the sample is beyond the pre-established reliability limits the examiner is able to accept, all loans over the cutoff amount should be reviewed. If the examiner is satisfied with the sample results, the bank's internal grading will be accepted for all criticized loans that have not been independently reviewed within the sample population. Even when the bank's internal grading is deemed acceptable by the examiner, any loans reviewed and found to be in error will be appropriately classified in the report.

- *Proportional Sampling.* The procedures for proportional sampling are similar to those followed for attributes sampling. The objective of this sampling technique is to determine whether bank management can identify all the criticizable loans in the portfolio. The examiner formulates a hypothesis about the quality of the examined bank's loan administration, based on an analysis of loan policies, practices, and procedures for loan extensions. In proportional sampling, every loan in the sample population is given an equal chance of selection in proportion to its size, so the larger the loan, the more likely it will be selected for review. Examiners grade the loans in the sample and compare these gradings with the bank's problem-loan list.

As in attributes sampling, the examiner specifies the desired precision of the sample, that is, that the true error rate in the bank's problem-loan list should be within a certain range of values. A statistical error occurs whenever the examiner criticizes a loan that is not criticized by the bank. If the error rate is higher than expected, the examiner will review all loans over a cutoff line, which is determined using the same criteria as line selection in judgmental sampling. If the sample results indicate an error rate within expectations, then the examiner will accept the bank's problem-loan list as a reliable list of the nonpass loans in the population from which the sample was taken. The examiner will then review and grade each loan on the problem-loan list over the cutoff amount.

For detailed procedures on how to implement both attributes and proportional sampling, examiners should contact either Reserve Bank supervision staff or Federal Reserve Board supervision staff.

REVIEWING CREDIT QUALITY

Importance of Cash Flow

Evaluating cash flow is the single most important element in determining whether a business has the ability to repay debt. Two principal methods of calculating the cash flow available in a business to service debt are presented in this subsection. The results of these methods should be used to determine the adequacy of cash flow in each credit evaluated at an institution. The accrual conversion method is the preferred method because it is the most reliable. The second and less reliable method is the supplemental or traditional cash-flow analysis; however, the information needed for this analysis is usually more obtainable and easier to calculate. The traditional method can be used when circumstances warrant, for example, when the borrower's financial statements are not sufficiently detailed for the information requested in the accrual conversion analysis or when historical information is inadequate.

Analysis and Limitations of Cash Flow

Cash-flow analysis uses the income statement and balance sheet to determine a borrower's operational cash flow. Careful analysis of all investment and financing (borrowing) activities must be made for an accurate assessment of cash flow. In reality, examiners face time constraints that often prevent them from performing the complex mathematical calculations involved in sophisticated cash-flow analysis. Therefore, the cash-flow methods presented below were designed to be reasonable and practical for examiner use. *However, examiners should be careful of conclusions reached using the traditional cash-flow analysis, without consideration to balance-sheet changes or other activities that affect cash flow. The traditional cash-flow analysis does not recognize growth in accounts receivable or inventory, a slow-down in accounts payable, capital expenditures, or additional borrowings.* If the credit file contains a CPA-prepared statement of cash flow or a statement prepared using the accrual conversion method, the examiner should concentrate efforts on reviewing and analyzing these statements rather than on preparing a traditional cash-flow statement.

One critical issue to remember is that deficit cash flow does not always mean that the borrower is encountering serious financial difficulties. In some cases, deficit cash flow is caused by a business's experiencing significant growth, and there is a pronounced need for external financing to accommodate this growth and eliminate the deficit cash-flow position. In this case, an adequate working-capital facility may not be in place to accommodate the need for additional inventory. A comprehensive analysis of changes in the balance sheet from period to period should be made before the loan is criticized.⁵

Components of the Accrual Conversion Method of Cash Flow

<i>Category</i>	<i>Basis for Amount</i>
Sales:	Dollar amount of sales in period
+/-change in A/R, INV., A/P:	Represents the absolute difference of the current period from the corresponding period of the previous year in accounts receivable, inventory, and accounts payable.
Formula:	(a) An increase in any current asset is a use of cash and is subtracted from the calculation. Conversely, a decrease in any current asset is a source of cash and is added to the calculation. (b) An increase in any current liability is a source of cash and is added to the calculation. Conversely, a decrease in any current liability is a use of cash and is subtracted from the calculation.
SGA:	Subtract selling, general, and administrative expenses.
Interest Expense:	Add interest expense to the calculation if SGA "expense" includes interest expense.

Excess (Deficit) Cash Flow: Represents cash available before debt service.

Calculation of Supplemental/Traditional Cash Flow

Net Income: Amount of net income reported on most recent annual income statement before taxes.

Interest Expense: Add the total amount of interest expense for the period.

Depreciation/Amortization: Add all noncash depreciation and principal amortization on outstanding debt.

Cash Flow before

Debt Service: Indicates net Earnings Before Interest, Taxes, Depreciation, and Amortization (EBITDA). Amortization should include both principal and interest payments required on debt.

Debt Service: Subtract scheduled principal and interest payments.

Capital

Expenditures: Subtract all capital expenditures for the period.

EQUALS—
Excess (Deficit)

Cash Flow: Total amount of excess or deficit cash flow for the period after debt service.

Coverage

Ratio: Cash flow before debt service divided by debt service (principal and interest).

Importance of Financial Analysis

While cash-flow analysis is critical in reviewing whether a borrower has the ability to repay individual debt, a review of the borrower's other financial statements can offer information about other sources of repayment, as well as the borrower's overall financial condition and future

5. Examiners should make sure that they are using financial data from consistent periods, that is, year-to-date financial information. Mixing annual financial data with interim financial information can cause misinterpretation of cash flow for a given business cycle or annual period.

prospects. The availability of historical balance-sheet and income information, which allow declining trends to be identified, is critical. Also, it may be appropriate to compare the borrower's financial ratios with the average for the industry overall. Much of the financial information that examiners will review will not be audited; therefore, considerable understanding of general accounting principles is necessary to competently review an unaudited financial statement. The bank should obtain at least annual financial statements from a borrower.

When reviewing a credit file of a borrowing customer of a bank, the following financial information should be available for review: income statement, balance sheet, reconciliation of equity, cash-flow statements, and applicable notes to financial statements. The components for a financial review can be segregated into three areas: operations management, asset management, and liability management. Operations management is derived from the income statement and can be used to assess company sales, cost control, and profitability. Asset management involves the analysis of the quality and liquidity of assets, as well as the asset mix. Liability management covers the analysis of the company's record of matching liabilities to the asset conversion cycle, such as long-term assets being funded by long-term liabilities.

In studying the above forms of management, various ratios will help the examiner form an informed and educated conclusion about the quality of the credit being reviewed. The ratios can be divided into four main categories:

- *Profitability ratios.* These ratios measure management's efficiency in achieving a given level of sales revenue and profits, as well as management's ability to control expenses and generate return on investment. Examples of these ratios include gross margin, operating profit margin, net profit margin, profit to sales ratio, profit to total assets ratio, and direct cost and expense ratios.
- *Efficiency ratios.* These ratios, which measure management's ability to manage and control assets, include sales to assets, inventory days on hand, accounts receivable days on hand, accounts payable days on hand, sales to net fixed assets, return on assets, and return on equity.
- *Leverage ratios.* These ratios compare the funds supplied by business owners with the financing supplied by creditors, and measure debt capacity and ability to meet obligations. These ratios may include debt to assets, debt to net worth, debt to tangible net worth, and interest coverage.
- *Liquidity ratios.* Include ratios such as the current ratio and quick ratio, which measure the borrower's ability to meet current obligations.

Common "Red Flags"

The symptoms listed below are included to provide an understanding of the common problems or weaknesses examiners encounter in their review of financial information. While one symptom may not justify criticizing a loan, when symptoms are considered in the aggregate, they may help the examiner detect near-term trouble. This list is only a sampling of "red flags" that should prompt further review; examiners should also be able to identify issues that may require further investigation from their cursory review of a borrower's financial statement.

- *A slowdown in the receivables collection period.* This symptom often reveals that the borrower has become more liberal in establishing credit policies, has softened collection practices, or is encountering an increase in uncollected accounts.
- *Noticeably rising inventory levels in both dollar amount and percentage of total assets.* Increases in inventory levels are usually supported by trade suppliers, and financing these increases can be extremely risky, particularly if turnover ratios are declining. The increase in inventory levels or lower turnover ratios may also be related to the borrower's natural reluctance to liquidate excessive or obsolete goods at a reduced price. Many businesses are willing to sacrifice liquidity to maintain profit margins.
- *Slowdown in inventory turnover.* This symptom may indicate overbuying or some other imbalance in the company's purchasing policies, and it may indicate that inventory is slow-moving. If the inventory is undervalued, the actual turnover is even slower than the calculated results.
- *Existence of heavy liens on assets.* Evidence of second and third mortgage holders is a sign of greater-than-average risk. The cost of junior

money is high. Most borrowers are reluctant to use this source of funds unless conventional sources are unavailable.

- *Concentrations of noncurrent assets other than fixed assets.* A company may put funds into affiliates or subsidiaries for which the bank may not have a ready source of information on operations.
- *High levels of intangible assets.* Intangible assets, which shrink or vanish much more quickly than hard assets, usually have very uncertain values in the marketplace. In some cases, however, intangible assets such as patents or trademarks have significant value and should be given considerable credit.
- *Substantial increases in long-term debt.* This symptom causes increasing dependence on cash flow and long-term profits to support debt repayment.
- *A major gap between gross and net sales.* This gap represents a rising level of returns and allowances, which could indicate lower quality or inferior product lines. Customer dissatisfaction can seriously affect future profitability.
- *Rising cost percentages.* These percentages can indicate the business's inability or unwillingness to pass higher costs to the customer or its inability to control overhead expenses.
- *A rising level of total assets in relation to sales.* If a company does more business, it will take more current assets in the form of inventory, receivables, and fixed assets. Examiners should be concerned when assets are increasing faster than sales growth.
- *Significant changes in the balance-sheet structure.* These changes may not be the customary changes mentioned previously, but they are represented by marked changes spread across many balance-sheet items and may not be consistent with changes in the marketplace, profits or sales, product lines, or the general nature of the business.

REQUIRED MINIMUM DOCUMENTATION STANDARDS FOR LOAN LINE SHEETS

Certain minimum documentation must appear on all line examination sheets to leave an acceptable audit trail and to support the classification of designated loans. Currently, much of this information is often placed on the line ticket automatically by using computer-based loan-

review systems. However, the disposition of the loan and the reasons for that disposition are the most crucial entries on the line ticket. Examiners must document their entries and decide how much of the documentation is required to support the loan-review decision. That decision and a summary of the reasons a loan is passed, listed for special mention, or adversely classified should be provided (preferably in bullet form) on the loan line ticket. Beyond that, the documentation will vary depending on the complexity and profile of the credit. The examiner may provide more detailed information on the collateral, cash flow, and repayment history. This additional information is not mandatory if the rationale for the disposition of the credit is otherwise clear.

The extension of credit line sheets and workpapers should document loan discussion comments, identify the examiner who reviewed the credit, and identify the officer(s) with whom the credit was discussed. Line sheets should also include the examiner's conclusion on the specific credit and the reasons for that conclusion.

As part of a review of examination and supervisory policies and procedures and to promote consistency, the items described below have been implemented as required minimum documentation standards for loan line sheets. These standards recognize a transactional approach in examinations and reflect the efficiencies inherent in a risk-focused approach to examinations. The amount of information that should be documented or included as part of a line sheet may vary depending on the type, complexity, and materiality of the credit. However, all line sheets should include the following information to satisfy the required minimum documentation standards, as set forth by SR-99-25 ("Minimum Documentation Standards for Loan Line Sheets," September 29, 1999). The first seven items are frequently provided through computer-based loan-review systems.

- *Name and location of borrower:* Document the name of the individual or company responsible for repayment of the debt.
- *Notation if the borrower is an insider or a related interest of an insider.* If the borrower is an insider or a related interest of the insider as defined by Regulation O, reflect this association on the line sheet.
- *Business or occupation.* Briefly describe the legal entity and the type of business in which the company is engaged, according to the

following definitions:

- *Corporation.* A business organization that is owned by shareholders who have no inherent right to manage the business. The organization is generally managed by a board of directors that is elected by the shareholders. The file should contain the borrowing resolution indicating which officers from the corporation are authorized to sign on its behalf. Indicate if the corporation is closely held.
- *Partnership.* A business organization, specifically, an association of two or more persons to carry on as co-owners of a business for profit. Indicate if it is a general partnership (GP) or limited partnership (LP). If GP, each partner is fully liable for the firm's debts and actions. If LP, at least one general partner is fully liable, but there will also be a number of partners whose liability is limited to that enumerated by the partnership agreement. Indicate each partner's proportionate interest (such as 25 or 50 percent).
- *Proprietorship.* A form of business organization that is owned and operated by an individual. If the borrower is an individual, include his or her primary occupation.
- *Loan terms.* Include the following loan information⁶:
 - date of origination (note subsequent renewals and/or extensions)
 - repayment terms (for example, maturity, periodic payments, revolving)
 - maturity (restructured loans should be noted as such)
 - interest rate (fixed or variable) (If variable, state the basis (index) upon which the interest rate is determined.)
 - originated amount of the loan
- *Purpose of loan.* Note the purpose of each credit facility.
- *Repayment source.* Indicate the primary and secondary sources of repayment for each credit facility.
- *Collateral summary and value.* Describe collateral and assess the value of the collateral in which the bank maintains a perfected security interest. Values should be supported by some type of document, such as a recent financial statement, formal appraisal, management estimate, or any publication that maintains a current market value of collateral. At a minimum, the collateral assessment should include the following information:
 - collateral value
 - basis for valuation
 - date of valuation
 - control of collateral
 - current lien status
- *Loan officer assigned to the credit and the internal rating of the credit.* Note the name of the loan officer responsible for the loan. Also document the bank's internal risk-rating. The date of the most recent update of the rating should also be noted. Particular attention should be given to the consistency between the loan classification at the current examination and the assessment provided by the bank's internal loan-review department. Significant disparities should be noted in the asset-quality assessment.
- *Total commitment and total outstanding balances.* Indicate the total amount of the bank's legal commitment or line of credit available to the borrower. Note the total outstanding debt to the borrower as of the date of examination.
- *Examination date.* Indicate the as-of date of the examination.
- *Past-due or nonaccrual status.* Indicate the past-due status (current, nonaccrual, and days past due).
- *Amounts previously classified.* Note the loan amount and how the loan was previously classified at the most recent examination (Federal Reserve Bank or state).
- *Loan disposition (pass, special mention, or adverse classification).* Note the credit amount and how the credit is being classified, such as pass, special mention, substandard, doubtful, or loss.
- *Rationale for examiner's conclusions (preferably in bullet form).* Indicate the reasons for passing the credit or extending it for criticism, which should be consistent with the classification descriptions noted in "Classification of Credits," section 2060.1.
- *Name or initials of the examiner reviewing the credit.* Indicate the name or initials of the examiner who reviewed and assigned the classification to the credit.
- *Any significant comments by, or commitments from, management.* Clearly and specifically indicate relevant comments (including man-

6. If the loan is a shared national credit (SNC), this should be noted on the line sheet. A copy of the SNC write-up should be attached to the line sheet, and it is not necessary to provide any additional data.

agement's disagreement with the disposition of the loan, if applicable) that may be considered when determining whether or not to criticize the credit. Comments can include officer's comments noted in the credit file, information derived from discussions with management, questions the examiner may have about the borrower, or any other item deemed appropriate. If management plans to get out of the credit relationship, a workout strategy should be included in this section. Comments should be included as to why management disagrees with any loan classification or how any loan was classified.

- *Any noted documentation exceptions or loan-administration policy or procedural weaknesses, and any contravention of law, regulation, or policy.* Indicate any documentation exception or violation of law, regulation, or policy that would be appropriate to include as part of the report of examination. The examiner may include any technical exception noted from the credit file that would inhibit the ability of the loan officer or the examiner to make an informed and/or competent judgment about the quality of the credit relationship.

When needed, loan line sheets should briefly note that information is not available or that certain information is not reliable due to deficient loan-administration systems and processes, particularly with respect to loan and collateral documentation and collateral values. If such deficiencies are material, a listing of the exceptions should be noted in the examination report. In addition, the effect of these loan-administration weaknesses should be discussed and factored into the risk-management rating.

Optional Information for Loan Line Sheets

In addition to the above information, additional items should be listed when needed to describe the terms of the credit and/or the disposition accorded to it by the examiners, for example, guarantors, amount of any specific reserve, or amounts previously charged off, as described below:

- *Related debt/tie-ins.* The name, total debt outstanding, and type of borrowings (such as real estate, commercial, installment debt) of the related party might be indicated.

- *Guarantor(s).* If a guarantor exists, the name, amount of the guaranty, and date the guaranty was signed can be noted. A summary and an assessment of data supporting a guaranty may also be included, along with current financial information from the guarantor(s) which the bank should obtain at least annually. Tax returns and supporting schedules, income statements, and other pertinent information on the guarantor(s) may be appropriate under certain circumstances. If a troubled credit, indicate whether the guarantor has exhibited any willingness to financially support the credit.
- *Summary of financial data.* The following information may be appropriate, based on the type and complexity of the loan:
 - key balance-sheet information (current ratio, D/E ratio)
 - key income items (EBITDA—earnings before income taxes, depreciation, and amortization; net income; profit margin)
 - cash-flow coverage (debt-service coverage, interest coverage)
 - source of financial data (company-prepared balance sheet, audited financial statement)
- *Dates and amounts of previous charge-offs.*
- *Specific reserves.* The examiner may indicate whether an amount (allocated reserve) was specifically set aside to absorb any loss from the credit. When evaluating the overall adequacy of the loan-loss reserve, subtract the aggregate of allocated reserves from the total reserve balance, and subtract the aggregate amount of loans for which allocated reserves exist from the total loan balance.
- *The name of the loan officer who may have offered the most pertinent discussion items that affected the classification decision.*

BANKRUPTCY LAW AND COMMERCIAL LOANS

This section provides examiners with an overview of the United States Bankruptcy Code (the code) chapters that affect commercial and industrial loans. Bankruptcy law is a significant body of law; it would be difficult in this manual to discuss all the issues necessary for comprehensive understanding of the code. This subsection will focus on basic issues that an examiner needs to be familiar with relative to three principal sections of the code: chapters 7, 11, and 13.

Creditors of a Bankrupt Business

A creditor in bankruptcy is anyone with a claim against a bankrupt business, even if a formal claim is not filed in the bankruptcy case. In bankruptcy court, a claim is defined very broadly. A claim may include a right to payment from a bankrupt business, a promise to perform work, or a right to a disputed payment from the debtor that is contingent on some other event. The two basic types of creditors are secured and unsecured. Secured creditors are those with perfected security interest in specific property, such as equipment, accounts receivable, or any other asset pledged as collateral on a loan. Unsecured creditors are generally trade creditors and others who have not taken a specific interest in property supplied to the bankrupt debtor.

Voluntary Versus Involuntary Bankruptcy

When a debtor files a bankruptcy petition, it is described as a voluntary bankruptcy filing. The individual or organization does not have to be insolvent to file a voluntary case. Creditors may also file a bankruptcy petition, in which case the proceeding is known as an involuntary bankruptcy. This form of petition can occur in chapters 7 and 11 bankruptcy cases, and the debtor generally must be insolvent. To be deemed insolvent, the debtor must be unable to pay debts as they mature. However, the code does limit who an involuntary action can be sought against.

Chapter 7—Liquidation Bankruptcy

A chapter 7 action may be filed by virtually any person or business organization that is eligible to file bankruptcy. Chapter 7 bankruptcy can be filed by a sole proprietorship, partnership, corporation, joint stock company, or any other business organization. Restrictions apply to only a few highly regulated businesses, such as railroads, insurance companies, banks, municipalities, and other financial institutions. This chapter is often referred to as “straight liquidation,” or the orderly liquidation of all assets of the entity. Generally, a debtor in a chapter 7 bankruptcy case is released from obligations to pay all dischargeable prebankruptcy debts in exchange for surrendering all nonexempt assets

to a bankruptcy trustee. The trustee liquidates all assets and distributes the net proceeds on a pro rata basis against the allowed claims of unsecured creditors. Secured creditor claims are generally satisfied by possession or sale of the debtor’s assets. Depending on the circumstances, a secured creditor may receive the collateral, the proceeds from the sale of the collateral, or a reaffirmation of the debt from the debtor. The reaffirmed debts are generally secured by property that the debtor can exempt from the bankruptcy estate, such as a home or vehicle. The amount of the reaffirmation is limited to the value of the asset at the time of the bankruptcy filing. Some characteristics of a chapter 7 bankruptcy are described below:

- A trustee is appointed in all chapter 7 bankruptcies and acts as an administrator of the bankruptcy estate. The bankruptcy estate that

is established when the petition is filed becomes the legal owner of the property. The trustee acts to protect the interest of all parties affected by the bankruptcy.

- The trustee has control of all nonexempt assets of the bankrupt debtor.
- The trustee is required to liquidate the estate quickly without jeopardizing the interests of the affected parties.
- The proceeds from the sale pay trustee's fees and other creditors. Trustee fees are determined according to the amount disbursed to the creditors and are a priority claim.
- A chapter 7 bankruptcy is typically completed in 90 days, depending on the time needed to liquidate collateral. Some chapter 7 bankruptcies take years to complete.
- The court may allow the trustee to continue to operate a business, if this is consistent with the orderly liquidation of the estate.

Chapter 11—Reorganization

Most major or large businesses filing bankruptcy file a chapter 11 reorganization. As in chapter 7, virtually any business can file a chapter 11 reorganization. There are specialized chapter 11 reorganization procedures for certain businesses such as railroads, and chapter 11 is not available to stockbrokers, commodity brokers, or a municipality. The basic concept behind chapter 11 is that a business gets temporary relief or a reprieve from paying all debts owed to creditors. This temporary relief gives the business time to reorganize, reschedule its debts (at least partially), and successfully emerge from bankruptcy as a viable business. The basic assumption underlying a chapter 11 bankruptcy is that the value of the enterprise as a going concern will usually exceed the liquidation value of its assets.

Reorganization Plan

Generally, the debtor has an exclusive 120-day period to prepare and file a reorganization plan. If the debtor's plan has not been confirmed within 180 days of the bankruptcy filing, a creditor may file a plan. A plan can provide for any treatment of creditor claims and equity interest, as long as it meets the requirements set out in the code. For example, a plan must designate substantially similar creditor claims

and equity interest into classes and provide for equal treatment of such class members. A plan must also identify those classes with impaired claims and their proposed treatment. Finally, a method of implementation must be provided. Although plans do not have to be filed by a deadline, the bankruptcy judge will generally place a deadline on the debtor or creditor authorized to prepare the plan.

Some characteristics of a chapter 11 bankruptcy are described below.

- The bankrupt debtor usually controls the business during the bankruptcy proceedings. This arrangement is referred to as "debtor in possession."
- The business continues to operate while in bankruptcy.
- The debtor is charged with the duty of developing a reorganization plan within the first 120 days of the filing. After this period expires, the court may grant this authority to a creditors' committee.
- Once the plan is approved by the bankruptcy court, the debtor's payment of debts is generally limited to the schedule and amounts that are detailed in the reorganization plan.
- A chapter 11 proceeding can be complex and lengthy, depending on the number of creditors, amount of the debts, amount of the assets, and other factors that complicate the proceedings.

Chapter 13—Wage-Earner Bankruptcy

A chapter 13 bankruptcy is available to any individual whose income is sufficiently stable and regular to enable him or her to make payments under the plan. As long as the individual has regular wages or takes a regular draw from his or her business, the individual may qualify under chapter 13 of the code. Under chapter 13, an individual or married couple can pay their debts over time without selling their property. As a protection to creditors, the money paid to a creditor must equal or exceed the amount that the creditor would get in a liquidation or chapter 7 bankruptcy. Chapter 13 may be used for a business bankruptcy, but only if the business is a proprietorship. In most cases, the business needs to be fairly small to qualify.

Some characteristics of a chapter 13 bankruptcy are described below:

- In most cases, only an individual can file a chapter 13 bankruptcy.
- Secured debt may not exceed \$350,000.
- Unsecured debt may not exceed \$100,000.
- The debtor must propose a good-faith plan to repay as many debts as possible from available income.
- A debtor makes regular payments to a trustee, who disburses the funds to creditors under the terms of the plan.
- The trustee does not control the debtor's assets.
- A chapter 13 bankruptcy may include the debts of a sole proprietorship. The business may continue to operate during the bankruptcy.
- After all payments are made under the plan, general discharge is granted.

SECTIONS 23A AND 23B OF THE FEDERAL RESERVE ACT

As a result of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), the application of sections 23A and 23B of the Federal Reserve Act was expanded to all federally insured commercial and thrift depository institutions. The passage of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) affected section 23A by allowing the appropriate federal regulator to revoke the "sister bank" exemption for all financial institutions that are "significantly undercapitalized" or those that are "undercapitalized" and fail to submit and implement capital-restoration plans. In addition, FDICIA prohibits critically undercapitalized banks from engaging in covered transactions that are defined in section 23A without prior written approval from the FDIC. Section 23B was added to the Federal Reserve Act on August 10, 1987, through the Competitive Equality Banking Act of 1987. This new section essentially codified additional limitations regarding transactions banks have with their nonbank affiliates. Previously, these transactions had been governed only by Federal Reserve policy or interpretation. The intent of this subsection is to provide examiners with general guidance on how to identify potential violations of these sections of the Federal Reserve Act as it pertains to the commercial-lending function. (Specific guidance and definitions can be obtained from part I of the *Federal Reserve Regulatory Service*.)

Section 23A

Section 23A of the Federal Reserve Act was designed to prevent misuse of a bank's resources stemming from non-arm's-length transactions with affiliates. Examiners will first need to determine if the institution and counterparty involved in a transaction are affiliates. Once this relationship is determined, the examiner will need to decide if the transaction is included in the statute as a "covered transaction." Generally, covered transactions within the lending function of the institution would include any loan or extension of credit to an affiliate as defined by section 23A. Any transaction by a bank with any person is deemed to be a transaction with an affiliate to the extent that the affiliate benefited from the transaction. A key element of section 23A is that covered transactions between a bank and its affiliate must be on terms and conditions consistent with safe and sound banking practices.

Once the examiner has determined that the counterparty is an affiliate and that the transaction is a covered transaction, there are quantitative limitations that apply. Section 23A limits the covered transaction between a bank and its affiliate to no more than 10 percent of the bank's capital and surplus (defined as capital stock, surplus, retained earnings, and reserves for loan losses). In addition, an institution and its subsidiaries may only engage in a covered transaction with an affiliate if, in the case of all affiliates, the aggregate amount of the covered transactions of the institution and its subsidiaries will not exceed 20 percent of the capital stock and surplus of the institution.

When the transaction involves an extension of credit to a defined affiliate, certain collateral requirements must also be met. Generally, extensions of credit require certain collateral margins that are tied to the type of collateral. For example, extensions of credit that are secured by U.S. Treasury securities or its agencies require a collateral margin of 100 percent of the transaction amount, whereas collateral consisting of stock, leases, or other real or personal property requires a margin of 130 percent. Some collateral, such as the obligations of an affiliate, is not eligible. Certain exemptions to collateral requirements were included to permit transactions that posed little risk to the bank and to prevent undue hardship among the affiliated organizations in carrying out customary transactions with related

entities. These exemptions include various transactions that are related to sister-bank relationships, correspondent relationships, uncollected items, or loans to affiliates secured by riskless collateral.

Section 23B

With respect to affiliates, section 23B defines affiliates in the same manner as section 23A, except that all banks are excluded from section 23B as affiliates. The principal requirements of section 23B state that any transaction between a bank and a defined affiliate under the act must be (1) on terms and under circumstances, including credit standards, that are substantially the same, or at least as favorable to the bank or its subsidiary, as those prevailing at the time for comparable transactions with or involving other nonaffiliated companies, or (2) in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would be offered or would apply to nonaffiliated companies. In short, the terms and conditions of an extension of credit to an affiliate under section 23B should be no more favorable than those that would be extended to any other borrowing customer of the bank. For covered transactions, all transactions that are covered under section 23A are covered under section 23B; however, section 23B expanded the list to include other transactions such as the sale of securities or the receipt of money or services from an affiliate.

The focus of section 23B is different from that of section 23A. Section 23A contains quantitative and collateral restrictions to protect the bank; section 23B focuses on whether transactions with nonbank affiliates are arm's length and not injurious to the bank. Occasionally, an extension of credit, by definition, is granted to an affiliate of a federally insured bank or thrift institution, so examiners are reminded that it is likely that sections 23A and 23B will be implicated. Essentially, examiners need to keep one basic principal in mind: If money flows from the bank to an affiliate other than through a dividend, the transaction is probably a covered transaction and would be enforceable under sections 23A and 23B.

TIE-IN ARRANGEMENTS

Section 106(b) of the Bank Holding Company

Act Amendments of 1970 prohibits banks from directly tying products or services offered by the bank or any of its affiliates. In the typical tie-in arrangement, whether or not credit is extended or a service is provided (or the amount charged for the credit or service) depends upon the customer's obtaining some additional product or service from the bank or its affiliate or providing some additional product or service to the bank or its affiliate. The intent of section 106(b) was to affirm the principles of fair competition by eliminating the use of tie-in arrangements that suppress competition. Specifically, the section prevents banks from using their marketing power over certain products, specifically credit, to gain an unfair competitive advantage. There are two exceptions to the anti-tying restrictions. The bank may vary the consideration charged for a traditional bank product on the condition or requirement that a customer also obtain a traditional bank product from an affiliate. This exception is a limited extension of the traditional bank product exception provided in section 106. The second exception applies to securities brokerage services (only those activities authorized under section 225.28(b)(7) of Regulation Y). A bank may vary the consideration charged for securities brokerage services on the condition that a customer also obtain a traditional bank product from that bank or its affiliate.

On April 19, 1995, the Board issued a final rule on the anti-tying provisions of section 106 of the 1970 Bank Holding Company Act Amendments. The rule establishes a "combined-balance discount" safe harbor for a banking organization offering varieties of services to its customers and wishing to offer them discounts based on the customers' overall relationship with the bank or its holding company and subsidiaries. The amendment, effective May 26, 1995, provides that a bank holding company or any bank or nonbank subsidiary thereof may weight products as it sees fit in connection with its evaluation of combined-balance discount arrangements, so long as deposits receive an equal or higher weight than other products. The new rule expanded the Board's recent exemption to a large regional banking organization to all banking organizations tying traditional services, such as checking accounts and nontraditional banking products like brokerage services. It permits banks to market products more efficiently and compete more effectively with their nonbanking competitors who currently offer combined-balance discount arrangements.

Examiners should be aware that the principal motive of section 106(b) is to eliminate any potential for “arm twisting” customers into buying some other product to get the product they desire. Examiners should focus on potentially illegal tie-in arrangements by reviewing (1) the banking organization’s internal controls and procedures and its written policies and procedures in this area; (2) the training provided

to the organization’s staff; (3) pertinent extensions of credit to borrowers whose credit facilities or services may be susceptible to improper tie-in arrangements imposed by the bank or company in violation of section 106(b) or the Board’s regulations; and (4) where applicable, the firewalls that have been established between banks and their holding companies and nonbank affiliates, including section 20 subsidiaries.

Commercial and Industrial Loans

Examination Objectives

Effective date May 1996

Section 2080.2

1. To determine if lending policies, practices, procedures, and internal controls for commercial and industrial loans are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for credit quality, performance, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.

Commercial and Industrial Loans Examination Procedures

Effective date November 2003

Section 2080.3

1. If selected for implementation, complete or update the commercial loan section of the internal control questionnaire.
2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal or external auditors, and determine if corrections have been accomplished.
4. Obtain a trial balance of the customer liability records.
 - a. Agree or reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination. Prepare credit line cards.
6. Obtain the following information from the bank or other examination areas, if applicable:
 - a. past-due loans
 - b. loans in a nonaccrual status
 - c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be given to loans that have been renewed with interest being rolled into principal.)
 - d. loans whose terms have been modified by a reduction of interest-rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
 - e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
 - f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
 - g. loan commitments and other contingent liabilities
 - h. loans secured by stock of other depository institutions
 - i. extensions of credit to employees, officers, directors, and principal shareholders and their interests, specifying which officers are considered executive officers
 - j. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
 - k. a list of correspondent banks
 - l. miscellaneous loan-debit and credit-suspense accounts
 - m. Shared National Credits
 - n. loans considered “problem loans” by management
 - o. specific guidelines in the lending policy
 - p. each officer’s current lending authority
 - q. any useful information resulting from the review of the minutes of the loan and discount committee or any similar committee
 - r. reports furnished to the loan and discount committee or any similar committee
 - s. reports furnished to the board of directors
 - t. loans classified during the previous examination
 - u. the extent and nature of loans serviced
7. Review the information received, and perform the following procedures.
 - a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.*
 - Participations only:
 - Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
 - Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
 - Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
 - Procedures pertaining to all transfers:
 - Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were trans-

- ferred to avoid possible criticism during the examination.
- Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
 - Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank's books and is equal to the fair market value of the transferred loans. (While fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium.) Section 23A of the Federal Reserve Act generally prohibits a state member bank from purchasing a low-quality asset.
 - Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.
 - If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
 - (1) name of originating institution
 - (2) name of receiving institution
 - (3) type of transfer (i.e., participation, purchase or sale, swap)
 - (4) date of transfer
 - (5) total number of loans transferred
 - (6) total dollar amount of loans transferred
 - (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
 - (8) any other information that would be helpful to the other regulator
- b. *Miscellaneous loan-debit and credit-suspense accounts.*
 - Discuss with management any large or old items.
 - Perform additional procedures as deemed appropriate.
 - c. *Loan commitments and other contingent liabilities.* Analyze the commitment or contingent liability if the borrower has been advised of the commitment and the combined amount of the current loan balance (if any) and the commitment or other contingent liability exceeds the cutoff.
 - d. *Loans classified during the previous examination.*
 - current balance and payment status, or
 - date the loan was repaid and the source of payment

Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.
 - e. *Review of leveraged buyouts.*
 - In evaluating individual loans and credit files, pay particular attention to the reasonableness of interest-rate assumptions and earnings projections relied on by the bank in extending the loan; the trend of the borrowing company's and the industry's performance over time and the history and stability of the company's earnings and cash flow, particularly over the most recent business cycle; the relationship between the company's cash-flow and debt-service requirements and the resulting margin of debt-service coverage; and the reliability and stability of collateral values and the adequacy of collateral coverage.
 - In reviewing the performance of individual credits, attempt to determine if debt-service requirements are being covered by cash flow generated by the company's operations or whether the debt-service requirements are being met out of the proceeds of additional or ancillary loans from the bank designed to cover interest changes.

- Review policies and procedures pertaining to leveraged buyout financing to ensure that they incorporate prudent and reasonable limits on the total *amount* and *type* (by industry) of exposure that the bank can assume through these financing arrangements.
 - Review the bank's pricing, credit policies, and approval procedures to ensure that rates are reasonable in light of the risks involved and that credit standards are not compromised in order to increase market share. Credit standards and internal review and approval standards should reflect the degree of risk and leverage inherent in these transactions.
 - Total loans to finance leveraged buyouts should be treated as a potential concentration of credit. If, in the aggregate, these loans are sufficiently large in relation to capital, the loans should be listed on the concentrations page in the examination report.
 - Discuss significant deficiencies or risks regarding a bank's leveraged buyout financing on page 1 of the examination report, and bring them to the attention of the board of directors.
- f. *Uniform review of Shared National Credits.*
- Compare the schedule of commercial credits included in the uniform review of the Shared National Credit Program with the loans being reviewed to determine which loans are portions of Shared National Credits.
 - For each loan so identified, transcribe appropriate information from the schedule to line cards. (No further examination procedures are necessary for these credits.)
8. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See "Instructions for the Report of Examination," section 6000.1, for considerations to be taken into account when compiling maturity information for the gap analysis.
9. Transcribe or compare information from the schedules to commercial line cards, where appropriate.
10. Prepare commercial line cards for any loan not in the sample that, based on information derived from the above schedules, requires in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.
12. Add collateral data to line cards selected in the preceding steps.
13. Obtain credit files for all borrowers for whom commercial line cards were prepared, and complete line cards. To analyze the loans, perform the following procedures:
- a. Analyze balance-sheet and profit-and-loss items as reflected in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
 - b. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
 - c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, if applicable, and determine the primary sources of repayment and evaluate their adequacy.
 - d. Ascertain compliance with provisions of loan agreements.
 - e. Review digests of officers' memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual liquidation program.
 - f. Relate collateral values to outstanding debt.
 - g. Compare interest rates charged with the interest-rate schedule, and determine that the terms are within established guidelines.
 - h. Compare the original amount of loan with the lending officer's authority.
 - i. Analyze secondary support afforded by guarantors and endorsers.
 - j. Ascertain compliance with the bank's established commercial loan policy.
 - k. Determine whether public officials are receiving preferential treatment and

- whether there is any correlation between loans to public officials and deposits they may control or influence.
14. For selected loans, check the central liability file on borrowers indebted above the cutoff or borrowers displaying credit weakness or suspected of having additional liability in other loan areas.
 15. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.
 16. Prepare "Report of Loans Supported by Bank Stock," if appropriate. Determine if a concentration of any bank's stock has been pledged.
 17. Determine compliance with laws, rulings, and regulations pertaining to commercial lending by performing the following steps.
 - a. *Lending limits.*
 - Determine the bank's lending limits as prescribed by state law.
 - Determine advances or combinations of advances with aggregate balances above the limit, if any.
 - b. *Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and Regulation W.*
 - Obtain a listing of loans to affiliates.
 - Test-check the listing against the bank's customer liability records to determine its accuracy and completeness.
 - Obtain a listing of other covered transactions with affiliates (i.e., purchase of loans from affiliates or acceptance of affiliates' securities as collateral for loan to any person).
 - Ensure that covered transactions with affiliates do not exceed the limits of section 23A and Regulation W.
 - Ensure that covered transactions with affiliates meet the appropriate collateral requirements of section 23A and Regulation W.
 - Determine that low-quality loans have not been purchased from an affiliate.
 - Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
 - Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
- c. *18 USC 215, Receipt of Commission or Gift for Procuring Loans.*
 - While examining the commercial loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
 - Investigate any such suspected situation.
 - d. *Federal Election Campaign Act (2 USC 441b), Political Contributions.*
 - While examining the commercial loan area, determine the existence of any loans in connection with any political campaigns.
 - Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.
 - e. *12 USC 1972, Tie-In Provisions.* While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon—
 - obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service;
 - the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit. (See "Tie-In Considerations of the BHC Act," section 3500.0 of the *Bank Holding Company Supervision Manual*.)
 - f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):

- *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests.* While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
 - test the accuracy and completeness of information about commercial loans by comparing it with the trial balance or loans sampled;
 - review credit files on insider loans to determine that required information is available;
 - determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
 - determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
 - determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the lending limits imposed by those sections;
 - if prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained;
 - determine compliance with the various reporting requirements for insider loans;
 - determine that the bank has made provisions to comply with the public disclosure requirements of Regulation O; and
 - determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years after the dates of the requests.
- *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
 - Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
 - Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.
- g. *12 USC 1828(v), Loans Secured by Bank Stock.*
 - While examining the commercial loan area, determine the existence of any loans or discounts that are secured by the insured financial institution's own stock.
 - In each case, determine that the chief executive officer has promptly reported such fact to the proper regulatory authority.
- h. *12 USC 83 (Rev. Stat. 5201), made applicable to state member banks by section 9, para. 6, of the Federal Reserve Act (12 USC 324), Loans Secured by Own Stock (see also 3-1505 in the Federal Reserve Regulatory Service).*
 - While examining the commercial loan area, determine the existence of any loans secured by the bank's own shares or capital notes and debentures.
 - Confer with the examiner assigned to investment securities to determine whether the bank owns any of its own shares or its own notes and debentures.
 - In each case in which such collateral or ownership exists, determine whether the collateral or ownership was taken to prevent loss on a debt previously contracted (DPC) transaction.
- i. *Regulation U (12 CFR 221).* While reviewing credit files, check the following for all loans that are secured directly or indirectly by margin stock and that were extended for the purpose of buying or carrying margin stock:
 - Except for credits specifically exempted under Regulation U, determine that the required Form FR U-1 has been executed for each credit by the customer and that it has been signed and accepted by a duly authorized officer of the bank acting in good faith.
 - Determine that the bank has not extended more than the maximum loan value of the collateral securing such credits, as set by section 221.7 of Regulation U, and that the margin requirements are being maintained.

- j. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 103), Retention of Credit Files.*
- Determine compliance with other specific exceptions and restrictions of the regulation as they relate to the credits reviewed.
 - Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over \$10,000, specifying the name and address of the borrower, the amount of credit, the nature and purpose of the loan, and the date thereof. (See 31 CFR 103.33.) (Loans secured by an interest in real property are exempt.)
18. Determine whether the consumer compliance examination uncovered any violations of law or regulation in this department. If violations were noted, determine whether corrective action was taken. Test for subsequent compliance with any law or regulation so noted.
19. Perform the appropriate procedural steps in "Concentration of Credits," section 2050.3.
20. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
- a. delinquent loans
 - b. violations of laws and regulations
 - c. loans not supported by current and complete financial information
 - d. loans on which collateral documentation is deficient
 - e. concentrations of credits
 - f. criticized loans
 - g. inadequately collateralized loans
 - h. Small Business Administration or other government-guaranteed delinquent or criticized loans
 - i. transfers of low-quality loans to or from another lending institution
- j. extensions of credit to principal shareholders, employees, officers, directors, and related interests
- k. other matters regarding the condition of the department
21. Inform the Reserve Bank of all criticized participation loans that are not covered by the Shared National Credit Program. Include the names and addresses of all participating state member banks and copies of loan classification comments. (This step deals with loans that deteriorated subsequent to participation and does not duplicate step 7a, which deals with transfers of loans that were of low quality when transferred).
22. Inform the Reserve Bank of those loans eligible for the Shared National Credit Program that were not previously reviewed. Include the names and addresses of all participants and the amounts of their credit. (This step applies only to credits for which the bank under examination is the lead bank.)
23. Evaluate the function for—
- a. the adequacy of written policies relating to commercial loans,
 - b. the manner in which bank officers are operating in conformance with established policy,
 - c. adverse trends within the commercial loan department,
 - d. the accuracy and completeness of the schedules obtained from the bank,
 - e. internal control deficiencies or exceptions,
 - f. recommended corrective action when policies, practices, or procedures are deficient,
 - g. the competency of departmental management, and
 - h. other matters of significance.
24. Update the workpapers with any information that will facilitate future examinations.

Commercial and Industrial Loans

Internal Control Questionnaire

Effective date March 1984

Section 2080.4

Review the bank's internal controls, policies, practices, and procedures for making and servicing commercial loans. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written commercial loan policies that:
 - a. Establish procedures for reviewing commercial loan applications?
 - b. Define qualified borrowers?
 - c. Establish minimum standards for documentation?
2. Are commercial loan policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary commercial loan records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
 - c. Approve loans?
 - d. Reconcile subsidiary records to the general ledger?
- *4. Are the subsidiary commercial loan records reconciled daily with the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?
5. Are delinquent account collection requests and past-due notices checked to the trial balances that are used in reconciling commercial loan subsidiary records with general ledger accounts, and are they handled only by persons who do not also handle cash?
6. Are inquiries about loan balances received

and investigated by persons who do not also handle cash?

- *7. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash (if so, explain briefly)?
8. Is a daily record maintained summarizing note transaction details, i.e., loans made, payments received, and interest collected, to support applicable general ledger account entries?
9. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
10. Is an overdue account report generated frequently (if so, how often _____)?
11. Are subsidiary payment records and files pertaining to serviced loans segregated and identifiable?
12. Do loan records provide satisfactory audit trails which permit the tracing of transactions from initiation to final disposition?

LOAN INTEREST

- *13. Is the preparation and posting of interest records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
14. Are any independent interest computations made and compared or tested to initial interest record by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?

COLLATERAL

15. Are multicopy, prenumbered records maintained that:
 - a. Detail the complete description of collateral pledged?
 - b. Are typed or completed in ink?
 - c. Are signed by the customer?
 - d. Are designed so that a copy goes to the customer?
- *16. Are the functions of receiving and releasing collateral to borrowers and of making

- entries in the collateral register performed by different employees?
17. Is negotiable collateral held under joint custody?
 18. Are receipts signed by the customer obtained and filed for released collateral?
 - *19. Are securities and commodities valued and margin requirements reviewed at least monthly?
 20. When the support rests on the cash surrender value of insurance policies, is a periodic accounting received from the insurance company and maintained with the policy?
 21. Is a record maintained of entry to the collateral vault?
 22. Are stock powers filed separately to bar negotiability and to deter abstraction of both the security and the negotiating instrument?
 23. Are securities out for transfer, exchange, etc., controlled by prenumbered temporary vault-out tickets?
 24. Has the bank instituted a system which:
 - a. Ensures that security agreements are filed?
 - b. Ensures that collateral mortgages are properly recorded?
 - c. Ensures that title searches and property appraisals are performed in connection with collateral mortgages?
 - d. Ensures that insurance coverage (including loss payee clause) is in effect on property covered by collateral mortgages?
 25. Are coupon tickler cards set up covering all coupon bonds held as collateral?
 26. Are written instructions obtained and held on file covering the cutting of coupons?
 27. Are coupon cards under the control of persons other than those assigned to coupon cutting?
 28. Are pledged deposit accounts properly coded to negate unauthorized withdrawal of funds?
 29. Are acknowledgments received for pledged deposits held at other banks?
 30. Is an officer's approval necessary before collateral can be released or substituted?
 32. Are all loan rebates approved by an officer and made only by official check?
 33. Does the bank have an internal review system that:
 - a. Re-examines collateral items for negotiability and proper assignment?
 - b. Checks values assigned to collateral when the loan is made and at frequent intervals thereafter?
 - c. Determines that items out on temporary vault-out tickets are authorized and have not been outstanding for an unreasonable length of time?
 - d. Determines that loan payments are promptly posted?
 34. Are all notes assigned consecutive numbers and recorded on a note register or similar record? Do numbers on notes agree to those recorded on the register?
 35. Are collection notices handled by someone not connected with loan processing?
 36. Are payment notices prepared and mailed by someone other than the loan teller?
 37. Does the bank prohibit the holding of debtor's checks for payment of loans at maturity?
 - *38. Concerning livestock loans:
 - a. Are inspections made at the inception of credit?
 - b. Are inspections properly dated and signed?
 - c. Is there a breakdown by sex, breed, and number of animals in each category?
 - d. Is the condition of the animals noted?
 - e. Are inspections required at least annually?
 - *39. Concerning crop loans:
 - a. Are inspections of growing crops made as loans are advanced?
 - b. Are disbursements closely monitored to ensure that the proceeds are properly channeled into the farmer's operation?
 - c. Is crop insurance encouraged?
 40. In mortgage warehouse financing, does the bank hold the original mortgage note, trust deed, or other critical document, releasing only against payment?
 41. Concerning commodity lending:
 - a. Is control for the collateral satisfactory, i.e., stored in the bank's vault, another bank, or a bonded warehouse?
 - b. If collateral is not stored within the bank, are procedures in effect to ascertain the authenticity of the collateral?
 - c. Does the bank have a documented

OTHER

31. Are notes safeguarded during banking hours and locked in the vault overnight?

- security interest in the proceeds of the future sale or disposition of the commodity as well as the existing collateral position?
- d. Do credit files document that the financed positions are and remain fully hedged?
42. Concerning loans to commodity brokers and dealers:
- a. Does the bank maintain a list of the major customer accounts on the brokers or dealers to whom it lends? If so, is the list updated on a periodic basis?
- b. Is the bank aware of the broker-dealer's policy on margin requirements and the basis for valuing contracts for margin purposes (i.e., pricing spot vs. future)?
- c. Does the bank attempt to ascertain whether the positions of the broker-dealer's clients that are indirectly

financed by bank loans remain fully hedged?

CONCLUSION

43. Is the foregoing information considered an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
44. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Loan-Sampling Program for Certain Community Banks

Section 2082.1

Effective date May 2003

A statistically based sampling approach to loan reviews can serve as an alternative to the traditional “top-down” loan-coverage approach when scoping certain bank examinations. In some cases, sampling requires fewer loans¹ to be reviewed than would be required using the minimum-coverage approach, while in other cases it requires more. The results depend heavily on the number of commercial and industrial loans (C&I) and commercial real estate (CRE) loans and the structure of the loan portfolio. Asset size and the level of tier 1 capital also affect the sample size. Additionally, sampling may require fewer loans to be reviewed than under the traditional method in well-managed institutions whose portfolios are not dominated by a small number of relatively large exposures.

Significantly, sampling may provide examiners with a broader perspective on the accuracy of the bank’s classification process than is typically provided by the traditional minimum-coverage target approach. At present, the sampling approach should be directed towards banks currently having a CAMELS composite and asset-quality rating of 1 or 2 and also assets of less than \$1 billion. At present, the sampling approach should be directed towards banks currently having a CAMELS composite and asset-quality rating of 1 or 2 and also assets of less than \$1 billion. The statistical sampling approach is not recommended, however, for use at de novo banks or other banks with unusually high or low capital ratios. Reserve Banks wishing to experiment with the sampling program at organizations with CAMELS or asset-quality ratings of 3 or above or at larger organizations should contact Board staff so that the examiner’s experience that is gained in this area may be used to develop alternative sampling procedures for these other types of institutions. (See SR-02-19.)

CONCEPT AND STRUCTURE OF THE SAMPLING TECHNIQUE

The sampling approach builds on procedures examiners currently use to evaluate loan portfolios, which require coverage of a similar “core” group of exposures. The principal difference relates to the manner in which loans outside the core group are selected for review. Under the traditional approach, the largest remaining loans are selected until a desired coverage ratio is achieved. Using sampling, the remaining noncore loans are grouped into several strata, or buckets, based on the size of the borrowing relationship. Loans are randomly selected from each of these buckets proportionate to the dollar value of each bucket relative to the total noncore portfolio. The total number of sampled loans required is determined by the number and size distribution of loans in the bank’s portfolio.

The sampling approach is an effective means to determine if the examiner can rely on the bank’s classification process or whether the examiner must determine the level of classifications by traditional means. Although sampling may, in some cases, require examiners to review more loans than required by the traditional loan-coverage approach, sampling is more likely to detect problems among smaller loans and will provide a broader perspective of the bank’s classifications across the entire portfolio.

In most cases, examiners should expect to find very few misclassifications within the sampled buckets, since those segments would exclude any credits that the bank’s internal procedures have identified as weak and those that the examiner has otherwise identified for specific review (the “core” loans). When the examiner’s classifications agree with the bank’s internal loan classifications, then internal classification totals can be relied upon in calculating the total and weighted asset-classification ratios. However, if misclassifications are found within the sample, internal classifications may underestimate the true extent of problem loans, and the examiner must make adjustments to estimate the actual extent of problems. To make that estimate, the rate of misclassification is applied to the remaining loans in the sampled bucket to derive an estimate of other problems that the examiners would likely find if all the loans were

1. The term “loans” encompasses all sources of credit exposure arising from loans and leases, including guarantees, letters of credit, and other loan commitments. The sampling methods described in this section select “loans” for review by obligor or related group of obligors (where identifiable). Thus, in the sampling procedures, the term “loan” refers to total credit exposure to an individual obligor or related group of obligors. As this implies, loan amounts referred to in this section should be determined on an exposure basis, including all outstanding notes and commitments.

read. This extrapolated amount of problem loans is then added to the total of specifically identified problems to evaluate the significance of credit weaknesses at the institution. Depending on the severity of misclassifications and the magnitude of problems specifically identified, expansion of the examination scope will probably be necessary to better assess the accuracy of loan grading.

Specific Procedures

Using electronic loan files provided by the bank (for example, those loan files available in the Automated Loan Examination Review Tool (ALERT) format) and the System's loan-sampling software, examiners are able to construct a variety of core and noncore borrower groups. (See table 1.) The "core" group—bucket 1—consists of several categories of loans that examiners have traditionally reviewed and would continue to review using sampling. These core borrowers include, for instance, the largest exposures and certain large problem or insider loans. The sampling program also permits examiners to select any additional borrower (or borrowers) for review based on the examiner's experience and judgment. These individually selected loans would be placed in the "examiner-selected" group—bucket 2. All loans contained in buckets 1 and 2 would be individually reviewed, not sampled, and examiners would not extrapolate their findings to other loans. All remaining internally identified problem borrowers are included in a separate "problem" group—bucket 3—designated as "discuss only"; these borrowers are not incorporated into the commercial-loan-coverage ratio nor are their findings extrapolated to other loans within the same bucket. However, any borrower in the "problem" group—bucket 3—may be individually selected for review by the examiner. Additionally, if the number of "discuss-only" borrowers in the "problem" group—bucket 3—is large, the examiner may select a number of borrowers to be randomly sampled.

The remaining noncore categories represent "pass" or creditworthy loans, grouped by the size of the borrowing relationship. Buckets 4 through 8 are composed of loans to be randomly sampled. The number of loans selected from buckets 4 through 8 is proportional to its total dollar value relative to the total noncore port-

folio. Thus, if loans in a particular category represent 30 percent of the bank's total noncore exposures, then approximately 30 percent of the number of sampled credits will be drawn from that category. A "custom" group—bucket 4—is available for examiners to target specific borrowers meeting a variety of selection criteria. Buckets 5 through 8 represent all remaining loans in the commercial loan portfolio, segregated by size relative to the bank's tier 1 capital and loan-loss reserve. The results of examiners' findings for these sampled buckets would be extrapolated to the entire group of borrowers not reviewed.

Determination of Reliance on a Bank's Internal Classifications

Once the commercial loans have been selected for review, examiners are expected to use existing credit-analysis techniques as described in this manual to evaluate the borrower's creditworthiness, determine the level of adverse classifications, and identify any discrepancies with the bank's internal classifications.

In performing their analysis of the accuracy of classified credits, examiners should start with the assets internally classified by the bank's rating system and add any pass credits that were misclassified by the bank and downgraded to a classified status during the examiner's credit review. These classified assets are the key component for a "base" weighted asset-classification ratio.

Under the sampling program, the "base" weighted asset-classification ratio must be adjusted upward (extrapolated) to the extent misclassifications were uncovered within the randomly sampled loan buckets. The resulting extrapolated weighted asset-classification ratio is necessary to account for the likelihood that misclassifications uncovered from the sampled loans represent only a small portion of the total misclassified loans throughout the rest of the portfolio that was not reviewed. The extrapolated value provides examiners with a more comprehensive picture of the magnitude of the institution's credit problems.

In many cases, there will be no disagreements between the examiner's credit analysis and the bank's internal classifications. Consequently, there will be no difference between the weighted asset-classification ratio and the extrapolated ratio. Generally, no additional sampling would

Table 1—Groups of Loans Available for Review

<i>Bucket</i>	<i>Description</i>
Nonsampled buckets	
Bucket 1 Core	1A: 10 largest non-insider non-problem-borrower exposures 1B: 5 largest non-insider non-problem-borrower exposures underwritten in the previous 12 months 1C: 10 largest non-insider problem-borrower exposures 1D: 5 largest insider borrower exposures
Bucket 2 Examiner-selected	Examiner optional core group. Examiners may manually select any borrower to review.
Bucket 3 Problem	Problem loans (watch list, >59 days past due, internal ratings, and previously classified). Discuss-only borrowers.
Sampled buckets	
Bucket 4 Custom	Examiners may select to target specific borrowers meeting a variety of criteria.
Bucket 5 >3% T1	Remaining borrower exposures greater than 3 percent of tier 1 capital plus the ALLL.
Bucket 6 2%–3% T1	Remaining borrower exposures between 2 percent and 3 percent of tier 1 capital plus the ALLL.
Bucket 7 1%–2% T1	Remaining borrower exposures between 1 percent and 2 percent of tier 1 capital plus the ALLL.
Bucket 8 0.1%–1% T1	Remaining borrower exposures between 0.1 percent and 1 percent of tier 1 capital plus the ALLL.
Bucket 9 <0.1% T1	Remaining borrower exposures less than 0.1 percent of tier 1 capital plus the ALLL. These loans are not included in the sample.
Bucket 10 Noncommercial	All noncommercial borrowers. Examiners may scope into bucket 2.

be necessary. However, other types of credit-administration weaknesses may be discovered that warrant additional review and, as a result, an additional sample of loans may be selected. In this case, the number of loans selected is left to the examiner's judgment.

In other cases, either minor or significant disagreements will require examiners to more fully investigate the reliance that can be placed on the internal classifications. When there are only a minor number of disagreements within

the sampled loans, examiners should be aware that those seemingly minor disagreements may translate into fairly large differences between the base and extrapolated problem-loan figures. When those differences are significant enough that they would alter an examiner's overall conclusion regarding the accuracy of the bank's loan-grading system, follow-up work is required. In particular, significant differences between the "base" and extrapolated weighted classification ratios should raise concerns as to whether the

institution is systematically misreporting credit problems.

For example, a disagreement may arise between an examiner's analysis and the bank's internal classification of a single credit that was drawn from the sample buckets. Assuming a "base" weighted asset-classification ratio of 4 percent, the disagreed-upon sample loan, when extrapolated, could increase the weighted asset-classification ratio to 7 percent. When the difference between the "base" and extrapolated ratios is not material, it would not be necessary to select additional loans if the ratio difference would not alter the examiner's conclusions regarding the condition of the loan portfolio.

In another situation, there may be disagreement between the examiner's analysis and the bank's internal rating on two small-dollar loans sampled from bucket 8 (borrower exposures between 0.1 percent and 1 percent of tier 1 capital plus the allowance for loan and lease losses (ALLL)). In this example, the bank's "base" weighted asset-classification ratio is calculated to be 3 percent. Individually, these loans do not play a significant role in the level of the "base" ratio. However, when these same disagreed-upon classifications are extrapolated, the result is a significant difference between the "base" ratio and the extrapolated classification ratio of 18.5 percent. This can occur when there are only four loans that are sampled from bucket 8, and the two loans in disagreement account for 40 percent of the dollar volume of the sampled loans. Through extrapolation, 40 percent of the remaining bucket 8 loans would be considered classified, thereby increasing the extrapolated ratio to a level that may cause an examiner to question the reliability of the bank's classification system.

In the preceding example, to rule out the possibility that misclassifications were identified as a matter of chance, examiners should expand their loan coverage by pulling an additional sample from the bucket in which the misclassifications were identified. If the examiner selected four additional borrowers from bucket 8 to review and no new misclassifications were found, the extrapolated ratio would decline to 11 percent. As the base and extrapolated ratios move much closer together, the examiner may have greater confidence in the bank's internal loan-rating system and place greater reliance on bank-identified problems in evaluating the bank's asset quality. However, when reviewing the additional four back-up loans, if the examiner

found one new misclassification, then the extrapolated ratio would be 15 percent. In these cases, it is highly unlikely that the misclassifications were caused by chance, and it is probable that a systematic problem exists in the ability of bank management to correctly risk-rate their commercial loans. Consequently, examiners should closely review the misclassifications and determine if any pattern exists, such as loans generated from a specific originating office or loan officer, or by type of credit extension. In these cases, internal classifications should be deemed unreliable and further credit review should be performed to evaluate the full extent of problem assets. That expanded review should be consistent with the minimum loan coverage of 55 percent to 65 percent or more, as required for banks posing supervisory concerns. (See SR-94-13.)

Factoring Sampling Results into Examination Findings

An evaluation of a bank's asset-quality rating within CAMELS should take into account both financial and managerial factors as detailed in SR-96-38. When using the sampling approach, the extrapolated weighted classification ratio is to be used as a tool for assessing the extent to which examiners may rely on the bank's internal classifications. To the extent loan sampling indicates that the bank's internal classifications are not reliable, the severity of that fundamental risk-management weakness should be factored into the asset-quality rating as well as the management and the risk-management rating. Results of the statistical loan sampling should be documented in the examination report. (See the examination procedures, section 2082.3, for a detailed description of the required information.)

Discussions with Management Regarding the Sampling Procedures

The sampling procedure produces an extrapolated estimate of weighted classified assets. The principal use of extrapolation is to provide an estimate of what the weighted asset-classification ratio would be for the entire loan portfolio. The extrapolated ratio will differ significantly from the traditional weighted asset-classification ratio when errors in the bank's internal classification

system are detected through random sampling. Examiners may want to discuss (1) how the errors led to a widening of the loan-review scope and (2) the degree of errors found in the loans pulled beyond the initial sample. Any uncertainties regarding the integrity of the institution's classification system or the extent of its asset-quality problems uncovered from the use

of sampling (that resulted from rating errors) should be discussed with management and included in the examination report, along with any necessary follow-up work required to gain more certainty. Those discussions may center on the number of errors uncovered in sampled and core loans.

Loan-Sampling Program for Certain Community Banks

Examination Objectives

Effective date May 2003

Section 2082.2

1. To evaluate and improve, using statistical sampling, the comprehensiveness and effectiveness of the examination's credit review of a bank's loan portfolio.
2. To better evaluate, using statistical sampling, a bank's internal credit-review process and also the effectiveness of its credit risk-management practices.
3. To assess the accuracy of the bank's internal credit classifications.

Loan-Sampling Program for Certain Community Banks

Examination Procedures

Effective date May 2003

Section 2082.3

1. Using the Federal Reserve System's loan-sampling software and the electronic files provided by the bank under examination (for example, those in the Automated Loan Examination Review Tool (ALERT) format), develop the bank's core and sampled borrower groups. (See table 1 in section 2082.1.) Follow the "Specific Procedures" of section 2082.1 for selecting loans for review, including those that are to be randomly sampled.
2. Use the bank examination credit-analysis techniques in this manual to—
 - a. evaluate the borrower's creditworthiness,
 - b. determine the level of adverse classifications, and
 - c. identify any discrepancies within the bank's internal classifications.
3. Continue to follow the "Specific Procedures."
 - a. Be especially alert when reviewing loan misclassifications to detect patterns of misclassifications (for example, whether the misclassified loans were generated by a specific originating office or loan officer).
 - b. When misclassifications are identified, be prepared to expand the scope of the loan review.
 - c. Ascertain whether the bank is systematically misreporting credit problems.
4. When it is determined that the bank's internal classifications are unreliable, factor the severity of this risk-management weakness into the asset-quality, management, and risk-management ratings.
5. Include the following information in the examination report (for instance, the information illustrated below):
 - a. Report the traditional weighted asset-classification ratio in the open section of the examination report.
 - b. Report the extrapolated weighted asset-classification ratio, the traditional asset-classification ratio, and the number of errors found in the sampled buckets in the confidential section of the report.
 - c. If an expanded sample was undertaken because of misclassification errors, report in the confidential section the number of additional loans selected, any errors from the expanded sample, and the adjusted weighted and extrapolated asset-classification ratios.

The illustration below is a sample table format that may be used to highlight the sampling findings within the indicated sections of the examination report.

Loan-Sampling Results—Items to Be Reported in the Examination Report

<i>Open section</i>	
Traditional weighted asset-classification ratio	%
<i>Confidential section</i>	
Extrapolated weighted asset-classification ratio	%
Number of borrowers sampled	
Number of errors in sampled buckets	
Expanded-sample information	
Number of sampled borrowers in expanded review	
Number of errors in expanded review	
Adjusted weighted asset-classification ratio	%
Adjusted extrapolated weighted asset-classification ratio	%

Real estate lending is a major function of most banks. However, the composition of banks' real estate loan portfolios will vary because of differences in the banks' asset size, investment objectives, lending experience, market competition, and location. Additionally, state member banks' lending activity is subject to supervision by state banking regulatory agencies, which may impose limitations, including restrictions on lending territory, types of lending, percentage of assets in real estate loans, loan limits, loan-to-value ratios, and loan terms.

Because of the differences in state banking laws, this section of the manual is only an overview of the Federal Reserve's supervisory and regulatory requirements for a safe and sound real estate lending program. For specific information on lending limitations and restrictions, refer to the applicable state banking laws. In addition, information related to real estate construction lending is discussed in section 2100.1 of this manual.

REAL ESTATE LENDING POLICY MANDATED BY FDICIA

A bank's real estate lending policy is a broad statement of its standards, guidelines, and limitations that senior bank management and lending officers are expected to adhere to when making a real estate loan. The maintenance of prudent written lending policies, effective internal systems and controls, and thorough loan documentation is essential to the bank's management of the lending function.

The policies governing a bank's real estate lending activities must include prudent underwriting standards that are clearly communicated to the institution's management and lending staff. The bank should also have credit-risk control procedures that include, for example, an effective credit-review and -classification process and a methodology for ensuring that the allowance for loan and lease losses is maintained at an adequate level. As part of the analysis of a bank's real estate loan portfolio, examiners should review lending policies, loan-administration procedures, and credit-risk control procedures, as well as the bank's compliance with its own policies.

As mandated by the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) (12 USC 1828(c)), the Federal Reserve Board, along with the other banking agencies, adopted in December 1992 uniform regulations prescribing standards for real estate lending. FDICIA defines real estate lending as extensions of credit secured by liens on or interests in real estate or made for the purpose of financing the construction of a building or other improvements to real estate, regardless of whether a lien has been taken on the property.

The Federal Reserve's Regulation H requires an institution to adopt real estate lending policies that are—

- consistent with safe and sound banking practices,
- appropriate to the size of the institution and the nature and scope of its operations, and
- reviewed and approved by the bank's board of directors at least annually.

These lending policies must establish—

- loan portfolio diversification standards;
- prudent underwriting standards that are clear and measurable, including loan-to-value limits;
- loan-administration procedures for the institution's real estate portfolio; and
- documentation, approval, and reporting requirements to monitor compliance with the bank's real estate lending policies.

Furthermore, the bank is expected to monitor conditions in the real estate market in its lending area to ensure that its policies continue to be appropriate for current market conditions.

GUIDELINES ESTABLISHED PURSUANT TO FDICIA

The criteria and specific factors that a bank should consider in establishing its real estate lending policies are set forth in the Interagency Guidelines for Real Estate Lending Policies (Regulation H, part 208, appendix C (12 CFR 208, appendix C)). These guidelines apply to transactions (including legally binding, but

unfunded, lending commitments) originated on or after March 19, 1993.

Loan Portfolio Management

The bank's lending policies should contain a general outline of its market area; a targeted loan portfolio distribution; and the manner in which real estate loans are made, serviced, and collected. Lending policies should include—

- identification of the geographic areas in which the bank will consider lending;
- establishment of a loan portfolio diversification policy and limits for real estate loans by type and geographic market (for example, limits on higher-risk loans);
- identification of the appropriate terms and conditions, by type of real estate loan;
- establishment of loan-origination and -approval procedures, both generally and by size and type of loan;
- establishment of prudent underwriting standards, including loan-to-value (LTV) limits, that are clear and measurable and consistent with the supervisory LTV limits contained in the interagency guidelines;
- establishment of review and approval procedures for exception loans, including loans with LTV ratios in excess of the interagency guidelines' supervisory limits;
- establishment of loan-administration procedures, including documentation, disbursement, collateral inspection, collection, and loan review;
- establishment of real estate appraisal and evaluation programs consistent with the Federal Reserve's appraisal regulation and guidelines; and
- a requirement that management monitor the loan portfolio and provide timely and adequate reports to the bank's board of directors.

The complexity and scope of these policies and procedures should be appropriate for the market, size, and financial condition of the institution and should reflect the expertise and size of the lending staff. The bank's policies

should also consider the need to avoid undue concentrations of risk and compliance with all real estate-related laws and regulations (such as the Community Reinvestment Act, the Truth in Lending Act, the Real Estate Settlement Procedures Act, and antidiscrimination laws).

The bank should monitor the conditions in the real estate markets in its lending area so that it can react quickly to changes in market conditions that are relevant to the lending decision. This should include monitoring market supply-and-demand factors, such as employment trends; economic indicators; current and projected vacancy, construction, and absorption rates; and current and projected lease terms, rental rates, and sales prices.

Underwriting Standards

The bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank's lending staff to evaluate all relevant credit factors. These factors include—

- the capacity of the borrower or income from the underlying property to adequately service the debt;
- the market value of the underlying real estate collateral;
- the overall creditworthiness of the borrower,
- the level of the borrower's equity invested in the property;
- any secondary sources of repayment; and
- any additional collateral or credit enhancements, such as guarantees, mortgage insurance, or takeout commitments.

While there is no one lending policy appropriate for all banks, there are certain standards that a bank should address in its policies, such as—

- the maximum loan amount by type of property,
- the maximum loan maturities by type of property,
- amortization schedules,
- the pricing structure for each type of real estate loan, and
- loan-to-value limits by type of property.

For development and construction projects and completed commercial properties, the bank's policy should also establish appropriate standards for the unique risks associated with these types of real estate loans by addressing the size, type, and complexity of the project. Such standards should include the acceptability of and limits for nonamortizing loans and interest reserves; requirements for pre-leasing and pre-sale; limits on partial recourse or nonrecourse loans; requirements for guarantor support; requirements for takeout commitments; and minimum covenants for loan agreements. Furthermore, the bank's policy should set minimum requirements for initial investment by the borrower; maintenance of hard equity throughout the life of the project; and net worth, cash flow, and debt-service coverage of the borrower or underlying property.

Exceptions to Underwriting Standards

The bank should have procedures for handling loan requests from creditworthy borrowers whose credit needs do not conform with the bank's general lending policy. As a part of the permanent loan file, the bank should document justification for approving such loans. Moreover, in the course of monitoring compliance with its own real estate lending policy, bank management should report to its board of directors loans of a significant size that are exceptions to bank policy. An excessive volume of exceptions to the institution's own policies may signal weaknesses in its underwriting practices or a need to revise its policy.

Supervisory Loan-to-Value Limits

The bank should establish its own internal loan-to-value (LTV) limits for each type of real estate loan that is permitted by its loan policy. The LTV ratio is derived at the time of loan origination by dividing the extension of credit, including the amount of all senior liens on, or other senior interests in, the property, by the total value of the property or properties securing or being improved by the extension of credit, plus the amount of any other acceptable collat-

eral and readily marketable collateral securing the credit.

In accordance with the Federal Reserve's appraisal regulation and guidelines, the value of the real estate collateral should be set forth in an appraisal or evaluation (whichever is appropriate) and should be expressed in terms of market value. However, for loans to purchase an existing property, the term "value" means the lesser of the actual acquisition cost to the borrower or the estimate of value as presented in the appraisal or evaluation. See "Real Estate Appraisals and Evaluations," section 4140.1 of this manual for further discussion of the Federal Reserve's appraisal regulation and guidelines.

"Other acceptable collateral" refers to any collateral in which the lender has a perfected security interest, that has a quantifiable value, and that is accepted by the lender in accordance with safe and sound lending practices. This includes inventory, accounts receivables, equipment, and unconditional irrevocable standby letters of credit.

Readily marketable collateral means insured deposits, financial instruments, and bullion in which the lender has a perfected interest. Financial instruments and bullion must be readily salable under ordinary circumstances at a market value determined by quotations based on actual transactions, on an auction, or similarly available daily bid and asking price.

Other acceptable collateral and readily marketable collateral should be appropriately discounted by the lender consistent with the bank's usual practices for making loans secured by such collateral. The lender may not consider the general net worth of the borrower, which might be a determining factor for an unsecured loan, as equivalent to other acceptable collateral for determining the LTV on a secured real estate loan. Furthermore, if an institution attempts to circumvent the supervisory LTV limits by lending a portion of the funds on a secured basis and a portion on an unsecured basis, examiners are instructed to consider the two loans as one if certain similarities are found. These similarities are based upon facts such as common origination dates or loan purposes, and should be used to determine compliance with the supervisory LTV limits. The bank's policy should reflect the supervisory limits set forth in the Interagency Guidelines for Real Estate Lending Policies, which are shown in the following table.

Table 1—Supervisory Loan-to-Value Limits

<i>Loan Category</i>	<i>Loan-to-Value Limit</i>
Raw land	65%
Land development, including improved land loans	75%
Construction:	
Commercial, multifamily, and other nonresidential	80%
One- to four-family residential	85%
Improved property	85%
Owner-occupied one- to four-family and home equity	**

** A loan-to-value limit has not been established for permanent mortgage or home equity loans on owner-occupied one- to four-family residential property. However, for any such loan with a loan-to-value ratio that equals or exceeds 90 percent at origination, an institution should require appropriate credit enhancement in the form of either mortgage insurance or readily marketable collateral.

For purposes of these supervisory limits, the loan categories are defined as follows:

Raw land loan means an extension of credit in which the funds are used to acquire and/or hold raw land.

Land development loan means an extension of credit for the purpose of improving unimproved real property before the erection of any structures. Such improvements include the laying or placement of sewers, water pipes, utility cables, streets, and other infrastructure necessary for future development. This loan category also includes an extension of credit for the acquisition of improved land, such as residential lots in an established development. If there are minimal improvements to the land, and the time-frame for construction of the dwelling or building has not been scheduled to commence in the foreseeable future, the loan generally should be considered a raw land loan.

Construction loan means an extension of credit for the purpose of erecting or rehabilitating buildings or other structures, including any infrastructure necessary for development.

One- to four-family residential loan means an

extension of credit for a property containing fewer than five individual dwelling units, including manufactured homes permanently affixed to the underlying property.

Multifamily construction loan means an extension of credit for a residential property containing five or more individual units, including condominiums and cooperatives.

Improved property loan refers to (1) farmland, ranchland, or timberland committed to ongoing management and agricultural production; (2) one- to four-family residential property that is not owner-occupied; (3) residential property containing five or more individual dwelling units; (4) completed commercial property; or (5) other income-producing property that has been completed and is available for occupancy and use, except income-producing owner-occupied one- to four-family residential property.

Owner-occupied one- to four-family residential property means that the owner of the underlying real property occupies at least one unit of the real property as a principal residence.

For loans that fund multiple phases of the same real estate project, the appropriate LTV limit is the supervisory LTV limit applicable to the final phase of the project. For example, when the loan is for the acquisition and development of land and the construction of an office building in continuous phases of development, the appropriate supervisory LTV limit for the project loan would be 80 percent (the supervisory LTV limit for commercial construction). However, this does not imply that the lender can finance the total acquisition cost of the land at the time the raw land is acquired by assuming that this financing would be less than 80 percent of the project's final value. The lender is expected to fund the loan according to prudent disbursement procedures that set appropriate levels for the borrower's hard equity contributions throughout the disbursement period and term of the loan. As a general guideline, the funding of the initial acquisition of the raw land should not exceed the 65 percent supervisory LTV limit; likewise, the project cost to fund the land development phase of the project should not exceed the 75 percent supervisory LTV limit.

For a multiple-phase one- to four-family residential loan in which the lender is funding both

the construction of the house and the permanent mortgage to a borrower who will be the owner-occupant, there is no supervisory LTV limit. However, if the LTV ratio equals or exceeds 90 percent, the bank should require an appropriate credit enhancement in the form of either mortgage insurance or readily marketable collateral.

When a loan is fully cross-collateralized by two or more properties, the maximum loan amount is determined by first multiplying each property's collateral value by the LTV ratio appropriate to that property and then deducting from that product any existing senior liens on that property. The resulting sum is the maximum loan amount that may be extended under cross-collateralization. To ensure that collateral margins remain within the supervisory limits, the bank should redetermine conformity whenever collateral substitutions are made to the collateral pool.

Loans in Excess of Supervisory LTV Limits

The Federal Reserve believes that it may be appropriate for a bank, in certain circumstances, to originate or purchase loans with LTV ratios in excess of supervisory limits, based on the support provided by other credit factors that the bank documented in its permanent credit files. While high LTV lending poses higher risk for lenders than traditional mortgage lending, high LTV lending can be profitable when these risks are effectively managed and loans are priced based on risk. Therefore, institutions involved in high LTV lending should implement risk-management programs that identify, measure, monitor, and control the inherent risks (see SR-99-26 and the attached "Interagency Guidance on High LTV Residential Real Estate Lending," October 8, 1998). The primary credit risks associated with this type of lending are increased default risk and losses, inadequate collateral, longer term and thus longer exposure, and limited default remedies.

Capital limits. A bank's nonconforming loans—those in excess of the supervisory LTV limits—should be identified in bank records, and the aggregate amount, along with the performance experience of the portfolio, should be reported at least quarterly to the bank's board of directors. There should be increased supervisory scrutiny

of a bank as its level of loans in excess of supervisory LTV limits approaches the capital limitations. Nevertheless, a nonconforming loan should not be criticized solely because it does not adhere to supervisory limits.

The aggregate amount of nonconforming loans may not exceed 100 percent of a bank's total risk-based capital (referred to as the nonconforming basket). Within this limit, the aggregate amount of non-one- to four-family residential loans (for example, raw land, commercial, multifamily, and agricultural loans) that do not conform to supervisory LTV limits may not exceed 30 percent of total risk-based capital. The remaining portion of the nonconforming basket includes the aggregate amount of one- to four-family residential development and construction loans, non-owner-occupied one- to four-family residential loans with an LTV ratio greater than 85 percent, and owner-occupied one- to four-family residential loans with an LTV ratio equal to or exceeding 90 percent without mortgage insurance or readily marketable collateral.

For the purpose of determining the loans subject to the 100 percent of risk-based capital limitation, and for the purposes of determining the aggregate amount of such loans, institutions should include loans that are secured by the *same* property, when the combined loan amount equals or exceeds 90 percent LTV and there is no additional credit support. In addition, institutions should include the recourse obligation of any such loan sold with recourse. If there is a reduction in principal or senior liens or if the borrower contributes additional collateral or equity that brings the LTV ratio into supervisory compliance, the loan is no longer considered nonconforming and may be deleted from the quarterly nonconforming loan report to the directors.

The following guidance is provided for calculating the LTV when multiple loans and more than one lender are involved. The institution should include its loan and all senior liens on or interests in the property in the total loan amount when calculating the LTV ratio. The following examples are provided:

- Bank A holds a first-lien mortgage on a property and subsequently grants the borrower a home equity loan secured by the same property. In this case, the bank would combine both loans to determine if the total amount outstanding equaled or exceeded 90 percent of

the property's market value. If the LTV ratio equals or exceeds 90 percent and there is no other appropriate credit support, the entire amount of both loans is an exception to the supervisory LTV limits and is included in the aggregate capital limitation.

- Bank A grants a borrower a home equity loan secured by a second lien. Bank B holds a first-lien mortgage for the same borrower and on the same property. Bank A would combine the committed amount of its home equity loan with the amount outstanding on Bank B's first-lien mortgage to determine if the LTV ratio equaled or exceeded 90 percent of the property's market value. If the LTV ratio equals or exceeds 90 percent and there is no other appropriate credit support, Bank A's entire home equity loan is an exception to the supervisory LTV limits and is included in the aggregate capital limitation. Bank A does not report Bank B's first-lien mortgage loan as an exception, but must use it to calculate the LTV ratio.

When a loan's LTV ratio is reduced below 90 percent by amortization or additional credit support, it is no longer an exception to the guidelines and may be excluded from the institution's 100 percent of capital limitation.

Institutions will come under increased supervisory scrutiny as the total of all loans in excess of the supervisory LTV limits, including high LTV residential real estate loan exceptions, approaches 100 percent of total capital. If an institution exceeds the 100 percent of capital limit, a supervisory assessment may be needed to determine whether there is any concern that warrants taking appropriate supervisory action. Such action may include directing the institution (1) to reduce its loans in excess of the supervisory LTV limits to an appropriate level, (2) to raise additional capital, or (3) to submit a plan to achieve compliance. The institution's capital level and overall risk profile, and the adequacy of its controls and operations, as well as other factors will be the basis for determining whether such actions are necessary.

Transactions Excluded from Supervisory LTV Limits

There are a number of lending situations in which other factors significantly outweigh the need to apply supervisory LTV limits, thereby

excluding such transactions from the application of the supervisory LTV and capital limits. This includes loans—

- guaranteed or insured by the U.S. government or its agencies, provided the amount of the guaranty or insurance is at least equal to the portion of the loan that exceeds the supervisory LTV limit.
- backed by the full faith and credit of a state government, provided the amount of the guaranty or insurance is at least equal to the portion of the loan that exceeds the supervisory LTV limit.
- guaranteed or insured by a state, municipal, or local government or agency, provided the amount of the guaranty or insurance is at least equal to the portion of the loan that exceeds the supervisory LTV limit and that the guarantor or insurer has the financial capacity and willingness to perform.
- sold promptly (within 90 days) after origination. A supervisory determination may be made that this exclusion is not available for an institution that has consistently demonstrated significant weaknesses in its mortgage banking operations. (If a loan is sold with recourse and the LTV is in excess of supervisory limits, the recourse portion of the loan counts toward the bank's limit for nonconforming loans.)
- renewed, refinanced, or restructured—
 - without the advancement of new monies (except reasonable closing costs); or
 - in conjunction with a clearly defined and documented workout, either with or without the advancement of new funds.
- facilitating the sale of real estate acquired by the lender in the course of collecting a debt previously contracted in good faith.
- in which a lien on real property is taken through an abundance of caution; for example, the value of the real estate collateral is relatively low compared with the aggregate value of other collateral, or a blanket lien is taken on all or substantially all of the borrower's assets.¹
- for working-capital purposes in which the lender does not rely principally on real estate as security. The proceeds of the loan are not

1. Any residential mortgage or home equity loan with an LTV ratio that equals or exceeds 90 percent and that does not have the additional credit support should be considered an exception to the guidelines and included in the calculation of loans subject to the 100 percent of capital limit.

used to acquire, develop, or construct real property.

- financing permanent improvements to real property, but in which no security interest is taken or required by prudent underwriting standards. For example, a manufacturing company obtains a loan to build an addition to its plant. The bank does not take a lien on the plant because the bank is relying on the company's operating income and financial strength to repay the debt.

Risk Management for Supervisory Loan-to-Value Limits

Loan review and monitoring. Institutions should perform periodic quality analyses through loan review and portfolio monitoring. These periodic reviews should include an evaluation of various risk factors, such as credit scores, debt-to-income ratios, loan types, location, and concentrations. At a minimum, the high-LTV loan portfolios should be segmented by their vintage (that is, age) and the performance of the portfolios should be analyzed for profitability, growth, delinquencies, classifications and losses, and the adequacy of the allowance for loan and lease losses based on the various risk factors. The ongoing performance of the high-LTV loans should be monitored by a periodic re-scoring of the accounts, or by periodically obtaining updated credit bureau reports or financial information on borrowers. In addition, institutions involved in high-LTV lending should adopt, as part of their loan-review program, the standards in the FFIEC's Uniform Retail-Credit Classification and Account-Management Policy. (See section 2130.1.)

Sales of high-LTV loans. When institutions securitize and sell high-LTV loans, all the risks inherent in such lending may not be transferred to the purchasers. Institutions that actively securitize and sell high-LTV loans must implement procedures to control the risks inherent in that activity. Only written counterparty agreements that specify the duties and responsibilities of each party and that include a regular schedule for loan sales should be entered into. A contingency plan should be developed that designates backup purchasers and servicers in the event that either party is unable to meet its contractual obligations. To manage liquidity risk, commitment limits should be established for the amount

of pipeline and warehoused loans, and alternate funding sources should be identified.

Institutions should refer to the Financial Accounting Standards Board's Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (a replacement of FASB statement 125)," for guidance on accounting for these types of transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights or obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations.

Compliance risk. Institutions that originate or purchase high-LTV real estate loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory "steering" of borrowers to high-LTV products for reasons other than the borrower's creditworthiness. An adequate compliance-management program must identify, monitor, and control the compliance risks associated with high-LTV real estate lending.

REAL ESTATE LENDING ACTIVITY AND RISKS

Real estate lending falls into two broad categories: short-term financing (primarily construction loans) and permanent financing (for example, a 30-year residential mortgage or a 10-year mortgage loan with payments based on a 25-year amortization schedule and a balloon payment due at the end of the 10 years on an existing commercial office building). Each type of lending carries with it unique underwriting risks as well as common risks associated with any type of lending. In all cases, the bank should understand the credit risks and structure of the proposed transaction, even if it is not the originating bank. This includes, at a minimum, understanding the borrower's ability to repay the debt and the value of the underlying real estate collateral.

Permanent financing, as the name implies, is long term and presents a funding risk since a bank's source of funds is generally of a shorter maturity. Accordingly, bank management should be aware of the source for funding this lending activity. While matching the maturity structures of assets to liabilities is particularly important for a bank's overall loan portfolio management, the importance of this task is even more evident in real estate lending activity. Many banks reduce their funding risk by entering into loan participations and sales with other institutions as well as asset securitization transactions.² For a detailed discussion on short-term financing, see section 2100.1, "Real Estate Construction Loans."

Unsound Lending Practices

Some banks have adversely affected their financial condition and performance by granting loans based on ill-conceived real estate projects. Apart from losses due to unforeseen economic downturns, these losses have generally been the result of poor or lax underwriting standards and improper management of the bank's overall real estate loan portfolio.

A principal indication of an unsound lending practice is an improper relationship between the loan amount and the market value of the property; for example, a high loan-to-value ratio in relationship to normal lending practice for a similar type of property. Another indication of unsound lending practices is the failure of the bank to examine the borrower's debt-service ability. For a commercial real estate loan, sound underwriting practices are critical to the detection of problems in the project's plans, such as unrealistic income assumptions, substandard project design, potential construction problems, and a poor marketing plan, that will affect the feasibility of the project.

Real Estate Loan Portfolio Concentration Risk

A bank should have in place effective internal policies, systems, and controls to monitor and

manage its real estate loan portfolio risk. An indication of improper management of a bank's portfolio is an excessive concentration in loans to one borrower or related borrowers, in one type of real estate loan, or in a geographic location outside the bank's designated trade area.

In identifying loan concentrations, commercial real estate loans and residential real estate loans should be viewed separately when their performance is not subject to similar economic or financial risks. However, groups or classes of real estate loans should be viewed as concentrations when there are significant common characteristics and the loans are affected by similar adverse economic, financial, or business developments. Banks with asset concentrations should have in place effective internal policies, systems, and controls to monitor and manage this risk.

Concentrations that involve excessive or undue risks require close scrutiny by the bank and should be reduced over a reasonable period of time. To reduce this risk, the bank should develop a prudent plan and institute strong underwriting standards and loan administration to control the risks associated with new loans. At the same time, the bank should maintain adequate capital to protect it from the excessive risk while restructuring its portfolio.

Loan Administration and Servicing

Real estate loan administration is responsible for certain aspects of loan monitoring. While the administration may be segregated by property type, such as residential or commercial real estate loans, the functions of the servicing department may be divided into the following categories (although the organization will vary among institutions):

- *Loan closing and disbursement*—preparing the legal documents verifying the transaction, recording the appropriate documents in the public land records, and disbursing funds in accordance with the loan agreement.
- *Payment processing*—collecting and applying the loan payments.
- *Escrow administration*—collecting insurance premiums and property taxes from the borrower and remitting the funds to the insurance company and taxing authority.

2. See section 4030.1, "Asset Securitization," for additional information, including information on mortgage-backed securities (MBSs), collateralized mortgage obligations (CMOs), and real estate mortgage investment conduits (REMICs).

- *Collateral administration*—maintaining documents to reflect the status of the bank’s lien on the collateral (i.e., mortgage/deed of trust and title policy/attorney’s opinion), the value of the collateral (i.e., real estate appraisal or evaluation and verification of senior lien, if in existence), and the protection of the collateral (i.e., hazard/liability insurance and tax payments).
- *Loan payoffs*—determining the pay-off amount, preparing the borrower release or assumption documents, confirming the receipt of funds, and recording the appropriate lien-release documents in the public land records.
- *Collections and foreclosure*—monitoring the payment performance of the borrower and pursuing collection of past-due amounts in accordance with bank policy on delinquencies.
- *Claims processing*—seeking recoveries on defaulted loans that are covered by a government guarantee or insurance program or a private mortgage insurance company.

The bank should have adequate procedures to ensure segregation of duties for disbursement and receipt of funds control purposes. Additionally, the procedures should address the need for document control because of the importance of the timely recording of the bank’s security interests in the public land records.

Some institutions provide various levels of loan services for other institutions, which may range from solely the distribution of payments received to the ultimate collection of the debt through foreclosure. In such cases, the bank will have the additional responsibility of remitting funds on a timely basis to the other institutions in accordance with a servicing agreement. The servicing agreement sets forth the servicer’s duties, reporting requirements, timeframe for remitting funds, and fee structure. If a bank relies on another institution for servicing, the bank should have adequate control and audit procedures to verify the performance of the servicer (also see section 4030.1, “Asset Securitization”). For residential loans sold into the secondary mortgage market for which the bank has retained servicing, Fannie Mae, Freddie Mac, and the Government National Mortgage Corporation (Ginnie Mae) have specific standards the bank (that is, seller/servicer) must adhere to. Failure to meet these standards can result in the termination of the servicing agreement.

BANK ASSESSMENT OF THE BORROWER

Although the value of the real estate collateral is an important component of the loan-approval process, the bank should not place undue reliance on the collateral value in lieu of an adequate assessment of the borrower’s ability to repay the loan. These assessment factors differ depending upon the purpose of the loan, such as single-family residential loans as compared with income-producing commercial property loans and commercial or residential development loans (referred to as “commercial real estate lending”). The loan documentation must adequately support the bank’s assessment of the borrower and contain the appropriate legal documentation to protect the bank’s interests.

Single-Family Residential Loans

For single-family residential loans, the bank should evaluate the loan applicant’s creditworthiness and whether the individual has the ability to meet monthly mortgage payments as well as all other obligations and expenses associated with home ownership. This includes an assessment of the borrower’s income, liquid assets, employment history, credit history, and existing obligations.³ The bank should also consider the availability of private mortgage insurance; a government guarantee; or a government insurance program, such as loans through the FHA-insured or VA-guaranteed programs, in assessing the credit risk of a loan applicant.

If a bank delegates the loan-origination function to a third party, the bank should have adequate controls to ensure that its loan policies and procedures are being followed. The controls should include a review of the third party’s qualifications; a written agreement between the bank and the third-party originator to set forth the responsibilities of the third party as an agent for the bank; a periodic review of the third party’s operations to ensure that the bank’s

3. There are restrictions on the information a bank can request. The Federal Reserve’s Regulation B, Equal Credit Opportunity (12 CFR 202), details the information that may and may not be requested on a loan application and provides a model form for a residential mortgage transaction. The Federal Reserve’s Regulation Z, Truth in Lending (12 CFR 226), describes the bank-disclosure requirements to the potential borrower on the cost of financing.

policies and procedures are being adhered to; and development of quality controls to ensure that loans originated by the third party meet the bank's lending standards, as well as those of the secondary mortgage market if the bank expects to sell the mortgages.

Secondary Residential Mortgage Market

In the secondary market, a bank (the primary mortgage originator) sells all or a portion of its interest in residential mortgages to other financial institutions (investors). Thus, the secondary mortgage market provides an avenue for a bank to liquidate a long-term asset as the need for funds arises. The majority of the secondary mortgage market activity is supported by three government-related or -controlled institutions: Fannie Mae,⁴ Freddie Mac,⁵ and Ginnie Mae.⁶ These entities were created or sponsored by the federal government to encourage the financing and construction of residential housing. Fannie Mae, Freddie Mac, and Ginnie Mae have specific underwriting standards and loan-documentation requirements for mortgages purchased or guaranteed by them. Generally, financial institutions enter into either a mandatory or a standby commitment agreement with these entities wherein the financial institution agrees to sell loans according to certain delivery schedules, terms, and performance penalties.

Commercial Real Estate Loans

As with other types of lending activities, the

4. Although Fannie Mae was originally created in 1938 as an organization within the federal government, it became a federally chartered, stockholder corporation in 1968 when some of its functions were placed under the newly created Ginnie Mae. Financial institutions can either sell mortgages directly to Fannie Mae or pool mortgages for placement in a Fannie Mae-guaranteed mortgage-backed security.

5. Freddie Mac was sponsored by the Federal Home Loan Bank Board and its members in 1970. Its primary purpose is to provide a secondary market for conventional mortgages originated by thrifts.

6. Ginnie Mae, a government agency under the Department of Housing and Urban Development (HUD), was created in 1968 when Fannie Mae became a private corporation. It has several functions to assist in government housing programs, such as managing and liquidating loans acquired by the government. In the secondary market, Ginnie Mae acts as a guarantor of mortgage-backed securities for pools of loans originated and securitized by financial institutions.

extent of commercial real estate lending activity should be contingent upon the lender's expertise and the bank's experience. In considering an application for a commercial real estate loan, a bank should understand the relationship of the actual borrower to the project being financed. The form of business ownership varies for commercial real estate projects and can affect the management, financial resources available for the completion of the project, and repayment of the loan.

Information on past and current projects constructed, rented, or managed by the potential borrower can help the bank assess the borrower's experience and the likelihood of the proposed project's success. For development and construction projects, the bank should closely review the project's feasibility study. The study should provide sensitivity and risk analyses of the potential impact of changes in key economic variables, such as interest rates, vacancy rates, or operating expenses. The bank should also conduct credit checks of the borrower and of all principals involved in the transaction to verify relationships with contractors, suppliers, and business associates.

Finally, the bank should assess the borrower's financial strength to determine if the principals of the project have the necessary working capital and financial resources to support the project until it reaches stabilization. As with any type of lending on income-producing properties,⁷ the bank should quantify the degree of protection from the borrower's (or collateral's) cash flow, the value of the underlying collateral, and any guarantees or other collateral that may be available as a source of loan repayment.

BANK ASSESSMENT OF REAL ESTATE COLLATERAL

Banks should obtain an appraisal or evaluation, as appropriate, for all real estate-related financial transactions before making the final credit or other decision. The Federal Reserve's appraisal regulation requires institutions to obtain appraisals when certain criteria are met. See "Real

7. Income-producing commercial properties include rental apartments, retail properties, office buildings, warehouses, and hotels.

Estate Appraisals and Evaluations” section 4140.1, for a description of the related requirements a bank must follow for real estate–related financial transactions. The appraisal section explains the standards for appraisals, indicates which transactions require an appraisal or an evaluation, states qualifications for an appraiser and evaluator, provides guidance on evaluations, and describes the three appraisal approaches.

Management is responsible for reviewing the reasonableness of the appraisal’s or evaluation’s assumptions and conclusions. Also, management’s rationale for accepting and relying upon the appraisal or evaluation should be documented in writing. In assessing the underwriting risks, management should reconsider any assumptions used by an appraiser that reflect overly optimistic or pessimistic values. If management, after its review of the appraisal or evaluation, determines that there are unsubstantiated assumptions, the bank may request the appraiser or evaluator to provide a more detailed justification of the assumptions or obtain a new appraisal or evaluation.

Single-Family Residential Loans

The assessment of a residential property’s market value is critical to the bank’s estimate of loan-to-value ratio. This assessment provides the bank with an estimate of the borrower’s equity in the property and the bank’s potential credit risk if the borrower should default on the loan. For mortgages over \$250,000, a bank is required to obtain an appraisal in conformance with the Federal Reserve’s appraisal regulation. As of January 1, 1993, the appraisal must be performed by a state-certified or -licensed appraiser, as specified in the regulation. While transactions under \$250,000 do not require an appraisal, a bank is expected to perform an appropriate evaluation of the underlying real estate collateral. Loans that are wholly or partially insured or guaranteed by a U.S. government agency or government-sponsored agency are exempt from the Federal Reserve’s appraisal regulation, so long as the loan meets the underwriting requirements of the federal insurer or guarantor. Additionally, state laws for appraisals may differ from the Federal Reserve’s requirements.

Loans qualifying for sale to any U.S. government agency or government-sponsored agency or conforming to the appraisal standards of Fannie Mae and Freddie Mac are also exempt from the Federal Reserve’s appraisal regulation. Fannie Mae and Freddie Mac jointly developed and adopted the Uniform Residential Appraisal Report (URAR) as the standard form for residential loans sold to them. As a result, a properly completed URAR form is considered the industry standard for appraising one- to four-family residential properties.

Commercial Real Estate Loans

Due to the variety of uses and the complexity of most commercial projects, there is not a uniformly accepted format for valuing commercial properties like there is for valuing one- to four-family residential properties. A bank relies on outside appraisers, or in some instances in-house expertise, to prepare appraisals. For the most part, appraisals on commercial real estate projects are presented in a narrative format with supporting schedules. As the complexity of a commercial project increases, the detail of the appraisal report or evaluation should also increase to fully support the analysis.

When estimating the value of income-producing real estate, the appraiser generally relies to a greater degree on the income approach to valuation than on the comparable-sales approach or the cost approach. The income approach converts all expected future net operating income into present-value terms, using different analytical methods. One method, known as the direct capitalization method, estimates the present value of a property by discounting its stabilized net operating income at an appropriate capitalization rate (commonly referred to as a cap rate). Stabilized net operating income is the net cash flow derived from a property when market conditions are stable and no unusual patterns of future rents and occupancy are expected. To approximate stabilized net operating income, the appraiser or bank may need to adjust the current net operating income of a property either up or down to reflect current market conditions. The direct capitalization method is appropriate only for use in valuing stabilized properties.

Another method, known as the discounted cash-flow method, requires the discounting of expected future cash flows at an appropriate

discount rate to ascertain the net present value of a property. This method is appropriate for use in estimating the values of new properties that have not yet stabilized, or for troubled properties that are experiencing fluctuations in income.

The discount rates and cap rates, used in estimating property values, should reflect reasonable expectations about the rate of return that investors and lenders require under normal, orderly, and sustainable market conditions. The appraiser's analysis and assumptions should support the discount and cap rates used in the appraisal. The appraiser should not use exaggerated, imprudent, or unsustainably high or low discount rates, cap rates, or income projections.

In assessing the reasonableness of the facts and assumptions associated with the valuation of commercial real estate, the bank should consider—

- current and projected vacancy and absorption rates;
- lease-renewal trends and anticipated rents;
- volume and trends in past-due leases;
- the project's feasibility study and market survey to determine support for the assumptions concerning future supply-and-demand factors;
- effective rental rates or sale prices (taking into account all concessions);
- net operating income of the property as compared with budget projections; and
- discount rates and direct capitalization rates.

Because the income approach is generally relied on to a greater degree than the other methods, with specific emphasis on arriving at stabilized values, the bank must use judgment in determining the time it will take for a property to achieve stabilized occupancy and rental rates. The analysis of collateral values should not be based on a simple projection of current levels of net operating income if markets are depressed or reflect speculative pressures but can be expected over a reasonable period of time to return to normal (stabilized) conditions.

The capacity of a property to generate cash flow to service a loan is evaluated on the basis of rents (or sales), expenses, and rates of occupancy that are reasonably estimated to be achieved over time. The determination of the level of stabilized occupancy, rental rates, and net operating income should be based on an analysis of current and reasonably expected market conditions, taking into consideration historical levels when appropriate.

EARLY INDICATIONS OF TROUBLED COMMERCIAL REAL ESTATE LOANS

Market-Related

To evaluate the collectibility of their commercial real estate portfolio, banks should be alert for economic indicators of weakness in their real estate markets as well as for indicators of actual or potential problems in the individual commercial real estate projects. Available indicators useful in evaluating the condition of the local real estate market include permits for and the value of new construction, absorption rates, employment trends, vacancy rates, and tenant lease incentives. Weaknesses disclosed by these types of statistics may signify that a real estate market is experiencing difficulties that may cause cash-flow problems for individual real estate projects, declining real estate values, and ultimately, troubled real estate loans.

Project-Related

Characteristics of potential or actual difficulties in commercial real estate projects may include—

- an excess supply of similar projects under construction in the same trade area.
- the lack of a sound feasibility study or analysis that reflects current and reasonably anticipated market conditions.
- changes in concept or plan (for example, a condominium project converted to an apartment project because of unfavorable market conditions).
- rent concessions or sales discounts, resulting in cash flow below the level projected in the original feasibility study, appraisal, or evaluation.
- concessions on finishing tenant space, moving expenses, and lease buyouts.
- slow leasing or lack of sustained sales activity and increasing sales cancellations that may reduce the project's income potential, resulting in protracted repayment or default on the loan.
- delinquent lease payments from major tenants.
- land values that assume future rezoning.
- tax arrearages.
- environmental hazards and liability for cleanup.

As the problems associated with a commercial real estate loan become more pronounced, the borrower/guarantor may experience a reduction in cash flow to service-related debts, which could result in delinquent interest and principal payments.

While some real estate loans become troubled because of a general downturn in the market, others become troubled because the loans were originated on an unsound or a liberal basis. Common examples of unsound loans include—

- loans with no or minimal borrower equity
- loans on speculative undeveloped property in which the borrower's only source of repayment is the sale of the property
- loans based on land values that have been driven up by rapid turnover of ownership, but without any corresponding improvements to the property or supportable income projections to justify an increase in value
- additional advances to service an existing loan without evidence that the loan will be repaid in full
- loans to borrowers with no development plans or noncurrent development plans
- renewals, extensions, and refinancings that lack credible support for full repayment from reliable sources and that do not have a reasonable repayment schedule⁸

EXAMINER REVIEW OF COMMERCIAL REAL ESTATE LOANS

The focus of an examiner's review of a real estate loan is on the ability of the loan to be repaid. The principal factors that bear on this review are the income-producing potential of the underlying collateral and the borrower's willingness and ability to repay the loan from other resources, if necessary, and according to existing loan terms. In evaluating the overall risk associated with a real estate loan, examiners should consider a number of factors, including

the borrower's character, overall financial condition and resources, and payment history; the prospects for support from any financially responsible guarantors; and the nature and degree of protection provided by the cash flow and value of the underlying collateral.⁹ As the borrower's and guarantor's ability to repay a troubled real estate loan decreases, the importance of the collateral value of the loan increases commensurately.

Examiner Review of the Real Estate Collateral

An examiner's analysis of the collateral value is based on the bank's most recent appraisal or evaluation and includes a review of the major facts, assumptions, and approaches used by the appraiser or person performing the evaluation (including any comments made by management relative to the reasonableness of the appraisal or evaluation assumptions and conclusions). While the examiner may make adjustments to the assessment of value, these adjustments should be made solely for purposes of an examiner's analysis and assessment of credit quality and should not involve an adjustment to the actual appraisal or evaluation.

Furthermore, examiners should not make adjustments to appraisal or evaluation assumptions for credit-analysis purposes based on worst-case scenarios that are unlikely to occur. For example, an examiner should not necessarily assume that a building will become vacant just because an existing tenant who is renting at a rate above today's market rate may vacate the property when the current lease expires. On the other hand, an adjustment to value may be appropriate for credit-analysis purposes when the valuation assumes renewal at the above-market rate, unless that rate is a reasonable estimate of the expected market rate at the time of renewal.

Assumptions, when recently made by qualified appraisers or persons performing the evalu-

8. As discussed more fully in the section on classification guidelines, the refinancing or renewing of loans to sound borrowers would not result in a supervisory classification or criticism unless well-defined weaknesses exist that jeopardize repayment of the loans. As consistent with sound banking practices, institutions should work appropriately and constructively with borrowers who may be experiencing temporary difficulties.

9. The primary basis for the review and classification of the loan should be the original source of repayment and the borrower's intent and ability to fulfill the obligation without relying on third-party guarantees. However, the examiner should also consider the support provided by any guarantees when determining the appropriate classification treatment for a troubled loan. The treatment of guarantees in the classification process is discussed in "Classification of Credits," section 2060.1.

ation and when consistent with the discussion above, should be given a reasonable amount of deference. Examiners should not challenge the underlying assumptions, including discount rates and cap rates used in appraisals or evaluations, that differ only in a limited way from norms that would generally be associated with the property under review. However, the estimated value of the underlying collateral may be adjusted for credit-analysis purposes when the examiner can establish that underlying facts or assumptions are inappropriate and can support alternative assumptions.

CLASSIFICATION GUIDELINES

As with other types of loans, real estate loans that are adequately protected by the current sound worth and debt-service capacity of the borrower, guarantor, or the underlying collateral generally are not classified. The examiner should focus on the ability of the borrower, guarantor, or the collateral to provide the necessary cash flow to adequately service the loan. The loan's record of performance is also important and must be taken into consideration. As a general principle, a performing real estate loan should not be automatically classified or charged off solely because the value of the underlying collateral has declined to an amount that is less than the loan balance. Conversely, the fact that the underlying collateral value equals or exceeds the current loan balance, or that the loan is performing, does not preclude the loan from classification if well-defined weaknesses jeopardize the repayment ability of the borrower, such as the lack of credible financial support for full repayment from reliable sources.¹⁰

Similarly, loans to sound borrowers that are refinanced or renewed according to prudent underwriting standards, including loans to creditworthy commercial or residential real estate developers, should not be categorized as special mention unless potential weaknesses exist or should not be classified unless well-

defined weaknesses exist that jeopardize repayment. An institution should not be criticized for working with borrowers whose loans are classified or categorized as special mention as long as the institution has a well-conceived and effective workout plan for such borrowers, along with effective internal controls to manage the level of these loans.

In evaluating real estate credits for special-mention categorization or classification, examiners should apply the standard definitions as set forth in "Classification of Credits," section 2060.1. In assessing credit quality, examiners should consider all important information regarding repayment prospects, including information on the borrower's creditworthiness, the value of and cash flow provided by all collateral supporting the loan, and any support provided by financially responsible guarantors.

These guidelines apply to individual credits, even if portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each credit should be based upon the fundamental characteristics affecting the collectibility of the particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits in the same industry that are not affected by the problems of the troubled sectors.

Troubled Project-Dependent Commercial Real Estate Loans

The following guidelines for classifying a troubled commercial real estate loan apply when the repayment of the debt will be provided solely by the underlying real estate collateral, and there are no other available and reliable sources of repayment. As a general principle, for a troubled project-dependent commercial real estate loan, any portion of the loan balance that exceeds the amount that is adequately secured by the value of the collateral, and that can be clearly identified as uncollectible, should be classified loss. The portion of the loan balance that is adequately secured by the value of the collateral should generally be classified no worse than substandard. The amount of the loan balance in excess of the value of the collateral, or portions thereof, should be classified doubtful

10. Another issue that arises in the review of a commercial real estate loan is its accrual or nonaccrual treatment for reporting purposes. The federal banking agencies, under the auspices of the FFIEC, have provided guidance on nonaccrual status in the instructions for the Reports of Condition and Income (call reports) and in related supervisory guidance of the agencies. This guidance is summarized in "Loan Portfolio Management," section 2040.1.

when the potential for full loss may be mitigated by the outcome of certain pending events, or when loss is expected but the amount of the loss cannot be reasonably determined. If warranted by the underlying circumstances, an examiner may use a doubtful classification on the entire loan balance. However, such a classification should occur infrequently.

Partially Charged-Off Loans

An evaluation based upon consideration of all relevant factors may indicate that a credit has well-defined weaknesses that jeopardize collection in full, although a portion of the loan may be reasonably assured of collection. When a charge-off has been taken in an amount sufficient to ensure that the remaining recorded balance of the loan (1) is being serviced (based upon reliable sources) and (2) is reasonably assured of collection, classification of the remaining recorded balance may not be appropriate. Classification would be appropriate when well-defined weaknesses continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally be classified no more severely than substandard.

A more severe classification than substandard for the remaining recorded balance would be appropriate, however, if the loss exposure cannot be reasonably determined—for example, when significant risk exposures are perceived, such as in the case of bankruptcy or loans collateralized by properties subject to environmental hazards. In addition, classifying the remaining recorded balance more severely than substandard would be appropriate when sources of repayment are considered unreliable.

Formally Restructured Loans

The classification treatment previously discussed for a partially charged-off loan would also generally be appropriate for a formally restructured loan when partial charge-offs have been taken. For a formally restructured loan, the focus of the examiner's analysis is on the ability of the borrower to repay the loan in accordance with its modified terms. Classification of a formally restructured loan would be appropriate if, after the restructuring, well-defined weak-

nesses exist that jeopardize the orderly repayment of the loan in accordance with reasonable modified terms.¹¹ Troubled commercial real estate loans whose terms have been restructured should be identified in the institution's internal credit-review system and closely monitored by management.

Home Equity Loans

Home equity loans (HELs) are defined as loans that are usually collateralized by a second mortgage or deed of trust on the borrower's principal residence or second residence; however, the collateral may be a first mortgage or deed of trust. The borrower's equity in the residence, pledged as collateral, provides protection for the loan and determines the maximum amount of credit that may be advanced. Traditionally, HELs were used to fund home improvements or to consolidate debt, and they were usually amortized without a revolving feature. Because of these characteristics, home equity loans were commonly maintained and administered in a bank's consumer or installment loan department and were monitored based on delinquency status. However, since enactment of the Tax Reform Act of 1986, which allows the deduction of home equity loan interest on debt of up to \$100,000, the popularity and usage of HELs have expanded considerably. The proceeds of home equity loans are now used for increasingly diverse purposes, such as to make consumer purchases or personal investments, to provide working capital for small businesses, and to supplement personal income.

The structure and repayment terms of home equity loans have become more varied. Amortization periods may be as long as 15 years, with possible balloon maturities of three to five years. In some instances, the payment requirement is only interest due for an initial period. Revolving lines of credit have also gained popularity as a way to accommodate the many different uses of loan proceeds. Lines of credit to individuals with high incomes or high net worths may substantially exceed \$100,000. These loans are often housed in the bank's private-banking

11. An example of a restructured commercial real estate loan that does not have reasonable modified terms would be a cash-flow mortgage, which requires interest payments only when the underlying collateral generates cash flow but provides no substantive benefits to the lending institution.

division or within the commercial loan portfolio, rather than in the consumer loan department.

In addition to the increasingly varied purposes of HELs, there has also been an upsurge in loans in which the combined first and second mortgages result in very high LTV ratios. To remain competitive with other residential lenders, some banks have relaxed their underwriting standards by permitting higher LTV ratios. In addition, some banks may have offset declines in residential mortgage refinancing during periods of higher interest rates by competing more aggressively for home equity loan business. Consumer demand for HELs may also increase during periods of higher interest rates because they provide an alternative source of financing for consumer purchases.

Examiners must ensure that a bank's policies for originating and acquiring HELs comply with the real estate lending standards and guidelines stipulated in the Board's Regulation H, subpart E. (See Regulation H, subpart E, 12 CFR 208.50–51.) While the guidelines permit banks to make residential real estate loans with LTV ratios in excess of 90 percent without the appropriate credit enhancements, these loans are treated as exceptions to the guidelines and are subject to the aggregate limitation of 100 percent of the bank's total capital.

For all types of lending, banks should have strong underwriting standards for HELs. In assessing these standards, the examiner should determine whether the bank primarily emphasizes the borrower's ability and willingness to repay the loan from income or cash flow versus the amount of equity in the real estate. Extended repayment terms and liberal loan structures can increase the risk of default on HELs. Normally, longer repayment terms increase the likelihood of events that could jeopardize the borrower's ability to repay, for example, the loss of a job, a change in marital status, a prolonged spike in prevailing interest rates, or a deflationary economic environment. Additionally, the examiner should review the bank's policy (or practice) for obtaining appraisals or evaluations to determine the lendable equity in the borrower's residence. The examiner should determine that the bank has not relaxed its appraisal and evaluation requirements to accommodate the growth of its HEL portfolio.

Economic periods of increasing unemployment, rising interest rates, or other recessionary factors can negatively affect the repayment ability of borrowers and erode the value and mar-

ketability of residential real estate. Moreover, most HELs are collateralized by junior lien positions. Therefore, if the bank forecloses, it must pay off or service the senior mortgage lender, further increasing its exposure. Foreclosure proceedings may entail lengthy and costly litigation, and real estate law commonly protects the home owner.

Examiners should ensure that banks have proper controls to manage HEL exposure, particularly those banks that have a high concentration of home equity loans with excessively high combined LTV ratios. (See the following subsection for interagency guidance on credit-risk management in home equity lending.) Banks with concentrations that lack proper controls and monitoring procedures should be criticized for these credit deficiencies. If the examiner judges the deficiencies to be severe, the bank should be cited for unsafe and unsound banking practices.

Interagency Credit-Risk Management Guidance for Home Equity Lending

The Federal Reserve and the other federal financial institutions regulatory agencies¹² collectively issued this interagency guidance on May 16, 2005. The guidance is intended to promote sound credit-risk management practices at financial institutions that have home equity lending programs, including open-end home equity lines of credit (HELOCs) and closed-end home equity loans (HELs). Home equity lending can be an attractive product for many homeowners and lenders. The quality of these portfolios, however, is subject to increased risk if interest rates rise and home values decline. Sound underwriting practices and effective risk-management systems are essential to mitigate this risk. Therefore, financial institutions' credit-risk management practices for home equity lending need to keep pace with any rapid growth in home equity lending and should emphasize compliance with sound underwriting standards and practices.

12. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration. Also, the interagency guidance frequently uses the term *financial institutions*. As used in this section, *financial institutions* means commercial banks and any of their various credit-extending nonbanking subsidiaries.

The risk factors listed below, combined with an inherent vulnerability to rising interest rates, suggest that financial institutions need to fully recognize the risk embedded in their home equity portfolios. Following are the specific product, risk-management, and underwriting risk factors and trends that deserve scrutiny:

- interest-only features that require no amortization of principal for a protracted period
- limited or no documentation of a borrower's assets, employment, and income (known as "low doc" or "no doc" lending)
- higher loan-to-value (LTV) and debt-to-income (DTI) ratios
- lower credit-risk scores for underwriting home equity loans
- greater use of automated valuation models (AVMs) and other collateral-evaluation tools for the development of appraisals and evaluations
- an increase in the number of transactions generated through a loan broker or other third party

Home equity lending can be conducted in a safe and sound manner if pursued with the appropriate risk-management structure, including adequate allowances for loan and lease losses and appropriate capital levels. Sound practices call for fully articulated policies that address marketing, underwriting standards, collateral-valuation management, individual-account and portfolio management, and servicing.

Financial institutions should ensure that risk-management practices keep pace with the growth and changing risk profile of home equity portfolios. Management should actively assess a portfolio's vulnerability to changes in consumers' ability to pay and the potential for declines in home values. Active portfolio management is especially important for financial institutions that project or have already experienced significant growth or concentrations, particularly in higher-risk products such as high-LTV, "low doc" or "no doc," interest-only, or third-party-generated loans. (See SR-05-11.)

Credit-Risk Management Systems

Product Development and Marketing

In the development of any new product offering, product change, or marketing initiative, manage-

ment should have a review and approval process that is sufficiently broad to ensure compliance with the financial institution's internal policies and applicable laws and regulations¹³ and to evaluate the credit, interest-rate, operational, compliance, reputation, and legal risks. In particular, risk-management personnel should be involved in product development, including an evaluation of the targeted population and the product(s) being offered. For example, material changes in the targeted market, origination source, or pricing could have a significant impact on credit quality and should receive senior management approval.

When HELOCs or HELs are marketed or closed by a third party, financial institutions should have standards that provide assurance that the third party also complies with applicable laws and regulations, including those on marketing materials, loan documentation, and closing procedures. (For further details on agent relationships, see "Third-Party Originations.") Finally, management should have appropriate monitoring tools and management information systems (MIS) to measure the performance of various marketing initiatives, including offers to increase a line, extend the interest-only period, or adjust the interest rate or term.

Origination and Underwriting

All relevant risk factors should be considered when establishing product offerings and underwriting guidelines. Generally, these factors should include a borrower's income and debt levels, credit score (if obtained), and credit history, as well as the loan size, collateral value (including valuation methodology), lien position, and property type and location.

Consistent with the Federal Reserve's regulations on real estate lending standards,¹⁴ prudently underwritten home equity loans should include an evaluation of a borrower's capacity

13. Applicable laws include the Federal Trade Commission Act; the Equal Credit Opportunity Act (ECOA); the Truth in Lending Act (TILA), including the Home Ownership and Equity Protection Act (HOEPA); the Fair Housing Act; the Real Estate Settlement Procedures Act (RESPA); and the Home Mortgage Disclosure Act (HMDA), as well as applicable state consumer protection laws.

14. On December 23, 1992, the Federal Reserve announced the adoption of uniform rules on real estate lending standards and issued the Interagency Guidelines for Real Estate Lending Policies. See 12 CFR 208.51 and 12 CFR 208, appendix C.

to adequately service the debt.¹⁵ Given the home equity products' long-term nature and the large credit amount typically extended to a consumer, an evaluation of repayment capacity should consider a borrower's income and debt levels and not just a credit score.¹⁶ Credit scores are based upon a borrower's historical financial performance. While past performance is a good indicator of future performance, a significant change in a borrower's income or debt levels can adversely alter the borrower's ability to pay. How much verification these underwriting factors require will depend upon the individual loan's credit risk.

HELOCs generally do not have interest-rate caps that limit rate increases.¹⁷ Rising interest rates could subject a borrower to significant payment increases, particularly in a low-interest-rate environment. Therefore, underwriting standards for interest-only and variable-rate HELOCs should include an assessment of the borrower's ability to amortize the fully drawn line over the loan term and to absorb potential increases in interest rates.

Third-Party Originations

Financial institutions often use third parties, such as mortgage brokers or correspondents, to originate loans. When doing so, institutions should have strong control systems to ensure the quality of originations and compliance with all applicable laws and regulations, and to help prevent fraud.

Brokers are firms or individuals, acting on behalf of either the financial institution or the borrower, who match the borrower's needs with institutions' mortgage-origination programs. Brokers take applications from consumers. Although they sometimes process the application and underwrite the loan to qualify the application for a particular lender, they generally do not use their own funds to close loans. Whether brokers are allowed to process and

perform any underwriting will depend on the relationship between the financial institution and the broker. For control purposes, the financial institution should retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and independence in the appraisal and evaluation function.

Correspondents are financial companies that usually close and fund loans in their own name and subsequently sell them to a lender. Financial institutions commonly obtain loans through correspondents and, in some cases, delegate the underwriting function to the correspondent. In delegated underwriting relationships, a financial institution grants approval to a correspondent financial company to process, underwrite, and close loans according to the delegator's processing and underwriting requirements and is committed to purchase those loans. The delegating financial institution should have systems and controls to provide assurance that the correspondent is appropriately managed, is financially sound, and provides mortgages that meet the financial institution's prescribed underwriting guidelines and that comply with applicable consumer protection laws and regulations. A quality-control unit or function in the delegating financial institution should closely monitor the quality of loans that the correspondent underwrites. Monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities.

Both brokers and correspondents are compensated based upon mortgage-origination volume and, accordingly, have an incentive to produce and close as many loans as possible. Therefore, financial institutions should perform comprehensive due diligence on third-party originators prior to entering a relationship. In addition, once a relationship is established, the financial institution should have adequate audit procedures and controls to verify that the third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.¹⁸ Monitoring

15. See also section 226.34(a)(4) of Regulation Z, Truth in Lending (12 CFR 226.34(a)(4)).

16. The Interagency Guidelines Establishing Standards for Safety and Soundness also call for documenting the source of repayment and assessing the ability of the borrower to repay the debt in a timely manner. See 12 CFR 208, appendix D-1.

17. While there may be periodic rate increases, the lender must state in the consumer credit contract the maximum interest rate that may be imposed during the term of the obligation. See 12 CFR 226.30(b).

18. In addition, a financial institution that purchases loans subject to TILA's rules for HELs with high rates or high closing costs (loans covered by HOEPA) can incur assignee liability unless the financial institution can reasonably show that it could not determine the transaction was a loan covered by HOEPA. Also, the nature of its relationship with brokers and correspondents may have implications for liability under

the quality of loans by origination source, and uncovering such problems as early payment defaults and incomplete packages, enables management to know if third-party originators are producing quality loans. If ongoing credit or documentation problems are discovered, the financial institution should take appropriate action against the third party, which could include terminating its relationship with the third party.

Collateral-Valuation Management

Competition, cost pressures, and advancements in technology have prompted financial institutions to streamline their appraisal and evaluation processes. These changes, coupled with financial institutions underwriting to higher LTVs, have heightened the importance of strong collateral-valuation management policies, procedures, and processes.

Financial institutions should have appropriate collateral-valuation policies and procedures that ensure compliance with the Federal Reserve's appraisal regulations¹⁹ and the Interagency Appraisal and Evaluation Guidelines (the guidelines).²⁰ In addition, the financial institution should—

- establish criteria for determining the appropriate valuation methodology for a particular transaction, based on the risk in the transaction and loan portfolio (For example, higher-risk transactions or nonhomogeneous property types should be supported by more-thorough valuations. The financial institution should also set criteria for determining the extent to which an inspection of the collateral is necessary.)
- ensure that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation
- implement policies and controls to preclude “value shopping” (Use of several valuation tools may return different values for the same property. These differences can result in systematic overvaluation of properties if the valuation choice becomes driven by the highest property value. If several different valuation

tools or AVMs are used for the same property, the financial institution should adhere to a policy for selecting the most reliable method, rather than the highest value.)

- require sufficient documentation to support the collateral valuation in the appraisal or evaluation

AVMs

When AVMs are used to support evaluations or appraisals, the financial institution should validate the models on a periodic basis to mitigate the potential valuation uncertainty in the model. As part of the validation process, the financial institution should document the validation's analysis, assumptions, and conclusions. The validation process includes back-testing a representative sample of the valuations against market data on actual sales (where sufficient information is available). The validation process should cover properties representative of the geographic area and property type for which the tool is used.

Many AVM vendors, when providing a value, will also provide a “confidence score,” which usually relates to the accuracy of the value provided. Confidence scores, however, come in many different formats and are calculated based on differing scoring systems. Financial institutions that use AVMs should have an understanding of how the model works as well as what the confidence scores mean. Institutions should also establish the confidence levels that are appropriate for the risk in a given transaction or group of transactions.

When tax-assessment valuations are used as a basis for the collateral valuation, the financial institution should be able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value as part of the validation process.

Account Management

Since HELOCs often have long-term, interest-only payment features, financial institutions should have risk-management techniques that identify higher-risk accounts and adverse changes in account risk profiles, thereby enabling management to implement timely preventive action (e.g., freezing or reducing lines). Further, a

ECOA, and for reporting responsibilities under HMDA.

19. 12 CFR 208, subpart E, and 12 CFR 225, subpart G.

20. See SR-94-55, dated October 27, 1994.

financial institution should have risk-management procedures to evaluate and approve additional credit on an existing line or extending the interest-only period. Account-management practices should be appropriate for the size of the portfolio and the risks associated with the types of home equity lending.

Effective account-management practices for large portfolios or portfolios with high-risk characteristics include—

- periodically refreshing credit-risk scores on all customers;
- using behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
- periodically assessing utilization rates;
- periodically assessing payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the line to keep payments current;
- monitoring home values by geographic area; and
- obtaining updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral.

The frequency of these actions should be commensurate with the risk in the portfolio. Financial institutions should conduct annual credit reviews of HELOC accounts to determine whether the line of credit should be continued, based on the borrower's current financial condition.²¹

When appropriate, financial institutions should refuse to extend additional credit or reduce the credit limit of a HELOC, bearing in mind that under Regulation Z such steps can be taken only in limited circumstances. These include, for example, when the value of the collateral declines significantly below the appraised value for purposes of the HELOC, default of a material obligation under the loan agreement, or

deterioration in the borrower's financial circumstances.²² In order to freeze or reduce credit lines due to deterioration in a borrower's financial circumstances, two conditions must be met: (1) there must be a "material" change in the borrower's financial circumstances and (2) as a result of this change, the financial institution must have a reasonable belief that the borrower will be unable to fulfill the plan's payment obligations.

Account-management practices that do not adequately control authorizations and provide for timely repayment of over-limit amounts may significantly increase a portfolio's credit risk. Authorizations of over-limit home equity lines of credit should be restricted and subject to appropriate policies and controls. A financial institution's practices should require over-limit borrowers to repay in a timely manner the amount that exceeds established credit limits. Management information systems should be sufficient to enable management to identify, measure, monitor, and control the unique risks associated with over-limit accounts.

Portfolio Management

Financial institutions should implement an effective portfolio credit-risk management process for their home equity portfolios that includes the following.

Policies. The Federal Reserve's real estate lending standards regulations require that a financial institution's real estate lending policies be consistent with safe and sound banking practices and that the financial institution's board of directors review and approve these policies at least annually. Before implementing any changes to policies or underwriting standards, management should assess the potential effect on the financial institution's overall risk profile, which would include the effect on concentrations, profitability, and delinquency and loss rates. The accuracy of these estimates should be tested by comparing them with actual experience.

Portfolio objectives and risk diversification. Effective portfolio management should clearly communicate portfolio objectives such as growth targets, utilization, rate-of-return hurdles, and

21. Under the Federal Reserve's risk-based capital guidelines, an unused HELOC commitment with an original maturity of one year or more may be allocated a zero percent conversion factor if the institution conducts at least an annual credit review and is able to unconditionally cancel the commitment (i.e., prohibit additional extensions of credit, reduce the credit line, and terminate the line) to the full extent permitted by relevant federal law. See 12 CFR 208, appendix A, III.D.4.

22. Regulation Z does not permit these actions to be taken in circumstances other than those specified in the regulation. See 12 CFR 226.5b(f)(3)(vi)(A)–(F).

default and loss expectations. For financial institutions with significant concentrations of HELs or HELOCs, limits should be established and monitored for key portfolio segments, such as geographic area, loan type, and higher-risk products. When appropriate, consideration should be given to the use of risk mitigants, such as private mortgage insurance, pool insurance, or securitization. As the portfolio approaches concentration limits, the financial institution should analyze the situation sufficiently to enable the financial institution's board of directors and senior management to make a well-informed decision to either raise concentration limits or pursue a different course of action.

Effective portfolio management requires an understanding of the various risk characteristics of the home equity portfolio. To gain this understanding, a financial institution should analyze the portfolio by segment, using criteria such as product type, credit-risk score, DTI, LTV, property type, geographic area, collateral-valuation method, lien position, size of credit relative to prior liens, and documentation type (such as "no doc" or "low doc").

Management information systems. By maintaining adequate credit MIS, a financial institution can segment loan portfolios and accurately assess key risk characteristics. The MIS should also provide management with sufficient information to identify, monitor, measure, and control home equity concentrations. Financial institutions should periodically assess the adequacy of their MIS in light of growth and changes in their appetite for risk. For institutions with significant concentrations of HELs or HELOCs, MIS should include, at a minimum, reports and analysis of the following:

- production and portfolio trends by product, loan structure, originator channel, credit score, LTV, DTI, lien position, documentation type, market, and property type
- delinquency and loss-distribution trends by product and originator channel with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
- vintage tracking
- the performance of third-party originators (brokers and correspondents)
- market trends by geographic area and property type to identify areas of rapidly appreciating or depreciating housing values

Policy- and underwriting-exception systems. Financial institutions should have a process for identifying, approving, tracking, and analyzing underwriting exceptions. Reporting systems that capture and track information on exceptions, both by transaction and by relevant portfolio segments, facilitate the management of a portfolio's credit risk. The aggregate data is useful to management in assessing portfolio risk profiles and monitoring the level of adherence to policy and underwriting standards by various origination channels. Analysis of the information may also be helpful in identifying correlations between certain types of exceptions and delinquencies and losses.

High-LTV monitoring. To clarify the real estate lending standards regulations and interagency guidelines, the agencies issued Guidance on High Loan-To-Value LTV Residential Real Estate Lending (the HLTV guidance) in October 1999. The HLTV guidance clarified the Interagency Real Estate Lending Guidelines and the supervisory loan-to-value limits for loans on one- to four-family residential properties. Financial institutions are expected to ensure compliance with the supervisory loan-to-value limits of the Interagency Real Estate Lending Guidelines. The HLTV guidance places emphasis on certain controls that financial institutions should have in place when engaging in HLTV lending. Financial institutions should accurately track the volume of HLTV loans, including HLTV home equity and residential mortgages, and report the aggregate of such loans to the financial institution's board of directors. Specifically, financial institutions are reminded that:

- Loans in excess of the supervisory LTV limits should be identified in the financial institution's records. The aggregate of high-LTV one- to four-family residential loans should not exceed 100 percent of the financial institution's total capital.²³ Within that limit, high-

23. For purposes of the Interagency Real Estate Lending Standards Guidelines, high-LTV one- to four-family residential property loans include (1) a loan for raw land zoned for one- to four-family residential use with an LTV ratio greater than 65 percent; (2) a residential land development loan or improved lot loan with an LTV greater than 75 percent; (3) a residential construction loan with an LTV ratio greater than 85 percent; (4) a loan on non-owner occupied one- to four-family residential property with an LTV greater than 85 percent; and (5) a permanent mortgage or home equity loan on an owner-occupied residential property with an LTV equal to or exceeding 90 percent without mortgage insurance.

LTV loans for properties other than one- to four-family residential properties should not exceed 30 percent of capital.

- In calculating the LTV and determining compliance with the supervisory LTVs, the financial institution should consider all senior liens. All loans secured by the property and held by the financial institution are reported as an exception if the combined LTV of a loan and all senior liens on an owner-occupied one- to four-family residential property equals or exceeds 90 percent and if there is no additional credit enhancement in the form of either mortgage insurance or readily marketable collateral.
- For the LTV calculation, the loan amount is the legally binding commitment (that is, the entire amount that the financial institution is legally committed to lend over the life of the loan).
- All real estate secured loans in excess of supervisory LTV limits should be aggregated and included in a quarterly report for the financial institution's board of directors.

Certain insurance products have been developed to help financial institutions mitigate the credit risks of HLTV residential loans. Insurance policies that cover a "pool" of loans can be an efficient and effective credit-risk management tool. But if a policy has a coverage limit, the coverage may be exhausted before all loans in the pool mature or pay off. The Federal Reserve will consider pool insurance to be a sufficient credit enhancement to remove the HLTV designation in the following circumstances: (1) the policy is issued by an acceptable mortgage insurance company, (2) it reduces the LTV for each loan to less than 90 percent, and (3) it is effective over the life of each loan in the pool.

Stress testing for portfolios. Financial institutions with home equity concentrations as well as higher-risk portfolios are encouraged to perform sensitivity analyses on key portfolio segments. This type of analysis identifies possible events that could increase risk within a portfolio segment or for the portfolio as a whole. Institutions should consider stress tests that incorporate interest-rate increases and declines in home values. Since these events often occur simultaneously, the testing should be performed for these events together. Institutions should also

readily marketable collateral, or other acceptable collateral.

periodically analyze markets in key geographic areas, including identified "soft" markets. Management should consider developing contingency strategies for scenarios and outcomes that extend credit risk beyond internally established risk tolerances. These contingency plans might include increased monitoring, tightening underwriting, limiting growth, and selling loans or portfolio segments.

Operations, Servicing, and Collections

Effective procedures and controls should be maintained for such support functions as perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes. Credit-risk management should oversee these support functions to ensure that operational risks are properly controlled.

Lien recording. Financial institutions should take appropriate measures to safeguard their lien position. They should verify the amount and priority of any senior liens prior to closing the loan. This information is necessary to determine the loan's LTV ratio and to assess the credit support of the collateral. Senior liens include first mortgages, outstanding liens for unpaid taxes, outstanding mechanic's liens, and recorded judgments on the borrower.

Problem-loan workouts and loss-mitigation strategies. Financial institutions should have established policies and procedures for problem-loan workouts and loss-mitigation strategies. Policies should be in accordance with the requirements of the FFIEC's Uniform Retail Credit Classification and Account Management Policy, issued June 2000 (see SR-00-8 and the appendix to section 2130.1) and should, at a minimum, address the following:

- circumstances and qualifying requirements for various workout programs including extensions, re-ages, modifications, and re-writes (Qualifying criteria should include an analysis of a borrower's financial capacity to service the debt under the new terms.)
- circumstances and qualifying criteria for loss-mitigating strategies, including foreclosure
- appropriate MIS to track and monitor the effectiveness of workout programs, including tracking the performance of all categories of

workout loans (For large portfolios, vintage delinquency and loss tracking also should be included.)

While financial institutions are encouraged to work with borrowers on a case-by-case basis, a financial institution should *not* use workout strategies to defer losses. Financial institutions should ensure that credits in workout programs are evaluated separately for the allowance for loan and lease losses (ALLL), because such credits tend to have higher loss rates than other portfolio segments.

Secondary-Market Activities

More financial institutions are issuing HELOC mortgage-backed securities (i.e., securitizing HELOCs). Although such secondary-market activities can enhance credit availability and a financial institution's profitability, they also pose certain risk-management challenges. An institution's risk-management systems should address the risks of HELOC securitizations.²⁴

Portfolio Classifications, Allowance for Loan and Lease Losses, and Capital

The FFIEC's Uniform Retail Credit Classification and Account Management Policy governs the classification of consumer loans and establishes general classification thresholds that are based on delinquency. Financial institutions and the Federal Reserve's examiners have the discretion to classify entire retail portfolios, or segments thereof, when underwriting weaknesses or delinquencies are pervasive and present an excessive level of credit risk. Portfolios of high-LTV loans to borrowers who exhibit inadequate capacity to repay the debt within a reasonable time may be subject to classification.

Financial institutions should establish appropriate ALLL and hold capital commensurate with the riskiness of their portfolios. In determining the ALLL adequacy, a financial institution should consider how the interest-only and draw features of HELOCs during the lines'

24. See SR-02-16, "Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations," (see also section 3020.1) and the risk management and capital adequacy of exposures arising from secondary-market credit activities discussion in SR-97-21.

revolving period could affect the loss curves for its HELOC portfolio. Those institutions engaging in programmatic subprime home equity lending or institutions that have higher-risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.²⁵

ALLOWANCE FOR LOAN AND LEASE LOSSES

A bank bases the adequacy of its allowance for loan and lease losses (ALLL), including amounts resulting from an analysis of the real estate portfolio, on a careful, well-documented, and consistently applied analysis of its loan and lease portfolio.²⁶ Guidance related to the ALLL is primarily addressed in section 2070.1. The following discussion summarizes general principles for assessing the adequacy of the ALLL.

Examiners should evaluate the methodology, documentation, and process that management has followed in arriving at an overall estimate of the ALLL to ensure that all of the relevant factors affecting the collectibility of the portfolio have been appropriately considered. In addition, the examiner should review the reasonableness of management's overall estimate of the ALLL, as well as the range of possible credit losses, by taking into account these factors. The examiner's analysis should also consider the quality of the bank's systems and management's ability to identify, monitor, and address asset-quality problems.

As discussed in the earlier subsection on classification guidelines, examiners should consider the value of the collateral when reviewing and classifying a loan. For a performing commercial real estate loan, however, the supervisory policy does not require automatic increases to

25. Section 2133.1 incorporates the January 2001 Interagency Expanded Guidance for Subprime Lending Programs. That guidance sets forth the supervisory expectations regarding risk-management processes, the ALLL, and capital adequacy for institutions engaging in subprime-lending programs.

26. The estimation process described in this section permits a more accurate estimate of anticipated losses than could be achieved by assessing the loan portfolio solely on an aggregate basis. However, it is only an estimation process and does not imply that any part of the ALLL is segregated for, or allocated to, any particular asset or group of assets. The ALLL is available to absorb all credit losses originating from the loan and lease portfolio.

the ALLL solely because the value of the collateral has declined to an amount that is less than the loan balance.

In assessing the ALLL during examinations, it is important that the examiner recognize that management's process, methodology, and underlying assumptions require a substantial degree of judgment. Even when an institution maintains sound loan-administration and collection procedures and effective internal systems and controls, the estimation of anticipated losses may not be precise because of the wide range of factors that must be considered. Furthermore, the ability to estimate anticipated losses on specific loans and categories of loans improves over time as substantive information accumulates regarding the factors affecting repayment prospects. The examiner should give considerable weight to management's estimates in assessing the adequacy of the ALLL when management has (1) maintained effective systems and controls for identifying, monitoring, and addressing asset-quality problems and (2) analyzed all significant factors affecting the collectibility of the portfolio.

REGULATORY COMPLIANCE

Banks are expected to comply with laws, regulations, and Federal Reserve policy in all aspects of their real estate lending programs. Moreover, banks should establish adequate internal controls to detect deficiencies or exceptions to their lending policy that result in unsafe and unsound lending practices. In regard to lending limits, the examiner should review the bank's lending practices in accordance with the applicable state laws in the following areas, which prescribe limits on aggregate advances to a single borrower and related borrowers:

Transactions with affiliates. All transactions with affiliates should be on terms and conditions that are consistent with safe and sound banking practices. The bank is expected to comply with the limits and collateral requirements of sections 23A and 23B of the Federal Reserve Act (12 USC 371c and 371c-1) and Regulation W (12 CFR 223).

Tie-in provisions. Section 106 of the Bank Holding Company Act Amendments of 1970

states that a bank is prohibited from fixing or varying the consideration for extending credit, leasing or selling property of any kind, or furnishing any product or service on the condition or requirement that a customer—

- obtain additional credit, property, or service from the bank, other than a loan, discount, deposit, or trust service (a “traditional bank product”);
- obtain additional credit, property, or service from the bank's parent holding company or the parent's other subsidiaries;
- provide additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
- provide additional credit, property, or service to the bank's parent holding company or any of the parent's other subsidiaries; or
- not obtain other credit, property, or service from the competitors of the bank, the bank's parent holding company, or the parent's other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.

See the statutory exceptions in section 106(b) of the Bank Holding Company Act Amendments and the exceptions in the Federal Reserve's Regulation Y (12 CFR 225.7).

Insider lending activities. Loans to insiders should not contain more-favorable terms than those afforded to other borrowers nor should these loans pose a more-than-normal risk of repayment. The bank is expected to maintain adequate loan documentation of insider loans showing that proper approval for the loan was obtained. Such loans should comply with the Federal Reserve's Regulation O, Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks (12 CFR 215, subpart A).

Loans to executives, officers, directors, and principal shareholders of correspondent banks. There should be no preferential treatment on loans to insiders of correspondent banks nor should there be the appearance of a conflict of interest. The bank should comply with title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA)

(12 USC 1972(2)). (See also 12 CFR 215, subpart B.)

Appraisals and evaluations. Banks should obtain an appraisal or evaluation for all real estate-related financial transactions before making the final credit decision in conformance with title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) (12 USC 3310, 3331–3351) and the Federal Reserve’s Regulation H, Membership of State Banking Institutions in the Federal Reserve System (12 CFR 208), as set forth in subpart G of Regulation Y (12 CFR 225). The Federal Reserve’s appraisal and evalu-

ation requirements are separately discussed in section 4140.1, “Real Estate Appraisals and Evaluations.”

Consumer compliance. The bank’s residential lending program should ensure that the loan applicant is adequately informed of the annual interest rate, finance charges, amount financed, total payments, and repayment schedule as mandated in the Federal Reserve’s Regulation Z, Truth in Lending (12 CFR 226). The bank’s process for taking, evaluating, and accepting or rejecting a credit application is subject to the Federal Reserve’s Regulation B, Equal Credit Opportunity (12 CFR 202).

Real Estate Loans

Examination Objectives

Effective date November 2005

Section 2090.2

1. To determine if policies, practices, procedures, and internal controls for real estate loans are adequate to identify and manage the risks the bank is exposed to.
 2. To ascertain if the institution has implemented risk-management programs that identify, measure, monitor, and control the inherent risks involved in real estate lending.
 3. To determine if bank officers and staff are operating in conformance with the bank's established guidelines.
 4. To evaluate the portfolio for collateral sufficiency, performance, credit quality, and collectibility.
 5. To determine compliance with applicable laws and regulations.
 6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.
- and regulations that are applicable to the organization.
 3. To determine if the financial institution has given full recognition to the risks embedded in its home equity lending.
 4. To determine whether the financial institution's risk-management practices have kept pace with the growth and changing risk profile of its home equity portfolios and whether underwriting standards have eased.
 5. To determine whether the financial institution's loan policy—
 - a. ensures prudent underwriting standards for home equity lending, including standards to ensure that a thorough evaluation of a borrower's capacity to service the debt is conducted (that is, the institution is not relying solely on the borrower's credit score);
 - b. provides risk-management safeguards for potential declines in home values;
 - c. ensures that the standards for interest-only and variable-rate home equity lines of credit (HELOCs) include an assessment of a borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates; and
 - d. provides appropriate collateral-valuation policies and procedures and provides for the use and validation of automated valuation models.

Home Equity Lending

1. To determine if the financial institution has an appropriate review and approval process for new product offerings, product changes, and marketing initiatives.
2. To ascertain whether the financial institution has appropriate control procedures for third parties that generate loans on its behalf and if the control procedures comply with the laws

Real Estate Loans

Examination Procedures

Effective date November 2005

Section 2090.3

1. Determine the scope of the examination, based on the evaluation of internal controls and the work performed by internal or external auditors.
2. Review the board of directors minutes to ensure that real estate loan policies are reviewed and approved at least annually.
3. Test real estate loans for compliance with policies, practices, and procedures by performing the remaining examination procedures in this section. Obtain a listing of any deficiencies noted in the latest internal or external audit report, and determine if appropriate corrections have been made. Additionally, obtain a list of personnel changes. Determine if these changes are significant enough to influence the scope of the examination.
4. Obtain a trial balance and delinquency listing for all real estate loans.
 - a. Reconcile the real estate department's trial balance totals to the bank's general ledger accounts.
 - b. Review reconciling items for reasonableness.
 - c. Obtain information (for example, paid-to dates, last date paid, and date of nonaccrual status) on past-due loans and loans on nonaccrual status.
5. Evaluate the bank with respect to—
 - a. the adequacy of written policies and procedures relating to real estate loans;
 - b. the operating compliance with established bank policy;
 - c. favorable or adverse trends in the overall real estate lending activity;
 - d. the accuracy and completeness of the bank's records;
 - e. the adequacy of internal controls;
 - f. adherence to lending policies, procedures, and authority by all appropriate personnel;
 - g. compliance with laws, regulations, and Federal Reserve policy on real estate lending activity, including lending limits and restrictions; loans to officers, directors, and shareholders; appraisal and evaluation of real estate collateral; and lending practices;
 - h. compliance with the Interagency Guidelines for Real Estate Lending Policies, including whether the bank is adequately documenting exceptions to supervisory loan-to-value (LTV) limits, whether the volume of nonconforming loans exceeds the capital limitations, and whether risk-management programs have been established and maintained to identify, measure, monitor, and control the inherent risks associated with high-LTV lending;
6. Select loans for examination, using an appropriate sampling technique drawn from judgmental (cutoff-amount approach) or statistical sampling. Analyze the performance of the loans selected for review by transcribing the appropriate information from the following list onto the real estate loan line cards, when applicable:
 - a. collateral records and credit files
 - b. loan agreements relative to any purchases, transfers, participations, or sales that have been entered into since the last examination
 - c. loan commitments and other contingent liabilities
 - d. loan-modification agreements or restructuring terms to identify a reduction in interest rate or principal payments, deferral of interest or principal payments, or other restructurings of terms
 - e. past-due/nonaccrual-related information
 - f. loan-specific internal information from problem credit analyses
 - g. escrow-analysis reports, including the status of property tax payments and escrow advances by the bank to cover delinquent property taxes
 - h. the status of mortgage insurance claims either for government insurance or guarantee programs or for private mortgage insurance, including procedures for ensuring coverage and reporting procedures for filing claims and contested claims, if any

- i. loans to insiders and their interests
7. In analyzing the selected real estate loans, consider the following procedures, taking appropriate action if necessary:
 - a. Determine the primary source of repayment and evaluate its adequacy.
 - b. Assess the quality of any secondary collateral afforded by the loan guarantors or partners.
 - c. Compare collateral values with outstanding debt. Determine whether the loan's LTV ratio is in excess of the supervisory LTV limits. If so, ascertain whether the loan has been properly reported as a nonconforming loan.
 - d. Assess the adequacy of the appraisal or evaluation.
 - e. Ascertain whether the loan complies with established bank policy.
 - f. Identify any deficiencies in the loan's documentation in the credit files, the collateral records, or both.
 - g. Identify whether the loan is to an officer, a director, or a shareholder of the bank or to a correspondent bank. Determine whether an officer, a director, or a shareholder of the bank is a guarantor on the loan.
 - h. Review the borrower's compliance with provisions of the loan agreement. Review the borrower's payment performance, indicating whether the loan is past due.
 - i. Determine if there are any problems that may jeopardize the repayment of the real estate loan.
 - j. Determine whether the loan was classified during the preceding examination, and, if the loan has been paid off, whether all or part of the funds for repayment came from another loan at the bank, from a participation or sale with another institution, or from the repossession of the property.
 - k. Identify whether the loan is to a firm or to individuals who are principals of a firm that provided professional services to the bank, including attorneys, accountants, and appraisers. If so, determine if the loan has received preferential treatment.
8. For loan participations, either in whole or in part, to or with another lending institution, review, if applicable—
 - a. participation certificates and agreements, on a test basis, to determine if the contractual terms are being adhered to;
 - b. loan documentation to see if it meets the bank's underwriting procedures (that is, the documentation for loan participations should meet the same standards as the documentation for loans the bank originates);
 - c. the transfer of loans immediately before the date of the examination to determine if the loan was either nonperforming or classified and if the transfer was made to avoid possible criticism during the current examination; and
 - d. losses to determine if such losses are shared on a pro rata basis.
9. For participations between an institution that has a different primary regulator and loans in the Shared National Credit program—
 - a. identify loans to be included in the Shared National Credit review;
 - b. inform the Reserve Bank of any criticized participation loans that were not covered by the Shared National Credit program and in which the participant(s) had a different primary regulator; and
 - c. inform the Reserve Bank of those loans eligible for the Shared National Credit program that were not previously reviewed.
10. In connection with the examination of other lending activity in the bank—
 - a. check the central liability file on the borrower(s) and determine whether the total indebtedness of the borrower exceeds the lending limit to a single borrower; and
 - b. obtain information and related performance status on common borrowers and their interests from examiners assigned to other examination areas (such as non-real estate loans, leasing, overdrafts, and cash items). Determine the total indebtedness of these borrowers to the bank. Additionally, one examiner should be assigned to review the borrower's overall borrowing relationship with the bank.
11. Consult with the examiner responsible for the asset-liability management analysis portion of the examination to determine the appropriate maturity breakdown of real estate loans needed for the analysis. Prepare the necessary schedules.
12. Summarize the findings of the real estate

loan portfolio review and address the following:

- a. the scope of the examination
- b. the quality of the policies, procedures, and controls
- c. the general level of adherence to policies and procedures
- d. the competency of management and loan officers, including the identification of individuals with an excessively high level of problem loans or documentation exceptions
- e. the quality of the loan portfolio
- f. loans not supported by current and complete financial information
- g. loans with incomplete documentation, addressing deficiencies related to items such as appraisals or evaluations, title policy, proof of insurance, deeds of trust, and mortgage notes
- h. loans to officers, directors, shareholders, or their interests
- i. causes of existing problems
- j. delinquent loans and the aggregate amount of statutory bad debts. (See section 2060.1, "Classification of Credits.")
- k. concentrations of credits
 - l. classified loans
- m. violations of laws, regulations, and Federal Reserve policy
- n. action taken by management to correct previously noted deficiencies, and corrective actions recommended to management at this examination, with the bank's response to them

Home Equity Lending

1. Review the credit policies for home equity lending to determine if the underwriting standards address all relevant risk factors (that is, an analysis of a borrower's income and debt levels, credit score, and credit history versus the loan's size, the collateral value (including valuation methodology), the lien position, and the property type and location).
2. Determine whether the financial institution's underwriting standards include—
 - a. a properly documented evaluation of the borrower's financial capacity to adequately service the debt;
 - b. an adequately documented evaluation of

the borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates for interest-only and variable-rate home equity lines of credit (HELOCs).

3. Assess the reasonableness and adequacy of the analyses and methodologies underlying the financial institution's evaluation of borrowers.
4. If the financial institution uses third parties to originate home equity loans, find out—
 - a. if the institution delegates the underwriting function to a broker or correspondent;
 - b. if the institution's internal controls for delegated underwriting are adequate;
 - c. whether the institution retains appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function;
 - d. if there are adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the institution's prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations;
 - e. if the institution has a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of loans that the third party underwrites; and
 - f. whether the institution has adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.
5. Evaluate the adequacy of the financial institution's collateral-valuation policies and procedures. Ascertain whether the institution—
 - a. establishes criteria for determining the appropriate valuation methodology for a particular transaction (based on the risk in the transaction and loan portfolio);
 - b. sets criteria for determining when a physi-

- cal inspection of the collateral is necessary;
- c. ensures that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation;
 - d. implements policies and controls to preclude “value shopping”; and
 - e. requires sufficient documentation to support the collateral valuation in the appraisal or evaluation.
6. If the financial institution uses automated valuation models (AVMs) to support evaluations or appraisals, find out if the institution—
 - a. implements policies and controls to preclude “value shopping” in its use of AVMs;
 - b. periodically validates the models, to mitigate the potential valuation uncertainty in the model;
 - c. adequately documents the validation’s analysis, assumptions, and conclusions;
 - d. back-tests a representative sample of evaluations and appraisals supporting loans outstanding; and
 - e. evaluates the reasonableness and adequacy of its procedures for validating AVMs.
 7. If tax-assessment valuations are used as a basis for collateral valuation, ascertain whether the financial institution is able to demonstrate and document the correlation between the assessment value of the taxing authority and the property’s market value, as part of the validation process.
 8. Review the risk- and account-management procedures. Verify that the procedures are appropriate for the size of the financial institution’s loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the institution.
 9. If the financial institution has large home equity loan portfolios or portfolios with high-risk characteristics, determine if the institution—
 - a. periodically refreshes credit-risk scores on all customers;
 - b. uses behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
 - c. periodically assesses utilization rates;
 - d. periodically assesses payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current;
 - e. monitors home values by geographic area; and
 - f. obtains updated information on the collateral’s value when significant market factors indicate a potential decline in home values, or when the borrower’s payment performance deteriorates and greater reliance is placed on the collateral.
- Determine if the frequency of the above actions is commensurate with the risk in the portfolio.
10. Verify that annual credit reviews of HELOC accounts are conducted. Verify if the reviews of HELOC accounts determine whether the line of credit should be continued, based on the borrower’s current financial condition.
 11. Determine that authorizations of over-limit home equity lines of credit are restricted and subject to appropriate policies and controls.
 - a. Verify that the financial institution requires over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits.
 - b. Evaluate the sufficiency of management information systems (MIS) that enable management to identify, measure, monitor, and control the risks associated with over-limit accounts.
 12. Verify that the financial institution’s real estate lending policies are consistent with safe and sound banking practices and that its board of directors reviews and approves the policies at least annually.
 13. Determine whether the MIS—
 - a. allows for the segmentation of the loan portfolios;
 - b. accurately assesses key risk characteristics; and
 - c. provides management with sufficient information to identify, monitor, measure, and control home equity concentrations.
 14. Determine whether management periodically assesses the adequacy of its MIS, in light of growth and changes in the financial institution’s risk appetite.
 15. If the financial institution has significant concentrations of HELs or HELOCs, determine if the MIS includes, at a minimum, reports and analysis of the following:
 - a. production and portfolio trends by prod-

- uct, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type
- b. the delinquency and loss-distribution trends by product and originator channel, with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
 - c. vintage tracking
 - d. the performance of third-party originators (brokers and correspondents)
 - e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values.
16. Determine whether the financial institution accurately tracks the volume of high-LTV (HLTV) loans, including HLTV home equity and residential mortgages, and if the financial institution reports the aggregate of these loans to its board of directors.
 17. Determine whether loans in excess of the supervisory LTV limits are identified as high-LTV loans in the financial institution's records. Determine whether the institution reports, on a quarterly basis, the dollar value of such loans to its board of directors.
 18. Find out whether the financial institution has purchased insurance products to help mitigate the credit risks of its HLTV residential loans. If a policy has a coverage limit, determine whether the coverage may be exhausted before all loans in the pool mature or pay off.
 19. Determine whether the financial institution's credit risk-management function oversees the support function(s). Evaluate the effectiveness of controls and procedures over staff who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes.
 20. Determine whether policies and procedures have been established for home equity problem-loan workouts and loss-mitigation strategies.
 21. Summarize the findings of the home equity loan portfolio review.

Real Estate Loans

Internal Control Questionnaire

Effective date November 2005

Section 2090.4

Review the bank's internal controls, policies, practices, and procedures for making and servicing real estate loans. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

LOAN POLICIES

1. Has the board of directors and management, consistent with their duties and responsibilities, adopted and, at least annually, reviewed and approved written real estate loan policies that define—
 - a. the institution's target market?
 - b. loan portfolio diversification standards?
 - c. acceptable collateral types?
 - d. prudent, clear, and measurable underwriting standards, including relevant credit factors such as—
 - maximum loan amount by type of property?
 - maximum loan maturity by type of property?
 - repayment terms?
 - pricing structure for each type of real estate loan?
 - loan-to-value (LTV) limits by type of property?
 - e. procedures for reviewing real estate loan applications?
 - f. loan-origination and -approval procedures (including loan-authority limits) by size and type of loan?
 - g. review and approval procedures for exception loans?
 - h. loan-administration procedures that include documentation, disbursement, collateral inspection, collection, and loan review?
 - i. minimum loan-documentation standards, such as minimum frequency and
- type of financial information required for each category of real estate loan?
- j. LTV limits that are consistent with regulatory supervisory limits?
 - k. real estate appraisal and evaluation programs consistent with the Federal Reserve's appraisal regulation, guidelines, and the October 27, 2003, inter-agency statement on Independent Appraisal and Evaluation Functions (see SR-03-18)?
 - l. reporting requirements to the board of directors relative to loan portfolio monitoring, including items such as compliance with lending policies and procedures, delinquency trends, and problem loans?
2. Are real estate policies and objectives appropriate to the size and sophistication of the bank, and are they compatible with changing market conditions?

LOAN RECORDS

- *1. Are the preparation and posting of subsidiary real estate loan records performed or adequately reviewed by persons who do not also—
 - a. issue official checks and drafts?
 - b. handle cash receipts?
 - c. reconcile subsidiary records to general ledger controls?
- *2. Are the subsidiary real estate loan records reconciled at least monthly to the appropriate general ledger accounts? Are reconciling items adequately investigated by persons who do not also handle cash or prepare/post subsidiary controls?
3. Are loans in excess of supervisory LTV limits identified in the bank's records, and are the aggregate amounts of such loans reported at least quarterly to the board of directors, along with the experience of the high-LTV loan portfolio?
4. Are loan statements, delinquent-account-collection requests, and past-due notices reconciled to the real estate loan subsidiary records? Are the notices and reconciliations handled by persons who do not also handle cash?

5. Are inquiries about loan balances received and investigated by persons who do not also handle cash?
 - *6. Are documents supporting recorded credit adjustments subsequently checked or tested by persons who do not also handle cash?
 7. Does the bank maintain a daily record summarizing note-transaction details (loans made, payments received, and interest collected) to support applicable general ledger account entries?
 8. Are note and liability trial balances frequently reconciled to the general ledger by employees who do not process or record loan transactions?
 9. Are subsidiary payment records and files pertaining to serviced loans segregated and identifiable?
 10. Are past-due-loan reports generated daily?
- b. Does the bank use a check sheet to ensure that required documents are received and on file?
 - c. Are safeguards in effect to protect notes and other documents?
 - d. Does the bank obtain a signed application form for all real estate mortgage loan requests?
 - e. Are separate credit files maintained?
 - f. Is there a program of systematic follow-up to determine that all required documents are received after the loan closing and from public recording offices?
 - g. Does a designated employee conduct a review after loan closing to determine if all documents are properly drawn, executed, recorded, and filed within the loan files?
 - h. Are all notes and other instruments pertaining to paid-off loans returned promptly to the borrower, canceled, and marked paid, where appropriate?
 - i. Are charged-off notes and related files segregated and adequately controlled?

LOAN INTEREST AND COMMITMENT FEES

- *1. Are the preparation and posting of loan interest and fee records performed or adequately reviewed by persons who do not also—
 - a. issue official checks or drafts?
 - b. handle cash?
2. Are any independent interest and fee computations made and compared with or adequately tested to loan interest records by persons who do not also—
 - a. issue official checks or drafts?
 - b. handle cash?

LOAN ORIGINATION

1. Does the bank have a written schedule of fees, rates, terms, and types of collateral for all new loans?
2. Does the bank have a mortgage errors and omission policy?
3. Are procedures in effect to ensure compliance with the requirements of governmental agencies that insure or guarantee loans or with the requirements of private mortgage insurance companies?

PROCESSING AND DOCUMENT CONTROL

- *1. Are all real estate loan commitments issued in written form?
2. Are loan officers prohibited from processing loan payments?
- *3. Are loan payments received by mail recorded upon receipt independently before being sent to and processed by a note teller?
- *4. Regarding mortgage documents—
 - a. Has the responsibility for the document files been established?

ESCROW PROCESSING

1. Regarding insurance and property taxes coverage—
 - a. Is there a procedure for determining that private mortgage insurance premiums are current on insured loans?
 - b. Is there a procedure for determining that property and hazard insurance premiums are current on properties securing loans?
 - c. Does the bank require that the hazard insurance policies include a loss-payable

clause to the bank?

- d. Are escrow accounts reviewed at least annually to determine if monthly deposits will cover anticipated disbursements?
- e. Are disbursements for taxes and insurance supported by records showing the nature and purpose of the disbursement?
- f. If advance deposits for taxes and insurance are not required, does the bank have a system to determine that taxes and insurance are being paid?

LOAN ADMINISTRATION

- *1. Are approvals of real estate advances reviewed, before disbursement, to determine that such advances do not increase the borrower's total liability to an amount in excess of the bank's legal lending limit?
2. Are detailed statements of account balances and activity mailed to mortgagors at least annually?

COLLECTIONS AND FORECLOSURES

1. Does the bank have adequate collection procedures to monitor delinquencies and, as necessary, have procedures to pursue foreclosure?
2. Are properties under foreclosure proceedings segregated?
3. Are properties to which the bank has obtained title appropriately transferred to other real estate owned (OREO)? See "Other Real Estate Owned," section 2200.1, for requirements.
4. Does the bank have an adequate management and sales disposition program for timely liquidation of OREO? Does the program take into account the maximum retention period for OREO allowed under state law?
5. Does the bank have adequate procedures for filing and monitoring its mortgage insurance claims for government-insured or -secured programs and for private mortgage insurance?

HOME EQUITY LENDING

Policies

1. Do the credit policies for home equity lending address the underwriting standards for all relevant risk factors, such as—
 - a. an analysis of a borrower's income and debt levels?
 - b. an analysis of a borrower's credit score and credit history versus the loan's size?
 - c. the collateral value (including valuation methodology)?
 - d. the lien position?
 - e. the property type and location?
2. Are the financial institution's risk- and account-management procedures appropriate for the size of the institution's loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the institution?
3. Does the financial institution have reasonable and adequate policies and procedures for home equity problem-loan workouts and loss-mitigation strategies?

Underwriting

4. Has the financial institution purchased insurance products to mitigate the credit risks of its high-LTV (HLTV) residential loans?
 - a. If so, do any of those insurance policies have a coverage limit?
 - b. Has the institution conducted reasonable and adequate analyses to determine whether the coverage may be exhausted before all loans in the pool covered by the insurance product mature or pay off?
5. Does the financial institution's credit-risk management function oversee the support function(s) for its real estate lending? Does the institution have effective controls and procedures over staff who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes?
6. Do the financial institution's underwriting standards include—
 - a. a properly documented evaluation of the borrower's financial capacity to

- adequately service the debt?
- b. an adequately documented evaluation of the borrower's ability to—
 - amortize the fully drawn line of credit over the loan term?
 - absorb potential increases in interest rates for interest-only and variable-rate home equity lines of credit (HELOCs)?
7. Are the analyses and methodologies underlying the institution's evaluation of borrowers reasonable and adequate?
 8. Does the financial institution use third parties to originate home equity loans? If so, does the institution—
 - a. delegate the underwriting function to a broker or correspondent?
 - b. have adequate internal controls for its delegated underwriting?
 - c. retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function?
 - d. have adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the institution's prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations?
 - e. have a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of loans that the third party underwrites?
 - f. have adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications and are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions?
 10. Does the financial institution use automated valuation models (AVMs) to support evaluations or appraisals? If so, does the institution—
 - a. periodically validate the models, to mitigate the potential valuation uncertainty in the model?
 - b. adequately document the validation's analysis, assumptions, and conclusions?
 - c. implement controls to preclude "value shopping" in its use of AVMs?
 - d. back-test a representative sample of evaluations and appraisals supporting loans outstanding?
 - e. evaluate the reasonableness and adequacy of its procedures for validating AVMs?
 11. Are tax-assessment valuations used as a basis for collateral valuation? If so, is the financial institution able to demonstrate and document the correlation between the assessment value of the taxing authority and the property's market value, as part of the validation process?

Risk Concentrations

12. Does the financial institution have large home equity loan portfolios or portfolios with high-risk characteristics? If so, does the institution—
 - a. periodically refresh credit-risk scores on all customers?
 - b. use behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts?
 - c. periodically assess utilization rates?

Collateral Valuation

9. Does the financial institution have adequate collateral-valuation policies and procedures that—
 - a. establish criteria for determining the

- d. periodically assess payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current?
- e. monitor home values by geographic area?
- f. obtain updated information on the collateral's value when significant market factors indicate a potential decline in home values, or when the borrower's payment performance deteriorates and greater reliance is placed on the collateral?

Are the frequency of these actions commensurate with the risk in the portfolio?

Management Information Systems

- 13. Are the financial institution's real estate lending policies consistent with safe and sound banking practices, and does its board of directors review and approve the policies at least annually?
- 14. Do the financial institution's management information systems (MIS) for real estate lending—
 - a. allow for the segmentation of the loan portfolios?
 - b. accurately assess key risk characteristics?
 - c. provide management with sufficient information to identify, monitor, measure, and control home equity concentrations?
- 15. Does the financial institution's management periodically assess the adequacy of its MIS, in light of growth and changes in the institution's risk appetite?
- 16. Does the financial institution have significant concentrations of HELs or HELOCs? If so, does the MIS include, at a minimum, reports and analysis of—
 - a. production and portfolio trends by product, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type?
 - b. the delinquency and loss-distribution trends, by product and originator channel, with some accompanying analysis of significant underwriting characteris-

tics (such as credit score, LTV, or DTI)?

- c. vintage tracking?
 - d. the performance of third-party originators (brokers and correspondents)?
 - e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values?
17. Do the financial institution's records identify loans in excess of the supervisory LTV limits as high-LTV (HLTV) loans? Is the aggregate dollar value of such loans reported quarterly to the institution's board of directors? Does the volume of HLTV loans exceed 100 percent of the institution's capital?

Internal Loan Review

- 18. Does the financial institution conduct annual credit reviews of HELOC accounts? Does the review of HELOC accounts determine whether the line of credit should be continued, based on the borrower's current financial condition?
- 19. Are the financial institution's authorizations of over-limit home equity lines of credit restricted? Are they subject to appropriate policies and controls?
 - a. Does the institution require over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits?
 - b. Is MIS sufficient to enable management to identify, measure, monitor, and control the risks associated with over-limit accounts?

CONCLUSION

- 1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
- 2. On the basis of a composite evaluation, are internal controls adequate, as evidenced by answers to the foregoing questions?

A construction loan is used to finance the construction of a particular project within a specified period of time and is funded by supervised disbursements of a predetermined amount over the construction period. When properly controlled, a bank can promote commercial or residential development through its construction lending as well as receive significant profits over a relatively short time frame. However, the higher rate of return demanded by construction lenders is indicative of the higher risks assumed.

Inasmuch as construction lending is a form of interim financing, loan repayment is contingent on whether the borrower either obtains permanent financing or finds a buyer with sufficient funds to purchase the completed project. Because many borrowers anticipate retaining ownership after construction, the cost and availability of funds from permanent financing is a primary factor to be considered by the bank in assessing the risk of a construction loan.

A construction loan is generally secured by a first mortgage or deed of trust on the land and improvements, which is often backed by a purchase agreement from a financially sound investor or by a takeout financing agreement from a responsible permanent lender. A long-term mortgage loan (permanent financing) is typically obtained before or simultaneously with the construction loan and is made to refinance the short-term construction loan. Additionally, the bank may require a borrower to provide secondary collateral in the form of a junior interest in another real estate project or a personal guarantee.

BANK LENDING POLICY

Banks can limit the risk inherent in construction lending by establishing policies that specify the type and extent of bank involvement. The bank's lending policies should reflect prudent lending standards and set forth pricing guidelines, limits on loan-to-value ratios and debt-coverage ratios, and yield requirements. Such policies should also address procedures relative to controlling disbursements in a manner that is commensurate with the progress of construction.

Lending Limits

A bank should have established and well-controlled construction lending limits that are within the acceptable standards of state banking regulations. State banking statutes governing construction lending may contain minimum standards of prudence without specifying actual loan terms.

The bank's internal limits should not exceed the supervisory loan-to-value (LTV) limits set forth in the Interagency Guidelines for Real Estate Lending Policies, as required by the Federal Deposit Insurance Corporation Improvement Act of 1991 (12 USC 1828(c)) and included as appendix C of the Federal Reserve's Regulation H. These guidelines and the accompanying LTV limits are discussed in "Real Estate Loans," section 2090.1. Generally, the LTV ratio should not exceed the following supervisory limits:

- 65 percent for raw-land loans
- 75 percent for land-development and improved-land loans
- 80 percent for commercial, multifamily, and other nonresidential construction loans
- 85 percent for one- to four-family residential construction loans

For loans that fund multiple phases of the same real estate project, the appropriate LTV limit is the supervisory LTV limit applicable to the final phase of the project.

Lending Risks

Construction loans are vulnerable to a wide variety of risks. Critical to the evaluation of any construction loan is the analysis of the project's feasibility study to ascertain the developer's risk, which affects the lender's risk. The major portion of the risk is attributable to the need to complete a project within specified cost and time limits. Examples of difficulties that may arise include—

- completion of a project after takeout dates, which voids permanent funding commitments;

- cost overruns, which may exceed takeout commitments or sale prices;
- the possibility that the completed project will be an economic failure;
- the diversion of progress payments, resulting in nonpayment of material bills or subcontractors;
- a financial collapse or the failure of the contractors, subcontractors, or suppliers to perform before the completion date;
- increased material or labor costs;
- the destruction of improvements from unexpected natural causes; and
- an improper or lax monitoring of funds advanced by the bank.

TYPES OF CONSTRUCTION LOANS

The basic types of construction lending are unsecured front-money, land-development, residential construction, and commercial construction loans. It is not uncommon for a bank to provide the acquisition, development, and construction loans for a particular project.

Unsecured Front-Money Loans

Front-money loans are considered very risky and should not be undertaken unless the bank has the expertise to evaluate the credit risk. These loans may represent working-capital advances to a borrower who may be engaged in a new and unproven venture. The funds may be used to acquire or develop a building site, eliminate title impediments, pay architect or standby fees, and meet minimum working-capital requirements established by construction lenders. Because repayment often comes from the first draw against construction financing, many construction loan agreements prohibit the use of the first advance to repay nonconstruction costs. Unsecured front-money loans used as a developer's equity investment in a project or to cover initial cost overruns are symptomatic of an undercapitalized or possibly an inexperienced or inept builder.

Land-Development Loans

Land-development or off-site-improvement loans are intended to be secured-purchase loans or

unsecured advances to creditworthy borrowers. A development loan involves the purchase of land and lot development in anticipation of further construction or sale of the property. In addition to funding the acquisition of the land, a development loan may be used to fund the preparation of the land for future construction, including the grading of land, installation of utilities, and construction of streets.

Effective administration of a land-development loan begins with a plan defining each step of the development. The development plan should incorporate cost budgets, including legal expenses for building and zoning permits, environmental impact statements, costs of installing utilities, and all other projected costs of the development. Bank management's review of the plan and related cost breakdowns should provide the basis for determining the size, terms, and restrictions for the development loan. Refer to the subsection below on the assessment of real estate collateral for further discussion.

The LTV ratio should provide for sufficient margin to protect the bank from unforeseen events (such as unplanned expenses) that would otherwise jeopardize the bank's collateral position or repayment prospects. If the loan involves the periodic development and sale of portions of the property under lien, each separately identifiable section of the project should be independently appraised, and any collateral should be released in a manner that maintains a reasonable margin. The repayment program should be structured to follow the sales or development program. Control over development loans can be best established when the bank finances both the development and the construction or sale phases of the project.

In the case of an unsecured land-development loan, it is essential to analyze the borrower's financial statements to determine the source of loan repayment. In establishing the repayment program, the bank should review sales projections to ensure that they are not overly optimistic. Additionally, banks should avoid granting loans to illiquid borrowers or guarantors who provide the primary support for a borrower (project).

Residential Construction Loans

Residential construction loans are made either on a speculative basis, where homes are built to

be sold later in the general market, or for a specific buyer with prearranged permanent financing. Loans financing residential projects that do not have prearranged homebuyer financing are usually limited to a predetermined number of speculative homes, which are permitted to get the project started. However, smaller banks are often engaged in this type of financing, and the aggregate total of individual speculative construction loans may equal a significant portion of their capital funds. It is important to ensure that the homebuyer has arranged permanent financing before the bank finances the construction; otherwise, the bank may find itself without a source of repayment. Construction loans without takeout commitments generally should be aggregated to determine whether a concentration of credit exists, that is, in those situations when the amount exceeds 25 percent of the bank's capital structure (tier 1 capital plus loan loss reserves).

Proposals to finance speculative construction should be evaluated according to predetermined policies that are compatible with the institution's size, the technical competence of its management, and the housing needs of its service area. The prospective borrower's reputation, experience, and financial condition should also be reviewed to assess the likelihood of completing the proposed project. Until the project is completed, the actual value of the real estate is questionable. Thus, the marketability of the project should be substantiated in a feasibility study, reflecting a realistic assessment of current favorable and unfavorable local housing market conditions. As in any real estate loan, the bank must also obtain an appraisal or evaluation for the project. The appraisal or evaluation and the feasibility study are important tools to be used by lenders in evaluating project risks. For projects located out of area, the lender may lack market expertise, which makes evaluating the reasonableness of the marketing plan and feasibility study more difficult, and therefore makes the loan inherently riskier.

A bank dealing with speculative builders should have control procedures tailored to the individual project. A predetermined limit on the number of unsold units to be financed at any one time should be included in the loan agreement to avoid overextending the builder's capacity. The construction lender should receive current inspection reports indicating the project's progress. In some instances, the construction lender is also the permanent mortgagor. Loans on larger resi-

dential construction projects are usually negotiated with prearranged permanent financing as part of the construction loan.

Commercial Construction Loans

A bank's commercial construction lending activity can encompass a wide range of projects—apartments, condominiums, office buildings, shopping centers, and hotels—with each requiring a special set of skills and expertise to successfully manage, construct, and market.

Commercial construction loan agreements should normally require the borrower to have a precommitted extended-term loan to “take out” the construction lender. Takeout-financing agreements, however, are usually voidable if construction is not completed by the final funding date, if the project does not receive occupancy permits, or if the preleasing or occupancy rate does not meet an agreed-upon level. A bank can also enter into an open-end construction loan where there is no precommitted source to repay the construction loan. Such loans pose an added risk because the bank may be forced into providing permanent financing, oftentimes in distressed situations. In evaluating this risk, the bank should consider whether the completed project will be able to attract extended-term financing, supportable by the projected net operating income.

The risk of commercial construction requires a complete assessment of the real estate collateral, borrower's financial resources, source of the extended-term financing, and construction plans. As it does any real estate loan, the bank must obtain an appraisal or evaluation of the real estate in accordance with the Federal Reserve's appraisal regulation. Additionally, the borrower should provide a feasibility study for the project that details the project's marketing plan, as well as an analysis of the supply-and-demand factors affecting the projected absorption rate. For an open-end construction loan, the feasibility study is particularly important to the bank's assessment of the credit because the repayment of the loan becomes increasingly dependent on the sales program or leasing of the project.

The bank also needs to assess the borrower's development expertise, that is, whether the borrower can complete the project within budget and according to the construction plans. The financial risk of the project is contingent on the

borrower's development expertise because the source of the extended-term loan may be predicated upon a set date for project completion. Until the project is completed, the actual value of the real estate is questionable.

A bank may reduce its financial risk by funding the construction loan after the borrower has funded its share of the project equity (for example, by paying for the feasibility study and land-acquisition and -development costs). An alternative approach would require the borrower to inject its own funds into the project at agreed-upon intervals during the project's management, construction, and marketing phases to coincide with the construction lender's contributions. In larger projects, equity injections can be provided by equity partners or joint ventures. These can take the form of equity syndications,¹ whose contributions are injected in the project in phases. A bank should assess the likelihood of the syndication being able to raise the necessary equity.

BANK ASSESSMENT OF THE BORROWER

The term *borrower* can refer to different types of entities. These forms can range from an entity whose sole asset is the project being financed to an entity that has other assets available to support the debt in addition to the project being financed (a multi-asset entity).

Although the value of the real estate collateral is an important component of the loan approval process, the bank should not place undue reliance on the collateral value in lieu of an adequate analysis of the borrower's ability to repay the loan. The analytical factors differ depending on the purpose of the loan, such as residential construction versus the various types of commercial construction loans.

The bank's analysis is contained in its documentation files, which should include background information on the borrower and partner/guarantor concerning their character and credit

history, expertise, and financial statements (preferably audited) for the most recent fiscal years. Background information regarding a borrower's and partner's/guarantor's character and credit history is based upon their work experience and previous repayment practices, both relative to trade creditors and financial institutions. The documentation files should indicate whether the borrower has demonstrated it can successfully complete the type of project to be undertaken. The financial statements should be analyzed to ensure that the loan can be repaid in the event that a takeout does not occur.

The degree of analysis depends on whether the borrower is in reality a single-asset entity or a multi-asset entity. A loan to a single-asset entity is often predicated upon the strength of the partners/guarantors. Accordingly, understanding their financial strength, which frequently is made up of various partnership interests, is key to assessing the project's strength. In this example, it would be necessary to obtain financial information on the partner's/guarantor's other projects, even those not financed by the bank, to understand their overall financial condition. This is necessary because other unsuccessful projects may cause financial trouble for the partner/guarantor, despite a successful sales program by the bank's borrower. Issues to be considered, in addition to those raised in the preceding paragraph, include the vacancy rates of the various projects, break-even points, and rent rolls.

A loan to a multi-asset entity has similar characteristics to those found in the single-asset entity, in that it is necessary to evaluate all of the assets contained therein to ascertain the actual financial strength. In both cases, assessment of the project under construction would include pre-leasing requirements. For a loan with a takeout commitment, the financial strength and reputation of the permanent lender should be analyzed. For a loan without a takeout commitment, or one in which the construction lender provides the permanent financing for its construction loan, the long-term risks also need to be evaluated. See the "Real Estate Loans" section in this manual, on the bank's assessment of the borrower, for additional factors to be considered.

In instances where approval for the loan is predicated upon the strength of entities other than the borrower (partner/guarantor), the bank should obtain information on their financial condition, income, liquidity, cash flow, contingent liabilities, and any other relevant factors

¹ *Syndication* generally refers to the act of bringing together a group of individuals or entities to invest in a real estate project and does not refer to any particular legal form of ownership. The legal form varies depending on the investors' investment objectives, division of tax benefits, responsibility for project management, and desire to limit personal liability. The investment vehicle may be a general partnership, limited partnership, joint venture, tenancy in common, corporation, real estate investment trust, or common law trust.

that exist to demonstrate their financial capacity to fulfill the obligation in the event that the borrower defaults.

Partners/guarantors generally have investments in other projects included as assets on their financial statements. The value of these investments frequently represents the partner's/guarantor's own estimate of the investment's worth, as opposed to a value based upon the investment's financial statements. As a result, it is necessary to obtain detailed financial statements for each investment to understand the partner's/guarantor's complete financial picture and capacity to support the loan. The statements should include detailed current and accurate cash-flow information since cash flow is often the source of repayment.

It is also important to consider the number and amount of the guarantees currently extended by a partner/guarantor to determine if they have the financial capacity to fulfill the contingent claims that exist. Furthermore, the bank should review the prior performance of the partner/guarantor to voluntarily honor the guarantee as well as the marketability of the assets collateralizing the guarantee. Since the guarantee can be limited to development and construction phases of a project, the bank should closely monitor the project before issuing a release to the partner/guarantor.

BANK ASSESSMENT OF REAL ESTATE COLLATERAL

Banks should obtain an appraisal or evaluation, as appropriate, for all real estate-related financial transactions before making the final credit or other decision. See "Real Estate Appraisals and Evaluations," section 4140.1, for a description of the related requirements a bank must follow for real estate-related financial transactions. The appraisal section explains the standards for appraisals, indicates which transactions require an appraisal or an evaluation, states qualifications for an appraiser and evaluator, provides guidance on evaluations, and describes the three appraisal approaches.

The appraisal or evaluation techniques used to value a proposed construction project are essentially the same as those used for other types of real estate. The aggregate principal amount of the loan should be based on an appraisal or evaluation that provides, at a mini-

um, the "as is" market value of the property.² Additionally, the bank will normally request the appraiser to report the "as completed" value.³ Projections should be accompanied by a feasibility study explaining the effect of projected property improvements on the market value of the land. The feasibility study may be a separate report or incorporated into the appraisal report. If the appraiser uses the feasibility study, the appraiser's acceptance or rejection of the study and its effect on the value should be fully explained in the appraisal. An institution's board of directors is responsible for reviewing and adopting policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program (the program) for all of its lending functions. The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units. Concerns about the independence of real estate appraisal and evaluation programs include the risk that improperly prepared appraisals and evaluations may undermine the integrity of credit-underwriting processes. More broadly, an institution's lending functions should not have undue influence that might compromise the program's independence. See the October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions (SR-03-18).

Management is responsible for reviewing the reasonableness of the appraisal's or evaluation's assumptions and conclusions. Also, management's rationale in accepting and relying upon the appraisal or evaluation should be in writing and made a part of loan documentation. In assessing the underwriting risks, management should reconsider any assumptions used by an appraiser that reflect overly optimistic or pessimistic values. If management, after its review of the appraisal or evaluation, determines that there

2. The "as is" value is the value of the property in its current physical condition and subject to the zoning in effect as of the date of appraisal.

3. The "as completed" value reflects the value of the land and the projected improvements. A bank may also request a value based on stabilized occupancy or a value based on the sum of retail sales. However, the sum of retail sales for a proposed development is not the market value of the development. For proposed residential developments that involve the sale of individual houses, units, or lots, the appraisal should reflect deductions and discounts for holding costs, marketing costs, and entrepreneurial profit. For proposed and rehabilitated income-producing properties, the appraisal should reflect appropriate deductions and discounts for leasing commissions, rent losses, and tenant improvements from the estimated value based on stabilized occupancy.

are unsubstantiated assumptions, the bank may request the appraiser or evaluator to provide a more detailed justification of the assumptions or a new appraisal or evaluation. The approval of the loan is based upon the value of the project after the construction is completed. Insofar as the value component of the loan-to-value ratio is concerned, it is important for the bank to closely monitor the project's progress (value) during the construction period. See "Real Estate Loans," section 2090.1, for additional information relative to the real estate collateral assessment.

LOAN DOCUMENTATION

The loan documentation should provide information on the essential details of the loan transaction, the security interest in the real estate collateral, and the takeout loan commitment, if any. The necessary documentation before the start of construction generally includes:

- Financial and background information on the borrower to substantiate the borrower's expertise and financial strength to complete the project.
- The construction loan agreement, which sets forth the rights and obligations of the lender and borrower, conditions for advancing funds, and events of default. In some states, the agreement must be cited in either the deed of trust or the mortgage.
- A recorded mortgage or deed of trust, which can be used to foreclose and obtain title to the collateral.
- A title insurance binder or policy, usually issued by a recognized title insurance company or, in some states, an attorney's opinion. The title should be updated with each advance of funds to provide additional collateral protection.
- Insurance policies and proof of payment as evidence that the builder has adequate and enforceable coverage for liability, fire and other hazards, and vandalism and malicious mischief losses.
- An appropriate appraisal or evaluation showing the value of the land and improvements to date or, possibly, a master appraisal based on specifications for a multiphase development.
- Project plans, a feasibility study, and a construction budget showing the development plans, project costs, marketing plans, and

equity contributions. A detailed cost breakdown of land, "hard" construction costs, and indirect or "soft" construction costs (such as construction loan interest; organizational and administration costs; and architectural, engineering, and legal fees) should be included.

- Property surveys, easements, an environmental impact report, and soil reports that indicate construction is feasible on the selected development site. The bank should also obtain the architect's certification of the plan's compliance with all applicable building codes and zoning, environmental protection, and other government regulations, as well as the engineer's report on compliance with building codes and standards. If internal expertise is not available, a bank may need to retain an independent construction expert to review these documents to assess the reasonableness and appropriateness of the construction plans and costs.
- The takeout commitment from the permanent lender, if applicable, and the terms of the loan. The bank should verify the financial strength of the permanent lender to fund the takeout commitment.
- A completion or performance bond signed by the borrower that guarantees the borrower will apply the loan proceeds to the project being financed.
- An owners' affidavit or a borrowing resolution empowering the borrower or its representative to enter into the loan agreement.
- Evidence that property taxes have been paid to date.

These documents furnish evidence that the lending officer is obtaining the information necessary for processing and servicing the loan and protect the bank in the event of default.

Documentation for Residential Construction Loans on Subdivisions

The documents mentioned above are usually available for residential construction loans on subdivisions (tracts). Documentation of tract loans frequently includes a master note in the gross amount of the entire project, and a master deed of trust covering all of the land involved in the project. In addition to an appraisal or evaluation for each type of house to be constructed, the bank should also obtain a master appraisal

including a feasibility study for the entire development. The feasibility study compares the projected demand for housing against the anticipated supply of housing in the market area of the proposed tract development. This analysis should indicate whether there will be sufficient demand for the developer's homes given the project's location, type of homes, and unit sales price.

Documentation for the Takeout Commitment

Most construction lenders require the developer to have an arrangement for permanent financing for each house to be constructed. Exceptions include model homes, typically one for each style of home offered, and a limited number

of housing starts ahead of sales (speculative houses). The starts ahead of sales, however, contain additional risk. If the bank finances too many houses without purchase contracts, and housing sales decline rapidly, it may have to foreclose on the unsold houses and sell them for less than their loan value. A takeout of this type is usually an arrangement between the developer and a permanent mortgage lender, but construction lenders may also finance the permanent mortgages.

The essential information required for a commercial real estate takeout to proceed includes the floor and ceiling rental rates and minimum occupancy requirements; details of the project being financed; expiration date; standby fee requirement; assignment of rents; and, generally, a requirement that the construction loan be fully disbursed and not in any way in default at the time settlement occurs.

The commitment agreement, referred to as the buy/sell contract or the tri-party agreement, is signed by the borrower, the construction lender, and the permanent lender. The purpose of this agreement is to permit the permanent lender to buy the loan directly from the construction lender upon completion of the construction, with the stipulation that all contingencies have been satisfied. Examples of contingencies include project completion by the required date, clear title to the property, and minimum lease-up requirements. A commitment agreement also protects the construction lender against unforeseen possibilities, such as the death of a principal, before the permanent loan documents are signed.

ADMINISTERING THE LOAN

The bank and the borrower⁴ must effectively cooperate as partners if controls relative to construction progress are to be maintained. The loan agreement specifies the performance of each party during the entire course of construction. Any changes in construction plans should be approved by both the construction lender and

4. The borrower may not be the entity responsible for the actual construction of the project. Depending on the size, type, and complexity of the project, the borrower may strictly be a developer who assembles the land, designs the project, and contracts with a construction company to handle the actual construction of the building. If this is the case, the bank should obtain financial and project history information on the builder/contractor.

the takeout lender. Construction changes can result in increased costs, which may not necessarily increase the sale value of the completed project. On the other hand, a decrease in costs may not indicate a savings but may suggest the use of lesser quality materials or workmanship, which could affect the marketability of the project.

Disbursement of Loan Funds

Loan funds are generally disbursed through either a stage payment plan or a progress payment plan. Regardless of the method of disbursement, the amount of each construction draw should be commensurate with the improvements made to date. Funds should not be advanced unless they are used in the project being financed and as stipulated in the draw request. Therefore, the construction lender must monitor the funds being disbursed and must be assured, at every stage of construction, that sufficient funds are available to complete the project.

Stage Payment Plan

The stage payment plan, which is normally applied to residential and smaller commercial construction loans, uses a preestablished schedule for fixed disbursements to the borrower at the end of each specified stage of construction. The amount of the draw is usually based upon the stage of development because residential housing projects normally consist of houses in various stages of construction. Nevertheless, loan agreements involving tract financing typically restrict further advances in the event of an accumulation of completed and unsold houses. Disbursements are made when construction has reached the agreed-upon stages, verified by an actual inspection of the property. These typically include advances at the conclusion of various stages of construction, such as the foundation, exterior framing, the roof, interior finishing, and completion of the house. The final payment is made after the legally stipulated lien period for mechanic's liens has lapsed.

Disbursement programs of this type are usually required for each house constructed within a tract development. As each house is completed and sold, the bank makes a partial release relative to that particular house covered by its

master deed of trust. The amount of the release is set forth in the loan agreement, which specifies the agreed-upon release price for each house sold with any excess over the net sales proceeds remitted to the borrower.

Progress Payment Plan

The progress payment plan is normally used for commercial projects.⁵ Under a progress payment system, funds are released as the borrower completes certain phases of construction as agreed upon in the loan agreement. Normally, the bank retains a percentage of the funds as a hold back (or retainage) to cover project cost overruns or outstanding bills from suppliers or subcontractors. Hold backs occur when a developer/contractor uses a number of subcontractors and maintains possession of a portion of the amounts owed to the subcontractors during the construction period. This is done to ensure that the subcontractors finish their work before receiving the final amount owed. Accordingly, the construction lender holds back the same funds from the developer/contractor to avert the risk of their misapplication or misappropriation.

The borrower presents a request for payment from the bank in the form of a “construction draw” request or “certification for payment,” which sets forth the funding request by construction phase and cost category for work that has been completed. This request should be accompanied by receipts for the completed work (material and labor) for which payment is being requested. The borrower also certifies that the conditions of the loan agreement have been met—that all requested funds have been used in the subject project and that suppliers and subcontractors have been paid. Additionally, the subcontractors and suppliers should provide the bank with lien waivers covering the work com-

pleted for which payment has been received. Upon review of the draw request and independent confirmation on the progress of work, the bank will disburse funds for construction costs incurred, less the hold back. The percentage of the loan funds retained are released when a notice of the project’s completion has been filed, and after the stipulated period has elapsed under which subcontractors or suppliers can file a lien.

Monitoring Progress of Construction and Loan Draws

It is critical that a bank has appropriate procedures and an adequate tracking system to monitor payments to ensure that the funds requested are appropriate for the given stage of development. The monitoring occurs through physical inspections of the project once it has started. The results of the inspections are then documented in the inspection reports, which are kept in the appropriate file. Depending on the complexity of the project, the inspection reports can be completed either by the lender or by an independent construction consulting firm, the latter generally staffed by architects and engineers. The reports address both the quantity and the quality of the work for which funds are being requested. They also verify that the plans are being followed and that the construction is proceeding on schedule and within budget.

The bank must be accurately informed of the progress to date in order to monitor the loan. It is also important that the bank ascertain whether draws are being taken in accordance with the predetermined disbursement schedule. Before any draw amount is disbursed, however, the bank must obtain verification of continued title insurance. Generally, this means verifying that no liens have been filed against the title of the project since the previous draw. The title insurance insuring the construction lender’s mortgage or lien is then increased to include the new draw, which results in an increase in the title insurance commensurate with the disbursement of funds. The lender frequently examines title to the property securing the construction loan to also be certain that the borrower is not pledging it for other borrowings and to be sure that mechanic’s liens are not being filed for unpaid bills. When the project is not proceeding as anticipated, that fact should be reflected in the inspection reports.

5. Other methods for disbursing commercial construction loans include the voucher system and the monthly draw method. The voucher system is similar to the progress system except that borrower prepares a voucher of all invoices to be paid with signatures of the subcontractors attesting to the invoiced amount. The bank then issues checks directly to the subcontractors or suppliers. The monthly draw method is used in long-term projects wherein the borrower makes a draw request each month for the previous month’s work. In turn, the bank determines the amount of work completed to date and releases funds based on the value of work completed versus the value of the work remaining.

Another important component in the process is the ongoing monitoring of general economic factors that will affect the marketing and selling of the residential or commercial properties and affect their success upon completion of the project.

Monitoring Residential Projects

An inventory list is maintained for each tract or phase of the project. The inventory list should show each lot number, the style of house, the release price, the sale price, and the loan balance. The list should be posted daily with advances and payments indicating the balance advanced for each house, date completed, date sold, and date paid, and should age the builder's inventory by listing the older houses completed and unsold.

Inspections (usually monthly) during the course of construction of each house should be documented in progress reports. The progress report should indicate the project's activity during the previous month, reflecting the number of homes under construction, the number completed, and the number sold. The monthly report should indicate whether advances are being made in compliance with the loan agreement.

Monitoring Commercial Projects

To have an effective control over its commercial construction loan program, the bank must have an established loan administration process that continually monitors each project. The process should include monthly reporting on the work completed, the cost to date, the cost to complete, construction deadlines, and loan funds remaining. Any changes in construction plans should be documented and reviewed by the construction consulting firm and should be approved by the bank and takeout lender. A significant number of change orders may indicate poor planning or project design, or problems in construction, and should be tracked and reflected in the project's budget. Soft costs such as advertising and promotional expenses normally are not funded until the marketing of the project has started.

Final Repayment

Before the final draw is made, the construction

loan should be in a condition to be converted to a permanent loan. Usually the final draw includes payment of the hold back stipulated in the loan agreement and is used to pay all remaining bills. The bank should obtain full waivers of liens (releases) from all contractors, subcontractors, and suppliers before the loan is released and the hold back is disbursed. The bank should also obtain a final inspection report to confirm the project is completed and meets the building specifications, including confirmation of the certificate of occupancy from the governing building authority.

Sources of permanent funding for commercial projects vary greatly, depending upon the type of project. For condominium projects, the construction lender may also be providing the funding for marketing the individual units and would be releasing the loan on a unit-by-unit basis similar to a residential development construction loan. If there is a precommitted takeout lender, the new lender could purchase the construction loan documents and assume the security interest from the construction lender. If the project is being purchased for cash, the bank would release its lien and cancel the note.

Additionally, as the commercial project is leased, the lender should ensure that the bank's position is protected in the event that extended-term funding is not obtained. The bank may require tenants to enter into subordination, attornment, and nondisturbance agreements, which protect the bank's interests in the lease by providing for the assumption of the landlord's position by the bank in the event the borrower declares bankruptcy. Furthermore, to ensure that the bank has full knowledge of all provisions of the lease agreements, tenants should be required to sign an estoppel certification.

In some cases, the takeout lender may only pay off a portion of the construction loan because a conditional requirement for full funding has not been met, such as the project not attaining a certain level of occupancy. The construction lender would then have a second mortgage on the remaining balance of the construction loan. When the conditions of the takeout loan are met, the construction lender is repaid in full and the lien is released.

Interest Reserves

A construction loan is generally an interest-only loan because of the fact that cash flow is not

available from most projects until they are completed. The borrower's interest expense is therefore borrowed from the construction lender as part of the construction loan for the purpose of "paying" the lender interest on the "portion" of the loan used for actual construction. The funds advanced to pay the interest are included as part of the typical monthly draw. As a result, the balance due to the lender increases with each draw by the full amount of construction costs, plus the interest that is borrowed.

The borrower's interest cost is determined by the amount of credit extended and the length of time needed to complete the project. This interest cost is referred to as an interest reserve. This period of time should be evaluated for reasonableness relative to the project being financed. In larger projects cash flow may be generated prior to the project's completion. In such cases, any income from the project should be applied to debt service before there is a draw on the interest reserve. The lender should closely monitor the lease-up of the project to ensure that the project's net income is being applied to debt service and not diverted to the borrower as a return of the developer's capital or for use in the developer's other projects.

Loan Default

The inherent exposure in construction financing is that the full value of the collateral is not realized until the project is completed. In default situations the bank must consider the alternatives available to recover its advances. For uncompleted projects, the bank must decide whether it is more advantageous to complete the project or to sell on an "as is" basis. The various mechanic's and materialmen's liens, tax liens, and other judgments that arise in such cases are distressing to even the most seasoned lender. Due to these factors, the construction lender may not be in the preferred position indicated by documents in the file. Therefore, the lender should take every precaution to minimize any third-party claim on the collateral. Because laws regarding the priority of certain liens may vary among states, the bank should take the necessary steps to ensure that its lien is recorded prior to the commencement of work or the delivery of materials and supplies.

Signs of Problems

To detect signs of a borrower's financial problems, the bank should review the borrower's financial statements on a periodic (quarterly) basis, assessing the liquidity, debt level, and cash flow. The degree of information the financial statements provide the bank, insofar as understanding the borrower's financial condition is concerned, depends primarily on whether the borrower is a single-asset entity or a multi-asset entity.

The financial statements of a single-asset entity only reflect the project being constructed; therefore, they are of a more limited use than statements of multi-asset entities. Nevertheless, one issue that is of importance to financial statements of both entities relates to monitoring changes in accounts and trade payables. Monitoring these payables in a detailed manner helps the bank to determine if trade payables are paid late or if there are any unpaid bills. In the event of problems, a bank might choose to either contact the payables directly or request an additional credit check on the borrower. Another source of information indicating borrower problems is local publications that list lawsuits or judgments that have been filed or entered against the borrower. Additionally, the bank should also verify that the borrower is making its tax payments on time.

In a multi-asset entity, on the other hand, more potential problems could arise due to the greater number of assets (projects/properties) that make up the borrower. As a result, it is necessary to obtain detailed financial statements of each of the assets (projects/properties) and the consolidating financial statements, as well as the consolidated financial statements. This is important because each kind of statement can provide significant insight into problems that could adversely affect the borrower's overall financial condition.

Assessing the financial condition of the multi-asset entity includes evaluating the major sources of cash and determining whether cash flow is dependent on income generated from completed projects, the sale of real estate, or infusion of outside capital. Additionally, the bank should also review the borrower's account receivables for the appropriateness of intercompany transactions and to guard against diversion of funds.

Depending upon the structure of the loan, it may also be desirable to obtain a partner's/

guarantor's financial statements on a periodic basis. In such cases it is important to obtain detailed current and accurate financial statements that include cash flow information on a project-by-project basis.

Slow unit sales, or excessive inventory relative to sales, indicate the borrower may have difficulty repaying the loan. Although sometimes there are mitigating factors beyond the control of the borrower, such as delays in obtaining materials and supplies, adverse weather conditions, or unanticipated site work, the borrower may be unable to overcome these problems. Such delays usually increase project costs and could hamper the loan's repayment.

The construction lender should be aware of funds being misused—for example, rebuilding to meet specification changes not previously disclosed, starting a new project, or possibly paying subcontractors for work performed elsewhere. The practice of "front loading," whereby a builder deliberately overstates the cost of the work to be completed in the early stages of construction, is not uncommon and, if not detected early on, will almost certainly result in insufficient loan funds with which to complete construction in the event of a default.

Loan Workouts

Sound workout programs begin with a full disclosure of all relevant information based on a realistic evaluation of the borrower's ability to manage the business entity (business, technical, and financial capabilities), and the bank's ability to assist the borrower in developing and monitoring a feasible workout/repayment plan. Management should then decide on a course of action to resolve the problems with the terms of the workout in writing and formally agreed to by the borrower. If additional collateral is accepted or substituted, the bank should ensure that the necessary legal documents are filed to protect the bank's collateral position.

In those cases where the borrower is permitted to finish the project, additional extensions of credit for completing the project, due to cost overruns or an insufficient interest reserve, may represent the best alternative for a workout plan. At the same time, the bank should evaluate the cause of the problem(s), such as mismanagement, and determine whether it is in its best

interest to allow the borrower to complete the project.

SUPERVISORY POLICY

As a result of competitive pressures, many banks in the early 1980s made construction loans on an open-end basis, wherein the borrower did not have a commitment for longer-term or takeout financing before construction was started. Although there was sufficient demand for commercial real estate space when this practice commenced, the supply of space began to exceed demand. One symptom of the excess supply was an increase in vacancy rates, which led to declining rental income caused by the ever greater need for rent concessions. The commensurate declining cash flow from income-producing properties, and the uncertainty regarding future income, reduced the market value of many properties to levels considered undesirable by permanent mortgage lenders. As a result of the subsequent void created by the permanent lenders, banks in the mid- and late 1980s began to extend medium-term loans with maturities for up to seven years (also referred to as mini-perms). These mini-perms were granted with the expectation by banks that as the excess supply of space declined, the return on investment would improve, and permanent lenders would return.

As these loans mature in the 1990s, borrowers may continue to find it difficult to obtain adequate sources of long-term credit. In some cases, banks may determine that the most desirable and prudent course is to roll over or renew loans to those borrowers who have demonstrated an ability to pay interest on their debts, but who presently may not be in a position to obtain long-term financing for the loan balance.

The act of refinancing or renewing loans to sound borrowers, including creditworthy commercial or residential real estate developers, generally should not be subject to supervisory criticism in the absence of well-defined weaknesses that jeopardize repayment of the loans. Refinancings or renewals should be structured in a manner that is consistent with sound banking, supervisory, and accounting practices, and that protects the bank and improves its prospects for collecting or recovering on the asset.

Real Estate Construction Loans Examination Objectives

Effective date November 1993

Section 2100.2

1. To determine if policies, practices, procedures, and internal controls regarding real estate construction loans are adequate.
2. To determine if bank officers are operating in conformance with the bank's established guidelines.
3. To evaluate the portfolio for collateral sufficiency, performance, credit quality, and collectibility.
4. To determine compliance with applicable laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

Real Estate Construction Loans Examination Procedures

Effective date November 1993

Section 2100.3

1. Refer to the Real Estate Loan Examination Procedures section of this manual for examination procedures related to all types of real estate lending activity, and incorporate into this checklist those procedures applicable to the review of the real estate construction loans. The procedures in this checklist are unique to the review of a bank's construction lending activity.
2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal/external auditors.
3. Test real estate construction loans for compliance with policies, practices, procedures, and internal controls by performing the remaining examination procedures in this section. Also, obtain a listing of any deficiencies noted in the latest internal/external audit reviews and determine if appropriate corrections have been made.
4. Review management reports on the status of construction lending activity, economic developments in the market, and problem loan reports.
5. Evaluate the bank with respect to—
 - a. the adequacy of written policies and procedures relating to construction lending.
 - b. operating compliance with established bank policy.
 - c. favorable or adverse trends in construction lending activity.
 - d. the accuracy and completeness of the bank's records.
 - e. the adequacy of internal controls, including control of construction draws.
 - f. the adherence of lending staff to lending policies, procedures, and authority as well as the bank's adherence to the holding company's loan limits, if applicable.
 - g. compliance with laws, regulations, and Federal Reserve policy on construction lending activity, including supervisory loan-to-value (LTV) limits and restrictions; loans to officers, directors, and shareholders; appraisal and evaluation of real estate collateral; and prudent lending practices.
6. Select loans for examination, using an appropriate sampling technique drawn from judgmental (cut-off line) or statistical sampling. Analyze the performance of the loans selected for examination by transcribing the following kinds of information onto the real estate construction loan line cards, when applicable:
 - a. Collateral records and credit files, including the borrower's financial statements, review of related projects, credit report of the borrower and guarantors, appraisal or evaluation of collateral, feasibility studies, economic impact studies, and loan agreement and terms.
 - b. Loan modification or restructuring agreements to identify loans where interest or principal is not being collected according to the terms of the original loan. Examples include reduction of interest rate or principal payments, deferral of interest or principal payments, or renewal of a loan with accrued interest rolled into the principal.
 - c. The commitment agreement—a buy/sell contract or the tri-party agreement—from the extended-term or permanent lender for the takeout loan.
 - d. Cash-flow projections and any revisions to projections based on cost estimates from change orders.
 - e. Estimates of the time and cost to complete construction.
 - f. Inspection reports and evaluations of the cost to complete, construction deadlines, and quality of construction.
 - g. Construction draw schedules and audits for compliance with the schedules.
 - h. Documentation on payment of insurance and property taxes.
 - i. Terms of a completion or performance bond.
 - j. Past-due/nonaccrual—related information.
 - k. Loan-specific internal problem credit analyses information.
 - l. Loans to insiders and their interests.
 - m. Loans classified during the preceding examination.
7. In analyzing the selected construction loans, the examiner should consider the following procedures, taking appropriate action if necessary:

- a. Determine the primary source of repayment and evaluate its adequacy, including whether—
 - the permanent lender has the financial resources to meet its commitment.
 - the amount of the construction loan and its estimated completion date correspond to the amount and expiration date of the takeout commitment and/or completion bond.
 - the permanent lender and/or the bonding company have approved any modifications to the original agreement.
 - properties securing construction loans that are not supported by a takeout commitment will be marketable upon completion.
 - b. Analyze secondary support afforded by guarantors and partners.
 - c. Relate collateral values to outstanding debt by—

assessing the adequacy of the appraisal and evaluation.

 - ascertaining whether inspection reports support disbursements to date.
 - determining whether the amount of undisbursed loan funds is sufficient to complete the project.
 - establishing whether title records assure the primacy of the bank's liens.
 - determining if adequate hazard, builder's risks, and worker's compensation insurance is maintained.
 - d. Determine whether the loan's loan-to-value (LTV) ratio is in excess of the supervisory LTV limits. If so, ascertain whether the loan has been properly reported as a nonconforming loan.
 - e. Ascertain whether the loan complies with established bank policy.
 - f. Identify any deficiencies in the loan's documentation in both the credit files and the collateral records.
 - g. Identify whether the loan is to an officer, director, or shareholder of the bank or a correspondent bank and whether an officer, director, or shareholder of the bank is a guarantor on the loan.
 - h. Review the borrower's compliance with the provisions of the loan agreement, indicating whether the loan is in default or in past-due status.
 - i. Determine if there are any problems that may jeopardize the repayment of the construction loan.
 - j. Determine whether the loan was classified during the preceding examination, and, if the loan has been paid off, whether all or part of the funds for repayment came from another loan at the bank or from the repossession of the property.
8. In connection with the examination of other lending activity in the bank, the examiner should—
 - a. check the central liability file on the borrower(s) and determine whether the total construction lending activity exceeds the lending limit to a single borrower.
 - b. obtain information and related performance status on common borrowers and their interests from examiners assigned to other examination areas (such as non-real estate loans, leasing, overdrafts, and cash items) and determine the total indebtedness of the borrower to the bank. Additionally, one examiner should be assigned to review the borrower's overall borrowing relationship with the bank.
 - c. perform appropriate procedural steps as outlined in the Concentration of Credits section of this manual. Interim construction loans that do not have firm permanent takeout commitments are to be treated as concentrations of credit.
 9. Consult with the examiner responsible for the asset/liability management analysis portion of the examination to determine the appropriate maturity breakdown of construction loans needed for the analysis and prepare the necessary schedules.
 10. Summarize the findings of the construction loan portfolio review and address—
 - a. the scope of the examination.
 - b. the quality of the policies, procedures, and controls.
 - c. the general level of adherence to policies and procedures.
 - d. the competency of management.
 - e. the quality of the loan portfolio.
 - f. loans not supported by current and complete financial information.
 - g. loans with incomplete documentation, addressing deficiencies related to items such as appraisals or evaluations, feasibility studies, the environmental impact study, takeout commitment, title policy, construction plans, inspection reports, change orders, proof of payment for

-
- insurance and taxes, deeds of trust, and mortgage notes.
 - h. the adequacy of control over construction draws and advances.
 - i. loans to officers, directors, shareholders, or their interests.
 - j. causes of existing problems.
 - k. delinquent loans and the aggregate amount of statutory bad debts. Refer to the manual section on classification of credits for a discussion on statutory bad debts or A Paper.
 - l. concentrations of credits.
 - m. classified loans.
 - n. violations of laws, regulations, and Federal Reserve policy.
 - o. action taken by management to correct previously noted deficiencies and corrective actions recommended to management at this examination, with the bank's response to such recommendations.

Real Estate Construction Loans

Internal Control Questionnaire

Effective date May 2004

Section 2100.4

Review the bank's internal controls, policies, practices, and procedures for making and servicing real estate construction loans. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

POLICIES AND OBJECTIVES

- *1. Has the board of directors and management, consistent with their duties and responsibilities, adopted and, at least annually, reviewed and approved written construction lending policies that—
 - a. outline construction lending objectives regarding—
 - detail the aggregate limit for construction loans?
 - concentrations of credit in particular types of construction projects?
 - b. establish minimum standards for documentation?
 - c. define qualified collateral and minimum margin requirements?
 - d. define the minimum equity requirement for a project?
 - e. define loan-to-value (LTV) limits that are consistent with supervisory LTV limits?
 - f. require an appraisal or evaluation that complies with the Federal Reserve real estate appraisal regulation and guidelines?
 - g. delineate standards for takeout commitments?
 - h. indicate completion bonding requirements?
 - i. establish procedures for reviewing construction loan applications?
 - j. detail methods for disbursing loan proceeds?
 - k. detail project-inspection requirements and progress-reporting procedures?

- l. require agreements by borrowers for completion of improvements according to approved construction specifications, and cost and time limitations?
- 2. Are construction lending policies and objectives appropriate to the size and sophistication of the bank, and are they compatible with changing market conditions?
- 3. Has the board of directors adopted, and does it periodically review, policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program for the entire bank's lending functions? (The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units.)

REVIEWING LOAN APPLICATIONS

- 1. Does bank policy require a personal guarantee from the borrower on construction loans?
- 2. Does bank policy require personal completion guarantees by the property owner and/or the contractor?
- 3. Does the bank require a construction borrower to contribute equity to a proposed project in the form of money or real estate? If so, indicate which form of equity.
- 4. Does the project budget include the amount and source of the builder's and/or owner's equity contribution?
- 5. Does the bank require—
 - a. background information on the borrower's, contractor's, and major subcontractors' development and construction experience, as well as other projects currently under construction?
 - b. payment-history information from suppliers and trade creditors on the aforementioned's previous projects?
 - c. credit reports?
 - d. detailed current and historical financial statements, including cash flow-related information?

6. Do the borrower's project-cost estimates include—
 - a. land and construction costs?
 - b. off-site improvement expenses?
 - c. soft costs, such as organizational and administrative costs, and architectural, engineering, and legal fees?
 - d. interest, taxes, and insurance expenses?
 7. Does the bank require an estimated cost breakdown for each stage of construction?
 8. Does the bank require that cost estimates of more complicated projects be reviewed by qualified personnel: experienced in-house staff, an architect, a construction engineer, or an independent estimator?
 9. Are commitment fees required on approved construction loans?
5. Does the construction loan agreement require that—
 - a. the contractor not start work until authorized to do so by the bank?
 - b. on-site inspections be permitted by the lending officer or an agent of the bank without prior notice?
 - c. disbursement of funds be made as work progresses, supported by documentation that the subcontractors are receiving payment and that the appropriate liens are being released?
 - d. the bank be allowed to withhold disbursements if work is not performed according to approved specifications?
 - e. a percentage of the loan proceeds be retained pending satisfactory completion of the construction?
 - f. the lender be allowed to assume prompt and complete control of the project in the event of default? If a commercial project, are the leases assignable to the bank?
 - g. the contractor carry builder's risk and workers' compensation insurance? If so, has the bank been named as mortgagee or loss payee on the builder's risk policy?
 - h. periodic increases in the project's value be reported to the builder's risk and title insurance companies?
 6. Does the construction loan agreement for residential tract construction loans require—
 - a. bank authorization for individual tract-housing starts?
 - b. that periodic sales reports be submitted to the bank?
 - c. that periodic reports on tract houses occupied under a rental, lease, or purchase-option agreement be submitted to the bank?
 - d. limitations on the number of speculative houses and the completion of one tract before beginning another?

CONSTRUCTION LOAN AGREEMENTS

1. Is the construction loan agreement signed before an actual loan disbursement is made?
- *2. Is the construction loan agreement reviewed by counsel and other experts to determine that improvement specifications conform to—
 - a. building codes?
 - b. subdivision regulations?
 - c. zoning and ordinances?
 - d. title and/or ground lease restrictions?
 - e. health and handicap access regulations?
 - f. known or projected environmental protection considerations?
 - g. specifications required under the National Flood Insurance Program?
 - h. provisions in tenant leases?
 - i. specifications approved by the permanent lender?
 - j. specifications required by the completion or performance bonding company and/or guarantors?
- *3. Does the bank require all change orders to be approved in writing by the—
 - a. bank?
 - b. bank's counsel?
 - c. permanent lender?
 - d. architect or supervising engineer?
 - e. prime tenants bound by firm leases or letters of intent to lease?
 - f. completion bonding company?
4. Does the construction loan agreement set a date for project completion?

COLLATERAL

1. Are liens filed on non-real estate construction improvements, i.e., personal property that is movable from the project?
2. When entering into construction loans, does the bank, consistent with supervisory loan-to-value limits—

- a. limit the loan amount to a reasonable percentage of the appraised value of the project when there is no prearranged permanent financing?
 - b. limit the loan amount to a percentage of the appraised value of the completed project when subject to the bank's own takeout commitment?
 - c. limit the loan amount to the floor of a takeout commitment that is based upon achieving a certain level of rents or lease occupancy?
3. Are unsecured credit lines to contractors or developers, who are also being financed by secured construction loans, supervised by the construction loan department or the officer supervising the construction loan?
 4. Does the bank have adequate procedures to determine whether construction appraisal or evaluation policies and procedures are consistently being followed in conformance with regulatory requirements, and that the appraisal or evaluation documentation supports the value indicated in the conclusions?
 - c. authorized in writing by the contractor, borrower, inspector, subcontractors, and/or lending officer?
 - d. reviewed by a bank employee who had no part in granting the loan?
 - e. compared with original cost estimates?
 - f. checked against previous disbursements?
 - g. made directly to subcontractors and suppliers?
 - h. supported by invoices describing the work performed and the materials furnished?
 2. Does the bank obtain waivers of subcontractor's and mechanic's liens as work is completed and disbursements are made?
 3. Does the bank obtain sworn and notarized releases of mechanic's liens from the general contractor at the time construction is completed and before final disbursement is made?
 4. Does the bank periodically review undisbursed loan proceeds to determine their adequacy to complete the projects?
 5. Are the borrower's undisbursed loan proceeds and contingency or escrow accounts independently verified at least monthly by someone other than the individuals responsible for loan disbursements?

INSPECTIONS

1. Are inspection authorities noted in the—
 - a. construction loan commitment?
 - b. construction loan agreement?
 - c. tri-party buy-and-sell agreement?
 - d. takeout commitment?
2. Are inspections conducted on an irregular basis?
3. Are inspection reports sufficiently detailed to support disbursements?
4. Are inspectors rotated from project to project?
5. Are spot checks made of the inspectors' work?
6. Do inspectors determine compliance with plans and specifications as well as the progress of the work? If so, are the inspectors competent to make the determination?

DISBURSEMENTS

- *1. Are disbursements—
 - a. advanced on a prearranged disbursement plan?
 - b. made only after reviewing written inspection reports?

TAKEOUT COMMITMENTS

1. Does counsel review takeout agreements for acceptability?
2. Does the bank obtain and review the permanent lender's financial statements to determine the adequacy of its financial resources to fulfill the takeout commitment?
3. Is a tri-party buy-and-sell agreement signed before the construction loan is closed?
4. Does the bank require takeout agreements to include a force majeure—an act-of-God clause—that provides for an automatic extension of the completion date in the event that construction delays occur for reasons beyond the builder's control?

COMPLETION BONDING REQUIREMENTS

1. Does the bank require completion insurance for all construction loans?

2. Has the bank established minimum financial standards for borrowers who are not required to obtain completion bonding? Are these standards observed in all cases?
3. Does counsel review completion insurance bonds for acceptability?
3. Does the bank employ standardized checklists to control documentation for individual files, and does it perform audit reviews for adequacy?
4. Does the documentation file indicate all of the borrower's other loans and deposit account relationships with the bank, and include a summary of other construction projects being financed by other banks? Does the bank analyze the status of these projects and the potential effect on the borrower's financial position?

DOCUMENTATION

1. Does the bank require and maintain documentary evidence of—
 - a. the contractor's payment of—
 - employee withholding taxes?
 - builder's risk insurance?
 - workers' compensation insurance?
 - public liability insurance?
 - completion insurance?
 - b. the property owner's payment of real estate taxes?
2. Does the bank require that documentation files include—
 - a. loan applications?
 - b. financial statements for the—
 - borrower?
 - builder?
 - proposed prime tenant?
 - takeout lender?
 - guarantors/partners?
 - c. credit and trade checks on the—
 - borrower?
 - builder?
 - major subcontractor?
 - proposed tenants?
 - d. a copy of plans and specifications?
 - e. a copy of the building permit?
 - f. a survey of the property?
 - g. the construction loan agreement?
 - h. an appraisal or evaluation and feasibility study?
 - i. an up-to-date title search?
 - j. the mortgage?
 - k. ground leases?
 - l. assigned tenant leases or letters of intent to lease?
 - m. a copy of the takeout commitment?
 - n. a copy of the borrower's application to the takeout lender?
 - o. the tri-party buy-and-sell agreement?
 - p. inspection reports?
 - q. disbursement authorizations?
 - r. undisbursed loan proceeds and contingency or escrow account reconciliations?
 - s. insurance policies?
5. Does the bank use tickler files that—
 - a. control scheduling of inspections and disbursements?
 - b. ensure prompt administrative follow-up on items sent for—
 - recording?
 - an attorney's opinion?
 - an expert review?
6. Does the bank maintain tickler files that provide advance notice (such as 30 days' prior notice) to staff of the expiration dates for—
 - a. the takeout commitment?
 - b. hazard insurance?
 - c. workers' compensation insurance?
 - d. public liability insurance?

LOAN RECORDS

- *1. Are the preparation, addition, and posting of subsidiary real estate construction loan records performed or adequately reviewed by persons who do not also—
 - a. issue official checks or drafts?
 - b. handle cash?
 - c. reconcile subsidiary records to general ledger controls?
- *2. Are the subsidiary real estate construction loan records reconciled at least monthly to the appropriate general ledger accounts? Are reconciling items adequately investigated by persons who do not also handle cash or prepare/post subsidiary controls?
- *3. Are loan statements, delinquent account-collection requests, and past-due notices reconciled to the real estate construction loan subsidiary records? Are the reconciliations handled by a person who does not also handle cash?
4. Are inquiries about construction loan balances received and investigated by persons who do not also handle cash?

- *5. Are documents supporting recorded credit adjustments subsequently checked or tested by persons who do not also handle cash?
6. Is a delinquent-accounts report generated daily?
7. Are loans in excess of supervisory LTV limits identified in the bank's records, and are the aggregate amounts of such loans reported at least quarterly to the board of directors?
8. Does the bank maintain a daily record summarizing note transaction details (loans made, payments received, and interest collected) to support applicable general ledger account entries?
9. Are note and liability trial balances frequently reconciled to the general ledger by employees who do not process or record loan transactions?

LOAN INTEREST AND COMMITMENT FEES

- *1. Are the preparation and posting of loan interest and fee records performed or

adequately reviewed by persons who do not also—

- a. issue official checks or drafts?
 - b. handle cash?
2. Are any independent interest and fee computations made and compared with or adequately tested to loan interest by persons who do not also—
 - a. issue official checks or drafts?
 - b. handle cash?

CONCLUSION

1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
2. On the basis of a composite evaluation, are internal controls adequate as evidenced by answers to the foregoing questions?

Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Effective date May 2007

Section 2103.1

This interagency supervisory guidance was developed to reinforce sound risk-management practices for institutions with high and increasing concentrations of commercial real estate loans on their balance sheets. The guidance, Concentrations in Commercial Real Estate (CRE) Lending, Sound Risk-Management Practices (the guidance), was issued on December 6, 2006 (effective on December 12, 2006).¹ However, institutions needing to improve their risk-management processes may have been provided the opportunity for some flexibility on the time frame for complying with the guidance. This time frame will be commensurate with the level and nature of CRE concentration risk, the quality of the institution's existing risk-management practices, and its levels of capital. (See 71 *Fed. Reg.* 74,580 [December 12, 2006], the Federal Reserve Board's press release dated December 6, 2006, and SR-07-01 and its attachments.)

SCOPE OF THE CRE CONCENTRATION GUIDANCE

The guidance focuses on those CRE loans for which the cash flow from the real estate is the primary source of repayment rather than loans to a borrower for which real estate collateral is taken as a secondary source of repayment or through an abundance of caution. For the purposes of this guidance, CRE loans include those loans with risk profiles sensitive to the condition of the general CRE market (for example, market demand, changes in capitalization rates, vacancy rates, or rents). CRE loans are land development and construction loans (including one- to four-family residential and commercial construction loans) and other land loans. CRE loans also include loans secured by multifamily property, and nonfarm nonresidential property where the primary source of repayment is derived from rental income associated with the property (that is, loans for which 50 percent or more of the source of repayment comes from third-party, nonaffiliated, rental income) or the proceeds of

1. The guidance was jointly adopted by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation.

the sale, refinancing, or permanent financing of the property. Loans to real estate investment trusts and unsecured loans to developers also should be considered CRE loans for purposes of this guidance if their performance is closely linked to performance of the CRE markets. The scope of the guidance does *not* include loans secured by nonfarm nonresidential properties where the primary source of repayment is the cash flow from the ongoing operations and activities conducted by the party, or affiliate of the party, who owns the property. Rather than defining a CRE concentration, the guidance's "Supervisory Oversight" section describes the criteria that the Federal Reserve will use as high-level indicators to identify banks potentially exposed to CRE concentration risk.

CRE CONCENTRATION ASSESSMENTS

Banks that are actively involved in CRE lending should perform ongoing risk assessments to identify CRE concentrations. The risk assessment should identify potential concentrations by stratifying the CRE portfolio into segments that have common risk characteristics or sensitivities to economic, financial, or business developments. A bank's CRE portfolio stratification should be reasonable and supportable. The CRE portfolio should not be divided into multiple segments simply to avoid the appearance of concentration risk.

The Federal Reserve recognizes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary by bank depending on the portfolio risk characteristics, the quality of risk-management processes, and capital levels. Therefore, the guidance does not establish a CRE concentration limit that applies to all banks. Rather, banks are encouraged to identify and monitor credit concentrations and to establish internal concentration limits, and all concentrations should be reported to senior management and the board of directors on a periodic basis. Depending on the results of the risk assessment, the bank may need to enhance its risk-management systems.

CRE RISK MANAGEMENT

The sophistication of a bank's CRE risk-management processes should be appropriate to the size of the portfolio, as well as the level and nature of concentrations and the associated risk to the bank. Banks should address the following key elements in establishing a risk-management framework that effectively identifies, monitors, and controls CRE concentration risk:

1. board and management oversight
2. portfolio management
3. management information systems
4. market analysis
5. credit underwriting standards
6. portfolio stress testing and sensitivity analysis
7. credit risk review function

Board and Management Oversight of CRE Concentration Risk

A bank's board of directors has ultimate responsibility for the level of risk assumed by the bank. If the bank has significant CRE concentration risk, its strategic plan should address the rationale for its CRE levels in relation to its overall growth objectives, financial targets, and capital plan. In addition, the Federal Reserve's real estate lending regulations require that each bank adopt and maintain a written policy that establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate, including CRE loans. Therefore, the board of directors or a designated committee thereof should—

1. establish policy guidelines and approve an overall CRE lending strategy regarding the level and nature of CRE exposures acceptable to the bank, including any specific commitments to particular borrowers or property types, such as multifamily housing;
2. ensure that management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies;
3. review information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including reports that describe changes in CRE market conditions in which the bank lends; and

4. periodically review and approve CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to conform to any changes in the bank's strategies and to respond to changes in market conditions.

CRE Portfolio Management

Banks with CRE concentrations should manage not only the risk of individual loans but also portfolio risk. Even when individual CRE loans are prudently underwritten, concentrations of loans that are similarly affected by cyclical changes in the CRE market can expose a bank to an unacceptable level of risk if not properly managed. Management regularly should evaluate the degree of correlation between related real estate sectors and establish internal lending guidelines and concentration limits that control the bank's overall risk exposure.

Management should develop appropriate strategies for managing CRE concentration levels, including a contingency plan to reduce or mitigate concentrations in the event of adverse CRE market conditions. Loan participations, whole loan sales, and securitizations are a few examples of strategies for actively managing concentration levels without curtailing new originations. If the contingency plan includes selling or securitizing CRE loans, management should assess periodically the marketability of the portfolio. This should include an evaluation of the bank's ability to access the secondary market and a comparison of its underwriting standards with those that exist in the secondary market.

CRE Management Information Systems

A strong management information system (MIS) is key to effective portfolio management. The sophistication of the MIS will necessarily vary with the size and complexity of the CRE portfolio and level and nature of concentration risk. The MIS should provide management with sufficient information to identify, measure, monitor, and manage CRE concentration risk. This includes meaningful information on CRE portfolio characteristics that is relevant to the bank's lending strategy, underwriting standards, and risk tolerances. A bank should assess periodi-

cally the adequacy of the MIS in light of growth in CRE loans and changes in the CRE portfolio's size, risk profile, and complexity.

Banks are encouraged to stratify the CRE portfolio by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating. Other useful stratifications may include loan structure (for example, fixed-rate or adjustable), loan purpose (for example, construction, short-term, or permanent), loan-to-value (LTV) limits, debt service coverage, policy exceptions on newly underwritten credit facilities, and affiliated loans (for example, loans to tenants). A bank should also be able to identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives.

Management reporting should be timely and in a format that clearly indicates changes in the portfolio's risk profile, including risk-rating migrations. In addition, management reporting should include a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses in response to potential market events that could affect the CRE loan portfolio.

Market Analysis

Market analysis should provide the bank's management and board of directors with information to assess whether its CRE lending strategy and policies continue to be appropriate in light of changes in CRE market conditions. A bank should perform periodic market analyses for the various property types and geographic markets represented in its portfolio.

Market analysis is particularly important as a bank considers decisions about entering new markets, pursuing new lending activities, or expanding in existing markets. Market information also may be useful for developing sensitivity analysis or stress tests to assess portfolio risk.

Sources of market information may include published research data, real estate appraisers and agents, information maintained by the property taxing authority, local contractors, builders, investors, and community development groups. The sophistication of a bank's analysis will vary by its market share and exposure, as well as the availability of market data. While a bank operating in nonmetropolitan markets may have

access to fewer sources of detailed market data than a bank operating in large, metropolitan markets, a bank should be able to demonstrate that it has an understanding of the economic and business factors influencing its lending markets.

Credit Underwriting Standards

A bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank's lending staff to evaluate all relevant credit factors. When a bank has a CRE concentration, the establishment of sound lending policies becomes even more critical. In establishing its policies, a bank should consider both internal and external factors, such as its market position, historical experience, present and prospective trade area, probable future loan and funding trends, staff capabilities, and technology resources. Consistent with the Federal Reserve's real estate lending guidelines, CRE lending policies should address the following underwriting standards:

1. maximum loan amount by type of property
2. loan terms
3. pricing structures
4. collateral valuation²
5. LTV limits by property type
6. requirements for feasibility studies and sensitivity analysis or stress testing
7. minimum requirements for initial investment and maintenance of hard equity by the borrower
8. minimum standards for borrower net worth, property cash flow, and debt service coverage for the property

A bank's lending policies should permit exceptions to underwriting standards only on a limited basis. When a bank does permit an exception, it should document how the transaction does not conform to the bank's policy or underwriting standards, obtain appropriate management approvals, and provide reports to the board of directors or designated committee detailing the number, nature, justifications, and trends for exceptions. Exceptions to both the bank's internal lending standards and the Fed-

2. Refer to the Federal Reserve's appraisal regulations: 12 CFR 208 subpart E and 12 CFR 225, subpart G.

eral Reserve's supervisory LTV limits³ should be monitored and reported on a regular basis. Further, banks would analyze trends in exceptions to ensure that risk remains within the bank's established risk tolerance limits.

Credit analysis should reflect both the borrower's overall creditworthiness and project-specific considerations as appropriate. In addition, for development and construction loans, the bank should have policies and procedures governing loan disbursements to ensure that the bank's minimum borrower equity requirements are maintained throughout the development and construction periods. Prudent controls should include an inspection process, documentation on construction progress, tracking pre-sold units, pre-leasing activity, and exception monitoring and reporting.

CRE Portfolio Stress Testing and Sensitivity Analysis

A bank with CRE concentrations should perform portfolio-level stress tests or sensitivity analysis to quantify the impact of changing economic conditions on asset quality, earnings, and capital. Further, a bank should consider the sensitivity of portfolio segments with common risk characteristics to potential market conditions. The sophistication of stress testing practices and sensitivity analysis should be consistent with the size, complexity, and risk characteristics of the CRE loan portfolio. For example, well-margined and seasoned performing loans on multifamily housing normally would require significantly less robust stress testing than most acquisition, development, and construction loans.

Portfolio stress testing and sensitivity analysis may not necessarily require the use of a sophisticated portfolio model. Depending on the risk characteristics of the CRE portfolio, stress testing may be as simple as analyzing the potential effect of stressed loss rates on the CRE portfolio, capital, and earnings. The analysis should focus on the more vulnerable segments of a bank's CRE portfolio, taking into consideration the prevailing market environment and the bank's business strategy.

3. The Interagency Guidelines for Real Estate Lending state that loans exceeding the supervisory LTV guidelines should be recorded in the bank's records and reported to the board at least quarterly.

Credit Risk Review Function

A strong credit risk review function is critical for a bank's self-assessment of emerging risks. An effective, accurate, and timely risk-rating system provides a foundation for the bank's credit risk review function to assess credit quality and, ultimately, to identify problem loans. Risk ratings should be risk sensitive, objective, and appropriate for the types of CRE loans underwritten by the bank. Further, risk ratings should be reviewed regularly for appropriateness.

SUPERVISORY OVERSIGHT OF CRE CONCENTRATION RISK

As part of its ongoing supervisory monitoring processes, the Federal Reserve will use certain criteria to identify banks that are potentially exposed to significant CRE concentration risk. A bank that has experienced rapid growth in CRE lending, has notable exposure to a specific type of CRE, or is approaching or exceeds the following supervisory criteria may be identified for further supervisory analysis of the level and nature of its CRE concentration risk:

1. total reported loans for construction, land development, and other land⁴ represent 100 percent or more of the bank's total capital⁵ or
2. total commercial real estate loans as defined in this guidance⁶ represent 300 percent or more of the bank's total capital, and the outstanding balance of the bank's commercial real estate loan portfolio has increased by 50 percent or more during the prior 36 months.

The Federal Reserve will use the criteria as a preliminary step to identify banks that may have CRE concentration risk. Because regulatory reports capture a broad range of CRE loans with varying risk characteristics, the

4. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.

5. For purposes of this guidance, the term *total capital* means the total risk-based capital as reported for commercial banks in the Call Report FFIEC 031 and 041 schedule RC-R—Regulatory Capital, line 21.

6. For commercial banks as reported in the Call Report FFIEC 031 and 041 schedule RC-C, items 1a, 1d, 1e, and memorandum item 3.

supervisory monitoring criteria do not constitute limits on a bank's lending activity but rather serve as high-level indicators to identify banks potentially exposed to CRE concentration risk. Nor do the criteria constitute a "safe harbor" for banks if other risk indicators are present, regardless of their measurements under (1) and (2).

Evaluation of CRE Concentrations

The effectiveness of a bank's risk-management practices will be a key component of the supervisory evaluation of the bank's CRE concentrations. Examiners will engage in a dialogue with the bank's management to assess CRE exposure levels and risk-management practices. Banks that have experienced recent, significant growth in CRE lending will receive closer supervisory review than those that have demonstrated a successful track record of managing the risks in CRE concentrations.

In evaluating CRE concentrations, the Federal Reserve will consider the bank's own analysis of its CRE portfolio, including consideration of factors such as—

1. portfolio diversification across property types
2. geographic dispersion of CRE loans
3. underwriting standards
4. level of pre-sold units or other types of take-out commitments on construction loans

5. portfolio liquidity (ability to sell or securitize exposures on the secondary market)

While consideration of these factors should not change the method of identifying a credit concentration, these factors may mitigate the risk posed by the concentration.

Assessment of Capital Adequacy for CRE Concentration Risk

The Federal Reserve's existing capital adequacy guidelines note that a bank should hold capital commensurate with the level and nature of the risks to which it is exposed. Accordingly, banks with CRE concentrations are reminded that their capital levels should be commensurate with the risk profile of their CRE portfolios. In assessing the adequacy of a bank's capital, the Federal Reserve will consider the level and nature of inherent risk in the CRE portfolio as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan loss reserves allocated for CRE concentration risk. A bank with inadequate capital to serve as a buffer against unexpected losses from a CRE concentration should develop a plan for reducing its CRE concentrations or for maintaining capital appropriate to the level and nature of its CRE concentration risk.

Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Examination Objectives

Effective date October 2007

Section 2103.2

When a bank has significant commercial real estate (CRE) credit concentrations, the inspection objectives are as follows:

1. To determine if the bank's risk-management practices and capital levels are commensurate with the level and nature of its CRE concentration risk.
2. To ascertain if the bank performs ongoing risk assessments to identify its CRE concentrations.
3. To evaluate whether the bank's CRE risk-management processes are appropriate for the size of its CRE loan portfolio, as well as for the level and nature of its concentrations and their associated risks to the bank.
 - a. To determine whether the bank's strategic plan addresses the rationale for its CRE credit concentration levels in relation to its overall growth objectives, financial targets, and capital plan.
 - b. To evaluate whether the bank manages not only the risk of individual loans but also its loan portfolio risks.
 - c. To find out if the bank's management information system provides management with sufficient information that can be used to identify, measure, and manage the bank's CRE concentration risk.
- d. To verify whether the bank's market analyses provide the bank's management and board of directors with sufficient information to assess whether the bank's CRE lending strategy and policies continue to be appropriate in light of its changing CRE market conditions.
4. To determine if the bank's CRE lending policies reflect the level of credit risk that is acceptable to its board of directors.
 - a. To evaluate whether the lending policies provide clear and measurable underwriting standards.
 - b. To assess whether the bank's lending policies enable the bank's lending staff to evaluate all relevant credit factors.
5. To find out if the bank performs portfolio-level stress tests or sensitivity analyses in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital.
6. To determine if the bank has a strong credit-review function that includes a self-assessment of its emerging credit and other risks.

Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Examination Procedures

Effective date October 2007

Section 2103.3

RISK MANAGEMENT

Board and Senior Management Oversight

1. Determine if the board of directors or its designated committee has—
 - a. established policy guidelines and approved an overall commercial real estate (CRE) lending strategy on the level and nature of the bank's CRE exposures, including any specific commitments to particular borrowers or property types, such as multifamily housing;
 - b. ensured that management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies;
 - c. reviewed information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including a review of reports that describe changes in the CRE market conditions in which the bank lends; and
 - d. periodically reviewed and approved CRE risk exposure limits and appropriate sub-limits (for example, by nature of concentration) to ensure they conform to any changes in the bank's strategies and respond to changes in market conditions.

Supervisory Oversight

2. Determine if the bank is (or is potentially) exposed to significant CRE credit concentration risk.
3. If the bank has experienced rapid growth in CRE lending or has notable exposure to a specific type of CRE, or if the bank is approaching or exceeds one or both of the following criteria, perform a preliminary analysis of the bank's CRE concentration risk:
 - a. Total loans for construction, land development, and other land represent 100 percent or more of the bank's total capital.
 - b. Total CRE loans represent 300 percent or more of the bank's total capital, and the

outstanding balance of the bank's CRE loan portfolio has increased by 50 percent or more during the prior 36 months.

Portfolio Management

4. Ascertain whether the bank manages not only the risk from individual loans but also portfolio risk. Find out if management—
 - a. regularly (1) evaluates the degree of correlation between related real estate sectors and (2) establishes internal lending guidelines and concentration limits that control the bank's overall risk exposure; and
 - b. develops appropriate strategies for managing CRE concentration levels, including the development of a contingency plan to reduce or mitigate concentrations during adverse CRE market conditions (such a plan may include strategies involving loan participations, whole loan sales, and securitizations).
 - Find out if the bank's contingency plan includes selling or securitizing CRE loans.
 - Ascertain if management periodically assesses the marketability of the CRE portfolio and evaluates the bank's ability to access the secondary market.
 - Verify whether the bank compares its underwriting standards with those that exist in the secondary market.

Management Information Systems

5. Evaluate whether management information systems (MIS) provide sufficient information to identify, measure, monitor, and manage CRE concentration risk (MIS should include information on CRE portfolio characteristics that are consistent with and relevant to the bank's lending strategy, underwriting standards, and risk tolerances).
6. Verify that management reporting is timely and in a format that clearly indicates changes in the portfolio's risk profile, including risk-rating migrations.

Market Analysis

7. Determine if management reporting includes a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses that are prepared in response to potential market events that could affect the CRE loan portfolio.
8. Find out if the bank's market analysis provides management and the board of directors with sufficient information to assess (1) the bank's CRE lending strategy and policies and (2) whether they continue to be appropriate in light of changes in CRE market conditions.

Credit-Underwriting Standards

9. Determine if CRE lending policies include the following underwriting standards:
 - a. maximum loan amount by type of property
 - b. loan terms
 - c. pricing structures
 - d. collateral valuation
 - e. loan-to-value (LTV) limits by property type
 - f. requirements for feasibility studies and sensitivity analyses or stress testing
 - g. minimum requirements for initial investment and maintenance of hard equity by the borrower
 - h. minimum standards for borrower net worth, property cash flow, and debt-service coverage for the property
10. Review the bank's permitted exceptions to its underwriting standards. Ascertain if the exceptions—
 - a. have been granted on a limited basis only; and
 - b. are supported by documentation and reports to management and the board of directors or a designated committee. The documentation and reports should indicate—
 - how the transactions did not conform to the bank's policy or underwriting standards;
 - whether appropriate management approvals were obtained; and
 - the details of the number and nature of and the justifications and trends for the exceptions.

11. Verify that exceptions to both the bank's internal lending standards and the Federal Reserve's supervisory LTV limits are monitored and reported on a regular basis.
12. Find out if the bank analyzes trends in its CRE lending exceptions in order to ensure that credit-underwriting risk remains within its established risk-tolerance limits.
13. Evaluate whether the bank's credit analyses reflect both the borrowers' overall credit-worthiness and project-specific considerations, as appropriate.
14. For the bank's development and construction loans, determine if—
 - a. the bank has policies and procedures governing loan disbursements in order to ensure that the bank's requirements for minimum borrower equity are maintained throughout the development and construction periods; and
 - b. prudent controls, including the following, are in place:
 - an inspection process
 - documentation of construction progress
 - tracking of pre-sold units
 - pre-leasing activity
 - exception monitoring and reporting

Portfolio Stress Testing and Sensitivity Analysis

15. When the bank has CRE concentrations, determine if it performs portfolio-level stress tests or sensitivity analyses in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital.
 - a. Ascertain if the bank considers the sensitivity of portfolio segments with common risk characteristics to potential market conditions.
 - b. Determine whether the sophistication of the bank's stress-testing practices and sensitivity analyses are consistent with the size, complexity, and risk characteristics of its CRE loan portfolio.
 - c. Evaluate whether the bank's sensitivity analyses focus on the more vulnerable segments of its CRE portfolio, considering its prevailing market environment and business strategy.

Credit-Review Function

16. Find out if the bank has a credit-review function, and if it is supported by a credit-risk rating system that is used to assess credit quality and identify problem loans.
17. Determine if (1) the bank's risk ratings are risk-sensitive, objective, and appropriate for the types of CRE loans underwritten and (2) the risk ratings are regularly reviewed.

EVALUATION OF CRE CONCENTRATIONS

1. Engage in a dialogue with bank management in order to assess the bank's CRE exposure levels and risk-management practices. If the bank has experienced recent, significant growth in CRE lending, perform an expanded review of the bank's risk in CRE concentrations, including a review of the bank's analysis of its CRE concentrations. Consider factors such as—
 - a. portfolio diversification across property types
 - b. the geographic dispersion of CRE loans
 - c. underwriting standards

- d. the level of pre-sold units or other types of take-out commitments on construction loans
- e. portfolio liquidity (the ability to sell or securitize exposures on the secondary market)

Assessment of Capital Adequacy

2. Evaluate whether the bank's holds capital commensurate with the risk profile of its CRE portfolios. Consider the level and nature of inherent risk in the bank's CRE portfolio, as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan-loss reserves allocated for CRE concentration risk.
3. If a bank has inadequate capital to serve as a buffer against unexpected losses from its CRE concentration, reach agreement with the bank's senior management and board of directors on the development of a plan to reduce the bank's CRE concentrations or to maintain capital that is appropriate and commensurate with the level and nature of the bank's CRE concentration risk.

Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices

Internal Control Questionnaire

Effective date October 2007

Section 2103.4

CRE CONCENTRATION ASSESSMENTS

1. Are ongoing risk assessments performed to identify commercial real estate (CRE) concentrations?
2. Are CRE concentration limits established and monitored?
3. Is the CRE portfolio stratified into reasonable and supportable segments that have common risk characteristics or sensitivities to economic, financial, or business developments?
4. Are all CRE concentrations reported to senior management and the board of directors on a periodic basis?

RISK MANAGEMENT

1. Has a risk-management framework been established that effectively identifies, monitors, and controls CRE concentration risk? If such a framework has been established, does it address—
 - a. board and management oversight?
 - b. portfolio management?
 - c. management information systems?
 - d. market analysis?
 - e. credit-underwriting standards?
 - f. portfolio stress testing and sensitivity analysis?
 - g. the credit-risk review function?

Board and Management Oversight

2. If the bank has significant CRE concentration risk, does it have a strategic plan that addresses the rationale for its CRE concentration levels in relation to the bank's overall growth objectives, financial targets, and capital plan?
3. Has the board of directors or its designated committee—
 - a. established policy guidelines and approved an overall CRE lending strategy for the level and nature of CRE exposures, including any specific com-

mitments to particular borrowers or property types, such as multifamily housing?

- b. ensured that the bank's management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies?
- c. reviewed information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including a review of reports that describe changes in the conditions of the CRE market in which the bank lends?
- d. periodically reviewed and approved CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) in order to conform to any changes in the bank's strategies and respond to changes in market conditions?

Portfolio Management

4. Does the bank's management regularly perform an analysis of its CRE portfolio, considering factors such as—
 - a. portfolio diversification across property types?
 - b. the geographic dispersion of CRE loans?
 - c. underwriting standards?
 - d. the level of pre-sold units or other types of take-out commitments on construction loans?
 - e. portfolio liquidity (the ability to sell or securitize exposures on the secondary market)?
5. Has the bank's board of directors and senior management—
 - a. (1) regularly evaluated the degree of correlation between related real estate sectors and (2) established internal lending guidelines?
 - b. established internal lending guidelines and concentration limits in order to control the bank's overall risk exposure?
 - c. developed appropriate strategies to manage CRE concentration levels?
6. Has the bank's management developed a

contingency plan to reduce or mitigate CRE loan concentrations during adverse market conditions? If the bank's contingency plan includes selling or securitizing CRE loans, has management periodically assessed the marketability of the portfolio?

Management Information System

7. Does the bank's management information system (MIS) provide sufficient information to identify, monitor, and manage CRE concentration risk?
8. Is the bank's CRE portfolio stratified by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating?
9. Does the bank's MIS identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives?
10. Are the bank's management reports timely and in a format that clearly indicates changes in the portfolio's risk profile?
11. Does the bank's management reporting include a well-defined process whereby management reviews and evaluates CRE concentrations, risk-management reports, and special ad hoc analyses prepared in response to potential market events that could affect the concentration risk in the bank's CRE portfolio?

Credit-Underwriting Standards

12. Are underwriting standards clear and measurable, and do they enable the bank's lending staff to evaluate relevant credit factors?
13. Do the bank's CRE lending policies address the following underwriting standards—
 - a. maximum loan amount by type of property?
 - b. loan terms?
 - c. pricing structures?
 - d. collateral valuation?
 - e. loan-to-value (LTV) limits by property type?
 - f. requirements for feasibility studies and sensitivity analyses or stress testing?
 - g. minimum requirements for initial investment and maintenance of hard equity by the borrower?
- h. minimum standards for borrower net worth, property cash flow, and debt-service coverage for the property?
14. Do the bank's lending policies permit exceptions to its underwriting standards for CRE concentrations on a limited basis only?
15. Are permitted exceptions documented; that is, do the documented exceptions describe how the loan transaction does not conform to the bank's lending policy or underwriting standards?
16. Does management analyze trends in exceptions to ensure that the bank's CRE concentration risk remains within established risk-tolerance limits?
17. Does the bank have policies and procedures governing loan disbursements in order to ensure that its minimum requirements for borrower equity are maintained throughout development and construction periods?
18. Do the bank's internal controls consist of an inspection process, documentation on construction progress, tracking of pre-sold units, tracking of pre-leasing activity, and exception monitoring and reporting?

Portfolio Stress Testing and Sensitivity Analysis

19. Are portfolio stress tests or sensitivity analyses performed in order to quantify the impact of changing economic conditions on asset quality, earnings, and capital?
20. If performed, are portfolio stress tests or sensitivity analyses required to focus on the more vulnerable segments of the bank's CRE portfolio? Do they take into consideration the prevailing market environment and the bank's business strategy?

Credit-Review Function

21. Does the bank have an effective, accurate, and timely risk-rating system that supports its credit-review function?
22. Are credit-risk ratings reviewed regularly for appropriateness?

INTRODUCTION

Floor-plan lending is a form of dealer-inventory financing in which each loan advance, which may be as much as 100 percent of the dealer's invoiced cost, is collateralized by a specific piece of inventory. As each unit of inventory is sold by the dealer, the loan advance against that unit of inventory is repaid. Floor-planned items typically have broad consumer demand. Items commonly subject to floor-plan debt are automobiles, large home appliances, furniture, televisions and stereo equipment, boats, mobile homes, and other types of merchandise usually sold under a sales-finance contract. Floor-plan financing involves all the basic risks inherent in any form of inventory financing. However, because of the high loan-to-value ratios typical of floor-plan financing, the exposure to loss is generally greater than in other types of inventory financing.

COLLATERAL

As with all inventory financing, collateral value is of prime importance. Control over collateral value requires the bank to determine the value at the time the loan is placed on the books, to periodically inspect the collateral to determine its condition and location, and to determine whether any curtailment payments¹ are needed to keep the loan balance in line with depreciating collateral values. As a general rule, curtailment payments are not required for new automobile models until the model year is approximately one-half over. Periodic curtailment payments are then expected to commence at some predetermined percentage of the amount financed.

Collateral Inspections

The examiner should determine whether the bank is inspecting the collateral frequently and

thoroughly enough to ensure compliance with the floor-plan agreement. Inspections should be conducted on a surprise basis. Floor-plan inspection reports should be reviewed and retained by the bank. Where practical, inspection duties should be rotated among the bank's staff. Banks should verify the floor-planned inventory by comparing serial numbers with manufacturers' certificates of origin or titles and to the bank's records, and the inspection reports should reflect whether the floor-planned inventory is available for sale. Any missing inventory or other exceptions revealed by the inspection, and the dealer's explanation, should be noted in the inspection report.

SECURITY INTEREST

In most banks, the security interest to floor-planned inventory is evidenced by a trust receipt.² Generally, trust receipts are created by two methods. First, the bank may enter into a drafting agreement with the manufacturer, which is similar to a letter of credit. In this situation, the bank agrees to pay documentary drafts covering shipments of merchandise to the dealer. The drafts are payable at the time the merchandise is received by the dealer or, if the manufacturer permits, after a grace period, which allows the dealer to prepare the inventory for sale. The drafting agreement usually limits the number of units, the per-unit cost, and the aggregate cost that can be shipped at one time. Drafting agreements are frequently used in conjunction with repurchase agreements when the manufacturer agrees to repurchase inventory that remains unsold after a specified period of time. The inventory and related title documents remain with the dealer until they are sold and are evidenced by a trust receipt. Banks should physically inspect all the documents during the floor-plan inspection to prevent dual financing.

Second, trust receipts are also created when merchandise is shipped under an invoice sys-

1. Curtailment payments are payments made by the dealer to the floor-plan lender when an item of floor-planned inventory is not sold during the anticipated time frame. The implicit assumption is that if the floor-planned inventory is not sold as anticipated, the inventory value depreciates over time. Unless a curtailment payment is made, the bank's loan-to-value ratio would increase and place the bank in a riskier position than desired.

2. A trust receipt is a document issued to the floor-plan lender by the dealer receiving the floor-plan financing. The trust receipt provides evidence that the dealer possesses the floor-planned inventory. It establishes the bank's rights to the inventory collateral and its proceeds or refers to other documents that set forth the rights of the bank.

tem. The dealer receives the inventory accompanied by invoices and titles, where appropriate. The dealer presents the documents to the bank and the bank pays the invoice, attaching duplicates of the documents to a trust receipt that is signed by the borrower. Depending on the type of inventory and the dealer, the title may remain in the bank or be released. For example, used car inventories are usually financed with trust receipts listing each item of the inventory and its loan value.

The method of perfecting a security interest varies from state to state, and there can be divergences from the Uniform Commercial Code. The examiner should determine that the security interest has been properly perfected. For a detailed discussion of the UCC requirements regarding secured transactions, refer to section 2080.1, "Commercial and Industrial Loans."

BANK/DEALER RELATIONSHIP

Two important facets of the bank's relationship with a dealer are (1) the quality of the paper generated and (2) the deposit account maintained. The income derived from a floor-plan loan may not be sufficient to justify the credit risk. However, additional income derived from quality loans to purchasers of the dealer's inventory may justify the credit risk. If the bank is not receiving an adequate portion of loans generated by the dealer or if the paper is of inferior quality, the relationship is of questionable value to the bank. The dealer's deposit relationship represents both a compensating balance and a tool by which the loan officer can monitor customer activity. A review of the flow of funds into and out of the dealer's account may suggest that inventory has been sold without debt reduction, that the dealer is incurring abnormal expenses, or that unreported diversification, expansion, or other financial activity has occurred that might warrant a reconsideration of the credit arrangement. Token or overdrawn balances should also trigger increased attention to the value of the relationship.

DEALER FINANCIAL ANALYSIS

Many dealers have minimal liquidity and capital relative to total debt. Therefore, the bank should closely and frequently review the dealer's finan-

cial information. Annual and interim financial statements are necessary to monitor the dealer's condition. Interim financial statements are often in the form of monthly financial reports to the dealer's franchiser. In analyzing the data, the bank should review the number of units sold and the profitability of those sales, as well as compare the number of units sold with the number financed to determine that inventory levels are reasonable.

Inventory will invariably be a dealer's primary asset, and its acquisition will normally create the dealer's major liability. The dealer's financial statement should show an inventory figure at least equal to the related flooring liability. Unless the difference is represented by short-term sales receivables, including contracts in transit, a floor-plan liability that is greater than the amount of inventory is an indication that the dealer has sold inventory and has not made the appropriate loan payment. To assess credit quality, it is essential that the examiner closely evaluate the level of floor-plan debt relative to inventory.

IDENTIFYING PROBLEMS

Missing inventory, reportedly sold and unpaid, should be verified to related contracts-in-process. Time to collect on contracts-in-process should be reasonable and conform to the floor-plan agreement. Floor-planned inventory sold and *not* in the process of payment is termed "sold out of trust" and represents a breach of trust by the dealer—and a significant exposure to the bank.

During floor-plan inspections, recurring out-of-trust positions that are not cleared in a reasonable time frame (three to five days) should be a red flag. If a bank discovers that a dealer is deliberately withholding funds or diverting funds received from the sale of pledged inventory, bank officials should meet with the borrower to discuss this situation and, if appropriate, consider terminating the lending relationship. Banks should avoid complicated situations in which they finance only part of the dealer's floor-plan debt that originates from one particular manufacturer or distributor. Other warning signs banks should be aware of include interest or curtailment payment delinquencies, extended maturities beyond reasonable expectations, slow-moving inventory, and the absence of interim financial statements.

LOAN POLICY

The bank's loan policy should establish sound standards to control the credit and operational risks associated with floor-plan lending. At a minimum, the policy should address the need

for detailed tri-party (manufacturer, dealer, and banker) floor-plan agreements, loan-to-value requirements, the percentage amount and timing of curtailment payments, inspection standards, and the frequency for obtaining and evaluating financial statements.

Floor-Plan Loans

Examination Objectives

Effective date May 1996

Section 2110.2

1. To determine if policies, practices, procedures, and internal controls for floor-plan loans are adequate.
2. To determine if bank officers are conforming to established guidelines.
3. To evaluate the quality of the loan portfolio and the sufficiency of its collateral.
4. To determine the scope and effectiveness of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Floor-Plan Loans

Examination Procedures

Effective date November 2003

Section 2110.3

1. If selected for implementation, complete or update the floor-plan loans section of the internal control questionnaire.
2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal or external auditors from the examiner assigned to internal control, and determine if corrections have been accomplished.
4. Request that the bank supply the following:
 - a. schedule of curtailment requirements for each dealer
 - b. schedule of approved floor-plan lines for each dealer, including outstanding balances
 - c. delinquent curtailment billing report
 - d. drafting agreements and amount of outstanding drafts
 - e. delinquent interest billings, date billed, and amount of past-due interest
5. Obtain a trial balance of all floor-plan accounts.
 - a. Agree balances to department controls and general ledger.
 - b. Review reconciling items for reasonableness.
6. Using an appropriate technique, select borrowers for examination.
7. Using the trial balance, transcribe the following information for each borrower selected onto the credit line cards:
 - a. total outstanding liability
 - b. number of items
 - c. status of any outstanding interest or curtailment billings
 - d. amount of approved floor-plan line
8. Obtain liability and other information on common borrowers from examiners assigned to overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.
9. Obtain from the bank or appropriate examiner the following schedules, if applicable to this area:
 - a. past-due loans
 - b. loans in a nonaccrual status
 - c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be given to loans that have been renewed with interest being rolled into principal.)
 - d. loans whose terms have been modified by a reduction on interest rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
 - e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
 - f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
 - g. loan commitments and other contingent liabilities
 - h. extensions of credit to employees, officers, directors, and principal shareholders and their interests specifying which officers are considered executive officers
 - i. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
 - j. a list of correspondent banks
 - k. miscellaneous loan-debit and credit-suspense accounts
 - l. loans considered "problem loans" by management
 - m. specific guidelines in the lending policy
 - n. each officer's current lending authority
 - o. current interest-rate structure
 - p. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
 - q. reports furnished to the loan and discount committee or any similar committee
 - r. reports furnished to the board of directors
 - s. loans classified during the previous examination
10. Review the information received, and perform the following procedures.
 - a. *Loans transferred, either in whole or in part, to or from another lending institu-*

tion as a result of a participation, sale or purchase, or asset swap.

- Participations only:
 - Test participation certificates and records, and determine that the parties share in the risks and contractual payments on pro rata basis.
 - Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
- Procedures pertaining to *all* transfers:
 - Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
 - Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
 - Determine that low-quality loans transferred to (but not purchased) or from the bank are properly reflected on its books at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium). Section 23A of the Federal Reserve Act prohibits a state member bank from purchasing low-quality assets.
 - Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.
 - If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as

applicable:

- (1) name of originating institution
 - (2) name of receiving institution
 - (3) type of transfer (i.e., participation, purchase or sale, swap)
 - (4) date of transfer
 - (5) total number of loans transferred
 - (6) total dollar amount of loans transferred
 - (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
 - (8) any other information that would be helpful to the other regulator
- b. *Miscellaneous loan-debit and credit-suspense accounts.*
 - Discuss with management any large or old items.
 - Perform additional procedures as deemed appropriate.
 - c. *Loans classified during the previous examination.* Determine the disposition of loans so classified by reviewing—
 - current balances and payment status,
 - date loan was repaid and sources of payment, and
 - any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale or swap, refer to step 10a of this section for the appropriate examination procedures.
 - d. *Loan commitments and other contingent liabilities.* Analyze whether—
 - the borrower has been advised of the contingent liability, and
 - the combined amounts of the current loan balance and the commitment or contingent liability exceeds the cutoff.
 - e. Select loans that require in-depth review on the basis of the information derived from the above schedules.
11. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See“ Instructions for the Report of Exami-

- nation,” section 6000.1, for considerations to be taken into account when compiling maturity information for the gap analysis.
12. For those loans selected in step 6 and for any other loans selected while performing the above steps—
 - a. transcribe the following information from the bank’s collateral record onto the credit line card:
 - a list of items floored, including date of entry, description of property, amount advanced, and curtailment, if any (Similar items and model year should be shown in aggregate, and entry dates should be shown as a range, except on stale or not properly curtailed items.)
 - a summary of the wholesale agreement between the bank and the dealer
 - a summary of the agreement between the manufacturer and the bank
 - a summary of any repurchase agreement
 - evidence that security interest has been perfected
 - details of any guarantees that may be held
 - details of any other collateral held
 - b. review the two most recent floor-plan inspection reports and determine—
 - if any items were sold out of trust,
 - that where trust receipts were used, all title documents were physically inspected, and
 - that appropriate follow-up was made on all missing items.
 13. Determine compliance with laws and regulations pertaining to floor-plan loans by performing the following steps.
 - a. *Lending limits.*
 - Determine the bank’s lending limits as prescribed by state law.
 - Determine advances or combinations of advances with aggregate balances above the limit, if any.
 - b. *18 USC 215, Commission or Gift for Procuring Loan.*
 - While examining the floor-plan loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
 - Investigate any such suspected situation.
 - c. *12 USC 1972, Tie-In Provisions.* While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon—
 - obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
 - the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit.
 - d. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):
 - *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Interests.* While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
 - test the accuracy and completeness of information about floor-plan loans by comparing it with the trial balance or loans sampled;
 - review credit files on insider loans to determine that required information is available;
 - determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
 - determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
 - determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the

- lending limits imposed by those sections;
- if prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained;
 - determine compliance with the various reporting requirements for insider loans;
 - determine that the bank has made provisions to comply with the public disclosure requirements for insider loans; and
 - determine that the bank maintains records of public disclosure requests and the disposition of the requests for a period of two years after the date of the requests.
- *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
 - Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
 - Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.
14. Perform the appropriate procedural steps in "Concentrations of Credit," section 2050.3.
 15. Discuss with appropriate officers, and prepare summaries in appropriate report form for—
 - a. delinquent loans;
 - b. extensions of credit to employees, officers, directors, and/or their interests;
 - c. loans on which collateral documentation is deficient;
 - d. transfers of low-quality loans to or from another lending institution;
 - e. the adequacy of written policies relating to floor-plan loans;
 - f. the manner in which bank officers are conforming with established policy;
 - g. schedules applicable to the department that were discovered to be incorrect or incomplete;
 - h. the performance of departmental management;
 - i. internal control deficiencies or exceptions;
 - j. recommended corrective action when policies, practices, or procedures are deficient; and
 - k. other matters of significance.
 16. Update the workpapers with any information that will facilitate future examinations.

Review the bank's internal controls, policies, practices and procedures for making and servicing floor plan loans. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written floor plan loan policies that:
 - a. Establish procedures for reviewing floor plan applications?
 - b. Define qualified borrowers, overall limits, and types of merchandise to be floor planned?
 - c. Establish minimum standards for documentation?
 - d. Establish curtailment amounts and time limits?
2. Are floor plan loan policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary floor plan loan records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
4. Are the subsidiary floor plan loan records reconciled daily with the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?
- *5. Are delinquent account collection requests and past-due notices checked to the trial balances used in reconciling floor plan subsidiary records with general ledger accounts, and are they handled only by persons who do not also handle cash?
- *6. Are inquiries about loan balances received and investigated by persons who do not also handle cash?

- *7. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash (if so, explain briefly)?
8. Is a daily record maintained summarizing note transaction details, i.e., loans made, payments received and interest collected, to support applicable general ledger account entries?
9. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
10. Is an overdue account report generated frequently (if so, state frequency _____)?

LOAN INTEREST

- *11. Is the preparation and posting of interest records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts singly?
 - b. Handle cash?
12. Are any independent interest computations made and compared or adequately tested to initial interest records by persons who do not also:
 - a. Issue official checks or drafts singly?
 - b. Handle cash?

COLLATERAL

13. Are floor plan checks, physical inventories, conducted at least monthly and on a surprise basis (if so, state frequency _____)?
14. Are more frequent floor plan checks required if the dealer is experiencing financial difficulties?
15. Are individuals performing floor plan checks rotated?
16. Are floor plan inspector(s) required to determine or verify the following and indicate their findings on the floor plan check sheet:
 - a. Serial number of item?
 - b. Odometer reading of vehicles?
 - c. Condition of item?

- d. Location of item, if other than normal place of business?
- e. Existence of any fire or theft hazards?
17. Does the floor plan inspector include on the check sheet:
 - a. Date inspection was performed?
 - b. Date any item located elsewhere was checked?
 - c. His or her signature?
 - d. Summary of his or her report, if appropriate?
18. Are all demonstrators checked?
19. Are floor plan reports reviewed by an officer?
20. Are follow-up inspections made of items not seen during the regular inspection?
21. Are items reported by the dealer as being sold, required to be paid off immediately?
22. Does the floor plan inspector determine the date that item(s) reported as sold were sold from that on the dealer's copy of the sales agreement?
23. Are dealer sales patterns reviewed to determine that the number of units reported sold at the time of floor plan inspection is not excessive and does not indicate a float?
24. Are payments-in-process reported by the dealer during floor plan inspection verified by bank personnel?
25. When a dealer trade or "swap" occurs, does the bank:
 - a. Obtain the manufacturer's invoice from the selling dealer on the new unit acquired?
 - b. Obtain the invoice from the borrowing dealer for the new unit?
 - c. Have a trust receipt executed on the new unit?
26. Does the bank have a procedure to check all indirect paper received from a dealer against the trust receipts of items floored for that dealer to determine that there is no duplication of loans against the same security?
27. Does the bank have floor plan property damage insurance or require that the dealer maintain such coverage with the bank named as loss payee?
28. Is the insurance coverage periodically reviewed for adequacy?
29. Are all trust receipts required to be supported by invoices or other evidence that title to the security is vested in the bank?
30. Are trust receipts required to include:
 - a. Description of each item?
 - b. Serial number of each item?
 - c. Loan amount for each item?
 - d. Interest rate?
 - e. Date?
 - f. Authorized signature of dealer or person holding power-of-attorney to execute the trust receipt?
31. If the bank and dealer permit a bank employee to execute trust receipts using the dealer's power-of-attorney:
 - a. Are proper documents on file granting the power-of-attorney?
 - b. Does the bank maintain a numbered register for trust receipt notes?
 - c. Are trust receipt notes under dual control?

OTHER

32. Are all floor plan loans granted under an established line?
33. Are line approvals structured to permit the bank to cancel or suspend shipments of unwanted merchandise?
34. Are dealer floor plan line limits strictly adhered to?
35. Is a trial balance of each dealer's trust receipts/security agreements prepared at least monthly?
36. Are dealer trial balances reconciled to department and general ledger controls?
37. Are floor plan interest charges systematically computed and regularly billed?
38. Are notices of past due interest payments sent promptly?
39. Are all interest, curtailment and unit pay off payments from dealers posted promptly?
40. Are disbursements for floor plan loans on new units made only against the original copy of the manufacturer's invoices?
41. Are the original invoices retained in the bank's files?
42. Are loan proceeds on new units paid directly to the manufacturer rather than to the dealer?
43. Are accounting records established so that the bank has records of all floored items with adequate individual identification?
44. Are limits on loan advance versus invoice price (current wholesale value, if used) clearly established?
45. Are wholesale values determined independently of dealer appraisals?

46. Are wholesale values that are assigned by floor plan department personnel periodically reviewed by someone independent of the department?
 47. Is amount of loan advance prohibited from exceeding 100 percent of the invoice price of a new item or of the wholesale value of a used item?
 48. Has a curtailment policy been established and is it being followed?
 49. Does the policy provide proper incentives to the dealer to turn over inventory on a timely basis?
 50. Is the loan written so that the floored items never depreciate faster than the loan balance is reduced?
 51. If a manufacturer of floored items has entered into a repurchase agreement, are curtailments structured to keep the loan balance in line with any declining repurchase amount?
 52. Are records maintained on curtailment billings so that delinquency is easily determinable?
 53. Are notices of past due curtailment payments sent promptly?
 54. If assignment of rebates has been made, have procedures been established to ensure that factory rebate checks payable at the end of the model year are promptly forwarded to the bank?
 55. If demonstrators are floored, are they subject to separate curtailment requirements which keep the loan balance in line with their liquidation value?
 56. Are floor plan agreements required for all dealers?
 57. Must agreements be accompanied by borrowing resolutions?
 58. Is a written agreement between the manufacturer and the bank required on any flooring line which includes drafting arrangements with the manufacturer?
 59. Do such agreements with the manufacturer stipulate under what conditions the bank will accept items to be floored?
 60. Are checks made periodically to determine that only those individuals granted power-of-attorney are signing the trust receipts?
 61. Are dealers required to submit financial and operating statements on a continuing basis?
 62. Are all dealers who prepare internal financial and operating statements more frequently than annually required to submit copies of those statements to the bank?
 63. Are all financial statements received from dealers reviewed promptly?
 64. Do financial statement reviews include a determination that floor plan loans, deposit accounts and other information agree with the bank's records?
 65. Are periodic reviews made of deposit accounts to detect any possible out-of-trust sales?
 66. Are periodic reviews made of the retail paper being generated to determine if the bank is receiving an adequate portion?
- ## CONCLUSION
67. Does the foregoing information constitute an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
 68. Based on a composite evaluation as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Leveraged financing is an important financing vehicle for mergers and acquisitions, business recapitalizations, and business expansions. Leveraged transactions are characterized by a degree of financial leverage that significantly exceeds industry norms, as measured by ratios such as debt-to-assets, debt-to-equity, cash flow-to-total debt, or other ratios and standards unique to particular industry norms for leverage. Leveraged borrowers typically have a diminished ability to respond to changing economic conditions or unexpected events, creating significant implications for an institution's overall credit-risk exposure and challenges for bank risk-management systems.

Leveraged-finance activities can be conducted in a safe and sound manner if a risk-management structure provides appropriate underwriting, pricing, monitoring, and controls. Comprehensive credit-analysis processes, frequent monitoring, and detailed portfolio reports are needed to better understand and manage the inherent risk in these leveraged-finance portfolios.

Many leveraged transactions are underwritten with reliance on the imputed value of a business (enterprise value), which is often highly volatile. Sound valuation methodologies must be used for these types of transactions, in addition to ongoing stress testing and monitoring of enterprise values.

On April 9, 2001, the Federal Reserve, along with the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision, issued the following guidance concerning sound risk-management practices for institutions engaged in leveraged financing.¹ The statement also provides guidance about risk-rating for leveraged-finance loans and how enterprise value should be evaluated in the risk-rating process. (See SR-01-9.) (The introductory paragraphs and some other material have been omitted from the policy statement here, as indicated by a line of asterisks. Other wording has been slightly altered, as indicated by brackets.)

1. This guidance augments previously issued supervisory statements on sound credit-risk management. See SR-99-23, "Recent Trends in Bank Lending Standards for Commercial Loans," and SR-98-18, "Lending Standards for Commercial Loans." (See also sections 2040.1, "Loan Portfolio Management," and 2040.3, "Examination Procedures—Loan Portfolio Management.")

INTERAGENCY STATEMENT ON LEVERAGED FINANCING

* * * * *

Institutions participate in leveraged financing on a number of levels. In addition to providing senior secured financing, they extend credit on a subordinated basis (mezzanine financing). Institutions and their affiliates also may take equity positions in leveraged companies with direct investments through affiliated securities firms, small business investment companies (SBICs), and venture capital companies or take equity interests via warrants and other equity "kickers" received as part of a financing package. Institutions also may invest in leveraged loan funds managed by investment banking companies or other third parties. Although leveraged financing is far more prevalent in large institutions, this type of lending can be found in institutions of all sizes * * * The extent to which institutions should apply these sound practices will depend on the size and risk profile of their leveraged exposures relative to assets, earnings, and capital; and the nature of their leveraged-financing activities (i.e., origination and distribution, participant, equity investor, etc.) * * *

Risk-Management Guidelines

[Institutions substantively engaged in leveraged financing are expected to] adequately risk-rate, track, and monitor these transactions and to maintain policies specifying conditions that would require a change in risk rating, accrual status, loss recognition, or reserves. In general, the risk-management framework for leveraged finance is no different from that which should be applied to all lending activities. However, because of the potential higher level of risk, the degree of oversight should be more intensive.

Loan Policy

The loan policy should specifically address the institutions' leveraged-lending activities by including—

- a definition of leveraged lending;

- an approval policy that requires sufficient senior-level oversight;
- pricing policies that ensure a prudent tradeoff between risk and return; and
- a requirement for action plans whenever cash flow, asset-sale proceeds, or collateral values decline significantly from projections. Action plans should include remedial initiatives and triggers for rating downgrades, changes to accrual status, and loss recognition.

Underwriting Standards

Either the loan policy or separate underwriting guidelines should prescribe specific underwriting criteria for leveraged financing. The standards should avoid compromising sound banking practices in an effort to broaden market share or realize substantial fees. The policy should—

- describe appropriate leveraged loan structures;
- require reasonable amortization of term loans (i.e., allow a moderate time period to realize the benefit of synergies or augment revenues and institute meaningful repayment);
- specify collateral policies including acceptable types of collateral, loan-to-value limits, collateral margins, and proper valuation methodologies;
- establish covenant requirements, particularly minimum interest and fixed-charge coverage and maximum leverage ratios;
- describe how enterprise values and other intangible business values may be used; and
- establish minimum documentation requirements for appraisals and valuations, including enterprise values and other intangibles.

Limits

Leveraged-finance and other loan portfolios with above-average default probabilities tend to behave similarly during an economic or sectoral downturn. Consequently, institutions should take steps to avoid undue concentrations by setting limits consistent with their appetite for risk and their financial capacity. Institutions should ensure that they monitor and control as separate risk concentrations those loan segments most vulnerable to default. Institutions may wish to identify such concentrations by the leveraged character-

istics of the borrower, by the institution's internal-risk grade, by particular industry or other factors that the institution determines are correlated with an above-average default probability. In addition, sublimits may be appropriate by collateral type, loan purpose, industry, secondary sources of repayment, and sponsor relationships. Institutions should also establish limits for the aggregate number of policy exceptions.

Credit Analysis

Effective management of leveraged-financing risk is highly dependent on the quality of analysis during the approval process and after the loan is advanced. At a minimum, analysis of leveraged-financing transactions should ensure that—

- cash-flow analyses do not rely on overly optimistic or unsubstantiated projections of sales, margins, and merger and acquisition synergies;
- projections provide an adequate margin for unanticipated merger-related integration costs;
- projections are stress-tested for one or two downside scenarios;
- transactions are reviewed quarterly to determine variance from financial plans, the risk implications thereof, and the accuracy of risk ratings and accrual status;
- collateral valuations are derived with a proper degree of independence and consider potential value erosion;
- collateral-liquidation and asset-sale estimates are conservative;
- potential collateral shortfalls are identified and factored into risk-rating and accrual decisions;
- contingency plans anticipate changing conditions in debt or equity markets when exposures rely on refinancing or recapitalization; and
- the borrower is adequately protected from interest-rate and foreign-exchange risk.

Enterprise Value

Enterprise value is often relied upon in the underwriting of leveraged loans to evaluate the feasibility of a loan request, determine the debt-reduction potential of planned asset sales, assess a borrower's ability to access the capital

markets, and to provide a secondary source of repayment. Consideration of enterprise value is appropriate in the credit-underwriting process. However, enterprise value and other intangible values can be difficult to determine, are frequently based on projections, and may be subject to considerable change. Consequently, reliance upon them as a secondary source of repayment can be problematic.

Because enterprise value is commonly derived from the cash flows of a business, it is closely correlated with the primary source of repayment. This interdependent relationship between primary and secondary repayment sources increases the risk in leveraged financing, especially when credit weaknesses develop. Events or changes in business conditions that negatively affect a company's cash flow will also negatively affect the value of the business, simultaneously eroding both the lender's primary and secondary source of repayment. Consequently, lenders that place undue reliance upon enterprise value as a secondary source of repayment or that utilize unrealistic assumptions to determine enterprise value are likely to approve unsound loans at origination or experience outside losses upon default.

It is essential that institutions establish sound valuation methodologies for enterprise value, apply appropriate margins to protect against potential changes in value, and conduct ongoing stress testing and monitoring.

Rating Leveraged-Finance Loans

Institutions need thoroughly articulated policies that specify requirements and criteria for risk-rating transactions, identifying loan impairment, and recognizing losses. Such specificity is critical for maintaining the integrity of an institution's risk-management system. Institutions' internal rating systems should incorporate both the probability of default and loss given default in their ratings to ensure that the risk of the borrower and the risk of the transaction structure itself are clearly evaluated. This is particularly germane to leverage-finance-transactions structures, which in many recent cases have resulted in large losses upon default.

In cases where a borrower's condition or future prospects have significantly weakened, leveraged-finance loans will likely merit a substandard classification based on the existence of well-defined weaknesses. If such weaknesses

appear to be of a lasting nature and it is probable that a lender will be unable to collect all principal and interest owed, the loan should be placed on nonaccrual and will likely have a doubtful component. Such loans should be reviewed for impairment in accordance with FAS 114, "Accounting by Creditors for Impairment of a Loan."

If the primary source of repayment is inadequate and a loan is considered collateral-dependent, it is generally inappropriate to consider enterprise value unless the value is well supported. Well-supported enterprise values may be evidenced by a binding purchase and sale agreement with a qualified third party or through valuations that fully consider the effect of the borrower's distressed circumstances and potential changes in business and market conditions. For such borrowers, where a portion of the loan is not protected by pledged assets or a well-supported enterprise value, examiners will generally classify the unprotected portion of the loan doubtful or loss.

In addition, institutions need to ensure that the risks in leveraged-lending activities are fully incorporated in the allowance-for-loan-and-lease-loss and capital-adequacy analysis. For allowance purposes, leverage exposures should be taken into account either through analysis of the expected losses from the discrete portfolio or as part of an overall analysis of the portfolio utilizing the institution's internal risk grades or other factors. At the transaction level, exposures heavily reliant on enterprise value as a secondary source of repayment should be scrutinized to determine the need for and adequacy of specific allocations.

Problem-Loan Management

For adversely rated borrowers and other high-risk borrowers who significantly depart from planned cash flows, asset sales, collateral values, or other important targets, institutions should formulate individual action plans with critical objectives and time frames. Actions may include working with the borrower for an orderly resolution while preserving the institution's interests, sale in the secondary market, and liquidation. Regardless of the action, examiners and bankers need to ensure such credits are reviewed regularly for risk-rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.

Portfolio Analysis

Higher-risk credits, including leveraged-finance transactions, require frequent monitoring by banking organizations. At least quarterly, management and the board of directors should receive comprehensive reports about the characteristics and trends in such exposures. These reports at a minimum should include—

- total exposure and segment exposures, including subordinated debt and equity holdings, compared to established limits;
- risk-rating distribution and migration data;
- portfolio performance—noncompliance with covenants, restructured loans, delinquencies, nonperforming assets, and impaired loans; and
- compliance with internal procedures and the aggregate level of exceptions to policy and underwriting standards.

Institutions with significant exposure levels to higher-risk credits should consider additional reports covering—

- collateral composition of the portfolio, e.g., percentages supported by working assets, fixed assets, intangibles, blanket liens, and stock of borrower's operating subsidiaries;
- unsecured or partially secured exposures, including potential collateral shortfalls caused by defaults that trigger *pari passu* [equable] collateral treatment for all lender classes;
- absolute amount and percentage of the portfolio dependent on refinancing, recapitalization, asset sales, and enterprise value;
- absolute amounts and percentages of scheduled and actual annual portfolio amortizations; and
- secondary-market pricing data and trading volume for loans in the portfolio.

Internal Controls

Institutions engaged in leveraged finance need to ensure their internal-review function is appropriately staffed to provide timely, independent assessments of leveraged credits. Reviews should evaluate risk-rating integrity, valuation methodologies, and the quality of risk management. Because of the volatile nature of these credits, portfolio reviews should be conducted on at least an annual basis. For many institutions, the

risk characteristics of the leveraged portfolio, such as high reliance on enterprise value, concentrations, adverse risk-rating trends or portfolio performance, will dictate more frequent reviews.

Distributions

Asset sales, participations, syndication, and other means of distribution are critical elements in the rapid growth of leveraged financing. [Lead and purchasing institutions are expected] to adopt formal policies and procedures addressing the distribution and acquisition of leveraged-financing transactions. The policies should include—

- procedures for defining, managing, and accounting for distribution fails;
- identification of any sales made with recourse and procedures for fully reflecting the risk of any such sales;
- a process to ensure that purchasers are provided with timely, current financial information;
- a process to determine the portion of a transaction to be held in the portfolio and the portion to be held for sale;
- limits on the length of time transactions can be held in the held-for-sale account and policies for handling items that exceed those limits;
- prompt recognition of losses in market value for loans classified as held-for-sale; and
- procedural safeguards to prevent conflicts of interest for both bank and affiliated securities firms.

Participations Purchased

Institutions purchasing participations and assignments in leveraged finance must make a thorough, independent evaluation of the transaction and the risks involved before committing any funds. They should apply the same standards of prudence, credit assessment and approval criteria, and “in-house” limits that would be employed if the purchasing organization were originating the loan. At a minimum, policies should include requirements for—

- obtaining and independently analyzing full credit information both before the participa-

tion is purchased and on a timely basis thereafter;

- obtaining from the lead lender copies of all executed and proposed loan documents, legal opinions, title insurance policies, UCC searches, and other relevant documents;
- carefully monitoring the borrower's performance throughout the life of the loan; and
- establishing appropriate risk-management guidelines as described in this [statement.]

Process To Identify Potential Conflicts

Examiners should determine whether an institution's board of directors and management have established policies for leveraged finance that minimize the risks posed by potential legal issues and conflicts of interest.

Conflicts of Interest

When a banking company plays multiple roles in leveraged finance, the interests of different customers or the divisions of the institution may conflict. For example, a lender may be reluctant to employ an aggressive collection strategy with a problem borrower because of the potential impact on the value of the organization's equity interest. A lender may also be pressured to provide financial or other privileged client information that could benefit an affiliated equity investor. Institutions should develop appropriate policies to address potential conflicts of interest. Institutions should also track aggregate totals for borrowers and sponsors to which it has both a lending and equity relationship. Appropriate limits should be established for such relationships.

Securities Laws

Equity interests and certain debt instruments used in leveraged lending may constitute "securities" for the purposes of federal securities laws. When securities are involved, institutions should ensure compliance with applicable securities law requirements, including disclosure and regulatory requirements.² Institutions

2. Institutions should also ensure that their acquired equity positions are consistent with equity ownership restrictions imposed by federal and state laws, such as the Bank Holding

should also establish procedures to restrict the internal dissemination of material nonpublic information about leveraged-finance transactions.

Compliance Function

The legal and regulatory issues raised by leveraged transactions are numerous and complex. To ensure that potential conflicts are avoided and laws and regulations are adhered to, an independent compliance function should review all leveraged-financing activity.

* * * * *

EXAMINATION RISK-RATING GUIDANCE FOR LEVERAGED FINANCING

When evaluating individual borrowers, examiners should pay particular attention to—

- the overall performance and profitability of a borrower and its industry over time, including periods of economic or financial adversity;
- the history and stability of a borrower's market share, earnings, and cash flow, particularly over the most recent business cycle and last economic downturn; and
- the relationship between a borrowing company's projected cash flow and debt-service requirements and the resulting margin of debt-service coverage.

Cash Flow/Debt-Service Coverage

Particular attention should be paid to the adequacy of the borrower's cash flow and the reasonableness of projections. Before entering into a leveraged-financing transaction, bankers should conduct an independent, realistic assessment of the borrower's ability to achieve the projected cash flow under varying economic and interest-rate scenarios. This assessment should take into account the potential effects of an economic downturn or other adverse business

Company Act and the Federal Reserve Act. Institutions need to take special care to aggregate all the equity positions held throughout the entire organization, including those held in all banking and nonbanking subsidiaries. [footnote added]

conditions on the borrower's cash flow and collateral values. Normally bankers and examiners should adversely rate a credit if material questions exist as to the borrower's ability to achieve the projected necessary cash flows, or if orderly repayment of the debt is in doubt. Credits with only minimal cash flow for debt service are usually subject to an adverse rating.

Enterprise Value

Many leveraged-financing transactions rely on "enterprise value" as a secondary source of repayment. Most commonly, enterprise value is based on a "going concern" assumption and derived from some multiple of the expected income or cash flow of the firm. The methodology and assumptions underlying the valuation should be clearly disclosed, well supported, and understood by appropriate decision makers and risk-oversight units. Examiners should ensure that the valuation approach is appropriate for the company's industry and condition.

Enterprise value is often viewed as a secondary source of repayment and as such would be relied upon under stressful conditions. In such cases the assumptions used for key variables such as cash flow, earnings, and sale multiples should reflect those adverse conditions. These variables can have a high degree of uncertainty—sales and cash-flow projections may not be achieved; comparable sales may not be available; changes can occur in a firm's competitive position, industry outlook, or the economic environment. Because of these uncertainties, changes in the value of a firm's assets need to be tested under a range of stress scenarios, includ-

ing business conditions more adverse than the base-case scenario. Stress testing of enterprise values and their underlying assumptions should be conducted upon origination of the loan and periodically thereafter incorporating the actual performance of the borrower and any adjustments to projections. The bank should in all cases perform its own discounted-cash-flow analysis to validate "enterprise value" implied by proxy measures such as multiples of cash flow, earnings or sales.

Finally, it must be recognized that valuations derived with even the most rigorous valuation procedures are imprecise and may not be realized when needed by an institution. Therefore, institutions relying on enterprise value or illiquid and hard-to-value collateral must have lending policies that provide for appropriate loan-to-value ratios, discount rates and collateral margins.

Deal Sponsors

Deal sponsors can be an important source of financial support for a borrower that fails to achieve cash-flow projections. However, support from this source should only be considered positively in a risk-rating decision when the sponsor has a history of demonstrated support as well as the economic incentive, capacity, and stated intent to continue to support the transaction. Even with capacity and a history of support, a sponsor's potential contributions should not mitigate criticism unless there is clear reason to believe it is in the best interests of the sponsor to continue that support or unless there is a formal guarantee.

Leveraged Financing

Examination Objectives

Effective date November 2001

Section 2115.2

1. To obtain assurances that the institution maintains sound lending standards.
2. To ensure that the institution's risk-management structure provides for appropriate underwriting, pricing, monitoring, and controls over leveraged-financing transactions.
3. To assess whether the institution uses comprehensive credit-analysis processes, whether frequent and continuous monitoring exists, and whether detailed portfolio reports are prepared and used to better understand and manage the inherent risk in leveraged-finance portfolios.
4. To ensure the institution uses sound valuation methodologies, conducts ongoing stress testing, and monitors enterprise values for leveraged-financing transactions.
5. To determine whether the institution's leveraged-financed loans are risk-rated and how enterprise values are evaluated in the risk-rating process.

Leveraged Financing Examination Procedures

Effective date November 2001

Section 2115.3

1. Ascertain that the institution has established procedures for determining which credits should be regarded as constituting “leveraged financing.”
2. Determine that the institution regularly reviews its leveraged-financing credits for their risk-rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.
3. Ascertain whether an institution’s board of directors and management have established policies for leveraged financing that minimize the risks of potential legal issues and conflicts of interest.
4. When reviewing leveraged-financing credits, give particular attention to—
 - the overall performance and profitability of a borrower and its industry over time, including periods of economic or financial adversity;
 - the history and stability of a borrower’s market share, earnings, and cash flow, particularly over the most recent business cycle and last economic downturn; and
 - the relationship between a borrowing company’s projected cash flow and debt-service requirements, the resulting margin of debt-service coverage, and actual performance.
5. Determine if the institution’s leveraged-finance rating systems incorporate both the probability of default and a realistic assessment of likely loss amounts in a troubled situation.
6. When a borrower’s condition or future prospects have significantly weakened, consider whether the leveraged-finance loans will likely merit an adverse rating based on the existence of well-defined weaknesses. If such weaknesses appear to be of a lasting nature and it is probable that a lender will be unable to collect all principal and interest owed, the loan should be placed on nonaccrual.¹
7. Determine whether the valuation approach used for the leverage financing is appropriate for the company’s industry and condition.
8. When reviewing leveraged loans that are collateral-dependent, determine whether the loans are well protected by pledged assets or whether enterprise values are well supported.

1. These loans should also be reviewed for impairment in accordance with Financial Accounting Standard No. 114 (FAS 114), “Accounting by Creditors for Impairment of a Loan.”

INTRODUCTION

Leasing is a recognized form of financing for fixed assets that provides a lessee (the customer) the right to use depreciable assets without tying up working capital. Leasing frequently offers the lessee greater flexibility than traditional bank term-loan financing. Leasing also provides the lessor (the owner of the asset) with a generally higher rate of return than lending, but this is in exchange for assuming greater risk or investing more resources in marketing and deal structuring. The higher risk inherent in a typical lease transaction is due to the higher advance to collateral value; a longer payment period; and, in some cases, the lessor's dependence on the sale of the leased property to recover a portion of the initial investment. In most instances, some or all of the higher rate of return for the lessor is derived from the tax benefits of equipment ownership.

While leases differ from loans in some respects, they are similar from a credit viewpoint because the basic considerations are cash flow, repayment capacity, credit history, management, and projections of future operations. Additional considerations are the type of property being leased and its marketability in the event of default or termination of the lease. However, these latter considerations do not radically alter how an examiner evaluates collateral for a lease. The assumption is that the lessee/borrower will generate sufficient funds to liquidate the lease/debt. Leases are generally structured so that the bank recovers the full cost of the equipment plus an interest factor over the course of the lease term. Sale of the leased property/collateral remains a secondary source of repayment and, except for the estimated residual value at the expiration of the lease, will not, in most cases, become a factor in liquidating the advance.

In general, leasing activities of state member banks are governed by federal tax law and, in some instances, applicable state law. The leasing of personal or real property or acting as agent, broker, or adviser in leasing such property is considered a "closely related nonbanking activity" and is therefore permitted under section 225.28(b)(3) of Regulation Y by a bank holding company (BHC) or subsidiary thereof, in accordance with certain requirements. While not specifically applicable to banks, these crite-

ria provide useful guidelines for reviewing the appropriateness and prudence of bank leasing activities. Any substantial departure from these criteria must be judged in light of safety-and-soundness implications.

A BHC can act as an agent, broker, or adviser in leasing such property only if—

- the lease is on a nonoperating basis¹ and
- the initial term of the lease is at least 90 days.

For leases involving real property—

- the effect of the transaction at the inception of the initial lease must be to yield a return that will compensate the lessor for not less than the lessor's full investment in the property plus the estimated total cost of financing the property over the term of the lease, such return to be derived from rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease; and
- the estimated residual value cannot exceed 25 percent of the acquisition cost of the property to the lessor.

Examiners should ensure that the bank's policies and procedures appropriately govern its direct-lease-financing activities and that bank management adheres to established policies and procedures. Examiners should also ensure that the bank's audit and loan-review functions adequately encompass the leasing activity.

1. With respect to the "nonoperating basis" requirement, a BHC may not, directly or indirectly, engage in operating, servicing, maintaining, or repairing leased property during the term of the lease. For automobile leasing, this requirement means that a BHC may not, directly or indirectly, (1) provide servicing, repair, or maintenance of the leased vehicle during the lease term; (2) purchase parts and accessories in bulk or for an individual vehicle after the lessee has taken delivery of the vehicle; (3) provide the loan of an automobile during servicing of the leased vehicle; (4) purchase insurance for the lessee; or (5) provide for the renewal of the vehicle's license merely as a service to the lessee when the lessee could renew the license without authorization from the lessor. The BHC can arrange for a third party to provide these services or products.

ACCOUNTING FOR LEASES

Since leasing activity became prominent within the last few decades, lessors have employed a number of different methods to account for their investments in leases. Financial Accounting Standards Board (FASB) Statement No. 13, "Accounting for Leases," effective January 1, 1977, was intended to bring uniformity to lease accounting.² Pursuant to the guidance, a lease is generally structured as a direct financing lease and reported as such on the institution's accounting records. A direct financing lease is a type of capital lease³ that transfers substantially all the benefits and risks inherent in the ownership of the leased property to the lessee. In addition, collection of the minimum lease payments must be reasonably predictable, and no important uncertainties may exist regarding costs to be incurred by the lessor under the terms of the lease. Although minor variations in accounting methods are still found, most investment-in-leases accounts will be equal to—

- the sum of the minimum lease payments to be received from the lessee, plus
- the unguaranteed residual value (estimated fair market value) of the property at the end of the lease term, reduced by
- the amount of unearned and deferred income to be recognized over the life of the lease.

For the purpose of illustration, assume that property costing \$120,000 is leased for a period of 96 months at \$1,605 per month, and the estimated residual value (ERV) of the property is \$24,000. In this example, income is recognized monthly according to the sum of the months' digits method. The investment in this lease is calculated below, followed by an explanation of each component of the net investment.

Cost	\$120,000
Unearned income	34,080
Rentals receivable ($96 \times \$1,605$)	154,080
Est. residual value	24,000
Gross investment	178,080
Less:	
Unearned income	34,080
Unearned income (ERV)	24,000
Net investment	120,000

Rentals Receivable

This account is established in the amount of total rental payments to be received from the lessee. The amount by which the rentals receivable (\$154,080) exceeds the cost of the property (\$120,000) is the functional equivalent of interest and represents a portion of the income to be recognized over the life of the lease. In the example below, the cost of the property is temporarily charged to a fixed-asset account, then transferred to rentals receivable.

2. Other Financial Accounting Standards Board releases dealing with leasing are FASB Statements 22, 23, 27, 28, 29, 76, 77, 91, 94, 98, and 109; FASB Interpretations 19, 21, 23, 24, 26, and 27; and FASB Technical Bulletins 79-10, 79-12, 79-13, 79-14, 79-15, 79-16, 85-3, 86-2, and 88-1.

3. FASB Statement No. 13, paragraph 7, outlines in detail certain criteria that a lease must meet for it to be classified as a capital lease. (See also the call report instructions.)

Fixed assets	\$120,000	
Cash		120,000
To record purchase or property for lease		
Rentals receivable	154,080	
Fixed assets		120,000
Unearned income		34,080
To record amount due from lessee		

Throughout the lease term, the rentals-receivable account is periodically reduced by the full amount of each rental payment received.

Cash	\$1,605	
Rentals receivable		1,605
To record receipt of monthly payment		

Estimated Residual Value

The estimated residual value represents the proceeds the lessor expects to realize at the end of the lease term from the sale or re-leasing of the property. Exactly as its title states, this account represents only an estimate of future value and does not represent current market value or depreciated book value. The residual value at the end of the lease term is considered to be income, and the corresponding credit for this asset account is posted to unearned income.

The balance of the ERV account does not normally change significantly during the lease term. The unguaranteed residual value should be reviewed at least annually to determine whether a decline, other than a temporary one, has occurred in its estimated value. If a decline is not temporary, the accounting for the lease transaction should be revised using the new estimate, and the resulting loss should be recognized in the period that the change is made. Upward adjustments or increases in the residual value are not recognized.

After the end of the term, the residual value account is eliminated from the books upon sale, re-lease, or other disposition of the property. If the amount of proceeds received differs from the

recorded residual value, the difference will be recognized as either a gain or loss, whichever is appropriate.

Est. residual value	\$24,000	
Unearned income		24,000
To record ERV of leased property		
Cash	26,000	
Est. residual value		24,000
Gain on sale		2,000
To record sale of property		

Any portion of the ERV guaranteed by a party unrelated to the lessor would be deducted from the ERV account and added to rentals receivable.

Unearned Income

This liability account has a credit balance and is netted against the total of rentals receivable and the ERV for balance-sheet presentation. Its component parts are the "interest" income equal to the excess of rentals receivable over the cost of the property and the income to be realized from disposition of the property at the end of the lease term. Each of these components is recognized as income throughout the life of the lease by periodic transfers to earned income. Unearned income is amortized to income over the lease term to produce a constant periodic rate of return on the net investment in the lease. Any other method, such as the sum-of-the-months'-digits method, may be used if the results obtained are not materially different from those that would result from the interest method described in the preceding sentence and if the resulting impact does not overstate income during the current period. Loan-origination fees and initial direct costs, such as commissions and fees that are incurred by the lessor in negotiating and consummating the lease, are offset against each other, and the resulting net amount is deferred and recognized over the lease term. The practice of recognizing a portion of the unearned income at the inception of the lease to offset initial direct costs is no longer acceptable.

Depreciation

For certain leases, the lessor is entitled to claim depreciation for tax purposes. However, for financial statement purposes, no depreciation for leased property will appear on the income statement and no accumulated depreciation will appear on the balance sheet. If the lessor is entitled to the benefits of depreciation, then, for tax purposes only, depreciation will be calculated and will reduce the lessor's tax liability.

The lessor's entitlement to depreciation tax benefits is a function of the type of lease arrangement negotiated. When the lessor retains title to the asset and owns the asset at the expiration of the lease, the lessor may take depreciation into account for tax purposes. These characteristics are typical of a "true," "net," or "capital" lease, terms often used interchangeably in the industry. In a "financing" lease, the lessee rather than the lessor acquires title to the property at the expiration of the lease and is entitled to depreciation tax benefits. Accordingly, the lessor will charge the lessee a higher periodic lease payment (for a higher "rate of return") to offset its loss of depreciation tax benefits.

Balance-Sheet Presentation

Lease receivables are to be reported on the balance sheet as the single amount "net investment" (see below). If the lessor has established an allowance for possible lease losses, this amount is included in the total allowance for loan and lease losses and represents a deduction from the net investment. Footnotes to the balance sheet should disclose the components of the net investment, as follows:

Rentals receivable	\$154,080
Est. residual value	<u>24,000</u>
Gross investment	178,080
Less:	
Unearned income	<u>58,080</u>
Net investment	<u>\$120,000</u>

For call report purposes, lease financing receivables are reported net of unearned income as part of an institution's total loans.

Classification

If it is deemed appropriate to classify a lease, the amount at which the lease would be classified is the net investment. For example, assume that 94 of the 96 payments have been received on the above lease, that income has been recognized monthly according to the sum-of-the-months'-digits method, and that the lease is now considered a loss. Its balance on the books is \$27,173, as follows:

Rentals receivable	\$ 3,210
Est. residual value	<u>24,000</u>
Gross investment	27,210
Less:	
Unearned income	22
Unearned income (ERV)	<u>15</u>
Net investment	<u>27,173</u>

Classification of the \$27,173 balance of this lease involves classifying \$3,188 of the unrecovered portion of the cost of the property (\$3,210 less \$22 unearned income) plus \$23,985 of income that has already been recognized in anticipation of receiving the ERV (\$24,000 less \$15 not yet recognized). In short, the calculation is $\$3,188 + \$23,985 = \$27,173$.

Charging off the ERV included in the net investment treats the lease as if the underlying property has no value and, in effect, reverses the unearned income that has been recognized in anticipation of selling the leased property at its recorded ERV. Accordingly, if the property does have value, the \$27,173 classified should be reduced by the net amount that the lessor could realize by selling the property.

Delinquency

It is appropriate for the examination report to state the percentage of delinquency in the lease portfolio. The percentage is calculated by dividing the aggregate rentals receivable on delinquent leases (less the "interest" components of their unearned income accounts) by the total of rentals receivable on all leases (less the "interest" components of their unearned income accounts). ERVs would not be included in the

delinquent amounts since they do not represent obligations of the lessees.

If the lease obligation in the previously described classification example was the only delinquent obligation in a portfolio of leases with component accounts as shown below, the rate of delinquency in the portfolio would be 3.4 percent.

Rentals receivable	\$ 94,411
Est. residual value	<u>705,882</u>
Gross investment	800,293
Less:	
Unearned income	647
Unearned income (ERV)	<u>441</u>
Net investment	\$799,205
<hr/>	
$\frac{\$3,210 - 22}{\$94,411 - 647} = 3.4\%$	
<hr/>	

Termination of a Lease

The termination of a lease is recognized in the income of the period in which the termination occurs by eliminating the remaining net investment from the lessor's account. The lease property is then recorded as an asset using the lower of the original cost, present fair value, or present carrying amount.

LEVERAGED LEASES

Leveraged leasing is a specialized form of financing and should only be pursued by banks with the appropriate expertise. Part of the examiner's duty is to determine that the personnel who structure and follow leveraged leases are highly qualified in that area and have a current working knowledge of applicable tax laws and regulations.

A leveraged lease transaction is complex in terms of size, the number of parties involved, legal involvement, and, of course, the unique advantages to all parties. Legal expenses and administrative costs associated with leveraged leasing limit its use to financing large capital-equipment projects. By tailoring the tax effects to the needs of the parties involved, the structure

of a leveraged lease permits multiple tax benefits and maximum investment return. The lessor is in search of a tax shelter to offset income generated from other sources, while the lessee bargains for lower rental charges in exchange for the tax advantage the lessor receives. The result of this trade-off ideally produces an attractive rate of return on the lessor's invested dollars, while the lessee conserves working capital and obtains financing at a cost substantially below the lessee's usual borrowing rate.

In a leveraged lease, the lessor purchases and becomes owner of the equipment by providing only a percentage (usually 20 to 40 percent) of the capital needed. The rest of the purchase price is borrowed by the lessor from long-term lenders on a nonrecourse basis. The borrowings are secured by a first lien on the equipment, an assignment of the lease, and an assignment of the lease payments.

If the purchase price of the equipment is large, there may be several equity owners and debtholders involved. In this case, an owner trustee may be named to hold title to the equipment and to represent the equity owners. An indenture trustee may be named to hold the mortgage on the property for the benefit of the debtholders.

The lessor (equity holder), as the owner, is allowed to take accelerated depreciation based on the total cost of the equipment. The lessor might also receive a small portion of the rental payments, but the desired yield is obtained from the timing of depreciation. The effect gives the lessor a return through the small rentals and allows the lessor to retain the residual value rights to the equipment at the end of the lease period.

The bank should consider its present and anticipated future tax position, its future money rates, and the residual value of the property. The return on the bank's investment in leveraged leases depends largely on these factors. A slight change can precipitate significant changes in the bank's position. Anticipated proceeds from the sale or re-leasing of the property at the conclusion of the lease term (the residual value) is an important element of the return and should be estimated carefully. It will, in most cases, exceed 25 percent of the purchase price because of certain tax requirements. The bank should continually evaluate the property for misuse, obsolescence, or market decline, all of which can rapidly deteriorate the value of the property before the lease term expires. In these cases, the

lessee may default, often with expensive consequences for the lessors.

The examiner should remember that a portion of the bank's recapture of its investment in leased property is often predicated on the inherent tax benefits. Accordingly, a decline in the bank's ability to use these tax benefits could reduce or eliminate the profitability of the venture.

The complexity of leveraged leasing should motivate the examiner to carefully scrutinize each indenture and all parties concerned before any analysis begins. The examiner should approach each lease from the standpoint of the creditworthiness of the lessee and the continuous assessment of the value of the leased property. If the lessee defaults, the loan participant is

in a position to foreclose and leave the bank without a way to recapture the carrying value of its investment. Therefore, the general rule is that a bank should not enter into a leveraged lease transaction with any party to which it would not normally extend unsecured credit.

The lessor's net investment in a leveraged lease shall be recorded in a manner similar to that for a direct financing lease, but net of the principal and interest on the nonrecourse debt. The components of the net investment, including related deferred taxes, should be fully disclosed in the footnotes to the lessor's financial statements when leveraged leasing is a significant part of a bank's business activities. (See appendix E of FASB 13 for an example of how to account for a leveraged lease.)

Direct Financing Leases

Examination Objectives

Effective date May 1996

Section 2120.2

1. To determine if lease policies, practices, procedures, objectives, and internal controls are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the adequacy of collateral, credit quality, and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.

Direct Financing Leases

Examination Procedures

Effective date March 1984

Section 2120.3

1. If selected for implementation, complete or update the Direct Financing Leases section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control" and determine if corrections have been accomplished.
4. The following information should be available at the start of the examination:
 - a. trial balance of all leases and outstanding credits
 - b. listing of accounts on which payments are delinquent 30 days or more or on which payments are otherwise not being made according to schedule
 - c. listing of available lines of credit
 - d. minutes of board and executive meetings since the date of the previous examination
5. Using an appropriate sampling technique, select leases for review.
6. Obtain liability and other information on common borrowers from examiners assigned cash items, overdrafts, and other loan areas and together decide who will review the borrowing relationship.
7. For leases selected for review, analyze the creditworthiness of the lessees. Consideration is given to the figures derived from the lessee's financial statements, as well as to cash flow, trends and projections of growth in sales and income, and the qualifications of management. Delinquency on a lease obligation is potentially more serious than delinquency on a conventional loan because, if the property under lease is necessary for the lessee's continued production of income, as is frequently the case, the lessee's financial condition will be seriously deteriorated before the lessee is willing to risk losing the property by default.
8. For those leases which might result in loss to the lessor or for which financial information was not adequate to make such a determination, transcribe the following information to line cards:
 - a. name and line of business of lessee
 - b. name of guarantor(s)
 - c. original date of the lease contract
 - d. original amount of the rentals receivable
 - e. ERV of the property
 - f. amount of ITC to be realized
 - g. book value of the investment in the lease as of the examination date
 - h. cost of the property
 - i. description and location of the property
 - j. amount and frequency of rental payments
 - k. original amount, term, rate, and schedule of amortization of any nonrecourse debt associated with the lease
 - l. lessor's percentage of equity participation in the lease obligation, if applicable
 - m. summary financial data indicating the creditworthiness of the lessee and guarantors, if applicable
9. Before the conclusion of the examination, discuss with management all classified leases. Inadequate or negative cash flow and unfavorable trends reflected in financial statements of the lessee are usually indicative of a substandard lease. Leases classified doubtful typically include those on which payments are delinquent for an extended period and those on which the lessor's recovery of investment is dependent upon an event of unknown probability, such as a pending lawsuit or insurance claim. A loss classification results from the lessee's inability or refusal to continue making payments.
10. Prepare write-ups to support the classifications. The write-up should include the lessee's type of business, present financial status, circumstances that led to the classification, the probability that the terms of the lease can be met, and the amount of protection afforded by sale or release of the underlying property.
11. Review a sample of the lessor's computations of lease yields to determine whether the lessor will recover the cost of purchasing and the after-tax cost of financing the

property during the initial term of the lease or 40 years, whichever is less.

Shown below are the amounts which may be applied against the purchase and financing costs in calculating recovery.

- a. Total of lease payments and ERV, reduced by the estimated taxes to be paid on unearned income. The amount of the ERV used in this calculation may not exceed 20 percent of acquisition cost, though it is permissible for the ERV to be carried on the books in an amount exceeding 20 percent of cost.
- b. ITC to be realized by the lessor.
- c. Tax benefits resulting from depreciation charges, equal to total allowable depreciation times the lessor's marginal tax rate. Depreciation for tax purposes is calculated on the basis of total original cost ignoring ERV. However, over time, accumulated depreciation may not exceed original cost less ERV.
- d. For personal property leases of seven years or less, any additional amount provided by an unconditional guarantee of the lessor's full recovery of investment plus financing cost. The guarantee can be made by a lessee, an independent third party, or manufacturer deemed creditworthy by the lessor. In determining full-payout compliance, the guarantee may only account for up to 60 percent of the acquisition cost of the property.

The following example of a payout calculation assumes a marginal tax rate of 46 percent and depreciation of the full cost of the property for tax purposes:

Total lease payments	\$154,080
ERV	24,000
ITC (tax benefit)	12,000
Depreciation—tax benefit (46% × 120,000)	<u>55,200</u>
Subtotal	<u>\$245,280</u>
Less taxes on unearned income:	
("interest")	\$34,080
(ERV)	<u>24,000</u>
46% × \$58,080	<u>26,717</u>
	<u>\$218,563</u>

After deducting the \$120,000 cost of the property from the net cash flow provided by the lease, after-tax funds of \$98,563 are available to cover the cost of financing the property. Dividing this amount by the assumed marginal tax rate of 46 percent indicates that the equivalent amount in pre-tax funds is \$214,267. If this \$214,267 were paid as interest over a 96-month period to finance the acquisition of property costing \$120,000, the annual rate of interest (internal rate of return) would be 32.0 percent (see compound interest chart). No further calculation need be made since this high percentage based on funds available to cover finance costs would exceed by far the lessor's likely approximate pre-tax cost of funds. However, in those instances in which the percentage calculated is believed to closely approximate the cost of funds, the lessor should be asked to explain the manner by which its recovery of cost is assured.

If this example were a personal property lease with a term of seven years or less, any qualified guarantee up to 60 percent of acquisition cost could have been considered as an addition to the funds available to provide the lessor with full payout.

As mentioned in the introduction to this section, an exception to the full-payout requirement is made for leases to those governmental entities that are prohibited from entering into leases for periods exceeding one year. In the case of leases to government entities, the lessor should demonstrate that the lease is expected to be continually renewed until the cost is fully recovered.

12. Review records to determine that the lease transaction constitutes a valid lease for tax purposes. If the agreement is ruled by the IRS to be a "conditional sale," the lessor would not be entitled to depreciation charges or the ITC, and the lessee would be required to deduct depreciation charges rather than lease payments from taxable income. It is preferable that the lessor obtain a private ruling from the IRS to make certain that it qualifies as the original user of the property and is therefore entitled to the previously mentioned tax benefits. Circumstances that the IRS considers as evidence of a conditional sale rather than a lease are as follows:
 - a. portions of the rental payments are made

- applicable to an equity interest of the lessee in the property
- b. the lessee acquires title to the property after making a specified number of payments
 - c. the payments made by the lessee for a short period of use constitute an unusually large percentage of the purchase price of the property
 - d. the total rental payments to be received exceed the current fair rental value of the property, indicating that the payments include an element other than rent
 - e. the lessee has an option to purchase the property at a price that is nominal in relation to the value of the property or to the total amount of rental payments
 - f. a portion of each rental payment is readily identifiable as the equivalent of interest
13. Ascertain whether title to the property rests with the lessor and that the lessor has taken steps to protect its ownership rights. Evidence of filing under the Uniform Commercial Code, where appropriate, should be found in the documentation file. Aircraft should be registered with the FAA, interstate vehicles with the ICC, and ships with the Coast Guard.
 14. Check for cancellation or other provisions in the contract that could jeopardize the full-payout status of the lease. There is no need to take exception to a cancellation provision that provides for payment by the lessee of an amount that allows the lessor to fully recover its investment in the property.
 15. Check that insurance coverage on leased property is provided by the lessee in compliance with all insurance provisions of the contract in an amount sufficient to protect against loss from property damage. Public liability insurance should also be provided to protect against loss from lawsuits that could arise from situations such as the crash of leased aircraft.
 16. Review the lessee's duties under the contract with respect to repairs and taxes. Determine whether the lessor has instituted procedures to check that the lessee's required duties are being performed.
 17. Review the status of all property acquired for lease purposes but which is not now under lease. Determine the reason for the "off-lease" status of the property, ascertain the realizable value of the property, and investigate whether the off-lease property will be sold or re-leased within the required two-year period.
 18. Investigate the lessor's procedures for periodic review of the reasonableness of the estimated residual value. The estimate should be reviewed at least annually and reduced in amount on the books if the value has declined on a presumably permanent basis.
 19. Review past operations of the lessee company to determine if projections of income and ERV have been realistic in light of actual experience.
 20. Review the minutes of the meetings of the board and executive committees to determine whether purchases of property and delinquent leases are reported to the board.
 21. Determine if the bank has entered into leases with companies owned or controlled by any director or officer. Compare the rates and terms on such leases to the rates and terms offered on leases to companies of similar credit standing.
 22. Check for lease concentrations to any one lessee or industry and prepare a comment for the examination report if any concentration is considered unwarranted.
 23. Determine whether the bank has established limits for the maximum amount of "credit" to be extended to a single lessee. If these limits have been established, investigate whether the bank adheres to them. If they have not been established, inquire as to the bank's policy on this matter.
 24. Check for action taken on matters criticized in the most recent audit reports and the previous examination report. Determine if leases classified "loss" were removed from the books.
 25. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of—
 - a. delinquent leases, including those considered "A" paper;
 - b. violations of laws and regulations;
 - c. leases not supported by current and complete financial information;
 - d. leases on which documentation is deficient;
 - e. equipment deficiencies revealed in inspection reports;
 - f. off-lease equipment;
 - g. concentrations of leases;
 - h. classified leases; and

- i. leases to major shareholders, employees, officers, directors, and/or their interests.
- 26. Update workpapers with any information that will facilitate future examinations.

Direct Financing Leases Internal Control Questionnaire

Effective date March 1984

Section 2120.4

Review the bank's internal controls, policies, practices, and procedures for making and servicing direct lease financing. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES AND OBJECTIVES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written direct lease financing policies that—
 - a. establish procedures for reviewing direct lease financing applications,
 - b. define qualified property, and
 - c. establish minimum standards for documentation?
2. Are direct lease financing policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary direct lease financing records performed or reviewed by persons who do not also—
 - a. issue official checks and drafts or
 - b. handle cash?
- *4. Are the subsidiary direct lease financing records reconciled, at least monthly, with the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?
5. Are delinquent account collection requests and past-due notices checked to the trial balances that are used in reconciling subsidiary records of direct lease receivables to general ledger accounts, and are they handled only by persons who do not also handle cash?
6. Are inquiries about lease balances received and investigated by persons who do not also handle cash or pass adjustments?
- *7. Are documents supporting recorded credit

adjustments checked or tested subsequently by persons who do not also handle cash or initiate transactions (if so, explain briefly)?

INTEREST AND/OR RENT

- *8. Is the preparation and posting of interest and/or rent records performed or reviewed by persons who do not also—
 - a. issue official checks and drafts or
 - b. handle cash?

DEPRECIATION (OPERATING LEASES)

9. Is the preparation and posting of periodic depreciation records performed or reviewed by persons who do not also have sole custody of property?
10. Do the bank's procedures require that depreciation expense be charged at least quarterly?
- *11. Are the subsidiary depreciation records balanced, at least quarterly, to the appropriate general ledger controls by persons who do not also have sole custody of property?

OTHER

- *12. Are periodic property inventory reports prepared by the lessee or trustee?
13. Do reports clearly indicate the condition and location of the leased property?
14. When inspection of the equipment leased is either infrequent or not feasible, has the bank taken measures to protect its equipment and prevent its misuse?
15. At lease termination, are outside appraisals made of property before bids are accepted?
16. Are review procedures in effect to maintain the necessary insurance coverage on all leased assets regardless of whether the cost of this insurance is to be borne by the bank or the lessee?
17. Does the bank have insurance coverage against its potential public liability risk as owner/lessor of the property?

18. Are safeguards in effect to prevent the possibility of conflict of interest or self-dealing in selecting the seller, servicer, insurer, or purchaser for the equipment leased?
19. Are separate files maintained for each lease transaction?
20. Does each file supporting the acquisition and disposal of assets reflect the review and written approval of an officer other than the person who actually controlled the disbursement and receipt of funds?
21. Are all leases required to be supported by current credit information?
22. Do modifications of terms require the approval of the board or committee that initially approved the lease?
23. If commitments are issued contingent upon receipt of certain satisfactory information, has authority to reject or accept such information been vested in someone other than the account officer?
24. Is residual value substantiated by periodic appraisals?
25. Are reports listing past-due leases and/or those receiving special attention submitted to the board for review at their regular meetings?

CONCLUSION

26. Is the foregoing information considered an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
27. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

This section applies to most types of loans found in a consumer loan department. Consumer credit, also referred to as retail credit, is defined as credit extended to individuals for household, family, and other personal expenditures, rather than credit extended for use in a business or for home purchases. Consumer credit loans are loans not ordinarily maintained by either the commercial or real estate loan departments. Consumer loans frequently make up the largest number of loans originated and serviced by the bank, but their dollar volume may be significantly less than for other types of loans. Consumer credit loans may be secured or unsecured and are usually structured with short- or medium-term maturities. Broadly defined, consumer credit includes all forms of *closed-end credit (installment credit)* and *open-end credit (revolving credit)*, such as check credit and credit card plans. Consumer credit also includes loans secured by an individual's personal residence, such as home equity and home-improvement loans. Home equity loans are discussed in "Real Estate Loans," section 2090.1.

The examiner should determine the adequacy of the consumer credit department's overall policies, procedures, and credit quality. The examiner's goal should not be limited to identifying current portfolio problems but should also include identifying potential problems that may result from liberal lending policies, unfavorable trends, potentially imprudent concentrations, or nonadherence to established policies. Banks lacking written policies, or failing to implement or follow established policies effectively, should be criticized in the report of examination.

TYPES OF CONSUMER CREDIT

Installment Loans

Many traditional forms of installment credit have standard monthly payments and fixed repayment schedules of one to five years. These loans are made with either fixed or variable interest rates that are based on specific indices. Installment loans fill a variety of needs, such as financing the purchase of an automobile or household appliance, financing home improvement, or consolidating debt. These loans may be unsecured or secured by an assignment of title,

as in an automobile loan, or by money in a bank account.

A bank's installment loan portfolio usually consists of a large number of small loans, each scheduled to be amortized over a specific period. Most installment loans are made for consumer purchases; however, amortizing commercial loans are sometimes placed in the installment loan portfolio to facilitate their servicing. In addition, the installment loan portfolio can consist of both loans made by the bank and loans purchased from retail merchants who originated the loans to finance the sale of goods to their customers.

Indirect Installment Loans

Indirect installment loans are also known as dealer loans, sales-finance contracts, or dealer paper. In this type of consumer credit, the bank purchases, sometimes at a discount, loans originated by retailers of consumer goods, such as a car dealer. This type of lending is called indirect lending because the dealer's customer indirectly becomes a customer of the bank.

The sales-finance contracts purchased from dealers of consumer goods are generally closed-end installment loans with a fixed rate of interest. These loans are purchased in one of three ways depending on the dealer and the circumstances of purchase:

- *Without recourse.* The bank is responsible for collecting the account, curing the delinquency, or applying the deficiency against dealer reserves or holdback accounts. The majority of sales-finance contracts with dealers are without recourse.
- *Limited recourse.* The dealer will repurchase the loan, cure the default, or replace the loan only under certain circumstances in accordance with the terms of the agreement between the bank and the dealer.
- *With recourse.* The dealer is required to repurchase the loan from the bank on demand, typically within 90 to 120 days of default.

In the case of recourse and limited-recourse loans, legal lending limitations need to be considered.

Sales-finance contracts purchased without recourse from dealers should be based on the

individual's creditworthiness, *not* on the financial strength of the dealership itself. The contracts purchased should comply with the bank's loan policy for similar consumer loans. Exceptions to the bank's policies and procedures should be documented in the credit file and have the appropriate level of approval. For sales-finance contracts purchased with recourse that do not meet the bank's normal credit criteria and are purchased on the basis of the added strength of the dealer, the bank should document the minimum criteria for such loans and the specific bank-approved financial covenants with which the dealer must comply.

Check Credit and Overdraft Protection

Check credit is defined, for the purpose of this manual, as the granting of unsecured, interest-bearing revolving lines of credit to individuals or businesses. Such extensions of credit are subject to the disclosure requirements of the Truth in Lending Act (TILA). Banks provide check-credit services through overdraft protection, cash reserves, and special drafts.

The most common product is overdraft line-of-credit protection, whereby a transfer is made from a preestablished line of credit to a customer's deposit account when a check is presented that would cause the account to be overdrawn. Transfers normally are made in specific increments, up to a maximum line of credit approved by the bank.

In a cash reserve system, the customer must request that the bank transfer funds from a preestablished line of credit to his or her deposit account. To avoid overdrawing the account, the customer must request the transfer before negotiating a check against the account.

In a special draft system, the customer negotiates a special check drawn directly against a preestablished line of credit. In this method, deposit accounts are not affected.

In all three systems, the bank periodically provides its check-credit customers with a statement of account activity. Required minimum payments are computed as a fraction of the balance in the account on the cycle date and may be made by automatic charges to the deposit account.

Banks also provide credit through ad hoc and automated overdraft-protection programs. Typi-

cally, ad hoc programs involve insured depository institutions' providing discretionary coverage of customers' overdrafts on a case-by-case basis. Automated overdraft-protection programs, also referred to as *bounced-check protection* or *overdraft protection*, are credit programs increasingly offered by institutions to transaction-account (typically deposit-account) customers as an alternative to traditional check-credit and ad hoc programs for covering overdrafts.

Under both the ad hoc and automated programs, regardless of whether an overdraft is paid, institutions typically impose a fee when an overdraft occurs. This fee is referred to as a nonsufficient-funds, or NSF, fee. Unlike the discretionary ad hoc accommodation typically provided to those lacking a line of credit or other type of overdraft service (such as linked accounts), automated programs are often marketed to consumers and may give consumers the impression that the service is a guaranteed short-term credit facility. These marketed programs typically provide consumers with an express overdraft "limit" that applies to their account.

Neither the ad hoc nor the automated overdraft programs are subject to the annual percentage rate (APR) disclosure requirements of TILA. These programs are, however, subject to the disclosure requirements of the Truth in Savings Act (TISA) and Regulation DD.

The specific details of institutions' overdraft-protection programs have varied over time. The programs currently offered by institutions incorporate some or all of the following characteristics:

- Institutions inform consumers that overdraft protection is a feature of their accounts and promote consumers' use of the service. Institutions may also inform consumers of their aggregate dollar limit under the overdraft-protection program.
- Coverage is automatic for consumers who meet the institution's criteria (for example, the account has been open a certain number of days, and deposits are made regularly). Typically, the institution performs no credit underwriting.
- Overdrafts generally are paid up to the aggregate limit set by the institution for the specific class of accounts. Limits are typically \$100 to \$500.
- Many program disclosures state that payment of an overdraft is discretionary on the part of the institution and may disclaim any legal

obligation of the institution to pay any overdraft.

- The service may extend to check transactions as well as other transactions, such as withdrawals at automated teller machines (ATMs), transactions using debit cards, preauthorized automatic debits from a consumer's account, telephone-initiated funds transfers, and online banking transactions.
- A flat fee is charged each time the service is triggered and an overdraft item is paid. Commonly, a fee in the same amount would be charged even if the overdraft item was not paid for nonsufficient funds. A daily fee may also apply for each day the account remains overdrawn.
- Some institutions offer closed-end loans to consumers who do not bring their accounts to a positive balance within a specified time period. These repayment plans allow consumers to repay their overdrafts and fees in installments.

To assist insured depository institutions in the responsible disclosure and administration of overdraft-protection services, particularly those that are marketed to consumers (a depository institution's customers), the federal banking and thrift agencies issued Joint Guidance on Overdraft Protection Programs. The interagency guidance, issued on February 18, 2005, addresses the agencies' concerns about the potentially misleading implementation, marketing, disclosure, and operation of these programs. (See the "Best Practices" section of the guidance.) The guidance also discusses the agencies' safety-and-soundness considerations and the legal risks of such programs. Institutions are encouraged to carefully review their programs to ensure that their marketing and other communications concerning the programs (1) do not mislead consumers into believing that their programs are traditional lines of credit (when they are not) or that payment of overdrafts is guaranteed, (2) do not mislead consumers about their account balance or the costs and scope of the overdraft protection offered, and (3) do not encourage irresponsible consumer financial behavior that may potentially increase the institution's risk. See SR-05-3 and the attached interagency guidance for detailed discussions of the agencies' concerns and best practices (for marketing and communication with consumers and program features and operation). See also section 3000.1.

Safety-and-Soundness Considerations

When overdrafts are paid, credit is extended to an institution's customers. To the extent overdraft-protection programs lack individual account underwriting, these programs may expose an institution to more credit risk (higher delinquencies and losses) than overdraft lines of credit and other traditional overdraft-protection options.

Institutions providing overdraft-protection programs should adopt written policies and procedures adequate to address the credit, operational, and other risks associated with these types of programs. Prudent risk-management practices include the establishment of express account-eligibility standards and well-defined and properly documented dollar-limit decision criteria. Institutions should also monitor these accounts on an ongoing basis and be able to identify consumers who may represent an undue credit risk to the institution. Overdraft-protection programs should be administered and adjusted, as needed, to ensure that credit risk remains in line with expectations. Program adjustments may include, as appropriate, disqualification of a consumer from future overdraft protection. Management should regularly receive reports sufficient to enable it to identify, measure, and manage overdraft volume, profitability, and credit performance.

Institutions are also expected to incorporate prudent risk-management practices related to account repayment and suspension of overdraft-protection services. These practices include the establishment of specific time frames for when consumers must pay off their overdraft balances. For example, procedures should be established for the suspension of overdraft services when an account holder no longer meets the eligibility criteria (such as when the account holder has declared bankruptcy or defaulted on another loan at the bank) as well as for when an account holder does not repay an overdraft. In addition, overdraft balances should generally be charged off when considered uncollectible, but no later than 60 days from the date first overdrawn. In some cases, an institution may allow a consumer to cover an overdraft through an extended repayment plan when the consumer is unable to bring the account to a positive balance within the required time frames. The existence of the repayment plan, however, would not extend the charge-off determination period beyond 60 days (or a shorter period if applicable), as measured from the date of the overdraft. Any payments

received after the account is charged off (up to the amount charged off against the allowance for loan and lease losses) should be reported as a recovery.

Some overdrafts are rewritten as loan obligations in accordance with an institution's loan policy and are supported by a documented assessment of that consumer's ability to repay. In those instances, the institution should use the charge-off time frames described in the Federal Financial Institutions Examination Council's Uniform Retail Credit Classification and Account Management Policy (revised June 6, 2000; effective December 31, 2000). (See SR-00-8.)

Institutions should follow generally accepted accounting principles and the instructions for the Reports of Condition and Income (Call Reports) to report income and loss recognition on overdraft-protection programs. Overdraft balances should be reported on the Report of Condition of the bank Call Report as loans. Accordingly, overdraft losses should be charged off against the allowance for loan and lease losses. All institutions are expected to adopt rigorous loss-estimation processes to ensure that overdraft-fee income is accurately measured. Such methods may include providing loss allowances for uncollectible fees or, alternatively, only recognizing that portion of earned fees estimated to be collectible.¹ The procedures for estimating an adequate allowance should be documented in accordance with the July 2, 2001, interagency Policy Statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions.² (See SR-01-17.)

If an institution advises account holders of the available amount of overdraft protection, for example, when accounts are opened or on depositors' account statements or automated teller machine (ATM) receipts, the institution should report the available amount of overdraft protection with its other legally binding commitments, for Call Report purposes. These available amounts, therefore, should be reported as "unused commitments."

Risk-Based Capital Treatment of Overdraft Balances

Banks are expected to provide proper risk-based capital treatment of outstanding overdrawn balances and unused commitments. Overdraft balances should be risk-weighted according to the obligor. Under the risk-based capital guidelines, the capital charge on the unused portion of commitments is generally based on an off-balance-sheet credit-conversion factor and the risk weight appropriate to the obligor. (See section 3020.1.) In general, the capital guidelines provide that the unused portion of a commitment is subject to a zero percent credit-conversion factor if the commitment has an original maturity of one year or less, or to a 50 percent credit-conversion factor if the commitment has an original maturity over one year. Under the guidelines, a zero percent conversion factor also applies to the unused portion of a "retail credit card line" or "related plan" if it is unconditionally cancelable by the institution in accordance with applicable law. (See 12 CFR 208, appendix A, section III.D.5.) The phrase "related plans" in the guidelines includes overdraft checking plans. The overdraft-protection programs discussed in the agencies' February 18, 2005, guidance fall within the meaning of "related plans" as a type of "overdraft checking plan" for the purposes of the federal banking agencies' risk-based capital guidelines. Consequently, overdraft-protection programs that are unconditionally cancelable by the institution in accordance with applicable law would qualify for a zero percent credit-conversion factor.

Institutions entering into overdraft-protection contracts with third-party vendors must conduct thorough due-diligence reviews before signing a contract. The November 30, 2000, interagency guidance Risk Management of Outsourced Technology Services outlines the agencies' expectations for prudent practices in this area. (See section 4060.1 and SR-00-17.)

Legal Risks

Overdraft-protection programs must comply with all applicable federal laws and regulations, including the Federal Trade Commission Act (as outlined below). State laws may also be applicable, including usury and criminal laws, as well as laws on unfair or deceptive acts or practices. Before implementing an overdraft-protection

1. Uncollected overdraft fees may be charged off against the allowance for loan and lease losses if such fees are recorded with overdraft balances as loans and if estimated credit losses on the fees are provided for in the allowance for loan and lease losses.

2. The interagency policy statement was issued by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision.

program, institutions should have their program reviewed by counsel for compliance with all applicable laws. Further, although the agencies' guidance outlines the applicable federal laws and regulations as of February 2005, such laws and regulations are subject to amendment. Accordingly, institutions should monitor applicable laws and regulations for revisions and ensure that their overdraft-protection programs are fully compliant.

Federal Trade Commission Act. Section 5 of the Federal Trade Commission Act (the FTC Act) prohibits unfair or deceptive acts or practices (15 USC 45). The banking agencies enforce this section pursuant to their authority in section 8 of the Federal Deposit Insurance Act (12 USC 1818).³ An act or practice is unfair if it causes or is likely to cause substantial injury to consumers that is not reasonably avoidable by consumers themselves and not outweighed by countervailing benefits to consumers or to competition. An act or practice is deceptive if, in general, it is a representation, omission, or practice that is likely to mislead a consumer acting reasonably under the circumstances and if the representation, omission, or practice is material.

Overdraft-protection programs may raise issues under the FTC Act, depending on how the programs are marketed and implemented. Institutions should closely review all aspects of their overdraft-protection programs, especially any materials that inform consumers about the programs, to avoid engaging in deceptive, inaccurate, misrepresentative, or unfair practices.

Examiner's Review of Delinquencies Involving Check-Credit (Overdraft-Protection) Plans

Delinquencies are often experienced when an account is at or near the customer's maximum credit line. Examiners should verify that the following reports are generated for and reviewed by bank management, and examiners should also analyze them as part of the examination process:

- aging of delinquent accounts
- accounts on which payments are made (either

3. See the March 2002 OCC Advisory Letter 2002-3 and the March 11, 2004, joint Federal Reserve Board and FDIC interagency guidance *Unfair or Deceptive Acts or Practices by State-Chartered Banks*.

on this account or other loans) by drawing on reserves

- accounts with steady usage

Many banks offer check-credit plans to small businesses; these plans may have a higher-than-normal degree of risk unless they are offered under very stringent controls. In these situations, the examiner's review should be based on the same factors and criteria used for the review of unsecured commercial loans.

Credit Card Plans

Most bank credit card plans are similar. The bank solicits retail merchants, service organizations, and others who agree to accept a credit card in lieu of cash for sales or services performed. The bank assumes the credit risk and charges the nonrecourse sales draft to the individual customer's credit card account. The bank sends monthly statements to the customer, who may elect to pay the entire amount or to pay in monthly installments, with an additional percentage charge on the outstanding balance each month. A cardholder may also obtain cash advances, which accrue interest from the transaction date, from the bank or automated teller machines.

A bank can be involved in a credit card plan in various ways. Also, the terminology used to describe the manner in which a bank is involved in a credit card plan may vary. The examiner first needs to determine the type of credit card plan that the bank has and then ascertain the degree of risk that the plan poses to the bank.

Both the bank's customers and the bank itself can generate potential risk in the credit card department. On the customer side, the risk is generally divided into two categories: the misuse of credit and the misuse of the credit card. The potential for credit misuse is reduced by careful screening of cardholders before cards are issued and by monitoring individual accounts for abuse. Credit card misuse may be reduced by establishing controls to prevent the following abuses:

- employees or others from intercepting the card before delivery to the cardholder
- merchants from obtaining control of cards
- fraudulent use of lost or stolen cards

Because credit cards may be easily misused by the cardholders and others who may obtain the cards, strict adherence to appropriate internal controls and operating procedures is essential in any credit card department. The examiner should determine if adequate controls and procedures exist.

Account Management, Risk Management, and the Allowance for Loan and Lease Losses

Credit card lending programs can generate risk through inappropriate account-management, risk-management, and loss-allowance practices. Banks should have and follow prudent policies for credit-line management, over-limit practices, minimum payments, negative amortization, workout and forbearance practices, and recovery practices. In addition, banks should follow generally accepted accounting principles (GAAP), existing interagency policies, and Call Report instructions for income-recognition and loss-allowance practices. In arriving at an overall assessment of the adequacy of a bank's account-management practices for its credit card lending business, examiners should incorporate the risk profile of the bank, the quality of management reporting, and the adequacy of the bank's charge-off policies and its allowance for loan and lease losses methodologies and documentation practices. (See SR-03-01 and the FFIEC January 8, 2003, interagency guidance on credit card lending.)

Credit-line management. Banks should carefully consider the repayment capacity of borrowers when assigning initial credit lines or significantly increasing borrowers' existing credit lines. When a bank inadequately analyzes the repayment capacity of a borrower, practices such as liberal line-increase programs and multiple card strategies can increase the risk profile of a borrower quickly and result in rapid and significant portfolio deterioration.

Credit-line assignments should be managed conservatively using proven credit criteria. Support for credit-line management should include documentation and analysis of decision factors such as a borrower's repayment history, risk scores, behavior scores, or other relevant criteria.

Banks can significantly increase their credit exposure by offering customers additional cards, including store-specific private-label cards and

affinity-relationship cards, without considering their entire relationship with a customer. In extreme cases, some banks may grant additional cards to borrowers who are already experiencing payment problems on their existing cards. Banks that offer multiple credit lines should have sufficient internal controls and management information systems (MIS) to aggregate related exposures and analyze performance before they offer additional credit lines to customers.

Over-limit practices. Account-management practices that do not adequately control authorization and provide for timely repayment of over-limit amounts may significantly increase the credit-risk profile of a bank's portfolio. While prudent over-limit practices are important for all credit card accounts, such practices are especially important for subprime accounts. Liberal over-limit tolerances and inadequate repayment requirements in subprime accounts can magnify the high risk exposure of the lending bank, and deficient reporting and loss-allowance methodologies can understate the credit risk.

All banks should carefully manage their over-limit practices and focus on reasonable control and timely repayment of amounts that exceed established credit limits. A bank's MIS should be sufficient to enable its management to identify, measure, manage, and control the unique risks associated with over-limit accounts. Over-limit authorization on open-end accounts, particularly those that are subprime, should be restricted and subject to appropriate policies and controls. The bank's objective should be to ensure that the borrower remains within prudent established credit limits that increase the likelihood of responsible credit management.

Minimum payment and negative amortization. Competitive pressures and a desire to preserve outstanding balances can lead to a bank's easing of minimum-payment requirements, which in turn can increase credit risk and mask portfolio quality. These problems are exacerbated when minimum payments consistently fall short of covering all finance charges and fees assessed during the billing cycle and when the outstanding balance continues to build (known as "negative amortization"). In these cases, the lending bank is recording uncollected income by capitalizing the unpaid finance charges and fees into the account balance the customer owes. The pitfalls of negative amortization are magnified when subprime accounts are involved—and are

even more damaging when the condition is prolonged by programmatic, recurring over-limit fees and other charges that are primarily intended to increase recorded income for the lending bank rather than enhance the borrowers' performance or their access to credit.

The Federal Reserve expects lending banks to require minimum payments that will amortize the current balance over a reasonable period of time, consistent with the unsecured, consumer-oriented nature of the underlying debt and the borrower's documented creditworthiness. Examiners should criticize prolonged practices involving negative amortization and inappropriate fees, as well as other practices that inordinately compound or protract consumer debt and disguise portfolio performance and quality, all of which raise safety-and-soundness concerns.

Workout and forbearance practices. Banks should properly manage workout programs.^{3a} Areas of concern involve liberal repayment terms with extended amortizations, high charge-off rates, moving accounts from one workout program to another, multiple re-agings, and poor MIS to monitor program performance. Examiners should criticize management and require appropriate corrective action when workout programs are not managed properly. Such actions may include adversely classifying entire segments of portfolios, placing loans on nonaccrual, increasing loss allowances to adequate levels, and accelerating charge-offs to appropriate time frames.

Workout programs should be designed to maximize principal reduction and should generally strive to have borrowers repay credit card debt within 60 months. Repayment terms for workout programs should be consistent with these time frames; exceptions should be clearly documented and supported by compelling evi-

dence that less conservative terms and conditions are warranted. To meet the appropriate time frames, banks may need to substantially reduce or eliminate interest rates and fees on credit card debt so that more of the payment is applied to reducing the principal.

In lieu of workout programs, banks sometimes negotiate settlement agreements with borrowers who are unable to service their unsecured open-end credit. In a settlement arrangement, the bank forgives a portion of the amount owed. In exchange, the borrower agrees to pay the remaining balance either in a lump-sum payment or by amortizing the balance over several months.

Income-recognition and ALLL methodologies and practices. Most banks use historical net charge-off rates, which are based on a migration analysis of the roll rates^{3b} to charge-off, as the starting point for determining appropriate loss allowances. Banks then typically adjust the historical charge-offs to reflect current trends and conditions and other factors.

Banks should evaluate the collectibility of accrued interest and fees on credit card accounts because a portion of accrued interest and fees is generally not collectible.^{3c} Although regulatory reporting instructions do not require consumer credit card loans to be placed on nonaccrual on the basis of their delinquency status, all banks should employ appropriate methods to ensure that income is accurately measured. Such methods may include providing loss allowances for uncollectible fees and finance charges or placing delinquent and impaired receivables on nonaccrual status. Banks must account for the owned portion of accrued interest and fees, including related estimated losses, separately from the retained interest in accrued interest and fees from credit card receivables that have been securitized.

A bank's allowance for loan and lease losses should be adequate to absorb credit losses that are probable and estimable on all loans. While some banks provide for an ALLL on all loans, others may only provide for an

3a. A workout is a former open-end credit card account in which credit availability has been closed and the balance owed has been placed on a fixed (dollar or percentage) repayment schedule in accordance with modified, concessionary terms and conditions. Generally, the repayment terms require amortization or liquidation of the balance owed over a defined payment period. Such arrangements are typically used when a customer is either unwilling or unable to repay the open-end credit card account in accordance with the original terms but shows the willingness and ability to repay the loan in accordance with modified terms and conditions.

Workout programs generally do not include temporary-hardship programs that help borrowers overcome temporary financial difficulties. However, temporary-hardship programs longer than 12 months, including renewals, should be considered workout programs.

3b. *Roll rate* is the percentage of balances or accounts that move from one delinquency stage to the next delinquency stage.

3c. AICPA Statement of Position 01-6, *Accounting by Certain Entities (Including Entities with Trade Receivables) That Lend to or Finance the Activities of Others*, provides guidance on accounting for delinquency fees.

ALLL on loans that are delinquent. This last practice may result in an inadequate ALLL. Banks should ensure that their loan-impairment analysis and ALLL methodology, including the analysis of roll rates, consider the losses inherent in both delinquent and nondelinquent loans.

A bank's allowance methodologies should always fully recognize the losses inherent in over-limit portfolio segments. For example, if a bank requires borrowers to pay monthly over-limit and other fees in addition to the minimum monthly payment amount, roll rates and estimated losses may be higher than indicated in the overall portfolio migration analysis. Accordingly, banks should ensure that their allowance methodology addresses the incremental losses that may be inherent in over-limit accounts.

A bank's allowances should appropriately provide for the inherent probable loss in workout programs, particularly when a program has liberal repayment periods with little progress in reducing principal. Accounts in workout programs should be segregated for performance-measurement, impairment-analysis, and monitoring purposes. When multiple workout programs with different performance characteristics exist, a bank should track each program separately and establish and maintain adequate allowances for each program. Generally, the allowance allocation should equal the estimated loss in each program based on historical experience as adjusted for current conditions and trends. These adjustments should take into account changes in economic conditions, the volume and mix of loans in each program, the terms and conditions of each program, and loan collection activities.

Banks should ensure that they establish and maintain adequate loss allowances for credit card accounts that are subject to settlement arrangements. In addition, the FFIEC Uniform Retail Credit Classification and Account Management Policy states that "actual credit losses on individual retail loans should be recorded when the bank becomes aware of the loss." In general, the amount of debt forgiven in a settlement arrangement should be classified as loss and charged off immediately. Immediate charge-off, in some circumstances, however, may be impractical. In such cases, banks may treat amounts forgiven in settlement arrangements as specific allowances.⁴ Upon receipt of the final

settlement payment, banks should charge off deficiency balances within 30 days.

Recovery practices. After a credit card loan is charged off, banks must properly report any subsequent collections on the loan.⁵ Typically, banks report some or all of such collections on charged-off credit card loans as recoveries to the ALLL. If the total amount a bank credits to the ALLL as the recovery on an individual credit card loan (which may include principal, interest, and fees) exceeds the amount previously charged off against the ALLL on that loan (which may have been limited to principal), then the bank's net charge-off experience—an important indicator of the credit quality and performance of its portfolio—will be understated. Banks must ensure that the total amount credited to the ALLL as recoveries on a loan (which may include amounts representing principal, interest, and fees) is limited to the amount previously charged off against the ALLL on that loan. Any amounts collected in excess of this limit should be recognized as income.

Re-aging of credit card receivables. The examiner should review the bank's credit card receivables to determine if re-aging occurs. Re-aging refers to the removal of a delinquent account from normal collection activity after the borrower has demonstrated over time that he or she is capable of fulfilling contractual obligations without the intervention of the bank's collection department. The bank may use re-aging when a customer makes regular and consecutive payments over a period of time that maintain the account at a consistent delinquency level or reduce the delinquency level with minimal collection effort. Re-aging, in effect, changes the delinquency-payment status of a credit card receivable from a past-due to a current status. The examiner should determine if the bank re-ages its accounts on an exception basis or as a regular practice. The bank should document those accounts that have been re-aged, obtain appropriate approval, and ensure that re-aging is done in conformance with internal policies and procedures. (See "Bank Classification and Charge-Off Policy" later in this section and SR-00-8 for further guidance.)

4. For regulatory reporting purposes, banks should report the creation of a specific allowance as a charge-off in Schedule

RI-B of the call report.

5. AICPA Statement of Position 01-6 provides recognition guidance for recoveries of previously charged-off loans.

Exceptions to examiner guidance. From time to time, banks with well-managed programs may authorize, and provide a basis for granting, limited exceptions to the FFIEC Uniform Retail Credit Classification and Account Management Policy. The basis for granting exceptions to the policy should be identified and described in the bank's policies and procedures. Such policies and procedures should address the types of exceptions allowed and the circumstances for permitting them. The volume of accounts granted exceptions should be small and well controlled, and the performance of these accounts should be closely monitored. Examiners will evaluate whether a bank uses its exceptions prudently. Examiners should criticize management and require corrective action when exceptions are not used prudently, are not well managed, result in improper reporting, or mask delinquencies and losses.

LOAN POLICY

A written consumer credit policy provides bank management with the framework to underwrite and administer the risk inherent in lending money while establishing a mechanism for the board of directors or senior management to monitor compliance. The policy should establish the authority, rules, and guidelines to operate and administer the bank's consumer loan portfolio effectively; that is, the policy should help manage risk while ensuring profitability. The policy should set basic standards and procedures clearly and concisely. The policy's guidelines should be derived from a careful review of internal and external factors that affect the bank. To avoid any discriminatory policies or practices, the policy should include guidelines on the various consumer credit laws and regulations.

The composition of the loan portfolio will differ considerably among banks because lending activities are influenced by many factors, including the type of institution, management's objectives and philosophies on diversification and risk, the availability of funds, and credit demand. An effective lending policy and commensurate procedures are integral components of the lending process. The bank's consumer credit policy should accomplish the following:

- define standards, rules, and guidelines for the

credit-evaluation process, with the following specific goals:

- establish minimum and maximum loan maturities
- establish minimum levels of creditworthiness
- create consistency within the bank's underwriting process
- ensure uniformity in how the bank's consumer credit products are offered to borrowers
- provide a degree of flexibility, which allows credit officers and management to use their knowledge, skills, and experience
- provide specific guidelines for determining the creditworthiness of applicants; these guidelines might include the following:
 - minimum income levels
 - maximum debt-to-income ratios
 - job or income stability
 - payment history on previous obligations
 - the type and value of collateral
 - maximum loan-to-value ratios on various types of collateral
 - a minimum score on a credit scoring system
- provide guidelines for the level and type of documentation to be maintained, including—
 - a signed application
 - the identity of the borrower and his or her occupation
 - documentation of the borrower's financial capacity
 - a credit bureau report
 - the purpose of all loans granted to the borrower, the sources of repayment, and the repayment programs
 - documentation of the collateral, its value, and the source of the valuation
 - documents perfecting the lien on the collateral
 - verification worksheets and supporting documentation
 - a credit scoring worksheet, if applicable
 - the sales contract and related security agreements, if applicable
 - evidence of insurance coverage, if applicable
 - any other documentation received or prepared in conjunction with the credit request
- define procedures for handling delinquent consumer credit loans and the subsequent charge-off and possible re-aging of those loans

The consumer credit policy should also provide

guidelines for granting loans that do not conform to the bank's written lending policy or procedures. The policy should require that the reason for the exception be detailed in writing, submitted for approval to a designated authority, and documented in the loan file. Credit exceptions should be reviewed by the appropriate bank committee. The frequency of exceptions granted may indicate a lessening of underwriting standards or a need to adjust the policy to allow flexibility within safe and sound parameters. The examiner should assess the exceptions and make recommendations accordingly.

Obtaining and maintaining complete and accurate information on every consumer credit applicant is essential to approving credit in a safe and sound manner. The loan policy should establish what information will be required from the borrower during the application process and what, if any, subsequent information the borrower will be required to submit while the credit remains outstanding. Credit files should be maintained on all borrowers, regardless of the credit amount, with the exception of the latitude provided by the March 30, 1993, Interagency Policy Statement on Documentation of Loans. Each borrower's credit file should include the names of all other borrowers who are part of the same borrowing relationship, or the bank should have some other system for informing the reader of a credit file that the borrower is part of a more extensive credit relationship. A current credit file should provide the loan officer, loan committee, and internal and external reviewers with all information necessary to (1) analyze the credit before it is granted and (2) monitor the credit during its life.

Documentation requirements will vary according to the type of loan, borrower, and collateral. For example, the bank may not require a financial statement from a borrower whose loans are fully secured by certificates of deposit issued by the bank. For most consumer credit loans, the borrower's financial information is collected only at the time of the loan application.

OPERATIONAL RISK

The management of the consumer credit function and the accompanying internal controls is of primary importance to the safe, sound, and profitable operation of a bank. In evaluating controls for consumer credit administration, the examiner should review (1) the bank's adher-

ence to policies and procedures and (2) the operational controls over recordkeeping, payments, and collateral records to ensure that risks are controlled properly. (See "Loan Portfolio Management," section 2040.1, for an overview of the various types of risk that the bank should be aware of and the controls it should implement to effectively manage risk.) Risks that are inherent to the consumer credit function and that require internal controls include, but are not limited to, the following:

- *Insurance.* All insurance policies on file should name the bank as loss payee. The bank should maintain a tickler system to monitor the expiration of insurance policies. In addition, the bank should implement procedures to ensure single-interest insurance coverage is obtained in case the borrower's insurance is canceled or expires.
- *Security agreements.* The bank should implement procedures to ensure that lien searches are performed and that liens are perfected by appropriate filings.
- *Indirect installment loans.* The bank should implement procedures to reduce the risk that can occur in this area. These procedures should ensure the following:
 - payments are made directly to the bank and not through the dealer
 - dealer lines are reaffirmed at least annually
 - selling prices as listed by the dealer are accurate
 - credit checks on the borrowers are performed independently of the dealer
 - overdrafts are prohibited in the dealer reserve and holdback accounts
 - past-due accounts are monitored in aggregate per dealer to assess the quality of loans received from each individual dealer

CREDIT SCORING SYSTEM

Credit scoring is a method for predicting how much repayment risk consumer credit borrowers present. Credit scoring systems are developed using application or credit bureau data on consumers whose performance has already been categorized as creditworthy or noncreditworthy. Items of information that help predict acceptable performance are identified and assigned point values relative to their overall importance. These values are then totaled to calculate an overall credit score.

The credit score is used to approve credit, and frequently allows a bank to avoid the costly and time-consuming process of individual underwriting. Management determines a minimum score, which is sometimes called the cutoff score. Borrowers whose credit scores are not within the approved cutoff-score range for the type of loan requested do not meet the bank's minimum underwriting criteria. However, the bank may override a borrower's unacceptable credit score when other mitigating factors are present that may not have been included in the credit score. Exceptions to the bank's credit scoring system should be documented.

A number of banks have developed and implemented credit scoring systems as part of the approval process for consumer credit; other banks use traditional methods that rely on a credit officer's subjective evaluation of an applicant's creditworthiness. Credit scoring systems are replacing credit officers' subjective evaluation of borrowers' creditworthiness in more and more banks, particularly in larger institutions. Credit scoring systems are divided into two categories: (1) empirically derived, demonstrably and statistically sound credit systems and (2) judgmental systems.

Empirically derived credit scoring systems are generally defined as systems that evaluate creditworthiness by assigning points to various attributes of the applicant and, perhaps, to attributes of the credit requested. The points assigned are derived from a statistical analysis of recent creditworthy and noncreditworthy applicants of the bank. An empirically derived credit scoring system is statistically sound when it meets the following requirements:

- The data used to develop the system are derived from an empirical comparison of sample groups or from the population of creditworthy and noncreditworthy applicants who applied for credit within a reasonably recent period of time.
- The system is developed to evaluate the creditworthiness of applicants in order to serve the legitimate business interests of the bank using the system.
- The system is developed and validated using statistical principles and methodology.
- The bank periodically reevaluates the predictive ability of the system by using statistical principles and methodologies and adjusts the system as necessary.

An empirically derived credit scoring system may take the age of an applicant into account as a predictive variable, provided that the age of an elderly applicant is not assigned a negative factor or value. In a judgmental system, which relies on a credit officer's personal evaluation of a potential borrower's creditworthiness, a creditor may not take age directly into account. However, the applicant's age may be related to other information that the creditor considers in evaluating creditworthiness. For example, a creditor may consider the applicant's occupation and length of time to retirement to ascertain whether the applicant's income (including retirement income) will support the extension of credit to maturity. Consumer credit regulations allow any system of evaluating creditworthiness to favor an applicant who is 62 or older.

If the bank has a credit scoring system, the examiner should review the items or customer attributes that are included in it. In general, credit scoring systems are built on an experiential or historical database. Credit scoring methods analyze the experiences of individuals who have been previously granted credit and divide them into creditworthy and noncreditworthy accounts for purposes of predicting future extensions of consumer credit.

A successful credit scoring system provides a standardized way of measuring the inherent risk of the borrower. An important measure of any credit scoring system is its definition of risk and the care with which explanatory variables are defined, data are collected, and the system is tested. The standardized risk measurement should be fundamentally sound, be based on historical data, measure the risk of default (or loss), and produce consistent results across time for a wide range of borrowers. The bank should further investigate potential borrowers who do not meet the credit scoring criteria.

Some banks may use more than one type of credit scoring methodology in their underwriting and account-management practices. The following are three examples of credit scoring systems:

- *Credit bureau scoring.* The bank uses a consumer's credit bureau information in a scoring formula. The scoring model is developed by the various credit bureaus, using the reported experience of all credit grantors with whom the applicant has or has had a relationship.
- *Custom-application scoring.* The bank uses both a consumer's application and credit

bureau data in a scoring formula. This scoring model is developed using only information on the bank's applicants and borrowers.

- *Behavioral scoring.* The bank uses a formula that includes a borrower's repayment history, account utilization, and length of time with the bank to calculate a risk score for revolving accounts.

Applicants who fail the scoring process may still be judgmentally reviewed if additional information exists that may not have been included in the scoring formula. In addition, if an applicant passes the scoring process, but other information indicates that the loan should not be made, the applicant can be denied but the reason for the credit denial should be documented.

BANK CLASSIFICATION AND CHARGE-OFF POLICY

Consumer credit loans, based on their volume and size, are generally classified using criteria that are different from the classification of other types of loans. The examiner should use the Uniform Retail Credit Classification and Account Management Policy⁶ when determining consumer credit classifications. (See the appendix to this section.)

A bank should have procedures detailing when consumer credit loans become watch list or problem credits. In addition, the bank should have charge-off procedures for consumer credit loans. The examiner should review the bank's policies and procedures for adequacy and compliance.

Identification of unfavorable trends must include the review of past-due percentages and income and loss trends in the consumer credit department, which management should monitor closely. Unfortunately, in banks that lack a well-enforced charge-off program, loss ratios

are often meaningless for periods of less than a year. As a result, bank management may not become aware of downward trends until year-end or examiner-initiated charge-offs are made. Recognition and implementation of any necessary corrective action are thus delayed.

The examiner should determine whether the bank has adopted a well-enforced charge-off procedure. If so, his or her review should be limited to ascertaining that exceptions meet established guidelines. If the bank is properly charging off delinquent consumer credit loans in the normal course of business under a policy that generally conforms to that of the Federal Reserve System, no specific request for charge-off should be necessary. When the bank has not established a program to ensure the timely charge-off of delinquent accounts, such a program should be recommended in the examination report. If material misstatements in the FFIEC Consolidated Reports of Condition and Income (Call Reports) for previous quarters have resulted from management's failure to charge off loans, management should be instructed to amend the Call Reports for each affected quarter. The following loans are subject to the uniform classification policy:

- All loans to individuals for household, family, and other personal expenditures as defined in the Call Reports.
- Mobile home paper, except when applicable state laws define the purchase of a mobile home as the purchase of real property and the loan is secured by the purchased mobile home as evidenced by a mortgage or similar document.
- Federal Housing Authority (FHA) title 1 loans. These loans are also subject to the following classification criteria:
 - Uninsured portions should be charged off when claims have been filed.
 - When claims have not been filed, uninsured delinquent portions should be classified in accordance with the delinquent-installment-loan classification policy.
 - The portion covered by valid insurance is not subject to classification.

The uniform classification policy includes consumer credit loans. Small, delinquent consumer credit loans may be listed for classification purposes in the report of examination without detailed comments. Larger classified consumer loans might need to be supported with detailed comments. When no specific proce-

6. The 1980 Federal Financial Institutions Examination Council (FFIEC) policy was revised and issued in February 1999 and June 2000. The June 2000 policy replaces the 1980 policy and its February 1999 revision. Reporting on the FFIEC Call Report, based on the revised policy, is not required until December 31, 2000. In addition to discussing the revised policy statement, SR-00-8 advises examiners to consider the methodology used for aging retail loans. In accordance with the FFIEC Call Report instructions, banks and their consumer finance subsidiaries are required to use the contractual method, which ages loans based on the status of contractual payments.

dures have been established, or when adherence to the established procedures is not evident, the examiner should make every effort to encourage the bank to adopt and follow acceptable procedures.

REPOSSESSED PROPERTY

Repossessed property should be booked at its fair value, less cost to sell, on the date the bank obtains clear title and possession of the property. Any outstanding loan balance in excess of the fair value of the property, less selling costs, should be charged off. Periodic repricing should be performed, and appropriate accounting entries should be made when necessary. Generally, repossessed property should be disposed of within 90 days of obtaining possession, unless legal requirements stipulate a longer period.

VIOLATIONS OF LAW

The consumer credit department is particularly susceptible to violations of the various consumer credit laws and regulations. These types of violations may result in serious financial penalties and loss of public esteem. Therefore, the examiner must be aware of any violations discovered during the consumer compliance examination and ensure that corrective action has been effected. All examiners should be familiar with the various consumer credit laws and regulations and be alert to potential violations.

APPENDIX—RETAIL-CREDIT CLASSIFICATION POLICY

The revised June 2000 Uniform Retail Credit Classification and Account Management Policy issued by the FFIEC and approved by the Federal Reserve Board is reproduced below. The Board has clarified certain provisions of this policy. In this text, the Board's revisions are in brackets.

The Uniform Retail Credit Classification and Account Management Policy¹ establishes standards for the classification and treatment of retail credit by financial institutions. Retail credit consists of open- and closed-end credit extended

to individuals for household, family, and other personal expenditures, and includes consumer loans and credit cards. For purposes of this policy, retail credit also includes loans to individuals secured by their personal residence, including first mortgage, home equity, and home-improvement loans. Because a retail-credit portfolio generally consists of a large number of relatively small-balance loans, evaluating the quality of the retail-credit portfolio on a loan-by-loan basis is inefficient and burdensome for the institution being examined and for examiners.

Actual credit losses on individual retail credits should be recorded when the institution becomes aware of the loss, but in no case should the charge-off exceed the time frames stated in this policy. This policy does not preclude an institution from adopting a more conservative internal policy. Based on collection experience, when a portfolio's history reflects high losses and low recoveries, more conservative standards are appropriate and necessary.

The quality of retail credit is best indicated by the repayment performance of individual borrowers. Therefore, in general, retail credit should be classified based on the following criteria:

- Open- and closed-end retail loans past due 90 cumulative days from the contractual due date should be classified substandard.
- Closed-end retail loans that become past due 120 cumulative days and open-end retail loans that become past due 180 cumulative days from the contractual due date should be classified loss and charged off.² In lieu of charging off the entire loan balance, loans with non-real estate collateral may be written down to the value of the collateral, less cost to sell, if repossession of collateral is assured and in process.
- One- to four-family residential real estate loans and home equity loans that are past due 90 days or more with loan-to-value ratios

2. For operational purposes, whenever a charge-off is necessary under this policy, it should be taken no later than the end of the month in which the applicable time period elapses. Any full payment received after the 120- or 180-day charge-off threshold, but before month-end charge-off, may be considered in determining whether the charge-off remains appropriate.

OTS regulation 12 CFR 560.160(b) allows savings institutions to establish adequate (specific) valuation allowances for assets classified loss in lieu of charge-offs.

Open-end retail accounts that are placed on a fixed repayment schedule should follow the charge-off time frame for closed-end loans.

1. [For the Federal Reserve's classification guidelines, see section 2060.1, "Classification of Credits."]

greater than 60 percent should be classified substandard. Properly secured residential real estate loans with loan-to-value ratios equal to or less than 60 percent are generally not classified based solely on delinquency status. Home equity loans to the same borrower at the same institution as the senior mortgage loan with a combined loan-to-value ratio equal to or less than 60 percent need not be classified. However, home equity loans where the institution does not hold the senior mortgage, that are past due 90 days or more should be classified substandard, even if the loan-to-value ratio is equal to, or less than, 60 percent.

- For open- and closed-end loans secured by residential real estate, a current assessment of value should be made no later than 180 days past due. Any outstanding loan balance in excess of the value of the property, less cost to sell, should be classified loss and charged off.
- Loans in bankruptcy should be classified loss and charged off within 60 days of receipt of notification of filing from the bankruptcy court or within the time frames specified in this classification policy, whichever is shorter, unless the institution can clearly demonstrate and document that repayment is likely to occur. Loans with collateral may be written down to the value of the collateral, less cost to sell. Any loan balance not charged off should be classified substandard until the borrower re-establishes the ability and willingness to repay for a period of at least six months.
- Fraudulent loans should be classified loss and charged off no later than 90 days of discovery or within the time frames adopted in this classification policy, whichever is shorter.
- Loans of deceased persons should be classified loss and charged off when the loss is determined or within the time frames adopted in this classification policy, whichever is shorter.

Other Considerations for Classification

If an institution can clearly document that a past-due loan is well secured and in the process of collection, such that collection will occur regardless of delinquency status, then the loan need not be classified. A well-secured loan is collateralized by a perfected security interest in, or pledges of, real or personal property, includ-

ing securities with an estimable value, less cost to sell, sufficient to recover the recorded investment in the loan, as well as a reasonable return on that amount. "In the process of collection" means that either a collection effort or legal action is proceeding and is reasonably expected to result in recovery of the loan balance or its restoration to a current status, generally within the next 90 days.

Partial Payments on Open- and Closed-End Credit

Institutions should use one of two methods to recognize partial payments. A payment equivalent to 90 percent or more of the contractual payment may be considered a full payment in computing past-due status. Alternatively, the institution may aggregate payments and give credit for any partial payment received. For example, if a regular installment payment is \$300 and the borrower makes payments of only \$150 per month for a six-month period, [the institution could aggregate the payments received ($\$150 \times$ six payments, or \$900). It could then give credit for three full months ($\$300 \times$ three payments) and thus treat the loan as] three full months past due. An institution may use either or both methods in its portfolio, but may not use both methods simultaneously with a single loan.

Re-aging, Extensions, Deferrals, Renewals, and Rewrites

Re-aging of open-end accounts, and extensions, deferrals, renewals, and rewrites of closed-end loans³ can be used to help borrowers overcome

3. These terms are defined as follows. *Re-age*: Returning a delinquent, open-end account to current status without collecting [at the time of aging] the total amount of principal, interest, and fees that are contractually due. *Extension*: Extending monthly payments on a closed-end loan and rolling back the maturity by the number of months extended. The account is shown current upon granting the extension. If extension fees are assessed, they should be collected at the time of the extension and not added to the balance of the loan. *Deferral*: Deferring a contractually due payment on a closed-end loan without affecting the other terms, including maturity [or the due date for subsequently scheduled payments] of the loan. The account is shown current upon granting the deferral. *Renewal*: Underwriting a matured, closed-end loan generally at its outstanding principal amount and on similar terms. *Rewrite*: Underwriting an existing loan by significantly chang-

temporary financial difficulties, such as loss of job, medical emergency, or change in family circumstances like loss of a family member. A permissive policy on re-aging, extensions, deferrals, renewals, or rewrites can cloud the true performance and delinquency status of the portfolio. However, prudent use is acceptable when it is based on a renewed willingness and ability to repay the loan, and when it is structured and controlled in accordance with sound internal policies.
