Management should ensure that comprehensive and effective risk management and internal controls are established and maintained so that re-ages, extensions, deferrals, renewals, and rewrites can be adequately controlled and monitored by management and verified by examiners. The decision to re-age, extend, defer, renew, or rewrite a loan, like any other modification of contractual terms, should be supported in the institution's management information systems. Adequate management information systems usually identify and document any loan that is re-aged, extended, deferred, renewed, or rewritten, including the number of times such action has been taken. Documentation normally shows that the institution's personnel communicated with the borrower, the borrower agreed to pay the loan in full, and the borrower has the ability to repay the loan. To be effective, management information systems should also monitor and track the volume and performance of loans that have been re-aged, extended, deferred, renewed, or rewritten and/or placed in a workout program.

Open-End Accounts

Institutions that re-age open-end accounts should establish a reasonable written policy and adhere to it. To be considered for re-aging, an account should exhibit the following:

- The borrower has demonstrated a renewed willingness and ability to repay the loan.
- The account has existed for at least nine months.
- The borrower has made at least three consecutive minimum monthly payments or the equivalent cumulative amount. Funds may not be advanced by the institution for this purpose.

Open-end accounts should not be re-aged more than once within any twelve-month period and no more than twice within any five-year period. Institutions may adopt a more conservative re-aging standard; for example, some institutions allow only one re-aging in the lifetime of an open-end account. Additionally, an over-limit account may be re-aged at its outstanding balance (including the over-limit balance, interest, and fees), provided that no new credit is extended to the borrower until the balance falls below the predelinquency credit limit.

Institutions may re-age an account after it enters a workout program, including internal and third-party debt-counseling services, but only after receipt of at least three consecutive minimum monthly payments or the equivalent cumulative amount, as agreed upon under the workout or debt-management program. Re-aging for workout purposes is limited to once in a five-year period and is in addition to the once-in-twelve-months/twice-in-five-years limitation described above. To be effective, management information systems should track the principal reductions and charge-off history of loans in workout programs by type of program.

Closed-End Loans

Institutions should adopt and adhere to explicit standards that control the use of extensions, deferrals, renewals, and rewrites of closed-end loans. The standards should exhibit the following:

- The borrower should show a renewed willingness and ability to repay the loan.
- The standards should limit the number and frequency of extensions, deferrals, renewals, and rewrites.
- Additional advances to finance unpaid interest and fees should be prohibited.

Management should ensure that comprehensive and effective risk management, reporting, and internal controls are established and maintained to support the collection process and to ensure timely recognition of losses. To be effective, management information systems should track the subsequent principal reductions and charge-off history of loans that have been granted an extension, deferral, renewal, or rewrite.

ing its terms, including payment amounts, interest rates, amortization schedules, or its final maturity.

Examination Considerations

Examiners should ensure that institutions adhere to this policy. Nevertheless, there may be instances that warrant exceptions to the general classification policy. Loans need not be classified if the institution can document clearly that repayment will occur irrespective of delinquency status. Examples might include loans well secured by marketable collateral and in the process of collection, loans for which claims are filed against solvent estates, and loans supported by valid insurance claims.

The Uniform Retail Credit Classification and Account Management Policy does not preclude examiners from classifying individual retail-credit loans that exhibit signs of credit weakness regardless of delinquency status. Similarly, an examiner may also classify retail portfolios, or

segments thereof, where underwriting standards are weak and present unreasonable credit risk, and may criticize account-management practices that are deficient.

In addition to reviewing loan classifications, the examiner should ensure that the institution's allowance for loan and lease losses provides adequate coverage for probable losses inherent in the portfolio. Sound risk- and account-management systems, including a prudent retail-credit lending policy, measures to ensure and monitor adherence to stated policy, and detailed operating procedures, should also be implemented. Internal controls should be in place to ensure that the policy is followed. Institutions that lack sound policies or fail to implement or effectively adhere to established policies will be subject to criticism.

Issued by the FFIEC on June 12, 2000.

Consumer Credit

Examination Objectives

Effective date May 2003

Section 2130.2

1. To determine the quality and adequacy of operations (including the adequacy of lending policies, practices, procedures, internal controls, and management information systems) for consumer credit and credit card plans.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To evaluate the consumer credit portfolio for credit quality, performance, adequate collateral, and collectibility.
4. To determine the scope and adequacy of the audit and loan-review function.
5. To determine the level of risk inherent in a bank's consumer credit and credit card lending departments and what actions management has taken to identify, measure, control, and monitor the level and types of risks.
6. To determine that the goals and objectives of specific credit card plans are being achieved and that the plans are profitable.
7. To determine compliance with the board of directors' and senior management's policies and procedures and with applicable laws and regulations.
8. To initiate corrective action when policies, procedures, practices, or internal controls are deficient or when violations of law or regulations have been noted.

GENERAL CONSUMER CREDIT

1. If selected for implementation, complete or update the installment loan section of the internal control questionnaire.
 2. Based on the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
 3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors. If applicable, also determine if the latest consumer compliance examination disclosed any violation of laws or regulations. Determine if corrective action has been taken.
 4. Request that the bank supply the following:
 - a. a listing of all dealers who have indirect-paper, fleet-leasing, or discounted-lease lines, along with respective codes
 - b. an indirect paper or a fleet-leasing or discounted fleet-leasing report by code, along with the respective delinquency report for all loans past due 30 days or more
 - c. a listing of dealer reserves, holdback accounts, or both showing the dealer, account number, and balance
 - d. the latest month-end extension and renewal reports
 - e. a schedule of all loans with irregular or balloon payments or both
 - f. a schedule of all loans with more than five prepaid installments
 - g. a listing of loans generated by brokers or finders
 - h. a listing of current repossessions, including the name of the borrower, a description of the item, the date of repossession, the date title was acquired, and the balance
 - i. a copy of each monthly installment-loan charge-off report since the preceding examination (If the monthly reports do not include all the information necessary to support the charge-off of the installment loans, request a revised listing that includes the missing information for each charge-off.)
 - j. management reports that are prepared by department personnel and that are not forwarded in their entirety to the board of directors or its committee
 - k. a listing of the amount of recoveries on charged-off installment loans, by month, since the preceding examination
 - l. a listing of all outstanding loans that have been assigned to an attorney for collection
 - m. an identification of all columns and codes on the computer printout
5. Obtain a trial balance of installment loans. Use of the bank's latest trial balance is acceptable. If exact figures are required, update the trial balance from the daily transaction journals. Using the trial balance—
 - a. agree or reconcile balances to department controls and the general ledger and
 - b. review reconciling items for reasonableness.
 6. Using an appropriate sampling technique, select borrowers' loans to be reviewed during the examination.
 7. Using an appropriate technique, select indirect dealers and fleet-leasing and indirect-lease lines from indirect-dealer or leasing reports. Transcribe the following onto consumer finance indirect line cards:
 - a. the amount and number of contracts, indicating whether they are with or without recourse
 - b. the amount and number of contracts still accruing that are past due 30–89 days and 90 days or more
 - c. the balance in dealer reserve or holdback accounts or both
 8. Obtain the following schedules from the bank or the appropriate examiner if they are applicable to this area:
 - a. past-due loans (obtain separate schedules by branch, if available)
 - b. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
 - c. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination

- d. loan commitments and other contingent liabilities
 - e. extensions of credit to employees, officers, directors, principal shareholders, and their interests, specifying which officers are considered executive officers
 - f. correspondent banks' extensions of credit to executive officers, directors, and principal shareholders and their interests
 - g. a list of correspondent banks
 - h. miscellaneous loan debit-and-credit suspense accounts
 - i. loans considered "problem loans" by management
 - j. each officer's current lending authority
 - k. the current structure of interest rates
 - l. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
 - m. reports furnished to the loan and discount committee or any similar committee
 - n. reports furnished to the board of directors
 - o. loans classified during the preceding examination
 - p. the extent and nature of loans serviced
9. Review the information received and perform the following for—
- a. Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap:
 - Participations only:
 - Test participation certificates and records and determine that the parties share in the risks and contractual payments on a pro rata basis.
 - Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
 - Procedures pertaining to *all* transfers:
 - Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
 - Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
 - Determine that low-quality loans transferred to or from the bank are properly reflected on its books at fair value (while fair value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium).
 - Determine that low-quality loans transferred to the parent holding company or a nonbank affiliate are properly reflected at fair value on the books of both the bank and its affiliate.
 - If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
 - (1) name of originating institution
 - (2) name of receiving institution
 - (3) type of transfer (i.e., participation, purchase/sale, swap)
 - (4) date of transfer
 - (5) total number of loans transferred
 - (6) total dollar amount of loans transferred
 - (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
 - (8) any other information that would be helpful to the other regulator
 - b. Miscellaneous loan debit-and-credit suspense accounts:
 - Discuss with management any large or old items.
 - Perform additional procedures as considered appropriate.
 - c. For loan commitments and other contingent liabilities, if the borrower has been advised of the commitment and it exceeds the cutoff alone or in combination with any outstanding debt, prepare a line card for subsequent analysis and review.
 - d. For loans classified during the previous examination, determine the disposition

- of loans so classified by—
- obtaining current balances and their payment status, or the date the loan was repaid and source of payment;
 - investigating any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or were a result of a participation, sale, or swap with another lending institution; and
 - referring to step 9a of this section for the appropriate examination procedures, determine if repayment was a result of a participation, sale, or swap.
- e. Select loans that require in-depth review on the basis of information derived from the above schedules.
10. Consult with the examiner responsible for the asset-liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See section 6000.1, “Instructions for the Report of Examination,” for considerations to be taken into account when compiling maturity information for the gap analysis.
 11. Obtain liability and other information on common borrowers from examiners assigned to overdrafts, lease financing, and other loan areas. Together decide who will review the borrowing relationship.
 12. Obtain the credit files of all direct non-consumer borrowers, indirect dealers, and fleet-leasing and discounted-leasing lines for which line cards have been developed. Transcribe and analyze the following as appropriate:
 - a. the purpose of the loan
 - b. collateral information, including its value and the bank’s right to hold and negotiate it
 - c. the source of repayment
 - d. ancillary information, including the type of business, its officers, and its affiliation
 - e. fiscal and interim financial exhibits
 - f. guarantors and the amount of any guarantee
 - g. personal statements of borrowers, endorsers, or guarantors
 - h. external credit checks and credit bureau reports
 - i. loan officer’s credit memoranda
 - j. subordination agreements
 - k. a corporate resolution to borrow or guarantee
 - l. provisions of the loan agreement or master lease agreement
 - m. the type of dealer endorsement:
 - full recourse
 - limited recourse
 - nonrecourse
 - n. dealer repurchase agreements
 - o. reserve and holdback requirements
 - p. the amount of insurance coverage
 13. Check the central liability file on borrowers indebted above the cutoff or borrowers displaying credit weakness who are suspected of having additional liability in other loan areas.
 14. Transcribe significant liability and other information on officers, principals, and affiliations of borrowers for which line cards have been developed. Cross-reference, if appropriate.
 15. Review a listing of loans generated by brokers or finders:
 - a. Check the quality of the paper being acquired.
 - b. Determine that sufficient financial data have been obtained to support the credits.
 - c. Evaluate performance.
 16. Review the current past-due (delinquent) loan list and determine that loans are aged using the contractual method, which ages a loan on the basis of its contractual repayment terms, as required by the Call Report instructions. Discuss with management selected delinquent loans from the listings of delinquent loans and repossessed collateral.
 17. Determine if management has a general policy for the timely classification and charge-off of past-due loans and ascertain whether the policy is adhered to. Determine if loan-classification practices follow the board of directors’ respective policies. Ascertain whether those policies comply with the provisions of the FFIEC’s Uniform Retail Credit Classification and Account Management Policy and with Federal Reserve policy. Review with management individual accounts that have not been charged off in line with these policies.
 18. Review voluntary charge-offs made since the preceding examination and, on a test basis, review files on borrowers and ascertain the correctness of the charge-off.
 19. Review any reports being submitted on

delinquent and defaulted loans guaranteed by government agencies:

- a. Determine that management is informed accurately and is complying with the reporting requirements.
- b. Determine that claims are being promptly filed after default.

OVERDRAFT-PROTECTION PROGRAMS

1. Determine if the bank has developed and implemented adequate written overdraft-protection-program policies and procedures for its ad hoc, automated, and other overdraft programs. Determine if the policies and procedures comply with the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs.
2. Ascertain whether the bank's management emphasizes and monitors adherence to its overdraft policies and procedures, applies generally accepted accounting principles to overdraft transactions, and applies the bank Call Report's accounting and reporting instructions and requirements to overdrafts. Evaluate whether the bank maintains and monitors safe and sound overdraft business practices to control the credit, operational, and other risks associated with overdraft programs.
3. Apply the additional examination procedures for overdraft-protection programs (see section 3000.3) when weaknesses are found in (1) the bank's compliance with the February 2005 interagency guidance and (2) the bank's evaluation of the risks associated with overdraft-protection programs.

CREDIT CARD LENDING

The examiner's analysis of operating policies and procedures is key to the examination of credit card banks and credit card operations. Credit card lending is characterized by a high volume of accounts, homogeneous loan pools, and small-dollar balances. A concentrated review of individual accounts, therefore, may not be practical. Examination procedures should focus on evaluating policies, procedures, and internal controls in conjunction with performing other selected functions. The goal is not confined to

identifying current portfolio problems. The examination process should include an investigation of potential problems that may result from ineffective policies, unfavorable trends, lending concentrations, or nonadherence to policies. The following examination procedures should be performed.

1. Review UBPR data to determine the volume of credit card activity.
2. Determine if management has recently offered or plans to offer new products or if management plans to enter new market niches or expand the credit card portfolio significantly (new offerings may include affinity cards, co-branded cards, secured cards, or purchasing cards).
3. Determine whether the bank is engaged or plans to engage in subprime credit card lending. If subprime lending exists or is planned, perform the subprime-lending examination procedures in section 2133.3.
4. Review correspondence that the bank has received or exchanged with credit card networks (i.e., Visa, MasterCard). These agencies perform periodic reviews of their members.

Policy Considerations

1. Review the credit card policy. Policy guidelines should include the following items:
 - a. adequate screening of account applicants
 - b. standards for approving accounts and determining credit-line size
 - c. minimum standards for documentation
 - d. internal controls to prevent and detect fraud, such as—
 - review procedures, including frequent review of delinquent accounts;
 - delinquency notification and collection procedures;
 - criteria for freezing accounts and charging off balances;
 - criteria for curing and re-aging delinquent accounts;
 - controls to avoid reissuances of expired cards to obligors who have unsatisfactory credit histories;
 - approvals of and controls over over-limits and overrides; and
 - cardholder information security controls
 - e. due diligence before engaging the service of a third party, as well as the

ongoing management of credit card operations

Audit

1. Review the adequacy of the audit function regarding credit card operations.
 - a. Determine if the audit program identifies contraventions of internal policy, credit card network (i.e., Visa, MasterCard) regulations, and written contracts.
 - b. Determine if audit procedures include reviewing the accuracy and integrity of the bank's system for reporting the past-due status of credit card loans, over-limit accounts, and other management information systems.
 - c. Determine if audit procedures include reviewing computer-driven models.
 - d. Determine if independent tests of automated procedures are performed (for example, a sample of automatically re-aged accounts may be independently reviewed to test the integrity of automated systems).
 - e. Determine whether audit procedures include a review of credit card processing operations. Ascertain if the product control file governing credit card processing was reviewed and whether it revealed any significant internal control weaknesses, such as a lack of segregation of duties and access controls. Determine whether management is aware of the risks and if the audit staff has the expertise to adequately evaluate procedures and suggest controls commensurate with the risks.
 - f. Determine if audit procedures include a review of the services provided by outside vendors (services such as telemarketing, data processing, and direct mail). Ascertain if the audit procedures included a review of the performance of the vendors and documentation of the relationships.
2. Determine if management has reviewed and appropriately responded to audit findings regarding credit card operations.

Fraud

1. Evaluate management's strategy for control-

ling fraud, including whether the strategies frequently emphasize review of credit card applications to prevent fraudulent accounts from being booked or whether neural networks are used to identify fraudulent transactions. Common controls include the following items:

- a. methods of preventing application fraud, such as name and address verification, duplicate-application detection, Social Security number verification, etc.
 - b. physical aspects of cards such as holograms and enriched information on the magnetic stripe
 - c. adequate staffing and training of the fraud-detection department
 - d. computer systems to identify suspicious activity
 - e. procedures for issuing cards to prevent their interception and activation
 - f. procedures for handling returned cards, statements, PINs, checks, and lost and stolen cards
 - g. investigation and documentation of cases of suspected fraud
 - h. freezing of accounts with suspicious activity
 - i. procedures for filing a Suspicious Activity Report by Depository Institutions (SAR-DI) (See SR-07-2 and the attached June 2007 SAR-DI form, the requirements for suspicious-activity reporting in section 208.62 of the Board's Regulation H (12 CFR 208.62), and the Bank Secrecy Act compliance program in section 208.63 (12 CFR 208.63).)
 - j. procedures for access to and alteration of customer information
 - k. controls over cardholder payments, account-balance records, and charge-back administration
 - l. account-authorization procedures
2. Determine whether management receives adequate fraud-monitoring reports, such as—
 - a. out-of-pattern-purchase or sequence-of-purchase reports that identify suspicious transactions that do not fit an individual cardholder's established purchasing pattern or
 - b. suspicious-purchasing-pattern reports that identify certain types of purchases, such as electronics or jewelry, that can correlate with fraudulent activity.
 3. Review consumer complaint correspon-

dence from cardholders that is on file with the bank or primary federal regulator for irregularities or patterns of activity.

Account Solicitation

1. Determine management's general approach to account solicitations (a variety of approaches or a combination of approaches can exist). Solicitations may be for preapproved or non-preapproved accounts. The latter are usually solicited through mass mailings, telemarketing, or counter displays.
2. Determine the extent to which outside contractors are used in marketing programs (for example, outsourced mass-mailing and telemarketing operations).
3. Review management's product and marketing program, including the goals of the program, the basis of the marketing approach, and product pricing. Ascertain whether adequate supporting evidence exists to indicate (1) that management has a marketing program and a product that appeal to the bank's targeted markets and (2) that the projected product and marketing program results will be obtained.
4. Determine how management identifies markets for new solicitations and evaluates expected performance.
 - a. Identify the analytical procedures (for example, response rates, usage rates, credit-score distributions, and future delinquency and loss rates) management uses to project the results of a particular solicitation.
 - b. Determine how management verifies projections before proceeding with a full-scale solicitation program (test marketing).
5. Determine if management monitors solicitation results for each major account segment and if management incorporates the findings into future solicitations.
6. Determine if management monitors and responds to trends in adverse selection (such as when a disproportionate number of respondents that are poor credit risks answer an offer, which may result in a larger-than-projected percentage of riskier accounts being included in the solicitation-response pool).
7. Review affinity and co-branding relationships. Determine if the bank has control over the approval and acceptance of such accounts. (In co-branding, a third-party relationship exists between a broad base of cardholders and a jointly sponsored credit card. Usually, the sponsors are the bank and a retail merchant for the affinity and co-branding relationships. These cards have some type of value-added feature such as cash rebates or discounts on merchandise.)
8. Review new-product offerings and the adequacy of management's market identification, testing, and ongoing monitoring of new products. Ascertain if management monitored and controlled key new-product concerns, including whether—
 - a. the amount of historical and test-sample data available to analyze the product or solicitation was adequate;
 - b. the speed at which the new product was introduced was compatible with the internal controls for credit authorizations; and
 - c. the size of solicitations introduced was adequately controlled, considering operational and managerial capabilities.
9. Determine if management had any problems with the wording of solicitations or applications and if any imprecise offer terms contributed to asset-quality and earnings problems. Ascertain if there were errors such as the following:
 - a. no expiration date on the offer
 - b. an absence of wording giving management discretion in setting credit lines
 - c. insufficient information requirements on applications
10. Review balance-transfer policies and monitoring practices. Determine if balance transfers generally resulted in higher credit exposures and a tendency to distort financial condition and performance ratios due to the immediate booking of relatively large balances.
11. Review teaser interest-rate practices. Determine if controls are adequate to prevent teaser rates from disguising a borrower's repayment capacity and from resulting in higher attrition when the teaser rates expire.

Predictive Models

1. Review the integrated models management uses to identify and select prospective cus-

tomers. (Management usually uses two distinct credit card predictive models. The first model, the credit-scoring model, is used in the initial application process. The second model, a behavioral model, is used in the management of existing accounts. These models use a credit scorecard, which is a table of characteristics, attributes, and scores that enable a credit grantor to calculate default risk. Information derived from these models assists management with quantifying and minimizing credit risk and fraud losses.)

Credit Scoring

1. Determine the nature and extent that credit scores are used in the underwriting process.
2. Determine the degree of reliance placed on credit bureau score “good” and “bad” odds charts. Ascertain if management develops and calibrates its own good and bad odds chart with a sufficient quantity and quality of historical account data (a customized odds chart is more predictive than a credit bureau odds chart).
3. Determine if a single- or dual-score model is used. (A single-score model uses credit bureau scores; a dual-score matrix calculates a score based on the combination of a custom score, usually based on credit application data, and a credit bureau score. For the more complex operations, management should be using the more sophisticated dual-scoring model.)

Behavior-Scoring System

1. Determine whether management has implemented a behavior-scoring system to manage existing accounts. (The score is derived from a cardholder's payment and usage behavior with the credit cardholder's issuing bank. A cardholder's historical performance with a particular bank is typically the best indicator of future performance with that bank. Behavior scores are frequently supplemented with credit bureau scores to enhance their predictive value.)
2. Ascertain if management continually refines existing, or if it considers new, predictive models.
 - a. Determine whether a champions and challengers system is used. (Such a system involves continual portfolio analysis and identification of predictive characteristics. Based on this analysis, existing models are revised and enhanced. The revised challenger model is then compared with the existing champion model. If the challenger is more predictive, it is adopted. This procedure is an ongoing system of refinement.)
 - b. Determine if management has adopted or is considering new predictive models (for example, revenue, revolving, bankruptcy, and payment-predictor models).

Validation

1. If credit scoring is used, determine if management is validating scores by comparing account-quality rankings of accepted applications with those predicted by the system (when the rank orderings remain substantially the same, the scoring system remains valid).
 - a. Review the statistical techniques used to validate each model used, and determine whether common statistical techniques are being used, such as the K/S test, the chi square, the goodness-of-fit test, divergence statistics, and the population stability test.
 - b. Determine if high and low override controls are in place and if they are detailed on exception reports (overrides can skew a statistical population and distort analysis).

Portfolio Analysis

1. Review and analyze the bank's customized credit card reports, which usually include performance and industry peer-group analysis data (be alert to the possibility that the data may have been distorted by niche marketing, specialized card products, or extensive affiliate support).
2. Determine if management is segmenting portfolios (such as by geographic or demographic distribution, affinity relationship (cardholders belonging to a particular union, corporation, professional association, etc.), product type (premium or standard cards), or credit bureau scores). Consider the particular characteristics of each segment for delinquency, profitability, future marketing programs, ALLL calculations, and other purposes.
3. Determine whether geographic, customer-base, card-type, or other concentrations exist, and identify the unique risks posed by any of these portfolio segments or concentrations. Evaluate their degree of risk and consider mitigating factors.
4. Review how management uses portfolio information to identify developing trends, make strategic decisions, and detect potential problems.
 - a. Determine how management reports identify the number and volume of workout and re-aged credits.¹
 - b. Evaluate the portfolio information that management reviews, such as asset-quality ratios and vintage analysis (an analysis of the account performance of homogeneous loans booked at a similar time using the same credit and pricing criteria).
5. Determine if cash advances are monitored and authorization procedures are in place

1. A workout is a former open-end credit card account in which credit availability has been closed and in which the balance owed has been placed on a fixed (dollar or percentage) repayment schedule in accordance with modified, concessionary terms and conditions. Generally, the repayment terms require amortization or liquidation of the balance owed over a defined payment period. Such arrangements are typically used when a customer is either unwilling or unable to repay the open-end credit card account in accordance with the original terms but shows the willingness and ability to repay the loan in accordance with modified terms and conditions. In a re-aged credit account, the bank changes the delinquency status of an account without the full collection of its delinquent payments.

- (cardholders with excessive debt may obtain cash advances to pay other debts).
6. Review the level and trend of the following portfolio ratios:
 - a. average balance of delinquent accounts (by 30-day time frames) to average balance of nondelinquent accounts
 - b. lagged delinquency rate and nine-month net charge-offs to lag rates
 - c. net charge-off rate and lagged net charge-off rate
 - d. re-aged accounts and partial-payment plans to total active accounts and to average total loans
 - e. total past-due loans to gross loans
 - f. noncurrent loans to gross loans
 7. Consider indicators of possible deterioration in asset quality and criticize prolonged practices that result in negative amortization (that is, when minimum payments consistently fall short of covering all finance charges and fees assessed during the billing cycle and when the outstanding balance continues to increase), inappropriate fees, and other practices that inordinately compound or protract consumer debt and disguise portfolio performance and quality. Be alert to other indicators and practices that can reflect a deterioration of asset quality, such as—
 - a. rapid growth that may indicate a lowering of underwriting standards;
 - b. lower minimum-payment requirements and extended principal-payment cycles, which may result in negative amortization and may also indicate less creditworthy accounts;
 - c. a heightened ratio of total accounts being charged off to the number of accounts or a high average balance of accounts that may indicate a lax policy toward the number and level of credit lines granted to cardholders;
 - d. lower payment rates combined with higher average balances, which may indicate that borrowers are having trouble paying their debt;
 - e. an inordinately high ratio of income earned not collected on loans to total loans when compared with the percentage of total past-due loans to gross loans, which may indicate frequent re-aging, inadequate collection procedures, or a failure to charge off credit card receivables on a timely basis; and
 - f. the average age of accounts, which may indicate that loss rates will rise for unseasoned accounts (loss rates are usually low for new offerings and peak at 18 to 24 months after issue).
 8. Evaluate management's practices for cure programs, such as re-aging, loan extensions, deferrals, fixed payment, and forgiveness.
 9. Develop an overall assessment of the adequacy of a bank's account-management practices for its credit card lending business, incorporating the risk profile of the bank, the quality of management reporting, and the adequacy of the bank's charge-off policies and loss-allowance methodologies.
 10. Evaluate whether the bank clearly documents in its policies and procedures the basis for using the exceptions to the FFIEC Uniform Retail Credit Classification and Account Management Policy and whether the bank documents the types of exceptions used and the circumstances giving rise to their use. Determine if the bank prudently limits the use of exceptions. If it does not, criticize the bank's management and require corrective action when the exceptions are not well managed, result in improper reporting, or mask delinquencies and losses.
 11. Criticize management and recommend appropriate supervisory corrective action when workout programs are not managed properly (characteristics of improperly managed workout programs include workout programs that do not strive to have the borrowers repay credit card debt within 60 months, the existence of liberal repayment terms with extended amortizations, high charge-off rates, accounts being moved from one workout program to another, multiple re-aging, and poor MIS to monitor program performance).
 12. Determine that the bank complies with the FFIEC Uniform Retail Credit Classification and Account Management Policy.
 13. Determine whether management monitors and analyzes the performance of each workout program (whether the program achieves the objective of improving the borrower's subsequent performance, the effect of the program on delinquency ratios, etc.)
 14. Assess the current and potential impact the workout programs have on reported performance and profitability, including their ALLL implications.
 15. Determine if third parties purchase or fund

- loan payments to cure loan delinquencies and, if so, assess the impact.
16. Determine whether management developed contingent strategies to deal with rising delinquency levels, which are generally the first sign of account deterioration. Strategies could include the following issues:
 - a. reviewing accounts more frequently
 - b. decreasing the size of credit lines
 - c. freezing or closing accounts
 - d. increasing collection efforts
 17. Ascertain the bank's compliance with its credit card policies and procedures by reviewing a sample of the bank's credit card loans that were originated since the prior examination.
 18. Determine the level of classifications for credit card loans:
 - a. Review a sample of loans to ascertain the accuracy and integrity of the bank's system for reporting past-due status.
 - b. Verify that the bank's classification and charge-off procedures adhere to, at a minimum, the guidance of the FFIEC Uniform Retail Credit Classification and Account Management Policy.
3. Determine if ALLL calculations are comprehensive and if they consider the following factors:
 - a. contingent liabilities, or the risk associated with undisbursed funds
 - b. bankrupt and deceased cardholders (such losses are usually not predicted by a simple roll-rate analysis)
 - c. economic conditions, such as unemployment and bankruptcy rates, that can significantly affect asset quality
 - d. the number and volume of workout and re-aged credits
 4. Determine if the ALLL methodologies adequately provide for the use of cure programs, settlement arrangements,² workout programs, existing over-the limit portfolio segments, any resulting estimable probable losses on those accounts, and any other credit card loan accounts.
 5. Review the accounting practices for credit- ing recoveries on credit card loans. Determine that the total amount credited to the ALLL as recoveries on individual credit card loans is limited to the amounts previously charged off against the ALLL for the credit card loan. Any excess recovery amount must be recognized as income.
 6. Verify that fraud losses are not charged to the ALLL or included in ALLL calculations and that the losses are recorded as a non- interest expense.

Allowance for Loan and Lease Losses

1. Ascertain whether an allowance for loan and lease losses (ALLL) policy exists for credit card loans and if adequate ALLL analytical procedures are in place. Roll-rate analysis (analysis of the migration of an account from one billing cycle to the next), which is generally performed for each portfolio segment, is the industry standard. However, some banks use the following additional or alternative methods:
 - a. delinquency analysis using a set percentage of loans over 60 days delinquent
 - b. exposure analysis that projects net charge-off rates to each 30-day period of delinquency
 - c. charge-off projections based on vintage analysis
 - d. a historical rolling average based on charge-off rates for the last six months
 - e. analysis based on external economic forecasting services
2. Review ALLL-calculation techniques for reasonableness (variables such as aggregating seasoned and unseasoned portfolios can

Asset Securitization

Perform the following examination procedures when the bank has securitized its credit card receivables (removed designated credit card receivables from its balance sheet to a special-purpose vehicle (SPV) while the bank retains its account ownership).

1. Determine if the credit card loan delinquency and loss rates are similar for both the owned portfolio and the securitized portfolio. (Slightly higher delinquency and net charge-off ratios on securitized assets

² In a settlement arrangement, the bank forgives a portion of the amount owed. In exchange, the borrower agrees to pay the remaining balance either in a lump-sum payment or by amortizing the balance over several months.

will be prevalent if the bank is experiencing high growth and possesses a significant portion of unseasoned accounts.) When the delinquency and loss rates deviate significantly, determine if management is prioritizing credit card receivables for securitization by selecting credit card accounts that have either a high credit quality or superior past credit history. For example, in the following two ratios, the resulting percentages on a managed and owned basis should approximate one another: (1) noncurrent loans to gross loans and (2) total past-due loans to gross loans.

2. Determine the on- and off-balance-sheet effects of asset securitization. (For example, what is the on- and off-balance-sheet effect of removing seasoned accounts?) (A performance analysis is important because the level of a credit card bank's earnings and capital is largely dependent on the quality of its average total assets under management and not merely on the owned credit card portfolio.)

Third Parties

1. Determine whether any credit card-related activities are outsourced. If so, complete the third parties review located in the Subprime Lending Loan Reference. Third parties may include brokers, marketing firms, collection or servicing firms, correspondents, affinity partners, and information systems firms.
2. Determine whether the bank shares a BIN (bank identification number) with a third party. (Sharing of BINs can create financial liability. A bank sharing a BIN should have a process to identify, monitor, and control the risks associated with BIN sharing. Certain Visa and MasterCard members are assigned BINs (represented by a series of numbers on the credit card) for clearing and settlement of their credit card activities. Members that are licensed specific BINs may allow other members to deposit and receive transactions through those BINs. However, the BIN licensee (holder of the BIN) has primary responsibility for transactions processed through its BIN. In addition, users of a BIN other than the BIN licensee (BIN holder) may share responsibility for transactions processed under that

BIN if the licensee fails to meet its membership obligations.)

BANK POLICIES AND PROCEDURES AND STATUTORY AND REGULATORY REQUIREMENTS

1. Determine compliance with laws, regulations, and Federal Reserve Board policies pertaining to lending by performing the following steps.

- a. *Lending limits:*

- Determine the bank's lending limits as prescribed by state law.
- Determine advances or combinations of advances whose aggregate balances are above the limit.

- b. *Sections 23A and 23B of the Federal Reserve Act (12 USC 371c and 371c-1) and the Federal Reserve's Regulation W—Transactions with Affiliates:*

- Obtain a listing of loans and other extensions of credit to affiliates.
- Test-check the listing against the bank's customer liability records to determine the list's accuracy and completeness.
- Obtain a listing of other covered transactions with affiliates (i.e., purchase of an investment or securities issued by an affiliate; purchase of loans or other credit-related assets, including assets subject to an agreement to repurchase from an affiliate; the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate; or acceptance of affiliate's securities as collateral for a loan to any person).
- Determine the volume of transactions with third parties when the proceeds were used or transferred for the benefit of any affiliate.
- Ensure that covered transactions with affiliates do not exceed the limits of section 23A.
- Ensure that covered transactions with affiliates meet the collateral requirements of section 23A.
- Determine that low-quality loans or other assets have not been purchased from an affiliate.

- Determine that all transactions with affiliates are on market terms and conditions that are consistent with safe and sound banking practices.
 - Determine that the transactions were conducted on terms and conditions that reflect pricing that is generally available to unaffiliated parties.
- c. *18 USC 215—Commission or Gift for Procuring Loan:*
- While examining the installment loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
 - Investigate any such suspected situation.
- d. *Federal Election Campaign Act (2 USC 441b)—Political Contributions:*
- While examining the installment loan area, determine the existence of any loans in connection with any election to any political office.
 - Review each such credit to determine whether it is made in accordance with applicable banking laws and regulations and in the ordinary course of business.
- e. *12 USC 1972—Tie-In Provisions.* While reviewing credit and collateral files (especially loan agreements), determine whether any extension of credit is conditioned upon the customer's—
- obtaining additional credit, property, or services from the bank, other than a loan, discount, deposit, or trust service;
 - obtaining additional credit, property, or service from the bank's parent holding company or the parent's other subsidiaries;
 - providing an additional credit, property, or service to the bank, other than those related to and usually provided in connection with a loan, discount, deposit, or trust service;
 - providing additional credit, property, or service to the bank's parent holding company or any of the parent's other subsidiaries; or
 - not obtaining other credit, property, or service from a competitor of the bank, the bank's parent holding company, or the parent's other subsidiaries, except that the lending bank may impose conditions and requirements in a credit transaction to ensure the soundness of the credit.
- f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider activities and reporting requirements are as follows (the examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment):
- *Regulation O (12 CFR 215)—Loans to Executive Officers, Directors, and Principal Shareholders and Their Interests.* While reviewing information relating to insiders received from the bank or appropriate examiner (including information on loan participations, loans purchased and sold, and loan swaps)—
 - Test the accuracy and completeness of information about installment loans by comparing it with the trial balance or loans sampled.
 - Review credit files on insider loans to determine that required information is available.
 - Determine that loans to insiders do not contain terms more favorable than those afforded to other borrowers.
 - Determine that loans to insiders do not involve more than the normal risk of repayment or present other unfavorable features.
 - Determine that loans to insiders, as defined by the various sections of Regulation O, do not exceed the lending limits imposed by those sections.
 - If prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained.
 - Determine compliance with the various reporting requirements for insider loans.
 - Determine that the bank has made provisions to comply with the public disclosure requirements for insider loans.

- Determine that the bank maintains records of such public requests and the disposition of the requests for a period of two years.
 - *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2))—Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
 - Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
 - Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.
 - g. *Federal Reserve Board Policy Statement on the Disposition of Credit Life Insurance Income (67 Fed. Res. Bull. 431 (1981), FRRS 3–1556).* Test for compliance with the policy statement by determining—
 - that the income generated from the sale of credit life, health, and accident insurance³ is—
 - not distributed directly to employees, officers, directors, or principal shareholders in the form of commissions or other income for their personal profit; however, such individuals may participate in a bonus or incentive plan in an amount not exceeding, in any one year, 5 percent of the recipient’s annual salary, and paid not more often than quarterly; and
 - for accounting purposes, credited to the bank’s income account, the income account of an affiliate operating under the Bank Holding Company Act, or in the case of an individual shareholder, to a trust for the benefit of all shareholders.
 - whether an insurance agent or agency acted as an intermediary in arranging the bank’s credit life insurance coverage and what the relationship of the agent or agency is to the bank. Is the agent or agency in compliance with the provisions of this policy?
 - which employees, officers, directors, and principal shareholders are licensed insurance agents.
 - whether bank officers have entered into reciprocal arrangements with officers of other banks to act as agent for sale of credit life insurance and to receive commissions.
 - if the credit life insurance income is credited to an entity other than the bank and whether the bank is being appropriately reimbursed for the use of its premises, personnel, and goodwill. Compute the percentage compensation paid to the bank (total credit life insurance income). Include that percentage in the confidential section of the commercial report of examination. As a general rule, a reasonable compensation would be an amount equivalent to at least 20 percent of the credited entity’s net income (if available) attributable to the credit life insurance sales.
 - h. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 103.33)—Records to Be Retained by Financial Institutions.* Review operating procedures and credit life documentation and determine whether the bank retains records of each extension of credit over \$10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date therefor. Loans secured by an interest in real property are exempt.
2. Perform appropriate procedural steps for the separate area, concentration of credits.
 3. Discuss with the appropriate officer (or officers) and prepare comments to the examiner-in-charge stating your findings on the following:
 - a. delinquent loans, including breakout of “A” paper
 - b. violations of laws and regulations
 - c. concentration of credits
 - d. classified loans
 - e. loans not supported by current and complete financial information
 - f. loans on which collateral documentation is deficient

3. This policy also applies to income derived from the sale of mortgage life insurance; therefore, consult with the examiner assigned real estate loans to coordinate work to avoid any duplication of efforts.

- g. inadequately collateralized loans
 - h. extensions of credit to major stockholders, employees, officers, directors, and/or their interests
 - i. Small Business Administration or other government-guaranteed delinquent or criticized loans
 - j. a list of installment loans requested to be charged off
 - k. the adequacy of written policies relating to installment loans
 - l. the manner in which bank officers are operating in conformance with established policy
 - m. adverse trends within the installment area
 - n. the accuracy and completeness of the schedules obtained from the bank or other examination areas
 - o. internal-control deficiencies or exceptions
 - p. recommended corrective action when policies, practices, or procedures are deficient
 - q. the quality of departmental management
 - r. other matters of significance
4. Update the workpapers with any information that will facilitate future examinations.

Consumer Credit

Internal Control Questionnaire

Effective date May 2005

Section 2130.4

Review the bank's internal controls, policies, practices, and procedures for making and servicing installment loans. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. In the questionnaire below, items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written installment-loan policies that establish—
 - a. procedures for reviewing installment-loan applications?
 - b. standards for determining credit lines?
 - c. minimum standards for documentation?
 2. Are installment-loan policies reviewed at least annually to determine if they are compatible with changing market conditions?
 3. Does the bank have adequate written overdraft-protection-program policies and procedures that follow the February 28, 2005, interagency Joint Guidance on Overdraft Protection Programs?
 4. Does the bank's management emphasize and monitor adherence to its overdraft policies and procedures, apply generally accepted accounting principles, and apply the bank Call Report's accounting and reporting requirements to overdrafts? Does the bank maintain and monitor safe and sound overdraft business practices to control the credit, operational, and other risks associated with overdraft programs?
- ing items investigated by persons who do not also handle cash?
 3. Are delinquent-account collection requests and past-due notices checked to the trial balances that are used in reconciling installment-loan subsidiary records to general ledger accounts, and are requests and notices handled only by persons who do not also handle cash?
 4. Are loan-balance inquiries received and investigated by persons who do not also handle cash?
 - *5. Are documents supporting recorded credit adjustments checked or tested subsequently by persons who do not also handle cash? (If not, explain why briefly.)
 6. Is a daily record maintained that summarizes loan-transaction details, i.e., loans made, payments received, and interest collected, to support applicable general ledger account entries?
 7. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
 8. Are two authorized signatures required to effect a status change in an individual customer's account?
 9. Does operating management produce and review an exception report that encompasses extensions, renewals, or any factors that would result in a change in a customer's account status?
 10. Do customer account records clearly indicate accounts that have been renewed or extended?

RECORDS

- *1. Is the preparation and posting of subsidiary installment-loan records performed or reviewed by persons who do not also—
 - a. issue official checks or drafts?
 - b. handle cash?
 - *2. Are the subsidiary installment-loan records reconciled daily to the appropriate general ledger accounts, and are reconcil-
1. Is the preparation and posting of interest records performed or reviewed by persons who do not also—
 - a. issue official checks or drafts?
 - b. handle cash?
 2. Are any independent tests of loan-interest computations made and compared with initial and subsequent borrowers' interest records by other persons who do not—
 - a. issue official checks or drafts?
 - b. handle cash?

COLLATERAL

DEALER LOANS

1. Are multicopy, prenumbered records maintained that—
 - a. detail the complete description of collateral pledged?
 - b. are typed or completed in ink?
 - c. are signed by the customer?
2. Are receipts issued to customers for each item of collateral deposited?
3. Are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
4. Is negotiable collateral held under joint custody?
5. Is all collateral for a single loan maintained in a separate file?
6. Are receipts obtained and filed for released collateral?
7. Is a record maintained of entry to the collateral vault?
8. Are the following controls on collateral in effect:
 - a. When the bank customers' savings pass-books are held as collateral, the savings department is notified and the account is so noted on the deposit ledger.
 - b. Descriptions of motor vehicles, as set forth on the certificate of title and insurance policies, are checked to the chattel mortgages or other appropriate documents granting security interest in the vehicle.
 - c. An insurance-maturity tickler file is maintained.
 - d. Procedures are in effect to ensure single-interest insurance coverage is obtained in case regular insurance is canceled or expires.
 - e. All insurance policies on file include a loss-payable clause in favor of the bank.
 - f. Filings are made on all security agreements.
 - g. Supporting lien searches and property appraisals are performed when a judgment action is returned involving real property.
9. Are control records maintained that identify loans secured by junior liens on real estate?
10. Do those records indicate the current balance for loans secured by superior liens on the same property?

1. On dealer loans, are—
 - a. separate controls maintained or can they be easily generated?
 - b. payments made directly to the bank and not through the dealer?
 - c. coupon books, if used in connection with loans, mailed to the borrowers, instead of the dealer?
 - d. monthly summaries of the total paper discounted and outstanding for each dealer prepared and reviewed?
 - e. dealer lines reaffirmed at least annually?
 - f. required documents on file in connection with the establishment of each dealer line?
 - g. signed extension agreements obtained from dealers before extending accounts originally discounted on a repurchase agreement or other recourse basis?
 - h. downpayment amounts checked to ensure they do not misrepresent the sales price?
 - i. procedures in effect to prevent the dealer from making late payments?
 - j. prohibitions against bringing loans current by charges to the dealer's reserve accounts in effect?
 - k. selling prices, as listed by the dealer, verified?
 - l. overdrafts prohibited in the dealer reserve and holdback accounts?
 - m. procedures in effect to have the title application controlled by someone other than the purchaser?
 - n. credit checks on borrowers performed independently of the dealer, or are the dealer's credit checks independently verified?
 - o. delinquencies verified directly with the customers?

DISCOUNTED LEASING PAPER

1. If the bank discounts leasing paper—
 - a. are separate controls maintained or can they be easily generated?
 - b. are payments made directly to the bank?
 - c. are controls established or are audits of lessor's books conducted if the lessor is permitted to accept payments (if so, explain why briefly)?
 - d. are monthly summaries of total paper

- discounted for each lessor prepared and reviewed?
- e. are lines for each lessor reaffirmed at least annually?
 - f. is a master lease required and properly recorded when fleet-leasing or blanket purchase of leasing paper is handled?
 - g. is the value of leased goods verified to ensure that it is not less than the amount advanced?
 - h. is lease paper screened for the credit quality of the lessee?
 - i. are lease terms and payment amounts required to be adequate to liquidate the debt in full?
4. Do the bank's policies and procedures require that minimum payments on credit card accounts amortize the current balances over a reasonable period of time, consistent with the nature of the underlying debt and the borrower's documented creditworthiness? Do the bank's policies and practices foster or encourage prolonged negative amortization, inappropriate fees, and other practices that inordinately compound or protract consumer debt?
 5. Are workout programs designed to maximize principal reduction, and do they strive to have borrowers repay their credit card debt within 60 months? Has the bank documented and supported, with compelling evidence, any exceptions to the 60-month time frame for workout programs? Has the bank also documented and supported any less conservative loan terms and conditions that may be warranted?

CREDIT CARD LENDING

1. Has the bank tested, analyzed, and documented line-assignment and line-increase criteria prior to broad implementation of a new credit card plan?
2. Is a borrower's repayment capacity carefully considered when the bank assigns an initial credit line or significantly increases existing credit lines?
 - a. Are credit-line assignments managed conservatively using proven credit criteria?
 - b. Does the bank have documentation and analyses of decision factors such as repayment history, risk scores, behavior scores, or other relevant criteria?
 - c. Does the bank consider its entire relationship with a borrower when making decisions about credit-line assignments?
 - d. If the bank offers multiple credit lines to borrowers, does it have sufficient controls and management information systems to aggregate related exposures and analyze borrowers' performance before offering them additional lines of credit?
3. Do the bank's policies and procedures focus on adequate control, authorizations, and the timely repayment of amounts that exceed established credit limits?
 - a. Are the bank's management information systems sufficient to enable management to identify, measure, manage, and control the risks associated with over-limit accounts?
 - b. Does the bank have appropriate policies and controls for over-limit authorizations on open-end accounts, particularly subprime accounts?
6. Has the bank established and maintained adequate loss allowances for credit card accounts subject to settlement arrangements?
 - a. Does the bank classify as a loss and charge off immediately amounts of debt forgiven in settlement arrangements?
 - b. Are specific allowances for such settlement accounts reported as a charge-off in Schedule RI-B of the call report?
 - c. Does the bank charge off any deficiency balances within 30 days from the receipt of a final settlement payment?
7. Does the bank evaluate the collectibility of accrued interest and fees on credit card accounts and recognize and properly account for the amounts that are uncollectible?
 - a. Are appropriate methods employed to ensure that income is accurately measured (such methods include providing loan-loss allowances for uncollectible fees and finance charges or placing delinquent and impaired receivables on nonaccrual status)?
 - b. Is the owned portion of accrued interest and fees, including related estimated losses, accounted for separately from the retained interest in accrued interest and fees from securitized credit card receivables?
8. Does the bank's allowance for loan and lease losses (ALLL) methodology fully recognize the incremental losses that may be inherent in over-limit accounts and portfolio segments?

9. Are accounts in workout programs segregated for performance-measurement, impairment-analysis, and monitoring purposes?
 - a. Are multiple workout programs with different performance characteristics tracked separately?
 - b. Is the allowance allocation for each workout program equal to the estimated loss in each program, based on historical experience adjusted for current conditions and trends?
10. Is the total amount credited to the ALLL as recoveries on a loan limited to the amount previously charged off against the ALLL, and are any amounts that are collected in excess of this limit recognized as income?
11. Do the bank's policies and procedures address the types of allowed exceptions to the FFIEC's Uniform Retail Credit Classification and Account Management Policy and also the circumstances permitting those exceptions?
 - a. Is the volume of accounts that are granted exceptions small and well controlled?
 - b. Is the performance of accounts that are granted exceptions closely monitored?
 - c. Does the bank use exceptions prudently? If not, has management been criticized and has appropriate supervisory corrective action been recommended?
- h. the bill of sale is properly completed and signed by an officer?
- i. separate general ledger control is maintained?

DELINQUENT ACCOUNTS AND OPERATING REVIEW SYSTEM

1. Are collection policies established so that—
 - a. a delinquent notice is sent before a loan becomes 30 days past due?
 - b. collection effort is intensified when a loan becomes two payments past due?
 - c. records of collection efforts are maintained in the customer's file?
 - d. field or outside collectors are under the supervision of an officer and are required to submit progress reports?
 - e. all collections are acknowledged on multicopy prenumbered forms?
 - f. all documents that are held outside the regular files and that pertain to installment loans under collection are evidenced by a transmittal sheet and receipt?
 - g. delinquency lists are generated on a timely basis (indicate the frequency)?
2. Is an operating review system in place that—
 - a. determines that duties are properly segregated and that loan officers are prohibited from processing loan payments?
 - b. recomputes the amount of credit life and accident and health insurance on new loans?
 - c. recomputes the amount of discount on new loans?
 - d. recomputes the rebates on prepaid loans?
 - e. test-checks daily transactions to subsequent general ledger postings?
 - f. reviews new-loan documentation?
 - g. reviews all information in reports being submitted to the board of directors, or any committee thereof, for errors or omissions?
 - h. conducts a periodic review of income accruals for accuracy?
 - i. reviews entries to unearned discount or income accounts?
 - j. reviews all charged-off loans for proper approval?
 - k. periodically reconciles charged-off notes to controls?

REPOSSESSIONS

1. Are procedures established on repossessions so that—
 - a. management takes timely action to receive full advantage of any dealer endorsement or repurchase agreement?
 - b. the notice of intention to sell is mailed to all parties who are liable on the account?
 - c. bids are required before the sale of the item?
 - d. bids are retained in the borrower's credit file?
 - e. open repossessions are physically checked monthly?
 - f. surplus funds received from the sale of a repossession are mailed back to the borrower in the form of a cashier's check?
 - g. any deficiency balance remaining after the sale of repossession is charged off?

- l. reviews dealer's reserve and holdback agreements and periodically determines the adequacy of the balances in the deposit account?
- m. periodically verifies dealer reserve balances?
- n. determines that payments are accurately and promptly posted?
- o. reviews collection or reversal of late charges?
- p. determines that extension fees are collected on all extended loans?
- q. determines that discounted dealer paper is properly endorsed?
- r. determines that discounted dealer paper is within established guidelines?
- s. reviews compliance with laws and regulations?
- t. reviews trial balance reconcilements to the general ledger?

CONCLUSION

1. Is the foregoing information an adequate basis for evaluating internal control that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
2. On the basis of a composite evaluation (as evidenced by answers to the foregoing questions), is internal control considered adequate or inadequate?

Federally insured banks tend to avoid lending to customers with poor credit histories because of the higher risk of default and resulting loan losses. However, some lenders¹ extend their risk-selection standards to attract lower-credit-quality accounts.

Subprime lending involves extending credit to borrowers who exhibit characteristics that indicate a significantly higher risk of default than traditional bank lending customers.² The risk of default may be measured by traditional credit-risk measures (such as credit or repayment history or debt-to-income levels) or by alternative measures such as credit scores.

Subprime borrowers represent a broad spectrum of debtors, ranging from those who have repayment problems because of an adverse event, such as job loss or medical emergency, to those who persistently mismanage their finances and debt obligations. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories. Generally, subprime borrowers will display a range of one or more credit-risk characteristics, such as—

- two or more 30-day delinquencies in the last 12 months, or one or more 60-day delinquencies in the last 24 months;
- judgment, foreclosure, repossession, or charge-off in the prior 24 months;
- bankruptcy in the last five years;
- relatively high default probability as evidenced by, for example, a credit bureau risk score (FICO) of 660 or below (depending on the product or collateral), or other bureau or proprietary scores with an equivalent default-probability likelihood; or
- debt-service-to-income ratio of 50 percent or greater, or an otherwise limited ability to cover family living expenses after deducting total monthly debt-service requirements from monthly income.

1. The terms *lenders*, *financial institutions*, and *institutions* refer to federally insured banks and their subsidiaries.

2. For purposes of this section, loans to customers who are not subprime borrowers are referred to as *prime*.

Subprime loans are loans to borrowers displaying one or more of these characteristics at the time of origination or purchase.

SUPERVISORY GUIDANCE FOR SUBPRIME LENDING

The subprime supervisory guidance applies to direct extensions of credit; the purchase of subprime loans from other lenders, including delinquent or credit-impaired loans purchased at a discount; the purchase of subprime automobile or other financing “paper” from lenders or dealers; and the purchase of loan companies that originate subprime loans.

Subprime lending does not include loans to borrowers who have had minor, temporary credit difficulties but are now current. Also, the subprime-lending guidance does not generally apply to prime loans that develop credit problems after acquisition; loans that were initially extended in subprime programs and are later upgraded, as a result of their performance, to programs targeted to prime borrowers; and community development loans, as defined in the Community Reinvestment Act (CRA) regulations, that may have some higher risk characteristics, but are otherwise mitigated by guarantees from government programs, private credit enhancements, or other appropriate risk-mitigation techniques.

Subprime lending poses unique and significant risks to banking institutions engaged in the activity. Market events have raised supervisory issues about how well subprime lenders are prepared to manage and control the risks. Subprime-lending institutions need strong risk-management practices and internal controls, as well as board-approved policies and procedures that appropriately identify, measure, monitor, and control all associated risks. Institutions considering or engaging in this type of lending should recognize the additional risks inherent in this activity and determine if these risks are acceptable and controllable, given their organization’s financial condition, asset size, level of capital support, and staff size. Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well

before the time frames in their respective interagency supervisory policy.

Interagency guidance on subprime lending was issued on March 1, 1999, to alert examiners and financial institutions to some of the pitfalls and hazards involved in this type of lending.³ (See SR-99-06.) Additional interagency examination guidance was issued on January 31, 2001, to further strengthen the supervision of certain institutions, primarily those institutions having subprime-lending programs with an aggregate credit exposure equaling or exceeding 25 percent of their tier 1 capital.⁴ (See SR-01-04.) The aggregate exposure includes principal outstanding and committed, accrued and unpaid interest, and any retained residual interests⁵ relating to securitized subprime loans. The Federal Reserve may also apply the additional guidelines to certain smaller subprime portfolios, such as those experiencing rapid growth or adverse performance trends, those administered by inexperienced management, and those with inadequate or weak controls.

Subprime loans command higher interest rates and loan fees than those offered to standard-risk borrowers. Subprime loans can be profitable, provided the price charged by the lender is sufficient to cover higher loan-loss rates and overhead costs related to underwriting, servicing, and collecting the loans. The ability to securitize and sell subprime portfolios at a profit while retaining the servicing rights makes subprime lending attractive to a larger number of institutions, further increasing the number of subprime lenders and loans. Some financial institutions have experienced losses attributable to ill-advised or poorly structured subprime-lending programs. These losses have attracted

greater supervisory attention to subprime lending and the ability of an insured bank to manage the unique risks associated with this activity.

Risk Management

The following items are essential components of a well-structured risk-management program for subprime lenders.

Planning and Strategy

Before engaging in subprime lending, the board and management should ensure that proposed activities are consistent with the institution's overall business strategy and risk tolerances, and that all involved parties have properly acknowledged and addressed critical business-risk issues. These issues include the costs associated with attracting and retaining qualified personnel, investments in the technology necessary to manage a more complex portfolio, a clear solicitation and origination strategy that allows for after-the-fact assessment of underwriting performance, and the establishment of appropriate feedback and control systems. The risk-assessment process should extend beyond credit risk and appropriately incorporate operating, compliance, and legal risks. Finally, the planning process should set clear objectives for performance, including the identification and segmentation of target markets or customers, as well as set performance expectations and benchmarks for each segment and the portfolio as a whole. Institutions establishing a subprime-lending program should proceed slowly and cautiously into this activity to minimize the impact of unforeseen personnel, technology, or internal-control problems and to determine if favorable initial profitability estimates are realistic and sustainable.

Staff Expertise

Subprime lending requires specialized knowledge and skills that many financial institutions may not possess. Marketing, account-origination, and collections strategies and techniques often differ from those employed for prime credit; thus, it may not be sufficient to have the same lending staff responsible for both subprime loans and other loans. Additionally, servicing and

3. The March 1999 and January 2001 statements were adopted and issued by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

4. The March 1999 and January 2001 subprime-lending interagency guidance is consolidated within this section. To focus on the supervisory guidance that applies primarily to institutions having subprime-lending programs equaling or exceeding 25 percent of tier 1 capital, see the January 2001 release. The March 1999 interagency supervisory guidance applies to all subprime-lending institutions.

5. Residual interests are on-balance-sheet assets that represent interests (including beneficial interests) in transferred financial assets retained by a seller (or transferor) after a securitization or other transfer of financial assets. They are structured to absorb more than a pro rata share of credit loss related to the transferred assets through subordination provisions or other credit-enhancement techniques.

collecting subprime loans can be very labor intensive. If necessary, the institution should implement programs to train staff. The board should ensure that staff possess sufficient expertise to appropriately manage the risks in subprime lending and that staffing levels are adequate for the planned volume of subprime activity. The experience, or seasoning, of staff and loans should be taken into account as performance is assessed over time.

Lending Policy

A subprime-lending policy should be appropriate to the size and complexity of the institution's operations and should clearly state the goals of the subprime-lending program. While not exhaustive, the following lending standards should be addressed in any subprime-lending policy:

- types of products offered as well as those that are not authorized
- portfolio targets and limits for each credit grade or class
- lending and investment authority clearly stated for individual officers, supervisors, and loan committees
- a framework for pricing decisions and profitability analysis that considers all costs associated with the loan, including origination costs, administrative or servicing costs, expected charge-offs, and capital
- evaluation of collateral and appraisal standards
- well-defined and specific underwriting parameters (that is, on acceptable loan term, debt-to-income ratios, and loan-to-collateral-value ratios for each credit grade and a minimum acceptable credit score) that are consistent with any applicable supervisory guidelines⁶
- procedures for the separate tracking and monitoring of loans approved as exceptions to stated policy guidelines
- credit-file documentation requirements, such as applications, offering sheets, loan and collateral documents, financial statements, credit

6. Extensions of credit secured by real estate, whether the credit is subprime or otherwise, are subject to the Interagency Guidelines for Real Estate Lending Policies, which establish supervisory loan-to-value (LTV) limits on various types of real estate loans and impose limits on an institution's aggregate investment in loans that exceed the supervisory LTV limits. (See 12 CFR 208, appendix C.)

reports, and credit memoranda to support the loan decision

- correspondent/broker/dealer approval process, including measures to ensure that loans originated through this process meet the institution's lending standards

If the institution elects to use credit scoring (including applications scoring) for approvals or pricing, the scoring model should be based on a development population that captures the behavioral and credit characteristics of the subprime population targeted for the products offered. Because of the significant variance in characteristics between the subprime and prime populations, institutions should not rely on models developed solely for products offered to prime borrowers. Further, the model should be reviewed frequently and updated as necessary to ensure that assumptions remain valid.

Purchase Evaluation

As they evaluate expected profits, institutions that purchase subprime loans from other lenders or dealers must give due consideration to the cost of servicing these assets and to the loan losses that may be experienced. For instance, some lenders who sell subprime loans charge borrowers high up-front fees, which are usually financed into the loan. This provides incentive for originators to produce a high volume of loans with little emphasis on quality, to the detriment of a potential purchaser. Further, subprime loans, especially those purchased from outside the institution's lending area, are at special risk for fraud or misrepresentation (that is, the quality of the loan may be less than the loan documents indicate).

Institutions should perform a thorough due-diligence review before committing to purchase subprime loans. Institutions should not accept loans from originators that do not meet their underwriting criteria, and they should regularly review loans offered to ensure that loans purchased continue to meet those criteria. Deterioration in the quality of purchased loans or in the portfolio's actual performance versus expectations requires a thorough reevaluation of the lenders or dealers who originated or sold the loans, as well as a reevaluation of the institution's criteria for underwriting loans and selecting dealers and lenders. Any such deterioration may also highlight the need to modify or termi-

nate the correspondent relationship or to adjust underwriting and dealer or lender selection criteria.

Loan-Administration Procedures

After the loan is made or purchased, loan-administration procedures should provide for the diligent monitoring of loan performance and establish sound collection efforts. To minimize loan losses, successful subprime lenders have historically employed stronger collection efforts, such as calling delinquent borrowers frequently, investing in technology (for example, using automatic dialing for follow-up telephone calls on delinquent accounts), assigning more experienced collection personnel to seriously delinquent accounts, moving quickly to foreclose or repossess collateral, and allowing few loan extensions. This aspect of subprime lending is very labor intensive but critical to the program's success. To a large extent, the cost of such efforts can be a tradeoff with future loss expectations, when an institution analyzes the profitability of subprime lending and assesses its appetite to expand or continue this line of business. Subprime-loan administration procedures should be in writing and at a minimum should detail—

- billing and statement procedures;
- collection procedures;
- content, format, and frequency of management reports;
- asset-classification criteria;
- methodology to evaluate the adequacy of the allowance for loan and lease losses (ALLL);
- criteria for allowing loan extensions, deferrals, and re-agings;
- foreclosure and repossession policies and procedures; and
- loss-recognition policies and procedures.

Loan Review and Monitoring

Once an institution books the loans, designated staff must perform an ongoing analysis of subprime loans, not only on an aggregate basis but also for subportfolios. Information systems should be in place to segment and stratify the institution's portfolio (for example, by originator, loan-to-value, debt-to-income ratios, or credit scores). Assigned staff should produce reports

that management can use to evaluate the performance of subprime loans. The review process should focus on whether performance meets expectations. Institutions then need to consider the source and characteristics of loans that do not meet expectations and make changes in their underwriting policies and loan-administration procedures to restore performance to acceptable levels.

When evaluating actual performance against expectations, it is particularly important that management review credit scoring, pricing, and any ALLL-adequacy models. Models driven by the volume and severity of historical losses experienced during an economic expansion may have little relevance in an economic slowdown, particularly in the subprime market. Management should ensure that models used to estimate credit losses or to set pricing allow for fluctuations in the economic cycle and are adjusted to account for other unexpected events.

Consumer Protection

Institutions that originate or purchase subprime loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory “steering” of borrowers to subprime products for reasons other than the borrower's underlying creditworthiness. An adequate compliance-management program must identify, monitor, and control the consumer protection hazards associated with subprime lending.

Subprime mortgage lending may trigger the special protections of the Home Ownership and Equity Protection Act of 1994, subtitle B of title I of the Riegle Community Development and Regulatory Improvement Act of 1994. This act amended the Truth in Lending Act to provide certain consumer protections in transactions involving a class of nonpurchase, closed-end home mortgage loans. Institutions engaging in this type of lending must also be thoroughly familiar with the obligations set forth in Regulation Z (12 CFR 226.32), Regulation X (24 CFR 3500), and the Real Estate Settlement Procedures Act (RESPA) (12 USC 2601) and should adopt policies and implement practices that ensure compliance.

The Equal Credit Opportunity Act makes it unlawful for a creditor to discriminate against an

applicant on a prohibited basis regarding any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits discrimination in connection with residential real estate–related transactions. Loan officers and brokers must treat all similarly situated applicants equally and without regard to any prohibited-basis characteristic (for example, race, sex, or age). This is especially important with respect to how loan officers or brokers assist customers in preparing their applications or otherwise help them to qualify for loan approval.

Securitization and Sale

To increase their loan-production and -servicing income, some subprime lenders originate loans and then securitize and sell them in the asset-backed securities market. Strong demand from investors and favorable accounting rules often allow securitization pools to be sold at a gain, providing further incentive for lenders to expand their subprime-lending program. However, the securitization of subprime loans carries inherent risks, including interim credit risk and liquidity risks, which are potentially greater than those for securitizing prime loans. Accounting for the sale of subprime pools requires assumptions that can be difficult to quantify, and erroneous assumptions could lead to the significant overstatement of an institution's assets. Moreover, the practice of providing support and substituting performing loans for nonperforming loans to maintain the desired level of performance on securitized pools has the effect of masking credit-quality problems.

Institutions should recognize the volatility of the secondary market for subprime loans and the significant liquidity risk incurred when originating a large volume of loans intended for securitization and sale. Investors can quickly lose their appetite for risk in an economic downturn or when financial markets become volatile. As a result, institutions that have originated, but have not yet sold, pools of subprime loans may be forced to sell the pools at deep discounts. If an institution lacks adequate personnel, risk-management procedures, or capital support to hold subprime loans that were originally intended for sale, these loans may strain an institution's liquidity, asset quality, earnings, and capital. Consequently, institutions actively involved in the securitization and sale of subprime loans should develop a contingency plan that addresses

backup purchasers of the securities or the attendant servicing functions, alternate funding sources, and measures for raising additional capital.

Institutions should refer to the Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," for guidance on accounting for these transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights or obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations. In particular, management should consider the appropriate discount rates, credit-loss rates, and prepayment rates associated with subprime pools when valuing these assets. Since the relative importance of each assumption varies with the underlying characteristics of the product types, management should segment securitized assets by specific pool, as well as by predominant risk and cash-flow characteristics, when making the underlying valuation assumptions. In all cases, however, institutions should take a conservative approach when developing securitization assumptions and capitalizing expected future income from subprime-lending pools. Institutions should also consult with their auditors as necessary to ensure that their accounting for securitizations is accurate.

Reevaluation

Institutions should periodically evaluate whether the subprime-lending program has met profitability, risk, and performance goals. Whenever the program falls short of original objectives, an analysis should be performed to determine the cause, and the program should be modified appropriately. If the program falls far short of the institution's expectations, management should consider terminating it. Questions that management and the board need to ask may include the following:

- Have cost and profit projections been met?
- Have projected loss estimates been accurate?

- Has the institution been called upon to provide support to enhance the quality and performance of loan pools it has securitized?
- Were the risks inherent in subprime lending properly identified, measured, monitored, and controlled?
- Has the program met the credit needs of the community that it was designed to address?

Examination Review and Analysis

The following supervisory guidance (up to the examination objectives) applies only to banks that have subprime-lending programs equaling or exceeding 25 percent of tier 1 capital and to banks that have other designated subprime programs referenced in SR-01-4.

The heightened risk levels and potential volatility in delinquency and loss rates posed by subprime-lending programs warrant examiners' increased ongoing attention. The risks inherent in subprime-lending programs call for frequent reviews. There are generally two levels of review appropriate for subprime activities:

- *Portfolio-level reviews* include assessments of underwriting standards, marketing practices, pricing, management information and control systems (quality control, audit and loan review, vendor management, compliance), portfolio performance, and the appropriate application of regulatory and internal allowance and capital policies.
- *Transaction-level testing* includes the testing of individual loans for compliance with underwriting and loan-administration guidelines; the appropriate treatment of loans under delinquency, re-aging, and cure programs; and the appropriate application of regulatory and internal allowance and capital policies.

During each regularly scheduled examination cycle, examiners should perform a portfolio-level review and some transaction testing at each institution engaged in subprime lending. The Federal Reserve will perform regular off-site supervisory monitoring and may require subprime lenders to supply supplementary information about their subprime portfolios between examinations. The examiner's findings from transaction-level testing and portfolio-level reviews should be incorporated into the conclusions about overall asset quality, the adequacy

of the ALLL and capital, and the adequacy of portfolio risk-management practices.

Transaction-Level Testing

Subprime-loan portfolios contain elevated risks, and actual subprime-lending practices often can deviate from stated policy and procedural guidance. Therefore, examiners should supplement the portfolio-level examination procedures with transaction-level testing to determine whether—

- individual loans adhere to existing policy, underwriting, risk-selection, and pricing standards;
- individual loans and portfolios are classified in accordance with the subprime-lending guidelines described in this section, or in other Federal Reserve credit-extending supervisory guidance;
- management, board, and regulatory reporting is accurate and timely;
- existing loans conform to specified account-management standards (such as over-limits, line increases, reductions, cancellations, re-scoring, or collections);
- key risk controls and control processes are adequate and functioning as intended;
- roll rates and other loss-forecasting methods used to determine ALLL levels are accurate and reliable; and
- lending practices exist that may appear unsafe, unsound, or abusive and unfair.

Adequacy of the ALLL

Examiners should assess the adequacy of the ALLL to ensure that the portion allocated to the subprime portfolio is sufficient to absorb estimated credit losses for this portfolio. Consistent with interagency policy,⁷ the term *estimated credit losses* means an estimate of the amount that is not likely to be collected; that is, net charge-offs that are likely to be realized given the facts and circumstances as of the evaluation date.⁸ These estimated losses should meet the

7. The 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses was issued December 13, 2006. (See SR-06-17.) The Supplemental Interagency policy statement on the ALLL methodologies and documentation was issued July 2, 2001. (See SR-01-07.)

8. Estimates of credit losses should include accrued interest and other accrued fees (for example, uncollected credit card

criteria for accrual of loss contingency, as set forth under generally accepted accounting principles (GAAP), consistent with supervisory ALLL policy.

New Entrants to the Business

In some instances, an institution (for example, a newly chartered institution or an existing institution entering the subprime-lending business) may not have sufficient previous loss experience to estimate an allowance for subprime-lending activities. In such cases, industry statistics or another institution's loss data for similar loans may be a better starting point to determine the ALLL than the institution's own data for developing loss rates. When an institution uses loss rates developed from industry statistics or from other institutions to determine its ALLL, it should demonstrate and document that the attributes of the loans in its portfolio or portfolio segment are similar to those in the other institution's (or industry's) portfolio.

Pools of Subprime Loans—Not Classified

The ALLL required for subprime loans should be sufficient to absorb at least all estimated credit losses on outstanding balances over the current operating cycle, typically 12 months. The board of directors and management are expected to ensure that the institution's process for determining an adequate level for the ALLL is based on a comprehensive and adequately documented analysis of all significant factors. The consideration factors should include historical loss experience, ratio analysis, peer-group analysis, and other quantitative analysis as a basis for the reasonableness of the ALLL. To the extent that the historical net charge-off rate is used to estimate expected credit losses, it should be adjusted for changes in trends, conditions, and other relevant factors, including business

fees or uncollected late fees) that have been added to the loan balances and, as a result, are reported as part of the institution's loans on the balance sheet. An institution may include these types of estimated losses in either the ALLL or a separate valuation allowance, which would be netted against the aggregated loan balance for regulatory reporting purposes. When accrued interest and other accrued fees are not added to the loan balances and are not reported as part of loans on the balance sheet, the collectibility of these accrued amounts should nevertheless be evaluated to ensure that the institution's income is not overstated.

volume, underwriting, risk selection, account-management practices, and current economic or business conditions that may alter such experience. The allowance should represent a prudent, conservative estimate of losses that allows a reasonable margin for imprecision. Institutions should clearly document loss estimates and the allowance methodology in writing. This documentation should describe the analytical process used, including—

- portfolio-segmentation methods applied;
- loss-forecasting techniques and assumptions employed;
- definitions of terms used in ratios and model computations;
- relevance of the baseline loss information used;
- rationale for adjustments to historical experience; and
- a reconciliation of forecasted loss rates to actual loss rates, with significant variances explained.

Classification Guidelines for Subprime Lending

Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well before the time frames outlined in the retail classification policy issued by the Federal Financial Institutions Examination Council (FFIEC) on June 12, 2000. Examiners should classify subprime loans and portfolios in accordance with the guidelines in this section and other applicable Federal Reserve supervisory guidelines. Classified loans are loans that are not protected adequately by the current sound worth and paying capacity of the borrower or the collateral pledged. As such, full liquidation of the debt may be in jeopardy. Pools of classified subprime loans (to include, at a minimum, all loans past due 90 days or more) should be reviewed for impairment, and an adequate allowance should be established consistent with existing interagency policy.

Individual Loans

Examiners should not automatically classify or place loans in special mention merely because they are subprime. Rather, classifications should

reflect the borrower's capacity and willingness to repay and the adequacy of collateral pledged.

Loans to borrowers that do not have the capacity to service their loans generally will be classified substandard. When repayment capacity is insufficient to support the orderly liquidation of the debt, and the collateral pledged is insufficient to mitigate risk of loss, then a more severe classification and nonaccrual is warranted. Subprime loans that are past due 90 days or more should be classified at least substandard based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay. A more stringent classification approach may be appropriate based on the historical loss experience of a particular institution. Classification of other subprime loans as doubtful or loss will be based on examiners' analysis of the borrower's capacity to repay, and on the quality of institution underwriting and account-management practices as evidenced in the loan file or by other documentation.

In some cases, the repayment of principal, interest, and fees on some subprime loans may be overly dependent on collateral pledged. This occurs when the risk of default is so high that an abundance of collateral is taken to mitigate risk of loss in the event of default. From a safety-and-soundness perspective, institutions should be discouraged from lending solely on the basis of collateral pledged. Such loans will generally be classified substandard. Further, when the borrower does not demonstrate the capacity to service the loan from sources other than collateral pledged, the loan may be placed on nonaccrual.

Portfolios

When the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality, examiners should consider classifying or criticizing the entire portfolio or segments of the portfolio. Such a decision may be appropriate in cases where risk is inordinately high or delinquency reports reflect performance problems. Some subprime-lending portfolios may pose very high risk. These may include portfolios of unsecured loans or secured, high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame. Most such portfolios should be classified at least substandard.

Required Documentation for Cure Programs

Cure programs, including such practices as re-aging, extensions, renewals, rewrites, or other types of account restructuring, are subject to the standards outlined in the retail classification policy. In accordance with that policy, cure programs should be used *only* when the institution has substantiated the customer's renewed willingness and ability to repay. Examiners will expect institutions to maintain documentation supporting their analysis of the customer's renewed ability and willingness to repay the loan at the time it is extended, renewed, or deferred. When the institution cannot demonstrate both the willingness and ability of the customer to repay, the loan should not be renewed, extended, deferred, or rewritten, and the loan should be moved back to its pre-cure delinquency status. Documentation should include one or more of the following:

- a new verification of employment
- a recomputed debt-to-income ratio indicating sufficient improvement in the borrower's financial condition to support orderly repayment
- a refreshed credit score or updated bureau report
- a file memo evidencing discussion with the customer

When documentation of the customer's renewed willingness and ability to repay the loan is absent or deficient, management practices should be criticized.

Predatory or Abusive Lending Practices

The term "subprime" is often misused to refer to certain predatory or abusive lending practices. Lending practices can be designed to responsibly provide service to customers and enhance credit access for borrowers with special credit needs. Subprime lending that is appropriately underwritten, priced, and administered can serve these goals.

Some forms of subprime lending may be abusive or predatory, however. Lending practices may be designed to transfer wealth from the borrower to the lender or loan originator without a commensurate exchange of value.

This is sometimes accomplished when the lender structures a loan to a borrower who has little or no ability to repay the loan from sources other than the collateral pledged. When default occurs, the lender forecloses or otherwise takes possession of the borrower's property (generally the borrower's home or automobile). In other cases, the lender may use the threat of foreclosure or repossession to induce duress on the borrower for payment. Typically, predatory lending involves at least one, and perhaps all three, of the following elements:

- making unaffordable loans based on the assets of the borrower rather than on the borrower's ability to repay an obligation
- inducing a borrower to refinance a loan repeatedly in order to charge high points and fees each time the loan is refinanced (that is, "loan flipping")
- engaging in fraud or deception to conceal the true nature of the loan obligation or ancillary products from an unsuspecting or unsophisticated borrower

Loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound. Such lending practices should be criticized in the examination report as imprudent. Further, examiners should refer any loans with the aforementioned characteristics to Federal Reserve consumer compliance/fair lending specialists for additional review.

Capitalization

The Federal Reserve's minimum capital requirements generally apply to portfolios that exhibit substantially lower risk profiles than those that exist in subprime-loan programs. Therefore, these requirements may not be sufficient to reflect the risks associated with subprime portfolios. Subprime-lending activities can present a greater-than-normal risk for financial institutions and the deposit insurance funds; therefore, the level of capital institutions need to support this activity should be commensurate with the additional risks incurred. Each subprime lender is responsible for quantifying the amount of capital needed to offset the additional risk in subprime-lending activities, and for *fully docu-*

menting the methodology and analysis supporting the amount specified.

The amount of additional capital necessary will vary according to the volume and type of subprime activities conducted and the adequacy of the institution's risk-management program. An institution's overall capital adequacy will be evaluated on a case-by-case basis through on-site examinations and off-site monitoring procedures, considering, among other factors, the institution's own documented analysis of the capital needed to support subprime lending. Institutions that are determined to have insufficient capital must correct the deficiency within a reasonable time frame or be subject to supervisory action. In light of the higher risks associated with this type of lending, higher minimum-capital requirements may be imposed on institutions engaging in subprime lending.

The sophistication of this analysis should be commensurate with the size, concentration level, and relative risk of the institution's subprime-lending activities and should consider the following elements:

- portfolio-growth rates
- trends in the level and volatility of expected losses
- the level of subprime-loan losses incurred over one or more economic downturns, if such data or analyses are available
- the impact of planned underwriting or marketing changes on the credit characteristics of the portfolio, including the relative levels of risk of default, loss in the event of default, and the level of classified assets
- any deterioration in the average credit quality over time due to adverse selection or retention
- the amount, quality, and liquidity of collateral securing the individual loans
- any asset, income, or funding-source concentrations
- the degree of concentration of subprime credits
- the extent to which current capitalization consists of residual assets or other potentially volatile components
- the degree of legal or reputation risk associated with the subprime business lines pursued
- the amount of capital necessary to support the institution's other risks and activities

Given the higher risk inherent in subprime-lending programs, examiners should reasonably expect, as a starting point, that an institution

would hold capital against such portfolios in an amount that is *one and one-half to three times greater* than what is appropriate for non-subprime assets of a similar type. Refinements should depend on the factors analyzed above, with particular emphasis on the trends in the level and volatility of loss rates, and on the amount, quality, and liquidity of collateral securing the loans. Institutions should have capital ratios that are well above the averages for their traditional peer groups or other similarly situated institutions that are not engaged in subprime lending.

Some subprime asset pools warrant increased supervisory scrutiny and monitoring, but not necessarily additional capital. For example, well-secured loans to borrowers who are slightly below what is considered prime quality may entail minimal additional risks compared with prime loans, and they may not require additional capital if adequate controls are in place to address the additional risks. On the other hand, institutions that underwrite higher-risk subprime pools, such as unsecured loans or high loan-to-value second mortgages, may need significantly higher levels of capital, perhaps as high as 100 percent of the loans outstanding, depending on the level and volatility of risk.

Stress Testing

An institution's capital adequacy analysis should include stress testing as a tool for estimating unexpected losses in its subprime-lending pools. Institutions should project the performance of their subprime-loan pools under conservative stress-test scenarios, including an estimation of the portfolio's susceptibility to deteriorating economic, market, and business conditions. Portfolio stress testing should include "shock" testing of basic assumptions, such as delinquency rates, loss rates, and recovery rates on collateral. Stress tests should also consider other potentially adverse scenarios, such as changing attrition or prepayment rates; changing utilization rates for revolving products; changes in credit-score distribution; and changes in the capital-market demand for whole loans or asset-backed securities supported by subprime loans. These are representative examples; actual factors will vary by product, market segment, and the size and complexity of the portfolio relative to the institution's overall operations. Whether stress

tests are performed manually, or through automated modeling techniques, it is expected that—

- the process is clearly documented, rational, and easily understood by the institution's board and senior management;
- the inputs are reliable and relate directly to the subject portfolios (for example, baseline loss history or default probabilities should reflect each segment of the institution's portfolio and not just a blend of prime and subprime borrowers);
- assumptions are well documented and conservative; and
- any models are subject to a comprehensive validation process.

The results of the stress-test exercises should be a documented factor in the analysis and determination of capital adequacy for the subprime portfolios.

Institutions that engage in subprime-lending programs without adequate procedures to estimate and document the level of capital necessary to support their activities should be criticized. Where capital is deemed inadequate to support the risk in subprime-lending activities, examiners should consult with their Reserve Bank supervisory official to determine the appropriate course of action. Such actions may include requiring additional capital in accordance with the Federal Reserve's capital adequacy rules, or requiring the institution to submit an acceptable capital plan in accordance with safety-and-soundness guidelines.

Subprime-Lending Examiner Responsibilities

Using the interagency guidance and any supplemental Federal Reserve guidelines, examiners should assess carefully management's ability to administer the higher risk in subprime portfolios. The examiner should judge management's ability to manage the risk involved in the subprime-lending program, in particular, the quality of the risk-management and control processes in place, and more importantly, the extent to which management is adhering to those processes. When examiners determine that risk-management practices are deficient, they should criticize management and initiate corrective action. Such actions may include formal or

informal enforcement actions or a plan to achieve adequate capitalization. When a primary supervisor determines that an institution's risk-management practices are materially deficient, the primary supervisor may instruct the institution to discontinue its subprime-lending programs.

APPENDIX—QUESTIONS AND ANSWERS FOR EXAMINERS REGARDING THE EXPANDED GUIDANCE FOR SUBPRIME-LENDING PROGRAMS

To assist examiners who review subprime-lending activities, the following questions and answers were developed to provide additional guidance on the expanded interagency guidance that was issued on January 31, 2001.

Applicability of the Guidance

Question 1: Does the guidance apply to all institutions?

No. The guidance will not affect the vast majority of insured institutions engaged in traditional consumer lending. The guidance applies to institutions that *systematically* target the subprime market through *programs* that employ tailored marketing, underwriting standards, and risk selection.

The guidance does not address traditional consumer lending that has historically been the mainstay of community banking. It does not apply to institutions extending credit to subprime borrowers as part of their standard community-lending process, or making loans to subprime borrowers as an occasional exception to a prime-lending program, even if the aggregate of these loans totals more than 25 percent of tier 1 capital. Such institutions continue to be subject to the normal supervisory process.

Institutions engaging in subprime-lending programs generally have knowingly and purposefully focused on the subprime-lending markets through planned business strategies, tailored products, and explicit borrower targeting. In instances where significant exposures to subprime borrowers are identified, examiners should consider the institution's marketing program, loan products, pricing, underwriting standards and

practices, and portfolio performance to determine if the institution has a program that warrants the supervision and safeguards outlined in the guidance.

Question 2: Does the guidance apply when an institution offers a product that attracts a disproportionate number of subprime borrowers, but which the institution does not explicitly identify as subprime?

A subprime program commonly features products specifically tailored to borrowers with weakened credit histories. Such products often differ substantially in pricing and terms from products offered to prime borrowers, and usually have separate and distinctly different underwriting standards. An institution offering a product that attracts a disproportionate number of borrowers with weakened credit histories likely has a subprime program whether or not the activity is called a subprime program. The guidance will apply to these programs when the resultant aggregate credit exposure is at least 25 percent of the institution's tier 1 capital.

Institutions with significant programs are expected to have the necessary risk-management and internal-control systems in place to properly identify, measure, monitor, and control the inherent risks in its subprime portfolio. Risk management and controls for these programs typically involve enhanced performance monitoring, intensive collection activities, and other loss-mitigation strategies. If an institution systematically targets the subprime market but does not segregate these loans from its prime portfolio, it is doubtful that the institution has the necessary risk-management and control systems in place to safely engage in the activity.

Subprime Characteristics

Question 3: Why does the Expanded Guidance for Subprime Lending Programs use a credit bureau risk score (FICO) of 660 as a cutoff point for subprime lending?

The guidance does not use credit scores, or any other single risk factor, as a definitive cutoff point for subprime lending. The characteristics listed are not explicit, bright-line definitions. The range of credit characteristics used to describe subprime borrowers is intended to help

examiners identify lenders that are engaged in subprime-lending programs. These characteristics describe borrowers with varying, but significantly higher, probabilities of default than prime borrowers. The guidance states that “this list is illustrative rather than exhaustive and is not meant to define specific parameters for all borrowers.”

A credit bureau score of 660 (FICO) is used only as an example to illustrate a credit score that generally indicates a higher default probability. The guidance indicates the probability of default, as evidenced by the credit score, will vary by product and collateral. The subprime guidance lists *several* characteristics that denote a higher probability of default. Examiners are directed to use these characteristics as a starting point to expand their review of lending programs targeting subprime borrowers in accordance with risk-focused examination procedures. The severity of risk may vary significantly for the different characteristics listed, as well as for the type and quality of collateral. Examiners should take this into consideration when reviewing the portfolio and determining the adequacy of loan-loss reserves and capital.

The characteristics used in the guidance are well recognized in the investment and lending industries. A number of public debt rating agencies and financial institutions, including the government-sponsored enterprises (GSEs), use similar credit characteristics to differentiate risk among borrowers. Specific examples include the following:

- Fitch defines a subprime borrower as “...one with a credit profile worse than that of a prime A quality borrower, whose credit report would typically reveal no recent mortgage delinquencies and whose credit profile would yield a [FICO] credit score in the range above 680.” Fitch’s mortgage credit grade matrix lists the following credit-history elements for A-, the highest subprime grade: one 30-day delinquency in the last 12 months on a mortgage debt; one 30-day delinquency in the last 24 months on installment debt, or two 30-day delinquencies in the last 24 months on revolving debt; bankruptcy in past five years; charge-off or judgments exceeding \$500 in the past 24 months; and/or a debt-to-income ratio of 45 percent.¹

1. Fitch IBCA, Duff & Phelps, “Rating U.S. Residential Subprime Mortgage Securities, March 16, 2001: 2.

- Standard & Poor’s subprime-mortgage underwriting guidelines define subprime A-characteristics as two or more 30-day delinquencies on mortgage and consumer credit, one 60-day delinquency on consumer credit, debt-to-income ratio of 45 percent, and no bankruptcy in the past five years. Standard & Poor’s also “...considers subprime borrowers to have a FICO credit score of 659 or below.”²
- Standard & Poor’s has classified nonprime B auto securitization pools as having occasional delinquencies and minor charge-offs on revolving debt, static pool net losses of 3.1 percent to 7.5 percent, and FICO credit scores ranging from 620–679.³
- Freddie Mac has used the FICO score of 660 or below to designate higher-risk borrowers requiring more comprehensive review. Freddie Mac views a score in the 620–660 range as an indication that the “borrower’s willingness to repay debt as agreed is uncertain.” FICO scores below 620 are placed in the “cautious-review category,” and Freddie Mac considers scores below 620 “as a strong indication that the borrower’s credit reputation is not acceptable...”⁴

Capital Guidance

Question 4: If an institution is engaged in subprime lending as described by the guidance, does the 1.5-to-3 times capital described in the guidance automatically apply?

No. The expanded interagency guidance on subprime lending is flexible examination guidance; the capital range does not automatically apply because the guidance is not a capital rule or regulation. Rather, the guidance describes an expectation that subprime lenders hold sufficient loan-loss reserves and capital to offset the additional risks that may exist in subprime activities. The agencies expect institutions to have methodologies and analyses in place to support and document the level of reserves and capital needed

2. Standard & Poor’s, “U.S. Residential Subprime Mortgage Criteria,” Structured Finance, 1999: 12, 169.

3. Standard & Poor’s, “Auto Loan Criteria and Market Overview 1998,” Structured Finance Ratings Asset-Backed Securities, 6.

4. Freddie Mac, Single-Family Seller/Servicer Guide, chapter 37, section 37.6, “Using FICO Scores in Underwriting,” March 7, 2001.

for the additional risks assumed. The higher the risk, the more reserves and capital needed to support the activity. Institutions with lower-risk subprime portfolios may not need additional reserves and capital. In addition, examiners are reminded that subprime lending is only one element in the evaluation of the institution's overall capital adequacy. If the analysis shows that the institution has adequate capital for all its assets and activities, including subprime lending, there is no additional capital requirement arising from the guidance.

Examiners are instructed not to unilaterally require additional reserves and capital based on the guidance. Any determination made by an examiner that an institution's reserves or capital are deficient will be discussed with the institution's management and with each agency's appropriate supervisory office before a final decision is made.

Question 5: Are the regulatory expectations for higher capital levels consistent with capital levels supporting subprime assets outside the insured banking industry?

Yes. The regulatory expectations of higher capital maintenance are consistent with expectations in the capital markets. The 1.5-to-3-times-capital multiple is risk based, e.g., the level of additional capital varies by relative loan quality and is applied only to the subprime portfolio, not the institution's entire asset structure. This is consistent with the financial marketplace's assessment of relative risk in subprime assets outside the banking industry. For example, the amount of credit enhancement required for subprime securitization structures varies according to the level and volatility of perceived credit risk in the underlying assets. In addition, publicly traded subprime-finance companies (that are not currently suffering from adverse ratings) maintain equity-capital-to-managed-asset ratios that are 1.5 to as much as 6 times (depending on loan type and relative quality) those of finance companies that do not specialize in subprime loans.

Subprime Lending

Examination Objectives

Effective date November 2002

Section 2133.2

1. To assess and evaluate the extent of subprime-lending activities; whether management has adequately planned for this activity; and whether management has developed and maintains board-approved policies and procedures, systems, and internal controls that identify, measure, monitor, and control the additional risks.
2. To ascertain whether management has established adequate subprime-lending standards that are commensurate with the risks associated with the subprime-lending program.
3. To conduct portfolio-level reviews and transaction-level testing of the subprime-lending activities, assessing the quality and performance of the subprime-loan portfolios and subprime-lending program, including its profitability, delinquency, and potential and actual loss experience.
4. To assess the adequacy of the allowance for loan and lease losses (ALLL) for the subprime-loan portfolio.

Subprime Lending Examination Procedures

Effective date November 2002

Section 2133.3

1. Determine whether the subprime-lending activities are consistent with the bank's overall business strategy and risk tolerances, and that the critical business risks have been identified and considered.
2. Assess whether the bank has the financial capacity, including capital adequacy, to conduct the high-risk activity of subprime lending safely, without any undue concentrations of credit.
3. Ascertain if management has committed the necessary resources, that is, technology and skilled personnel, to manage and control the risks associated with the volume and complexity of the subprime-lending program.
4. Determine whether the banking institution's contingency plans are adequate to address the issues of (1) alternative funding sources, (2) back-up purchasers of the securities or the attendant servicing functions, and (3) methods of raising additional capital during an economic downturn or when financial markets become volatile.
5. Determine if management has established adequate lending standards that are appropriate for the size and complexity of the banking organization's operations, and if management is maintaining proper controls over the program. (See "Risk Management" in section 2133.1 for the lending standards that should be included in the subprime-loan program.)
6. Review and evaluate loan-administration and loan-monitoring procedures for subprime loans originated or purchased, including—
 - a. collection, repossession, and disclosure procedures;
 - b. the management of the number of staff members, the level and effective use of skilled staffing, and advanced technology;
 - c. the adequacy of the allowance for loan and lease losses (ALLL); and
 - d. the adequacy and accuracy of models used to estimate credit losses or set pricing, making certain that the models account for economic cycles and other unexpected events.
7. Perform a portfolio-level review and conduct some transaction testing. Incorporate examination findings from the portfolio-level and transaction-level testing reviews into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.
8. Review securitization transactions for compliance with Statement of Financial Accounting Standards No. 140 (FAS 140) and this guidance, including whether the banking organization has provided any support to maintain the credit quality of loan pools it has securitized.
9. Evaluate the ALLL and regulatory capital allocated to support subprime-lending programs, including whether the total protection for subprime-asset programs and the levels for each component are adequate. Ascertain that a sound risk-management program exists that includes the ability of management to determine and quantify appropriate levels for each component.
10. Analyze the performance of the program, including its profitability, delinquency, and loss experience.
11. Consider management's response to adverse performance trends, such as higher-than-expected prepayments, delinquencies, charge-offs, customer complaints, and expenses.
12. Determine if the banking institution's subprime-lending program effectively manages the credit, market, liquidity, reputational, operational, and legal risks associated with subprime-lending operations.
13. Evaluate the documented analysis of the institution's capital needed to support its subprime-lending activities. Ascertain whether the capital levels are risk sensitive, that is, does allocated capital reflect the level and variability of loss estimates within reasonably conservative parameters? Determine if there is a direct link between the expected loss rates used to determine the required ALLL and the unexpected loss estimates used to determine capital. Document and reference each institution's subprime capital evaluation in the examination comments and conclusions regarding capital adequacy.
14. Classify loans according to the following criteria:

- a. Classify as substandard loans to borrowers that do not have the capacity to service their loans.
 - b. Classify as at least substandard subprime loans that are 90 days or more past due based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay.
 - c. Consider classifying or criticizing the entire portfolio or segments of the portfolio when the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality.
 - d. Classify as substandard high-risk unsecured loan portfolios or secured high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame.
15. Report as unsafe and unsound imprudent loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the pledged collateral. Refer such loans to a consumer compliance/fair lending specialist for review.
 16. Carefully assess management's ability to administer the higher risk in subprime portfolios. If risk-management practices are deficient, criticize management and reach specific agreements with senior management and the board of directors to initiate corrective action.

An interagency Statement on Subprime Mortgage Lending (the subprime statement) was issued on July 10, 2007 (72 Fed. Reg. 37569) by the agencies¹ (same effective date). The subprime statement address issues and questions related to certain adjustable-rate mortgage (ARM) products marketed to subprime borrowers. The statement clarifies how institutions can offer certain ARM products in a safe and sound manner, and in a way that clearly discloses the risks that a borrower may assume from certain ARMs. The statement applies to all banks and their subsidiaries and bank holding companies and their nonbank subsidiaries. See SR-07-12/CA-07-3 and its attachment (the full text of the interagency statement).

The guidance was developed to address emerging risks associated with certain subprime mortgage products and lending practices. The agencies are particularly concerned about the growing use of ARM products² that provide low initial payments based on a fixed introductory rate that expires after a short period, and then adjusts to a variable rate plus a margin for the remaining term of the loan. These products could result in payment shock to the borrower. Also, there is concern that these products, typically offered to subprime borrowers, present heightened risks to lenders and borrowers. Often, these products have additional characteristics that increase risk. These include qualifying borrowers based on limited or no documentation of income or imposing substantial prepayment penalties or prepayment penalty periods that extend beyond the initial fixed-interest-rate period.

ARM products originally were extended to customers primarily as a temporary credit accommodation in anticipation of early sale of the property or in expectation of future earnings growth. However, these loans have been offered to subprime borrowers as “credit repair” or “affordability” products. The agencies had concerns that many of these subprime borrowers may not have sufficient financial capacity to service a higher debt load, especially if they were qualified based on a low introductory payment. Also, there was concern that the

subprime borrowers may not fully understand the risks and consequences of obtaining these types of ARM products. Borrowers who obtain these loans may face unaffordable monthly payments after the initial rate adjustment, difficulty in paying real estate taxes and insurance that were not escrowed, or expensive refinancing fees, any of which could cause borrowers to default and potentially lose their homes.

SCOPE OF THE SUBPRIME STATEMENT

The subprime statement emphasizes the need for prudent underwriting standards and clear and balanced consumer information so that institutions and consumers can assess the risks arising from certain ARM products with discounted or low introductory rates. The statement is focused on these types of ARMs and uses the interagency Expanded Guidance for Subprime Lending (the expanded guidance)³ issued in 2001 to determine subprime borrower characteristics. While the statement is focused on subprime borrowers, the principles in the statement are also relevant to ARM products offered to non-subprime borrowers.

RISK-MANAGEMENT PRACTICES

The risk-management practices discussed in the subprime statement are generally consistent with existing interagency guidance regarding real estate lending, subprime lending, and nontraditional mortgage products.⁴ Like the nontradi-

1. The Board of Governors of the Federal Reserve System (the Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), the Office of Thrift Supervision (OTS), and the National Credit Union Administration (NCUA).

2. See footnote 8.

3. As discussed in the 2001 interagency Expanded Guidance for Subprime Lending Programs, the term “subprime” refers to the characteristics of individual borrowers. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories.

4. The 1993 Interagency Guidelines for Real Estate Lending (see SR-93-1 and sections 2090.1–2090.4); the 1999 Interagency Guidance on Subprime Lending (see SR-99-6 and sections 2133.1–2133.3); the 2001 Expanded Guidance for Subprime Lending Programs (see SR-01-4 and sections 2133.1–2133.3); and the 2006 Interagency Guidance on Non-traditional Mortgage Product Risks (see SR-06-15/CA-06-12 and sections 2043.1–2043.4).

tional mortgage guidance issued in 2006, the subprime statement encourages institutions to evaluate the borrower's repayment capacity and ability to repay the loan by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule.⁵ Further, the subprime statement emphasizes that an institution's assessment of a borrower's repayment capacity should include an evaluation of the borrower's debt-to-income ratio and states that this assessment should include total monthly housing-related payments (i.e., principal, interest, taxes, and insurance).

WORKOUT ARRANGEMENTS

The subprime statement reiterates the principles in the interagency Statement on Working with Borrowers (April 2007) in which the agencies encouraged institutions to work constructively with residential borrowers who are in default or whose default is reasonably foreseeable. Both documents indicate that prudent workout arrangements that are consistent with safe and sound lending practices are generally in the long-term best interest of both the financial institution and the borrower. The Federal Reserve will not criticize institutions that pursue reasonable workout arrangements with borrowers.

SUPERVISORY REVIEW

Federal Reserve examiners are expected to carefully review an institution's risk management, consumer-disclosure practices, and consumer compliance, concerns which are contained in the subprime statement as a part of ongoing examination activities. Examiners will take action against institutions that exhibit predatory lending practices, violate consumer protection or fair lending laws, engage in unfair or deceptive acts or practices, or otherwise engage in unsafe or unsound lending practices.

5. The nontraditional mortgage (NTM) guidance covers mortgage products that allow borrowers to defer payment of principal and sometimes interest, including interest-only mortgages when a borrower pays no loan principal for the first few years of the loan and payment-option ARMs when a borrower has flexible payment options with the potential for negative amortization. Because certain ARM products offered to subprime borrowers are fully amortizing, the NTM guidance does not cover such products.

STATEMENT ON SUBPRIME MORTGAGE LENDING

The Statement on Subprime Mortgage Lending (the subprime statement) was developed by the agencies to address emerging issues and questions relating to certain subprime⁶ mortgage lending practices. The agencies stated their concern that borrowers may not fully understand the risks and consequences of obtaining products that can cause payment shock.⁷ In particular, they have concerns with certain adjustable-rate mortgage (ARM) products typically offered to subprime borrowers that have one or more of the following characteristics:

- low initial payments based on a fixed introductory rate that expires after a short period and then adjusts to a variable index rate plus a margin for the remaining term of the loan;⁸
- very high or no limits on how much the payment amount or the interest rate may increase ("payment or rate caps") on reset dates;
- limited or no documentation of borrowers' income;
- product features likely to result in frequent refinancing to maintain an affordable monthly payment; and/or
- substantial prepayment penalties and/or prepayment penalties that extend beyond the initial fixed-interest-rate period.

Products with one or more of these features present substantial risks to both consumers and lenders. These risks are increased if borrowers are not adequately informed of the product features and risks, including their responsibility for paying real estate taxes and insurance, which may be separate from their monthly mortgage payments. The consequences to borrowers could

6. The term "subprime" is described in the 2001 Expanded Guidance for Subprime Lending Programs. (See SR-01-4 and sections 2133.1–2133.3)

7. *Payment shock* refers to a significant increase in the amount of the monthly payment that generally occurs as the interest rate adjusts to a fully indexed basis. Products with a wide spread between the initial interest rate and the fully indexed rate that do not have payment caps or periodic interest rate caps, or that contain very high caps, can produce significant payment shock.

8. For example, ARMs known as "2/28" loans feature a fixed rate for two years and then adjust to a variable rate for the remaining 28 years. The spread between the initial fixed interest rate and the fully indexed interest rate in effect at loan origination typically ranges from 300 to 600 basis points.

include being unable to afford the monthly payments after the initial rate adjustment because of payment shock; experiencing difficulty in paying real estate taxes and insurance that were not escrowed; incurring expensive refinancing fees, frequently due to closing costs and prepayment penalties, especially if the prepayment penalty period extends beyond the rate adjustment date; and losing their homes. Consequences to lenders may include unwarranted levels of credit, legal, compliance, reputation, and liquidity risks due to the elevated risks inherent in these products.

Many of these concerns are addressed in existing interagency guidance. The most prominent are the 1993 Interagency Guidelines for Real Estate Lending (real estate guidelines) (see SR-93-1 and sections 2090.1–2090.4), the 1999 Interagency Guidance on Subprime Lending (see SR-99-6 and sections 2133.1–2133.3) and the 2001 Expanded Guidance for Subprime Lending Programs (expanded subprime guidance) (see SR-01-4 and sections 2133.1–2133.3).

While the 2006 Interagency Guidance on Nontraditional Mortgage Product Risks (NTM guidance)⁹ may not explicitly pertain to products with the characteristics addressed in this statement, it outlines prudent underwriting and consumer protection principles that institutions also should consider with regard to subprime mortgage lending. This statement reiterates many of the principles addressed in existing guidance relating to prudent risk-management practices and consumer protection laws.¹⁰

Risk-Management Practices

Predatory Lending Considerations

Subprime lending is not synonymous with predatory lending, and loans with the features described above are not necessarily predatory in nature. However, institutions should ensure that they do not engage in the types of predatory lending practices discussed in the expanded subprime guidance. Typically, predatory lending involves at least one of the following elements:

- making loans based predominantly on the foreclosure or liquidation value of a borrower's collateral rather than on the borrower's ability to repay the mortgage according to its terms;
- inducing a borrower to repeatedly refinance a loan in order to charge high points and fees each time the loan is refinanced (“loan flipping”); or
- engaging in fraud or deception to conceal the true nature of the mortgage loan obligation, or ancillary products, from an unsuspecting or unsophisticated borrower.

Institutions offering mortgage loans such as these face an elevated risk that their conduct will violate section 5 of the Federal Trade Commission Act (FTC Act), which prohibits unfair or deceptive acts or practices.¹¹

Underwriting Standards

Institutions should refer to the real estate guidelines, which provide underwriting standards for all real estate loans.¹² The real estate guidelines state that prudently underwritten real estate loans should reflect all relevant credit factors, including the capacity of the borrower to adequately service the debt. The 2006 NTM guidance details similar criteria for qualifying borrowers for products that may result in payment shock.

Prudent qualifying standards recognize the potential effect of payment shock in evaluating a borrower's ability to service debt. An institution's analysis of a borrower's repayment capacity should include an evaluation of the borrower's ability to repay the debt by its final maturity at the fully indexed rate,¹³ assuming a fully

9. See SR-06-1, sections 2043.1–2043.4, and 71 *Fed. Reg.* 58609 (October 4, 2006).

10. As with the NTM guidance, this statement applies to all banks and their subsidiaries as well as to bank holding companies and their nonbank subsidiaries.

11. The Board, the OCC, the OTS, and the FDIC enforce this provision under section 8 of the Federal Deposit Insurance Act. The Board, the OCC, and the FDIC also have issued supervisory guidance to the institutions under their respective jurisdictions concerning unfair or deceptive acts or practices. See OCC Advisory Letter 2002-3, Guidance on Unfair or Deceptive Acts or Practices, March 22, 2002, and 12 CFR 30, appendix C; Joint Board and FDIC Guidance on Unfair or Deceptive Acts or Practices by State-Chartered Banks, March 11, 2004.

12. Refer to 12 CFR 208, subpart C.

13. The fully indexed rate equals the index rate prevailing at origination plus the margin to be added to it after the expiration of an introductory interest rate. For example, assume that a loan with an initial fixed rate of 7 percent will reset to the six-month London Interbank Offered Rate (LIBOR) plus a margin of 6 percent. If the six-month LIBOR rate

amortizing repayment schedule.¹⁴

One widely accepted approach in the mortgage industry is to quantify a borrower's repayment capacity by a debt-to-income (DTI) ratio. An institution's DTI analysis should include, among other things, an assessment of a borrower's total monthly housing-related payments (e.g., principal, interest, taxes, and insurance, or what is commonly known as PITI) as a percentage of gross monthly income.

This assessment is particularly important if the institution relies upon reduced documentation or allows other forms of risk layering. Risk-layering features in a subprime mortgage loan may significantly increase the risks to both the institution and the borrower. Therefore, an institution should have clear policies governing the use of risk-layering features, such as reduced-documentation loans or simultaneous second-lien mortgages. When risk-layering features are combined with a mortgage loan, an institution should demonstrate the existence of effective mitigating factors that support the underwriting decision and the borrower's repayment capacity.

Recognizing that loans to subprime borrowers present elevated credit risk, institutions should verify and document the borrower's income (both source and amount), assets, and liabilities. Stated-income and reduced-documentation loans to subprime borrowers should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. Reliance on such factors also should be documented. Typically, mitigating factors arise when a borrower with favorable payment performance seeks to refinance an existing mortgage with a new loan of a similar size and with similar terms, and the borrower's financial condition has not deteriorated. Other mitigating factors might include situations where a borrower has substantial liquid reserves or assets that demonstrate repayment capacity and can be verified and documented by the lender. However, a higher interest rate is not considered an acceptable mitigating factor.

equals 5.5 percent, lenders should qualify the borrower at 11.5 percent (5.5 percent + 6 percent), regardless of any interest rate caps that limit how quickly the fully indexed rate may be reached.

14. The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a "2/28" loan would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

Workout Arrangements

As discussed in the April 2007 Interagency Statement on Working with Borrowers (see SR-07-6/CA-07-1), financial institutions are encouraged to work constructively with residential borrowers who are in default or whose default is reasonably foreseeable. Prudent workout arrangements that are consistent with safe and sound lending practices are generally in the long-term best interest of both the financial institution and the borrower.

Financial institutions should follow prudent underwriting practices in determining whether to consider a loan modification or a workout arrangement.¹⁵ Such arrangements can vary widely based on the borrower's financial capacity. For example, an institution might consider modifying loan terms, including converting loans with variable rates into fixed-rate products to provide financially stressed borrowers with predictable payment requirements.

The agencies will not criticize financial institutions that pursue reasonable workout arrangements with borrowers. Further, existing supervisory guidance and applicable accounting standards do not require institutions to immediately foreclose on the collateral underlying a loan when the borrower exhibits repayment difficulties. Institutions should identify and report credit risk, maintain an adequate allowance for loan losses, and recognize credit losses in a timely manner.

Consumer Protection Principles

Fundamental consumer protection principles relevant to the underwriting and marketing of mortgage loans include—

- approving loans based on the borrower's ability to repay the loan according to its terms; and
- providing information that enables consumers to understand material terms, costs, and risks of loan products at a time that will help the consumer select a product.

Communications with consumers, including

15. Institutions may need to account for workout arrangements as troubled-debt restructurings and should follow generally accepted accounting principles in accounting for these transactions.

advertisements, oral statements, and promotional materials, should provide clear and balanced information about the relative benefits and risks of the products. This information should be provided in a timely manner to assist consumers in the product-selection process, not just upon submission of an application or at consummation of the loan. Institutions should not use such communications to steer consumers to these products to the exclusion of other products offered by the institution for which the consumer may qualify.

Information provided to consumers should clearly explain the risk of payment shock and the ramifications of prepayment penalties, balloon payments, and the lack of escrow for taxes and insurance, as necessary. The applicability of prepayment penalties should not exceed the initial reset period. In general, borrowers should be provided a reasonable period of time (typically at least 60 days prior to the reset date) to refinance without penalty.

Similarly, if borrowers do not understand that their monthly mortgage payments do not include taxes and insurance, and they have not budgeted for these essential homeownership expenses, they may be faced with the need for significant additional funds on short notice.¹⁶ Therefore, mortgage-product descriptions and advertisements should provide clear, detailed information about the costs, terms, features, and risks of the loan to the borrower. Consumers should be informed of—

- *payment shock*: potential payment increases, including how the new payment will be calculated when the introductory fixed rate expires;¹⁷
- *prepayment penalties*: the existence of any prepayment penalty, how it will be calculated, and when it may be imposed;

16. Institutions generally can address these concerns most directly by requiring borrowers to escrow funds for real estate taxes and insurance.

17. To illustrate: a borrower earning \$42,000 per year obtains a \$200,000 “2/28” mortgage loan. The loan’s two-year introductory fixed interest rate of 7 percent requires a principal and interest payment of \$1,331. Escrowing \$200 per month for taxes and insurance results in a total monthly payment of \$1,531 (\$1,331 + \$200), representing a 44 percent DTI ratio. A fully indexed interest rate of 11.5 percent (based on a six-month LIBOR index rate of 5.5 percent plus a 6 percent margin) would cause the borrower’s principal and interest payment to increase to \$1,956. The adjusted total monthly payment of \$2,156 (\$1,956 + \$200 for taxes and insurance) represents a 41 percent increase in the payment amount and results in a 62 percent DTI ratio.

- *balloon payments*: the existence of any balloon payment;
- *cost of reduced-documentation loans*: whether there is a pricing premium attached to a reduced-documentation or stated-income loan program; and
- *responsibility for taxes and insurance*: the requirement to make payments for real estate taxes and insurance in addition to their loan payments, if not escrowed, and the fact that taxes and insurance costs can be substantial.

Control Systems

Institutions should develop strong control systems to monitor whether actual practices are consistent with their policies and procedures. Systems should address compliance and consumer information concerns, as well as safety and soundness, and encompass both institution personnel and applicable third parties, such as mortgage brokers or correspondents.

Important controls include establishing appropriate criteria for hiring and training loan personnel, entering into and maintaining relationships with third parties, and conducting initial and ongoing due diligence on third parties. Institutions also should design compensation programs that avoid providing incentives for originations inconsistent with sound underwriting and consumer protection principles, and that do not result in the steering of consumers to these products to the exclusion of other products for which the consumer may qualify.

Institutions should have procedures and systems in place to monitor compliance with applicable laws and regulations, third-party agreements, and internal policies. An institution’s controls also should include appropriate corrective actions in the event of failure to comply with applicable laws, regulations, third-party agreements, or internal policies. In addition, institutions should initiate procedures to review consumer complaints to identify potential compliance problems or other negative trends.

Supervisory Review

The agencies will continue to carefully review risk-management and consumer compliance processes, policies, and procedures. The agen-

cies will take action against institutions that exhibit predatory lending practices, violate consumer protection laws or fair lending laws,

engage in unfair or deceptive acts or practices, or otherwise engage in unsafe or unsound lending practices.

INTRODUCTION

Agricultural loans can be broadly defined as loans made to agricultural producers to finance the production of crops or livestock. The term “crops” is meant to include any of the many types of plants that produce grains, fruits, vegetables, or fibers that can be harvested. Similarly, a variety of animals is produced for profit, although cattle, swine, sheep, and poultry are by far the most common. Production cycles vary with the type of crop or livestock, from a few weeks or months to several years; in the case of an orchard crop or timber, the time from planting to harvest (from cash outlay to the generation of income) is quite lengthy. The type of crop or livestock to be produced will determine the nature of the financing needed, including its timing, collateral considerations, and repayment terms.

Repayment terms for farm loans normally correspond to anticipated cash flows. Since repayment of agricultural-related loans usually comes from the sale of crops or livestock, annual repayment terms are not uncommon. Depending on the type of operation and timing of cash income, payments may be set to come due semiannually, quarterly, or on an irregular schedule. However, many smaller farm operators also receive income from nonfarm employment, which allows them to make monthly payments on some loans.

Agricultural producers need access to land (often with buildings and other improvements) and equipment, in addition to the shorter-term operating inputs directly involved in crop or livestock production. Not all producers own land; some are tenants who pay the landowners cash rent or a portion of the crop yield. Many producers both own and rent or lease land in an effort to maximize efficiency and income. Accordingly, individual producers may need a variety of types of loans, including—

- real estate loans,
- equipment loans,
- livestock loans, and
- operating (or production) loans.

Information on each of these types of agricultural loans follows, as well as general comments on agricultural lending and the examiner’s review of agricultural loans.

AGRICULTURAL REAL ESTATE LOANS

Real estate loans are not intended as a primary focus of this manual section. However, real estate loans are a significant portion of total debt for many agricultural producers, and the examiner should consider them when evaluating other types of loans to agricultural producers. For a more thorough discussion of real estate loans, refer to section 2090.1, “Real Estate Loans.” Loans to finance agricultural land, together with related improvements (frequently including the producer’s residence) comprise the most common type of real estate loan made by agricultural banks. These loans are subject to the same general lending principles and legal and regulatory requirements¹ as loans on other types of real estate. Even if a bank has not made a real estate loan to the agricultural borrower, any real estate debt owed elsewhere must be considered in analyzing the borrower’s creditworthiness, along with amounts due to the bank and any other creditors. Additionally, any state laws on homestead exemptions should be noted.

Agricultural real estate loans tend to have special characteristics, particularly with regard to valuation and repayment considerations. For instance, farmland appraisers need special knowledge of soil types, topography, data on rainfall or water tables, and crop production data, as well as a knowledge of area market conditions and other extenuating information. Prevailing market values for farmland tend not to permit as high a level of cash return as those for other types of income-producing property. Values always reflect supply and demand, and, probably due to a number of factors, the demand for farmland has traditionally been relatively strong from neighboring landowners, other area farmers, nonfarmers, and absentee owners who have a strong desire to own land. A lower level of return generally dictates a lower loan-to-value ratio, although a borrower may be able to

1. In connection with the supervisory loan-to-value limits set forth in the “Interagency Guidelines for Real Estate Lending Policies,” farmland, ranchland, or timberland committed to ongoing management and agricultural production is considered “improved property,” subject to a loan-to-value limit of 85 percent. However, a bank may set a lower limit for itself and, as a matter of policy, probably will loan less than 85 percent of appraised value on farmland in most cases.

service debt at a higher level from other income sources such as less-heavily encumbered land, rented land, or nonfarm income. For example, it would not be unusual for a bank to advance 100 percent of the purchase price of land if a lien on additional land is taken to lower the overall loan-to-value ratio.

There is generally a well-established market for agricultural land. Although values fluctuate based on a variety of factors (just as they do with other types of real estate), there is normally a recognized range of values at any given time for particular land types within a general area. The examiner should gain some knowledge of current area land prices and trends through published data from local universities or private organizations, interviews with bank management, and the review of appraisal reports. This knowledge will be vital in assessing collateral values and the borrower's overall financial condition and future prospects.

An amortization period of up to 20 years is not uncommon for agricultural real estate loans by banks. Longer-term loans (up to 30 years) on farm real estate are sometimes made by commercial banks, but are more common with other lenders such as Federal Land Banks. Many banks structure real estate loans so that required payments are based on a 20- to 30-year amortization, but they write the notes with a 5- to 10-year maturity, at which time a balloon payment is due. Major improvements, such as livestock-confinement buildings or grain-handling facilities, commonly have a shorter amortization period of 10 years or less.

AGRICULTURAL MACHINERY AND EQUIPMENT LOANS

Agricultural producers often need to finance the purchase of machinery, equipment, vehicles, and implements. Typically, these loans are secured by the durable goods being financed and are amortized over an intermediate term of up to seven years. As with any equipment loan, some borrower equity should be required, the amortization period should be no longer than the expected useful life of the equipment, and scheduled payments should correlate reasonably with the timing and amount of anticipated income. In some cases, equipment loan payments may be advanced under the borrower's operating line of credit.

Loans to farmers and ranchers may include individual notes to finance the purchase of specific pieces of equipment or vehicles. However, many agricultural borrowers provide the bank with a blanket lien on all equipment and vehicles to secure any and all debts owed the bank. Frequently, borrowers have both purchase money loans on specific equipment and other loans secured by a blanket equipment lien.

Under the Uniform Commercial Code, a security interest in equipment is created with a security agreement signed by the borrower and a bank officer, and the lien is perfected by a centrally filed financing statement. Many banks file the financing statement in both the county and state in which the borrower resides *and* in the county and state in which the equipment is located. The filing is a public record that notifies lenders or other interested parties that the assets identified have been pledged, as well as to whom and when they were pledged.

Since the filing record provides vital information for potential lenders, bank management must check it before extending credit to determine whether the collateral is already pledged to another lender. In many cases, a bank might approve a loan request only if it were to be in a first lien position, but there can be exceptions. For example, a bank may agree to advance on a second lien position in a large piece of equipment in which the borrower has substantial equity or take a blanket lien on all equipment, including one or a few items of equipment pledged elsewhere (such as a purchase money lien held by an equipment dealer). As a matter of prudent lending and sound loan administration, lien searches should be performed periodically on at least larger borrowers or on those borrowers known to be or suspected of having problems or of being involved with other lenders.

Sound bank lending policies should prescribe a maximum loan-to-value ratio for equipment, as well as maximum repayment terms. The same is true for vehicles, although the loan-to-value limits on vehicles for highway use (automobiles and trucks) tend to be higher because they have a less-specialized use and are more liquid. Maximum loan-to-value limits, particularly for loans to purchase specific pieces of farm equipment, may range to more than 80 percent or even to 100 percent for strong borrowers. However, many farm lines of credit are supported in part by blanket liens on all the borrower's

equipment. Typically, overall loan-to-value ratios on a line of equipment do not exceed 60 percent.

LIVESTOCK LOANS

Livestock loans vary with the animal species and the nature of the individual producer's operation, but the same general lending principles apply to virtually all types of livestock loans. The borrower should have an equity position in the livestock financed, ample feed on hand, or another underlying financial strength that will protect the lender from risks such as losses from animal diseases and deaths, rising feed costs, or market fluctuations. The size of the livestock operation should be commensurate with the borrower's physical facilities and management capability. Total debt should not overburden the borrower, and the timing and source of repayment for loans should be understood when they are originated. The term of a livestock loan normally bears a close relationship to the length of time the animals are to be held.

Feed is a necessity for livestock producers and a major expense for those involved in finishing animals for slaughter, dairy herds, or egg-laying operations. On the other hand, stocker cattle feed mainly on pasture or silage, which reduces feed costs. Some livestock producers also raise feed crops, which may improve their overall efficiency. Many producers, however, need to buy feed. In any event, the loan officer should have a firm understanding of how much feed the borrower has on hand (or will be harvesting) and how much will have to be purchased. Still, even though both borrower and banker may be experienced and capable at projecting feed costs, variables beyond their control impose some risk of increased costs. These variables might include perils such as unfavorable weather or disease affecting feed crop yields or rising feed prices or shortages brought on by other unanticipated forces.

Many banks will advance up to 100 percent of the cost of livestock if the borrower has sufficient feed on hand and a sound overall financial position. Since the animals gain weight and value as feedstocks are consumed, the bank's collateral position normally strengthens as the livestock matures toward market weight. For borrowers without adequate feedstocks on hand, advance rates may be limited to 70 to 80 percent of the purchase price.

TYPES OF LIVESTOCK OPERATIONS AND LOAN CONSIDERATIONS

Livestock producers usually specialize in particular kinds or breeds of animals or in certain phases of an animal's life cycle. This specialization may vary depending on geographic area, climate, topography, soil type, or the availability of water and feed, or on the producer's preferences, experience, or physical facilities. A producer may change his specialization from time to time based on recurring market cycles or more fundamental shifts in economic factors, such as consumer demand. Some producers are involved in more than one type of livestock operation at any given time.

The following is a brief discussion of the most common types of livestock operations, as well as the lending and loan analysis considerations for each.

Cattle

Beef Breeds

- *Cow-calf operation.* A producer has breeding stock that produces calves, which are then sold as either feeder calves or future breeding stock or are kept until the animal reaches full maturity.

The typical cow-calf loan is for financing the breeding stock (cows and bulls) of a herd. The loan term is usually three to five years, with annual payments of principal and interest to fully amortize the loan within that term. Often, loans for this type of operation are written with one-year maturities and no predetermined amount of principal reduction at maturity. However, this kind of loan structure is more suitable for borrowers who are not highly leveraged.

Repayment is from the annual sale of calves and cull cows (older cows or those that fail to produce offspring). Approximately 10 to 15 percent of a cow herd is culled each year; most cows are retained for seven to as many as twelve years. Bulls are typically stocked at one for each 20 to 25 cows; pregnancy rates are generally 80 to 100 percent, depending on the age and health of the cows and on feed availability.

Most calves are born in late winter and early spring, weighing around 100 pounds. Cows may be winter-fed on hay, but cows and calves graze on pastureland from spring to around October when the calves weigh 500 to 550 pounds. At this time, the calves may be sold to another producer who specializes in raising stockers. (However, in some areas, herds are managed to produce fall calves. Also, depending on feed sources and market conditions, calves may be sold at lighter weights, around 300 to 400 pounds.)

- *Stocker or backgrounding operation.* A producer in a stocker operation acquires calves weighing from 300 to 550 pounds and feeds them, primarily on pasture, until they weigh around 700 to 750 pounds, when they are sold to a finisher. Since the growth gains of young cattle are generally the most efficient phase of beef production, some stock operators prefer to buy lighter weight calves, although the lighter weights require more care and supervision to minimize death losses. Stocker operations are relatively high-risk programs that require specialized knowledge, but they can also be quite profitable.

Backgrounding requires approximately 100 days, during which time the cattle may be fed a daily ration of silage (the entire corn or grain sorghum plant chopped into feed and stored in a silo) and grain and feed supplements, including soybean meal, minerals, salt, and vitamins. The supplements usually need to be purchased. Steers gain approximately two pounds per day, and heifers slightly less. Sometimes stocker cattle are placed on pasture, which can include dormant wheat in the winter or grass during the summer.

Stocker cattle are typically financed with a 90- to 120-day single-advance, single-maturity note. Funds for feed purchases may be provided as part of the note proceeds, but, more commonly, the feed is raised by the producer. Loan repayment comes from the sale of the cattle when they weigh around 700 to 750 pounds. Collateral for stocker loans is typically the cattle financed and the feed. Banks usually require around a 30 percent margin in the cattle, but may require as little as 20 percent or less for financially strong borrowers.

The profitability of a backgrounding operation is sensitive to the average daily weight gain, feed costs, weather, and purchase and sale prices of the cattle.

- *Finishing operation.* A finishing operation acquires cattle weighing approximately 700 to 750 pounds and feeds them a high-protein grain ration until they are ready for slaughter at around 1,100 to 1,200 pounds.

Finishing usually takes around 130 to 145 days. Most finishing cattle are now custom-fed in commercial feedlots, but the producer (not the feedlot owner) usually retains ownership of the cattle. Feeder steers usually gain approximately 3.2 pounds per day, and heifers around 2.8 pounds per day. However, average daily gains vary depending on the breed, type of ration, time of year, or weather conditions.

Finishing cattle can be risky because of fluctuations in cattle prices between purchase and sale dates. Some producers use futures contracts to lock in prices and reduce the risk, or they enter into forward contracts with a packer. Larger producers may use a “moving hedge” to offset the risk imposed by market cycles.²

Banks normally require 20 to 30 percent initial margin in financing the purchase of feeder cattle, but may advance up to 100 percent of the feed costs. As the cattle gain weight, the bank’s collateral position tends to improve. Repayment comes from sale of the cattle, with loan maturity set near the anticipated sale date.

Dairy Operations

Cows are milked for ten months each year, then rested for two months and allowed to “dry up” (quit producing milk by not being milked). Three months after a female dairy cow gives birth, she is rebred and calves nine months later. Cows are commonly bred through artificial insemination, which allows the producer to improve the genetics of the herd. Each year approximately one-third of the cows are culled,

2. In this strategy, the producer periodically buys a given number of lightweight feeders and at the same time sells a similar number of fat cattle. When prices are down, lower revenues from sales of cattle are offset by the benefit of lower costs to purchase replacement lightweight feeders. By the same token, when prices are up, higher purchase costs are offset by higher revenues on the slaughter cattle sold. This strategy allows the producer to prevent or substantially minimize losses due to fluctuating market prices. Otherwise, the producer might too often be in the position of only buying at high prices and only selling at low prices.

with replacement heifers usually raised on the farm. An 80 percent calf crop is common, with the males either sold soon after birth or fed for slaughter.

Milk production is measured by pounds of milk produced per cow per year. Production in the range of 13,500 to 20,500 pounds is common. Milk production variables include the quality of the cows, number of days milked each year, and amount and quality of feed. Feeding cows a higher ratio of grain to dry hay will result in higher milk production, but the higher feed costs must be weighed against the returns of higher production.

Feed is a major expense for a dairy operation. Dairy cows consume a ration of corn or grain sorghum, soybean meal, high-quality hay, silage, vitamins, and minerals. Family-oriented dairy operations usually grow most of their own feed on the farm, while larger operations purchase most of their feed and confine the cows to a dry-lot facility.

A dairy operation is heavily capital intensive because of the investment in cows, buildings, and equipment. Dairying is also labor intensive, which further adds to the cost of production.

The efficiency of a dairy operation is measured on a "per-cow" basis. Gross income, expenses, and net income can be divided by the number of cows to analyze trends and compare them with other dairy operations. Several other key indicators of a dairy operation's productivity include the following:

- *Pounds of milk per cow per year.* Herds averaging less than 14,000 pounds may be struggling.
- *Calving interval.* Twelve to thirteen months is favorable; if the interval lengthens, milk production and the overall efficiency of the operation will decline.
- *Calf losses.* A 10 percent or less loss on live calves born is favorable and considered an indication of good management.
- *Culling rate.* Cows should start milking when they are about two years old and should average four to five lactation periods before they are culled; if cows have to be culled prematurely, efficiency declines.

Loans to dairy operators may include longer-term financing for land and improvements; intermediate financing for the cow herd, specialized equipment, and vehicles; and operating loans to help finance the production of feed

crops. Established operations may not require herd financing unless the herd is being expanded. Financing replacement cows to maintain a herd, if necessary, should be included in a shorter-term operating loan. Generally, operating loans are not a major financing activity as the dairy farmer's regular income from the sale of milk can often accommodate operating needs.

Collateral for dairy loans, in addition to real estate, typically includes the livestock, crops and feed on hand, and equipment. The collateral is usually covered with a blanket security agreement. Often, milk sale proceeds are assigned to the bank, and the milk buyer sends a monthly check directly to the bank to meet scheduled loan repayments.

Clearly, the primary source of income for the dairy farmer is the sale of milk, which is produced daily. Additional income is produced from the annual sale of calves and culled cows.

Hogs

Hog production consists of a two-stage operation: (1) "farrowing" (breeding sows to produce feeder pigs) and (2) "finishing" (fattening feeder pigs to slaughter weight). Many producers combine both enterprises and are called farrow-to-finish operations.

Hog producers range from small operators to large corporate interests. The small producers can be considered those who market less than 2,500 head per year; they can be involved either in finishing hogs or in farrow-to-finish operations. Small producers also tend to be involved in grain farming (raising their own feed) and other kinds of livestock production. The profitability and financial strength of a small producer is generally tied to the ability to market hogs frequently throughout the year, which lessens the impact of adverse market fluctuations. If the producer cannot market frequently, he or she probably needs to be involved in hedging practices. A corporate hog farm is usually a farrow-to-finish operation, with the number of sows ranging from 500 to as many as 100,000 for the largest producers.

Farrowing Operations

Hog breeding normally requires one boar for approximately 20 sows. Sows typically have

two litters per year, and litter size is one of the most crucial factors in determining the success of a farrowing operation. Eight hogs per litter is a goal for most producers. Up to 25 percent of the sows will be culled each year. Some producers raise their own replacement sows, while others purchase quality breeding stock in an attempt to improve herd quality.

Pigs are farrowed (born) in confinement buildings, and after three weeks, they are moved to a nursery facility where the pigs are weaned from the sow. The capital invested in farrowing facilities varies greatly, but the trend has been toward higher investments in facilities that require less labor. However, a large investment in a single-use, costly hog facility can pose a significant risk if the farrowing operation is not profitable.

Feed costs are the largest operating expense of a farrowing operation. The feed required consists of a feed grain (corn or milo), a protein supplement, vitamins and minerals, and a pig starter (a commercial feed used in the transition from nursing to eating solid food). In a feeder pig production operation, the young pigs are typically kept until they weigh 40 to 60 pounds, which takes around two months. Feed costs are continually changing because of fluctuating grain prices, so it may be difficult to project cash flow accurately. Historical cash flow may be more useful in demonstrating the borrower's overall management capabilities.

Loans to farrowing operations may include an intermediate- to mid-term loan on the facilities (usually not for more than ten years), breeding stock loans that should be amortized over no more than four years, and operating loans. Operating loans are often in the form of revolving lines of credit to purchase feed, with repayment normally coming from the sale of hogs. The operating line should be cleaned up periodically, or the bank should establish systems to monitor advances and repayments to ensure that stale debt is not accumulating.

Collateral for a farrowing operation could include the facilities and the hogs and feed on hand. For collateral purposes, the hogs should be valued at local market prices even though the producer might have paid a premium for breeding stock. Feed should be heavily margined, as the proceeds from feed sale during a foreclosure are likely to be limited.

Loan repayment comes primarily from the sale of young feeder pigs and culled sows. The timing of scheduled repayments will vary,

depending largely on the producer's breeding schedule and the anticipated sale dates for feeder pigs. Usually, sows are bred at different times so they are not all having pigs at the same time. In the case of a farrow-to-finish operation, the cycle will be longer, and repayments will be scheduled according to anticipated sale dates of the fat hogs and culled breeding stock.

Finishing Operations

Hog finishing is the process of acquiring young pigs that weigh 40 to 60 pounds, and feeding them until they reach a slaughter market weight of 220 to 240 pounds. The process takes approximately four months. The average death loss for a finishing operation is generally 4 to 5 percent of the total number of hogs started on feed.

Loans for hog finishing are usually in the form of single-payment notes that mature in approximately four months. Loan proceeds are used to purchase young pigs and may also be used to purchase feed. A bank commonly advances up to 100 percent of the purchase price of the pigs. Usually, there is a blanket security agreement in place that gives the bank a security interest in all hogs, as well as in feed and other chattels to provide additional overall support for the credit. Margin in the collateral increases as the animals gain weight. Repayment comes from the sale of fat hogs to a packing plant.

The main factors in determining a finisher's profitability are (1) the cost of the feeder pigs, (2) the cost of feeding the pigs, and (3) revenues from the sale of hogs. Costs and revenues continually change because of fluctuations in market prices for young pigs, slaughter hogs, grain, and feed. Because of the relatively short cycle of hog finishing, a number of loans may be made during one year. In analyzing hog loans, reviewing the overall profitability of the operation (taking into account depreciation on facilities and equipment, interest, and insurance) is more meaningful than reviewing the results from each individual loan advance.

Sheep

Sheep are raised for the production of meat and wool. The most common sheep enterprise is the raising of ewe (female) flocks, which produces

income from the sale of both wool and lambs. Larger flocks tend to be more efficient as they can take better advantage of investments in labor-saving equipment.

Ewes give birth once a year, usually during late fall or winter. They frequently have twins, resulting in an overall lamb production per ewe of approximately 140 percent. About 20 percent of the ewes are culled each year, with replacements usually being raised from lambs. There is typically one ram for each 30 ewes in a breeding flock. The sheep and lambs graze on pasture during the summer and are fed a ration of roughage and grain during the winter.

Loans to ewe flock operators are made to purchase breeding stock and to pay operating expenses. Breeding-stock loans should be amortized over no more than five years. Repayment comes primarily from the sale of lambs and wool.

Typically, lambs are finished in commercial feedlots until they reach slaughter weight, which involves purchasing 60-pound feeder lambs and feeding them a hay-grain ration for about 90 days until they weigh approximately 120 pounds. The loan term is usually 90 to 120 days, with the sale of fat lambs to a processor being the source of repayment. Collateral consists of the lambs, which should be valued at local market prices. Margin required in the lambs, if any, will depend on feedstocks owned or on the borrower's financial strength.

Poultry

Poultry production has become a very large and highly organized agribusiness. Large corporate producers dominate the industry. However, they depend to a large extent on individual growers, with whom they contract to raise the birds almost from the day they are hatched until they are ready for slaughter. The large company supplies an independent grower with the day-old chicks, feed, and medications and provides technical support. Under the contract, the company pays the grower at a rate designed to provide an acceptable return on the grower's investment in poultry houses, equipment, and labor.

Producing breeding stock, incubating eggs, hatching chicks, and producing pullets and eggs are other aspects of the poultry industry that are highly specialized and relatively concentrated

within fairly large corporate producers. Most banks will not extend loans on these types of operations, and any that do should have substantial background information on the industry in their files. The examiner should review that information and discuss the industry and the borrower's operation with the officer originating or servicing the credit.

The typical grower owns 60 to 80 acres of land and has an average of three to four poultry houses. Most growers also have other jobs and earn supplemental income from their growing operations. Broiler (or fryer) chickens generally are grown to a live market weight of approximately 4.2 pounds at 42 days of age.

Most bank loans to contract poultry growers consist of construction loans to build poultry houses and permanent financing for the houses and equipment. The houses are large but of relatively simple construction. Permanent financing is typically amortized over 10 to 15 years.

Government guarantees (Farmers Home Administration, Small Business Administration, or various state agencies) are often available to mitigate the bank's risk by guaranteeing from 85 percent to as much as 100 percent of the permanent loan. Federal guarantees have not been available for construction financing of poultry houses, so the bank generally will have to assume the full risk of the loan during the construction period.

Construction loans are generally converted into long-term loans that are repaid with the contract income a grower receives from the large corporate producer. Since feed and other supplies are typically furnished by the large producer, individual growers do not normally require operating loans.

Egg production for consumption (rather than hatching) is another aspect of the poultry industry; it is also highly organized and controlled by large producers. Facilities, feed, and labor represent the primary costs for these operations, with repayment coming primarily from the sale of eggs. Some income is also derived from the sale of "spent" hens (older hens that are no longer efficient layers). These operations are capital intensive and highly specialized. Loans to egg producers need to be carefully analyzed to determine whether they are properly structured and adequately margined. Assessment of the borrower's overall management ability, and record of profitability, industry trends, and any special risk factors is particularly important in judging loan quality.

OPERATING (PRODUCTION) LOANS

Banks (and other lenders) commonly finance the operating expenses of agricultural producers with short-term operating loans. Expenses financed may include items such as cash rent; seed; fertilizer; chemicals; irrigation; fuel; taxes; hired labor; professional fees; and, for a livestock producer, feed, feed supplements, veterinary care and medicines, and other supplies. Operating loans may take the form of single-purpose financing or line-of-credit financing. The single-purpose loan is the simplest and most basic form of financing, as it does not attempt to address the borrower's total credit requirements, and the repayment source and timing are relatively certain.

Line-of-credit financing may accommodate most of a borrower's operating needs for the production cycle. Advances are made as needed to purchase inputs or pay various expenses, with all income usually remitted to the lender to reduce the line. Depending on the type of operation, the line may seldom be fully retired because funds are advanced for a new operating year before all inventories from prior years are marketed. An operating line of credit is generally established after cash-flow projections for the year are made to anticipate credit needs and repayment capacity. While this type of financing has the advantages of convenience and accurate cash-flow monitoring (which permits comparing actual cash flow with projections), it can also have some disadvantages. The lender may be inadvertently funding or subsidizing other creditors' payments with advances on the line and, because operating cycles overlap, it may be difficult for the lender to get out of an undesirable situation.

An operating line may be revolving or non-revolving. A revolving line replenishes itself as repayments are made, so the outstanding balance can fluctuate up and down during the approved term. There is no limit on the total amount borrowed during the term of the line, as long as the amount outstanding never exceeds the established limit. A nonrevolving line is structured so that once the approved amount is used, even though payments are made to reduce the line, the borrower must reapply and receive approval for any further advances. Revolving lines afford flexibility but have no firm disbursement or repayment plan, so they

are usually reserved for borrowers with strong financial positions, proven financial management, and a history of cooperation and performance. Bank management should continually monitor operating lines and clearly document the purpose for advances and source of repayments. A clean-up period may or may not be required after harvest or completion of the operating cycle, depending on the anticipated schedule for selling farm or ranch production.

The primary source of repayment for an agricultural operating loan is revenue from agricultural production. Many farmers also receive some form of government support payments, and they may have employment off the farm or do custom work (such as harvesting) for hire. In many cases, wages or salaries generated from the nonfarm employment of a farmer's spouse will cover a significant portion of the family's living expenses, relieving the financial pressure on the farming operation. To evaluate repayment capacity, the loan officer must determine how much revenue will be generated from either current production or inventories. Revenues will need to be sufficient to cover all expenses, however, not just those funded by the loan. These could include various operating expenses, family living expenses, payments on capital debt (for real estate and equipment), and any anticipated new capital expenditures. There should also be a margin to cover incorrect assumptions about yields and prices.

Most agricultural lenders recognize the need for yearly cash-flow projections to help determine credit needs and repayment capacity. Projections of both income and expense are usually made for each month (or each quarter) of the year to anticipate the amount and timing of peak financing needs, as well as the total net cash flow for the year. Obtaining and analyzing yearly federal income tax returns (particularly Schedule F) should be strongly encouraged as a means of reviewing actual operating results. Actual data can then be compared with projections to determine variances. Reasons for the variances should be understood as a part of the credit analysis process. This analysis will help the bank decide whether to grant or deny credit and service loans.

If a borrower loses money from operations in one year and cannot fully repay the operating loan, there will be "carryover debt." In general, carryover debt should be segregated, secured with additional collateral if possible, and amortized over a reasonable term that is consistent

with the borrower's repayment capacity. Consistent losses and excessive carryover debt can preclude further advances and lead to the sale of certain assets or even to full liquidation of the operation.

Collateral for a typical operating loan includes growing crops, feed and grain, livestock, and other inventories. Normally, a bank also obtains a security interest in equipment, vehicles, government payments, and other receivables to strengthen the collateral margin. For new borrowers, a lien search is recommended to determine the presence of any senior liens. Pledged assets should be valued, either by a knowledgeable bank officer or an outside appraiser, and the operation and collateral should be inspected periodically to judge conditions and values. Inspections for established borrowers are usually done at least annually. More frequent inspections are usually performed on marginal borrowers or if the borrower has a feeder livestock operation with more rapid turnover of assets.

GOVERNMENT AGRICULTURAL SUBSIDY PROGRAMS

Federal government programs have long been able to help farmers financially and, to an extent, control the overproduction of agricultural products. These programs are continually evolving, but remain important in determining many producers' income levels and profitability. In addition to establishing subsidies, the programs also set limits on the number of acres of certain crops that a producer can plant to help control crop surpluses and support price levels.

Conservation Reserve Program

The Conservation Reserve Program (CRP) is a long-term retirement program for erodible land. Landowners submit bids for a 10-year contract, stating the annual payment per acre they would accept to convert the highly erodible land to a grass cover. The maximum bid per acre has been established, and accepted bids must not exceed prevailing local rental rates for comparable land. If the bid is accepted by the local Agricultural Stabilization and Conservation Service (ASCS) office, the landowner must sow the land to grass, with the cost of planting grass shared by the landowner and the government.

During the term of the 10-year contract, the landowner cannot plant a crop on the land, allow grazing on it, or cut the grass for hay. The CRP contract is assignable, so it can be transferred to a new owner along with title to the land.

Farmers Home Administration

The Farmers Home Administration (FmHA) is a federal lending agency operating within the U.S. Department of Agriculture. The FmHA performs two main functions: (1) providing supervised credit to farmers who are unable to obtain adequate credit from commercial banks and (2) improving rural communities and enhancing rural development.

Three basic programs allow the FmHA to extend funds to farmers: (1) grants, (2) direct loans, and (3) loan guarantees. The grant program is the smallest and generally relates to rural housing and community programs, most of which are for water and waste disposal systems. The direct loan programs are for loans made by FmHA through its county and state offices to farmers. The loan guarantee program permits the FmHA to guarantee up to 90 percent of the amount of loss on a loan made and serviced by another lender.

Most FmHA loans are (1) farm-operating loans, (2) farm ownership loans, or (3) emergency farm loans. Operating loans and farm ownership loans are for operators of family farms. Eligible purposes for operating loans include capital loans for machinery and livestock, as well as annual production inputs. Farm ownership loans are available for buying land, refinancing debts, and constructing buildings. Emergency loans are designed for farmers in counties where severe production losses have resulted from a disaster or from economic emergencies.

To qualify for a loan, a borrower must (1) be unable to obtain sufficient credit elsewhere at reasonable rates and terms, (2) be a citizen of the United States, (3) be an owner or tenant operator of a farm not larger than a family farm, and (4) have sufficient training or experience to ensure a reasonable chance of success in the proposed operation.

Banks have been highly motivated to use the FmHA-guaranteed loan program as a means of mitigating risk and perhaps developing a sound customer for the future. An FmHA loan also

improves the bank's liquidity, since the guaranteed portion of the loan can be sold in the secondary market.

Small Business Administration

While it is not primarily a lender to agricultural producers, the Small Business Administration (SBA) has made low-interest-rate disaster loans available to individuals, including farmers. The SBA can make or guarantee various types of agricultural loans to producers whose annual revenues do not exceed \$500,000. Banks occasionally make these loans, which are supported by collateral as well as a substantial percentage guarantee by the SBA. In many rural areas, however, it is probably more convenient for a bank to work with a nearby FmHA office than with an SBA office, which may be located some distance away in a metropolitan community.

Federal Crop Insurance Corporation

The Federal Crop Insurance Corporation, which is a part of the U.S. Department of Agriculture, writes multiperil crop insurance. The premiums for this insurance are subsidized by the federal government. For further information, see the following subsection on crop insurance.

CROP INSURANCE

The Federal Crop Insurance Reform Act of 1994 combined crop insurance and disaster aid into a single, unified program. To be eligible for any price support or production adjustment program and for new contracts in the conservation reserve program or any FmHA loan, farmers must carry crop insurance coverage. The expanded crop insurance program replaces the need for disaster bills as the federal response to emergencies involving widespread crop loss.

Aside from the basic required coverage under the federal program, known as the catastrophic coverage level, banks encourage some borrowers to carry crop insurance to reduce their risk of not being repaid on farm-operating loans. Borrowers that are more highly leveraged and have minimum margin in their operating loans are most likely to be required to carry crop insur-

ance. Two common types of crop insurance are (1) crop hail insurance sold by private insurers, which insures only against hail damage, and (2) multiperil crop insurance written by the Federal Crop Insurance Corporation. As its name implies, multiperil crop insurance insures against drought, rain, hail, fire, wind, frost, winterkill, disease, and insect losses.

The federal government subsidizes the multiperil crop insurance premium by paying most of its administrative, actuarial, underwriting, and selling expenses. By subsidizing premiums and encouraging more producers to purchase the insurance, the government hopes to reduce the dependency on crop disaster payments when natural disasters occur. However, this program has not been particularly popular with farmers because they would have to suffer a high level of losses on all planted acres to receive any significant proceeds from the insurance. By diversifying their crops and planting in fields that are separated by significant distances, many farmers are willing to risk planting without crop insurance.

EVALUATING AGRICULTURAL MANAGEMENT

A crucial factor in loan analysis for banks, as well as for examiners, is an evaluation of the management capabilities of the agricultural producer. Cash earnings from an operation provide the primary source of repayment for most agricultural loans, so it is important to evaluate the borrower's ability to manage a profitable operation. The three kinds of management that agricultural lenders most often analyze are production, marketing, and financial management.

Production Management

A lender should first assess the borrower's technical ability as a producer of crops or livestock. This is primarily an objective measure because it consists of comparing an operation's output against industry and area norms. An operator whose production levels are consistently below average will probably have difficulty meeting debt-service requirements and may not be able to stay in business. There may be justifiable reasons for occasional years of below-average production, but lenders should

be cautious of operators who consistently perform poorly.

Another factor to consider is the producer's ability to successfully cope with the inherent variability of agricultural production. Adverse weather, disease, and pest infestations are all production risks that continually affect crops and livestock. Some producers diversify the commodities they produce to reduce their dependency on one crop or type of livestock.

Marketing Management

Good marketing management enables the producer to reduce price risk exposure. Volatile markets have convinced most producers and lenders that sound marketing is crucial for an ongoing agricultural operation, and almost every producer needs a marketing plan designed to control price risk. Aside from helping to ensure profitability, the plan can be incorporated in formulating a more reliable statement of projected cash flow, which helps both the lender and producer anticipate financing needs.

Some of the techniques that producers use to manage price risk exposure are forward contracting, hedging, purchasing options, and using government programs. See the subsection "Marketing Farm Products" for details.

Financial Management

A producer should have the ability and willingness to understand, maintain, and use financial records. The importance of sound financial records began to be more fully appreciated in the 1980s when agricultural loan losses rose, and many agricultural producers and banks failed. During that time, the primary emphasis for many agricultural lenders shifted from collateral-based lending to cash-flow lending. While collateral may afford ultimate protection for the lender under a liquidation scenario, cash flow allows for repayment of debt in the normal course of business.

In addition to recordkeeping, financial management also encompasses how a producer uses his or her assets and liabilities. Maintaining financial reserves in the form of current assets is one means by which a producer can be prepared to overcome short-run adversity. The reserves need not necessarily be cash; they might be in

the form of stored grain or other nonperishable produce or they could be earning assets such as livestock, which is readily marketable. Controlled, reasonable equipment purchases are another indication of good financial management. Overspending on equipment may be indicated if the borrower's equipment list includes many items that are new, especially costly, duplicative, or unneeded for the types of operations being conducted. The presence of sizable nonbank equipment debt on the borrower's financial statement can, in some cases, also reflect overspending.

MARKETING FARM PRODUCTS

Marketing considerations have become more important for many producers as they attempt to maximize returns. Rather than merely selling crops or livestock at prevailing market prices when the production cycle is complete, some producers attempt to lock in a price through the use of forward contracts or futures or options trading. Some producers of nonperishables may simply study market action and cycles and keep harvested crops in storage, waiting for higher prices. Some livestock producers may buy and sell throughout the year to help even out the effects of market fluctuations. Both the bank lending officer and the borrower need to have a clear understanding of the marketing plan, including its potential costs, benefits, and risks.

The following comments briefly describe some of the basic tools producers use as alternatives to the cash market to manage price risk.

- *Forward contracting.* The producer contracts with a buyer to sell farm products at a fixed price in advance of the actual marketing date. These contracts are simple to use if willing buyers can be found, but carry some risk of the buyer's defaulting, particularly if market prices decline significantly before the contract matures. This risk may be mitigated to some extent by requiring the buyer to provide security in the form of a 10 to 15 percent margin to help ensure that the buyer honors the contract.
- *Minimum-price forward contract.* This is a relatively new type of forward pricing that may be available to some producers. It establishes a floor but not a ceiling for the price the producer will receive for his commodities, so

it protects against price declines but permits the producer to garner additional profits if the market rises.

- *Basis contracting.* This is a variation on forward contracting, whereby the price the producer receives is not fixed when the contract is drawn, but will be determined by the futures market price plus or minus some agreed-on difference (basis). For example, cattle for September delivery might be priced at the September futures price (as of a date to be selected by the seller) plus 50 cents per hundredweight. Accordingly, a basis contract does not reduce risk until the price is set by the seller, so if the seller waits to set the price, he or she is still subject to all market risk. However, a basis contract can be combined with a put option (see below) to set a minimum price.
- *Hedging.* Hedging involves the use of counterbalancing transactions to substantially eliminate market risk. The type of hedge typically used by an agricultural producer is sometimes referred to as a “short hedge” because it involves use of the futures market to, in effect, sell short. Later, when the producer’s commodities are ready for delivery, he sells them in the cash market. If the price has declined, he makes a profit on the sale of the futures contract to offset the lower price he receives in the cash market. Conversely, if the price has increased, a loss on the futures contract will be incurred to offset the gain in the cash market. Hedging is similar to fixing a price with a forward contract except that the price is said to be an “expected” fixed price, since the difference between the cash and futures prices may not be correctly anticipated and the resulting net price received will vary some from the expected level. Hedging can have an advantage over forward contracting because it is readily available and based on competitively determined futures prices. Since positions in the futures market require the producer to keep a cash margin with the broker, and additional margin calls may have to be met if the market goes up (after the producer has sold short), it is especially important that the bank loan officer be aware of and understand the borrower’s marketing plan.
- *Put option.* Buying a put option gives the producer the right, but not the obligation, to sell a commodity at a given (strike) price any time before the put’s expiration date. It protects against falling prices because the put

becomes more valuable as prices fall. At the same time, a put allows the producer to benefit from rising prices, if they rise more than enough to cover the cost of the put. Puts can also be attractive because they can limit losses by establishing a minimum price at times when current prices are not profitable and the producer is reluctant to fix a low price with forward contracting or short hedging. Puts have the disadvantage of being more expensive than hedging; premiums for put options can be especially high when market prices are high.

Other more complex strategies are sometimes used that combine cash and futures instruments to minimize risk or to modify initial positions to adjust for changing market conditions, including the following.

- *Establishing minimum prices with basis contracts.* Purchasing a put option along with selling commodities on a basis contract establishes a minimum price, while allowing the producer to gain from rising prices.
- *Converting a fixed price into a minimum price.* If a producer accepts a fixed price via forward contracting and later regrets that decision, he or she may decide to purchase a call option (which becomes more valuable as prices rise). The combination of a fixed-price contract and a call option is called a “synthetic put” because the net effect is the same as buying a put option. The producer who has accepted an estimated fixed price via a short hedge can either lift the hedge (cover the open short sale in the futures market) or, depending on circumstances and relative costs, leave the hedge in place and purchase a call option.
- *Converting a minimum price into a fixed price.* If a put option has been used to set a minimum price at very low levels, and prices subsequently increase, the producer can either roll up the put to a higher strike price or sell futures and establish a fixed price when the market reaches an acceptable level. Buying one or a series of additional puts allows the producer to profit from a further rising market but may become expensive.

FINANCIAL AND INCOME INFORMATION FOR AGRICULTURAL PRODUCERS

The financial and income information most

commonly used by agricultural lenders includes balance sheets, income tax returns, and statements of projected cash flow. Many producers do not prepare income statements on an accrual basis. Often, their only available income statement is Schedule F of the annual federal income tax return.

Balance Sheet

Balance sheets for agricultural producers usually divide assets and liabilities into three groups—current, intermediate, and long-term—based on the liquidity of assets and repayment schedules of liabilities. Current assets are those that will either be depleted within 12 months or can easily be converted to cash without affecting the ongoing business operation. Current assets include cash, accounts receivable, livestock held for sale, inventories of crops, feed, supplies, growing crops to be harvested within 12 months, and prepaid expenses.

Intermediate assets support production and may be held for several years. Principal intermediate assets include breeding stock, equipment, and vehicles. While these assets may be relatively liquid, their sale would seriously affect the productivity of the operation.

Long-term, or fixed, assets are more permanent in nature and benefit the operation on an ongoing basis. The principal fixed asset of an agricultural operation is farm real estate, although the producer may have other long-term assets, such as investments, which may or may not be related to his or her farming or ranching operation.

Current liabilities include those which must be paid within 12 months, including amounts owed for feed, seed, supplies, interest, and taxes. The amounts of any payments due within 12 months on intermediate-term and long-term debt should also be included in current liabilities.

Intermediate liabilities are generally those due between one and ten years from the statement date, and commonly represent debt to finance equipment and vehicles. As mentioned above, the amounts of payments due on these debts within 12 months are shown as current liabilities.

Long-term liabilities usually are those that, at inception, had a maturity of more than ten years. Debt on real estate is the main type of long-term liability on the balance sheets of most agricultural producers.

The difference between total assets and total liabilities is the net worth of the producer or the equity in the producer's assets. Most producers are individual or family farmers whose balance sheets also include personal assets not directly used in the operation, as well as debts owed on those items.

It is important to remember that the amount shown on the statement for net worth is subject to question. Since it is merely the difference between the amounts shown for total assets and total liabilities, its accuracy depends on how the assets are valued and whether all liabilities are reflected. Most agricultural borrowers value assets on their balance sheets at what they assume to be "market value." However, some tend to use rather optimistic valuations, particularly on items such as equipment and real estate. Also, some borrowers tend to carry the same values forward each year for real estate or equipment, which may cast some doubt on accuracy. Examiners reviewing agricultural credits should try to determine prevailing market prices for various types of land in the bank's trade area and acquire general knowledge of equipment values. Recent published sales data on both real estate and equipment provide reliable indications of current values.

Sometimes not all liabilities are fully or properly disclosed. A form of potential liability that is often not disclosed is the amount of deferred income tax that will be due on the sale of real estate in which the borrower may have a substantial unrealized capital gain. It may not be possible to readily estimate such deferred-tax liability unless the borrower's statement shows both cost and market values. However, the examiner should keep these points in mind in analyzing the balance sheet, in an attempt to accurately assess the borrower's financial strength. Comparison with previous balance sheets, other information in the loan file, and general knowledge about values will aid the examiner in this analysis.

It is advisable to determine how the balance sheet was prepared and by whom. Many are prepared by the borrower and submitted to the bank. Others may be prepared by the borrower and lending officer working together. Presumably, the latter method would tend to ensure a more accurate presentation but, if not, it could raise questions about lending practices or the lending officer's competency. Similarly, balance sheets that do not balance (not an unusual

occurrence) might indicate a lack of appropriate analysis by the lending officer.

Balance-Sheet Ratio Analysis

The following are some basic, fairly simple ratios that can indicate the financial strength of a producer.

- *Current ratio (current assets/current liabilities)*. This ratio can reflect a borrower's ability to meet current obligations without additional borrowing.
- *Quick ratio (liquid assets/current liabilities)*. This ratio compares current assets that are easily converted into cash with current obligations and reflects a borrower's ability to immediately meet current obligations.
- *Leverage ratio (total liabilities/net worth)*. This ratio shows the relationship between borrowed capital and owned capital. The higher the ratio, the greater is the reliance on borrowed capital, which means higher interest expense, potentially lower net income, and certainly less equity cushion to withstand risk and adversity. This is often called the *debt-to-worth ratio*.

*Ratio Interpretation Guidelines*³

<i>Ratio</i>	<i>Low Risk</i>	<i>Mod- erate Risk</i>	<i>High Risk</i>
Current Ratio	1.5:1	1:1–1.5:1	<1:1
Quick Ratio	1.1:1	.8:1–.5:1	<.5:1
Leverage Ratio	.75:1	1:1	1.25:1

Income Statement

Determining actual profitability for most agricultural borrowers is difficult, primarily because of the absence of complete income and expense information on an accrual basis. The most common income statement for agricultural producers is Schedule F of the federal income tax return (“Profit or Loss from Farming”), which

3. These ratio interpretation guidelines are only rules of thumb and need to be viewed in conjunction with a thorough analysis of other pertinent factors, including balance-sheet composition, the nature of the operation, and an assessment of the borrower's management ability.

accompanies Form 1040. It is prepared on a cash basis, showing cash income received and cash expenses paid, although the taxpayer is also permitted to deduct depreciation expense for items such as equipment, improvements to real estate, and breeding stock. Farmers may have other farm-related income reported on Form 4797, which reports sales of dairy and breeding livestock, or on Schedule D, which shows sales of real estate and equipment. Additional nonfarm income is reported on page 1 of Form 1040. All sources of income need to be considered by lenders and examiners, but for most farm borrowers, Schedule F is the primary report of income for the farming operation.

Tax returns probably provide the most accurate income and expense information for most farm operations. Some lenders attempt to convert the cash basis Schedule F to an accrual basis by adjusting for changes in inventory values, receivables, payables, and similar items, but the process requires timely, detailed financial information that often is not readily available. Instead, many lenders and examiners look at cash-basis income over a three-to-five year period to analyze trends and even out the cash-flow variances caused by differences in production and marketing cycles.

While cash income is not necessarily a good measure of farm business profits, it does help show the cash-flow situation and is useful in planning debt repayment programs and family budgets. In addition, cash income statements can be compared with projected cash flows to determine variances that need explanation or that may indicate the need for changes in the operation.

Operating Ratio Analysis

Key ratios can be calculated from income statements to aid in analysis. The most commonly used ratios measure profitability, repayment ability, and efficiency. Profitability is usually determined by return on equity and return on assets. Repayment ability can be determined by the earnings coverage ratio and debt payment ratio. The most common economic efficiency ratio used is the operating expense to revenue ratio. Although many smaller banks have not used income statements to any extent to analyze agricultural credits, this type of analysis can provide useful insights into an operator's efficiency and repayment ability.

Return on assets is usually calculated by adding interest expense to net farm income and deducting a management fee (usually an amount for unpaid family labor), then dividing the resulting figure by average total farm assets for the year. Return on equity is usually calculated by deducting a management fee or unpaid family labor from net farm income and dividing the difference by total farm net worth.

Common ratios used to assess debt repayment ability and repayment risk are the earnings coverage ratio and the debt payment ratio. The earnings coverage ratio (also known as the cash-flow ratio) is a measure used to assess the operation's ability to repay. A strong earnings coverage ratio would be 30 percent or above. An acceptable but riskier level would be 10 to 30 percent. The debt payment ratio is used to determine risk over the term of the loan. It is calculated by dividing total annual debt payments by total revenue. As a general rule, total principal and interest payments should not exceed 25 percent of total revenue. A ratio of less than 15 percent would be relatively safe, while a 15 to 25 percent range would indicate some degree of risk.

The operating expense to revenue ratio measures the operating efficiency of the farm exclusive of debt obligations. A ratio of less than 70 percent usually reflects an efficient manager who can service larger amounts of debt. If the ratio exceeds 80 percent, repayment problems could occur if large amounts of debt are outstanding. The ratio tends to be higher for smaller operations.

The following example shows how the earnings coverage, debt payment, and operating expense to revenue ratios are determined from the income statement. This example reflects generally adequate ratios.

1. Total farm revenue	\$210,000
2. PLUS: Nonfarm revenue	22,000
3. Total revenue (line 1 + line 2)	232,000
4. LESS: Farm operating expenses (excluding interest and depreciation)	153,000
5. LESS: Family living expenses and income taxes	35,000
6. Earnings available for interest and principal payments and new investments	44,000
7. LESS: Interest and principal payments	32,500

8. Remaining earnings available for risk, uncertainty, or new investments	11,500
---	--------

Earnings coverage ratio = line 8
divided by line 7 35%

Debt payment ratio = line 7
divided by line 3 14%

Operating expense to revenue ratio
= line 4 divided by line 1 73%

Statement of Projected Cash Flow

Projecting cash flow for an agricultural operation gives recognition to the importance of cash flow in servicing the debt of an ongoing operation. It also tends to impose some discipline on both borrower and lender by requiring a thoughtful planning process for the year in terms of anticipated income, expenses, financing needs, debt-servicing requirements, and capital expenditures. For individual or family farm operations, family living expenses should be included in the projections, as well as nonfarm income.

A cash-flow statement typically shows both the timing and amount of cash receipts and expenses. It can be either a forecasting device (statement of projected cash flow) or historical record (statement of actual cash flow). Banks and other lenders most commonly use the statement of projected cash flow because it aids in planning the borrower's credit needs, usually for the coming 12-month period.

A statement of projected cash flow shows not only how much credit is likely to be needed, but approximately when it will be needed. Perhaps most importantly, it shows whether cash income is expected to exceed expenses for the year. It also indicates the likely high point of the credit (amount and time) and the expected cash or debt position at the end of the year. The projected cash-flow statement represents a kind of budget that provides benchmarks against which actual performance can be compared. Significant variances call for explanations and may prompt certain actions to improve future operating results. Historical statements of actual cash flow have value for comparative purposes and can be an excellent aid in preparing projections for the following year, although banks do not typically request them from most agricultural borrowers. They tend to rely, instead, on income tax returns for information on actual operating results.

Cash flow projections are usually made near the beginning of a calendar year, although timing can vary depending on the nature of the operation. The statement is prepared as a spreadsheet normally listing, by month, anticipated cash receipts and disbursements. For each period, the projected operating-loan balance is shown after adjusting for the amount of projected net cash flow.

AGRICULTURAL LOAN POLICIES

Not all banks make agricultural loans, but for many banks, these loans comprise a significant portion of their portfolios. Any bank making agricultural loans should have developed an adequate, formalized set of written policies to guide the lending officers and staff. Agricultural loan policies should address the same general considerations as the policies used for other loan categories, such as desirable, undesirable, or prohibited loans; collateral requirements (including evaluation guidelines); maximum loan-to-value ratios; maximum maturities; documentation requirements; and concentration limitations. Given the specialized nature of agricultural assets and the varied types of operations, the policies should be comprehensive and specifically address the types of agricultural loans the bank intends to make.

Some banks may have general policies, supplemented by separate procedures or practices. Regardless of the individual bank's terminology or the way in which the material is organized, it is important that the bank's board of directors ensure that appropriate written guidance is provided for management in the agricultural lending area. The policies should help ensure that loans are made on a sound basis and provide a framework for identifying, addressing, and resolving problems that arise. Loan grading, either by the loan officers, a separate loan review function, or both is desirable, as well as a general plan for actions to be taken on loans with unsatisfactory grades. The policies should also address collection and charge-off considerations. Agricultural loan policies should be reviewed by the bank's board of directors and modified when deemed necessary. For more detailed guidance on bank loan policy, refer to section 2040.1, "Loan Portfolio Management."

AGRICULTURAL LOAN DOCUMENTATION

Loan documentation establishes the bank's legal position as creditor and secured party and evidences the borrower's ownership of and actual existence of collateral. Some documents, such as an insurance policy, give some evidence of collateral values and ensure that tangible collateral is protected. A number of documents play a supporting role, as they provide information that is vital in assessing a borrower's creditworthiness and in demonstrating the borrower's financial capacity to regulatory authorities, auditors, loan reviewers, senior management, and the board of directors. The documents also help management to service and grade the credit, determine the nature and extent of any problems, and formulate plans to resolve them by strengthening the bank's position or averting losses.

Absence of complete and current loan documentation is a weakness in the lending function and can pose a significant threat to the bank's safety and soundness. Some documentation exceptions are noted during virtually every examination, largely due to inadvertent oversights or unavoidable delays in obtaining original or updated documents. However, an unusually large volume of exceptions can be an important indication of weak and deteriorating loan quality. Excessive exceptions reflect unfavorably on management and indicate a need for management to either formulate stronger loan policies and procedures or to emphasize adherence to established guidance.

Many banks use a standard checklist to help ensure that all applicable documents are obtained when a loan is made. Most banks also have either an automated or manual "tickler" system to identify when updated documents are needed, such as current financial statements, tax returns, UCC-1 filings, collateral inspections, and evidence of insurance. Because of the large volume of required documents, many of which need to be updated at least annually, it is imperative that bank management be firmly committed to a sound loan documentation program. The program should establish responsibility for obtaining documents, monitoring compliance, and providing follow-up to help ensure that all required documents are obtained in a timely manner.

Not every document is applicable to each agricultural loan. Examiners need to assess which

documents are appropriate for a given loan depending on its individual circumstances. There should be little disagreement between examiners and bank management about the basic documents needed. Basic documentation requirements are usually listed in the bank's loan policies or procedures. The need for certain supporting documents may be a matter of judgment, particularly in regard to frequency of updating documents. In most cases, however, bankers and examiners tend to agree on items that are to be considered documentation exceptions. Refer to section 2080.1, "Commercial and Industrial Loans," for further guidance on loan documentation. Following is a list of the types of documents a bank should have in connection with agricultural loans:

- promissory note
- security agreement
- financing statement
- real estate mortgage or deed of trust
- other collateral assignments, as appropriate (such as assignments of third-party notes, mortgages or deeds of trust, life insurance policies, deposit accounts, securities, or other contracts)
- subordination agreements (for example, a prior lienholder may subordinate its lien position to a bank to induce the bank to make a loan)
- appraisals
- hazard insurance policy or certificate of coverage
- cash-flow projections, usually prepared annually
- income tax returns
- financial statements (balance sheets) for the borrower, cosigner, or guarantor
- collateral inspection reports by the bank
- bill of sale for livestock or equipment
- worksheet for each note (showing the purpose, timing, and source of repayment; collateral; total existing bank debt; analysis)
- overall credit analysis (particularly on large or troubled loans)
- loan officer memos and comments
- correspondence

LOAN ADMINISTRATION AND SERVICING

In addition to making agricultural loans, analyzing creditworthiness, setting loan terms, obtain-

ing collateral, and assembling required documentation, management needs to administer the portfolio of outstanding loans. They need to monitor borrowers' performance relative to agreed-upon terms, collateral margins, financial and income data, cash flow, crop prospects, and market trends that may affect borrower performance. If problems arise, bankers need to formulate and implement plans to protect the bank's position.

Farm and Livestock Inspections

A physical inspection of the farming operation is usually performed by bank management before advancing any substantial funds to a new borrower. Subsequent inspections, particularly for larger or more marginal borrowers and for readily moveable collateral, should be performed periodically. Inspections may be performed by the loan officer or by another bank officer or employee with agricultural experience. The inspector usually prepares a fairly detailed report listing farm assets (livestock, equipment, grain and feed on hand, and growing crops) and at least brief comments on the condition of assets and crop prospects. Often, a listing of machinery, equipment, and vehicles is prepared from the bank's records ahead of time to aid in the inspection process; any additions, deletions, or exceptions noted should be shown on the report. Livestock are listed by type, showing numbers, sex, and approximate weight. Values for all items should be shown on the report, based on current market prices. The report may note the number of acres the potential borrower owns and rents, as well as the approximate value of real estate owned. A real estate evaluation might be performed as part of a farm inspection, but a full appraisal, if required, would almost always be performed separately, usually by another individual.

Farm inspections are usually performed annually, unless the borrower has a livestock feeding operation or some other type of operation that involves frequent turnover of assets. Generally, it is desirable to inspect feeder operations approximately every six months or more frequently if deemed necessary. The absence of a current inspection report, especially for larger or troubled borrowers, may be considered a loan-documentation exception.

UNSOUND AGRICULTURAL LENDING PRACTICES

Following is a list of common unsound lending practices, some of which are general and apply to all types of loans while others relate more specifically to agricultural loans. This list includes the most common shortcomings. Depending on the extent of the unsound practices, the examiner should incorporate specific recommendations for improvement into the examination report or formal supervisory action where appropriate.

- absence of or failure to follow sound lending policies and procedures
- failure to require adequate performance on debt
- failure to monitor the borrower's performance and position, commonly evidenced by the—
 - lack of periodic collateral inspections
 - absence of current income and financial information
 - failure to consider the borrower's total debt-service requirements
 - presence of additional operating debt at another bank; or
 - absence of a lien search to verify the bank's position in collateral
- inappropriate loan structuring, such as—
 - untimely or inappropriate repayment schedules
 - failure to identify or segregate carryover operating debt
- unwillingness to say “no” to a financially stressed borrower, which could be an indication of—
 - overlending (building loan volume without regard to quality or long-term effects on the borrower and the bank)
 - failure to consider borrower's management capabilities
 - failure to analyze or project costs of production
 - failure to observe market trends.
- lending for speculative purposes
- lending outside of the bank's normal trade area
- lending on new or unproven types of operations or operations in which bank management has little or no experience

TROUBLED AGRICULTURAL LOANS

Aside from readily identifiable problem loans such as past-due loans, loans on nonaccrual status, loans on the bank's watch list or those that were previously classified, or loans to borrowers who have filed for bankruptcy, the following characteristics may indicate existing or potential problems. Examiners should keep in mind both current conditions and trends.

- undermargined collateral position
- unusually high leverage
- marginal liquidity
- heavy investment in equipment, vehicles, or real estate
- need for unplanned credit advances
- deficiencies or problems revealed in the collateral inspection
- unfavorable financial trends (especially increasing debt-to-worth ratio or declining collateral margins)
- lack of performance (renewals without appropriate performance)
- capitalizing interest on debt
- charge-offs
- inability to meet scheduled debt payments
- tax problems
- reluctance of borrower to provide current, complete, and accurate financial information
- notification of insurance cancellation for failure to pay premium
- evidence of legal action against the borrower
- overdependence on guarantors
- overdependence on anticipated inheritance

CHAPTER 12 BANKRUPTCY

Chapter 12 bankruptcy for family farmers became effective in November 1986. It was designed specifically for the family-farm debtor and permits family farmers to reorganize farm debt so that the amount of the debt approximates the value of the collateral. Only a “family farmer with regular annual income” (which can be a partnership or corporate structure) may file a chapter 12 bankruptcy. To be eligible, a debtor must meet *all* of the following tests:

- have a farming operation
- have no more than \$1.5 million in total debts
- derive at least 80 percent of total debts (exclud-

ing debt on the principal residence) from the farming operation

- derive more than 50 percent of the family's income from the farming operation during the year immediately preceding the filing

The family farmer will have regular annual income if the court finds the annual income to be sufficiently stable and regular to enable the farmer to make payments under the chapter 12 plan.

Under chapter 12, there is no requirement for accelerated payment of arrearage as there is with chapter 13. Instead, the farmer/debtor can commence making plan-required payments from the start of the chapter 12 bankruptcy. Also, a farmer/debtor will have the ability to modify a promissory note and continue payments on it beyond the life of the chapter 12 plan if the court approves the modification; in such cases, the creditor cannot object.

A secured creditor will be "adequately protected" during the chapter 12 bankruptcy if it receives cash payments to offset any decrease in the value of collateral and, in the case of farmland, if the creditor is paid a reasonable rental fee based on the earning capacity of the property. Also, chapter 12 does not allow the creditor to recover "lost opportunity costs," so the creditor will not be entitled to interest and other gains that would have been received by the creditor had bankruptcy not been filed. Elimination of the lost-opportunity-cost provision makes it more difficult for creditors to obtain a lift of stay on the grounds that there is not adequate protection.

Before confirming the chapter 12 plan, a court may permit a farmer to sell pledged assets without the consent of the secured creditor, although proceeds from the sale must go to the secured creditor. Creditors may bid at the sale, and collateral that is not sold will be subject to current evaluation in determining what amounts will be claimed by secured creditors under the plan. There is no time limit on the duration of a chapter 12 plan, except for a three-year limit (or five years with court approval) on unsecured debts.

If a chapter 12 debtor voluntarily dismisses the case, he is prohibited from refiling for 180 days. The law also provides for a dismissal from chapter 12, or a conversion to chapter 7, when the debtor commits fraud. Any other provisions of chapter 12 that are not discussed

here are generally similar to those in chapter 11 and chapter 13 bankruptcy proceedings.

WORKING OUT PROBLEM AGRICULTURAL LOANS

When significant problems arise in agricultural credits, bank management resolves the problems in a timely manner to protect and strengthen the bank's condition. A sound and accurate loan-grading system, supported by a competent internal loan review program, will help to ensure timely identification of problems. Regulatory examinations provide an independent assessment, which may identify additional problems that management has not recognized. Once problems are identified, the following considerations are important in a workout program:

- identify the source of the problem
- establish a workout plan designed to strengthen the borrower and to minimize loss to the bank
- set at least a tentative timetable for the workout
- reach agreement with the borrower on the plan, if possible
- monitor progress frequently

Alternative actions in a workout plan might include—

- reducing the bank's exposure in outstanding debt by—
 - obtaining additional collateral,
 - obtaining financial assistance through sound cosigners, guarantors, or government guarantees,
 - encouraging the borrower to modify his operations, or
 - restructuring the credit to reduce the interest rate or payments
- advancing more funds to—
 - refinance existing nonbank debt on more favorable terms or
 - improve the bank's overall collateral position (for example, take out a small balance to a senior lender to put the bank in a first lien position)
- reducing or eliminating outstanding bank debt by—
 - selling assets, which can range from a partial sale to reduce debt burden and improve chances for survival to a complete liquidation;

- refinancing a portion of bank debt (such as real estate) elsewhere if more favorable rates or terms are available; or
- recognizing a loss by partial or complete charge-off of the credit.

EXAMINER REVIEW OF AGRICULTURAL LOANS

A review of agricultural loans during an examination will follow the same basic guidelines employed in reviewing commercial or real estate loans. Certain practices, types of collateral, and documents may be unique to agricultural loans, and credit analysis will be somewhat specialized. However, the objectives of assessing credit quality based on the borrower's financial strength,

cash flow, collateral, history of performance, and indications of management capabilities are much the same as for other loan types.

Sample size and sampling techniques will vary with the planned scope of the examination and size of the bank and its agricultural loan portfolio. As a minimum, the examination scope would usually include past-due and nonaccrual loans, watch-list loans, previously classified loans, insider loans, and some portion of other loans. See section 2080.1, "Commercial Loans," for details regarding this topic.

Classification of agricultural loans should be made using the same criteria established for other types of loans. See section 2060.1, "Classification of Credits," for regulatory definitions of substandard, doubtful, and loss classifications, as well as the special mention category and guidance on classifying loans.

Agricultural Loans

Examination Objectives

Effective date May 1996

Section 2140.2

1. To determine if lending policies, practices, procedures, and internal controls for agricultural loans are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the agricultural loan portfolio for credit quality, performance, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.

INTRODUCTION

This section is intended to provide guidance to examiners reviewing small, noncomplex production loans, usually to small independent oil and/or gas operators. The examination of a loan to a small oil or gas operator is considerably different from the examination of most commercial loans, and is similar in some respects to examinations of real estate loans. The only asset that many small independent operators have is oil or gas in the ground or both. Loans to operators are based solely on the predicted cash-flow value of the oil or gas production. Therefore, a production loan is a loan secured by interests in oil and/or gas production properties. Cash flow generated from the future sale of encumbered oil and/or gas reserves is the primary, and in some cases, the only credible source of repayment. Therefore, production payments are usually assigned to the bank, and the liquidation value of collateral is expected to be sufficient to pay off the loan at any time. In considering this or any type of secured loan, the banker will determine or judge the character, capacity, credit history, and other credit factors related to the borrower. Also, the bank must determine that the operator of the properties is capable and dependable.

Because cash flow generated from the future sale of oil or gas is the justification or basis for production lending, only proved-producing reserves are acceptable collateral for a bank because they provide sufficiently predictable cash flow for debt service. For this reason, loan values are predicated primarily on reserves that are proved-developed-producing properties.

DEFINITIONS OF RESERVES

Reserves are classified into one of three categories: proved, probable, or possible, with proved divided into three subcategories.

Proved Reserves

- *Proved-developed-producing.* These wells have been drilled and completed, and are producing oil or gas.

- *Proved-developed-nonproducing.* These are generally proved-developed reserves behind the casing of existing wells or at minor depths below the present bottom of such wells that are expected to be produced through these wells in the predictable future. The development cost of this type of reserves should be relatively small compared with the cost of a new well.
- *Proved-undeveloped.* These are reserves that are proved resources to be recovered from new wells on undrilled acreage or from existing wells requiring a relatively major expenditure for recompletion.

Probable Reserves

- *Probable reserves.* These reserves might include those expected to be producing from existing or planned wells in areas anticipated to be economically beneficial, based on geological or seismic data.

Possible Reserves

- *Possible reserves.* These reserves include those whose existence may be inferred from geological considerations, including potential reserves from planned waterfloods or other recovery techniques that have not been proved.

EVALUATION OF RESERVES

When a lender decides to proceed with financing secured by oil or gas reserves, an engineering report will be obtained. The initial step to determining the loan value of the collateral or assessing the creditworthiness of a production loan is an analysis of the engineering report. Banks that make production loans will usually have a petroleum engineer on staff or contract with an engineering consultant firm to provide an engineer's report on the properties to be pledged. Basically, the engineering report consists of determining reserves and production forecasts and then applying the pricing and costs to arrive at the net lease operating income available for debt service. This report is comparable to a real estate appraisal in its importance and function.

The following table is a very simple presentation compared with the typical evaluation of oil and gas properties in an engineer's report. Typically, most reports will detail five or more years with the last row including all remaining years. Production is usually broken down into categories of oil and gas, and sometimes the number of wells is detailed. Expenses may be divided into major components such as operating costs; production and ad valorem taxes; depreciation, depletion, and write-off of intangibles; general and administration expenses; and taxes on income. Also, if the owner expects to make capital improvements from income, a column may be added for that factor. Some reports include the pro forma amount and terms of the loan to aid the analysis.

Engineering reports must be generated by a fully qualified petroleum engineer. The lender must have complete confidence in the engineer's ability and intellectual honesty, as well as in the quality of the data and its susceptibility to analysis. The integrity of engineering data that depict future cash stream is critical to the initial lending decision and equally important to an examiner in the assessment of credit quality. In summary, an acceptable engineering report must be an independent, detailed analysis of the reserves prepared by a competent engineer. The examiner should carefully review the following three elements.

Pricing

The value assigned to production and expenses must be realistic. Operating costs are based on what similar operations in similar areas have been or, in the case of producing reserves, on historical performance, which may be escalated at some reasonable percentage each year. The report should consider increases and decreases in price as well as cost inflation over the "life of the properties." The future price of oil is a judgment factor and should be based on conservative pricing and can include some reasonable escalation each year. This information can be obtained from a number of reliable sources, and the examiner should determine the source to judge the reliability of report information. The prices used for gas are usually contract prices plus escalation-clause rates. Special care is necessary in evaluating gas contracts, including their reasonableness in light of current conditions and the ability and willingness of the purchasers to honor the contracts. In some instances, certain purchasers have broken contracts or exercised "market-out" clauses to cease complying with long-term purchase commitments. The Securities and Exchange Commission requires reserves with renegotiable contracts or under market-out clauses to value the reserves at spot prices at the date of renegotiation or immediately, in the case of market-out clauses.

TABLE 1
ENGINEER'S REPORT—EVALUATION OF OIL AND GAS PROPERTIES

<i>Year</i>	<i>Production \$18 per Barrel (bbl)</i>	<i>Future Income</i>	<i>Operating and Other Expenses</i>	<i>Future Net Income</i>	<i>Present Worth (PW) Future Income @10%</i>	<i>PW Future Net Income @10%</i>
1	5,000	\$ 90,000	\$10,000	\$ 80,000	\$ 85,800 ¹	\$ 76,300
2	4,000	72,000	8,000	64,000	62,400	55,500
3	3,000	54,000	7,000	47,000	42,600	37,000
4	2,000	36,000	6,000	30,000	25,800	21,500
5	1,000	18,000	5,000	13,000	11,700	8,500
Total	15,000	\$270,000	\$36,000	\$234,000	\$228,300	\$198,800

1. For present-worth calculations, usually ½ year is used for the first period, 1½ for the second period, and 2½ for the third period, and so on.

Present Worth

Present worth is used to recast future income into the equivalent dollar value today; it should reflect current market interest rates. The present worth of future net revenues is used to help determine the maximum amount that can be loaned.

Timing

Preferably, the report should be no more than six months old. A report that is up to 12 months old may be acceptable in some cases; however, it should not be more than 12 months old. Change is the most important factor in determining the adequacy and timeliness of reports. Recent significant price fluctuations or changes in interest rates may require the examiner to adjust the valuation of the reserves to reflect current conditions.

The engineer is responsible for ensuring that the evaluation includes only proved-developed-producing reserves, unless otherwise directed by the lender. In some cases, the lender might give value to a property or well that is proved-developed-nonproducing if it has been drilled and completed, but is not producing because sales facilities or a gas pipeline hookup has not been completed. The lender would, however, deduct a safety factor by cutting back the reserves assumed to be dedicated to that well because the margin of error increases. However, the lender will not generally loan against proved-undeveloped, probable, or possible reserves because of the speculative nature of those categories. Their inclusion as collateral is usually as an abundance of caution with little or no value assigned to them.

A judgment has to be made on the probable accuracy of predictions of future revenues. The engineer evaluates geologic conditions such as sand continuity, faulting, spacing, the number of wells, the diversity of properties, well productivity, the pressure production history, and overall data quality, as well as the degree of confidence the engineers have in their own numbers. Estimates based on well-established production performance are given the most credibility. Lesser weight is given to estimates derived from more speculative methods such as volumetrics, analogy with similar reservoirs, or a computer simulation of new producing zones. The examiner should carefully review the narrative por-

tion of the engineer's report to help determine its usefulness. It will detail what data were available, how they were used, the methods of analysis, and whether a field inspection was made, including individual well tests. This section of the report should inform the examiner of the true condition of the well and reserves. It is possible for the projected cash flow to portray one picture while the narrative portrays an entirely different one.

Generally, a bank will loan up to 50 percent of the net present value of proved-developed-producing reserves; however, a lower percentage may be needed depending on a number of factors. If the reserves are in an area that is highly faulted, or if seismic work and drilling indicated that a zone is contiguous from one well to the next and the porosity and permeability of the pay-zone rock are very similar, then a smaller percentage will be used. To avoid the possibility that any individual, unforeseen event will have a significant effect on the total projection, a wide spread of properties is preferable. This applies not only to a concentration of value in any one well, but also to a concentration in one reservoir, field, or producing area. Generally, a safety factor of not less than 2:1 will be used on proved-producing properties, but on long-life and high-quality reserves, a safety factor of 1.5:1 is sometimes used. However, wells that are highly faulted may require a 3:1 or higher safety factor. Terms will usually require that the loan be fully repaid before the safety factor is reduced.

DOCUMENTATION

The documentation for a term loan is relatively simple. There is a note, a loan agreement, a deed of trust/mortgage, an assignment of production (usually in the mortgage), a title opinion, and a security agreement/financing statement. The assignment of oil and gas interests is unique because oil and gas are treated as real property while in the ground but convert to personal property interests as production is generated at the wellhead. Most lenders also require an affidavit as to payment of bills. Also, the owner or the operator is usually required to guarantee payment of the loan.

The bank will obtain an acceptable title opinion that indicates the borrower has, on the date of the loan, clear title to each of the leases under mortgage and that properties are free and clear

of all liens. After the loan is closed, the bank will send a letter of instruction to notify the company sending out production checks that the bank has taken a lien on the production and to request that production checks be sent directly to the bank. The mortgage covers surface rights and mineral interests. A copy of the mortgage containing an assignment of production will be sent to the company purchasing the production, along with a request that division orders or transfer orders be prepared recording its interest in production payments. This authorizes the purchaser to send production payments directly to the bank for the account of the borrower. The security agreement and financing statement covers removable equipment, oil and gas inventory above the ground, and accounts receivable. The financing statements are filed in the real estate records of the county in which the properties are located (usually with the county clerk) and in the secretary of state's office. This filing is done to perfect security interests in equipment, which may be moved from place to place. However, some states have different requirements, and the examiner should be familiar with each state's filing requirements. The affidavit as to payment of bills is executed by the borrower to ensure that all the bills have been paid on the properties or will be paid out of loan proceeds. If bills are to be paid out of proceeds, the bank should ensure that payments are verified. The loan agreement should be read very carefully by the examiner with close attention paid to both positive and negative covenants.

The bank will usually take a collateral interest in equipment, accounts receivables, and inventory. The deed of trust/mortgage will cover real estate, surface rights, and mineral interests, and a security agreement will cover removable equipment, oil as inventory (in tanks), and accounts receivable. An appropriate filing is needed for each type of collateral. Filing requirements may vary from state to state and should be researched. Generally, collateral documents should be filed with the state and county. It is reasonable to expect the bank to have collateral files completed within two to three months.

CLASSIFICATION GUIDELINES FOR TROUBLED PRODUCTION LOANS

The classification of production loans is like all loan classifications in that it must be predicated

on an independent assessment of all credit factors that are germane to the specific credit being reviewed. A comprehensive analysis of the credit must take place if any of the following factors are present:

- The loan balance exceeds 65 percent of the discounted present worth of future net income (PWFNI) of proved-developed-producing reserves, or the cash-flow analysis indicates that the loan will not amortize over four to five years.
- The credit is not performing in accordance with terms or payment of interest and/or principal.
- The credit is identified by the bank as a problem credit.
- Other factors indicate a potential problem credit.

After performing the analysis, the examiner must determine if classification is warranted. When classification is warranted, the following guidelines are to be applied when repayment of the debt is solely dependent on oil and/or gas properties pledged as collateral. A lesser percentage or less severe criticism may be appropriate when other reliable means of repayment exist for a portion of the debt.

Proved-Developed-Producing Reserves

Sixty-five percent of discounted PWFNI should be classified substandard when the discounted PWFNI is determined using historical production data (decline-curve-analysis engineering). When less than 75 percent of the reserve estimate is determined using historical production data, or when the discounted PWFNI is predicated on engineering estimates of the volume of oil/gas flow (volumetric and/or analogy-based engineering data), the collateral value assigned to substandard should be reduced accordingly. The balance, but not more than 100 percent of discounted PWFNI of proved-developed-producing (PDP) reserves, should be extended doubtful. Any remaining deficiency balance should be classified loss.

Other Reserves

In addition to PDP, many reserve-based credits will include proved-developed-nonproducing

reserves, shut-in reserves, behind-the-pipe reserves, and proved-undeveloped properties (PUPs) as collateral. Due to the nature of these other reserves, there are no strict percentage guidelines for the proportion of the credit supported by this type of collateral that should remain as a bankable asset. However, only in very unusual situations would the proportion of collateral values assigned to a classification category approach the values for PDP. The examiner must ascertain the current status of each reserve and develop an appropriate amount. Examples could be reserves that are shut in due to economic conditions versus reserves that are shut in due to the absence of pipeline or transportation. PUPs require careful evaluation before allowing any bankable collateral value. An example of a bankable value for a PUP could be one that has a binding purchase contract. In every classification where a bankable value is given for any of these other reserves, the loan write-up should fully support the examiner's determination.

The above guidelines apply to production loans that are considered collateral-dependent and are devoid of repayment capacity from any other tangible source. Rarely should bankable consideration be given to loans that are completely collateral dependent in excess of the liquidation value of the pledged reserves. Once again, there is no substitute for a specific, case-by-case analysis of applicable credit and collateral factors pertaining to each individual credit. Frequently, when a lender encounters problems with a production credit, numerous other types of assets (for example A/R, inventories, or real estate) are encumbered in an effort to protect the bank's interests. Other types of

collateral and sources of repayment should be carefully evaluated on a case-by-case basis.

SAMPLE CASE

The following case describes some of the general principles related to production lending. A customer applied for a \$100,000 loan to help fund the purchase of oil reserves, which will be used to secure the note. Based on an analysis, the loan officer agreed to make a loan and secure it with oil production. As part of the analysis, the loan officer ordered an engineer's report on the properties to determine the half-life of the cash flow—the point at which 50 percent of cash flow available for debt service has been depleted. Using table 1 (presented earlier in the "Evaluation of Reserves" subsection), the loan officer determined that cumulative PWFNI equals \$198,800 and 50 percent of that amount equals \$99,400. In the next step, the loan officer determined the point in time that \$99,400 is reached, which in this case is 17 months. Based on these calculations, the loan officer determined that the maximum loan should not exceed \$99,400 and should be repaid within 17 months. He offered a term loan to the borrower for \$99,400 with 17 monthly payments of \$5,847 principal plus interest of 12 percent. Although the loan request was for \$100,000, the borrower accepted the offer. Shortly after the loan is made, the value of oil declines from \$18 bbl to \$12 bbl, and the discount used for evaluations increases from 10 to 15 percent. As a result, table 1 was revised. Table 2 includes these new factors.

TABLE 2
ENGINEER'S REPORT—EVALUATION OF OIL AND GAS PROPERTIES

<i>Year</i>	<i>Production @\$12 bbl</i>	<i>Future Income</i>	<i>Operating and Other Expenses</i>	<i>Future Net Income</i>	<i>PW Future Income @15%</i>	<i>PW Future Net Income @15%</i>
1	5,000	\$ 60,000	\$10,000	\$ 50,000	\$ 56,000	\$ 46,600
2	4,000	48,000	8,000	40,000	38,900	32,400
3	3,000	36,000	7,000	29,000	25,400	20,400
4	2,000	24,000	6,000	18,000	14,700	11,000
5	1,000	12,000	5,000	7,000	6,400	3,700
Total	15,000	\$180,000	\$36,000	\$144,000	\$141,400	\$114,100

The loan now exceeds 65 percent of PWFNI of PDP reserves, and a comprehensive analysis of the credit is performed. Because the obligor is devoid of other repayment capacity or other reliable means of repayment, with total support of the debt provided solely by the pledged production, the loan should be classified. Sixty-five percent of discounted PWFNI of PDP reserves equals \$74,165, and this amount will be classified substandard. The balance of \$16,827, which is also supported by discounted PWFNI of PDP reserves, should be classified doubtful. The loan should be placed on nonaccrual status with any outstanding interest classified as loss.

TERMINOLOGY

The following are abbreviated explanations or discussions of some of the terms found in engineering reports and energy-lending transactions.

Analogy-based engineering data. Comparative analyses relating past performances of comparable properties to determine possible future reserves.

Assignment of production. Usually in the mortgage agreement, it allows direct payment from purchaser to the bank for oil production. Gas purchases generally are paid to the operator, and the operator then pays the bank.

Carried interest. When a party or parties have their expenses paid (carried) by other parties up to a specified limit.

Decline curves. Used to determine reserves by extrapolation of historical production data.

Deed of trust/mortgage. Covers real estate, surface rights, and mineral interests. Mortgage is unique because oil and gas are treated as real property while in the ground but converted to personal property interests as production is generated at the wellhead and as oil and gas enter storage tanks or a pipeline. The security agreement portion of the oil and gas mortgage will usually cover fixtures and equipment affixed to the well site.

Development wells. Drilled in the proven territory of a field, they have a high likelihood of producing oil or gas.

Division orders. Set out the borrower's interest in the property and direct production payments. Division order title opinions can be used to verify ownership and will contain the legal description of properties.

Escalating. Involves the difficult task of predicting future prices of oil and gas for valuing production. Escalating the value of production usually increases the risk to the lender. Examiners should carefully review the basis for escalating values when it has a significant impact on the value of the collateral and/or cash flow. Also, the examiner should carefully review how future expenses related to each well are estimated.

Exploratory well. Also known as a "wildcat," a well drilled in an unproven area. The term originated in early drilling days in Pennsylvania when wells were drilled within the sight and sound of wildcats.

Fault. A break or fracture in the earth's crust that causes rock layers to shift.

Field. An area in which a number of wells produce from a reservoir or from several reservoirs at various depths.

Formation. A bed or deposit of substantially the same kinds of rocks.

Fracturing, frac'ing, frac job. Refers to pumping fluids under extremely high pressure into a formation to create or enlarge fractures through which oil or gas can move. Propping agents such as sand are sent down with fluids to hold the fractures open. Many completed wells require additional treatment (stimulation) before oil or gas can be produced.

Lease. A contract between the landowner (lessor) and the lessee that gives the lessee the right to exploit the premises for minerals or other products and to use the surface as needed. However, surface damages would normally have to be reimbursed. Surface ownership is different from mineral ownership in many cases. Also, if drilling does not begin during a specified time period, the lease will expire.

Lithology. The scientific study of rocks.

Log(s). Used to record three basic measure-

ments: electrical, radioactive, and sonic. The logging device is lowered into the well bore and transmits signals to the surface. These are recorded on film and used to make a log showing the recorded measurements that are used to analyze the formation's porosity, fluid saturation, and lithology. The log's header gives the log's type and date, the operator, the well name, and other information.

Market-out. A clause that basically allows the purchaser to stop paying the original contract price and institute a lower price with the intent of maintaining the marketability of the gas. Some contracts allow the producer to be released from the contract if he refuses the lower price or may offer other remedies.

Mineral rights. The ownership of minerals under a tract, which includes the right to explore, drill, and produce such minerals, or assign such rights in the form of a lease to another party. Mineral-rights ownership may or may not be severed from land-surface ownership, depending on state law. Title in fee simple means all rights are held by one owner; the fee in surface owner does not hold mineral rights. The term "minerals" is loosely used to refer to mineral ownership and even, incorrectly, to royalty ownership. A mineral acre is the full mineral interest under one acre of land.

Operator. The manager of drilling and production for the owner.

Perforations. The holes in casing and cement through which oil and/or gas flow from formation into wellbore and up to surface.

Permeability. A measure of how easily fluids may flow through pore spaces. A tight rock or sand formation will have low permeability and, thus, low capacity to produce oil or gas. Wells in these zones usually require fracturing or other stimulation.

Porosity. Refers to the pore space in rock that enables it to hold fluids.

Reservoir or pool. A single accumulation of oil or gas trapped in a rock body.

Reserves. The estimated amount of oil and gas in a given reservoir that is capable of being

profitably recovered, assuming current costs, prices, and technology. Not to be confused with oil and gas in place, which is the total amount of petroleum in the earth regardless of whether or not it can be recovered. Recovery is a function not only of technology, but of the marketplace.

Reserve interest. The term used to describe the percent of revenue received.

Royalty interest. The share of gross production proceeds from a property received by its mineral owner(s), free of exploration, drilling, and production costs. Typically one-eighth to one-sixth of production, but fractions may be higher. Royalty payments take precedence over all other payments from lease revenues.

Primary, secondary, and tertiary recovery. Relates to the method of obtaining production from a well. Primary recovery is production from a reservoir through flowing or pumping wells because of the existence of natural energy within the reservoir. This usually recovers about 10 to 35 percent of the oil and gas in place. Secondary recovery is any method by which essentially depleted reservoir energy is restored. This may be accomplished by injection of liquids or gases or both. Tertiary recovery is any enhanced method employed after secondary recovery and is generally very costly.

Runs. A term used to refer to oil or gas production income from a lease.

Seismic survey or shooting. A method of gathering information by recording and analyzing shock waves artificially produced and reflected from subsurface rocks.

Stripper wells. Wells that make less than 10 barrels of oil per day based on the last 12 months or wells that make less than 60,000 cubic feet of gas per day based on the last 90 days.

Volumetric calculations. Determine oil or gas reserves by use of rock volume and characteristics.

Working interest. Also referred to as an operating interest, the term used to describe the lease owner's interest in the well. Lease owners are the ones who pay for drilling and completing the

well. Lease owners pay 100 percent of cost and receive all revenues after taxes and royalties are paid.

Workover: Relates to the process of cleaning out or other work on a well to restore or increase its production.

Energy Lending—Production Loans

Examination Objectives

Effective date May 1996

Section 2150.2

1. To determine if policies, practices, procedures, and internal controls for energy loans are adequate to identify and manage the risks the bank is exposed to.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for performance, credit quality, collateral sufficiency, and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

INTRODUCTION

Asset-based lending is a specialized area of commercial bank lending in which borrowers assign their interests in certain accounts receivable and inventory, and in selected cases fixed assets, to the lender as collateral. In asset-based lending, the primary repayment source is the conversion of the pledged assets into cash. Asset-based lending differs from a commercial loan in which the bank takes a security interest in all accounts receivable and inventory owned or acquired by the borrower. This section will discuss asset-based lending in relation to the characteristics of the borrower, its advantages to the borrower and the bank, credit and collateral analysis, documentation, and safeguards to ensure the authenticity and collectibility of the assigned receivables.

The examiner must judge the quality of the asset-based credit by evaluating the financial condition and debt-servicing ability of the borrower and the quality of the collateral. In addition, the examiner must evaluate the bank's credit policy, internal controls, audit procedures, and operational practices.

Many borrowers whose financial condition is not strong enough to allow them to qualify for regular, secured commercial bank loans may use asset-based loans to meet their financial needs. Some examples of asset-based borrowers are—

- businesses that are growing rapidly and need year-round financing in amounts too large to justify commercial lines of credit secured by blanket liens on accounts receivable and inventory,
- businesses that are nonseasonal and need year-round financing because working capital and profits are insufficient to permit periodic cleanups,
- businesses whose working capital is inadequate for their volume of sales and type of operation, and
- businesses that cannot obtain regular commercial loan terms because of deteriorating credit factors.

Some advantages of asset-based lending for the borrower are—

- efficiency in financing an expanding operation because the business's borrowing capacity

expands along with increases in levels of accounts receivables, inventory, and sales;

- the ability to take advantage of purchase discounts because the company receives immediate cash on its sales and is able to pay trade creditors in a timely manner (consistent usage of purchase discounts reduces the cost of goods sold and enhances the gross profit margin); and
- the interest paid on asset-based loans may be lower than for alternate sources of funds.

Some advantages of asset-based lending for banks are—

- a relatively high-yield loan is generated commensurate with the perceived credit risk of the borrower;
- a depository relationship is formed that provides income and enhances the bank's ability to monitor changes in the borrower's cash flow and overall financial condition;
- banking relationships with longstanding customers whose financial conditions no longer warrant traditional commercial bank loans can continue;
- new business is generated by prudently lending to financially weaker customers who could not qualify for normal commercial loans; and
- potential loss is minimized when the loan is collateralized by a percentage of the accounts receivable and inventory.

CREDIT ANALYSIS

Although asset-based loans are collateralized and closely monitored, it is important to analyze the borrower's financial statements. Even if the collateral is of good quality and supports the loan, the borrower should demonstrate financial progress. Full repayment through collateral liquidation is normally a solution of last resort. An examiner should analyze the borrower's financial statements with particular emphasis on trends in working capital, review trade reports, analyze accounts receivable and inventory turnover, and review the agings of receivables and payables. Furthermore, the prompt payment of taxes, especially payroll taxes, should be verified. One reason for a company to obtain asset-based financing is to maximize discounts offered by

suppliers; therefore, it should pay creditors promptly upon receiving the financing.

Bank management's ability to recognize a customer's financial problems as they develop, and to initiate orderly liquidation, if necessary, is important in the supervision of asset-based financing. Theoretically, a borrower's line could be fully liquidated by discontinuing further advances, collecting the assigned receivables, and liquidating pledged inventory. However, such drastic action would most likely cause the borrower's business to close, resulting in a probable deterioration of the receivables from new disputes and in returns and offsets. Consequently, the bank usually notifies its borrower of a contemplated liquidation, which gives the borrower time to seek other means of continuing business so that the bank's loan may be liquidated in an orderly manner without losses or other adverse effects. Unless the bank has initiated an orderly liquidation, examiners should specially mention or classify receivable and inventory lines in which the borrower's financial position has declined so that continued financing is not prudent. When a liquidation is occurring, classification of the credit may not be necessary if the borrower's business is continuing, the existing collateral is of good quality, liquidation value sufficiently covers outstanding debt, and no collateral deterioration is anticipated.

A related issue concerning asset-based loans is the amount of excess availability associated with the revolving line of credit. The quantity of a borrowing company's excess availability is an excellent indicator of whether it has the capacity to service its loan. If a status report shows little availability, the borrower has used all of the cash that the pledged receivables and inventory are capable of generating under the asset-based line of credit. Since these loans may not yet be on the bank's watch list or problem-loan report, it is important for the examiner to track, over a fiscal-year period, a borrower's changing levels of availability when performing an analysis of creditworthiness. This analysis is especially critical for borrowers whose business is seasonal. Initial credit analyses of potential asset-based loan customers should include detailed projections showing that availability under revolving lines of credit at anticipated advance rates would be sufficient to meet the borrower's working-capital needs. Occasionally, overadvance lines are part of the initial credit facility.

Bank management must continually evaluate the realizable value of receivables and inventory

pledged. To do so, management should review the quality of the receivables and inventory pledged, including documentation; the safeguards imposed to ensure the authenticity and collectibility of the assigned receivables; and the loan agreement and compliance therewith. The information obtained is sometimes difficult to interpret unless it is related to other periods, comparable businesses, or industry statistics. Comparative analysis helps indicate the continuing value of the collateral.

Lender-liability exposure is a risk in all types of commercial lending, but especially in asset-based lending. Borrowers using asset-based financing are generally very dependent on its continuation, so an abrupt cessation of a line of credit would be more likely to result in legal action against a lender. To protect themselves as much as possible from lender-liability lawsuits, banks frequently use time notes (with renewal options). Time notes are supported by loan agreements that usually include more numerous and detailed loan covenants. Legal counsels for both the lender and borrower should approve the loan agreement and covenants. At times, the borrower may not comply with one or more covenants in a loan agreement. The lender may agree to waive specific covenant violations to give a borrower time to take corrective action. If a covenant such as a financial covenant requiring a minimum capital level is waived, the waiver should be formally communicated to the borrower in writing. The lender should avoid both not taking action for a period of time and not issuing a written waiver for a covenant violation. In either case, if a covenant violation is subsequently used as a reason to cancel an asset-based loan, the lender is more vulnerable to lender liability. The lender should be careful to be consistent in all actions regarding the borrower.

ASSET-BASED LOAN AGREEMENTS

An asset-based loan agreement is a contract between a borrower and the bank that sets forth conditions governing the handling of the account and the remedies available in the event of default. The following areas should be addressed in the loan agreement:

- *Eligible accounts receivable.* This involves identifying classes of receivables that will not

be regarded as acceptable collateral. Certain types of receivables carry a higher degree of risk relative to the willingness and ability of account debtors to pay and, by their very nature, should be excluded from the lending formula. The following are typical classes of ineligible receivables:

- Delinquent accounts.* Eligible receivables generally exclude accounts that are more than a given number of days delinquent, most often 60 days or more past due. Delinquency is frequently expressed in loan agreements as a given number of days from the invoice date, such as 90 days from the invoice date when payment is required in 30 days, which is the most common payment term. Expressing delinquency in days from the invoice date prevents a borrower from reducing the volume of ineligible delinquent accounts by giving dated terms (extending payment days). For example, accounts with 30-day trade terms that are becoming 60 days delinquent could otherwise be maintained in the eligible-receivable base by increasing payment terms to 90 days. Also, under what is commonly referred to as the “50 percent rule,” accounts with multiple invoices that have more than 50 percent of the total balance past due are excluded from the eligible-receivable base. For example, if a borrower’s customer owes payment for ten invoices, of which six are delinquent, all ten would be considered ineligible, not just the six that are delinquent. While 50 percent is standard industry practice, lenders may be more conservative and require ineligibility for an entire account if less than 50 percent of it is past due.
- Contra accounts.* These usually arise when the borrower both sells to and purchases from the account debtor. The risk is the possibility of direct offset against these accounts.
- Affiliate accounts.* These accounts, unlike contra-accounts, occur when a borrower sells to an account debtor, both of whom are associated through common ownership. Associated risks include forgiveness of debt on behalf of the affiliate and a temptation for the borrower to create fraudulent invoices.
- Concentration accounts.* A lender may be vulnerable to loss if a large percentage of the dollar amount of receivables assigned is

concentrated in a few accounts. Too many sales, even to a good creditworthy customer, could ultimately cause problems should disputes arise over products or contracts. A common benchmark is that no more than 20 percent of the receivables assigned should be from one customer. Some lenders will use a percentage that is also subject to a dollar limit.

- Bill-and-hold sales.* These occur when a product ordered by a buyer has actually been billed and is ready for shipment, but is held by the seller pending receipt of shipping instructions from the buyer. Bill-and-hold sales are not eligible as receivables to be loaned against because they are not fully executed transactions. A second party’s claim could be of little value when merchandise has not been shipped and there is no evidence of acceptance on behalf of the buyer.
- Progress billings.* These are invoices issued on partial completion of contracts, usually on a percentage basis. This practice is standard in construction and other industries where long-term contracts are generally used. Failure to complete a contract could jeopardize the collectibility of progress receivables and, therefore, should generally not be considered eligible collateral. Moreover, failure to complete contracts can expose companies to lawsuits from their customers, who may be forced to pay higher prices to other parties to complete the contracts over much shorter time periods. The only exception for progress billings is when, on partial completion, there has been delivery of the product, and the contract clearly states that buyers have accepted the product and are responsible for payment of the product delivered.
- Receivables subject to a purchase-money interest.* These include floor-plan arrangements, under which a manufacturer will frequently file financing statements when merchandise is delivered to the borrower. That filing usually gives the manufacturer a superior lien on the receivable. An alternative would be to enter into an agreement with the manufacturer, which specifies that rights to the receivables are subordinated to the bank.
- *Percentage advanced against eligible or acceptable accounts receivable.* The accounts-

receivable advance rate, typically in the range of 75 to 85 percent, must serve the two primary functions of providing adequate cash flow for the borrower and providing a margin that gives adequate protection for the lender. Protection for the lender requires a sufficient margin for the continual costs of collection and absorption of dilution in the receivables. Selecting the proper advance rate for a borrower involves understanding the amounts and causes of portfolio dilution. Causes of dilution that are positive include the offering of discounts and various allowances. Causes that are negative include merchandise returns, bad debts, product liability, or warranty claims. An abundance of negative causes, such as bad debts, might indicate poor receivable-management practices. A lender must know how dilution is occurring in each receivable portfolio to measure it continually. This knowledge should lead to proper advance-rate selection, resulting in a loan balance protected by a receivables base with sufficient liquidation value to repay the loan.

- *Percentage advanced against eligible inventory.* The inventory advance rate typically ranges from 35 to 65 percent for finished products. Marketability and accessibility of the inventory are key factors in determining the advance rate. Proper evaluation of the liquidation value of inventory requires a firm understanding of marketability in all the various inventory stages (raw materials, works-in-process, finished merchandise). Works-in-process often have very low marketability because of their unfinished nature, and they will typically carry a very low advance rate—if they are even allowed as eligible inventory. Conversely, the raw materials or commodities (such as aluminum ingots, bars, and rolls) have a broader marketability as separately financed collateral components. When setting advance rates, it is also important to consider whether inventory is valued at LIFO (last in, first out) or FIFO (first in, first out). In an inflationary environment, FIFO reporting will result in higher overall inventory values on the customer's books.

The above factors are considerations in the conduct of inventory audits performed in connection with the granting and monitoring of asset-based loans. These audits will generally discuss the inventory from a liquidation basis.

This information is critical in determining appropriate advance rates.

Pledged Receivables

The following factors should be considered in evaluating the quality of receivables pledged:

- Standard procedures require that the bank obtain a monthly aging report of the accounts receivable pledged. The eligible receivables base is then calculated by deducting the various classes of ineligible receivables. Usually the eligible receivables base will be adjusted daily during the month following receipt of the aging report. If accounts are ledgered, the base will be increased by additional sales, as represented by duplicate copies of invoices together with shipping documents and/or delivery receipts received by the bank. The receivables base will be decreased daily by accounts-receivable payments received by the borrower, who then remits the payments to the bank. Another method of payment in which the bank has tighter control is a lockbox arrangement. Under this arrangement, receivables are pledged on a notification basis and the borrower's customers remit their payments on accounts receivable directly to the bank through deposit in a specially designated account. If accounts are not ledgered but a blanket assignment procedure is used, the borrower periodically informs the bank of the amount of receivables outstanding on its books. Based on this information, the bank advances the agreed percentage of the outstanding receivables. Receivables are also pledged on a non-notification basis, with payments on the receivables made directly to the borrower who then remits them to the bank. Proper management of any asset-based credit line requires that all payments on accounts receivable be remitted to the bank, with the accounts-receivable borrowing base reduced by a like amount. The borrower's working-capital needs should then be met by drawing against the asset-based credit line.
- Slower turnover of the pledged receivables can be a strong indication of deterioration in credit quality of accounts receivable.
- Debtor accounts that are significant to the bank borrower's business should be well rated and financially strong. Borrowers should also

obtain financial statements on their major customers to make credit decisions. These financial statements should be reviewed when the bank performs its periodic audits. In addition, the borrower should maintain an appropriate level of reserves for doubtful accounts. Credit insurance is often used, which indemnifies a company against noncollection of accounts receivable for credit reasons. When credit insurance is used, the asset-based lender should be named as beneficiary.

- Dilution or shrinking of the accounts-receivable borrowing base can result from disputes, returns, and offsets. A large or increasing volume of these transactions could adversely affect the bank's collateral position.

The following safeguards, which bank management should consider and the examiner should evaluate, ensure the authenticity and collectibility of the pledged accounts receivable:

- *Audits.* To verify the information supplied by the borrower to the bank, the bank should audit the borrower's books. Audits should occur several times a year at the borrower's place of business. For satisfactory borrowers, the audit is usually performed quarterly. However, audits can occur more frequently if deemed necessary. Individuals who perform bank audits should be independent of the credit function. The scope of an audit should include—
 - verification that the information on the borrowing-base certificate reconciles to the borrower's books;
 - review of concentrations of accounts;
 - review of trends in accounts receivable, accounts payable, inventory, sales, and costs of goods sold;
 - review of the control of cash proceeds;
 - determination that the general ledger is regularly posted;
 - verification of submitted aging reports;
 - review of bank reconciliations and canceled checks;
 - determination if any accounts receivable are being settled with notes receivable;
 - verification that the accounts-receivable ledger is noted to show that an assignment has been made to the bank;
 - determination on non-notification accounts that all payments are remitted to the bank and that positive written confirmations are issued timely (for example, semiannually);

- verification that all taxes, especially sales and payroll, are paid timely; and
- review of compliance with the loan agreement.

- *Confirmation.* To verify the authenticity of the pledged collateral, the bank should institute a program of direct confirmation. This procedure is particularly important if the accounts receivable are pledged on a non-notification basis, since the bank does not have the same control over debtor accounts as it does when the receivables are pledged on a notification basis. Direct confirmation should be made before the initial lending arrangement and periodically thereafter. Confirmation should be on a positive basis. The bank should obtain written approval from the borrower before confirming accounts receivable on a non-notification basis.

Pledged Inventory

The following factors should be considered in evaluating the inventory pledged:

- A borrowing-base certificate, obtained from the borrower at least monthly, is normally used to calculate the dollar amount of inventory eligible for collateral. The borrowing-base certificate will show the different classes of inventory, such as raw materials, works-in-process, and finished goods. After this will be listed the different types of ineligible inventory, which will be subtracted to give the amount of eligible inventory. Finally, the advance rates are applied to the different classes of eligible inventory to determine the borrowing base.
- Factors affecting marketability, advance rates, and the decision whether to allow a class of inventory as eligible at even a low advance rate:
 - Obsolescence.* This could involve not only merchandise that is no longer in demand for various reasons, such as technological advances, but also style products, such as clothing, which obviously have a greater potential for obsolescence.
 - Seasonal goods.* It is necessary to know the seasonal highs and lows associated with a particular class of inventory, as well as the costs associated with these seasonal variations.

—*Oversupply*. If there is an oversupply in the general market of a particular class of inventory, then its value would be negatively affected.

—*Limited-use raw materials and finished goods*. These would be difficult to liquidate at a reasonable value.

Two other areas a lender must analyze in setting the inventory advance rate are the ease or difficulty, in terms of cost, of liquidating inventory in multiple locations, and the cost of maintaining certain inventory, such as food products that require refrigeration, in a salable state.

In addition to marketability, accessibility of the collateral is extremely important, as liquidation plans become meaningless if a lender cannot gain access to collateral. Constant vigilance is necessary to guard against actions that would preempt a lender's security interest in inventory. Following are some common actions that impede a lender's access to collateral:

- *Possessory liens*. A landlord lien is a common example. To protect their interest, lenders need to obtain landlord waivers to the lien.
- *Nonpossessory liens*. A purchase-money security interest is a common example. These are usually filed by trade suppliers against their customers.
- *Secret lien*. A tax lien is the most common example. To ensure that a loss of collateral does not occur, it is necessary to conduct

periodic lien searches if a borrower develops financial problems.

Commercial lenders often use outside appraisal firms to help them determine prudent inventory-advance rates. Also, normal industry practice for advance rates on different classes of inventory is available through the Commercial Finance Association Information Exchange.

Turnover rates should be analyzed to identify potential slow-moving or obsolete inventory, which should be subject to a lower or no advance rate. The borrower should establish inventory reserves if the volume of slow-moving or obsolete inventory is significant, and charge-off procedures should be in effect. Inventory should be adequately insured in relation to its location and amount. Furthermore, bill-and-hold merchandise and goods held on consignment should be physically segregated from other warehoused inventory and should not be included as inventory on the borrower's books or on the borrowing-base certificate submitted to the bank.

UCC Requirements for Secured Transactions

Article 9 of the UCC applies to any transaction that is intended to create a security interest in personal property. For a detailed discussion of the UCC requirements regarding secured transactions, refer to section 2080.1, "Commercial and Industrial Loans."

Asset-Based Lending

Examination Objectives

Effective date May 1996

Section 2160.2

1. To determine if the policies, practices, procedures, and internal controls for accounts receivable and inventory financing are adequate.
2. To determine if bank officers are conforming to established guidelines.
3. To evaluate the portfolio for collateral sufficiency, credit quality, and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Asset-Based Lending

Examination Procedures

Effective date November 2003

Section 2160.3

1. If selected for implementation, complete or update the asset-based lending section of the internal control questionnaire.
2. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal or external auditors, and determine if corrections have been accomplished.
4. Obtain a trial balance of the customer liability records.
 - a. Agree or reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination. Prepare credit line cards.
6. Obtain the following information from the bank or other examination areas, if applicable:
 - a. past-due loans
 - b. loans in a nonaccrual status
 - c. loans on which interest is not being collected in accordance with the terms of the loan (Particular attention should be paid to loans that have been renewed without payment of interest.)
 - d. loans whose terms have been modified by a reduction of interest rate or principal payment, by a deferral of interest or principal, or by other restructuring of repayment terms
 - e. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
 - f. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
 - g. loan commitments and other contingent liabilities
 - h. Extensions of credit to employees, officers, directors, and principal shareholders and their interests, specifying which officers are considered executive officers
7. Review the information received and perform the following procedures.
 - a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.*
 - Participations only:
 - Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
 - Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
 - Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
 - Procedures pertaining to *all* transfers:
 - Investigate any situations in which loans were transferred immediately before the date of examination to determine if any were transferred
 - i. extensions of credit to executive officers, directors, and principal shareholders and their interests of correspondent banks
 - j. a list of correspondent banks
 - k. miscellaneous loan-debit and credit-suspense accounts
 - l. loans considered “problem loans” by management
 - m. Shared National Credits
 - n. specific guidelines in the lending policy
 - o. each officer’s current lending authority
 - p. current interest-rate structure
 - q. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
 - r. reports furnished to the loan and discount committee or any similar committee
 - s. reports furnished to the board of directors
 - t. loans classified during the preceding examination

to avoid possible criticism during the examination.

- Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
- Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank's books and is equal to the fair market value of the transferred loans. (While fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on these loans as well as an appropriate risk premium.) Section 23A of the Federal Reserve Act prohibits a state member bank from purchasing a low-quality asset.
- Determine that low-quality loans transferred to an affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.
- If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
 - (1) name of originating institution
 - (2) name of receiving institution
 - (3) type of transfer (i.e., participation, purchase or sale, swap)
 - (4) date of transfer
 - (5) total number of loans transferred
 - (6) total dollar amount of loans transferred
 - (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
 - (8) any other information that would be helpful to the other regulator

b. *Miscellaneous loan-debit and credit-*

suspense accounts.

- Discuss with management any large or old items.
 - Perform additional procedures as deemed appropriate.
- c. *Loan commitments and other contingent liabilities.* Analyze the commitment or contingent liability if the borrower has been advised of the commitment, and analyze the combined amounts of the current loan balance (if any) and the commitment or other contingent liability exceeding the cutoff.
 - d. *Loans classified during the previous examination.*
 - Determine the disposition of loans so classified by transcribing—
 - current balance and payment status, or
 - date loan was repaid and source of payment.
 - Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank, or as a result of a participation, sale, or swap with another lending institution. If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.
 - e. *Uniform review of Shared National Credits.*
 - Compare the schedule of credits included in the uniform review of Shared National Credits Program with line cards to ascertain which loans in the sample are portions of Shared National Credits.
 - For each loan so identified, transcribe appropriate information from schedule to line cards. (No further examination procedures are necessary in this area.)
8. Consult with the examiner responsible for the asset/liability management analysis to determine the appropriate maturity breakdown of loans needed for the analysis. If requested, compile the information using bank records or other appropriate sources. See "Instructions for the Report of Examination," section 6000.1, for the considerations to be taken into account when compiling maturity information for the gap analysis.
 9. Prepare line cards for any loan not in the sample that, on the basis of the information

- derived from the above schedules, requires in-depth review.
10. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, lease financing, and other loan areas, and together decide who will review the borrowing relationship.
 11. Obtain credit files for each loan for which line cards have been prepared. In analyzing the loans, perform the following procedures:
 - a. Analyze balance-sheet and profit-and-loss items as reflected in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
 - b. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
 - c. Review supporting information and consolidation techniques for major balance-sheet items.
 - d. Ascertain compliance with provisions of loan agreements.
 - e. Review digests of officers' memoranda, mercantile reports, credit checks, and correspondence.
 - f. Review the following:
 - relationship between amount collected in a month on the receivables pledged as collateral and the borrower's credit limit
 - aging of accounts receivable
 - ineligible receivables
 - concentration of debtor accounts
 - financial strength of debtor accounts
 - disputes, returns, and offsets
 - management's safeguards to ensure the authenticity and collectibility of the assigned receivables
 - g. Analyze secondary support offered by guarantors and endorsers.
 - h. Ascertain compliance with established bank policy.
 12. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.
 13. Determine compliance with laws and regulations pertaining to accounts receivable lending by performing the following steps.
 - a. *Lending limits.*
 - Determine the bank's lending limit as prescribed by state law.
 - Determine advances or combinations of advances with aggregate balances above the limit, if any.
 - b. *Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and Regulation W.*
 - Obtain a listing of loans to affiliates.
 - Compare the listing with the bank's customer liability records to determine its accuracy and completeness.
 - Obtain a listing of other covered transactions with affiliates (i.e., acceptance of affiliate's securities as collateral for a loan to any person).
 - Ensure that covered transactions with affiliates do not exceed the limits of section 23A and Regulation W.
 - Ensure that covered transactions with affiliates meet the collateral requirements of section 23A and Regulation W.
 - Determine that low-quality loans have not been purchased from an affiliate.
 - Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
 - Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
 - c. *18 USC 215, Receipt of Commission or Gift for Procuring Loans.*
 - While examining the accounts receivable loan area, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
 - Investigate any such suspected situation.
 - d. *Federal Election Campaign Act (2 USC 441b), Political Contributions and Loans.*
 - While examining the accounts receivable loan area, determine the existence of any loans in connection with any political campaign.
 - Review each such credit to determine

- whether it is made in accordance with applicable banking laws and regulations and in the ordinary course of business.
- e. *12 USC 1972, Tie-In Provisions.* While examining the accounts receivable loan area, determine whether any extension of credit is conditioned upon—
- obtaining or providing an additional credit, property, or service to or from the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
 - the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit.
- f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows. (The examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment.)
- *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests.* While reviewing information relating to insiders that is received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
 - test the accuracy and completeness of information about accounts receivable loans by comparing it with the trial balance or loans sampled;
 - review credit files on insider loans to determine that required information is available;
 - determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
 - determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
 - determine that loans to insiders do not exceed the lending limits imposed by Regulation O;
 - if prior approval by the bank's board was required for a loan to an insider, determine that this approval was obtained;
 - determine compliance with the various reporting requirements for insider loans;
 - determine that the bank has made provisions to comply with the disclosure requirements for insider loans; and
 - determine that the bank maintains records of public disclosure requests and the disposition of the requests for a period of two years after the dates of the requests.
 - *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
 - Obtain from or request that the examiners reviewing due from banks and deposit accounts verify a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
 - Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.
- g. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 103.33), Retention of Credit Files.* Review the operating procedures and credit file documentation and determine if the bank retains records of each extension of credit over \$10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date thereof. (Loans secured by an interest in real property are exempt.)
14. Determine whether the consumer compliance examination uncovered any violations of law or regulation in this department. If violations were noted, determine whether corrective action was taken. Extend testing to determine subsequent compliance with

- any noted law or regulation.
15. Perform the appropriate steps in “Concentrations of Credits,” section 2050.3.
 16. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
 - a. delinquent loans
 - b. loans not supported by current and complete financial information
 - c. loans on which documentation is deficient
 - d. inadequately collateralized loans
 - e. classified loans
 - f. Small Business Administration delinquent or criticized loans
 - g. transfers of low-quality loans to or from another lending institution
 - h. concentrations of credit
 - i. extensions of credit to major shareholders, employees, officers, directors, and/or their interests
 - j. violations of laws and regulations
 - k. other matters concerning the condition of the department
 17. Evaluate the function for—
 - a. the adequacy of written policies, relating to accounts receivable financing;
 - b. the manner in which bank officers are conforming with established policy;
 - c. adverse trends within the accounts receivable financing department;
 - d. the accuracy and completeness of the schedules obtained from the bank;
 - e. internal control deficiencies or exceptions;
 - f. recommended corrective action when policies, practices, or procedures are deficient;
 - g. the competency of departmental management; and
 - h. other matters of significance.
 18. Update the workpapers with any information that will facilitate future examinations.

Asset-Based Lending Internal Control Questionnaire

Effective date March 1984

Section 2160.4

Review the bank's internal controls, policies, practices, and procedures for making and servicing accounts receivable financing loans. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

- *1. Has the board of directors, consistent with its duties and responsibilities, adopted written accounts receivable financing policies that—
 - a. establish procedures for reviewing accounts receivable financing applications,
 - b. establish standards for determining credit lines,
 - c. establish standards for determining percentage advance to be made against acceptable receivables,
 - d. define acceptable receivables,
 - e. establish minimum requirements for verification of borrower's accounts receivable, and
 - f. establish minimum standards for documentation?
- 2. Are accounts receivable financing policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary accounts receivable financing records performed or reviewed by persons who do not also—
 - a. issue official checks and drafts or
 - b. handle cash?
- *4. Are the subsidiary accounts receivable financing records reconciled, at least monthly, to the appropriate general ledger accounts, and are reconciling items investigated by persons who do not also handle cash?
- 5. Are loan statements, delinquent account

collection requests, and past-due notices checked to the trial balances that are used in reconciling subsidiary records of accounts receivable financing loans with general ledger accounts, and are they handled only by persons who do not also handle cash?

- 6. Are inquiries about accounts receivable financing loan balances received and investigated by persons who do not also handle cash or pass adjustments?
- *7. Are documents supporting recorded credit adjustments to loan accounts or accrued interest receivable accounts checked or tested subsequently by persons who do not also handle cash or initiate transactions (if so, explain briefly)?
- 8. Are terms, dates, weights, descriptions of merchandise, etc., shown on invoices, shipping documents, delivery receipts, and bills of lading scrutinized for differences?
- 9. Are procedures in effect to determine if the signatures shown on the above documents are authentic?
- 10. Are payments from customers scrutinized for differences in invoice dates, numbers, terms, etc.?

LOAN INTEREST

- *11. Is the preparation and posting of loan interest records performed or reviewed by persons who do not also—
 - a. issue official checks and drafts or
 - b. handle cash?
- 12. Are independent interest computations made and compared or tested to initial loan interest records by persons who do not also—
 - a. issue official checks and drafts or
 - b. handle cash?

COLLATERAL

- *13. Does the bank record, on a timely basis, a first lien on the assigned receivables for each borrower?
- 14. Do all loans granted on the security of the receivables also have an assignment of the inventory?

15. Does the bank verify the borrower's accounts receivable or require independent verification periodically?
16. Does the bank require the borrower to provide aged accounts receivable schedules periodically?
17. If applicable, are cash receipts and invoices block proven in the mailroom and subsequently traced to posting on daily transaction records?
18. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
19. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

CONCLUSION

18. Is the foregoing information an adequate

Some member banks provide lending services to stock brokerage firms using marketable securities as collateral. While various financial services are offered, typically most banks make loans to brokerage firms to provide them with the funding needed to carry their securities portfolio. The securities can either be held by the bank or a tri-party custodian or pledged to the bank at a depository. Collateral securities can be in physical form or can be held at a depository in book-entry form.

To promote efficiency, a brokerage firm may use a depository to hold the securities it has pledged as collateral for a bank loan. Brokerage firms deposit shares of eligible securities with the depository, and the stock certificates representing those shares are registered in the name of a common nominee. Beneficial ownership of the securities is transferred through computerized book entries, thus eliminating the physical movement of the securities. The depository has physical control of the securities while they are on deposit. Loan arrangements are made between the broker and the lending bank, with the broker providing electronic instructions to the depository to debit the firm's account and credit that of the lending bank. The depository acknowledges the transaction to the lending bank and will not reverse the entry or allow partial withdrawals without authorization from that institution. Par-

ticipating banks receive daily reports showing their position in the program by broker name and type of security.

The New York Stock Exchange formed a subsidiary, the National Securities Clearing Corporation (NSCC), to provide equity clearance and continuous net settlement for the brokerage community. The Depository Trust Company in New York, under contract with the NSCC, handles the technical aspects of that operation, including final settlement. Collateral-pledging services may be offered by other depositories as well.

Book-entry transfer of ownership is limited to only those securities that are eligible for deposit in a depository. However, even if a security was depository-eligible, it would not be eligible for book-entry movement unless the lending bank was a direct or indirect participant in the depository. If the lending institution does not have a relationship, either directly or indirectly, with a depository, the securities would have to be delivered physically to the ultimate custodian (presumably the lending bank).

Securities lending is not always constrained by eligibility. Depending on the bank's underwriting standards, some banks may be willing to lend on the basis of securities that are not depository-eligible. This would preclude book-entry movement and require physical delivery.

Securities Broker and Dealer Loans

Examination Objectives

Effective date May 1996

Section 2170.2

1. To determine if policies, practices, procedures, objectives, and internal controls for securities broker and dealer loans are adequate.
2. To determine the types of loans (underwriting loan, day loan, inventory loan, margin loan, or guidance line) made, loan pricing and fees, loan-to-value ratios, and margin calls.
3. To evaluate credit quality, credit analysis, collateral and custody requirements, and procedures for lost and stolen securities.
4. To determine if bank officers are operating in conformance with the established guidelines.
5. To determine compliance with applicable laws and regulations, including Regulations T and U, the Securities Act of 1933, and the Securities Exchange Act of 1934.
6. To evaluate management information systems, particularly the lender's ability to ensure adequate collateral coverage by being able to automatically price collateral daily.
7. To determine the scope and adequacy of the audit function.
8. To initiate corrective action when policies, practices, procedures, objectives, or internal controls are deficient or when violations of laws or regulations have been noted.

Securities Broker and Dealer Loans

Examination Procedures

Effective date March 1984

Section 2170.3

1. If selected for implementation, complete or update the Securities Broker and Dealer Loans section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and of the work performed by internal/external auditors ascertain the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors, and determine if corrections have been accomplished.
4. Request the bank to supply:
 - a. Schedule of approved lines for each dealer including outstanding balances.
 - b. Delinquent interest billings, date billed amount of past-due interest.
5. Obtain a trial balance of all dealer accounts and:
 - a. Agree balances to department controls and general ledger.
 - b. Review reconciling items for reasonableness.
6. Using an appropriate technique, select borrowers to be reviewed.
7. Using the trial balance, transcribe the following information for each borrower selected onto the credit line cards.
 - a. Total outstanding liability.
 - b. Amount of approved line.
8. Obtain from the appropriate examiner the following schedules, if applicable to this area:
 - a. Past-due loans.
 - b. Loan commitments and other contingent liabilities.
 - c. Miscellaneous loan debit and credit suspense accounts.
 - d. Loans considered "problem loans" by management.
 - e. Each officer's current lending authority.
 - f. Current interest rate structure.
 - g. Any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee.
 - h. Reports furnished to the loan and discount committee or any similar committee.
 - i. Reports furnished to the board of directors.
 - j. Loans classified during the preceding examination.
 - k. A listing of loans charged-off since the preceding examination.
9. Review the information received and perform the following:
 - a. For miscellaneous loan debit and credit suspense accounts:
 - Discuss with management any large or old items.
 - Perform additional procedures as deemed appropriate.
 - b. For loans classified during the previous examination, determine disposition of loans so classified by transcribing:
 - Current balances and payment status, *or*
 - Date loan was repaid and sources of payment.
 - c. For loan commitments and other contingent liabilities, analyze if:
 - The borrower has been advised of the contingent liability.
 - The combined amounts of the current loan balance and the commitment or contingent liability exceed the cutoff.
 - d. Select loans which require in-depth review based on information derived when performing the above steps.
10. For those loans selected in step 6 above and for any other loans selected while performing the above steps, transcribe the following information from the bank's collateral record onto the credit-line cards:
 - a. A list of collateral held, including date of entry, and amount advanced.
 - b. A brief of the agreement between the bank and the dealer.
 - c. Evidence that the proper documentation is in place.
 - d. Details of any other collateral held.
11. The examiner should be aware that certain stock-secured purpose transactions with and for brokers and dealers are exempt from the

- margin restrictions of Regulation U. Refer to the regulation for a complete description of such transactions, which include the following:
- a. Temporary advances to finance cash transactions.
 - b. Securities in transit or transfer.
 - c. Day loans.
 - d. Temporary financing of distributions.
 - e. Arbitrage transactions.
 - f. Credit extended pursuant to hypothecation.
 - g. Emergency credit.
 - h. Loans to specialists.
 - i. Loans to odd-lot dealers.
 - j. Loans to OTC market makers.
 - k. Loans to third-market makers.
 - l. Loans to block positioners.
 - m. Loans for capital contributions.
12. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:
 - a. Delinquent loans, including a breakout of "A" paper.
 - b. Loans on which collateral documentation is deficient.
 - c. Recommended corrective action when policies, practices or procedures are deficient.
 - d. Other matters regarding the condition of the department.
 13. Prepare appropriate comments for examination report stating your findings with regard to:
 - a. The adequacy of written policies relating to dealer loans.
 - b. The manner in which bank officers are conforming with established policy.
 - c. Schedules applicable to the department that were discovered to be incorrect or incomplete.
 - d. The competence of departmental management.
 - e. Internal control deficiencies or exceptions.
 - f. Other matters of significance.
 14. Update the workpapers with any information that will facilitate future examinations.

Securities Broker and Dealer Loans

Internal Control Questionnaire

Effective date March 1984

Section 2170.4

Review the bank's internal control, policies, practices and procedures for making and servicing loans. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written loan policies that:
 - a. Establish standards for determining broker and dealer credit lines?
 - b. Establish minimum standards for documentation?
2. Are such loan policies reviewed at least annually to determine if they are compatible with changing market conditions?
3. Is a daily record maintained summarizing loan transaction details, i.e., loans made, payments received and interest collected to support applicable general ledger account entries?
4. Are frequent note and liability ledger trial balances prepared and reconciled with controlling accounts by employees who do not process or record loan transactions?
5. Is an exception report produced and reviewed by operating management that encompasses extensions, renewals or any factors that would result in a change in customer account status?
6. Do customer account records clearly indicate accounts which have been renewed or extended?

LOAN INTEREST

7. Is the preparation and posting of interest

records performed and reviewed by appropriate personnel?

8. Are any independent interest computations made and compared or adequately tested to initial interest records by appropriate personnel?

COLLATERAL

9. Are multicopy, prenumbered records maintained that:
 - a. Detail the complete description of collateral pledged?
 - b. Are typed or completed in ink?
10. Are receipts issued to customers covering each item of negotiable collateral deposited?
11. If applicable, are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
12. Are appropriate steps with regard to Regulation U being considered in granting dealer and broker loans?

CONCLUSION

13. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
14. Based on composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

INTRODUCTION

Factoring is the purchase, essentially without recourse, of the accounts receivable of a client by a bank (the factor). Generally, factor clients are small, undercapitalized companies or start-up firms with limited liquidity that generally do not qualify for more traditional bank financing. In contrast to accounts receivable financing, where the client retains the credit and collection risk associated with the receivables, factoring transfers these risks to the factor. For the client, the principal advantage of factoring is the assurance that it will receive the proceeds of its sales, regardless of whether the factor is paid. Furthermore, the client does not have to maintain a credit department to evaluate the creditworthiness of customers, collect past-due accounts, or maintain accounting records on the status of receivables. The factor assumes these responsibilities. An additional advantage for the client is that under the terms of an "advance factoring" arrangement, the client receives payment for its receivables before the time stated on the invoice.

Two basic types of factoring service offered by the industry are (1) maturity factoring and (2) advance factoring. In maturity factoring, an average maturity due date is computed for the receivables purchased within a given time period, and the client receives payment on that date. Advance factoring is computed in the same way; however, the client has the option of taking a percentage of the balance due on a receivable in advance of the computed average maturity due date. The remainder of the receivable, sometimes called the "client's equity," is payable on demand at the due date.

ACCOUNTING FOR FACTORING

The factor's balance sheet reflects the purchased accounts receivable as an asset account, "factored receivables," with "due to clients" as the corresponding liability. Usually, the balance of due-to-clients will be less than the factored receivables because of payments and advances to the clients. If, however, the factor makes advances to the client in amounts that exceed amounts due to the client, the advances will be shown as "overadvances." Overadvances are common and usually secured by other collateral.

The factoring agreement should set limits on the amount of overadvances available at any one time, generally based on specified collateral, such as the client's inventory. The relationship to inventory is based on the premise that the inventory will be sold, thus generating receivables that the factor has contracted to purchase. Proceeds from the factored receivables resulting from the sale of inventory are then used to repay the overadvance. If the overadvance is unsecured, it should be offset by a corresponding reduction in the "client's equity." The factor's income statement will show factoring commissions, which represent the discount on the receivables purchased, as income. Interest income for advances on the due-to-client balances may or may not be a separate line item.

Since factoring is a highly competitive industry, price cutting has reduced factoring commissions to the point that they provide minimal support to a factor's earnings. As a result, interest margins on factoring advances represent an increasingly important part of a factor's net income. An analysis of proportional changes in the due-to-clients account should provide valuable insight into the analysis of the earnings of a bank's factoring activities. As more clients take advances (reducing due-to-clients), profit margins should widen. Conversely, as the due-to-clients proportion of total liabilities rises, profit margins may be expected to narrow.

FACTORING AGREEMENT, APPROVAL PROCEDURES, AND EXAMINER'S EVALUATION

The typical factoring agreement stipulates that all of a client's accounts receivable are assigned to the factor. However, the agreement between the factor and the client will usually state that receivables subject to shipping disputes and errors, returns, and adjustments are chargeable back to the client because they do not represent bona fide sales. The agreement will, in most instances, require that a reserve be established against the purchased receivables to ensure the factor's access to funds for any future charge-back adjustments.

The usual approval process requires the client to contact the factor's credit department before filling a sales order on credit terms. The credit

department conducts a credit review, determines the creditworthiness of the customer, and approves or rejects the sale. If the credit department rejects the sale, the client may complete the sale, but at its own risk. The most commonly rejected sales are those to affiliates, known bad risks, customers whose credit cannot be verified, and customers whose outstanding payables exceed the factor's credit line to that customer. Sales made by the client without the factor's approval are considered client-risk receivables, and the factor has full recourse to the client.

Once a sale has been made and the receivable assigned to the factor, whether or not the factor has approved it, the client's account will be credited for the net invoice amount of the sale. Trade or volume discounts, early payment terms, and other adjustments are deducted from the invoice amount. The receivable then becomes part of the client's "availability" to be paid immediately or at the computed date, depending on the basis of the factoring arrangement.

Each month the client receives an "accounts-current" statement from the factor, which details daily transactions. This statement reflects the daily assignments of receivables, remittances made (including overadvances and amounts advanced at the client's risk), deductions for term loans, interest charges, and factoring commissions. Credit memos, client-risk charge-backs, and other adjustments will also be shown. Client-risk charge-backs are the amounts deducted from the remittances to the client resulting from the failure of the client's customers to pay receivables that were advanced at the client's risk.

The accounts-current statement and the availability sheets are necessary for analyzing asset quality. The factor's ability to generate these reports daily is a basic control feature. Accounting systems for a high-volume operation probably will be automated, providing the factor with the data necessary to properly monitor the client. If a monitoring system is in place, the examiner should use the data provided in the asset analysis process.

The evaluation of a factoring operation includes a review of its systems and controls as well as an analysis of the quality of its assets. A major portion of a factor's assets will be factored receivables, for which the credit department has the responsibility for credit quality and collection. The other major portion of assets will consist of client loans and credit accommoda-

tions, such as overadvances and amounts advanced at the client's risk, for which the account officers are responsible.

CREDIT DEPARTMENT EVALUATION

Because of its integral function in the credit and collection process, the credit department is the heart of a factoring operation. The department should maintain a credit file for each of its client's customers, and these files should be continually updated as purchases are made and paid for by the customers. These files should include financial statements, credit bureau reports, and details of purchasing volume and paying habits. Each customer should have an assigned credit line based on the credit department's review of the customer's credit capacity.

The objective of a credit department evaluation is to critique the credit and collection process and to assess departmental effectiveness. The examiner should have a copy of departmental policies and procedures as well as a verbal understanding of them before beginning the review. The factor's policies should include, at a minimum, well-defined field audit procedures, a fraud detection and monitoring plan, and a computer back-up plan. Customer files selected for review may be drawn from large and closely monitored customers, or they may be selected by a random sample.

ASSET EVALUATION

The asset evaluation is a twofold process. The first part is to evaluate credit accommodations to each client. The second part is to evaluate customer receivables purchased by the factor at its own risk. For the first part of the process, the examiner should obtain a list that shows the aggregate of each client's credit exposure to the factor, both direct and indirect, including overadvances and receivables purchased at the client's risk. For the second part of the process, the examiner should obtain an aging schedule of factored receivables aggregated by customer but net of client-risk receivables. The selection of clients and customers for review should be based on the same selection methods as those used for the commercial loan review. Clients with a high "dilution" of receivables

(that is, customer nonpayment due to returns, shipping disputes, or errors) and those with client-risk receivables equal to 20 percent or more of factored volume might also be selected for review. Past-due factored volume is not a meaningful measure of client quality because a factor usually collects principal and interest payments directly from the client's availability.

A maturity client's availability is the sum of all factored receivables less trade and other discounts, factoring commissions, client-risk charge-backs, and other miscellaneous charges to the client's account. There may also be deductions for letters of credit and other credit accommodations. An advance client's availability would be further reduced by advances on the factored receivables, interest charges, and the reciprocal of the contractually agreed-upon "advance" percentage. This reciprocal, 20 percent in the case of a client who receives an 80 percent advance, is sometimes referred to as the client's equity in the factored receivables. Availability may be increased by liens on additional collateral, such as inventory, machinery and equipment, real estate, and other marketable assets.

A client's balance sheet will show a "due-from-factor" account instead of accounts receivable. The account balance may be somewhat lower than a normal receivables balance, thus distorting turnover ratios and other short-term ratios. A client can convert sales to cash faster with a factor than if it collected the receivables. The statement analysis should consider the client's ability to repay any advances received from the factor in the form of overadvances, term loans, or other credit accommodations. The analysis should also assess the client's ability to absorb normal dilution and the potential losses associated with client-risk receivables, particularly when these elements are unusually high.

CLASSIFICATION GUIDELINES

When classifying the credit exposure to a client, the client-risk receivables portion of factored volume is the only amount subject to classification. Because of the recourse aspect, the balance is considered an indirect obligation rather than a direct obligation. Any other credit accommodations to a client that are not included in factored receivables, such as overadvances or term loans, are also subject to classification. Customer receivables purchased by the factor at its own risk are subject to classification. Care should be taken not to classify any receivables that have already been classified under client-risk exposure. Seasonal aspects of clients' businesses should be carefully analyzed in assessing asset quality based on classification data.

CONCLUSION

Due to the large volume of daily transactions that typically flows through a factor, any internal control procedure that can be easily circumvented is a potential problem. The review of the department's internal systems and controls should be continuous throughout the examination. This review should include credit controls for both clients and customers. Since credit problems can develop rapidly in factoring, credit controls and systems must be responsive to the identification of these problems. Earnings and capital adequacy are evaluated based on the department's own performance. The factoring department's earnings trends may be evaluated by comparing the yield on assets for various periods. Factors are subject to the same price competition in the commercial finance market as accounts receivable financiers. Declining portfolio yields may reflect competitive pressures and may portend declining future profitability.

Factoring

Examination Objectives

Effective date May 1996

Section 2180.2

1. To determine if policies, practices, procedures, and internal controls for factoring are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the portfolio for performance, credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Factoring

Examination Procedures

Effective date March 1984

Section 2180.3

1. If selected for implementation, complete or update the Factoring section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest reviews done by internal/external auditors, and determine if appropriate corrections have been made.
4. Obtain a trial balance(s) of applicable asset and liability accounts and:
 - a. Agree or reconcile balances to department controls and general ledger.
 - b. Review reconciling items for reasonableness.
5. Obtain the following information:
 - a. A list of all clients with their outstanding balances including total factored receivables with those purchased at the client's risk segregated, overadvances, term loans and other credit accommodations.
 - b. If not included in 5a above, a list of amounts due to each client by the factor (availability reports).
 - c. Aging schedules of factored receivables by client and by customer with client risk receivables segregated.
 - d. Past due status reports for 5c, above.
 - e. Listings of all clients and customers considered to be problems.
 - f. Credits classified at the previous examination.
 - g. Concentration reports by client and by customer.
 - h. Exception reports highlighting dilution of factored receivables because of shipping disputes and errors, returns, or any other adjustments.
 - i. Credit commitments/lines for each client including amounts for overadvances and receivables purchased at the client's risk.
 - j. Credit lines for each customer.
 - k. Specific lending policy guidelines including each officer's current lending authority.
6. Current fee schedule.
- m. Any useful information obtained from the review of the minutes of the loan and discount committee or any similar committees.
- n. Reports furnished to the board of directors.
- o. Any other management reports maintained by the factoring department.
6. After consulting with the examiner-in-charge, determine the appropriate cut-off lines for:
 - a. Client's aggregate direct liability (i.e., overadvances, term loans and other credit accommodations).
 - b. Client's indirect liability (i.e., client-risk exposure).
 - c. Customer's factored receivables not including those in 6b above.
7. Transcribe information to line cards for all client and customer credits over the cut-off limits, for all credits recognized as problems, and for credits classified at the previous examination.
8. Cross reference clients and customers with the examiners assigned to other loan areas for common borrowers, and together decide who will review the borrowing relationship.
9. Obtain credit files for all clients and customers for whom line cards were prepared and analyze the accounts by performing the following procedures:
 - a. Analyze balance sheet and profit and loss items as reflected in current and preceding financial statements, determine the existence of any favorable or adverse trends.
 - b. Review components of the balance sheet as reflected in the current financial statements and determine the reasonableness of each item as it relates to the total financial structure.
 - c. Review supporting information for the major balance sheet items and the techniques used in consolidation, if applicable, and determine the primary sources of repayment and evaluate their adequacy.
 - d. Compare the amount of the credit line(s) with the lending officer's authority.
 - e. Determine compliance with the bank's established commercial loan policy.

In addition to the above procedures which are applicable to both client and customer accounts, the following additional procedures should be performed for client accounts only:

- f. Determine compliance with provisions of factoring agreements.
 - g. Review digest of officers' memoranda, mercantile reports, credit checks and correspondence to determine the existence of any problems which might deter the contractual program as set forth in the factoring agreement.
 - h. Relate collateral values to outstanding debt.
 - i. Compare fees charged to the fee schedule and determine that the terms are within established guidelines.
 - j. Analyze secondary support afforded by guarantors and endorsers.
10. Perform appropriate procedural steps in Concentration of Credits section, if applicable.
 11. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:
 - a. Delinquent amounts, segregating those considered "A" paper.
 - b. Violations of laws and regulations.
 - c. Accounts not supported by current and complete financial information or on which other documentation is deficient.
 - d. Concentrations of credit.
 - e. Criticized accounts.
 - f. Other matters regarding condition of asset quality.
 12. Evaluate the factoring department with respect to:
 - a. The adequacy of written policies relating to factoring.
 - b. The manner in which bank officers are operating in conformance with established policy.
 - c. Adverse trends within the factoring department.
 - d. Internal control deficiencies or exceptions.
 - e. Recommended corrective action when policies, practices or procedures are deficient.
 - f. The competency of departmental management.
 - g. Other matters of significance.
 13. Update the workpapers with any information that will facilitate future examinations.

Factoring

Internal Control Questionnaire

Effective date March 1984

Section 2180.4

Review the bank's internal controls, policies, practices and procedures for its factoring operation. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written factoring policies that:
 - a. Establish procedures for reviewing factoring agreements?
 - b. Establish standards for determining client credit lines for each of the various types of accommodations available (i.e., factored receivables, client-risk receivables, overadvances, term loans, etc.)?
 - c. Establish standards for determining individual customer limits?
 - d. Require a client to contact the factor for approval before filling a sales order on credit terms?
 - e. Establish standards for approving the sales orders referred to above.
 - f. Establish standards for determining the percentage of advance that will be made against acceptable receivables in advance factoring arrangements?
 - g. Establish standards for determining the discount on factored receivables and the interest rate or fee charged for other credit accommodations?
 - h. Establish minimum standards for documentation?
2. Are factoring policies reviewed at least annually to determine if they are compatible with changing market conditions?

INTERNAL CONTROL

- *3. Is the preparation and posting of subsidiary factoring records performed or reviewed by persons who do not also:
 - a. Issue official checks and drafts?

b. Handle cash?

- *4. Are the subsidiary factoring records reconciled, at least monthly, to the appropriate general ledger accounts, and reconciling items investigated by persons who do not also handle cash?
5. Are accounts current statements, delinquent account collection requests, and past-due notices checked to the trial balances that are used in reconciling subsidiary records of factoring accounts with general ledger accounts, *and* handled only by persons who do not also handle cash?
6. Are inquiries about factored balances received and investigated by persons who do not also handle cash?
- *7. Are documents supporting recorded credit adjustments to factored receivable accounts and the due-to-clients accounts checked or tested subsequently by persons who do not also handle cash (if so, explain briefly)?
8. Are proper records maintained for approval of:
 - a. Customer orders?
 - b. Client credit accommodations?
9. Are items, dates, weights, description of merchandise, etc., shown on invoices, shipping documents, delivery receipts, and bills of lading scrutinized for differences?
10. Are procedures in effect to determine if the signatures shown on the above documents are authentic?
11. Are payments from customers scrutinized for differences in invoice dates, numbers, terms, etc.?

INTEREST AND FEES

- *12. Is the preparation and posting of discount, interest, and fee records performed or reviewed by persons who do not also:
 - a. Issue official checks and drafts singly?
 - b. Handle cash?
13. Are independent discount, interest and fee computations made and compared or tested to initial records by persons who do not also:
 - a. Issue official checks and drafts?
 - b. Handle cash?

COLLATERAL

- *14. Does the bank record, on a timely basis, a first lien on the assigned receivables for each borrower?
- 15. Does the bank verify the borrower's accounts receivable or require independent verification on a periodic basis?
- 16. Does the bank review aged accounts receivable schedules on a regular basis?
- 17. If applicable, are cash receipts and invoices block proved in the mailroom and subsequently traced to posting on daily transaction records?

CONCLUSION

- 18. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
- 19. Based on a composite evaluation as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Bank premises and equipment includes land, buildings, furniture, fixtures, and other equipment, either owned or acquired by means of a capitalized lease, and any leasehold improvements. This section covers the fair valuation, general propriety, and legality of the bank's investment in premises and equipment. Other real estate owned and insurance coverage on fixed assets are discussed in other sections of this manual. (See sections 2200.1 and 4040.1, respectively.)

ACQUISITION AND VALUATION

Banks obtain premises and equipment in three primary ways:

- directly purchasing premises and equipment with cash outlays or by incurring debt, such as a mortgage
- indirectly investing in a corporation that holds title to bank premises (the corporation may or may not be affiliated with the bank)
- leasing bank premises and equipment from a third party

The bank's initial investment in premises and equipment should be booked at cost, which should be determined according to generally accepted accounting principles (GAAP). Non-depreciable assets such as land and art should remain on the books at cost, unless the asset incurs a material and permanent decline in value. Under such circumstances, the asset should be reduced to fair market value on the books, and a loss should be recorded.

The bank should depreciate assets that, over time, decline in economic value. These assets may be depreciated differently for book and tax purposes, which may give rise to deferred tax implications. GAAP allows depreciation using methods such as straight-line, double-declining, or sum-of-years'-digits. The Internal Revenue Service allows accelerated depreciation methods for many assets to encourage businesses to make capital investments. While many banks follow these accelerated schedules for tax purposes, they may not depreciate these same assets as rapidly for book purposes.

Examiners should closely review internal controls for the bank's premises and equipment to

ensure that these assets are properly safeguarded and appropriately recorded on the bank's books. Controls should be in place to inventory these assets and periodically review their economic usefulness. Furniture, fixtures, and equipment whose economic usefulness has expired or that are otherwise damaged, impaired, or obsolete should be written down to value. Assets that cannot be located should be accounted for as a loss.

LEASES

Banks frequently lease their premises and equipment rather than own them. Leases should be accounted for in accordance with Financial Accounting Standards Board Statement No. 13 (FAS 13), "Accounting for Leases." FAS 13 requires, among other things, that the lessee capitalize certain leases. The instructions for the preparation of Reports of Condition and Income detail the capitalization of leases and specify treatment for leases entered into before 1977. If a lease is required to be capitalized, the lessee records a capital lease as an asset and a corresponding liability. The amount capitalized would be the present value of the minimum required payments over the noncancelable term, as defined, of the lease, plus the present value of the payment required under the bargain-purchase option, if any, less any portion of the payments representing executory expenses such as insurance, maintenance, and taxes to be paid by the lessor. The amortization period should be the life of the lease or a period established in a manner consistent with the lessee's normal schedule of depreciation for owned assets. The requirements of FAS 13 are somewhat complex, and examiners who have questions on the capitalization of leases are referred to that statement for necessary detail. Leases not required to be capitalized are called "operating leases," and lease payments associated with them are charged to expense over the term of the lease as they become payable.

Lease arrangements between a state member bank and its parent company or other affiliated entity should be reviewed in detail. Examiners should ensure that the lease arrangement is reasonable in relation to the cost of the asset, its current fair market value, or similar lease

arrangements in the current market. Transactions that appear to be self-serving or otherwise unreasonable to the bank should be criticized.

INVESTMENT IN BANK PREMISES

Investment in bank premises is limited by section 24A of the Federal Reserve Act, as amended by the Economic Growth and Regulatory Paperwork Reduction Act of 1996. Section 208.21 of Regulation H sets forth the Board's rule on investment limits for bank premises. Except as discussed below, no state member bank is permitted to invest in bank premises or in the stock, bonds, debentures, or other such obligations of any corporation holding the premises of the bank or make loans to or upon the security of any such corporation (collectively, investments in bank premises).

A well-rated and well-capitalized bank may invest an amount that is 150 percent or less of the amount of (1) its perpetual preferred stock and related surplus and (2) its common stock and surplus, provided it gives the appropriate Reserve Bank at least 15 days' notice before making such an investment, and the bank has not received a notice that the investment is subject to further review by the end of that 15-day notice period. State member banks that have a CAMELS rating of 1 or 2 (as of the most recent examination of the bank),¹ and that are, and will continue to be, well capitalized, may make such investments without notice to the Board. Banks that are not well capitalized or well rated may have investments in bank premises only up to 100 percent or less of those amounts, and only with the prior notice indicated above.

When considering the approval of domestic-branch applications, the Board follows the guidelines detailed in section 208.6(b) of Regulation H. The Board will analyze whether the bank's investment in premises for the branch is consistent with section 208.21 of Regulation H. Reserve Banks, under their delegated authority, can also perform this analysis.

1. Alternatively, the state member bank may have an equivalent rating under a comparable rating system, also as defined in the FFIEC Consolidated Reports of Condition and Income.

Member banks are encouraged to plan for their future premises needs. However, examiners should not arbitrarily classify real estate acquired for future use. The examiner needs to review the circumstances surrounding each individual case and determine if the period of time which the property has been held is reasonable relative to the intended use. Real estate acquired for future expansion is considered "other real estate owned" from the date when its use for banking is no longer contemplated. In addition, former banking premises are considered other real estate owned from the date of relocation to new banking quarters.

TRANSACTIONS WITH INSIDERS

If a member bank contracts for or purchases any securities or other property from any of its directors, any firm its directors are members of, or any of its affiliates, the transaction is subject to the requirements of sections 22(d) and 23B of the Federal Reserve Act. These sections require that transactions be made in the regular course of business on terms not less favorable to the bank than those offered to others. When the purchase is authorized by a majority of the board of directors who have no interest in the sale of such securities or property, the authority should be evidenced by affirmative vote or written assent. In addition, a member bank may sell securities or other property to any of its directors subject to the same stipulations.

EXAMINATION CONSIDERATIONS

As indicated earlier, the examiner responsible for bank premises and equipment should assess the appropriateness of the bank's investment in this area and the overall impact of occupancy expense on the bank. Even if a bank's total investment in bank premises is within legal limits and all of its fixed assets are valued fairly, its total expenditures for or investment in premises and equipment may be inappropriate relative to earnings, capital, or the nature and volume of the bank's operations.

Bank Premises and Equipment Examination Objectives

Effective date May 1996

Section 2190.2

1. To determine if the policies, practices, procedures, and internal controls regarding bank premises and equipment are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine the adequacy and propriety of the bank's present and planned investment in bank premises.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Bank Premises and Equipment Examination Procedures

Effective date March 1984

Section 2190.3

1. If selected for implementation, complete or update the Bank Premises and Equipment section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors (see separate program) determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if appropriate corrections have been made.
4. Obtain a summary of changes in fixed asset and depreciation ledgers that have occurred since the previous examination. Also, balance each of the fixed asset subsidiary accounts to the appropriate general ledger control account.
5. Determine, by reference to excerpts of the minutes of meetings of the board of directors, that all major additions and disposals of fixed assets are properly documented.
6. Determine by observation and inquiry of appropriate management personnel, that the bank's books have been properly adjusted to reflect significant assets that are idle, abandoned, or useless.
7. In instances where bank premises are subject to lease, perform the following for:
 - a. Bank as lessee:
 - For each lease which has an initial lease period of more than one year, obtain from the bank:
 - Name of lessor.
 - Expiration date.
 - Required minimum annual payments.
 - Current status.
 - Renewable option provisions.
 - b. Bank as lessor:
 - Determine if the bank relies on rental income to contribute to payment of occupancy expenses and if that income is material. As a general guideline, rental income is considered material if it equals or exceeds 1 percent of total operating revenues.
 - If rental income is material, analyze the bank's potential exposure from:
 - Concentrations among lessees.
 - Impending expiration of major leases.
 - Lack of creditworthiness of lessee.
 - Non-compliance with lease terms.
8. Forward to the examiner assigned "Funds Management:"
 - a. The total minimum annual commitment under various lease agreements.
 - b. The dollar amount of any significant, future fixed asset expenditure(s).
9. Determine, by reference to appropriate workpapers (see "Insurance Coverage"), that fire and hazard insurance, in sufficient amounts, is in force.
10. Perform a limited test of the records to verify that depreciation methods are consistent with bank policy, prior years' calculations, generally accepted accounting principles, and applicable IRS laws.
11. Analyze the bank's investment in fixed assets and the annual expenditures required to carry them and determine their reasonableness relative to:
 - a. Present total capital structure.
 - b. Present annual earnings.
 - c. Projected future earnings.
 - d. Nature and volume of operations.
12. Test for compliance with the limitations set forth in section 24A of the Federal Reserve Act.
13. Review the following with appropriate management personnel or prepare a memo to other examiners for their use in reviewing with management:
 - a. Any internal control deficiencies.
 - b. Any policy deficiencies.
 - c. Any violations of law.
14. Review your findings with respect to the propriety and adequacy of present and projected investment in bank premises. In formulating your conclusion, consider:
 - a. Size of bank.
 - b. Cash flow forecasts.
 - c. Existing fixed asset investments.
 - d. Anticipated growth potential.

- e. Bank programs to maintain assets at their most optimal use.
 - f. The policy used to establish the useful life of each asset.
 - g. Control of inventory procedures.
 - h. Systems used to record all asset purchases, sales and retirements between physical inventories.
- 15. Prepare comments regarding deficiencies or violations of law for inclusion in the examination report.
 - 16. Prepare the appropriate write-ups for the report of examination.
 - 17. Update workpapers with any information that will facilitate future examinations.

Bank Premises and Equipment Internal Control Questionnaire

Effective date March 1984

Section 2190.4

Review the bank's internal controls, policies, practices and procedures over additions, sales and disposals and depreciation of bank premises and equipment. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

CUSTODY OF PROPERTY

- *1. Do the bank's procedures preclude persons who have access to property from having "sole custody of property," in that:
 - a. Its physical character or use would make any unauthorized disposal readily apparent?
 - b. Inventory control methods sufficiently limit accessibility?

ADDITIONS, SALES, AND DISPOSALS

- 2. Is the addition, sale or disposal of property approved by the signature of an officer who does not also control the related disbursement or receipt of funds?
- 3. Is board of directors' approval required for all major additions, sales or disposals of property (if so, indicate the amount that constitutes a major addition, sale or disposal \$_____)?
- *4. Is the preparation, addition and posting of property additions, sales and disposals records, if any, performed and/or adequately reviewed by persons who do not also have sole custody of property?
- *5. Are any property additions, sales and disposals records, balanced, at least annually, to the appropriate general controls by persons who do not also have sole custody of property?
- 6. Are the bank's procedures such that all additions are reviewed to determine whether they represent replacements and that any replaced items are cleared from the accounts?

- 7. Do the bank's procedures provide for signed receipts for removal of equipment?
- *8. Do the bank's policies cover procedures for selecting a seller, servicer, insurer, or purchaser of major assets (through competitive bidding, etc.), to prevent any possibility of conflict of interest or self-dealing?
- 9. Do the review procedures provide for appraisal of an asset to determine the propriety of the proposed purchase or sales price?

DEPRECIATION

- *10. Is the preparation, addition and posting of periodic depreciation records performed and adequately reviewed by persons who do not also have sole custody of property?
- 11. Do the bank's procedures require that regular charges be made for depreciation expense?
- *12. Are the subsidiary depreciation records balanced, at least annually, to the appropriate general controls by persons who do not also have sole custody of property?

PROPERTY RECORDS

- *13. Are subsidiary property records posted by persons who do not also have sole custody of property?
- *14. Are the subsidiary property records balanced, at least annually, to the appropriate general ledger accounts by persons who do not also have sole custody of property?

BANK AS LESSOR (BANK PREMISES AND BANK-RELATED EQUIPMENT ONLY)

- *15. Do policies provide for division of the duties involved in billing and collection of rental payments?
- 16. Are the lease agreements subject to the same direct verification program applied to other bank assets and liabilities?

17. Are credit checks performed on potential lessees?
18. Do policies provide for a periodic review of lessees for undue concentrations of affiliated or related concerns?

BANK AS LESSEE (BANK PREMISES AND BANK-RELATED EQUIPMENT ONLY)

19. Does the bank have a clearly defined method of determining whether fixed assets should be owned or leased, and is supporting documentation maintained by the bank?
20. Are procedures in effect to determine whether a lease is a "capital" or an "operating" lease as defined by the generally accepted accounting principles?
21. Do the bank's operating procedures provide, on "capital" leases, that the amount capitalized is computed by more than one individual and/or reviewed by an independent party?

OTHER PROCEDURES

- *22. Is the physical existence of bank equipment periodically checked or tested, such as by a physical inventory, and are any

- differences from property records investigated by persons who do not also have sole custody of property?
23. Do the bank's procedures provide for serial numbering of equipment?
24. Are the bank's policies and procedures on property in written form?
25. Is the benefit of expert tax advice obtained prior to final decision-making on significant transactions involving fixed assets?
- *26. Does the bank maintain separate property files which include invoices (including settlement sheets and bills of sale, as necessary), titles (on real estate, vehicles, etc.) and other pertinent ownership data as part of the required documentation?

CONCLUSIONS

27. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant additional deficiencies that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
28. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

A state member bank's authority to hold real estate is governed by its state laws. A bank is permitted to include owned real estate in its premises account if the real estate serves as premises for operations or is intended to be used as premises. In addition, a bank may hold other real estate owned (OREO), which is defined below. State laws dictate the terms and conditions under which state-chartered banks may acquire and hold OREO.

Definition

Bank holdings of OREO arise from the following events:

- the bank purchases real estate at a sale under judgment, decree, or mortgage when the property secured debts previously contracted;
- a borrower conveys real estate to the bank to fully or partially satisfy a debt previously contracted (acceptance of deed in lieu of foreclosure);
- real estate is obtained in exchange for future advances to an existing borrower to fully or partially satisfy debts previously contracted;
- a bank takes possession (although not necessarily title) of collateral in a collateral-dependent real estate loan (i.e., an in-substance foreclosure);
- a bank has relocated its premises and has not yet sold the old premises;
- a bank abandons plans to use real estate as premises for future expansion.

Environmental Liability

Under federal and state environmental liability statutes, a bank may be liable for cleaning up hazardous substance contamination of other real estate owned. In some cases, the liability may arise before the bank takes title to a borrower's collateral real estate. A property's transition from collateral to bank ownership may take an extended period of time. As the financial problems facing a borrower worsen, a bank may become more involved in managing a company or property. Such involvement may become extensive enough that the bank is deemed to have met substantially all ownership criteria, the

absence of a clear title in the bank's name notwithstanding. Generally, the more involved bank management is in such activity, the greater the bank's exposure to any future clean-up costs assessed in connection with the property. A more thorough discussion of environmental liability can be found in section 2040.1, "Loan Portfolio Management," of this manual, under the subsection "Other Lending Concerns."

Transfer of Assets to Other Real Estate Owned

Real estate assets transferred to OREO should be accounted for individually on the date of transfer, at the lower of the recorded investment in the loan or fair value. The recorded investment in a loan is the unpaid balance, increased by accrued and uncollected interest, unamortized premium, finance charges, and loan-acquisition costs, if any, and decreased by previous write-downs and unamortized discount, if any. Any excess of the recorded investment in the loan over the property's fair value must be charged against the allowance for loan and lease losses immediately upon the property's transfer to OREO. Legal fees should generally be charged to expenses unless payment of the fees is for the purpose of enhancing the property's value (for example, obtaining a zoning variance).

Establishing a valuation allowance for estimated selling expenses may also be necessary upon transferring each property to OREO to comply with AICPA Statement of Position 92-3, Accounting for Foreclosed Assets. According to this pronouncement, the value of OREO properties must be reported at the lesser of the fair value minus estimated selling expenses or the recorded investment in the loan. For example, if the recorded investment of the property is \$125, the fair value is \$100, and the estimated selling expenses are \$6, the carrying value for this property would be \$94. The difference between the recorded investment and the fair value (\$25) would be charged to the allowance for loan and lease losses at the time the property was transferred to OREO. In addition, since the bank estimated it would incur selling expenses of \$6, a valuation reserve for this amount must be established. The net of the fair value and this valuation reserve for selling expenses is called

the “net realizable value,” and in this example would be \$94. Changes to this valuation reserve should be handled as outlined in the subsection “Accounting for Subsequent Changes in Market Value.”

On the other hand, if the recorded investment in the property is \$250, the fair value is \$300, and the estimated selling expenses are \$18, the carrying value of this property would be \$250 (the lesser of the recorded investment or the fair value). In this example, a valuation reserve for estimated selling expenses is unnecessary, as netting the estimated selling expenses (\$18) from the fair value (\$300) would yield a net realizable value of \$282.

The transfer of a loan to OREO is considered to be a “transaction involving an existing extension of credit” under 12 CFR 225.63(a)(7) and is exempt from Regulation Y’s appraisal requirement. However, under 12 CFR 225.63(b), the bank must obtain an “appropriate evaluation” of the real estate that is “consistent with safe and sound banking practices” to establish the carrying value of the OREO. A bank may elect, but is not required, to obtain an appraisal to serve as the “appropriate evaluation.” Until the evaluation is available, a bank should rely on its best estimate of the property’s value to establish the carrying value. The federal banking agencies have issued appraisal and evaluation guidelines to provide guidance to examining personnel and federally regulated institutions regarding prudent appraisal and evaluation policies, procedures, practices, and standards.

The appraisal or evaluation should provide an estimate of the parcel’s market value. Refer to section 4140.1, “Real Estate Appraisals and Evaluations,” for a definition of market value. Generally, market value and fair value are equivalent when an active market exists for a property. In discussing OREO, it is common practice to use the terms “fair value” and “market value” interchangeably. When no active market exists for a property, the accounting industry’s definition of fair value applies because the appraiser cannot determine a market value. The accounting industry definition requires the appraisal or evaluation to contain an estimate of the property’s fair value based on a forecast of expected cash flows, discounted at a rate commensurate with the risks involved. The cash flow estimate should include projected revenues and the costs of ownership, development, operation, marketing, and sale. In such situations, the appraiser or evaluator should fully describe the

definition of value and the market conditions that have been considered in estimating the property’s value.

When a bank acquires a property through foreclosure as a junior lienholder, whether or not the first lien has been assumed, the fair value of the property should be recorded as an asset and the senior debt as a liability. The senior debt should not be netted against the assets. Any excess of the recorded investment of the property over the fair value should be charged off, as the recorded investment may not exceed the sum of the junior and senior debt. Payments made on senior debt should be accounted for by reducing both the asset and the liability, and interest that accrues on the senior debt after foreclosure should be recognized as interest expense.

For regulatory reporting purposes, a collateral-dependent real estate loan should be transferred to OREO only when the lender has taken possession (title) of the collateral. Nevertheless, to facilitate administration and tracking, banks may choose to include a collateral-dependent real estate loan in the OREO portfolio as potential or probable OREO. Examiners should review these loans using the same criteria applied to OREO.

Property the bank originally acquired for future use as premises, but for which plans have been abandoned, and property that formerly served as bank premises, should be accounted for at the lower of book value or fair value on the date of transfer to OREO. Any excess of book value over fair value should be charged to other operating expense during the current period.

Carrying Value of Other Real Estate Owned

A bank should have a policy for periodically determining the fair value of its OREO property by obtaining an appraisal or an evaluation, as appropriate. While the Federal Reserve has no prescribed time frame for when a bank should reappraise or reevaluate its OREO property, the bank’s policy should conform to state law, if applicable, and address the volatility of the local real estate market. Specifically, a bank should determine if there have been material changes to the underlying assumptions in the appraisal or valuation that have affected the original estimate of value. If material changes have occurred, the bank should obtain a new appraisal or evalua-

tion based on assumptions that reflect the changed conditions.

Accounting for Subsequent Changes in Market Value

Charges for subsequent declines in the fair value of OREO property should never be posted to the allowance for loan and lease losses. If an appraisal or evaluation indicates a subsequent decline in the fair value of an OREO property, the loss in value should be recognized by a charge to earnings. Banks should attempt to determine whether a property's decline in value is temporary or permanent, taking into consideration each property's characteristics and existing market dynamics. The preferred treatment for permanent losses in value is the direct write-down method, in which the charge to expenses is offset by a reduction in the OREO property's carrying value. If the reduction in value is deemed temporary, the charge to earnings may be offset by establishing a valuation allowance specifically for that property. In the event of subsequent appreciation in the value of an OREO property, the increase can only be reflected by reducing this valuation allowance or recognizing a gain upon disposition, but never by a direct write-up of the property's value. A change to the valuation allowance should be offset with a debit or credit to expense in the period in which it occurs.

In addition to the preceding treatment of the write-down in the OREO value, the previous subsection "Transfer of Assets to Other Real Estate Owned" discusses setting up a valuation allowance for estimated selling expenses associated with the sale of the other real estate. The balance of this valuation reserve can fluctuate based on changes in the fair value of the property held, but it can never be less than zero. The following examples are presented to illustrate the treatment that subsequent depreciation and appreciation would have on OREO properties.

Depreciation in OREO Property Value

Assume a bank has written down its initial recorded investment in an OREO property from \$125 to its fair value of \$100. Since the fair value of the property was less than the initial

recorded investment, a valuation reserve for estimated selling expenses was established. In this example, assume these to be \$6. Accordingly, the net realizable value was \$94 (\$100 minus \$6). Next, assume a new appraisal indicates a fair value of \$90, reducing the estimated selling expenses to \$5. Although the bank must expense the depreciation in the fair value (\$10), the valuation reserve for selling expenses would be reduced by the difference in the estimate of the selling expenses (\$1). Given this scenario, the "adjusted" net realizable value would be \$85 (\$90 minus \$5).

Appreciation in OREO Property Value

Assume a bank has written down its recorded investment in an OREO property to its fair value of \$100. Since the fair value of the property was less than the original recorded investment, an estimated valuation reserve for selling expenses of \$6 was established. Accordingly, the net realizable value was \$94. A new appraisal indicates an increase in the fair value of the property to \$110, with selling expenses now estimated at \$7. As a result, the net realizable value is now \$103. Given that the new net realizable value is greater than the recorded investment of \$100, the selling expense valuation reserve is no longer necessary and the \$6 can be reversed to income. Notwithstanding the property's increased fair value, the recorded investment value cannot be increased above \$100. The valuation reserve for selling expenses can never be less than zero, thus prohibiting an increase in the value of the property above the recorded investment.

Accounting for Income and Expense

Gross revenue from other real estate owned should be recognized in the period in which it is earned. Direct costs incurred in connection with holding an OREO property, including legal fees, real estate taxes, depreciation, and direct write-downs, should be charged to expense when incurred.

A bank can expend funds to develop and improve OREO when it appears reasonable to expect that any shortfall between the property's fair value and the bank's recorded book value will be reduced by an amount equal to or greater

than the expenditure. Such expenditures should not be used for speculation in real estate. The economic assumptions relating to the bank's decision to improve a particular OREO property should be well documented. Any payments for developing or improving OREO property are treated as capital expenditures and should be reflected by increasing the property's carrying value.

Disposition of Other Real Estate Owned

OREO property must be disposed of within any holding period established by state law and, in any case, as soon as it is prudent and reasonable. Banks should maintain documentation reflecting their efforts to dispose of OREO property, which should include—

- a record of inquiries and offers made by potential buyers
- methods used in advertising the property for sale whether by the bank or its agent
- other information reflecting sales efforts

The sale or disposition of OREO property is considered a real estate-related financial transaction under the Board's appraisal regulation. A sale or disposition of an OREO property that qualifies as a federally related transaction under the regulation requires an appraisal conforming to the regulation. A sale or disposition that does not qualify as a federally-related transaction nonetheless must comply with the regulation by having an appropriate evaluation of the real estate, that is consistent with safe and sound banking practices.

The bank should promptly dispose of OREO if it can recover the amount of its original loan plus additional advances and other costs related to the loan or the OREO property before the end of the legal holding period. The holding period generally begins on the date that legal title to the property is transferred to the bank, except for real estate that has become OREO because the bank no longer contemplates using it as its premises. The holding period for this type of OREO property begins on the day that plans for future use are formally terminated. Some states require OREO property to be written off or depreciated on a scheduled basis, or to be written off at the end of a specified time period.

The bank should determine whether such requirements exist and comply with them.

Accounting for the Sale of Other Real Estate Owned

Gains and losses resulting from a sale of OREO properties for cash must be recognized immediately. A gain resulting from a sale in which the bank provides financing should be accounted for under the standards described in Statement of Financial Accounting Standards 66 (SFAS 66).

SFAS 66 recognizes that differences in terms of the sale and in selling procedures lead to different profit recognition criteria and methods. Banks may facilitate the sale of foreclosed real estate by requiring little or no down payment, or by offering loans with favorable terms. Profit shall only be recognized in full when the collectibility of the sales price is reasonably ensured and when the seller is not obligated to perform significant activities after the sale to earn the profit. Unless both conditions exist, recognition of all or part of the profit shall be deferred. Collectibility of the sale price of OREO property is demonstrated when the buyer's investment is sufficient to ensure that the buyer will be motivated to honor his or her obligation to the seller rather than lose the investment. Collectibility shall also be assessed by considering factors such as the credit standing of the buyer, age and location of the property, and adequacy of cash flow from the property.

The practice of recognizing all profit from the sale of bank-financed OREO at the time of the sale is referred to as the full-accrual method. A bank shall not recognize profit using this method until all of the following general criteria are met:

- a sale is consummated;
- the buyer's initial and continuing investments adequately demonstrate a commitment to pay for the property;
- the bank's loan is not subject to future subordination;
- the bank has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale, and it has no substantial continuing involvement in the property.

A sale will not be considered consummated until the parties are bound by the terms of the

contract, all consideration has been exchanged, and all conditions precedent to closing have been performed.

Initial investment, as defined by SFAS 66, includes only cash down payments, notes supported by irrevocable letters of credit from an independent lending institution, payments by the buyer to third parties to reduce existing debt on the property, and other amounts paid by the buyer that are part of the sale price. In these situations, SFAS 66 requires that profit on the sale be deferred until a minimum down payment has been received and annual payments equal those for a loan for a similar type of property with a customary amortization period. The amount of down payment required varies by category of property: land, 20–25 percent; commercial and industrial, 10–25 percent; multifamily residential, 10–25 percent; and single-family residential, 5–10 percent. Ranges within these categories are defined further in the statement.

Continuing investment requires the buyer to be contractually obligated to make level annual payments on his or her total debt for the purchase price of the property. This level annual payment must be able to service principal and interest payments amortized for no more than 20 years for raw land, and for no more than the customary amortization term for a first-mortgage loan by an independent lending institution for other types of real estate.

If a bank finances the sale of foreclosed property it owns with a loan at less than current market interest rates or noncustomary amortization terms, generally accepted accounting principles require that the loan be discounted to bring its yield to a market rate, using a customary amortization schedule. This discount will either increase the loss or reduce the gain resulting from the transaction. Interest income is then generally recognized at a constant yield over the life of the loan.

If a transaction does not qualify for the full-accrual accounting method, SFAS 66 identifies alternative methods of accounting for sales of OREO property as described below.

The Installment Method

This method is used when the buyer's down payment is insufficient to allow the full-accrual method, but when recovery of the cost of the property is reasonably assured if the buyer defaults. The installment method recognizes the

sale of the property and the booking of the corresponding loan, although profits from the sale are recognized only as the bank receives payments from the buyer. Under this method, interest income is recognized on an accrual basis, when appropriate.

Since default on the loan usually results in the seller (the bank) reacquiring the real estate, the bank is reasonably assured that it will be able to recover its costs with a relatively small down payment. Cost recovery is especially likely when loans are made to buyers who have verifiable net worth, liquid assets, and income levels adequate to service the loan. Reasonable assurance of cost recovery also may be achieved when the buyer pledges adequate additional collateral.

The Cost-Recovery Method

Dispositions of OREO that do not qualify for either the full accrual or installment methods are sometimes accounted for using the cost-recovery method. This method recognizes the sale of the property and the booking of the corresponding loan, but all income recognition is deferred. Principal payments are applied by reducing the loan balance, and interest payments are accounted for by increasing the unrecognized gross profit. No profit or interest income is recognized until either the buyer's aggregate payments exceed the recorded amount of the loan or a change to another accounting method (for example, the installment method) is appropriate. Consequently, the loan is maintained on nonaccrual status while this method is being used.

The Reduced Profit Method

This method is used in certain situations when the bank receives an adequate down payment, but the loan amortization schedule does not meet the requirements for use of the full-accrual method. The bank again recognizes the sale of the property and the booking of the corresponding loan but, as under the installment method, profits from the sale are recognized only as the bank receives payments from the buyer. Since sales with adequate down payments generally are not structured with inadequate loan-amortization schedules, this method is seldom used.

The Deposit Method

This method is used when a sale of OREO has not been consummated. It also may be used for dispositions that could be accounted for under the cost-recovery method. Under this method, a sale is not recorded, so the asset continues to be reported as OREO. Further, no profit or interest income is recognized. Payments received from the buyer are reported as a liability until the use of one of the other methods is appropriate.

Banks may promote the sale of foreclosed real estate by offering nonrecourse financing to buyers. These loans should be made under the same credit terms and underwriting standards the bank employs for its regular lending activity. Financing arrangements associated with this type of transaction are subject to the accounting treatment discussed above.

Bank records should (1) indicate the accounting method used for each sale of OREO, (2) support the choice of the method selected, and (3) sufficiently document that the institution is correctly reporting associated notes receivable, as either loans or OREO property, with valuation allowances as appropriate.

Classification of Other Real Estate Owned

The examiner should generally evaluate the quality of each OREO property to determine if classification is appropriate. OREO usually should be considered a problem asset, even when it is carried at or below its appraised value. Despite the apparent adequacy of the fair or market value, the bank's acquisition of OREO through foreclosure usually indicates a lack of demand. As time passes, the lack of demand can become more apparent, and the value of the real estate can become increasingly questionable.

When evaluating the OREO property for classification purposes, the examiner must consider the property's market value, whether it is being held in conformance with state law, and

whether it is being disposed of according to the bank's plan. The amount of an OREO property subject to classification is the carrying value of the property, net of any specific valuation allowance. The existence of a specific valuation allowance does not preclude adverse classification of OREO. The examiner should review all types of OREO for classification purposes, including sales that fail to meet the standards required for the full-accrual method of accounting. When the bank provides financing, the examiner should determine whether it is prudently underwritten.

The examiner should review all relevant factors to determine the quality and risk of the OREO property and the degree of probability that its carrying value will be realized. Some factors the examiner should consider include—

- the property's carrying value relative to its market value (including the date of any appraisal or evaluation relative to changes in market conditions), the bank's asking price, and offers received;
- the source and quality of the appraisal or evaluation, including the reasonableness of assumptions, such as projected cash flow for commercial properties;
- the length of time a property has been on the market and local market conditions for the type of property involved, such as history and trend of recent sales for comparable properties;
- bank management's ability and track record in liquidating other real estate and assets acquired in satisfaction of debts previously contracted;
- income and expenses generated by the property and other economic factors affecting the probability of loss exposure;
- the manner in which the bank intends to dispose of the property;
- other pertinent factors, including property-title problems, statutory redemption privileges, pending changes in the property's zoning, environmental hazards, other liens, tax status, and insurance.

Other Real Estate Owned

Examination Objectives

Effective date May 1995

Section 2200.2

1. To determine if the policies, practices, procedures, and internal controls regarding other real estate owned are adequate.
2. To determine that bank officers and employees are operating in conformance with the established guidelines.
3. To evaluate the validity and quality of all other real estate owned.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with laws and regulations.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

Other Real Estate Owned

Examination Procedures

Effective date March 1984

Section 2200.3

1. If selected for implementation, complete the Other Real Estate Owned section of the Internal Control Questionnaire.
2. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures and obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors and determine if appropriate corrections have been made.
3. Obtain a list of other real estate owned and agree total to general ledger.
4. Review the other real estate owned account to determine if any property has been disposed of since the prior examination and:
 - a. If so, determine that:
 - The bank accepted written bids for the property.
 - The bids are maintained on file.
 - There is justification for accepting a lower bid if the bank did not accept the highest one.
 - b. Investigate any insider transactions.
5. Test compliance with applicable laws and regulations:
 - a. Determine that other real estate owned is held in accordance with the provisions of applicable state law.
 - b. Determine if other real estate is being amortized or written off in compliance with applicable state law.
 - c. Consult with the examiners assigned to “Loan Portfolio Management,” “Other Assets and Other Liabilities,” “Reserve for Possible Loan Losses” and “Bank Premises and Equipment” to determine if the situation holds real estate acquired as salvage on uncollectible loans, abandoned bank premises or property originally purchased for future expansion, which is no longer intended for such usage.
 - d. Review the details of all other real estate owned transactions to determine that:
 - The property has been booked at its fair value.
 - The documentation reflects the bank’s persistent and diligent effort to dispose of the property.
 - If the bank has made expenditures to improve and develop other real estate owned, proper documentation is in the file.
 - Real estate that is former banking premises has been accounted for as other real estate owned since the date of abandonment.
 - Such property is disposed of in accordance with state law.
6. Review parcels of other real estate owned with appropriate management personnel and, if justified, assign appropriate classification. Classification comments should include:
 - a. Description of property.
 - b. How real estate was acquired.
 - c. Amount and date of appraisal.
 - d. Amount of any offers and bank’s asking price.
 - e. Other circumstances pertinent to the classification.
7. Review the following with appropriate management personnel or prepare a memo to other examiners for their use in reviewing with management:
 - a. Internal control exceptions and deficiencies in, or non-compliance with, written policies, practices and procedures.
 - b. Uncorrected audit deficiencies.
 - c. Violations of law.
8. Prepare comments in appropriate report form for all:
 - a. Criticized other real estate owned.
 - b. Deficiencies noted.
 - c. Violations of law.
9. Update the workpapers with any information that will facilitate future examinations.

Other Real Estate Owned Internal Control Questionnaire

Effective date March 1984

Section 2200.4

Review the bank's internal controls, policies, practices and procedures for other real estate owned. The bank's systems should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

RECORDS

1. Is the preparation, addition, and posting of subsidiary other real estate owned records performed and/or tested by persons who do not have direct, physical or accounting, control of those assets?
2. Are the subsidiary other real estate owned records balanced at least annually to the appropriate general ledger accounts by persons who do not have direct, physical or accounting, control of those assets?
3. Is the posting to the general ledger other real estate owned accounts approved, prior to posting, by persons who do not have direct, physical or accounting, control of those assets?
4. Are supporting documents maintained for all entries to other real estate owned accounts?
5. Are acquisitions and disposals of other real estate owned reported to the board of directors or its designated committee?

6. Does the bank maintain insurance coverage on other real estate owned including liability coverage where necessary?
7. Are all parcels of other real estate owned reviewed at least annually for:
 - a. Current appraisal or certification?
 - b. Documentation inquiries and offers?
 - c. Documented sales efforts?
 - d. Evidence of the prudence of additional advances?

OTHER PROCEDURES

8. Are the bank's policies and procedures relating to the real estate owned in writing?

CONCLUSION

9. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
10. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

OTHER ASSETS

The term *other assets*, as used in this section, includes all balance-sheet asset accounts not covered specifically in other areas of the examination. Often, such accounts may be quite insignificant in the overall financial condition of the bank. However, significant subquality assets may be uncovered in banks lacking proper internal controls and procedures.

In many banks, other asset accounts are maintained on the daily statement but must be reflected in a specific asset category for reporting. Schedule RC-F of the Consolidated Report of Condition lists the specific accounts classified as “other assets” and includes a catchall heading of “other.” Certain accounts in that other asset account, such as securities borrowed, are examined using the procedures described in the appropriate section of this manual.

Types of Other Asset Accounts

Types of other assets frequently found in banks are the various temporary holding accounts, such as suspense, interoffice, teller, transit, and bookkeeping differences having debit balances. Those accounts should be used only for temporary recording until the offsetting entry is received or fully identified and posted to the proper account. A bank should have written internal control procedures to ensure that difference accounts are reconciled and closed out on a timely basis. Nothing should be allowed to remain in those accounts for any significant length of time—usually no more than a few business days. All difference accounts should be closed out at least quarterly.

General categories of other assets common to banks are accrued interest receivables (on loans, debt securities, and other interest-bearing assets) and other types of income earned but not yet collected (income derived from an asset that is recognized but not yet collected or received on the reporting date), net deferred tax assets (deferred tax assets less deferred tax liabilities that result in a debit balance for a particular tax jurisdiction), interest-only strips receivables for mortgage loans and other financial assets, pre-paid expenses (cash outlays for goods and services, the benefits of which will be realized in

future periods), equity securities (cost of) that do not have readily determinable fair values (including Federal Reserve stock and bankers’ bank stock), the cash surrender value of bank-owned life insurance (BOLI), and other nonsecurity or other interest-only strips receivables.

An interest-only strip receivable is the contractual right to receive some or all of the interest due on a bond, mortgage loan, collateralized mortgage obligation, or other interest-bearing financial asset. This includes, for example, the contractual rights to future interest cash flows that exceed contractually specified servicing fees on financial assets that have been sold.

The other assets category also consists of unique and unusual transactions that are not appropriate to include in other line items of a bank’s balance sheet. An unlimited number of possible account titles could be included in this category, such as redeemed food stamps, art objects, antiques, and coin and bullion. Regardless, the examiner must design specific procedures for review and testing to fit the particular account and situation and must document the scope of the review in the workpapers.

Examination Review of Other Assets

Examiners assigned to “other assets” must obtain the detailed breakdown of these accounts when they are reported on the bank’s statement of condition and when they are so designated for the purposes of reporting on the bank’s Call Report. When the account can best be examined by examiners assigned to other areas of the bank, the detailed breakdown of the accounts should be furnished to those examiners. The remaining accounts should be reviewed and evaluated by examiners assigned to this section. The major factor in deciding which accounts are to be reviewed are materiality and the volume of transactions flowing through the account.

With regard to materiality, the examiner should evaluate whether to analyze the nature and quality of each individual item, on the basis of its impact on the overall soundness of the bank or the quality of the bank’s earnings. Therefore, the examiner needs to verify—

- the existence of the asset;
- the proper valuation of the asset;

- that the asset is properly classified, described, and disclosed in the financial statements (including the existence of any liens);
- that the asset is being properly amortized on a consistent basis over the estimated period of benefit;
- that any sales of assets, including the recognition of gains and losses, have been properly recognized; and
- the adequacy of the accounting and disposition controls for, as well as the quality of, the asset.

With regard to transaction volume, the examiner should evaluate whether any accounts with small balances have an unusually high level of transaction volume. Therefore, it is important that the examiner verify that—

- the account has a valid business purpose,
- the account is reconciled on a regular basis, and
- the accounting controls are adequate.

An examiner should authenticate the existence of the selected assets by ensuring that their supporting documentation is adequate. Also, the examiner should verify that ownership of the asset rests with the bank. (In the case of organizational costs borne by the bank for the formation of a holding company, those costs, and the related ownership rights in the capitalized asset, should more properly be borne by the ownership interests and should not be recorded as assets of the bank.)

Proper valuation and reporting of other asset accounts is another potential area of concern for the examiner. Assets are generally acquired through purchase, trade, repossession, prepayment of expenses, or accrual of income. Generally, assets purchased, traded, or repossessed are transferred at their fair market value. Prepaid expenses and income accrued are booked at cost. An examiner should be particularly alert in identifying those assets that lose value over time to ensure that they are appropriately depreciated or amortized. All intangible assets should be regularly amortized, and management should have a system in place to confirm the valuation of the remaining book balance of the intangible assets.

The examiner needs to ensure that the controls concerning other assets protect the bank's ownership rights, the accounts are properly valued and accurately reported, and control

activities are monitored regularly by management. A bank with good control and review procedures will periodically charge off all uncollectible or unreconcilable items. However, the examiner must frequently go beyond the general ledger control accounts and scan the underlying subsidiary ledgers to ensure that posting errors and the common practice of netting certain accounts against each other do not cause significant balances to go unnoticed because of lack of proper detail.

Deferred Tax Assets

For verifying compliance with the limits found in the risk-based capital guidelines, examiners need to review the net deferred tax assets (deferred tax assets less deferred tax liabilities) that a bank reports in its regulatory reports and the amount of limited deferred tax assets that are not deducted from a bank's tier 1 capital. The net deferred taxes result from the application of an asset and liability approach for financial-accounting and reporting for income taxes. Net deferred taxes (net deferred tax assets) generally arise from the tax effects of reporting income or expense charges in one period for financial-statement purposes and in another period for tax purposes. This effect, known as a temporary difference, is at times sizable. Tax laws often differ from the recognition and measurement requirements of financial accounting standards. Differences can arise between (1) the amount of taxable income and pretax financial income for a year and (2) the tax bases of assets or liabilities and their reported amounts in financial statements. Charges that result in a significant deferred tax asset are often caused by loan-loss provisions exceeding bad debt deductions for tax purposes in a given period. While banks are permitted to carry deferred income tax assets on their reports of condition, they are limited by generally accepted accounting principles (GAAP) to the extent these items can be carried.

The Financial Accounting Standards Board's (FASB) Statement No. 109 (FAS 109), "Accounting for Income Taxes," establishes procedures to (1) measure deferred tax assets and liabilities using a tax-rate convention and (2) assess whether a valuation allowance should be established for deferred tax assets. Enacted tax laws and rates are considered in determining the applicable tax rate and in assessing the need for

a valuation allowance. FAS 109 was to be adopted by banks as of January 1, 1993, or the beginning of their first fiscal year thereafter, if later.

FAS 109 requires a deferred tax asset to be recognized for all temporary differences that will result in deductible amounts in future years and for tax credit carryforwards. For example, a temporary difference may be created between the reported amount and the tax basis of a liability for estimated expenses if, for tax purposes, those estimated expenses are not deductible until a future year. Settlement of that liability will result in tax deductions in future years, and a deferred tax asset is recognized in the current year for the reduction in taxes payable in future years. A valuation allowance is recognized (deducted from the amount of the deferred tax asset) if, based on the weight of available evidence, it is *likely* that some or all of the deferred tax asset will not be realized.

Deferred Tax Liabilities

A deferred tax liability is recognized for temporary differences that will result in taxable amounts in future years. Deferred tax liabilities that may be related to a particular tax jurisdiction (for example, federal, state, or local) may be offset against each other for reporting purposes. A resulting debit balance is included in “other assets” on the bank Call Report and reported in Schedule RC-F; a resulting credit balance is included in “other liabilities” on the bank Call Report and reported in Schedule RC-G. A bank may report a net deferred tax debit (or asset) for one tax jurisdiction (for example, federal taxes) and also report a net deferred tax credit (or liability) for another tax jurisdiction (for example, state taxes).

Limitation on Deferred Tax Assets for Tier 1 Risk-Based Capital and Leverage Capital

The risk-based capital and leverage capital guidelines include a limit on the amount of certain deferred tax assets that may be included in (that is, not deducted from) tier 1 capital for determining the amount of the bank’s required risk-based and leverage capital levels. Certain deferred tax assets can only be realized if a bank earns taxable income in the future. Deferred tax

assets are limited, for regulatory capital purposes, to (1) the amount that the bank expects to realize within one year of the quarter-end report date (based on its projections of future taxable income for that year) or (2) 10 percent of tier 1 capital, whichever is less. The reported amount of deferred tax assets, net of any valuation allowance for deferred tax assets, in excess of the lesser of these two amounts is to be deducted from a bank’s core capital elements in determining tier 1 capital. See section 3020.1 for more detailed information on how to determine the capital composition and limitation on deferred tax assets.

Bank-Owned Life Insurance to Be Included in Other Assets

FASB’s Technical Bulletin No. 85-4 (FTB 85-4), “Accounting for the Purchases of Life Insurance,” addresses the accounting for BOLI. “Other assets” are to include the amount of the assets that represent the cash surrender value of the insurance policy that is reported to the institution by the insurance carrier (less any applicable surrender charges not reflected by the insurance carrier in the reported cash surrender value that could be realized under the insurance contract) as of the balance-sheet date. Because there is no right of offset, an investment in BOLI is reported as an asset separately from any deferred compensation liability. BOLI is reported on the balance sheet of the bank Call Report as “other assets” and on its schedule RC-F as “all other assets—cash surrender value of life insurance.” (See SR-04-4 and SR-04-19.) (The net earnings (losses) on, or the net increases (decreases) in, the net cash surrender value of BOLI should be reported according to the bank Call Report instructions for the glossary and the income statement, Schedules RI and RI-E.)

OTHER LIABILITIES

The term *other liabilities* represents the bank’s authorized obligations. Other liabilities, as used in this section, include all balance-sheet liability accounts not covered specifically in other areas of the examination. The accounts often may be quite insignificant when compared with the overall size of the bank. In some banks, individual accounts are established for control pur-

poses and appear on the balance sheet as “other liabilities.” For reporting, however, these accounts must be assigned to specific liability categories or netted from related asset categories, as appropriate.

Schedule RC-G of the Consolidated Report of Condition lists the specific accounts classified as “other liabilities.” The schedule includes interest accrued and unpaid on deposits and other expenses that are accrued and unpaid (including accrued income taxes payable), net deferred tax liabilities, the allowance for credit losses on off-balance-sheet credit exposures, and all other liabilities. “All other liabilities” includes liability accounts such as accounts payable, deferred compensation liabilities, dividends that are declared but not yet payable, and derivatives with a negative fair value held for purposes other than trading.

As stated above, the “all other liabilities” term includes deferred compensation liabilities. This account is used to record the bank’s obligation under its deferred compensation agreements. Section 3015.1 discusses deferred compensation agreements in detail, both as to the nature and operation of the different types of agreements and the accounting standards and guidance that are applicable to those agreements—in particular, a revenue-neutral plan or an indexed retirement plan. (See also SR-04-4, SR-04-19, and the glossary entry for “deferred compensation agreements” in the bank Call Report instructions.)

Types of Other Liability Accounts

A general category of other liabilities common to banks is expenses accrued and unpaid. These accounts represent periodic charges to income based on anticipated or contractual payments of funds to be made at a later date. They include such items as interest on deposits, dividends, taxes, and expenses incurred in the normal course of business. There should be a correlation between the amount being accrued daily or monthly and the amount due on the stated or anticipated payment date.

Other liability accounts should be reviewed to determine that accounts, such as deferred taxes, are being properly recognized when there are temporary differences in the recognition of income and expenses between the books and the income tax returns. This review should also

determine that matters such as pending tax litigation, equipment contracts, and accounts payable have been properly recorded and are being discharged in accordance with their terms and requirements.

Various miscellaneous liabilities may be found in accounts, such as undisbursed loan funds, deferred credits, interoffice, suspense, and other titles denoting pending status. An unlimited number of possible items could be included. The review of these accounts should determine that they are used properly and that all such items are clearing in the normal course of business. Because of the variety of such accounts, the examiner must develop specific examination procedures to fit the particular account and situation.

Examination Review of Other Liabilities

Examiners assigned to “other liabilities” are responsible for obtaining the bank’s breakdown of these accounts and, when the accounts are to be examined under other sections, must ensure that examiners in charge of those sections receive the necessary information. The remaining accounts should be reviewed and evaluated by examiners assigned to this section.

The primary emphasis of examining other liabilities is to obtain reasonable assurance that (1) the liabilities represent the bank’s authorized obligations and (2) all contingencies and estimated current-period expenses that will be paid in future periods that should be accrued during the period have been accrued, classified, and described in accordance with GAAP, and the related disclosures are adequate. Another emphasis in examining this area should be the adequacy of the controls and procedures the bank employs to promptly record the amount of liability. Without proper management attention, these accounts may be advertently or inadvertently misstated. Unless properly supervised, these accounts may be used to conceal shortages that should be detected immediately. For instance, other liabilities may include fraudulent entries for suspense or interbranch accounts that could be rolled over every other day to avoid stale dates, causing shortages of any amount to be effectively concealed for indefinite periods of time.

Similar to “other assets,” other liability

accounts with small balances may be significant. Scanning account balances may disclose a recorded liability, but it does not aid in determining the accuracy of liability figures. Therefore, it is important to review the documented information obtained from examiners working with and reviewing the minutes of the board and

its committees. Responses from legal counsel handling litigation could also be important because this information might reveal a major understatement of liabilities. Determining accurate balances in other liability accounts requires an in-depth review of source documents or the other accounts in which the liability arose.

Other Assets and Other Liabilities

Examination Objectives

Effective date May 1993

Section 2210.2

1. To determine if policies, practices, procedures, and internal controls regarding “other assets” and “other liabilities” are adequate.
2. To determine that bank officers and employees are operating in conformance with established guidelines.
3. To evaluate the validity and quality of all “other assets.”
4. To determine that “other liabilities” are properly recorded.
5. To determine the scope and adequacy of the audit function.
6. To determine compliance with laws and regulations.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Other Assets and Other Liabilities

Examination Procedures

Effective date May 1993

Section 2210.3

1. Complete or update the Internal Control Questionnaire, if selected for implementation.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if appropriate corrections have been made.
4. Obtain from the examiner assigned "Examination Strategy" the list of "other assets" and "other liabilities" accounts.
5. Obtain a trial balance of "other assets" and "other liabilities" accounts, including a detailed listing of the interbank accounts and:
 - a. Agree or reconcile balances to department controls and general ledger.
 - b. Review reconciling items for reasonableness.
6. Scan the trial balances for:
 - a. Obvious misclassifications of accounts and, if any are noted, discuss reclassification with appropriate bank personnel and furnish a list to appropriate examining personnel.
 - b. Large, old, or unusual items and, if any are noted, perform additional procedures as deemed appropriate, being certain to appraise the quality of "other assets."
 - c. "Other assets" items that represent advances to related organizations, directors, officers, employees, or their interests, and if any are noted, inform the examiner assigned "Loan Portfolio Management."
7. Determine that amortizing "other assets" accounts are being amortized over a reasonable period correlating to their economic life.
8. If the bank has outstanding customer liability under letters of credit, obtain and forward a list of the names and amounts to the examiner assigned "Loan Portfolio Management."
9. Review the balance of any "other liabilities" owed to officers, directors, or their interests and investigate, by examining applicable supporting documentation, whether they have been used—
 - a. record unjustified amounts; or
 - b. record amounts for items unrelated to bank operations.
10. Develop, and note in the workpapers, any special programs considered necessary to properly analyze any remaining "other assets" or "other liabilities" account.
11. Test for compliance with applicable state laws and regulations.
12. For "other assets" items that are determined to be stale, abandoned, uncollectible, or carried in excess of estimated values, and for "other liabilities" items that are determined to be improperly stated, after consulting with the examiner-in-charge, request management to make the appropriate entries on the bank's books.
13. Prepare, in appropriate report form, and discuss with appropriate officer(s):
 - a. Violations of laws and regulations.
 - b. Criticized "other assets."
 - c. The adequacy of written policies relating to "other assets" and "other liabilities."
 - d. Recommended corrective action when policies, practices, or procedures are deficient.
14. Update the workpapers with any information that will facilitate future examinations.

Other Assets and Other Liabilities

Internal Control Questionnaire

Effective date May 1993

Section 2210.4

Review the bank's internal controls, policies, practices, and procedures concerning "other assets" and "other liabilities." The bank's systems should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

9. Are receivables reviewed at least quarterly for collectibility by someone other than the originator of the entry?
10. Is approval required to pay credit balances in receivable accounts?
11. Do credit entries to a receivables account, other than payments, require the approval of an officer independent of the entry preparation?

OTHER ASSETS

Policies and Procedures

1. Has the bank formulated written policies and procedures governing "other assets" accounts?

Records

2. Is the preparation of entries and posting of subsidiary "other assets" records performed or tested by persons who do not also have direct control, either physical or accounting, of the related assets?
3. Are the subsidiary "other assets" records, if any, balanced at least quarterly to the appropriate general ledger accounts by persons who do not also have direct control, either physical or accounting, of the related assets?
4. Is the posting of "other assets" accounts to the general ledger approved prior to posting by persons who do not also have direct control, either physical or accounting, of the related assets?
5. Are worksheets or other supporting records maintained to support prepaid expense amounts?
6. Are supporting documents maintained for all entries to "other assets"?
7. Are the items included in suspense accounts aged and reviewed for propriety regularly by responsible personnel?

Receivables

8. Are receivables billed at regular intervals? (If so, state frequency _____.)

Other Procedures

12. Does charge-off of a nonamortizing "other asset" initiate review of the item by a person not connected with entry authorization or posting?
13. Do review procedures, where applicable, provide for an appraisal of the asset to determine the propriety of the purchase or sale price?

Conclusion

14. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
15. Are internal controls adequate based on a composite evaluation, as evidenced by answers to the foregoing questions?

OTHER LIABILITIES

Policies and Procedures

1. Has the bank formulated written policies and procedures governing the "other liabilities" accounts?

Records

2. Does the bank maintain subsidiary records of items comprising "other liabilities"?

3. Is the preparation of entries and posting of subsidiary "other liabilities" records performed or tested by persons who do not also originate or control supporting data?
4. Are subsidiary records of "other liabilities" balanced at least monthly to appropriate general ledger accounts by persons who do not also originate or control supporting data?
5. Are the items included in suspense accounts aged and reviewed for propriety regularly by responsible personnel?
10. Are invoices and bills verified and approved by designated employees prior to payment?
11. Are procedures established to call attention, within the discount period, to invoices not yet paid?
12. Does the bank have a system of advising the board of directors of the acquisition and status of major "other liabilities" items?
13. Are all payroll tax liabilities agreed to appropriate tax returns and reviewed by an officer to ensure accuracy?

Other Procedures

6. Does the bank book obligations immediately on receipt of invoices or bills for services received?
7. If the bank uses a Federal Reserve deferred credit account, is the liability for incoming "Fed" cash letters booked immediately upon receipt?
8. Does the bank book dividends that have been declared but are not yet payable?
9. Are invoices and bills proved for accuracy prior to payment?

Conclusion

14. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
15. Are internal controls adequate based on a composite evaluation, as evidenced by answers to the foregoing questions?

Deposits are funds that customers place with a bank and that the bank is obligated to repay on demand, after a specific period of time or after expiration of some required notice period. Deposits are the primary funding source for most banks and, as a result, have a significant effect on a bank's liquidity. Banks use deposits in a variety of ways, primarily to fund loans and investments. Management should establish a procedure for determining the volatility and composition of the deposit structure to ensure that funds are employed profitably, while allowing for their potential withdrawal. Therefore, a bank's management should implement programs to retain and prudently expand the bank's deposit base.

Bankers place great significance on the deposit structure because favorable operating results depend, in part, on a core deposit base. Because of competition for funds, the need for most individuals and corporations to minimize idle funds, and the effect of disintermediation (the movement of deposits to other higher-yielding markets) on a bank's deposit base, bank management should adopt and implement a development and retention program for all types of deposits.

DEPOSIT DEVELOPMENT AND RETENTION PROGRAM

Important elements of the examination process are the review of a bank's deposit development and retention program and the methods used to determine the volatility and composition of the deposit structure. A bank's deposit development and retention program should include—

- a marketing strategy,
- projections of deposit structure and associated costs, and
- a formula for comparing results against projections.

To structure a deposit program properly, bank management must consider many factors, some of which include—

- the composition of the market-area economic base,
- the ability to employ deposits profitably,

- the adequacy of current operations (staffing and systems) and the location and size of banking quarters relative to the bank's volume of business,
- the degree of competition from banks and nonbank financial institutions and their programs to attract deposit customers, and
- the effects of the national economy and the monetary and fiscal policies of the federal government on the bank's service area.

The bank's size and the composition of its market determine how formal its deposit program should be. After a bank develops its deposit program, management must continue to monitor the above factors and correlate any findings to determine if adjustments are needed. The long-term success of any deposit program relates directly to the ability of management to make adjustments at the earliest possible time.

DEPOSIT STRUCTURE

Management should look not only at deposit growth but also at the nature of the deposit structure. To invest deposited funds properly in view of anticipated or potential withdrawals, management must be able to determine what percentage of the overall deposit structure is centered in core deposits, in fluctuating or seasonal deposits, and in volatile deposits. It is important that internal reports with information concerning the composition of the deposit structure be provided to management periodically. Management's lack of such knowledge could lead to an asset-liability mismatch, causing problems at a later date.

In analyzing the deposit structure, information gathered by the various examination procedures should be sufficient to allow the examiner to evaluate the composition of both volatile and core deposits. Ultimately, the examiner should be satisfied with management's efforts to plan for the bank's future.

Examiners must analyze the present and potential effect deposit accounts have on the financial condition of the bank, particularly with regard to the quality and scope of management's planning. The examiner's efforts should be directed to the various types of deposit accounts that the bank uses for its funding base. The

examiners assigned to the areas of funds management and to the analytical review of the bank's income and expenses should be informed of any significant change in interest-bearing deposit-account activity.

COST OF FUNDS

Interest paid on deposits is generally the largest expense to a bank. As a result, interest-bearing deposit accounts employed in a marginally profitable manner could have significant and lasting effects on bank earnings. The examiner should consider the following in evaluating the effect of interest-bearing deposit accounts on a bank's earnings:

- an estimated change in interest expense resulting from a change in interest rates on deposit accounts or a shift in funds from one type of account to another
- service-charge income
- projected operating costs
- changes in required reserves
- promotional and advertising costs
- the quality of management's planning

SPECIAL DEPOSIT-RELATED ISSUES

The examiner should keep the following issues in mind during an examination to ensure the bank is in compliance, where applicable.

Abandoned-Property Law

State abandoned-property laws generally are called escheat laws. Although escheat laws vary from state to state, they normally require a bank to remit the proceeds of any deposit account to the state treasurer when—

- the deposit account has been dormant for a certain number of years and
- the owner of the account cannot be located.

Service charges on dormant accounts should bear a direct relationship to the cost of servicing the accounts, which ensures that the charges are not excessive. A bank's board of directors (or a committee appointed by the board) should review

the basis on which service charges on dormant accounts are assessed and should document the review. There have been occasions when excessive servicing charges have resulted in no proceeds being remitted at the time the account became subject to escheat requirements. In these cases, courts have required banks to reimburse the state. (See also the "Dormant Accounts" discussion later in this section.)

Bank Secrecy Act

Examiners should be aware of the Bank Secrecy Act when examining the deposit area and should follow up on any unusual activities or arrangements noted. The act was implemented by the Treasury Department's Financial Recordkeeping and Reporting of Currency and Foreign Transactions Regulation. For further information, see the *Bank Secrecy Act Examination Manual* and section 208.63 of the Federal Reserve's Regulation H.

Banking Hours and Processing of Demand Deposits

The Board's Regulation CC (12 CFR 229), "Availability of Funds and Collection of Checks," and the Uniform Commercial Code (UCC) govern banking-day cutoff hours and the processing of deposits. A "banking day" is that part of a day on which an office of the bank is open to the public for carrying on substantially all of its banking functions. Saturdays, Sundays, and certain specified holidays are not banking days under Regulation CC, although such days might be banking days under the UCC if a bank is open for substantially all of its functions on those days.

Regulation CC requires a bank to make deposited funds available for withdrawal within a certain period after the banking day on which they are received. Cash deposits, wire transfers, and certain check deposits that pose little risk to the depository bank (such as Treasury checks and cashier's checks) generally are to be made available for withdrawal by the business day after the day of deposit. The time when the depository bank must make other check deposits available for withdrawal depends on whether the check is local or nonlocal to the depository bank. As of September 1, 1990, proceeds of local and

nonlocal checks must be available for withdrawal by the second and fifth business day following deposit, respectively. However, Regulation CC allows a bank to set, within certain limits, cutoff hours, after which the bank will deem funds to be received on the next banking day for purposes of calculating the availability date (12 CFR 229.19). Different cutoff-hour limits apply to different types of deposits.

For the purpose of allowing banks to process checks, the UCC provides that a bank may set a cutoff hour of 2 p.m. or later and that items received after that time will be considered received as of the next banking day (UCC section 4-108). Under both the UCC and Regulation CC, both the banking day on which a bank is deemed to have received a check and the cutoff hour affect the time frames within which a bank must send the check through the forward-collection and return processes.

A bank that fails to set its cutoff hour appropriately, does not make funds available within the appropriate time frames, or processes checks in an untimely manner may be subject to civil liability for not performing its duties in accordance with various provisions of Regulation CC and the UCC.

Banking Accounts for Foreign Governments, Embassies, and Political Figures

On June 15, 2004, an interagency advisory concerning the embassy banking business and related banking matters was issued by the federal banking and thrift agencies (the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the National Credit Union Administration (the agencies)). The advisory was issued in coordination with the U.S. Department of the Treasury's Financial Crimes Enforcement Network. The purpose of the advisory is to provide general guidance to banking organizations regarding the treatment of accounts for foreign governments, foreign embassies, and foreign political figures.

The joint interagency statement advises banking organizations that the decision to accept or reject an embassy or foreign government account is theirs alone to make. The statement advises that financial institutions should be aware that

there are varying degrees of risk associated with such accounts, depending on the customer and the nature of the services provided. Institutions should take appropriate steps to manage such risks consistent with sound practices and applicable anti-money-laundering laws and regulations. The advisory also encourages banking organizations to direct questions about embassy banking to their primary federal bank regulators.

Interagency Advisory on Accessing Accounts from Foreign Governments, Embassies, and Foreign Political Figures

The interagency advisory answers questions on whether financial institutions should conduct business with foreign embassies and whether institutions should establish account services for foreign governments, foreign embassies, and foreign political figures. As it would with any new account, an institution should evaluate whether or not to accept a new account for a foreign government, embassy, or political figure. That decision should be made by the institution's management, under standards and guidelines established by the board of directors, and should be based on the institution's own business objectives, its assessment of the risks associated with particular accounts or lines of business, and its capacity to manage those risks. The agencies will not, in the absence of extraordinary circumstances, direct or encourage any institution to open, close, or refuse a particular account or relationship.

Providing financial services to foreign governments and embassies and to foreign political figures can, depending on the nature of the customer and the services provided, involve varying degrees of risk. Such services can range from account relationships that enable an embassy to handle the payment of operational expenses, for example, payroll, rent, and utilities, to ancillary services or accounts provided to embassy staff or foreign government officials. Each of these relationships potentially poses different levels of risk. Institutions are expected to assess the risks involved in any such relationships and to take steps to ensure both that such risks are appropriately managed and that the institution can do so in full compliance with its obligations under the Bank Secrecy Act, as amended by the USA Patriot Act, and the regulations promulgated thereunder.

When an institution elects to establish finan-

cial relationships with foreign governments, embassies, or foreign political figures, the agencies, consistent with their usual practice of risk-based supervision, will make their own assessment of the risks involved in such business. As is the case with all accounts, the institution should expect appropriate scrutiny by examiners that is commensurate with the level of risk presented by the account relationship. As in any case where higher risks are presented, the institution should expect an increased level of review by examiners to ensure that the institution has in place controls and compliance oversight systems that are adequate to monitor and manage such risks, as well as personnel trained in the management of such risks and in the requirements of applicable laws and regulations.

Institutions that have or are considering taking on relationships with foreign governments, embassies, or political figures should ensure that such customers are aware of the requirements of U.S. laws and regulations to which the institution is subject. Institutions should, to the maximum extent feasible, seek to structure such relationships in order to conform them to conventional U.S. domestic banking relationships so as to reduce the risks that might be presented by such relationships.

Foreign-Currency Deposits

Domestic depository institutions are permitted to accept deposits denominated in foreign currency. Institutions should notify customers that such deposits are subject to foreign-exchange risk. The bank should convert such accounts to the U.S. dollar equivalent for purposes of reporting to the Federal Reserve. Examination staff should ascertain that all reports are in order and should evaluate the bank's use of such funds and its management of the accompanying foreign-exchange risk. Accounts denominated in foreign currency are not subject to the requirements of Regulation CC. (See SR-90-03 (IB), "Foreign (Non-U.S.) Currency Denominated Deposits Offered at Domestic Depository Institutions.")

International Banking Facilities

An international banking facility (IBF) is a set of asset and liability accounts segregated on the books of a depository institution. IBF activities are essentially limited to accepting deposits

from and extending credit to foreign residents (including banks), other IBFs, and the institutions establishing the IBF. IBFs are not required to maintain reserves against their time deposits or loans. The examiner should follow the special examination procedures in the international section of this manual when examining an IBF.

Deposits Insured by the Federal Deposit Insurance Corporation

The Federal Deposit Insurance Corporation (FDIC) is an independent agency of the U.S. government. The FDIC protects depositors against the loss of their insured deposits due to the failure of an insured bank, savings bank, savings association, insured branch of a foreign bank, or other depository institution whose deposits are insured pursuant to the Federal Deposit Insurance Corporation Act. If a depositor's accounts at one FDIC-insured depository institution total \$100,000 (or the standard maximum deposit insurance amount [SMDIA]) or less, the funds are fully insured and protected. A depositor can have more than the SMDIA at one insured depository institution and still be fully insured provided the accounts meet certain requirements. In addition, federal law currently provides for insurance coverage of up to \$250,000 or the SMDIA for "self-directed" retirement accounts.

The FDIC insurance covers all types of deposits received at an insured depository institution, including deposits in checking, negotiable order of withdrawal (NOW), and savings accounts; money market deposit accounts; and time deposits such as certificates of deposit (CDs). FDIC deposit insurance covers the balance of each depositor's account, dollar-for-dollar, up to the SMDIA, including the principal and any accrued interest through the date of an insured depository institution's closing.

Deposits in separate branches of an insured depository institution are not separately insured. Deposits in one insured institution are insured separately from deposits in another insured institution. Deposits maintained in different categories of legal ownership at the same depository institution can be separately insured. Therefore, it is possible to have deposits of more than the SMDIA at one insured institution and still be fully insured.

Deposit Insurance Reform Acts

On March 14, 2006, the FDIC amended its deposit insurance regulations (effective April 1, 2006) by issuing an interim rule with a request for public comment on or before May 22, 2006. (See 71 *Fed. Reg.* 14,629 and 12 CFR Part 330.) The interim rule implemented applicable revisions to the Federal Deposit Insurance Act made by the Federal Deposit Insurance Reform Act of 2005 (Reform Act) and the Federal Deposit Insurance Reform Conforming Amendments Act of 2005 (the Conforming Amendments Act). The Reform Act provided for consideration of inflation adjustments (cost-of-living adjustment) to increase the current SMDIA of \$100,000 on a five-year cycle beginning on April 1, 2010.

Second, the Reform Act increased the deposit insurance limit for certain retirement accounts from \$100,000 to \$250,000, also subject to inflation adjustments. The types of accounts included are individual retirement accounts (IRAs),¹ eligible deferred compensation plan accounts,² and individual account plan accounts,³ and any plan described in section 401(d) of the IRC, to the extent that participants and beneficiaries under such plans have a right to direct the investment of assets held in individual accounts maintained on their behalf by the plans.

Third, the Reform Act provided per-participant insurance coverage to employee benefit plan accounts, even if the depository institution at which the deposits are placed is not authorized to accept employee benefit plan deposits. The cost-of-living adjustment is to be calculated according to the Personal Consumption Expenditures Chain-type Price Index published by the U.S. Department of Commerce and rounded down to the nearest \$10,000.

The Conforming Amendments Act created the term *government depositor* in connection with public funds described in and insured pursuant to section 11(a)(2) of the Federal Deposit Insurance Act (FDIA). (See 12 USC 1821(a)(2).) The Conforming Amendments Act provides that the deposits of a government depositor are insured in an amount up to the

SMDIA, subject to the inflation adjustment described previously.

Deposit Insurance Rule Amendments

Retirement and Employee Benefit Plan Accounts

When deposits from a retirement or employee benefit plan (EBP)—such as a 401(k) retirement account, Keogh plan account, corporate pension plan, or profit-sharing program—are entitled to pass-through insurance, the SMDIA on FDIC insurance does not apply to the entire EBP account balance. Rather, the FDIC insurance coverage “passes through” to each owner or beneficiary, and the deposited funds of each individual EBP participant are insured up to the SMDIA.

The Reform Act and the Conforming Amendments Act, and the FDIC’s March 23, 2006, interim rule eliminated the previous requirement that pass-through coverage for employee benefit plan accounts be dependent on the capital level of a depository institution where such deposits are placed. Pass-through coverage for employee benefit plan deposits was not available if the deposits were placed with an institution that was not permitted to accept brokered deposits because of the capital requirements. Insured institutions that are not “well capitalized” or “adequately capitalized” are now prohibited by the Reform Act from accepting employee benefit plan deposits. Under the Reform Act, employee benefit plan deposits accepted by an insured depository institution, even those prohibited from accepting such deposits, are nonetheless eligible for pass-through deposit insurance coverage. The rule’s amendment (see 12 CFR 330.14) applies to all employee benefit plan deposits, including employee benefit plan deposits placed before April 1, 2006. The rule’s other requirements in section 330.14 continue to apply. In particular, only the “noncontingent” interests of plan participants in an applicable plan are eligible for pass-through coverage. A “noncontingent interest” is an interest that can be determined without the evaluation of contingencies other than life expectancy. This rule indicates that the maximum coverage for certain retirement accounts is \$250,000 or the SMDIA. These retirement accounts continue to be made up of individual retirement accounts (the traditional IRAs and the Roth IRAs); section 457

1. IRAs described in section 408(a) of the Internal Revenue Code (IRC). (See 26 USC 408(a).)

2. Eligible deferred compensation plan accounts described in section 457 of the IRC. (See 26 USC 457.)

3. Individual account plan accounts such as those defined in section 3(34) of the Employee Retirement Income Security Act.

deferred compensation plan accounts, “self-directed” Keogh plan accounts (or HR 10 accounts); and “self-directed” defined contribution plan accounts, which are primarily 401(k) plan accounts. The term *self-directed* means that the plan participants have the right to direct how their funds are invested, including the ability to direct that the funds be invested at an FDIC-insured institution.

Reserve Requirements

The Monetary Control Act of 1980 and the Federal Reserve’s Regulation D, “Reserve Requirements of Depository Institutions,” establish two categories of deposits for reserve-requirement purposes. The first category is the transaction account, which represents a deposit or account from which the depositor or account holder is permitted to make orders of withdrawals by negotiable instrument, payment orders of withdrawal, telephone transfer, or similar devices for making payments to a third party or others. Transaction accounts include demand deposits, NOW accounts, automatic transfer (ATS) accounts, and telephone or preauthorized transfer accounts. The second category is the non-transaction deposit account, which includes all deposits that are not transaction accounts, such as (1) savings deposits, that is, money market deposit accounts and other savings deposits, and (2) time deposits, that is, time certificates of deposit and time deposits, open account. See Regulation D for specific definitions of the various deposit accounts.

Treasury Tax and Loan Accounts

Member banks may select either the “remittance-option” or the “note-option” method to forward deposited funds to the U.S. Treasury. With the remittance option, the bank remits the Treasury Tax and Loan (TT&L) account deposits to the Federal Reserve Bank the next business day after deposit. The remittance portion is not interest-bearing.

The note option permits the bank to retain the TT&L deposits. With the note option, the bank debits the TT&L remittance account for the amount of the previous day’s deposit and simultaneously credits the note-option account. Thus, TT&L funds are now purchased funds evi-

denced by an interest-bearing, variable-rate, open-ended, secured note callable on demand by Treasury. Rates paid are $\frac{1}{4}$ of 1 percent less than the average weekly rate on federal funds. Interest is calculated on the weekly average daily closing balance in the TT&L note-option account. Although there is no required maximum note-option ceiling, banks may establish a maximum balance by providing written notice to the Federal Reserve Bank. As per 31 CFR 203.24, the TT&L balance requires the bank to pledge collateral to secure these accounts, usually from its investment portfolio. The note option is not included in reserve-requirement computations and is not subject to deposit insurance because it is classified as a demand note issued to the U.S. Treasury, a type of borrowing.

POTENTIAL PROBLEM AREAS

The following types of deposit accounts and related activities have above-average risk and, therefore, require the examiner’s special attention.

Bank-Controlled Deposit Accounts

Bank-controlled deposit accounts, such as suspense, official checks, cash-collateral, dealer reserves, and undisbursed loan proceeds, are used to perform many necessary banking functions. However, the absence of sound administrative policies and adequate internal controls can cause significant loss to the bank. To ensure that such accounts are properly administered and controlled, the directorate must ensure that operating policies and procedures are in effect that establish acceptable purpose and use; appropriate entries; controls over posting entries; and the length of time an item may remain unrecorded, unposted, or outstanding. Internal controls that limit employee access to bank-controlled accounts, determine the responsibility for frequency of reconciliation, discourage improper posting of items, and provide for periodic internal supervisory review of account activity are essential to efficient deposit administration.

The deposit suspense account is used to process unidentified, unposted, or rejected items. Characteristically, items posted to such accounts clear in one business day. The length of time an item remains in control accounts often reflects

on the bank's operational efficiency. This deposit type has a higher risk potential because the transactions are incomplete and require manual processing to be completed. As a result of the need for human interaction and the exception nature of these transactions, the possibility of misappropriation exists.

Official checks, a type of demand deposit, include bank checks, cashier's checks, expense checks, interest checks, dividend-payment checks, certified checks, money orders, and traveler's checks. Official checks reflect the bank's promise to pay a specified sum upon presentation of the bank's check. Because accounts are controlled and reconciled by bank personnel, it is important that appropriate internal controls are in place to ensure that account reconciliation is segregated from check origination. Operational inefficiencies, such as unrecorded checks that have been issued, can result in a significant understatement of the bank's liabilities. Misuse of official checks may result in substantial losses through theft.

Cash-collateral, dealer differential or reserve, undisbursed loan proceeds, and various loan escrow accounts are also sources of potential loss. The risk lies in inefficiency or misuse if the accounts become overdrawn or if funds are diverted for other purposes, such as the payment of principal or interest on bank loans. Funds deposited to these accounts should be used only for their stated purposes.

Brokered Deposits

As defined in Federal Deposit Insurance Corporation (FDIC) regulations, brokered deposits are funds a depository institution obtains, directly or indirectly, from or through the mediation or assistance of a deposit broker, for deposit into one or more deposit accounts (12 CFR 337.6). Thus, brokered deposits include both those in which the entire beneficial interest in a given bank deposit account or instrument is held by a single depositor and those in which the deposit broker pools funds from more than one investor for deposit in a given bank deposit account.

Section 29 of the Federal Deposit Insurance Act (the FDI Act) (12 USC 1831f(g)(1)) and the FDIC's regulations (12 CFR 337.6 (a)(5)) define *deposit broker* to mean—

- any person engaged in the business of placing

deposits, or facilitating the placement of deposits, of third parties with insured depository institutions or the business of placing deposits with insured depository institutions for the purpose of selling interests in those deposits to third parties; and

- an agent or a trustee who establishes a deposit account to facilitate a business arrangement with an insured depository institution to use the proceeds of the account to fund a prearranged loan.

The term *deposit broker* does not include —

- an insured depository institution, with respect to funds placed with that depository institution;
- an employee of an insured depository institution, with respect to funds placed with the employing depository institution;
- a trust department of an insured depository institution, if the trust or other fiduciary relationship in question has not been established for the primary purpose of placing funds with insured depository institutions;
- the trustee of a pension or other employee benefit plan, with respect to funds of the plan;
- a person acting as a plan administrator or an investment adviser in connection with a pension plan or other employee benefit plan provided that person is performing managerial functions with respect to the plan;
- the trustee of a testamentary account;
- the trustee of an irrevocable trust,⁴ as long as the trust in question has not been established for the primary purpose of placing funds with insured depository institutions;
- a trustee or custodian of a pension or profit-sharing plan qualified under section 401(d) or 403(a) of the Internal Revenue Code of 1986 (26 USC 401(d), 503(a)); or
- an agent or a nominee whose primary purpose is not the placement of funds with depository institutions; or
- an insured depository institution acting as an intermediary or agent of a U.S. government department or agency for a government-sponsored minority or women-owned depository institution deposit program.

4. This exception does not apply to an agent or a trustee who establishes a deposit account to facilitate a business arrangement with an insured depository institution to use the proceeds of the account to fund a prearranged loan.

A small- or medium-sized bank's dependence on the deposits of customers who reside or conduct their business outside of the bank's normal service area should be closely monitored by the bank and analyzed by the examiner. Such deposits may be the product of personal relationships or good customer service; however, large out-of-area deposits are sometimes attracted by liberal credit accommodations or significantly higher interest rates than competitors offer. Deposit growth that is due to liberal credit accommodations generally proves costly in terms of the credit risks taken relative to the benefits received from corresponding deposits, which may be less stable. Banks outside dynamic metropolitan areas are limited in growth because they usually can maintain stable deposit growth only as a result of prudent reinvestment in the bank's service area. Deposit development and retention policies should recognize the limits imposed by prudent competition and the bank's service area.

Historically, most banking organizations have not relied on funds obtained through deposit brokers to supplement their traditional funding sources. A concern regarding the activities of deposit brokers is that the ready availability of large amounts of funds through the issuance of insured obligations undercuts market discipline.

The use of brokered deposits by sound, well-managed banks can play a legitimate role in the asset-liability management of a bank and enhance the efficiency of financial markets. However, the use of brokered deposits also can contribute to the weakening of a bank by allowing it to grow at an unmanageable or imprudent pace and can exacerbate the condition of a troubled bank. Consequently, without proper monitoring and management, brokered and other highly rate-sensitive deposits, such as those obtained through the Internet, certificate of deposit (CD) listing services, and similar advertising programs, may be unstable sources of funding for an institution.

Deposits attracted over the Internet, through CD listing services, or through special advertising programs offering premium rates to customers without another banking relationship, require special monitoring. Although these deposits may not fall within the technical definition of "brokered" in 12 USC 1831f and 12 CFR 337.6, their inherent risk characteristics are similar to brokered deposits. That is, such deposits are typically attractive to rate-sensitive customers who may not have significant loyalty to the

bank. Extensive reliance on funding products of this type, especially those obtained from outside a bank's geographic market area, has the potential to weaken a bank's funding position.

Some banks have used brokered and Internet-based funding to support rapid growth in loans and other assets. In accordance with the safety-and-soundness standards, a bank's asset growth should be prudent and its management must consider the source, volatility, and use of the funds generated to support asset growth. (See 12 CFR 208 appendix D-1.)

To compensate for the high rates typically offered for brokered deposits, institutions holding them tend to seek assets that carry commensurately high yields. These assets can often involve excessive credit risk or cause the bank to take on undue interest-rate risk through a mismatch in the maturity of assets and liabilities. The FDI Act (12 USC 1831f) includes certain restrictions on the use of brokered deposits to prohibit undercapitalized insured depository institutions from accepting funds obtained, directly or indirectly, by or through any deposit broker for deposit into one or more deposit accounts.

Capital Categories

For the purposes of section 29 of the FDI Act, the regulations of the FDIC and the Federal Reserve (for the FDIC, 12 CFR 325.103 and for the Federal Reserve, 12 CFR 208.43) provide the definitions of well-capitalized, adequately capitalized, and undercapitalized financial institutions (banks). These definitions are tied to percentages of leverage and risk-based capital. Section 29 of the FDI Act limits the rates of interest on brokered deposits that may be offered by insured depository institutions that are adequately capitalized or undercapitalized.

Well-capitalized bank. A bank is deemed to be *well capitalized* if it—

- has a total risk-based capital ratio of 10.0 percent or greater;
- has a tier 1 risk-based capital ratio of 6.0 percent or greater;
- has a leverage ratio of 5.0 percent or greater; and
- is not subject to any written agreement, order, capital directive, or prompt-corrective-action

directive issued by the Board pursuant to section 8 of the FDI Act (12 USC 1818), the International Lending Supervision Act of 1983 (12 USC 3907), or section 38 of the FDI Act (12 USC 1831o), or any regulation thereunder, to meet and maintain a specific capital level for any capital measure.

A well-capitalized insured depository institution may solicit and accept, renew, or roll over any brokered deposit without restriction.

Adequately capitalized bank. A bank is deemed to be *adequately capitalized* if it—

- has a total risk-based capital ratio of 8.0 percent or greater;
- has a tier 1 risk-based capital ratio of 4.0 percent or greater;
- has—
 - a leverage ratio of 4.0 percent or greater or
 - a leverage ratio of 3.0 percent or greater if the bank is rated composite 1 under the CAMELS rating system in the most recent examination of the bank and is not experiencing or anticipating significant growth;
- does not meet the definition of a well-capitalized bank.

An adequately capitalized insured depository institution may not accept, renew, or roll over any brokered deposit unless it has applied for and been granted a waiver of this prohibition by the FDIC. If the insured depository institution has been granted a waiver by the FDIC, the institution may accept, renew, or roll over a brokered deposit. The institution may not pay an effective yield on the deposit that exceeds, by more than 75 basis points: (1) the effective yield paid on deposits of comparable size and maturity, and for deposits accepted, within the institution's normal market area⁵ or (2) the "national rate" paid on deposits of comparable size and maturity for deposits accepted outside the institution's normal market area. The national rate is either 120 or 130 basis points of the current yield on similar-maturity U.S. Treasury obligations, depending on whether the deposit is FDIC-insured or more than half uninsured (the portion of the deposit that is in excess of the FDIC-

5. For deposits obtained through Internet solicitations, the determination of the bank's "normal market area" is particularly problematic and difficult.

insured limit, as detailed in the rule).

If an FDIC-insured bank is adequately capitalized and does not have a waiver from the FDIC, it may not use a broker to obtain deposits. The following rate restrictions on deposits also apply: (1) the deposit rates may be no more than 75 basis points over the effective yield on deposits of comparable size and maturity within the bank's normal market area and (2) the deposit rates may not be based on a "national" rate.

Undercapitalized bank. A bank is deemed to be *undercapitalized* if it—

- has a total risk-based capital ratio that is less than 8.0 percent;
- has a tier 1 risk-based capital ratio that is less than 4.0 percent;
- has a leverage ratio that is less than 4.0 percent;⁶ or
- has a leverage ratio that is less than 3.0 percent, if the bank is rated composite 1 under the CAMELS rating system in the most recent examination of the bank and is not experiencing or anticipating significant growth.

An undercapitalized insured depository institution may not accept, renew, or roll over any brokered deposit. Also, an undercapitalized insured depository institution (and any employee of the institution) may not solicit deposits by offering an effective yield that exceeds by more than 75 basis points the prevailing effective yields on insured deposits of comparable maturity in the institution's normal market area or in the market area in which such deposits are being solicited.

Each examination should include a review for compliance with the FDIC's limitations on the acceptance of brokered deposits and guidelines on interest payments. The use of brokered deposits should be reviewed during all on-site examinations, even in those institutions not subject to the FDIC's restrictions. Given the potential risks involved in using brokered deposits, the examination should focus on the—

6. An exception is available when (1) the bank (the insured depository institution) has a leverage ratio of 3.0 percent or greater, (2) the bank is rated composite 1 under the CAMELS rating system following its most-recent bank examination, and (3) the bank is not experiencing or anticipating significant growth.

- rate of growth and the credit quality of the loans or investments funded by brokered deposits;
- corresponding quality of loan files, documentation, and customer credit information;
- ability of bank management to adequately evaluate and administer these credits and manage the resulting growth;
- degree of interest-rate risk involved in the funding activities and the existence of a possible mismatch in the maturity or rate sensitivity of assets and liabilities;
- composition and stability of the deposit sources and the role of brokered deposits in the bank's overall funding position and strategy; and
- effect of brokered deposits on the bank's financial condition and whether the use of brokered deposits constitutes an unsafe and unsound banking practice.

The examiner should identify relevant concerns in the examination report when brokered deposits amount to 5 percent or more of the bank's total deposits.

Risk-Management Expectations for Brokered Deposits

On May 11, 2001, the Federal Reserve Board and the other federal banking agencies (the agencies) issued a Joint Agency Advisory on Brokered and Rate-Sensitive Deposits. The advisory sets forth the following risk-management guidelines for brokered deposits. The bank's management is expected to implement risk-management systems that are commensurate in complexity with the liquidity and funding risks that the bank undertakes. (See SR-01-14.) Such systems should incorporate the following principles:

- *Proper funds-management policies.* A good policy should generally provide for forward planning, establish an appropriate cost structure, and set realistic limitations and business strategies. It should clearly convey the board's risk tolerance and should not be ambiguous about who holds responsibility for funds-management decisions.
- *Adequate due diligence when assessing deposit brokers.* Bank management should implement adequate due diligence procedures before entering any business relationship with a

deposit broker. The agencies do not regulate deposit brokers.

- *Due diligence in assessing the potential risk to earnings and capital associated with brokered or other rate-sensitive deposits, and prudent strategies for their use.* Bankers should manage highly sensitive funding sources carefully, avoiding excessive reliance on funds that may be only temporarily available or which may require premium rates to retain.
- *Reasonable control structures to limit funding concentrations.* Limit structures should consider typical behavioral patterns for depositors or investors and be designed to control excessive reliance on any significant source(s) or type of funding. This includes brokered funds and other rate-sensitive or credit-sensitive deposits obtained through the Internet or other types of advertising.
- *Management information systems (MIS) that clearly identify nonrelationship or higher-cost funding programs and allow management to track performance, manage funding gaps, and monitor compliance with concentration and other risk limits.* At a minimum, MIS should include a listing of funds obtained through each significant program, rates paid on each instrument and an average per program, information on maturity of the instruments, and concentration or other limit monitoring and reporting. Management also should ensure that brokered deposits are properly reported in the bank's Consolidated Reports of Condition and Income.⁷
- *Contingency funding plans that address the risk that these deposits may not "roll over" and provide a reasonable alternative funding strategy.* Contingency funding plans should factor in the potential for changes in market acceptance if reduced rates are offered on rate-sensitive deposits. The potential for triggering legal limitations that restrict the bank's access to brokered deposits under Prompt Corrective Action (PCA) standards, and the effect that this would have on the bank's liability structure, should also be factored into the plan.

7. See the FFIEC bank Call Report and Instructions for Consolidated Reports of Condition and Income, Schedule RC-E—Deposit Liabilities.

Examiners should assess carefully the liquidity-risk management framework at all banks. Banks with meaningful reliance on brokered or other rate-sensitive deposits should receive the appropriate level of supervisory attention. Examiners should not wait for PCA provisions to be triggered or the viability of the bank to come into question, before raising relevant safety-and-soundness issues with regard to the use of these funding sources. If a determination is made that a bank's use of these funding sources is not safe and sound, or that these risks are excessive or that they adversely affect the bank's condition, then the examiner or central point of contact should recommend to the Reserve Bank management that it consider taking immediate appropriate supervisory action. The following represent potential red flags that may indicate the need to take such action to ensure the risks associated with brokered or other rate-sensitive funding sources are managed appropriately:

- ineffective management or the absence of appropriate expertise
- a newly chartered institution with few relationship deposits and an aggressive growth strategy
- inadequate internal audit coverage
- inadequate information systems or controls
- identified or suspected fraud
- high on- or off-balance-sheet growth rates
- use of rate-sensitive funds not in keeping with the bank's strategy
- inadequate consideration of risk, with management focus exclusively on rates
- significant funding shifts from traditional funding sources
- the absence of adequate policy limitations on these kinds of funding sources
- high loan delinquency rate or deterioration in other asset-quality indicators
- deterioration in the general financial condition of the institution
- other conditions or circumstances warranting the need for administrative action

Check Kiting

Check kiting occurs when—

- a depositor with accounts at two or more banks draws checks against the uncollected balance at one bank to take advantage of the

float—that is, the time required for the bank of deposit to collect from the paying bank, and

- the depositor initiates the transaction with the knowledge that sufficient collected funds will not be available to support the amount of the checks drawn on all of the accounts.

The key to this deceptive practice, the most prevalent type of check fraud, is the ability to draw against uncollected funds. However, drawing against uncollected funds in and of itself does not necessarily indicate kiting. Kiting only occurs when the aggregate amount of drawings exceeds the sum of the collected balances in all accounts. Nevertheless, since drawing against uncollected funds is the initial step in the kiting process, management should closely monitor this activity. The requirements of Regulation CC, Availability of Funds and Collection of Checks, increased the risk of check kiting, and should be addressed in a bank's policies and procedures.

By allowing a borrower to draw against uncollected funds, the bank is extending credit that should be subject to an appropriate approval process. Accordingly, management should promptly investigate unusual or unauthorized activity since the last bank to recognize check kiting and pay on the uncollected funds suffers the loss. Check kiting is illegal and all suspected or known check kiting operations should be reported pursuant to established Federal Reserve policy. Banks should maintain internal controls to preclude loss from kiting, and the examiner should remember that in most cases kiting is not covered under Blanket Bond Standard Form 24.

Delayed Disbursement Practices

Although Regulation CC, Availability of Funds and Collection of Checks, stipulates time frames for funds availability and return of items, delayed disbursement practices (also known as remote disbursement practices) can present certain risks, especially concerning cashier's checks, which have next-day availability. Delayed disbursement is a common cash management practice that consists of arrangements designed to delay the collection and final settlement of checks by drawing checks on institutions located substantial distances from the payee or on institutions located outside the Federal Reserve cities when alternate and more efficient payment arrange-

ments are available. Such practices deny depositors the availability of funds to the extent that funds could otherwise have been available earlier. A check drawn on an institution remote from the payee often results in increased possibilities of check fraud and in higher processing and transportation costs for return items.

Delayed disbursement arrangements could give rise to supervisory concerns because a bank may unknowingly incur significant credit risk through such arrangements. The remote location of institutions offering delayed disbursement arrangements often increases the collection time for checks by at least a day. The primary risk is payment against uncollected funds, which could be a method of extending unsecured credit to a depositor. Absent proper and complete documentation regarding the creditworthiness of the depositor, paying items against uncollected funds could be considered an unsafe or unsound banking practice. Furthermore, such loans, even if properly documented, might exceed the bank's legal lending limit for loans to one customer.

Examiners should routinely review a bank's practices in this area to ensure that such practices are conducted prudently. If undue or undocumented credit risk is disclosed or if lending limits are exceeded, appropriate corrective action should be taken.

Deposit Sweep Programs or Master-Note Arrangements

Deposit sweep programs or master-note arrangements (sweep programs) can be implemented on a bank level or on a parent bank holding company (BHC) level. On a bank level, these sweep programs exist primarily to facilitate the cash-management needs of bank customers, thereby retaining customers who might otherwise move their account to an entity offering higher yields. On a BHC level, the sweep programs are maintained with customers at the bank level, and the funds are upstreamed to the parent as part of the BHC's funding strategy. Sweep programs use an agreement with the bank's deposit customers (typically corporate accounts) that permits these customers to reinvest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company, another affiliate of the bank, or a third party. These obligations include instruments such as commercial paper,

program notes, and master-note agreements. (See SR-90-31.)

The disclosure agreement regarding the sale of the nondeposit debt obligations should include a statement indicating that these instruments are not federally insured deposits or obligations of or guaranteed by an insured depository institution. In addition, banks and their subsidiaries that have issued or plan to issue nondeposit debt obligations should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank. This requirement exists to convey the impression or understanding that the purchase of such obligations by retail depositors of the subsidiary bank can, in the event of default, result in losses to individuals who believed they had acquired federally insured or guaranteed obligations.

Bank Policies and Procedures

Banking organizations with sweep programs should have adequate policies, procedures, and internal controls in place to ensure that the activity is conducted in a manner consistent with safe and sound banking principles and in accordance with all banking laws and regulations. Bank policies and procedures should further ensure that deposit customers participating in a sweep program are given proper disclosures and information. When a sweep program is used as part of a funding strategy for a BHC or a nonbank affiliate, examiners should ensure that liquidity and funding strategies are carried out in a prudent manner.

Application of Deposit Proceeds

In view of the extremely short-term maturity of most swept funds, banks and BHCs are expected to exercise great care when investing the proceeds. Banks, from whom deposit funds are swept, have a fiduciary responsibility to their customers to ensure that such transactions are conducted properly. Appropriate uses of the proceeds of deposit sweep funds are limited to short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal.⁸ When deposit sweep funds are invested in

8. Some banking organizations have interpreted language in a 1987 letter signed by the secretary of the Board as

U.S. government securities, appropriate agreements must be in place, required disclosures must be made, and daily confirmations must be provided to the customer in accordance with the requirements of the Government Securities Act of 1986. Use of such proceeds to finance mismatched asset positions, such as those involving leases, loans, or loan participations, can lead to liquidity problems and are not considered appropriate. The absence of a clear ability to redeem overnight or extremely short-term liabilities when they become due should generally be viewed as an unsafe and unsound banking activity.

Funding Strategies

A key principle underlying the Federal Reserve's supervision of banking organizations is that BHCs operate in a way that promotes the soundness of their subsidiary banks. BHCs are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Any funding strategy should maintain an adequate degree of liquidity at both the parent level and the subsidiary bank level. Bank management should avoid, to the extent possible, allowing sweep programs to serve as a source of funds for inappropriate uses at the BHC or at an affiliate. Concerns exist in this regard because funding mismatches can exacerbate an otherwise manageable period of financial stress and, in the extreme, undermine public confidence in a banking organization's viability.

Funding Programs

In developing and carrying out funding programs, BHCs should give special attention to the use of overnight or extremely short-term liabilities, since a loss of confidence in the issuing organization could lead to an immediate

condoning funding practices that may not be consistent with the principles set forth in a subsequent supervisory letter dated September 21, 1990, as well as with prior Board rulings. The 1987 letter involved a limited set of facts and circumstances that pertained to a particular banking organization; it did not establish or revise Federal Reserve policies on the proper use of the proceeds of short-term funding sources. In any event, banking organizations should no longer rely on the 1987 letter to justify the manner in which they use the proceeds of sweep programs. Banking organizations employing sweep programs are expected to ensure that these programs conform with the policies in this manual section.

funding problem. Thus BHCs relying on overnight or extremely short-term funding sources should maintain a sufficient level of superior-quality assets (at a level at least equal to the amount of the funding sources¹) that can be immediately liquidated or converted to cash with minimal loss.

Dormant Accounts

A dormant account is one in which customer-originated activity has not occurred for a predetermined period of time. Because of this inactivity, dormant accounts are frequently the target of malfeasance and should be carefully controlled by a bank. Bank management should establish standards that specifically outline the bank's policy for the effective control of dormant accounts, addressing—

- the types of deposit categories that could contain dormant accounts, including demand, savings, and official checks;
- the length of time without customer-originated activity that qualifies an account to be identified as dormant;
- the controls exercised over the accounts and their signature cards, that is, prohibiting release of funds by a single bank employee; and
- the follow-up by the bank when ordinary bank mailings, such as account statements and advertising flyers, are returned to the bank because of changed addresses or other reasons for failure to deliver.

Employee Deposit Accounts

Historically, examiners have discovered various irregularities and potential malfeasance through review of employee deposit accounts. As a result, bank policy should establish standards that segregate or specially encode employee accounts and should encourage periodic internal supervisory review. In light of these concerns, examiners should review related bank procedures and practices, taking appropriate measures when warranted.

Overdrafts

The size, frequency, and duration of deposit-account overdrafts are matters that should be

governed by bank policy and controlled by adequate internal controls, practices, and procedures. Overdraft authority should be approved in the same manner as lending authority and should never exceed the employee's lending authority. Systems for monitoring and reporting overdrafts should emphasize a secondary level of administrative control that is distinct from other lending functions so account officers who are less than objective do not allow influential customers to exploit their overdraft privileges. A bank's payment of overdrafts of executive officers and directors of the bank is generally prohibited under Regulation O. (See 12 CFR 215.4(e).) It is the board of directors' responsibility to review overdrafts as they would any other extension of credit. Overdrafts outstanding for more than 60 days, lacking mitigating circumstances, should be considered for charge-off. See SR-05-3/CA-05-2 and section 2130.1 on the February 18, 2005, Interagency Joint Guidance on Overdraft Protection Programs.

Payable-Through Accounts

A payable-through account is an accommodation offered to a correspondent bank or other customer by a U.S. banking organization whereby drafts drawn against client subaccounts at the correspondent are paid upon presentation by the U.S. banking institution. The subaccount holders of the payable-through bank are generally non-U.S. residents or owners of businesses located outside of the United States. Usually the contract between the U.S. banking organization and the payable-through bank purports to create a contractual relationship solely between the two parties to the contract. Under the contract, the payable-through bank is responsible for screening subaccount holders and maintaining adequate records with respect to such holders. The examiner should be aware of the potential effect of money laundering.

Public Funds

Public funds generally represent deposits of the U.S. government, as well as state and political subdivisions, and typically require collateral in the form of securities to be pledged against them. A bank's reliance upon public funds can cause potential liquidity concerns if the aggregate amount, as a percentage of total deposits, is

material relative to the bank's asset-liability management practices. Another factor that can cause potential liquidity concerns relates to the volatile nature of these deposits.

This volatility occurs because the volume of public funds normally fluctuates on a seasonal basis due to timing differences between tax collections and expenditures. A bank's ability to attract public funds is typically based upon the government entity's assessment of three key points:

- the safety and soundness of the institution with which the funds have been placed
- the yield on the funds being deposited
- that such deposits are placed with a bank that can provide or arrange the best banking service at the least cost

Additionally, banks that offer competitive interest rates and provide collection, financial advisory, underwriting, and data processing services at competitive costs are frequently chosen as depositories. Public funds deposits acquired through political influence should be regarded as particularly volatile. As a result, an examiner should pay particular attention to assessing the volatility of such funds in conjunction with the review of liquidity.

Zero-Balance Accounts

Zero-balance accounts (ZBAs) are demand deposit accounts used by a bank's corporate customers through which checks or drafts are received for either deposit or payment. The total amount received on any particular day is offset by a corresponding debit or credit to the account before the close of business to maintain the balance at or near zero. ZBAs enable a corporate treasurer to effectively monitor cash receipts and disbursements. For example, as checks arrive for payment, they are charged to a ZBA with the understanding that funds to cover the checks will be deposited before the end of the banking day. Several common methods used to cover checks include—

- wire transfers;
- depository transfer checks, a bank-prepared payment instrument used to transfer money from a corporate account in one bank to another bank;

- concentration accounts, a separate corporate demand deposit account at the same bank used to cover deficits or channel surplus funds relative to the ZBA; or
- extended settlement, a cash-management arrangement that does not require the corporate customer to provide same-day funds for payment of its checks.

Because checks are covered before the close of business on the day they arrive, the bank's exposure is not reflected in the financial statement. The bank, however, assumes risk by paying against uncollected funds, thereby creating unsecured extensions of credit during the day (which is referred to as a daylight overdraft

between the account holder and the bank). If these checks are not covered, an overdraft occurs, which will be reflected on the bank's financial statement.

The absence of prudent safeguards and a lack of full knowledge of the creditworthiness of the depositor may expose the bank to large, unwarranted, and unnecessary risks. Moreover, the magnitude of unsecured credit risk may exceed prudent limits. Examiners should routinely review cash-management policies and procedures to ensure that banks do not engage in unsafe and unsound banking practices, making appropriate comments in the report of examination, as necessary.

Deposit Accounts

Examination Objectives

Effective date November 2006

Section 3000.2

1. To determine if the policies, practices, procedures, and internal controls regarding deposit accounts are adequate.
2. To determine if the bank's management implemented adequate risk-management systems for brokered and rate-sensitive deposits that are commensurate with the liquidity and funding risks the bank has undertaken.
3. To determine if the bank's policies, practices, procedures, and internal controls (including compliance oversight, management reporting, and staff training) for account relationships involving foreign governments, foreign embassies, and foreign political figures (as well as foreign-currency customer deposit accounts) are adequate for the varied risks posed by these accounts.
4. To determine if bank officers and employees are operating in conformance with the bank's established guidelines.
5. To evaluate the deposit structure and determine its characteristics and volatility.
6. To determine the scope and adequacy of the audit function.
7. To determine compliance with applicable laws and regulations.
8. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations are noted.

Deposit Accounts Examination Procedures

Effective date November 2006

Section 3000.3

1. Determine the scope of the examination of the deposit-taking function. In so doing, consider the findings of prior examinations, related work prepared by internal and external auditors, deficiencies in internal controls noted within other bank functions, and the requirements of examiners assigned to review the asset/liability management and interest-rate risk aspects of the bank.
2. If required by the scope, implement the "Deposit Accounts" internal control questionnaire.
3. Test the deposit function for compliance with policies, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest internal or external audit review, then determine if appropriate corrections have been made.
4. In conducting the examination, use available bank copies of printouts plus transactions journals, microfiche, or other visual media to minimize expense to the bank. However, if copies of these reports are not available, determine what information is necessary to complete the examination procedures and request that information from the bank.

Obtain or prepare, as applicable, the reports indicated below, which are used for a variety of purposes, including the assessment of deposit volatility and liquidity, the assessment of the adequacy of internal controls, the verification of information on required regulatory reports, and the assessment of loss.

 - a. For demand deposits and other transaction accounts:
 - trial balance
 - overdrafts
 - unposted items
 - nonsufficient-funds (NSF) report
 - dormant accounts
 - public funds
 - uncollected funds
 - due to banks
 - trust department funds
 - significant activity
 - suspected kiting report
 - matured certificates of deposit without an automatic renewal feature
 - large-balance report
 - b. For official checks:
 - trial balance(s)
 - exception list
 - c. For savings accounts:
 - trial balance
 - unposted items
 - overdrafts
 - dormant accounts
 - public funds
 - trust department funds
 - large-balance report
 - d. For other time deposits:
 - trial balance(s)
 - large-balance report
 - unposted items
 - public funds
 - trust department funds
 - money market accounts
 - e. For certificates of deposit:
 - trial balance(s)
 - unposted items
 - public funds
 - certificates of \$100,000 or more
 - negotiable certificates of deposit
 - maturity reports
 - matured certificates of deposit
 - f. For deposit sweep programs or master-note arrangements, list individually by deposit type and amount.
 - g. For brokered deposits, list individually by deposit type, including amount and rate.
 - h. For bank-controlled accounts:
 - reconciliation records for all such accounts
 - names and extensions of individuals authorized to make entries to such accounts
 - name and phone extension of reconciliation clerk(s)
 - i. For the bank's foreign-currency customer deposit accounts and the deposit accounts for foreign governments, embassies, and political figures:
 - list of accounts and currency type
 - list of currency transactions over \$10,000 for each account, and the copies of their Currency Transaction

- Report (IRS Form 4789) or its equivalent, since the previous examination
- the most recent internal audit report covering the review of those accounts, the risks associated with the accounts, the internal controls over those accounts, and the staff's completion of the Currency Transaction Report (IRS Form 4789)
 - the completed copies of the Report of Foreign (Non-U.S.) Currency Deposits, Form 2915, that have been submitted since the previous examination
5. Review the reconciliation of all types of deposit accounts. Verify the balances to department controls and the general ledger.
 - a. Determine if reconciliation items are legitimate and if they clear within a reasonable time frame.
 - b. Retain custody of all trial balances until items outstanding are resolved.
 6. Review the reconciliation process for bank-controlled accounts, such as official checks and escrow deposits, by—
 - a. determining if reconciling items are legitimate and if they clear within a reasonable time frame;
 - b. scanning activity in such accounts to determine the potential for improper diversion of funds for various uses, such as—
 - political contributions,
 - loan payments (principal and interest), or
 - personal use; and
 - c. determining if checks are being processed before their related credits.
 7. Review the bank's operating procedures and reconciliation process relative to suspense accounts. Determine if—
 - a. the disposition process of unidentified items is completed in a timely fashion;
 - b. reports are generated periodically to inform management of the type, age, and amount of items in such accounts; and
 - c. employees responsible for clearing suspense-account items are not shifting the items between accounts.
 8. Evaluate the effectiveness of the written policies and procedures and of management's reporting methods regarding overdrafts and drawings against uncollected funds.
 - a. Concerning overdrafts, determine if—
 - officer-approval limits have been established, and
 - a formal system of review and approval is in effect.
 - b. Ascertain the existence of formal overdraft protection. If the bank provides overdraft protection, perform the following procedures:
 - Obtain a master list of all depositors with formal overdraft protection.
 - Obtain a trial balance indicating advances outstanding and compare it with the master list to ensure compliance with approved limits.
 - Cross-reference the trial balance or master list to examiner loan line sheets.
 - Review credit files on significant formal agreements not cross-referenced above.
 - Determine whether the depository institution has an overdraft-protection program and if it has adequate written policies and procedures to address the credit, operational, and other risks associated with those programs. See the February 18, 2005, interagency Joint Guidance on Overdraft Protection Programs (SR-05-3/CA-05-2).
 - Ascertain whether there is ongoing monitoring of overdrafts to identify customers who may pose an undue credit risk to the bank.
 - Find out if the bank has incorporated into its overdraft-protection program prudent risk-management practices pertaining to account repayment and the suspension of a customer's overdraft-protection services when the customer does not satisfy repayment and eligibility requirements.
 - Determine whether overdrafts are properly and accurately reported according to generally accepted accounting principles on the bank's financial statements and on its Reports of Condition and Income (Call Reports). Verify that overdrafts are reported as loans on the Report of Condition.
 - Verify the existence of the bank's loss-estimation procedures for overdraft and fee balances. Determine if the procedures are adequately rigorous and if losses are properly accounted for as part of (1) the allowance for loan and lease losses or (2) the loss allow-

- ance for uncollectible fees (alternatively, the bank may recognize only that portion of earned fees estimated to be collectible), if applicable.¹
- When applicable, validate (1) whether the bank's overdraft commitments were assigned the correct conversion factor, (2) whether they are accurately risk-weighted by obligor, and (3) if the commitment terms comply with the risk-based capital guidelines.
 - Determine whether the bank has obtained assurances from its legal counsel that its overdraft-protection program is fully compliant with all applicable federal and state laws and regulations, including the Federal Trade Commission Act.
 - When the bank contracts with third-party vendors to do information technology work, determine if the bank conducted proper due diligence before entering into the contract and that it followed the November 28, 2000, guidance on the Risk Management of Outsourced Technology Services. (See SR-00-17.)
- c. Concerning drawings against uncollected funds, determine if—
- the uncollected-funds report reflects balances as uncollected until they are actually received;
 - management is comparing reports of significant changes in balances and activity volume with uncollected-funds reports;
 - management knows the reasons why a depositor is frequently drawing against uncollected funds;
 - a reporting system to inform senior management of significant activity in the uncollected-funds area has been instituted; and
 - appropriate employees clearly understand the mechanics of drawing against uncollected funds and the risks involved, especially in the area of potential check-kiting operations.
- d. After completing steps 8.a., 8.b., and 8.c.—
- cross-reference overdraft and uncollected-funds reports to examiner loan line sheets;
 - review the credit files of depositors with significant overdrafts, if available, or the credit files of depositors who frequently draw significant amounts against uncollected funds, for those depositors not cross-referenced in the preceding step;
 - request management to charge off overdrafts deemed to be uncollectible; and
 - submit a list of the following items to the appropriate examiner:
 - overdrafts considered loss, indicating borrower and amount
 - aggregate amounts overdrawn 30 days or more past due, for inclusion in past-due statistics
9. Review the bank's deposit development and retention policy, which is often included in the funds-management policy.
- a. Determine if the policy addresses the deposit structure and related interest costs, including the percentages of time deposits and demand deposits of—
 - individuals,
 - corporations, and
 - public entities.
 - b. Determine if the policy requires periodic reports to management comparing the accuracy of projections with results.
 - c. Assess the reasonableness of the policy, and ensure that it is routinely reviewed by management.
10. If a deposit sweep program or master-note arrangement exists, review the minutes of the board of directors for approval of related policies and procedures.
11. For banks with deposit sweep programs or master-note arrangements (sweep programs), compare practices for adherence to approved policies and procedures. Review the following:
- a. The purpose of the sweep program: Is it strictly a customer-accommodation transaction, or is it intended to fund certain assets at the holding company level or at an affiliate? Review funding transactions in light of liquidity and funding needs of the banking organization by referring to section 4020.1.
 - b. The eligibility requirements used by the bank to determine the types of customers and accounts that may participate in a

1. Institutions may charge off uncollectible overdraft fees against the allowance for loan and lease losses if such fees are recorded with overdraft balances as loans and if estimated credit losses on the fees are provided for in the allowance for loan and lease losses.

- sweep program, including—
- a list of customers participating in sweep programs, with dollar amounts of deposit funds swept on the date of examination, and
 - the name of the recipient(s) of swept funds.
 - If the recipient is an affiliate of the bank, include a schedule of the instruments into which the funds were swept, including the effective maturity of these instruments.
 - If the recipient is an unaffiliated third party, determine if the bank adequately evaluates the third party's financial condition at least annually. Also, verify if a fee is received by the bank for the transaction. If so, determine that the fee is disclosed in customer documentation.
- c. Whether the proceeds of sweep programs are invested only in short-term bank obligations; short-term U.S. government securities; or other highly liquid, readily marketable, investment-grade assets that can be disposed of with minimal loss of principal.
- d. Whether the bank and its subsidiaries have issued or plan to issue nondeposit debt obligations in any public area of the bank where retail deposits are accepted, including any lobby area of the bank.
- e. Completed sweep-program documents to determine the following:
- Signed documents boldly disclose that the instrument into which deposit funds will be swept is not insured by the FDIC and is not an obligation of, or guaranteed by, the bank.
 - Proper authorization for the instrument exists between the customer and an authorized representative of the bank.
 - Signed documents properly disclose the name of the obligor and the type of instrument into which the depositor's funds will be swept. If funds are being swept into U.S. government securities held by the banking organization, verify that adequate confirmations are provided to customers in accordance with the Government Securities Act of 1986. (This act requires that all transactions subject to a repurchase agreement be confirmed in writing at the end of the day of initiation and that the confirmation confirms specific securities. If any other securities are substituted that result in a change of issuer, maturity date, par amount, or coupon rate, another confirmation must be issued at the end of the day during which the substitution occurred. Because the confirmation or safekeeping receipt must list specific securities, "pooling" of securities for any type of sweep program involving government securities is not permitted. Additionally, if funds are swept into other instruments, similar confirmation procedures should be applied.)
- f. Conditions of the sweep program are stated clearly, including the dollar amount (minimum or maximum amounts and incremental amounts), time frame of sweep, time of day the sweep transaction occurs, fees payable, transaction confirmation notice, prepayment terms, and termination notice.
- g. The length of any single transaction under sweep programs in effect has not exceeded 270 days and the amount is \$25,000 or more (as stipulated by SEC policy). Ongoing sweep-program disclosures should occasionally be sent to the customer to ensure that the terms of the program are updated and the customer understands the terms.
- f. Samples of advertisements (newspaper, radio, television spots, etc.) by the bank for sweep programs to determine if the advertisements—
- boldly disclose that the instrument into which deposit funds are swept is not insured by the FDIC and is not an obligation of, or guaranteed by, the bank, and
 - are not enclosed with insured deposit statements mailed to customers.
- g. Whether the sweep program has had a negative effect on bank liquidity or has the potential to undermine public confidence in the bank.
- Review the bank's federal funds and borrowing activities to ascertain whether borrowings appear high. If so, compare the bank's borrowing activity with daily balances of aggregate sweep

- transactions on selected dates to see if a correlation exists.
- If sweep activity is significant, compare the rates being paid on swept deposits with the yields received on the invested funds and with the rates on other overnight funding instruments, such as federal funds, to determine if they are reasonable.
12. Forward the following to the examiner assigned to asset/liability management:
 - a. the amount of any deposit decline or deposit increase anticipated by management (the time period will be determined by the examiner performing asset/liability management)
 - b. a listing by name and amount of any depositor controlling more than 1 percent of total deposits
 - c. a listing, if available, by name and amount of any deposits held solely because of premium rates paid (brokered deposits)
 - d. the aggregate amount of brokered deposits
 - e. a maturity schedule of certificates of deposit, detailing maturities within the next 30, 60, 90, 180, and 360 days
 - f. an assessment of the overall characteristics and volatility of the deposit structure
 13. Analyze UBPR data on deposits and related expense ratios, and compare with peer-group norms to determine—
 - a. variations from the norm, and
 - b. trends in the deposit structure with respect to—
 - growth patterns, and
 - shifts between deposit categories.
 14. Assess the volatility and the composition of the bank's deposit structure.
 - a. Review the list of time certificates of deposit of \$100,000 or more and related management reports, including those on brokered deposits, to determine—
 - whether concentrations of maturing deposits exist;
 - whether a concentration of deposits to a single entity exists;
 - the aggregate dollar volume of accounts of depositors outside the bank's normal service area, if significant, and the geographic areas from which any significant volume emanates;
 - the aggregate dollar volume of CDs that have interest rates higher than current publicly quoted rates within the market;
 - b. *Federal Deposit Insurance Corporation Improvement Act of 1991* (12 USC 1831F).
 - whether the bank is paying current market rates on CDs;
 - the dollar amount of brokered CDs, if any; and
 - the dollar volume of deposits obtained as a result of special promotions.
 - c. If the bank is undercapitalized, as defined in the FDIC's regulation on brokered deposits, ensure that it is not accepting brokered deposits. (See 12 CFR 337.6.)
 - d. If the bank is only adequately capitalized, as defined in the FDIC's regulation and is accepting brokered deposits, ensure that a waiver authorizing acceptance of such deposits has been obtained from the FDIC and that the bank is in compliance with the interest-rate restrictions. (See 12 CFR 337.6(b)(3).)
 - c. Determine if the bank has risk-management systems to monitor and control its liquidity and funding risks that are associated with the bank's brokered and rate-sensitive deposits.
 - d. Ascertain if the bank's risk-management systems for its brokered and rate-sensitive deposits are adequate and if they are commensurate with the complexity of its liquidity and funding risks. Determine if the bank has the following:
 - proper funds-management policies;
 - adequate due diligence when assessing the risks associated with deposit brokers;
 - due diligence in assessing the potential risk to earnings and capital associated with brokered or other rate-sensitive deposits, and prudent strategies for their use;
 - reasonable control structures to limit funding concentrations;
 - management information systems (MIS) that clearly identify nonrelationship or higher-cost funding programs that allow management to track performance, manage funding gaps, and monitor compliance with concentration and other risk limits; and
 - contingency funding plans that address

- the risk that these deposits may not “roll over” and provide a reasonable alternative funding strategy.
- e. Review public funds and the bank’s method of acquiring such funds to assess whether the bank uses competitive bidding in setting the interest rate paid on public deposits. If so, does the bank consider variables in addition to rates paid by competition in determining pricing for bidding on public deposits?
 - f. Review appropriate trial balances for all other deposits (demand, savings, and other time deposits). Review management reports that relate to large deposits for individuals, partnerships, corporations, and related deposit accounts to determine whether a deposit concentration exists.
 - Select, at a minimum, the 10 largest accounts to determine if the retention of those accounts depends on—
 - criticizable loan relationships;
 - liberal service accommodations, such as permissive overdrafts and drawings against uncollected funds;
 - interbank correspondent relationships;
 - deposits obtained as a result of special promotions; and
 - a recognizable trend with respect to—
 - frequent significant balance fluctuations,
 - seasonal fluctuations, and
 - nonseasonal increases or decreases in average balances.
 - g. Elicit management’s comments to determine, to the extent possible—
 - the potential renewal of large CDs that mature within the next 12 months;
 - if public fund deposits have been obtained through political influence;
 - if a significant dollar volume of accounts is concentrated in customers engaged in a single business or industry; and
 - if there is a significant dollar volume of deposits from customers who do not reside within the bank’s service area.
15. Obtain information on competitive pressures and economic conditions from the examiner responsible for the “Economic Conditions and Competition” report section, and evaluate that information, along with current deposit trends, to estimate its effect on the bank’s deposit structure.
 16. Perform the following procedures to test for compliance with the applicable laws and regulations listed below:
 - a. *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks.* Review the overdraft listing to ensure that the bank has not paid an overdraft on any account of an executive officer or director, unless the payment is made according to—
 - a written, preauthorized, interest-bearing extension of a credit plan that provides a method of repayment, or
 - a written, preauthorized transfer from another account of that executive officer or director.
 Payment of inadvertent overdrafts in an aggregate amount of \$1,000 or less is not prohibited, provided the account is not overdrawn more than five business days and the executive officer or director is charged the same fee charged to other customers in similar circumstances. Overdrafts are extensions of credit and must be included when considering each insider’s lending limits and other extension-of-credit restrictions, as well as when considering the aggregate lending limit for all outstanding extensions of credit by the bank to all insiders and their related interests.
 - b. *12 USC 1972(2), Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.* Review the overdraft listing to ensure that no preferential overdrafts exist from the bank under examination to the executive officers, directors, or principal shareholders of the correspondent bank.
 - c. *Section 22(e) of the Federal Reserve Act (12 USC 376), Interest on Deposits of Directors, Officers, and Employees.* Obtain a list of deposit accounts, with account numbers, of directors, officers, attorneys, and employees. Review the accounts for any exceptions to standard policies on service charges and interest rates paid that would suggest self-dealing or preferential treatment.
 - d. *Sections 23A and 23B of the Federal Reserve Act (12 USC 371c), and Regulation W.* Determine the existence of

- any non-intraday overdrawn affiliate accounts. If such overdrawn accounts are identified, review for compliance with sections 23A and 23B of the act and with Regulation W.
- e. *Regulation D (12 CFR 204), Reserve Requirements of Depository Institutions.* Review the accuracy of the deposit data used in the bank's reserve-requirement calculation for the examination date. When a bank issues nondeposit, uninsured obligations that are classified as "deposits" in the calculation of reserve requirements, examiners should determine if these items are properly categorized. Ascertain that the TT&L remittance option is included in the computations for reserve requirements.
 - f. *Regulation Q (12 CFR 217), Prohibition Against Payment of Interest on Demand Deposits.* Ensure that interest is not being paid on the proceeds of nonautomatically renewable matured certificates of deposit held in demand deposit accounts (as opposed to NOW accounts, which permit the payment of interest).
 - g. *12 USC 501 and 18 USC 1004, False Certification of Checks.* Compare several certified checks by date, amount, and purchaser with the depositors' names appearing on uncollected-funds and overdraft reports of the same dates to determine that the checks were certified against collected funds.
 - h. *Uniform Commercial Code 4-108, Banking Hours and Processing of Items.*
 - Determine the bank's cutoff hour, after which items received are included in the processing for the next "banking day," to ensure that the cutoff hour is not earlier than 2:00 p.m.
 - If the bank's cutoff hour is before 2:00 p.m., advise management that failure to process items received before a 2:00 p.m. cutoff may result in civil liability for delayed handling of those items.
 - i. *Local escheat laws.* Determine if the bank is adhering to the local escheat laws with regard to all forms of dormant deposits, including official checks.
17. If applicable, determine if the bank is appropriately monitoring and limiting the foreign-exchange risk associated with foreign-currency deposits.
 18. For a bank that accepts accounts from foreign governments, embassies, and political figures, evaluate—
 - a. the existence and effectiveness of the bank's policies, procedures, compliance oversight, and management reporting with regard to such foreign accounts;
 - b. whether the bank and its staff have the necessary controls, as well as the ability, to manage the risks associated with such foreign accounts;
 - c. whether the bank's board of directors and staff can ensure full compliance with its obligations under the Bank Secrecy Act, as amended by the USA Patriot Act, and its regulations;
 - d. the adequacy of the level of training of the bank's personnel responsible for managing the risks associated with such foreign accounts and for ensuring that the bank is and remains in compliance with the requirements of the applicable laws and regulations; and
 - e. the effectiveness of the bank's program that communicates its policies and procedures for such foreign accounts to ensure that foreign government, embassy, and political-figure customers are fully informed of the requirements of applicable U.S. laws and regulations.
 19. Discuss overall findings with bank management. Prepare report comments on—
 - a. policy deficiencies,
 - b. noncompliance with policies,
 - c. weaknesses in supervision and reporting,
 - d. violations of laws and regulations, and
 - e. possible conflicts of interest.
 20. Update workpapers with any information that will facilitate future examinations.

Deposit Accounts

Internal Control Questionnaire

Effective date November 2004

Section 3000.4

Review the bank's internal controls, policies, practices, and procedures for demand and time deposit accounts. The bank's systems should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

For large institutions or those institutions that have individual demand and time deposit book-keeping functions, the examiner should consider administering this questionnaire separately for each function, as applicable.

Questions pertain to both demand and time deposits unless otherwise indicated. Negative responses to the questions in this section should be explained, and additional procedures deemed necessary should be discussed with the examiner-in-charge. Items marked with an asterisk require substantiation by observation or testing.

OPENING DEPOSIT ACCOUNTS

- *1. Are new-account documents prenumbered?
 - a. Are new-account documents issued in strict numerical sequence?
 - b. Are the opening of new accounts and access to unused new-account records and certificate of deposit (CD) forms handled by an employee who is not a teller or who cannot make internal entries to customer accounts or the general ledger?
- *2. Does the institution have a written "know-your-customer" policy?
 - a. Do new-account applications require sufficient information to clearly identify the customer?
 - b. Are "starter" checks issued only after the verification of data on new transaction-account applications?
 - c. Are checkbooks and statements mailed only to the address of record? If not, is a satisfactory explanation and description obtained for any other mailing address (post office boxes, a friend or relative, etc.)?
 - d. Are the employees responsible for opening new accounts trained to screen depositors for signs of check kiting?
- *3. Does the bank perform periodic inven-

tories of new-account documents and CDs, and do the inventories include an accountability of numbers issued out of sequence or canceled prior to issuance?

- *4. Are CDs signed by a properly authorized individual?
- 5. Are new-account applications and signature cards reviewed by an officer?

CLOSING DEPOSIT ACCOUNTS

- 1. Are signature cards for closed accounts promptly pulled from the active-account file and placed in a closed file?
- 2. Are closed-account lists prepared? If so, how frequently?
- 3. Is the closed-account list circulated to appropriate management?
- 4. Is verification of closed accounts, in the form of statements of "goodwill" letters, required? Are such letters mailed under the control of someone other than a teller or an individual who can make internal entries to an account (such as a private banker or branch manager)?
- *5. For redeemed CDs:
 - a. Are the CDs stamped paid?
 - b. Is the disposition of proceeds documented to provide a permanent record as well as a clear audit trail?
 - c. Are penalty calculations on CDs and on other time deposits that are redeemed before maturity rechecked by a second employee?
- *6. Except for deposit-account agreements that authorize the transfer of deposited funds to other nondemand deposit accounts, are matured CDs that are not automatically renewable classified as demand deposits on the Call Report and on the Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900)?

DEPOSIT-ACCOUNT RECORDS

- *1. Does the institution have documentation supporting a current reconciliation of each deposit-account category recorded on its general ledger, including customer accounts

- and bank-controlled accounts such as dealer reserves, escrow, Treasury tax and loan, etc.? (Prepare separate workpapers for demand and time accounts, listing each account and the date and frequency of reconciliation, the general-ledger balance, the subsidiary-ledger balance, adjustments, and unexplained differences.)
- *2. Are reconciliations performed by an individual or group not directly engaged in accepting or preparing transactions or in data entry to customers' accounts?
 - *3. If the size of the bank precludes full separation of duties between data entry and reconciliation, are reconciliation duties rotated on a formal basis, and is a record maintained to support such action?
 - *4. Are reconciliations reviewed by appropriate independent management, especially in circumstances when full separation of duties is not evident?
 - *5. Are periodic reports prepared for management, and do the reports provide an aging of adjustments and differences and detail the status of significant adjustments and differences?
 - *6. Has management adequately addressed any significant or long-outstanding adjustments or differences?
 - *7. Is the preparation of input and the posting of subsidiary demand deposit records performed or adequately reviewed by persons who do not also—
 - a. accept or generate transactions?
 - b. issue official checks or handle funds-transfer transactions?
 - c. prepare or authorize internal entries (return items, reversals, and direct charges, such as loan payments)?
 - d. prepare supporting documents required for disbursements from an account?
 - e. perform maintenance on the accounts, such as changes of address, stop payments, holds, etc.?
 - *8. Are in-process, suspense, interoffice, and other accounts related to deposit accounts controlled or closely monitored by persons who do not have posting or reconciliation duties?
 - *9. Are periodic reports prepared for management on open items in suspense and on in-process, interoffice, overdrawn, and other deposit accounts, and do the reports include aging of items and the status of significant items?
 - 10. If the bank's bookkeeping system is not automated, are deposit bookkeepers rotated?
 - 11. Does the bank segregate the deposit account files of—
 - a. employees and officers?
 - b. directors?
 - c. the business interests of employees and officers, or interests controlled by employees and officers?
 - d. the business interests of directors, or interests controlled by directors?
 - e. foreign governments, embassies, and political figures?
 - *12. Are posting and check filing separated from statement preparation?
 - 13. Are statements mailed or delivered to all customers as required by the bank's deposit-account agreement?
 - *14. Are customer transaction and interest statements mailed in a controlled environment that precludes any individual from receiving any statement not specifically authorized by the customer or the institution's policy (for example, dormant-account statements)?

DORMANT ACCOUNTS AND RETURNED MAIL

- *1. Does the bank have formal policies and procedures for the handling of customers' transaction and interest statements that are returned as undeliverable? Does the policy—
 - a. require that statements be periodically mailed on dormant accounts? If so, how often?
 - b. prohibit the handling of dormant-account statements by (1) employees of the branch where the account is assigned, (2) the account officer, and (3) other individuals with exclusive control of accounts?
 - c. require positive action to follow up on obtaining new addresses?
 - d. place statements and signature cards for accounts for which contact cannot be re-established (the mail is returned more than once or is marked "deceased") into a controlled environment?
 - e. require the bank to change the address on future statements to the department

- of the bank (the controlled environment) designated to receive returned mail?
- f. require a written request from the customer and verification of the customer's signature before releasing an account from the controlled environment?
- *2. Are accounts for which contact cannot be re-established and that do not reflect recent activity removed from active files and clearly classified as dormant?
 - *3. Before returning a dormant account to active status, are transactions reactivating the account verified, and are independent confirmations obtained directly from the customer?
 - *4. Does transfer from dormant to active status require the approval of an officer who cannot approve transactions on dormant accounts?

INACTIVE ACCOUNTS

1. Are demand accounts that have been inactive for one year, and time accounts that have been inactive for three years, classified as inactive? If not, state the time period for classifying a demand or time account as inactive.
2. Does the bank periodically review the inactive accounts to determine if they should be placed in a dormant status, and are decisions to keep such accounts in active files documented?
 - a. maintain current signature cards of individuals authorized to pick up statements?
 - b. obtain signed receipts showing the date of pickup, and compare the receipts with the signature cards?
 - c. follow up on the status of statements not picked up as scheduled?
- *3. Does management review activity in hold-mail accounts that have not been picked up for extended periods of time (for example, one year), and, when there is no activity, place the accounts in a dormant status?

HOLD MAIL

- *1. Does the institution have a formal policy and procedure for handling statements and documents that a customer requests not to be mailed but that will be picked up at a location within the institution? Does the policy—
 - a. require that statements will not be held by an individual (an account officer, branch manager, bookkeeper, etc.) who could establish exclusive control over entries to and the delivery of statements for customer accounts?
 - b. discourage such pickup arrangements and grant them only after the customer provides a satisfactory reason for the arrangement?

OVERDRAFTS

- *1. Are overdraft authorization limits for officers formally established?
- *2. Does the bank require an authorized officer to approve overdrafts?
- *3. Is an overdraft listing prepared daily for demand deposit and time transaction accounts?
 4. For banks processing overdrafts that are not automatically approved (a "pay none" system), is the nonsufficient-funds report circulated among bank officers?
- *5. Are overdraft listings circulated among the officers?
6. Are the statements of accounts with large overdrafts reviewed for irregularities and prompt repayment?

7. Is an aged record of large overdrafts included in the monthly report to the board of directors or its committee, and does the report include the overdraft origination date?
8. Is there an established schedule of service charges?

UNCOLLECTED FUNDS

- *1. Does the institution generate a daily report of drawings against uncollected funds for demand deposit and time transaction accounts?
 - a. Is the computation of uncollected funds positions based on reasonable check-collection criteria?
 - b. Can the reports, or a separate account activity report, be used to detect potential kiting conditions?
 - c. If reports are not generated for time transaction accounts, is a system in place to control drawings against uncollected funds?
- *2. Do authorized officers review the uncollected-funds reports and approve drawings against uncollected funds within established limits?
- *3. Are accounts that frequently appear on the uncollected-funds or kite-suspect reports reviewed regardless of account balances? (For example, accounts with simultaneous large debits and credits can reflect low balances.)

ACCOUNTS FOR FOREIGN GOVERNMENTS, EMBASSIES, AND POLITICAL FIGURES

1. For bank relationships with a foreign government, embassy, or political figure:
 - a. Has the board of directors established standards and guidelines for management to use when evaluating whether or not the bank should accept such new accounts?
 - b. Are the standards and guidelines consistent with the bank's—
 - own business objectives,
 - assessment of the varying degrees of risks associated with particular for-

- eign accounts or lines of business, and
 - capacity to manage those risks?
- c. Does the bank have adequate internal controls and compliance oversight systems to monitor and manage the varying degrees of risks associated with such foreign accounts? Do these internal controls and compliance systems ensure full compliance with the Bank Secrecy Act, as amended by the USA Patriot Act, and its respective regulations?
- d. Does the bank have personnel that are sufficiently trained in the management of such risks and in the requirements of applicable laws and regulations?
- e. Does the bank have policies and procedures for ensuring that such foreign-account customers receive adequate communications from the bank? Communications should ensure that these customers are made fully aware of the requirements of U.S. laws and regulations to which the bank is subject.
- f. Does the bank seek to structure its relationships with such foreign-account customers so as to minimize the varying degrees of risks these customers may pose?

OTHER MATTERS

- *1. Are account-maintenance activities (changes of address, status changes, rate changes, etc.) separated from data entry and reconciling duties?
- *2. Do all internal entries other than service charges require the approval of appropriate supervisory personnel?
- *3. If not included in the internal or external audit program, are employees' and officers' accounts, accounts of employees' and officers' business interests, and accounts controlled by employees and officers periodically reviewed for unusual or prohibited activity?
- *4. For unidentified deposits:
 - a. Are deposit slips kept under dual control?
 - b. Is the disposition of deposit slips approved by an appropriate officer?
- *5. For returned checks, unposted items, and

- other rejects:
- a. Are daily listings of such items prepared?
 - b. Are all items reviewed daily, and is disposition of items required within a reasonable time period? If so, indicate the time period.
 - c. Are reports prepared for management that show items not disposed of within the established time frames?
6. Are customers immediately notified in writing of deposit errors?
 7. Does the bank require a customer's signature for stop-payment orders?
 8. For automatic transfer accounts:
 - a. Are procedures in effect that require officer approval for transfers in excess of the savings balance?
 - b. For nonautomated systems, are transfers made by employees who do not also handle cash, execute external funds transfers, issue official checks singly, or post subsidiary records?
 9. For telephone transfer accounts:
 - a. Do depositors receive an individual identification code for use in making transfers?
 - b. Are transfers made by employees who do not also handle cash, execute external funds transfers, issue official checks singly, or post subsidiary records?
 - *10. If not included in the internal or external audit program, are accrual balances for the various types of deposits verified periodically by an authorized official? If so, indicate how often.
 - *11. Are accounts with a "hold-balance" status—those accounts on which court orders have been placed, those pledged as security to customers' loans, those pending the clearing of a large check, those for which the owner is deceased, and those for which the passbook has been lost—"locked out" for transactions unless the transaction is approved by appropriate management?
 12. For passbook accounts:
 - a. Do all entries to passbooks contain teller identification?
 - b. Under a window-posting system, are recording media and passbooks posted simultaneously?
 - c. Are tellers prohibited from holding customers' savings passbooks?
 - d. If customers' passbooks are held, are they maintained under the institution's "hold-mail" program and kept under dual control?
 - e. Are customers prohibited from withdrawing funds without a passbook? If not, state the policy.
 13. For withdrawals from savings or other time accounts:
 - a. Are withdrawal tickets canceled daily?
 - b. Are procedures in place to preclude overdrafts?
 - c. Are procedures in effect to place holds on, and to check for holds on, withdrawals over a stated amount? If so, indicate the amount.
 14. For signature cards on demand and time accounts:
 - a. Are procedures in effect to guard against the substitution of false signatures? Describe the procedures.
 - b. Are signature cards stored to preclude physical damage?
 - c. Are signatures compared for withdrawals and cashed checks? Describe the procedures.

OFFICIAL CHECKS, MONEY ORDERS, AND CERTIFIED CHECKS

- *1. Are separate general-ledger accounts maintained for each type of official check?
- *2. For each type of check issued:
 - a. Are multicopy checks and certified-check forms used? If not, are detailed registers of disbursed checks maintained?
 - b. Are all checks prenumbered and issued in sequence?
 - c. Is check preparation and issuance separate from recordkeeping?
 - d. Is the signing of checks in advance prohibited?
 - e. Do procedures prohibit the issuance of a check before the credit is processed?
- *3. Is the list authorizing bank personnel to sign official checks kept current? Does the list include changes in authorization limits, delete employees who no longer work at the bank, and indicate employees added to the list?
- *4. Are appropriate controls in effect over check-signing machines (if used) and certification stamps?

- *5. Are voided checks and voided certified-check forms promptly defaced and filed with paid checks?
- *6. If reconcilements are not part of the overall deposit-reconciliation function—
 - a. are outstanding checks listed and reconciled regularly to the general ledger? If so, state how often.
 - b. is permanent evidence of reconcilements maintained?
 - c. is there clear separation between the preparation of checks, data entry, and check reconciliation?
 - d. are the reconcilements reviewed regularly by an authorized officer?
 - e. are reconcilment duties rotated on a formal basis in institutions where size precludes the full separation of duties between data entry and reconcilment?
 - f. are authorized signatures and endorsements checked by the filing clerk?
- *7. For supplies of official checks:
 - a. Are records of unissued official checks maintained centrally and at each location storing them?
 - b. Are periodic inventories of unissued checks independently performed?
 - c. Do the inventories include a description of all checks issued out of sequence?
 - d. If users are assigned a supply, is that supply replenished on a consignment basis?
- *8. Are procedures in effect to preclude certification of checks drawn against uncollected funds?

TREASURY TAX AND LOAN ACCOUNTS (31 CFR 203)

1. Do transfers from the remittance-option account to the Federal Reserve Bank occur the next business day after deposit?
2. When the note option is used, do transfers from the Treasury Tax and Loan (TT&L) demand deposit account occur the next

business day after deposit?

- *3. Has the TT&L-account reconciliation been completed in a timely manner and approved by a supervisor?
- 4. Has adequate collateral been pledged to secure the TT&L account?

AUDIT

- *1. Are deposit-account activities audited on a sufficiently frequent basis?
- *2. Does the scope of the audit program require, and do audit records support, substantive testing or quantitative measurements of deposit-account activities that, at a minimum, include the matters set forth in this questionnaire?
- *3. Does the audit program include a comprehensive confirmation program with the customers of each deposit category maintained by the institution?
- *4. Do audit department records support the execution of the confirmation program, and do the records reflect satisfactory follow-up of responses and of requests returned as undeliverable?
- *5. Are audit and prior-examination recommendations for deposit-account activities appropriately addressed?

CONCLUSION

- *1. Does the foregoing information provide an adequate basis for evaluating internal control in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
- *2. Are internal controls adequate on the basis of a composite evaluation, as evidenced by answers to the foregoing questions?

Borrowed funds are a common and practical method for banks of all sizes to meet customers' needs and enhance banking operations. For the purposes of this section, borrowings exclude long-term subordinated debt, such as capital notes and debentures (discussed in "Assessment of Capital Adequacy," section 3020.1). Borrowings may exist in a number of forms, both on a direct and indirect basis. Common sources of direct bank borrowings include Federal Home Loan Bank credit lines, federal funds purchased, loans from correspondent banks, repurchase agreements, negotiable certificates of deposit, and borrowings from the Federal Reserve discount window. These are discussed in some detail below. Other borrowings include bills payable to the Federal Reserve, interest-bearing demand notes issued to the U.S. Treasury (the Treasury tax and loan note option account), mortgages payable, due bills, and other types of borrowed securities. Indirect forms of borrowings include customer paper rediscounted and assets sold with the bank's endorsement or guarantee or subject to a repurchase agreement.

The primary reasons a bank may borrow include the following:

- To meet the temporary or seasonal loan or deposit withdrawal needs of its customers, if the borrowing period is temporary and the bank is quickly restored to a position in which the quantity of its principal earning assets and cash reserves is in proper relation to the requirements of its normal deposit volume.
- To meet large and unanticipated deposit withdrawals that may arise during periods of economic distress. The examiner should distinguish between "large and unanticipated deposit withdrawals" and a predeterminable contraction of deposits, such as the cessation of activities in a resort community or the withdrawal of funds on which the bank received adequate prior withdrawal notice. Those situations should be met through ample cash reserves and readily convertible assets rather than borrowing.
- To manage liabilities effectively. Generally, the effective use of this type of continuous borrowing is limited to money-center or large regional banks.

It is important to analyze each borrowing on

its own merit to determine its purpose, effectiveness, and stability. Some of the more frequently used sources of borrowings are discussed below.

COMMON SOURCES OF BORROWINGS

Federal Home Loan Bank Borrowings

The Federal Home Loan Bank (FHLB) originally served solely as a source of borrowings to savings and loan companies. With the implementation of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), FHLB's lending capacity was expanded to include banks.

Compared with borrowings from the discount window of the Reserve Banks, borrowings from the FHLB have fewer conditions. Both short-term and long-term borrowings, with maturities ranging from overnight to 30 years, are available to institutions at generally competitive interest rates. The flexibility of the facility enables bank management to use this source of funds for the purpose of asset/liability management, and it allows management to secure a favorable interest-rate spread. For example, FHLB borrowings may provide a lower-cost alternative to the conventional deposit, particularly in a highly competitive local market.

Management should be capable of explaining the purpose of the borrowing transaction. The borrowing transaction should then be analyzed to determine whether the arrangement achieved the stated purpose or whether the borrowings are a sign of liquidity deficiencies. Further, the borrowing agreement between the institution and the FHLB should be reviewed to determine the asset collateralizing the borrowings and the potential risks presented by the agreement. In some instances, the borrowing agreement may provide for collateralization by all assets not already pledged for other purposes.

The types of collateral necessary to obtain an FHLB loan include residential mortgage loans and mortgage-backed securities. The composite rating of an institution is a factor in both the approval for obtaining an FHLB loan and the level of collateral required.

Federal Funds Purchased

The day-to-day use of federal funds is a rather common occurrence, and federal funds are considered an important money market instrument. Many regional and money-center banks, acting in the capacity of correspondents to smaller community banks, function as both providers and purchasers of federal funds and, in the process of these transactions, often generate a small return.

A brief review of bank reserves is essential to a discussion of the federal funds market. As a condition of membership in the Federal Reserve System, member banks are required to maintain a portion of their deposits as reserves. Reserves can take the form of vault cash and deposits in the Reserve Bank. The amount of these reserve balances is reported weekly or quarterly and computed on the basis of the daily average deposit balances. For institutions that report their reserves on a weekly basis, required reserves are computed on the basis of daily average balances of deposits and Eurocurrency liabilities during a 14-day period ending every second Monday. Institutions that report their reserves on a quarterly basis compute their reserve requirement on the basis of their daily average deposit balances during a seven-day computation period that begins on the third Tuesday of March, June, September, and December. (See 12 CFR 204.3(c)–(d).)

Since member banks do not receive interest on the reserves, banks prefer to keep excess balances at a minimum to achieve the maximum utilization of funds. To accomplish this goal, banks carefully analyze and forecast their daily reserve position. Changes in the volume of required reserves occur frequently as the result of deposit fluctuations. Deposit increases require member banks to maintain more reserves; conversely, deposit decreases require less reserves.

The most frequent type of federal funds transaction is unsecured for one day and repayable the following business day. The rate is usually determined by overall money market rates as well as by the available supply of and demand for funds. In some instances, when the selling and buying relationship between two banks is quite continuous, something similar to a line of credit may be established on a funds-availability basis. Although the most common federal funds transaction is unsecured, the selling of funds can also be secured and for longer

periods of time. Agency-based federal funds transactions are discussed in “Bank Dealer Activities,” section 2030.1.

Loans from Correspondent Banks

Small and medium-sized banks often negotiate loans from their principal correspondent banks. The loans are usually for short periods and may be secured or unsecured.

Repurchase Agreements

The terms “repurchase agreement”¹ (repo) and “reverse repurchase agreement” refer to a type of transaction in which a money market participant acquires immediately available funds by selling securities and simultaneously agreeing to repurchase the securities after a specified time at a given price, which typically includes interest at an agreed-on rate. Such a transaction is called a repo when viewed from the perspective of the supplier of the securities (the borrower), and a reverse repo or matched sale-purchase agreement when described from the point of view of the supplier of funds (the lender).

Frequently, instead of resorting to direct borrowings, a bank may sell assets to another bank or some other party and simultaneously agree to repurchase the assets at a specified time or after certain conditions have been met. Bank securities as well as loans are often sold under a repo to generate temporary working funds. These kind of agreements are often used because the rate on this type of borrowing is less than the rate on unsecured borrowings, such as federal funds purchased.

The usual terms for the sale of securities under a repo require that, after a stated period of time, the seller repurchase the securities at a predetermined price or yield. A repo commonly includes a near-term maturity (overnight or a few days) and is usually arranged in large-dollar amounts. The lender or buyer is entitled to receive compensation for use of the funds provided to its counterparty. The interest rate paid on a repo is negotiated based on the rates on the underlying securities. U.S. government and agency securities are the most common type of

1. See sections 2015.1, 2020.1, and 4170.1.

instruments sold under repurchase agreements, since those types of repos are exempt from reserve requirements.

Although standard overnight and term repo arrangements in Treasury and federally related agency securities are most prevalent, market participants sometimes alter various contract provisions to accommodate specific investment needs or to provide flexibility in the designation of collateral. For example, some repo contracts allow substitutions of the securities subject to the repurchase commitment. These are called “dollar repurchase agreements” (dollar rolls), and the initial seller’s obligation is to repurchase securities that are substantially similar, but not identical, to the securities originally sold. Another common repo arrangement is called a “flex repo,” which, as implied by the name, provides a flexible term to maturity. A flex repo is a term agreement between a dealer and a major customer in which the customer buys securities from the dealer and may sell some of them back before the final maturity date.

Bank management should be aware of certain considerations and potential risks of repurchase agreements, especially when entering into large-dollar-volume transactions with institutional investors or brokers. Both parties in a term repo arrangement are exposed to interest-rate risk. It is a fairly common practice to have the collateral value of the underlying securities adjusted daily to reflect changes in market prices and to maintain the agreed-on margin. Accordingly, if the market value of the repo securities declines appreciably, the borrower may be asked to provide additional collateral. Conversely, if the market value of the securities rises substantially, the lender may be required to return the excess collateral to the borrower. If the value of the underlying securities exceeds the price at which the repurchase agreement was sold, the bank could be exposed to the risk of loss if the buyer is unable to perform and return the securities. This risk would obviously increase if the securities are physically transferred to the institution or broker with which the bank has entered into the repurchase agreement. Moreover, if the securities are not returned, the bank could be exposed to the possibility of a significant write-off, to the extent that the book value of the securities exceeds the price at which the securities were originally sold under the repurchase agreement. For this reason, banks should avoid pledging excessive collateral and obtain sufficient financial information on and analyze the

financial condition of those institutions and brokers with whom they engage in repurchase transactions.

“Retail repurchase agreements” (retail repos)² for a time were a popular vehicle for some commercial banks to raise short-term funds and compete with certain instruments offered by nonbanking competitors. For booking purposes, a retail repo is a debt incurred by the issuing bank that is collateralized by an interest in a security that is either a direct obligation of or guaranteed as to principal and interest by the U.S. government or an agency thereof. Retail repos are issued in amounts not exceeding \$100,000 for periods of less than 90 days. With the advent of money market certificates issued by commercial banks, the popularity of the retail repo declined.

Both retail and large-denomination, wholesale repurchase agreements are in many respects equivalent to short-term borrowings at market rates of interest. Therefore, banks engaging in repurchase agreements should carefully evaluate their interest-rate-risk exposure at various maturity levels, formulate policy objectives in light of the institution’s entire asset and liability mix, and adopt procedures to control mismatches between assets and liabilities. The degree to which a bank borrows through repurchase agreements also should be analyzed with respect to its liquidity needs, and contingency plans should provide for alternative sources of funds.

Negotiable Certificates of Deposit

Certificates of deposit (CDs) have not been legally defined as borrowings and continue to be reflected as deposits for reporting purposes. However, the fundamental distinction between a negotiable money market CD as a deposit or as a borrowing is nebulous at best; in fact, the negotiable money market CD is widely recognized as the primary borrowing vehicle for many banks. Dependence on CDs as sources of funds is discussed in “Deposit Accounts,” section 3000.1.

2. See sections 2015.1, 2020.1, and 4170.1.

Borrowings from the Federal Reserve

In accordance with the Board's Regulation A (12 CFR 201), the Federal Reserve Banks generally make credit available through the primary, secondary, and seasonal credit programs to any depository institution that maintains transaction accounts or nonpersonal time deposits.³ However, the Federal Reserve expects depository institutions to rely on market sources of funds for their ongoing funding needs and to use these credit programs as a backup source of funding rather than a routine one. An institution that borrows primary credit may use those funds to finance sales of federal funds, but secondary and seasonal credit borrowers may not act as the medium or agent of another depository institution in receiving Federal Reserve credit except with the permission of the lending Federal Reserve Bank.

A Federal Reserve Bank is not obligated to extend credit to any depository institution but may lend to a depository institution either by making an advance secured by acceptable collateral or by discounting certain types of paper described in the Federal Reserve Act. Although Reserve Banks now always extend credit in the form of an advance, the Federal Reserve's credit facility nonetheless is known colloquially as the "discount window." Before lending to a depository institution, a Reserve Bank can require any information it believes is appropriate to ensure that the assets tendered as collateral are acceptable. A Reserve Bank also should determine prior to lending whether the borrowing institution is undercapitalized or critically undercapitalized. Operating Circular No. 10, "Lending," establishes the credit and security terms for borrowings from the Federal Reserve.

3. In unusual and exigent circumstances and after consultation with the Board, a Reserve Bank may extend credit to individuals, partnerships, and corporations that are not depository institutions if, in the judgment of the Reserve Bank, credit is not available from other sources and failure to obtain credit would adversely affect the economy. A Reserve Bank may extend credit to a nondepository entity in the form of an advance only if the advance is secured by a direct obligation of the United States or a direct obligation of, or an obligation that is fully guaranteed as to principal and interest by, any agency of the United States. An extension of credit secured by any other type of collateral must be in the form of a discount and must be authorized by an affirmative vote of at least five members of the Board.

Primary Credit

Reserve Banks may extend primary credit on a very short term basis (typically overnight) to depository institutions that the Reserve Banks judge to be in generally sound financial condition. Reserve Banks extend primary credit at a rate above the target federal funds rate of the Federal Open Market Committee. Minimal administrative requirements apply to requests for overnight primary credit, unless some aspect of the credit request appears inconsistent with the conditions of primary credit (for example, if a pattern of behavior indicates strongly that an institution is using primary credit other than as a backup source of funding). Reserve Banks also may extend primary credit to eligible institutions for periods of up to several weeks if such funding is not available from other sources. However, longer-term extensions of primary credit will be subject to greater administration than are overnight loans.

Reserve Banks determine eligibility for primary credit according to a uniform set of criteria that also is used to determine eligibility for daylight credit under the Board's Policy Statement on Payments System Risk. These criteria are based mainly on examination ratings and capitalization, although Reserve Banks also may use supplementary information, including market-based information when available. Specifically, an institution that is at least adequately capitalized and rated CAMELS 1 or 2 (or SOSA 1 and ROCA 1, 2, or 3) almost certainly would be eligible for primary credit. An institution that is at least adequately capitalized and rated CAMELS 3 (or SOSA 2 and ROCA 1, 2, or 3) generally would be eligible. An institution that is at least adequately capitalized and rated CAMELS 4 (or SOSA 1 or 2 and ROCA 4 or 5) would be eligible only if an ongoing examination indicated a substantial improvement in condition. An institution that is not at least adequately capitalized, or that is rated CAMELS 5 (or SOSA 3 regardless of the ROCA rating), would not be eligible for primary credit.

Secondary Credit

Secondary credit is available to institutions that do not qualify for primary credit. Secondary credit is available as a backup source of liquidity on a very short term basis, provided that the loan is consistent with a timely return to a reliance on

market sources of funds. Longer-term secondary credit is available if necessary for the orderly resolution of a troubled institution, although any such loan would have to comply with additional requirements for lending to undercapitalized and critically undercapitalized institutions. Unlike the primary credit program, secondary credit is not a minimal administration facility because Reserve Banks must obtain sufficient information about a borrower's financial situation to ensure that an extension of credit complies with the conditions of the program. Secondary credit is available at a rate above the primary credit rate.

Seasonal Credit

Seasonal credit is available under limited conditions to meet the needs of depository institutions that have seasonal patterns of movement in deposits and loans but that lack ready access to national money markets. In determining a depository institution's eligibility for seasonal credit, Reserve Banks consider not only the institution's historical record of seasonal fluctuations in loans and deposits, but also the institution's recent and prospective needs for funds and its liquidity conditions. Generally, only very small institutions with pronounced seasonal funding needs will qualify for seasonal credit. Seasonal credit is available at a flexible rate that takes into account the rate for market sources of funds.

Collateral Requirements

All loans advanced by the Reserve Bank must be secured to the satisfaction of the Reserve Bank. Collateral requirements are governed by Operating Circular No. 8. Reserve Banks require a perfected security interest in all collateral pledged to secure loans. Satisfactory collateral generally includes U.S. government and federal-agency securities, and, if they are of acceptable quality, mortgage notes covering one- to four-family residences; state and local government securities; and business, consumer, and other customer notes. Traditionally, collateral is held in the Reserve Bank vault. Under certain circumstances, collateral may be retained on the borrower's premises under a borrower-in-custody arrangement, or it may be held on the borrower's premises under the Reserve Bank's exclusive custody and control in a field ware-

house arrangement. Collateral may also be held at the borrowing institution's correspondent or another third party. All book-entry collateral must be held at the Federal Reserve Bank. Definitive collateral, not in bearer form, must be properly assigned and endorsed.

Lending to Undercapitalized and Critically Undercapitalized Depository Institutions

Credit from any Reserve Bank to an institution that is "undercapitalized" may be extended or outstanding for no more than 60 days during which the institution is undercapitalized in any 120-day period.⁴ An institution is considered undercapitalized if it is not critically undercapitalized under section 38 of the Federal Deposit Insurance Act (the FDI Act) but is either deemed undercapitalized under that provision and its implementing regulations or has received a composite CAMELS rating of 5 as of the most recent examination. A Reserve Bank may make or have outstanding advances or discounts to an institution that is deemed "critically undercapitalized" under section 38 of the FDI Act and its implementing regulations only during the five-day period beginning on the date the institution became critically undercapitalized or after consultation with the Board.

INTERNATIONAL BORROWINGS

International borrowings may be direct or indirect. Common forms of direct international borrowings include loans and short-term call money from foreign banks, borrowings from the Export-Import Bank of the United States, and overdrawn nostro (due from foreign banks—demand) accounts. Indirect forms of borrowing include notes and trade bills rediscounted with the central banks of various countries; notes, acceptances, import drafts, or trade bills sold with the bank's endorsement or guarantee; notes and other obligations sold subject to repurchase agreements; and acceptance pool participations.

4. Generally, a Reserve Bank also may lend to an undercapitalized institution during 60 calendar days after receipt of a certificate of viability from the Chairman of the Board of Governors or after consultation with the Board.

ANALYZING BORROWINGS

If a bank borrows extensively or in large amounts, the examiner should thoroughly analyze the borrowing activity. An effective analysis includes a review of the bank's reserve records, both required and maintained, to determine the frequency of deficiencies at the closing of reserve periods. The principal sources of borrowings, range of amounts, frequency, length of time indebted, cost, and reasons for the borrowings should be explored. The actual use of the funds should be verified.

Examiners should also analyze changes in a bank's borrowing position for signs of deterioration in its borrowing ability and overall creditworthiness. One indication of deterioration is the payment of large fees to money brokers to obtain funds because the bank is having difficulty obtaining access to conventional sources of borrowings. These "brokered deposits" are usually associated with small banks since they

do not generally have ready access to alternative sources of funds available to larger institutions through the money and capital markets. Brokered deposits generally carry higher interest rates than alternative sources, and they tend to be particularly susceptible to interest-rate changes in the overall financial market. For further discussion of brokered deposits, see "Deposit Accounts," section 3000.1.

Other indicators of deterioration in a bank's borrowing ability and overall creditworthiness include, but are not limited to, requests for collateral on previously unsecured credit lines or increases in collateral margins, the payment of above-market interest rates, or a shortening of maturities that is inconsistent with management's articulated balance-sheet strategies. If the examiner finds that a bank's borrowing position is not properly managed, appropriate comments should be included in the report of examination.

Borrowed Funds

Examination Objectives

Effective date May 1996

Section 3010.2

1. To determine if the policies, practices, procedures, and internal controls for borrowed funds are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Borrowed Funds

Examination Procedures

Effective date October 2008

Section 3010.3

1. If selected for implementation, complete or update the Borrowed Funds section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by the internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any audit deficiencies noted in the latest review done by internal/external auditors from the examiner assigned to “Internal Control” and determine if appropriate corrections have been made.
4. Obtain the listing of accounts related to domestic and international borrowed funds from the examiner assigned to “Examination Strategy.”
5. Prepare or obtain a listing of borrowings, by type, and—
 - a. agree or reconcile balances to department controls and general ledger, and
 - b. review reconciling items for reasonableness.
6. From consultation with the examiners assigned to the various loan areas, determine that the following schedules were reviewed in the lending departments and that there was no endorsement, guarantee, or repurchase agreement which would constitute a borrowing:
 - a. participations sold
 - b. loans sold in full since the preceding examination
7. Based on the information obtained in steps 5 and 6, and through observation and discussion with management and other examining personnel, determine that all borrowings are properly reflected on the books of the bank.
8. If the bank engages in any form of borrowing which requires written borrowing agreement(s), complete the following:
 - a. Prepare or update a carry-forward workpaper describing the major terms of each borrowing agreement, and determine that the bank is complying with those terms.
 - b. Review terms of past and present borrowing agreements for indications of deteriorating credit position by noting—
 - recent substantive changes in borrowing agreements,
 - increases in collateral to support borrowing transactions,
 - general shortening of maturities,
 - interest rates exceeding prevailing market rates,
 - frequent changes in lenders, and
 - large fees paid to money brokers.
 - c. If the bank has obtained funds from money brokers (brokered deposits), determine—
 - why such deposits were originally obtained,
 - who the deposits were obtained from,
 - what the funds are used for,
 - the relative cost of brokered deposits in comparison to alternate sources of funds, and
 - the overall effect of the use of brokered deposits on the bank’s condition and whether there appear to be any abuses related to the use of such deposits.
 - d. If there is an indication that the bank’s credit position has deteriorated, ascertain why.
9. If the bank engages in the issuance of retail repurchase agreements (retail repos), check for compliance with section 4170.1; also 2015.1 and 2020.1.
10. Determine the purpose of each type of borrowing and conclude whether the bank’s borrowing posture is justified in light of its financial condition and other relevant circumstances.
11. Provide the examiner assigned to “Asset/Liability Management” the following information:
 - a. A summary and an evaluation of the bank’s borrowing policies, practices, and procedures. The evaluation should give consideration to whether the bank—
 - evaluates interest-rate-risk exposure at various maturity levels;
 - formulates policy objectives in light of the entire asset and liability mix, and liquidity needs;
 - has adopted procedures to control mis-

- matches between assets and liabilities; and
 - has contingency plans for alternate sources of funds in the event of a run-off of current funding sources.
- b. An evaluation of the bank's adherence to established policies and procedures.
 - c. A repricing maturity schedule of borrowings.
 - d. A listing of prearranged federal funds lines and other lines of credit. Indicate the amount currently available under those lines, i.e., the unused portion of the lines.
 - e. The amount of any anticipated decline in borrowings over the next _____ day period. (The time period will be determined by the examiner assigned to "Asset/Liability Management.")
12. Prepare a list of all borrowings by category, on a daily basis for the period since the last examination. Also, include on the list short-term or overnight money market lending activities such as federal funds sold and securities purchased under resale agreement. For each category on the list, compute for the period between examinations—
 - a. high point
 - b. low point
 - c. average amounts outstanding
 - d. frequency of borrowing and lending activity, expressed in terms of number of days
 13. Prepare, in appropriate report form, and discuss with appropriate management—
 - a. the adequacy of written policies regarding borrowings;
 - b. the manner in which bank officers are operating in conformance with established policy;
 - c. the existence of any unjustified borrowing practices;
 - d. any violation of laws or regulations; and
 - e. recommended corrective action when policies, practices, or procedures are deficient; violations of laws or regulations exist; or when unjustified borrowing practices are being pursued.
 14. Update the workpapers with any information that will facilitate future examinations.
 15. Review the market value of collateral and collateral-control arrangements for repurchase agreements to ensure that excessive collateral has not been pledged and that the bank is not exposed to excessive credit risks.

Borrowed Funds

Internal Control Questionnaire

Effective date March 1984

Section 3010.4

Review the bank's controls, policies, practices and procedures for obtaining and servicing borrowed funds. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICY

1. Has the board of directors approved a written policy which:
 - a. Outlines the objectives of bank borrowings?
 - b. Describes the bank's borrowing philosophy relative to risk considerations, i.e., leverage/growth, liquidity/income?
 - c. Provides for risk diversification in terms of staggered maturities rather than solely on cost?
 - d. Limits borrowings by amount outstanding, specific type or total interest expense?
 - e. Limits or restricts execution of borrowings by bank officers?
 - f. Provides a system of reporting requirements to monitor borrowing activity?
 - g. Requires subsequent approval of transactions?
 - h. Provides for review and revision of established policy at least annually?
- c. Prepare all supporting documents required for payment of debt?
- *4. Are subsidiary borrowed funds records reconciled with the general ledger accounts at an interval consistent with borrowing activity, and are the reconciling items investigated by persons, who do not also:
 - a. Handle cash?
 - b. Prepare or post to the subsidiary borrowed funds records?

INTEREST

- *5. Are individual interest computations checked by persons who do not have access to cash?
6. Is an overall test of the total interest paid made by persons who do not have access to cash?
7. Are payees on the checks matched to related records of debt, note or debenture owners?
8. Are corporate resolutions properly prepared as required by creditors and are copies on file for reviewing personnel?
9. Are monthly reports furnished to the board of directors reflecting the activity of borrowed funds, including amounts outstanding, interest rates, interest paid to date and anticipated future activity?

CONCLUSION

RECORDS

- *2. Does the bank maintain subsidiary records for each type of borrowing, including proper identification of the obligee?
 - *3. Is the preparation, addition and posting of the subsidiary borrowed funds records performed or adequately reviewed by persons who do not also:
 - a. Handle cash?
 - b. Issue official checks and drafts?
10. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
 11. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Commercial banks rely on wholesale borrowings obtained from a number of financial intermediaries, including Federal Home Loan Banks, other commercial banks, and securities firms. These borrowings frequently have attractive features and pricing. If properly assessed and prudently managed, they can enhance a bank's funding options and assist in controlling interest-rate and liquidity risks. Some of the reasons that banks use these types of borrowings include the initial low cost of funds when compared with other liabilities with similar maturities. At the same time, certain wholesale borrowings have become more complex, and some structures include various types of embedded options.¹ If not thoroughly assessed and prudently managed, these more complex funding instruments have the potential over time to significantly increase a bank's sensitivity to market and liquidity risks. Maturity mismatches or the embedded options themselves can, in some circumstances, adversely affect a bank's financial condition, especially when the terms and conditions of the borrowings are misunderstood.

A growing use of wholesale borrowings, combined with the risks associated with the complex structures of some of these borrowings, makes it increasingly important for bank supervisors to assess the risks and risk-management processes associated with these sources of funds. The supervisory guidance provided below supplements and expands upon existing general guidance on bank funding and borrowings.² Where appropriate, examiners should (1) review the provisions of each significant borrowing agreement between the bank and the wholesale institution, (2) determine what assets collateralize

the borrowing (or borrowings), and (3) identify the potential risks presented by the agreement. (See SR-01-8.)

In addition to determining if a bank follows the sound-practice guidance for bank liability management and funding in general, supervisors should take the following steps, as appropriate, when assessing a bank that has material amounts of wholesale borrowings:

- Review the bank's borrowing contracts for embedded options or other features that may affect the bank's liquidity and sensitivity to market risks. In addition, examiners should review the collateral agreements for fees, collateral-maintenance requirements (including triggers for increases in collateral), and other features that may affect the bank's liquidity and earnings.
- Assess the bank's management processes for identifying and monitoring the risks of the various terms of each borrowing contract, including penalties and option features over the expected life of the contract. Examiners should review for evidence that the bank's management, or an independent third party, completed stress tests (1) before the bank entered into the borrowing agreement (or agreements) and (2) periodically thereafter. If the bank relies on independent third-party testing, examiners should verify that management reviewed and accepted the underlying assumptions and test results. In any case, management should not be relying solely on the wholesaler's stress-test results. Also, the stress tests employed should cover a reasonable range of contractual triggers and external events. Such triggers or events include interest-rate changes that may result in the exercise of embedded options or the bank's termination of the agreement, which may entail prepayment penalties. In general, stress-test results should depict the potential impact of these variables on the individual borrowing facility, as well as on the overall earnings and liquidity position of the bank.
- Evaluate management processes for controlling risks, including interest-rate risks arising from the borrowings and liquidity risks. Proper controls include (1) hedges or other plans for minimizing the adverse effects of penalties or interest-rate changes and other triggers for embedded options and (2) contingent funding

1. Wholesale borrowings with embedded options may have variable interest payments or average lives or redemption values that depend on external measures such as reference rates, indexes, or formulas. Embedded options include puttable, callable, convertible, and variable rate advances with caps, floors, collars, step-ups, or amortizing features. In addition, these types of borrowings may contain prepayment penalties.

2. See the supervisory guidance for "Borrowed Funds," section 3010.1; "Asset/Liability Management," section 4020.1; and "Interest-Rate Risk Management," section 4090.1. See also the *Trading and Capital-Markets Activities Manual*, sections 2030.1, "Liquidity Risk," and 3010.1, "Interest-Rate Risk Management." In general, this guidance collectively calls for supervisors to analyze the purpose, effectiveness, concentration exposure, and stability of borrowings and to assess bank management's understanding of liquidity and interest-rate risks associated with borrowing and funding strategies.

plans if borrowings or lines are terminated before the original expected maturity.

- Determine whether the asset/liability management committee or board of directors, as appropriate, is fully informed of the risks and ramifications of complex wholesale-borrowing agreements before engaging in the transactions and on an ongoing basis.
- Determine whether funding strategies for wholesale borrowings, especially those with embedded options, are consistent with both the portfolio objectives of the bank and the level of sophistication of the bank's risk management. Banks without the technical knowledge and whose risk-management systems are insufficient to adequately identify, assess, monitor, and control the risks of com-

plex wholesale borrowings should not be using this funding.

Reliance on wholesale borrowings is consistent with safe and sound banking when management understands the risks of these activities and has systems and procedures in place to properly monitor and control the risks. Supervisors and examiners, however, should take appropriate steps to follow up on institutions that use complex funding instruments without adequately understanding their risks or without proper risk-management systems and controls. Examiners should also seek corrective action when funding mechanisms or strategies are inconsistent with prudent funding needs and objectives.

Complex Wholesale Borrowings

Examination Objectives

Effective date May 2001

Section 3012.2

1. To review the terms of wholesale-borrowing contracts to identify embedded options or other features that may affect the bank's liquidity and sensitivity to market risks.
2. To assess management's technical knowledge, systems, and processes for identifying, assessing, monitoring, and controlling the risks (including liquidity risk and interest-rate risk) associated with wholesale borrowing, and to assess the bank's stress-testing practices and contingency-funding plans.
3. To determine if the bank's board of directors or its asset/liability management committee is fully aware of the risks associated with and ramifications of engaging in complex wholesale-borrowing agreements.
4. To ascertain whether the bank's wholesale-borrowing funding and hedging strategies are consistent with its portfolio objectives and the level of management's sophistication.

Complex Wholesale Borrowings

Examination Procedures

Effective date May 2001

Section 3012.3

1. Review the bank's borrowing contracts to identify embedded options or other features that may affect the bank's liquidity and sensitivity to market risks. Also review the collateral agreements to determine what fees, collateral-maintenance requirements (including triggers for increases in collateral), and other agreed-upon features may affect the bank's liquidity and earnings.
2. Assess the bank's management processes for identifying and monitoring the risks of the various terms of each borrowing contract, including penalties and option features over the expected life of the contract.
 - a. Obtain and examine evidence to determine whether the bank's management, or an independent third party, completed stress tests before the bank entered into the borrowing agreement (or agreements) and periodically thereafter.
 - b. If the bank relies on independent third-party testing, verify that management reviewed and accepted the underlying assumptions and test results.
3. Evaluate the management processes for controlling risks, including (1) interest-rate risks arising from the borrowings and (2) liquidity risks.
4. Determine if the asset/liability management committee or board of directors, as appropriate, is fully informed of the risks and ramifications of complex wholesale-borrowing agreements both before engaging in the transactions and on an ongoing basis.
5. Determine if funding strategies for wholesale borrowings, especially those with embedded options, are consistent with both the portfolio objectives of the bank and the level of sophistication of the bank's risk management.
6. Seek the corrective action taken by the institution when funding mechanisms or strategies are inconsistent with prudent funding needs and objectives.

Deferred Compensation Agreements

Effective date May 2005

Section 3015.1

As part of their executive compensation and retention programs, banks and other financial institutions (collectively referred to in this section as “institutions”) often enter into deferred compensation agreements with selected employees. These agreements are generally structured as nonqualified retirement plans for federal income tax purposes and are based on individual agreements with selected employees.

Institutions often purchase bank-owned life insurance (BOLI) in connection with many of their deferred compensation agreements. (See sections 4042.1 and 2210.1 for an explanation of the accounting for BOLI transactions). BOLI may produce attractive tax-equivalent yields that offset some or all of the costs of the agreements.

Deferred compensation agreements are commonly referred to as *indexed retirement plans* (IRPs) or as *revenue-neutral plans*. The institution’s designated management and accounting staff that is responsible for the institution’s financial reporting must regularly review the accounting for deferred compensation agreements to ensure that the obligations under the agreements are appropriately measured and reported in accordance with generally accepted accounting principles (GAAP). In so doing, the management and accounting staff should apply and follow Accounting Principles Board Opinion No. 12, “Omnibus Opinion—1967,” as amended by Statement of Financial Accounting Standards No. 106 (FAS 106), “Employers’ Accounting for Postretirement Benefits Other Than Pensions” (hereafter referred to as APB 12).

IRPs are one type of deferred compensation agreement that institutions enter into with selected employees. IRPs are typically designed so that the spread each year, if any, between the tax-equivalent earnings on the BOLI covering an individual employee and a hypothetical earnings calculation is deferred and paid to the employee as a post-retirement benefit. This spread is commonly referred to as *excess earnings*. The hypothetical earnings are computed on the basis of a predefined variable index rate (for example, the cost of funds or the federal funds rate) times a notional amount. The notional amount is typically the amount the institution initially invested to purchase the BOLI plus subsequent after-tax benefit payments actually made to the employee. By including the after-

tax benefit payments and the amount initially invested to purchase the BOLI in the notional amount, the hypothetical earnings reflect an estimate of what the institution could have earned if it had not invested in the BOLI or entered into the IRP with the employee. Each employee’s IRP may have a different notional amount on which the index is based. The individual IRP agreements also specify the retirement age and vesting provisions, which can vary from employee to employee.

An IRP agreement typically requires the excess earnings that accrue before an employee’s retirement to be recorded in a separate liability account. Once the employee retires, the balance in the liability account is generally paid to the employee in equal, annual installments over a set number of years (for example, 10 or 15 years). These payments are commonly referred to as the *primary benefit* or *pre-retirement benefit*.

An employee may also receive the excess earnings that are earned after his or her retirement. This benefit may continue until the employee’s death and is commonly referred to as the *secondary benefit* or *post-retirement benefit*. The secondary benefit is paid annually, once the employee has retired, and is in addition to the primary benefit.

Examiners should be aware that some institutions may not be correctly accounting for the obligations under an IRP. Because many institutions were incorrectly accounting for IRPs, the federal banking and thrift agencies issued on February 11, 2004, an Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance. (See SR-04-4.) The guidance is stated here, except for the information on the reporting of deferred compensation agreement obligations in the bank Call Reports and on changes in accounting for those agreements. Examiners should determine whether an institution’s deferred compensation agreements are correctly accounted for. If the accounting is incorrect, assurance should be obtained from the institution’s management that corrections will be made in accordance with GAAP and the advisory’s instructions for changes in accounting. The examiner’s findings should be reported in the examination report. Also report the nature of the accounting errors and the estimated financial impact that correcting the errors will have on the institution’s

financial statements, including its earnings and capital position.

ACCOUNTING FOR DEFERRED COMPENSATION AGREEMENTS, INCLUDING IRPs

Deferred compensation agreements with select employees under individual contracts generally do not constitute post-retirement income plans (that is, pension plans) or post-retirement health and welfare benefit plans. The accounting for individual contracts that, when taken together, do not represent a post-retirement plan should follow APB 12. If the individual contracts, taken together, are equivalent to a plan, the plan should be accounted for under Statement of Financial Accounting Standards No. 87, "Employers' Accounting for Pensions," or under FAS 106.

APB 12 requires that an employer's obligation under a deferred compensation agreement be accrued according to the terms of the individual contract over the required service period to the date the employee is fully eligible to receive the benefits, or the *full eligibility date*. Depending on the individual contract, the full eligibility date may be the employee's expected retirement date, the date the employee entered into the contract, or a date between these two dates. APB 12 does not prescribe a specific accrual method for the benefits under deferred compensation contracts, stating only that the "cost of those benefits shall be accrued over that period of the employee's service in a systematic and rational manner." The amounts to be accrued each period should result in a deferred compensation liability at the full eligibility date that equals the then-present value of the estimated benefit payments to be made under the individual contract.

APB 12 does not specify how to select the discount rate to measure the present value of the estimated benefit payments. Therefore, other relevant accounting literature must be considered in determining an appropriate discount rate. An institution's incremental borrowing rate¹ and

the current rate of return on high-quality fixed-income debt securities² should be the acceptable discount rates to measure deferred compensation agreement obligations. An institution must select and consistently apply a discount-rate policy that conforms with GAAP.

For each IRP, an institution should calculate the present value of the expected future benefit payments under the IRP at the employee's full eligibility date. The expected future benefit payments can be reasonably estimated. They should be based on reasonable and supportable assumptions and should include both the primary benefit and, if the employee is entitled to excess earnings that are earned after retirement, the secondary benefit. The estimated amount of these benefit payments should be discounted because the benefits will be paid in periodic installments after the employee retires. The number of periods the primary and any secondary benefit payments should be discounted may differ because the discount period for each type of benefit payment should be based on the length of time during which each type of benefit will be paid, as specified in the IRP.

After the present value of the expected future benefit payments has been determined, the institution should accrue an amount of compensation expense and a liability each year from the date the employee enters into the IRP until the full eligibility date. The amount of these annual accruals should be sufficient to ensure that a deferred compensation liability equal to the present value of the expected benefit payments is recorded by the full eligibility date. *Any method of deferred compensation accounting that does not recognize some expense for the primary benefit and any secondary benefit in each year from the date the employee enters into the IRP until the full eligibility date is not considered to be systematic and rational.*

Vesting provisions should be reviewed to ensure that the full eligibility date is properly determined because this date is critical to the measurement of the liability estimate. Because APB 12 requires that the present value of the expected benefit payments be recorded by the full eligibility date, institutions also need to consider changes in market interest rates to appropriately measure deferred compensation

1. Accounting Principles Board Opinion No. 21, "Interest on Receivables and Payables," paragraph 13, states in part that "the rate used for valuation purposes will normally be at least equal to the rate at which the debtor can obtain financing of a similar nature from other sources at the date of the transaction."

2. FAS 106, paragraph 186, states that "[t]he objective of selecting assumed discount rates is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the accumulated benefits when due."

liabilities. Therefore, to comply with APB 12, institutions should periodically review both their estimates of the expected future benefits under IRPs and the discount rates used to compute the present value of the expected benefit payments, and revise those estimates and rates, when appropriate.

Deferred compensation agreements, including IRPs, may include noncompete provisions or provisions requiring employees to perform consulting services during post-retirement years. If the value of the noncompete provisions cannot be reasonably and reliably estimated, no value should be assigned to the noncompete provisions in recognizing the deferred compensation liability. Institutions should allocate a portion of the future benefit payments to consulting services to be performed in post-retirement years only if the consulting services are determined to be substantive. Factors to consider in determining whether post-retirement consulting services are substantive include but are not limited to (1) whether the services are required to be performed, (2) whether there is an economic benefit to the institution, and (3) whether the employee forfeits the benefits under the agreement for failure to perform such services.

APPENDIX—EXAMPLES OF ACCOUNTING FOR DEFERRED COMPENSATION AGREEMENTS

The following are examples of the full-eligibility-date accounting requirements for a basic deferred compensation agreement. The assumptions used in these examples are for illustrative purposes only. An institution must consider the terms of its specific agreements, the current interest-rate environment, and current mortality tables in determining appropriate assumptions to use in measuring and recognizing the present value of the benefits payable under its deferred compensation agreements.

Institutions that enter into deferred compensation agreements with employees, particularly more-complex agreements (such as IRPs), should consult with their external auditors and their respective Federal Reserve Bank to determine the appropriate accounting for their specific agreements.

Example 1: Fully Eligible at Agreement Inception

A company enters into a deferred compensation agreement with a 55-year-old employee who has worked five years for the company. The agreement states that, in exchange for the employee’s past and future services and for his or her service as a consultant for two years after retirement, the company will pay an annual benefit of \$20,000 to the employee, commencing on the first anniversary of the employee’s retirement. The employee is fully eligible for the deferred compensation benefit payments at the inception of the agreement, and the consulting services are not substantive.

Other key facts and assumptions used in determining the benefits payable under the agreement and in determining the liability and expense the company should record in each period are summarized in the following table:

Expected retirement age	60
Number of years to expected retirement age	5
Discount rate (%)	6.75
Expected mortality age based on present age	70

At the employee’s expected retirement date, the present value of a lifetime annuity of \$20,000 that begins on that date is \$142,109 (computed as \$20,000 times 7.10545, the factor for the present value of 10 annual payments at 6.75 percent). At the inception date of the agreement, the present value of that annuity of \$102,514 (computed as \$142,109 times 0.721375, the factor for the present value of a single payment in five years at 6.75 percent) is recognized as compensation expense because the employee is fully eligible for the deferred compensation benefit at that date.

The following table summarizes *one* systematic and rational method of recognizing the expense and liability under the deferred compensation agreement:

	A	B	C	D (B + C)	E	F (E + D – A)
<i>Year</i>	<i>Benefit payment (\$)</i>	<i>Service component (\$)</i>	<i>Interest component (\$)</i>	<i>Compensation expense (\$)</i>	<i>Beginning- of-year liability (\$)</i>	<i>End- of-year liability (\$)</i>
0	–	102,514	–	102,514	–	102,514
1	–	–	6,920	6,920	102,514	109,434
2	–	–	7,387	7,387	109,434	116,821
3	–	–	7,885	7,885	116,821	124,706
4	–	–	8,418	8,418	124,706	133,124
5	–	–	8,985	8,985	133,124	142,109
6	20,000	–	9,593	9,593	142,109	131,702
7	20,000	–	8,890	8,890	131,702	120,592
8	20,000	–	8,140	8,140	120,592	108,732
9	20,000	–	7,339	7,339	108,732	96,071
10	20,000	–	6,485	6,485	96,071	82,556
11	20,000	–	5,572	5,572	82,556	68,128
12	20,000	–	4,599	4,599	68,128	52,727
13	20,000	–	3,559	3,559	52,727	36,286
14	20,000	–	2,449	2,449	36,286	18,735
15	20,000	–	1,265	1,265	18,735	0
Totals	200,000	102,514	97,486	200,000		

The following entry would be made at the inception date of the agreement (the final day of year 0) to record the service component of the compensation expense and related deferred compensation agreement liability:

	<i>Debit</i>	<i>Credit</i>
Compensation expense	\$102,514	
Deferred compensation liability		\$102,514

[To record the column B service component]

In each period after the inception date of the agreement, the company would adjust the deferred compensation liability for the interest component and any benefit payment. In addition, the company would reassess the assumptions used in determining the expected future benefits under the agreement and the discount rate used to compute the present value of the expected benefits in each period after the incep-

tion of the agreement, and revise the assumptions and rate, as appropriate.

Assuming that no changes were necessary to the assumptions used to determine the expected future benefits under the agreement or to the discount rate used to compute the present value of the expected benefits, the following entry would be made in year 1 to record the interest component of the compensation expense:

	<i>Debit</i>	<i>Credit</i>
Compensation expense	\$6,920	
Deferred compensation liability		\$6,920

[To record the column C interest component (computed by multiplying the prior-year column F balance by the discount rate)]

Similar entries (but for different amounts) would be made in year 2 through year 15 to record the interest component of the compensation expense.

The following entry would be made in year 6 to record the payment of the annual benefit:

	<i>Debit</i>	<i>Credit</i>
Deferred compensation liability	\$20,000	
Cash		\$20,000

[To record the column A benefit payment]

Similar entries would be made in year 7 through year 15 to record the payment of the annual benefit.

Example 2: Fully Eligible at Retirement Date

If the terms of the contract described in example 1 had stated that the employee is only entitled to receive the deferred compensation benefit if the sum of the employee's age and years of service equals 70 or more at the date of retirement, the employee would be fully eligible for the deferred compensation benefit at age 60, after rendering five more years of service. At the employee's expected retirement date, the present value of a lifetime annuity of \$20,000 that begins on the first anniversary of that date is \$142,109 (computed as \$20,000 times 7.10545, the factor for the present value of 10 annual payments at 6.75 percent). The company would accrue this amount in a systematic and rational manner over the five-year period from the date it entered into the agreement to the date the employee is fully eligible for the deferred compensation benefit. Under *one* systematic and rational method, the annual service component accrual would be \$24,835 (computed as \$142,109 divided by

5.72213, the factor for the future value of five annual payments at 6.75 percent).

Other key facts and assumptions used in determining the benefits payable under the agreement and in determining the liability and expense the company should record in each period are summarized in the following table:

Expected retirement age	60
Number of years to expected retirement age	5
Discount rate (%)	6.75
Expected mortality age based on present age	70

The following table summarizes *one* systematic and rational method of recognizing the expense and liability under the deferred compensation agreement:

	A	B	C	D (B + C)	E	F (E + D - A)
<i>Year</i>	<i>Benefit payment (\$)</i>	<i>Service component (\$)</i>	<i>Interest component (\$)</i>	<i>Compensation expense (\$)</i>	<i>Beginning- of-year liability (\$)</i>	<i>End- of-year liability (\$)</i>
1	–	24,835	–	24,835	–	24,835
2	–	24,835	1,676	26,511	24,835	51,346
3	–	24,835	3,466	28,301	51,346	79,647
4	–	24,835	5,376	30,211	79,647	109,858
5	–	24,835	7,416	32,251	109,858	142,109
6	20,000	–	9,593	9,593	142,109	131,702
7	20,000	–	8,890	8,890	131,702	120,592
8	20,000	–	8,140	8,140	120,592	108,732
9	20,000	–	7,339	7,339	108,732	96,071
10	20,000	–	6,485	6,485	96,071	82,556
11	20,000	–	5,572	5,572	82,556	68,128
12	20,000	–	4,599	4,599	68,128	52,727
13	20,000	–	3,559	3,559	52,727	36,286
14	20,000	–	2,449	2,449	36,286	18,735
15	20,000	–	1,265	1,265	18,735	0
Totals	200,000	124,175	75,825	200,000		

No entry would be made at the inception date of the agreement. The following entry would be made in year 1 to record the service component of the compensation expense and related deferred compensation agreement liability:

	<i>Debit</i>	<i>Credit</i>
Compensation expense	\$24,835	
Deferred compensation liability		\$24,835

[To record the column B service component]

Similar entries would be made in year 2 through year 5 to record the service component of the compensation expense.

In each subsequent period, until the date the employee is fully eligible for the deferred compensation benefit, the company would adjust the deferred compensation liability for the total expense (the service and interest components). In each period after the full eligibility date, the company would adjust the deferred compensa-

tion liability for the interest component and any benefit payment. In addition, the company would reassess the assumptions used in determining the expected future benefits under the agreement and the discount rate used to compute the present value of the expected benefits in each period after the inception of the agreement, and revise the assumptions and rate, as appropriate.

Assuming no changes were necessary to the assumptions used to determine the expected

future benefits under the agreement or to the discount rate used to compute the present value of the expected benefits, the following entry would be made in year 2 to record the interest component of the compensation expense:

	<i>Debit</i>	<i>Credit</i>
Compensation expense	\$1,676	
Deferred compensation liability		\$1,676

[To record the column C interest component (computed by multiplying the prior-year column F balance by the discount rate)]

Similar entries (but for different amounts) would be made in year 3 through year 15 to record the interest component of the compensation expense.

The following entry would be made in year 6 to record the payment of the annual benefit:

	<i>Debit</i>	<i>Credit</i>
Deferred compensation liability	\$20,000	
Cash		\$20,000

[To record the column A benefit payment]

Similar entries would be made in year 7 through year 15 to record the payment of the annual benefit.

Although both bank directors and bank regulators must look carefully at the quality of bank assets and management and at the ability of the bank to control costs, evaluate risks, and maintain proper liquidity, capital adequacy is the area that triggers the most regulatory action, especially in view of prompt corrective action. The primary function of capital is to support the bank's operations, act as a cushion to absorb unanticipated losses and declines in asset values that could otherwise cause a bank to fail, and provide protection to uninsured depositors and debt holders in the event of liquidation. A bank's solvency promotes public confidence in the bank and the banking system as a whole by providing continued assurance that the bank will continue to honor its obligations and provide banking services. By exposing stockholders to a larger percentage of any potential loss, higher capital levels also reduce the subsidy provided to banks by the federal safety net. Capital regulation is particularly important because deposit insurance and other elements of the federal safety net provide banks with an incentive to increase their leverage beyond what the market—in the absence of depositor protection—would permit. Additionally, higher capital levels can reduce the need for regulatory supervision, thereby lowering costs to the banking industry and the government.

The Federal Reserve uses two ratios to help assess the capital adequacy of state members: the risk-based capital ratio and the tier 1 leverage ratio. State member banks may also be subject to separate capital requirements imposed by state banking supervisors.

OVERVIEW OF THE RISK-BASED CAPITAL MEASURE FOR STATE MEMBER BANKS

The Federal Reserve's risk-based capital guidelines (the guidelines) focus principally on the credit risk associated with the nature of banks' on- and off-balance-sheet exposures and on the type and quality of banks' capital. The risk-based capital guidelines apply to all state member banks. The information provided in this section should be used in conjunction with the guidelines, which are found in Regulation H (12 CFR 208, appendix A).

The risk-based capital guidelines provide a definition of capital and a framework for calculating risk-weighted assets by assigning assets and off-balance-sheet items to broad categories of credit risk. A bank's risk-based capital ratio is calculated by dividing its qualifying capital (the numerator of the ratio) by its risk-weighted assets (the denominator). The definition of qualifying capital is outlined below, as are the procedures for calculating risk-weighted assets.

The major objectives of the risk-based capital guidelines are to make regulatory capital requirements more sensitive to differences in credit-risk profiles among banking organizations; to factor off-balance-sheet exposures into the assessment of capital adequacy; to minimize disincentives to holding liquid, low-risk assets; and to achieve greater consistency in the evaluation of the capital adequacy of major banking organizations worldwide.

The guidelines set forth minimum supervisory capital standards that apply to all state member banks on a consolidated basis. Most banks are expected to operate with capital levels above the minimum ratios. Banking organizations that are undertaking significant expansion or that are exposed to high or unusual levels of risk are expected to maintain capital well above the minimum ratios; in such cases, the Federal Reserve may specify a higher minimum requirement. In addition, the risk-based capital ratio is used as a basis for categorizing institutions for purposes of prompt corrective action.¹

For most institutions, the risk-based capital ratio focuses principally on broad categories of credit risk, although the framework for assigning assets and off-balance-sheet items to risk categories does incorporate elements of transfer risk as well as limited instances of interest-rate and market risk.² The framework incorporates risks arising from traditional banking activities as well as risks arising from nontraditional activities. The ratio does not, however, incorporate other factors that can affect an institution's financial condition. These factors include overall interest-rate exposure; liquidity, funding, and market risks; the quality and level of earnings;

1. See section 4133.1, "Prompt Corrective Action."

2. A small number of institutions are required to hold capital to support their exposure to market risk. For more information, see the "Market-Risk Measure" subsection below or the Federal Reserve's *Trading and Capital-Markets Activities Manual*, section 2110.1, "Capital Adequacy."

investment, loan portfolio, and other concentrations of credit; certain risks arising from nontraditional activities; the effectiveness of loan and investment policies; and management's overall ability to monitor and control financial and operating risks, including the risks presented by concentrations of credit and nontraditional activities. An overall assessment of capital adequacy must take into account these other factors, including, in particular, the level and severity of problem and classified assets as well as a bank's exposure to declines in the economic value of its capital due to changes in interest rates. For this reason, the final supervisory judgment on a bank's capital adequacy may differ significantly from conclusions that might be drawn solely from the level of its risk-based capital ratio.

DEFINITION OF CAPITAL

For the purpose of risk-based capital, a bank's total capital consists of two types of components: "core capital elements" (which are included in tier 1 capital) and "supplementary capital elements" (which are included in tier 2 capital). To qualify as an element of tier 1 or tier 2 capital, a capital instrument must be unsecured and may not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practices.

Tier 1 capital is generally defined as the sum of core capital elements (common equity, including capital stock, surplus, and undivided profits; qualifying noncumulative perpetual preferred stock; and minority interest in the equity accounts of consolidated subsidiaries) less any amounts of goodwill, other intangible assets, interest-only strips receivables and nonfinancial equity investments that are required to be deducted,³ and unrealized holding losses in the available-for-sale equity portfolio, as well as any investments in subsidiaries that the Federal Reserve determines should be deducted from tier 1 capital. Tier 1 capital elements represent the highest form of capital, namely, permanent equity.

Tier 2 capital consists of a limited amount of the allowance for loan and lease losses; per-

petual preferred stock that does not qualify for inclusion in tier 1 capital; certain other hybrid capital instruments; mandatory convertible securities; long-term preferred stock with an original term of 20 years or more; and limited amounts of term subordinated debt, intermediate-term preferred stock, including related surplus, and unrealized holding gains on qualifying equity securities.

Capital investments in unconsolidated banking and finance subsidiaries, and reciprocal holdings of other banking organizations' capital instruments, are deducted from a bank's capital. The sum of tier 1 and tier 2 capital less any deductions makes up total capital, which is the numerator of the total risk-based capital ratio. The maximum amount of tier 2 capital that may be included in a bank's qualifying total capital is limited to 100 percent of tier 1 capital (net of goodwill, other intangible assets, and interest-only strips receivables and nonfinancial equity investments that are required to be deducted).

RISK-WEIGHTING PROCESS

Each asset and off-balance-sheet item is assigned to one of four broad risk categories based on the perceived credit risk of the obligor or, if relevant, the guarantor or type of collateral. These risk categories are assigned weights of 0 percent, 20 percent, 50 percent, and 100 percent. The majority of items fall into the 100 percent risk-weight category. A brief explanation of the components of each category follows. For more detailed information, see the capital adequacy guidelines.

Risk Categories

Category 1: Zero Percent

Category 1 includes cash (domestic and foreign) owned and held in all offices of the bank or in transit, as well as gold bullion held in the bank's own vaults or in another bank's vaults on an allocated basis to the extent it is offset by gold bullion liabilities. The category also includes all direct claims on (including securities, loans, and leases), and the portions of claims that are directly and unconditionally guaranteed by, the central governments of the Organisation for Economic Co-operation and Development (OECD) countries and U.S. government agencies, as well as all direct local currency claims

3. In this subsection, the words "required to be deducted" refer to section II.B. of the capital adequacy guidelines: risk-based measure (Regulation H, appendix A (12 CFR 208, appendix A)).

on, and the portions of local currency claims that are directly and unconditionally guaranteed by, the central governments of non-OECD countries, to the extent that the bank has liabilities booked in that currency. A claim is not considered to be unconditionally guaranteed by a central government if the validity of the guarantee depends on some affirmative action by the holder or a third party. Generally, securities guaranteed by the U.S. government or its agencies that are actively traded in financial markets, such as Government National Mortgage Association (GNMA) securities, are considered to be unconditionally guaranteed. This zero percent category also includes claims collateralized (1) by cash on deposit in the bank or (2) by securities issued or guaranteed by OECD central governments or (3) by U.S. government agencies for which a positive margin of collateral is maintained on a daily basis, fully taking into account any change in the bank's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim.

Category 2: 20 percent

Category 2 includes cash items in the process of collection, both foreign and domestic; short-term claims on (including demand deposits), and the portions of short-term claims that are guaranteed by, U.S. depository institutions and foreign banks; and long-term claims on, and the portions of long-term claims that are guaranteed by, U.S. depository institutions and OECD banks. This category also includes the portions of claims that are conditionally guaranteed by OECD central governments and U.S. government agencies, as well as the portions of local currency claims that are conditionally guaranteed by non-OECD central governments, to the extent that the bank has liabilities booked in that currency. In addition, this category includes claims on, and the portions of claims that are guaranteed by, U.S. government-sponsored agencies and claims on, and the portions of claims guaranteed by, the International Bank for Reconstruction and Development (the World Bank), the International Finance Corporation, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the European Investment Bank, the European Bank for Reconstruction and Development, the Nordic Investment Bank, and other

multilateral lending institutions or regional development banks in which the U.S. government is a shareholder or contributing member. General obligation claims on, or portions of claims guaranteed by the full faith and credit of, states or other political subdivisions of the United States or other countries of the OECD-based group are also assigned to this category. Category 2 also includes the portions of claims (including repurchase transactions) that are (1) collateralized by cash on deposit in the bank or by securities issued or guaranteed by OECD central governments or U.S. government agencies that do not qualify for the zero percent risk-weight category; (2) collateralized by securities issued or guaranteed by U.S. government-sponsored agencies; or (3) collateralized by securities issued by multilateral lending institutions or regional development banks in which the U.S. government is a shareholder or contributing member.

This risk category also includes claims on,^{3a} or guaranteed by, a qualifying securities firm incorporated in the United States or other countries that are members of the OECD-based group of countries^{3b} provided that (1) the qualifying securities firm has a long-term issuer credit rating, or a rating on at least one issue of long-term debt, in one of the three highest investment-grade rating categories from a nationally recognized statistical rating organization or (2) the claim is guaranteed by the firm's parent company and the parent company has such a rating. If ratings are available from more than one rating agency, the lowest rating will be used to determine whether the rating requirement has been met. This category also includes a collateralized claim on a qualifying securities firm in such a country, without regard to satis-

3a. Claims on a qualifying securities firm that are instruments the firm, or its parent company, uses to satisfy its applicable capital requirements are not eligible for this risk weight.

3b. With regard to securities firms incorporated in the United States, qualifying securities firms are those securities firms that are broker-dealers registered with the Securities and Exchange Commission (SEC) and are in compliance with the SEC's net capital rule, 17 CFR 240.15c3-1. With regard to securities firms incorporated in any other country in the OECD-based group of countries, qualifying securities firms are those securities firms that a bank is able to demonstrate are subject to consolidated supervision and regulation (covering their direct and indirect subsidiaries, but not necessarily their parent organizations) comparable to that imposed on banks in OECD countries. Such regulation must include risk-based capital requirements comparable to those applied to banks under the Basel Accord.

faction of the rating standard, provided that the claim arises under a contract that (1) is a reverse-repurchase/repurchase agreement or securities-lending/borrowing transaction executed using standard industry documentation; (2) is collateralized by debt or equity securities that are liquid and readily marketable; (3) is marked to market daily; (4) is subject to a daily margin-maintenance requirement under the standard industry documentation; and (5) can be liquidated, terminated, or accelerated immediately in bankruptcy or a similar proceeding, and the security or collateral agreement will not be stayed or avoided, under applicable law of the relevant jurisdiction.^{3c}

Category 3: 50 percent

Category 3 includes loans fully secured by first liens on one- to four-family residential properties (either owner-occupied or rented), or on multifamily residential properties, that meet certain criteria. To be included in category 3, loans must have been made in accordance with prudent underwriting standards, be performing in accordance with their original terms, and not be 90 days or more past due or carried in nonaccrual status. The following additional criteria must be applied to a loan secured by a multifamily residential property that is included in this category: (1) all principal and interest payments on the loan must have been made on time for at least the year preceding placement in this category, or, in the case of an existing property owner who is refinancing a loan on that property, all principal and interest payments on the loan being refinanced must have been made on time for at least the year preceding placement in this category; (2) amortization of the principal and interest must occur over a period of not more than 30 years, and the minimum original maturity for repayment of principal must not be less than seven years; and (3) the annual net operating income (before debt service) generated by the property during its most recent fiscal

year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate) or, in the case of a cooperative or other not-for-profit housing project, the property must generate sufficient cash flow to provide comparable protection to the institution. Also included in category 3 are privately issued mortgage-backed securities, provided that (1) the structure of the security meets the criteria described in section III.B.3. of the risk-based measure of the capital guidelines (12 CFR 208, appendix A); (2) if the security is backed by a pool of conventional mortgages on one- to four-family residential or multifamily residential properties, each underlying mortgage meets the criteria described above for eligibility for the 50 percent risk category at the time the pool is originated; (3) if the security is backed by privately issued mortgage-backed securities, each underlying security qualifies for the 50 percent risk category; and (4) if the security is backed by a pool of multifamily residential mortgages, principal and interest payments on the security are not 30 days or more past due. Privately issued mortgage-backed securities that do not meet these criteria or that do not qualify for a lower risk weight are generally assigned to the 100 percent risk category.

Also assigned to category 3 are revenue (nongeneral obligation) bonds or similar obligations, including loans and leases, that are obligations of states or other political subdivisions of the United States (for example, municipal revenue bonds) or other countries of the OECD-based group, but for which the government entity is committed to repay the debt with revenues from the specific projects financed, rather than from general tax funds. Credit-equivalent amounts of derivative contracts involving standard risk obligors (that is, obligors whose loans or debt securities would be assigned to the 100 percent risk category) are included in the 50 percent category, unless they are backed by collateral or guarantees that allow them to be placed in a lower risk category.

Category 4: 100 percent

All assets not included in the categories above are assigned to category 4, which comprises

^{3c}. For example, a claim is exempt from the automatic stay in bankruptcy in the United States if it arises under a securities contract or a repurchase agreement subject to section 555 or 559 of the Bankruptcy Code, respectively (11 USC 555 or 559); a qualified financial contract under section 11(e)(8) of the Federal Deposit Insurance Act (12 USC 1821(e)(8)); or a netting contract between financial institutions under sections 401–407 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (12 USC 4401–4407) or the Board's Regulation EE (12 CFR 231).

standard risk assets. The bulk of the assets typically found in a loan portfolio would be assigned to the 100 percent category.

Category 4 includes long-term claims on, and the portions of long-term claims that are guaranteed by, non-OECD banks, and all claims on non-OECD central governments that entail some degree of transfer risk. This category includes all claims on foreign and domestic private-sector obligors not included in the categories above (including loans to nondepository financial institutions and bank holding companies); claims on commercial firms owned by the public sector; customer liabilities to the bank on acceptances outstanding that involve standard risk claims; investments in fixed assets, premises, and other real estate owned; common and preferred stock of corporations, including stock acquired for debts previously contracted; all stripped mortgage-backed securities and similar instruments; and commercial and consumer loans (except those assigned to lower risk categories due to recognized guarantees or collateral and loans secured by residential property that qualify for a lower risk weight). This category also includes claims representing capital of a qualifying securities firm.

This category also includes industrial-development bonds and similar obligations issued under the auspices of states or political subdivisions of the OECD-based group of countries for the benefit of a private party or enterprise when that party or enterprise, not the government entity, is obligated to pay the principal and interest. All obligations of states or political subdivisions of countries that do not belong to the OECD-based group are also assigned to category 4. The following assets are assigned a risk weight of 100 percent if they have not been deducted from capital: investments in unconsolidated companies, joint ventures, or associated companies; instruments that qualify as capital that are issued by other banking organizations; and any intangibles, including those that may have been grandfathered into capital.

Application of the Risk Weights

The appropriate aggregate dollar value of the amount in each risk category is multiplied by the risk weight associated with that category. The resulting weighted values for each of the risk

categories are added together. The resulting sum is the bank's total risk-weighted assets and is the denominator of the risk-based capital ratio.

Risk Weighting of Off-Balance-Sheet Items

Off-balance-sheet items are incorporated into the risk-based capital ratio through a two-step process. First, an on-balance-sheet "credit-equivalent amount" is calculated, generally by multiplying the face amount of the item by a credit-conversion factor (except for direct-credit substitutes and recourse obligations). Most off-balance-sheet items are assigned to one of the five credit-conversion factors: 0 percent, 10 percent, 20 percent, 50 percent, or 100 percent. These factors are intended to reflect the risk characteristics of the activity in terms of an on-balance-sheet equivalent. Second, once the credit-equivalent amount of the off-balance-sheet item is calculated, the resultant credit-equivalent amount is assigned to the appropriate risk category according to the obligor or, if relevant, the guarantor, the nature of any collateral, or external credit ratings. Briefly, the credit-conversion factors are as follows:

- *Items with a zero percent credit-conversion factor* include unused portions of commitments (with the exception of asset-backed commercial paper (ABCP) liquidity facilities) with an original maturity of one year or less, or which are unconditionally cancelable at any time, provided a separate credit decision is made before each drawing under the facility.
- *Items with a 10 percent credit-conversion factor* include unused portions of eligible ABCP liquidity facilities with an original maturity of one year or less.
- *Items with a 20 percent credit-conversion factor* include short-term, self-liquidating trade-related contingencies that arise from the movement of goods.
- *Items with a 50 percent credit-conversion factor* include transaction-related contingencies, which include bid bonds, performance bonds, warranties, standby letters of credit related to particular transactions, and performance standby letters of credit, as well as acquisitions of risk participations in performance standby letters of credit. In addition, this credit-conversion factor includes unused

portions of commitments, including eligible ABCP liquidity facilities, with an original maturity exceeding one year; revolving-underwriting facilities; note-issuance facilities; and other similar arrangements.

- *Items with a 100 percent credit-conversion factor* include, except as otherwise provided within the risk-based capital guidelines, direct-credit substitutes, recourse obligations, sale and repurchase agreements, *ineligible* ABCP liquidity facilities, and forward agreements, as well as securities lent where the securities lender is at risk of loss.

See the risk-based capital guidelines for more information on the use, treatment, and application of credit-conversions factors for off-balance-sheet items and transactions.

For derivative contracts, the credit-equivalent amount for each contract is determined by multiplying the notional principal amount of the underlying contract by a credit-conversion factor and adding the resulting product (which is an estimate of potential future exposure) to the positive mark-to-market value of the contract (which is the current exposure). A contract with a negative mark-to-market value is treated as having a current exposure of zero. Where appropriate, a bank may offset positive and negative mark-to-market values of derivative contracts entered into with a single counterparty subject to a qualifying, legally enforceable, bilateral netting arrangement.

As a general rule, if the terms of a claim can change, the claim should be assigned to the risk category appropriate to the highest risk option available under the terms of the claim. For example, in a collateralized loan where the borrower has the option to withdraw the collateral before the loan is due, the loan would be treated as an uncollateralized claim for risk-based capital purposes. Similarly, a commitment that can be drawn down in the form of a loan or a standby letter of credit would be treated as a commitment to make a standby letter of credit, the higher risk option available under the terms of the commitment.

When an item may be assigned to more than one category, that item generally is assigned to the lowest eligible risk category. For example, a mortgage originated by the bank for which a 100 percent Federal Housing Administration guarantee has been obtained would be assigned the 20 percent risk weight that is appropriate to claims conditionally guaranteed by a U.S. gov-

ernment agency, rather than the 100 percent risk weight that is appropriate to high loan-to-value single-family mortgages.

While the primary determinant of the risk category of a particular on-balance-sheet asset or off-balance-sheet credit-equivalent amount is the obligor, collateral or guarantees may be used to a limited extent to assign an item to a lower risk category than would be available to the obligor. The only forms of collateral that are recognized for risk-based capital purposes are cash on deposit in the lending bank;⁴ securities issued or guaranteed by the central governments of the OECD-based group of countries,⁵ U.S. government agencies, or U.S. government-sponsored agencies; and securities issued by multilateral lending institutions or regional development banks in which the U.S. government is a shareholder or contributing member. In order for a claim to be considered collateralized for risk-based capital purposes, the underlying arrangements must provide that the claim will be secured by recognized collateral throughout its term. A commitment may be considered collateralized for risk-based capital purposes to the extent that its terms provide that advances made under the commitment will be secured throughout their term.

The extent to which qualifying securities are recognized as collateral is determined by their current market value. The full amount of a claim for which a positive margin (that is, greater than 100 percent of the claim) of recognized collateral is maintained daily may qualify for a

4. There is a limited exception to the rule that cash must be on deposit in the lending bank to be recognized as collateral. A bank participating in a syndicated credit secured by cash on deposit in the lead bank may treat its pro rata share of the credit as collateralized, provided that it has a perfected interest in its pro rata share of the collateral.

5. The OECD-based group of countries comprises all full members of the Organization for Economic Cooperation and Development (OECD), as well as countries that have concluded special lending arrangements with the International Monetary Fund (IMF) associated with the Fund's General Arrangements to Borrow. The OECD's thirty member countries include Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Any country that has rescheduled its external sovereign debt within the previous five years is not considered to be part of the OECD-based group of countries for risk-based capital purposes.

zero percent risk weight. The full amount of a claim that is 100 percent secured by recognized collateral may be assigned to the 20 percent risk category. For partially secured obligations, the secured portion is assigned a 20 percent risk weight. Any unsecured portion is assigned the risk weight appropriate for the obligor or guarantor, if any. The extent to which an off-balance-sheet item is secured by collateral is determined by the degree to which the collateral covers the face amount of the item before it is converted to a credit-equivalent amount and assigned to a risk category. For derivative contracts, this determination is made in relation to the credit-equivalent amount.

The only guarantees that are recognized for risk-based capital purposes are those provided by central or state and local governments of the OECD-based group of countries, U.S. government agencies, U.S. government-sponsored agencies, multilateral lending institutions or regional development banks in which the United States is a shareholder or contributing member, U.S. depository institutions, and foreign banks. If an obligation is partially guaranteed, the portion that is not fully covered is assigned the risk weight appropriate to the obligor or to any collateral. An obligation that is covered by two types of guarantees having different risk weights is apportioned between the two risk categories appropriate to the guarantors.

Minimum Risk-Based Capital Ratios

Banks are expected to meet a minimum ratio of capital to risk-weighted assets of 8 percent, with at least 4 percent taking the form of tier 1 capital. Banks that do not meet the minimum risk-based capital ratios, or that are considered to lack sufficient capital to support their activities, are expected to develop and implement capital plans acceptable to the Federal Reserve for achieving adequate levels of capital.⁶ Such plans should satisfy the provisions of the guidelines or established arrangements that the Federal Reserve has agreed on with designated banks. In addition, such banks should avoid any actions, including increased risk taking or unwarranted expansion, that would lower or

further erode their capital positions. In these cases, examiners are to review and comment on banks' capital plans and their progress in meeting, and continuing to maintain, the minimum risk-based capital requirements.

The bank's board of directors and senior management should be encouraged to establish capital levels and ratios that are consistent with the bank's overall financial profile. When assessing the bank's capital adequacy, it is appropriate to include comments on risk-based capital in the open section of the examination report. Examiner comments should address the adequacy of the bank's plans and progress toward meeting the relevant target ratios.

Market-Risk Measure

In August 1996, the Federal Reserve amended its risk-based capital framework to incorporate a measure for market risk for state member banks. The market-risk amendment, also known as the market-risk rule, is found in Regulation H (12 CFR 208), appendix E. Under the market-risk rule, certain institutions with significant exposure to market risk must measure that risk using their internal value-at-risk (VAR) measurement model and, subject to parameters in the market-risk rule, hold sufficient levels of capital to cover the exposure. The market-risk rule applies to any insured state member bank whose trading activity (the gross sum of its trading assets and liabilities) equals (1) 10 percent or more of its total assets or (2) \$1 billion or more. On a case-by-case basis, the Federal Reserve may require an institution that does not meet these criteria to comply with the market-risk rule if deemed necessary for safety-and-soundness reasons. The Federal Reserve may also exclude an institution that meets the criteria if such exclusion is deemed to be consistent with safe and sound banking practices.

The market-risk amendment is a supplement to the risk-based capital rules for credit risk; an institution applying the market-risk rule remains subject to the requirements of the credit-risk rules but must adjust its risk-based capital ratio to reflect market risk. A bank that is applying the market-risk rule must hold capital to support its exposure to two types of risk: (1) general market risk arising from broad fluctuations in interest rates, equity prices, foreign exchange rates, and commodity prices, including risk associated with all derivative positions, and (2) specific risk

6. Under the prompt-corrective-action framework, banks that do not meet the minimum risk-based capital ratio are considered undercapitalized and must file capital-restoration plans that meet certain requirements.

arising from changes in the market value of debt and equity positions in the trading account due to factors other than broad market movements, including the credit risk of an instrument's issuer. A bank's covered positions include all trading-account positions as well as all foreign-exchange and commodity positions, whether or not they are in the trading account. Banks that are subject to the market-risk capital rules are precluded from applying those rules to positions held in the bank's trading book that act, in form or in substance, as liquidity facilities supporting asset-backed commercial paper (ABCP). (See the definition of *covered positions* in appendix E, section 2(a).) Any facility held in the trading book whose primary function, in form or in substance, is to provide liquidity to ABCP—even if the facility does not qualify as an eligible ABCP liquidity facility under the rule—will be subject to the banking-book risk-based capital requirements. Specifically, organizations will be required to convert the notional amount of all trading-book positions that provide liquidity to ABCP to credit-equivalent amounts by applying the appropriate banking-book credit-conversion factors. For example, the full notional amount of all eligible ABCP liquidity facilities with an original maturity of one year or less will be subject to a 10 percent conversion factor, as described previously, regardless of whether the facility is carried in the trading account or the banking book.

Market Risk Rule Provisions for Securities Lending

On February 6, 2006, the Board approved a revision to Regulation H for its market-risk measure of the capital adequacy guidelines. (See 12 CFR 208, appendix E.) The amendment lessened and aligned the capital requirement of state member banks (those that have adopted the market-risk rule) to the risk involved with certain cash collateral that is posted in connection with securities-borrowing transactions.^{6a} It also broadened the scope of counterparties for which favorable capital treatment would be applied. (See 71 *Fed. Reg.* 8,932, February 22, 2006.) For a detailed description of the market-risk measure, see the Federal Reserve's *Trading and*

Capital-Markets Activities Manual, section 2110.1, "Capital Adequacy."

Documentation

Banks are expected to have adequate systems in place to compute their risk-based capital ratios. Such systems should be sufficient to document the composition of the ratios to be used for regulatory reporting and other supervisory purposes. Generally, supporting documentation will be expected to establish how banks track and report their capital components and on- and off-balance-sheet items that are assigned preferential risk weights, that is, risk weights less than 100 percent. Where a bank has inadequate documentation to support its assignment of a preferential risk weight to a given item, it may be necessary for examiners to assign an appropriate higher weight to that item. Examiners are expected to verify that banks are correctly reporting the information requested on the Reports of Condition and Income, which are used in computing banks' risk-based capital ratios.

SUPERVISORY CONSIDERATIONS FOR CALCULATING AND EVALUATING RISK-BASED CAPITAL

Certain requirements and factors should be considered in assessing the risk-based capital ratios and the overall capital adequacy of banks. Analysis of these requirements and factors may have a material impact on the amount of capital banks must hold to appropriately support certain activities for on- and off-balance-sheet items, and this analysis must be used in assessing compliance with the guidelines. The requirements and factors to be considered relate to certain capital elements, capital adjustments, balance-sheet activities, off-balance-sheet activities, and the overall assessment of capital adequacy.

Federal Reserve Review of a Capital Instrument

If the terms and conditions of a particular instrument cause uncertainty as to how the

6a. See the Board staff's August 21, 2007, legal interpretation as to the appropriate risk-based capital risk weight to be applied to certain collateralized loans of cash.

instrument should be treated for capital purposes, it may be necessary to consult with Federal Reserve staff for a final determination. The Federal Reserve will, on a case-by-case basis, determine whether a capital instrument has characteristics that warrant its inclusion in tier 1 or tier 2 capital, as well as determine any quantitative limit on the amount of an instrument that will be counted as an element of tier 1 or tier 2 capital. In making this determination, the Federal Reserve will consider the similarity of the instrument to instruments explicitly treated in the guidelines, the ability of the instrument to absorb losses while the bank operates as a going concern, the maturity and redemption features of the instrument, and other relevant terms and factors.

Redemptions of Capital

Redemptions of permanent equity or other capital instruments before their stated maturity could have a significant impact on a bank's overall capital structure. Consequently, a bank considering such a step should consult with the Federal Reserve before redeeming any equity or debt capital instrument (before maturity) if its redemption could have a material effect on the level or composition of the institution's capital base.⁷

Capital Elements

This subsection discusses the characteristics of the principal types of capital elements. It also covers terms and conditions that may disqualify an instrument from inclusion in a particular element of capital.

Common Stockholders' Equity

Common stockholders' equity includes common stock; related surplus; and retained earnings, including capital reserves and adjustments for the cumulative effect of foreign-currency translation, net of any treasury stock. A capital instrument that is not permanent or that has preference with regard to liquidation or the

7. Consultation would not ordinarily be necessary if an instrument was redeemed with the proceeds of, or replaced by, a like amount of a similar or higher-quality capital instrument and if the organization's capital position is considered fully adequate by the Federal Reserve.

payment of dividends is not deemed to be common stock, regardless of whether it is called common stock. Other preferences may also call into question whether the capital instrument is common stock. Close scrutiny should be paid to the terms of common-stock issues of banks that have issued more than one class of common stock. If preference features are found in one of the classes, that class generally should not be treated as common stock.

From a supervisory standpoint, it is desirable that voting common stockholders' equity remain the dominant form of tier 1 capital. Accordingly, the risk-based capital guidelines state that banks should avoid overreliance on nonvoting equity elements in tier 1 capital. Nonvoting equity elements can arise in connection with common stockholders' equity when a bank has two classes of common stock, one voting and the other nonvoting. Alternatively, one class may have so-called super-voting rights entitling the holder to substantially more votes per share than the other class. In this case, the super-voting shares may have so many votes per share that the voting power of the other shares is effectively overwhelmed.

Banks that have nonvoting, or effectively nonvoting, common equity and tier 1 perpetual preferred stock in excess of their voting common stock are clearly overrelying on nonvoting equity elements in tier 1 capital. In such cases, it may be appropriate to reallocate some of the nonvoting equity elements from tier 1 capital to tier 2 capital.

Perpetual Preferred Stock

The risk-based capital guidelines define perpetual preferred stock as preferred stock that has no maturity date, cannot be redeemed at the option of the holder, and has no other provisions that will require future redemption of the issue. Perpetual preferred stock qualifies for inclusion in capital only if it can absorb losses while the issuer operates as a going concern and only if the issuer has the ability and legal right to defer or eliminate preferred dividends.

Perpetual preferred stock with a feature permitting redemption at the option of the issuer may qualify for tier 1 or unlimited tier 2 capital only if the redemption is subject to prior approval of the Federal Reserve. An issue that is convertible at the option of the issuer into another issue of perpetual preferred stock or a lower form of

capital, such as subordinated debt, is considered to be redeemable at the option of the issuer. Accordingly, such a conversion must be subject to prior Federal Reserve approval.

Banks may include perpetual preferred stock in tier 1 capital only if the stock is noncumulative. A noncumulative issue may not permit the accruing or payment of unpaid dividends in any form, including the form of dividends payable in common stock. Perpetual preferred stock that calls for the accumulation and future payment of unpaid dividends is deemed to be cumulative, regardless of whether it is called noncumulative, and it is generally includable in tier 2 capital.

Perpetual preferred stock (including auction-rate preferred) in which the dividend rate is reset periodically based, in whole or in part, on the bank's financial condition or credit standing is excluded from tier 1 capital but may generally be included in tier 2 capital. The obligation under such instruments to pay out higher dividends when a bank's condition deteriorates is inconsistent with the essential precept that capital should provide both strength and loss-absorption capacity to a bank during periods of adversity.

Ordinarily, fixed-rate preferred stock and traditional floating- or adjustable-rate preferred stock—in which the dividend rate adjusts in relation to an independent index based solely on general market interest rates and is in no way tied to the issuer's financial condition—do not raise significant supervisory concerns, especially when the adjustable-rate instrument is accompanied by reasonable spreads and cap rates. Such instruments may generally be included in tier 1 capital, provided they are noncumulative.

Some preferred-stock issues incorporate certain features that raise serious questions about whether these issues will truly serve as a permanent, or even long-term, source of capital. Such features include so-called exploding-rate mechanisms, or similar mechanisms, in which, after a specified period, the dividend rate automatically increases to a level that could create an incentive for the issuer to redeem the instrument. Perpetual preferred stock with this type of feature could cause the issuing bank to be faced with higher dividend requirements at a future date when the bank may be experiencing financial difficulties; it is generally not includable in tier 1 capital.

Traditional convertible perpetual preferred stock, which the holder can convert into a fixed

number of common shares at a preset price, ordinarily does not raise supervisory concerns and generally qualifies as tier 1 capital, provided the stock is noncumulative. However, forms of preferred stock that the holder must or can convert into common stock at the market price prevailing at the time of conversion do raise supervisory concerns. Such preferred stock may be converted into an increasing number of common shares as the bank's condition deteriorates and as the market price of the common stock falls. The potential conversion of such preferred stock into common stock could pose a threat of dilution to the existing common shareholders. The threat of dilution could make the issuer reluctant to sell new common stock, or it could place the issuer under strong market pressure to redeem or repurchase the convertible preferred stock. Such convertible preferred stock should generally be excluded from tier 1 capital.

Perpetual preferred stock issues may include other provisions or pricing mechanisms that would provide significant incentives or pressures for the issuer to redeem the stock for cash, especially at a time when the issuer is in a weakened financial condition. As a general matter, an issue that contains such features would be ineligible for tier 1 treatment.

While no formal limit is placed on the amount of noncumulative perpetual preferred stock that may be included in tier 1 capital, the guidelines state that banks should avoid overreliance on preferred stock and other nonvoting equity elements in tier 1 capital. A bank that includes in tier 1 capital perpetual preferred stock in an amount in excess of its voting common stock is clearly overrelying on perpetual preferred stock in tier 1 capital. In such cases, it may be appropriate to reallocate the excess amount of perpetual preferred stock from tier 1 capital to tier 2 capital.

Forward Equity Transactions

Banking organizations have engaged in various types of forward transactions involving the repurchase of their common stock. In these transactions, the banking organization enters into an arrangement with a counterparty, usually an investment bank or another commercial bank, under which the counterparty purchases common shares of the banking organization, either in the open market or directly from the institution. The banking organization agrees that it will

repurchase those shares at an agreed-on forward price at a later date (typically three years or less from the execution date of the agreement). These transactions are used to “lock in” stock repurchases at price levels that are perceived to be advantageous, and they are a means of managing regulatory capital ratios.

Some banking organizations have treated shares under forward equity arrangements as tier 1 capital. However, because these transactions can impair the permanence of the shares and typically have certain features that are undesirable from a supervisory point of view, shares covered by these arrangements have qualities that are inconsistent with tier 1 capital status. Accordingly, any common stock covered by forward equity transactions entered into after the issuance of SR-01-27 (November 9, 2001), other than those specified for deferred compensation or other employee benefit plans, will be excluded from the tier 1 capital of a state member bank, even if executed under a currently existing master agreement. The amount to be excluded is equal to the common stock, surplus, and retained earnings associated with the shares. This guidance does not apply to shares covered under traditional stock buyback programs that do not involve forward agreements.

Minority Interest in Equity Accounts of Consolidated Subsidiaries

Minority interest in equity accounts of consolidated subsidiaries is included in tier 1 capital because, as a general rule, this interest represents equity that is freely available to absorb losses in operating subsidiaries whose assets are included in a bank’s risk-weighted asset base. While not subject to an explicit sublimit within tier 1, banks are expected to avoid using minority interest as an avenue for introducing into their capital structures elements that might not otherwise qualify as tier 1 capital (such as cumulative or auction-rate perpetual preferred stock) or that would, in effect, result in an excessive reliance on preferred stock within tier 1 capital. If a bank uses minority interest in these ways, supervisory concerns may warrant reallocating some of the bank’s minority interest in equity accounts of consolidated subsidiaries from tier 1 to tier 2 capital.

Whenever a bank has included perpetual preferred stock of an operating subsidiary in minority interest, a possibility exists that such

capital has been issued in excess of the subsidiary’s needs, for the purpose of raising cheaper capital for the bank. Stock issued under these circumstances may, in substance if not in legal form, be secured by the subsidiary’s assets. If the subsidiary fails, the outside preferred investors would have a claim on the subsidiary’s assets that is senior to the claim that the bank, as a common shareholder, has on those assets. Therefore, as a general matter, issuances in excess of a subsidiary’s needs do not qualify for inclusion in capital. The possibility that a secured arrangement exists should be considered if the subsidiary on-lends significant amounts of funds to the parent bank, is unusually well capitalized, has cash flow in excess of its operating needs, holds a significant amount of assets with minimal credit risk (for example, U.S. Treasury securities) that are not consistent with its operations, or has issued preferred stock at a significantly lower rate than the parent could obtain for a direct issue.

Some banks may use a nonoperating subsidiary or special-purpose entity (SPE) to issue perpetual preferred stock to outside investors. Such a subsidiary may be set up offshore so a bank can receive favorable tax treatment for the dividends paid on the stock. In such arrangements, a strong presumption exists that the stock is, in effect, secured by the assets of the subsidiary. It has been agreed internationally that a bank may not include in its tier 1 capital minority interest in the perpetual preferred stock of nonoperating subsidiaries. Furthermore, such minority interest may not be included in tier 2 capital unless a bank can conclusively prove that the stock is unsecured. Even if the bank’s accountants have permitted the bank to account for perpetual preferred stock issued through an SPE as stock of the bank, rather than as minority interest in the equity accounts of a consolidated subsidiary, the stock may not be included in tier 1 capital and most likely is not includable in tier 2 capital.

Banks may also use operating or nonoperating subsidiaries to issue subordinated debt. As with perpetual preferred stock issued through such subsidiaries, a possibility exists that such debt is in effect secured and therefore not includable in capital.

Minority Interests in Consolidated Asset-Backed Commercial Paper Programs

Minority interests in consolidated asset-backed commercial paper (ABCP) programs that are sponsored by a bank are not to be included in the bank's tier 1 capital or total capital base if the bank excludes the consolidated assets of such programs from risk-weighted assets pursuant to section III.B.6. of the capital guidelines (12 CFR 208, appendix A).

Minority Interests in Small Business Investment Companies

Minority interests in small business investment companies (SBICs), in investment funds that hold nonfinancial equity investments, and in subsidiaries engaged in nonfinancial activities are not included in a bank's tier 1 or total capital base if the bank's interest in the company or fund is held under the legal authorities listed in section II.B.5.b. of the capital guidelines (12 CFR 208, appendix A).

Allowance for Loan and Lease Losses

The allowance for loan and lease losses is a reserve that has been established through a charge against earnings to absorb anticipated, but not yet identified, losses on loans or lease-financing receivables. The allowance excludes allocated transfer-risk reserves and reserves created against identified losses. Neither of these two types of reserves is includable in capital. The amount of the allowance for loan and lease losses that is includable in tier 2 capital is limited to 1.25 percent of risk-weighted assets.

Net Unrealized Holding Gains (Losses) on Securities Available for Sale

The Financial Accounting Standards Board's Statement No. 115 (FAS 115), "Accounting for Certain Investments in Debt and Equity Securities," created a new common stockholders' equity account known as "net unrealized holding gains (losses) on securities available for sale." Although this equity account is considered to be part of a bank's GAAP equity capital, this account should not be included in a bank's

regulatory capital calculations. There are exceptions, however, to this rule. A bank that legally holds equity securities in its available-for-sale portfolio⁸ may include up to 45 percent of the

8. Although banks are generally not allowed to hold equity securities except in lieu of debts previously contracted and certain mutual fund holdings, some banks have grandfathered holdings of equity securities in accordance with provisions of the National Bank Act, passed in the 1930s.

pretax net unrealized holding gains on those securities in tier 2 capital. These equity securities must be valued in accordance with generally accepted accounting principles and have readily determinable fair values. Unrealized holding gains may not be included in tier 2 capital if the Federal Reserve determines that the equity securities were not prudently valued. Moreover, if a bank experiences unrealized holding losses in its available-for-sale equity portfolio, these losses must be deducted from tier 1 capital.

Mandatory Convertible Debt Securities

Mandatory convertible debt securities are essentially subordinated-debt securities that receive special capital treatment because a bank has committed to repay the principal from proceeds obtained through the issuance of equity. Banks may include such securities (net of any stock issued that has been dedicated to their retirement) in the form of equity contract notes or equity commitment notes⁹ issued before May 15, 1985, as unlimited elements of tier 2 capital, provided that the criteria set forth in 12 CFR 225, appendix B, are met. Consistent with these criteria, mandatory convertible notes are subject to a maximum maturity of 12 years, and a bank must receive Federal Reserve approval before redeeming (or repurchasing) such securities before maturity. The terms of the securities should note that such approval is required.

If a bank has issued common or perpetual preferred stock and dedicated the proceeds to the retirement or redemption of mandatory convertibles,¹⁰ the portion of mandatory convertibles covered by the dedication no longer carries a commitment to issue equity and is effectively rendered into ordinary subordinated debt. Accordingly, the amount of the stock dedicated is netted from the amount of mandatory convertibles includable as unlimited tier 2 capital. The portion of such securities covered by dedica-

tions should be included in capital as subordinated debt, subject to amortization in the last five years of its life and limited, together with other subordinated debt and intermediate-term preferred stock, to 50 percent of tier 1 capital. For example, a bank has an outstanding equity contract note for \$1 million and issues \$300,000 of common stock, dedicating the proceeds to the retirement of the note. The bank would include the \$300,000 of common stock in its tier 1 capital. The \$700,000 of the equity contract note not covered by the dedication would be treated as an unlimited element of the bank's tier 2 capital. The \$300,000 of the note covered by the dedication would be treated as subordinated debt.

In some cases, the indenture of a mandatory convertible debt issue may require the bank to set up segregated trust funds to hold the proceeds from the sale of equity securities dedicated to pay off the principal of the mandatory convertibles at maturity. The portion of mandatory convertible securities covered by the amount of such segregated trust funds is considered secured and may therefore not be included in capital. The maintenance of such a separate segregated fund for the redemption of mandatory convertibles exceeds the requirements of 12 CFR 225, appendix B. Accordingly, if a bank, with the agreement of the debtholders, seeks regulatory approval to eliminate the fund, the approval normally should be given unless supervisory concerns warrant otherwise.

Subordinated Debt and Intermediate-Term Preferred Stock

To qualify as supplementary capital, subordinated debt and intermediate-term preferred stock must have an original average maturity of at least five years. The average maturity of an obligation whose principal is repayable in scheduled periodic payments (for example, a so-called "serial-redemption issue") is the weighted average of the maturities of all such scheduled repayments. If the holder has the option to require the issuer to redeem, repay, or repurchase the instrument before the original stated maturity, maturity is defined as the earliest possible date on which the holder can put the instrument back to the issuing bank. This date may be much earlier than the instrument's stated maturity date. In the last five years before the

9. Equity contract notes are debt securities that obligate the holder to take common or perpetual preferred stock for repayment of principal. Equity commitment notes are redeemable only with the proceeds from the sale of common or perpetual preferred stock.

10. Such a dedication generally must be made in the quarter in which the new common or perpetual preferred stock is issued. There are no restrictions on the actual use of the proceeds of dedicated stock. For example, stock issued under dividend-reinvestment plans or issued to finance acquisitions may be dedicated to the retirement of mandatory convertible debt securities.

maturity of a limited-life instrument, the outstanding amount includable in tier 2 capital must be discounted by 20 percent a year. The aggregate amount of subordinated debt and intermediate-term preferred stock that may be included in tier 2 capital is limited to 50 percent of tier 1 capital.

Consistent with longstanding Federal Reserve policy, a bank may not repay, redeem, or repurchase a subordinated debt issue without the prior written approval of the Federal Reserve. The terms of the debt indenture should note that such approval is required. The Federal Reserve requires this approval to prevent a deteriorating institution from redeeming capital at a time when it needs to conserve its resources and to ensure that subordinated debtholders in a failing bank are not paid before depositors.

Close scrutiny should be given to terms that permit the holder to accelerate payment of principal upon the occurrence of certain events. The only acceleration clauses acceptable in a subordinated-debt issue included in tier 2 capital are those that are triggered by the issuer's insolvency, that is, the appointment of a receiver. Terms that permit the holder to accelerate payment of principal upon the occurrence of other events jeopardize the subordination of the debt since such terms could permit debtholders in a troubled institution to be paid out before the depositors. In addition, debt whose terms permit holders to accelerate payment of principal upon the occurrence of events other than insolvency does not meet the minimum five-year maturity requirement for debt capital instruments. Holders of such debt have the right to put the debt back to the issuer upon the occurrence of the named events, which could happen on a date well in advance of the debt's stated maturity.

Close scrutiny should also be given to the terms of those debt issues in which an event of default is defined more broadly than insolvency or a failure to pay interest or principal when due. There is a strong possibility that such terms are inconsistent with safe and sound banking practice, so the debt issue should not be included in capital. Concern is heightened where an event of default gives the holder the right to accelerate payment of principal or where other borrowings exist that contain cross-default clauses. Some events of default, such as issuing jumbo certificates of deposit or making additional borrowings in excess of a certain amount, may unduly restrict the day-to-day operations of

the bank. Other events of default, such as change of control of the bank or disposal of a bank subsidiary, may limit the flexibility of management or banking supervisors to work out the problems of a troubled bank. Still other events of default, such as failure to maintain certain capital ratios or rates of return or to limit the amount of nonperforming assets or charge-offs to a certain level, may be intended to allow the debtholder to be made whole before a deteriorating institution becomes truly troubled. Debt issues that include any of these types of events of default are not truly subordinated and should not be included in capital. Likewise, banks should not include debt issues in capital that otherwise contain terms or covenants that could adversely affect the liquidity of the issuer; unduly restrict management's flexibility to run the organization, particularly in times of financial difficulty; or limit the regulator's ability to resolve problem-bank situations.

Debt issues, including mandatory convertible securities, in which interest payments are tied to the financial condition of the borrower should generally not be included in capital. The interest payments may be linked to the financial condition of an institution through various ways, such as (1) an auction-rate mechanism; (2) a preset schedule mandating interest-rate increases, either as the credit rating of the bank declines or over the passage of time;¹¹ or (3) a term that raises the interest rate if payment is not made in a timely fashion. These debt issues raise concerns because as the financial condition of a bank declines, it faces ever-increasing payments on its credit-sensitive subordinated debt at a time when it most needs to conserve its resources. Thus, credit-sensitive debt does not provide the support expected of a capital instrument to an institution whose financial condition is deteriorating; rather, the credit-sensitive feature can accelerate depletion of the institution's resources and increase the likelihood of default

11. Although payment on debt whose interest rate increases over time may not on the surface appear to be directly linked to the financial condition of the issuing bank, such debt (sometimes referred to as expanding- or exploding-rate debt) has a strong potential to be credit-sensitive in substance. Banks whose financial condition has strengthened are more likely to be able to refinance the debt at a lower rate than that mandated by the preset increase, whereas banks whose condition has deteriorated are less likely to do so. Moreover, just when these latter institutions would be in the most need of conserving capital, they would be under strong pressure to redeem the debt as an alternative to paying higher rates and would therefore accelerate the depletion of their resources.

on the debt. While such terms may be acceptable in perpetual preferred stock qualifying for tier 2 capital, they are not acceptable in a capital debt issue because a bank in a deteriorating financial condition does not have the option available in equity issues of eliminating the higher payments without going into default.

When a bank has included subordinated debt issued by an operating or nonoperating subsidiary in its capital, a possibility exists that the debt is in effect secured, and thus not includable in capital. Further details on arrangements regarding a bank's issuance of capital instruments through subsidiaries are discussed in an earlier subsection, "Minority Interest in Equity Accounts of Consolidated Subsidiaries."

Capital Adjustments

Intangible Assets

Goodwill and other intangible assets. Certain intangible assets are deducted from a bank's capital for the purpose of calculating the risk-based capital ratio.¹² Those assets include goodwill and certain other identifiable assets. These assets are deducted from the sum of the core capital components (tier 1 capital).

The only identifiable intangible assets that are eligible to be included in—that is, not deducted from—a bank's capital are marketable mortgage-servicing assets (MSAs), nonmortgage-servicing assets (NMSAs), and purchased credit-card relationships (PCCRs).¹³ The total amount of MSAs and PCCRs that may be included in a bank's capital, in the aggregate, cannot exceed 100 percent of tier 1 capital. The total amount of NMSAs and PCCRs is subject to a separate aggregate sublimit of 25 percent of tier 1 capital. In addition, the total amount of credit-enhancing

interest-only strips (I/Os) (both purchased and retained) that may be included in capital cannot exceed 25 percent of tier 1 capital. Amounts of MSAs, NMSAs, PCCRs, and credit-enhancing I/Os (both retained and purchased) in excess of these limitations, as well as all other identifiable intangible assets, including core deposit intangibles and favorable leaseholds, are to be deducted from a bank's core capital elements in determining tier 1 capital. However, identifiable intangible assets (other than MSAs and PCCRs) acquired on or before February 19, 1992, generally will not be deducted from capital for supervisory purposes, although they will continue to be deducted for applications purposes.

For purposes of calculating the limitations on MSAs, NMSAs, PCCRs, and credit-enhancing I/Os, tier 1 capital is defined as the sum of core capital elements, net of goodwill and net of all identifiable intangible assets other than MSAs, NMSAs, and PCCRs. This calculation of tier 1 is before the deduction of any disallowed MSAs, any disallowed NMSAs, any disallowed PCCRs, any disallowed credit-enhancing I/Os (both purchased and retained), any disallowed deferred tax assets, and any nonfinancial equity investments.

Banks may elect to deduct disallowed servicing assets and disallowed credit-enhancing I/Os (both purchased and retained) on a basis that is net of any associated deferred tax liability. Deferred tax liabilities netted in this manner cannot also be netted against deferred tax assets when determining the amount of deferred tax assets that are dependent on future taxable income.

Banks must review the book value of all intangible assets at least quarterly and make adjustments to these values as necessary. The fair value of MSAs, NMSAs, and PCCRs must also be determined at least quarterly. This determination of fair value should include adjustments for any significant changes in original valuation assumptions, including changes in prepayment estimates or account-attribution rates. Examiners should review both the book value and fair value assigned to these assets, as well as supporting documentation. The Federal Reserve may require, on a case-by-case basis, an independent valuation of a bank's intangible assets.

Value limitation. The amount of eligible servicing assets and PCCRs that a bank may include in capital is further limited to the lesser of 90 percent of their fair value, or 100 percent of their

12. Negative goodwill is a liability and is therefore not taken into account in the risk-based capital framework. Accordingly, a bank may not offset goodwill to reduce the amount of goodwill it must deduct from tier 1 capital.

13. Purchased mortgage-servicing rights (PMSRs) no longer exist under the most recent accounting rules that apply to servicing of assets. Under these rules (Financial Accounting Standards Board statements No. 122, "Accounting for Mortgage Servicing Rights," and No. 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities"), organizations are required to recognize separate servicing assets (or liabilities) for the contractual obligation to service financial assets that entities have either sold or securitized with servicing retained.

book value, as adjusted for capital purposes in accordance with the instructions in the commercial bank Consolidated Report of Condition and Income (call report). The amount of I/Os that a bank may include in capital shall be its fair value. If both the application of the limits on MSAs, NMSAs, and PCCRs and the adjustment of the balance-sheet amount for these assets would result in an amount being deducted from capital, the bank would deduct only the greater of the two amounts from its core capital elements in determining tier 1 capital.

Consistent with longstanding Federal Reserve policy, banks experiencing substantial growth, whether internally or by acquisition, are expected to maintain strong capital positions substantially above minimum supervisory levels, without significant reliance on intangible assets or credit-enhancing I/Os.

An arrangement whereby a bank enters into a licensing or leasing agreement or similar transaction to avoid booking an intangible asset should be subject to particularly close scrutiny. Normally, such arrangements will be dealt with by adjusting the bank's capital calculation appropriately. In making an overall assessment of a bank's capital adequacy for applications purposes, the institution's quality and composition of capital are considered together with its holdings of tangible and intangible assets.

Credit-enhancing interest-only strips receivables (I/Os). Credit-enhancing I/Os are on-balance-sheet assets that, in form or substance, represent the contractual right to receive some or all of the interest due on transferred assets. I/Os expose the bank to credit risk directly or indirectly associated with transferred assets that exceeds a pro rata share of the bank's claim on the assets, whether through subordination provisions or other credit-enhancement techniques. Such I/Os, whether purchased or retained and including other similar "spread" assets, may be included in, that is, not deducted from, a bank's capital subject to the fair value and tier 1 limitations. (See sections II.B.1.d. and e. of the capital guidelines (12 CFR 208, appendix A).)

Both purchased and retained credit-enhancing I/Os, on a non-tax-adjusted-basis, are included in the total amount that is used for purposes of determining whether a bank exceeds the tier 1 limitation. In determining whether an I/O or other types of spread assets serve as a credit enhancement, the Federal Reserve will look to the economic substance of the transaction.

Disallowed Deferred Tax Assets

In response to the Financial Accounting Standards Board's Statement No. 109 (FAS 109), "Accounting for Income Taxes," the Federal Reserve adopted a limit on the amount of certain deferred tax assets that may be included in (that is, not deducted from) tier 1 capital for risk-based and leverage capital purposes. Under the rule, certain deferred tax assets can only be realized if an institution earns taxable income in the future. Those deferred tax assets are limited, for regulatory capital purposes, to the amount that the institution expects to realize within one year of the quarter-end report date (based on its projections of future taxable income for that year) or to 10 percent of tier 1 capital, whichever is less.

The reported amount of deferred tax assets, net of any valuation allowance for deferred tax assets, in excess of the lesser of these two amounts is to be deducted from a bank's core capital elements in determining tier 1 capital. For purposes of calculating the 10 percent limitation, tier 1 capital is defined as the sum of core capital elements, net of goodwill and net of all identifiable intangible assets other than MSAs, NMSAs, and PCCRs, but before the deduction of any disallowed MSAs, any disallowed NMSAs, any disallowed PCCRs, any disallowed credit-enhancing I/Os, any disallowed deferred tax assets, and any nonfinancial equity investments.

To determine the amount of expected deferred tax assets realizable in the next 12 months, a bank should assume that all existing temporary differences fully reverse as of the report date. Projected future taxable income should not include net operating-loss carry-forwards to be used during that year or the amount of existing temporary differences a bank expects to reverse within the year. Such projections should include the estimated effect of tax-planning strategies that the organization expects to implement to realize net operating losses or tax-credit carry-forwards that would otherwise expire during the year. A new 12-month projection does not have to be prepared each quarter. Rather, on interim report dates, the future-taxable-income projections may be used for their current fiscal year, adjusted for any significant changes that have occurred or are expected to occur.

Deferred tax assets that can be realized from taxes paid in prior carry-back years or from future reversals of temporary differences are

generally not limited. For banks that have a parent, however, this amount may *not* exceed the amount the bank could reasonably expect its parent to refund. The disallowed deferred tax assets are subtracted from tier 1 capital and also from risk-weighted assets.

Nonfinancial Equity Investments

In general, a bank must deduct from its core capital elements the sum of the appropriate percentages (as determined below) of the adjusted carrying value of all nonfinancial equity investments held by it or its direct or indirect subsidiaries. An equity investment includes the purchase, acquisition, or retention of any equity instrument (including common stock, preferred stock, partnership interests, interests in limited-liability companies, trust certificates, and warrants and call options that give the holder the right to purchase an equity instrument), any equity feature of a debt instrument (such as a warrant or call option), and any debt instrument that is convertible into equity.¹⁴ The Federal Reserve may treat any other instrument (including subordinated debt) as an equity investment if, in its judgment, the instrument is the functional equivalent of equity or exposes the state member bank to essentially the same risks as an equity instrument.

A nonfinancial equity investment, subject to the risk-based capital rule (the rule), is an equity investment in a nonfinancial company made under the following authorities:

- the authority to invest in SBICs under section 302(b) of the Small Business Investment Act of 1958 (15 USC 682(b))
- the portfolio investment provisions of Regulation K (12 CFR 211.8(c)(3)), including the authority to make portfolio investments through Edge and agreement corporations

A nonfinancial company is an entity that engages in any activity that has not been determined to be permissible for the bank to conduct directly, or to be financial in nature or incidental to financial activities under section 4(k) of the Bank Holding Company Act (12 USC 1843(k)). The rule does not apply to investments made in companies that engage solely in banking and financial activities, nor does it apply to invest-

14. This requirement generally does not apply to investments in nonconvertible senior or subordinated debt.

ments made by a state bank under the authority in section 24(f) of the Federal Deposit Insurance Act (FDI Act). The higher capital charges also do not apply to equity securities acquired and held by a bank as a bona fide hedge of an equity derivatives transaction it entered into lawfully, or to equity securities that are acquired in satisfaction of a debt previously contracted and that are held and divested in accordance with applicable law. The adjusted carrying value of these investments is not included in determining the total amount of nonfinancial equity investments held by the bank. (See SR-02-4 for a general discussion of the risk-based and leverage capital rule changes.)

The bank must deduct from its core capital elements the sum of the appropriate percentages, as stated in table 1, of the adjusted carrying value of all nonfinancial equity investments held by the bank or its direct or indirect subsidiaries. The amount of the percentage deduction increases as the aggregate amount of nonfinancial equity investments held by the bank increases as a percentage of its tier 1 capital.

The “adjusted carrying value” of investments is the aggregate value at which the investments are carried on the balance sheet of the bank, reduced by (1) any unrealized gains on those investments that are reflected in such carrying value but excluded from the bank’s tier 1 capital and (2) associated deferred tax liabilities. For example, for investments held as available-for-sale (AFS), the adjusted carrying value of the investments would be the aggregate carrying value of the investments (as reflected on the consolidated balance sheet of the bank) *less* any unrealized gains on those investments that are included in other comprehensive income and not reflected in tier 1 capital, and associated deferred tax liabilities.¹⁵ The total adjusted carrying value of any nonfinancial equity investment that is subject to deduction is excluded from the bank’s risk-weighted assets and for purposes of computing the denominator of the bank’s risk-based capital ratio.¹⁶ The total adjusted carrying

15. Unrealized gains on AFS equity investments may be included in supplementary capital to the extent permitted by the capital guidelines. In addition, the unrealized losses on AFS equity investments are deducted from tier 1 capital.

16. For example, if 8 percent of the adjusted carrying value of a nonfinancial equity investment is deducted from tier 1 capital, the entire adjusted carrying value of the investment will be excluded from risk-weighted assets when calculating the denominator for the risk-based capital ratio, and from average total consolidated assets when computing the leverage ratio.

Table 1—Deduction for Nonfinancial Equity Investments

<i>Aggregate adjusted carrying value of all nonfinancial equity investments held directly or indirectly by the bank (as a percentage of the tier 1 capital of the bank)¹</i>	<i>Deduction from core capital elements (as a percentage of the adjusted carrying value of the investment)</i>
Less than 15 percent	8 percent
15 percent to 24.99 percent	12 percent
25 percent and above	25 percent

1. For purposes of calculating the adjusted carrying value of nonfinancial equity investments as a percentage of tier 1 capital, tier 1 capital is defined as the sum of core capital elements net of goodwill and net of all identifiable intangible assets other than MSAs, NMSAs, and PCCRs, but before

the deduction for any disallowed MSAs, any disallowed NMSAs, any disallowed PCCRs, any disallowed credit enhancing I/Os (both purchased and retained), any disallowed deferred tax assets, and any nonfinancial equity investments.

value is also deducted from average total consolidated assets when computing the leverage ratio.

The deductions are applied on a marginal basis to the portions of the adjusted carrying value of nonfinancial equity investments that fall within the specified ranges of the parent bank's tier 1 capital. The rule sets forth a "stair-step" approach under which each tier of capital charges applies, on a marginal basis, to the adjusted carrying value of the bank's aggregate nonfinancial equity investment portfolio that falls within the specified ratios of the organization's tier 1 capital. The stair-step approach reflects the fact that the financial risks to a bank from equity investment activities increase as the level of these activities accounts for a larger portion of the bank's capital, earnings, and activities. For example, if the adjusted carrying value of all nonfinancial equity investments held by a bank equals 20 percent of its tier 1 capital, then the amount of the deduction would be 8 percent of the adjusted carrying value of all investments up to 15 percent of the bank's tier 1 capital, and 12 percent of the adjusted carrying value of all investments in excess of 15 percent of the bank's tier 1 capital.

With respect to consolidated SBICs, some equity investments may be in companies that are consolidated for accounting purposes. For investments in a nonfinancial company that is consolidated for accounting purposes under GAAP, the bank's adjusted carrying value of the investment is determined under the equity method of accounting (net of any intangibles associated

with the investment that are deducted from the bank's core). Even though the assets of the nonfinancial company are consolidated for accounting purposes, these assets (as well as the credit-equivalent amounts of the company's off-balance-sheet items) should be excluded from the bank's risk-weighted assets for regulatory capital purposes.

The capital adequacy guidelines for state member banks establish *minimum* risk-based capital ratios. Banks are at all times expected to maintain capital commensurate with the level and nature of the risks to which they are exposed. The risk to a bank from nonfinancial equity investments increases with its concentration in such investments, and strong capital levels above the minimum requirements are particularly important when a bank has a high degree of concentration in nonfinancial equity investments (for example, in excess of 50 percent of tier 1 capital).

The Federal Reserve will monitor banks and apply heightened supervision, as appropriate, to equity investment activities, including where the bank has a high degree of concentration in nonfinancial equity investments, to ensure that each bank maintains capital levels that are appropriate in light of its equity investment activities. In addition, the Federal Reserve may impose capital levels established by the capital adequacy rules, in light of the nature or performance of a particular organization's equity investments or the sufficiency of the organization's policies, procedures, and systems to monitor and control the risks associated with its equity investments.

SBIC investments. Investments may be made by banks in or through SBICs under section 4(c)(5) of the BHC Act and section 302(b) of the Small Business Investment Act. No deduction is required for nonfinancial equity investments that are held by a bank (1) through one or more SBICs that are consolidated with the bank or (2) in one or more SBICs that are not consolidated with the bank, to the extent that all such investments, in the aggregate, do not exceed 15 percent of the bank's tier 1 capital. Any nonfinancial equity investment that is held through or in an SBIC and that is not required to be deducted from tier 1 capital will be assigned a 100 percent risk weight and included in the bank's consolidated risk-weighted assets.¹⁷

To the extent the adjusted carrying value of all nonfinancial equity investments that a bank holds through one or more SBICs that are consolidated with the bank, or in one or more SBICs that are not consolidated with the bank, exceeds, in the aggregate, 15 percent of the bank's tier 1 capital, the appropriate percentage of such amounts (as set forth in table 1) must be deducted from the bank's core capital elements. In addition, the aggregate adjusted carrying value of *all* nonfinancial equity investments held through a consolidated SBIC and in a nonconsolidated SBIC (including any investments for which no deduction is required) must be included in determining, for purposes of table 1, the total amount of nonfinancial equity investments held by the bank in relation to its tier 1 capital.

Grandfather provisions. No deduction is required to be made for the adjusted carrying value of

any nonfinancial equity investment (or portion of such an investment) that the bank made before March 13, 2000, or that the bank made on or after this date pursuant to a binding written commitment¹⁸ entered into before March 13, 2000, provided that in either case the bank has continuously held the investment since the relevant investment date.¹⁹ A nonfinancial equity investment made before March 13, 2000, includes any shares or other interests the bank received through a stock split or stock dividend on an investment made before March 13, 2000, provided the bank provides no consideration for the shares or interests received and the transaction does not materially increase the bank's proportional interest in the company. The exercise on or after March 13, 2000, of options or warrants acquired before March 13, 2000, is *not* considered to be an investment made before March 13, 2000, if the bank provides any consideration for the shares or interests received upon exercise of the options or warrants. Any nonfinancial equity investment (or portion thereof) that is not required to be deducted from tier 1 capital must be included in determining the total amount of nonfinancial equity investments held by the bank in relation to its tier 1 capital for purposes of table 1. In addition, any nonfinancial equity investment (or portion thereof) that is not required to be deducted from tier 1 capital will be assigned a 100 percent risk weight and included in the bank's consolidated

17. If a bank has an investment in an SBIC that is consolidated for accounting purposes but that is not wholly owned by the bank, the adjusted carrying value of the bank's nonfinancial equity investments through the SBIC is equal to the bank's proportionate share of the adjusted carrying value of the SBIC's equity investments in nonfinancial companies. The remainder of the SBIC's adjusted carrying value (that is, the minority interest holders' proportionate share) is excluded from the risk-weighted assets of the bank. If a bank has an investment in an SBIC that is not consolidated for accounting purposes, and the bank has current information that identifies the percentage of the SBIC's assets that are equity investments in nonfinancial companies, the bank may reduce the adjusted carrying value of its investment in the SBIC proportionately to reflect the percentage of the adjusted carrying value of the SBIC's assets that are not equity investments in nonfinancial companies. If a bank reduces the adjusted carrying value of its investment in a nonconsolidated SBIC to reflect financial investments of the SBIC, the amount of the adjustment will be risk-weighted at 100 percent and included in the bank's risk-weighted assets.

18. A "binding written commitment" means a legally binding written agreement that requires the bank to acquire shares or other equity of the company, or make a capital contribution to the company, under terms and conditions set forth in the agreement. Options, warrants, and other agreements that give a bank the right to acquire equity or make an investment, but do not require the bank to take such actions, are not considered a binding written commitment for purposes of this provision.

19. For example, if a bank made an equity investment in 100 shares of a nonfinancial company before March 13, 2000, the adjusted carrying value of that investment would not be subject to a deduction. However, if the bank made any additional equity investment in the company after March 13, 2000, such as by purchasing additional shares of the company (including through the exercise of options or warrants acquired before or after March 13, 2000) or by making a capital contribution to the company, and such investment was not made pursuant to a binding written commitment entered into before March 13, 2000, the adjusted carrying value of the additional investment would be subject to a deduction. In addition, if the bank sold and repurchased, after March 13, 2000, 40 shares of the company, the adjusted carrying value of those 40 shares would be subject to a deduction under this provision.

risk-weighted assets. The following example illustrates these calculations.

A bank has \$1 million in tier 1 capital and has nonfinancial equity investments with an aggregate adjusted carrying value of \$375,000. Of this amount, \$100,000 represents the adjusted carrying value of investments made before March 13, 2000, and an additional \$175,000 represents the adjusted carrying value of investments made through the bank's wholly owned SBIC. The \$100,000 in investments made before March 13, 2000, and \$150,000 of the bank's SBIC investments would not be subject to the rule's marginal capital charges. These amounts are considered for purposes of determining the marginal charge that applies to the bank's covered investments (including the \$25,000 of nonexempt SBIC investments). In this case, the total amount of the bank's tier 1 capital deduction would be \$31,250. This figure is 25 percent of \$125,000, which is the amount of the bank's total nonfinancial equity portfolio subject to the rule's marginal capital charges. The average tier 1 capital charge on the bank's entire nonfinancial equity portfolio would be 8.33 percent.

Investments in Unconsolidated Banking and Finance Subsidiaries and Other Subsidiaries

Generally, debt and equity capital investments and any other instruments deemed to be capital in unconsolidated banking and finance subsidiaries²⁰ are to be deducted from the consolidated capital of the parent bank, regardless of whether the investment is made by the parent bank or its direct or indirect subsidiaries.²¹ Fifty percent of the investment is to be deducted from tier 1 capital and 50 percent from tier 2 capital. When tier 2 capital is not sufficient to absorb the portion (50 percent) of the investment allocated to it, the remainder (up to 100 percent) is to be deducted from tier 1 capital.

20. A banking and finance subsidiary is generally defined as any company engaged in banking or finance in which the parent organization holds directly or indirectly more than 50 percent of the outstanding voting stock, or any such company which is otherwise controlled or capable of being controlled by the parent organization.

21. An exception to this deduction is to be made for shares acquired in the regular course of securing or collecting a debt previously contracted in good faith.

Advances to banking and finance subsidiaries (that is, loans, extensions of credit, guarantees, commitments, or any other credit exposures) not considered as capital are included in risk-weighted assets at the 100 percent risk weight (unless recognized collateral or guarantees dictate weighting at a lower percentage). However, such advances may be deducted from the parent bank's consolidated capital where examiners find that the risks associated with the advances are similar to the risks associated with capital investments, or if such advances possess risk factors that warrant an adjustment to capital for supervisory purposes. These risk factors could include the absence of collateral support or the clear intention of banks to allow the advances to serve as capital to subsidiaries regardless of form.

Although the Federal Reserve does not automatically deduct investments in other unconsolidated subsidiaries or investments in joint ventures and associated companies,²² the level and nature of such investments should be closely monitored. Resources invested in these entities support assets that are not consolidated with the rest of the bank and therefore may not be generally available to support additional leverage or absorb losses of affiliated institutions. Close monitoring is also necessary because experience has shown that banks often stand behind the losses of affiliated institutions to protect the reputation of the organization as a whole. In some cases, this support has led to losses that have exceeded the investments in such entities.

Accordingly, for risk-based capital purposes, a bank may be required, on a case-by-case basis, to (1) deduct such investments from total capital; (2) apply an appropriate risk-weighted charge against the bank's pro rata share of the assets of the affiliated entity; (3) consolidate the entity on a line-by-line basis; or (4) operate with a risk-based capital ratio above the minimum. In determining the appropriate capital treatment for such actions, the Federal Reserve will generally take into account whether (1) the bank has significant influence over the financial or managerial policies or operations of the affiliated entity, (2) the bank is the largest investor in the entity, or (3) other circumstances prevail

22. Such entities are defined in the instructions to the call report. Associated companies and joint ventures are generally defined as companies in which the bank owns 20 to 50 percent of the voting stock.

(such as the existence of significant guarantees from the bank) that appear to closely tie the activities of the affiliated company to the bank.

Reciprocal Holdings of Banking Organizations' Capital Instruments

Reciprocal holdings are intentional cross-holdings resulting from formal or informal arrangements between banking organizations to swap or exchange each other's capital instruments. Such holdings of other banking organizations' capital instruments are to be deducted from the total capital of an organization for the purpose of determining the total risk-based capital ratio. Holdings of other banking organizations' capital instruments taken in satisfaction of debts previously contracted or that constitute stake-out investments that comply with the Federal Reserve's policy statement on non-voting equity investments (12 CFR 225.143) are not deemed to be intentional cross-holdings and are therefore not deducted from a bank's capital.

On-Balance-Sheet Activities

Claims on, and Guaranteed by, OECD Central Governments

The risk-based capital guidelines assign a zero percent risk weight to all direct claims (including securities, loans, and leases) on the central governments of the OECD-based group of countries and U.S. government agencies. Generally, the only direct claims banks have on the U.S. government and its agencies take the form of Treasury securities. Zero-coupon, that is, single-payment, Treasury securities trading under the U.S. Treasury's Separately Traded Registered Interest and Principal (STRIP) program are assigned to the zero percent risk category. A security that has been stripped by a private-sector entity, such as a brokerage firm, is considered an obligation of that entity and is accordingly assigned to the 100 percent risk category.

Claims that are directly and unconditionally guaranteed by an OECD-based central government or a U.S. government agency are also assigned to the zero percent risk category. Claims

that are directly but conditionally guaranteed are assigned to the 20 percent risk category. A claim is considered to be conditionally guaranteed by a central government if the validity of the guarantee depends on some affirmative action by the holder or a third party. Generally, securities guaranteed by the U.S. government or its agencies that are actively traded in financial markets are considered to be unconditionally guaranteed. These include Government National Mortgage Association (GNMA or Ginnie Mae) and Small Business Administration (SBA) securities.

A limited number of U.S. government agency-guaranteed loans are deemed to be unconditionally guaranteed and can be assigned to the zero percent risk category. These include most loans guaranteed by the Export-Import Bank (Eximbank),²³ loans guaranteed by the U.S. Agency for International Development (AID) under its Housing Guaranty Loan Program, SBA loans subject to a secondary participation guaranty in accordance with SBA form 1086, and Farmers Home Administration (FmHA) loans subject to an assignment guaranty agreement in accordance with FmHA form 449-36.

Apart from the exceptions noted in the preceding paragraph, loans guaranteed by the U.S. government or its agencies are considered to be conditionally guaranteed. The guaranteed portion of such loans is assigned to the 20 percent risk category. These include, but are not limited to, loans guaranteed by the Commodity Credit Corporation (CCC), the Federal Housing Administration (FHA), the Overseas Private Investment Corporation (OPIC), the Department of Veterans Affairs (VA), and, except as indicated above, the FmHA and SBA. Loan guarantees offered by OPIC often guarantee against political risk. However, only that portion of a loan guaranteed by OPIC against commercial or credit risk may receive a preferential 20 percent risk weight. The portion of government trust certificates issued to provide funds for the refinancing of foreign military sales loans made by the Federal Financing Bank or the Defense Security Assistance Agency that are indirectly guaranteed by the U.S. government also qualify for the 20 percent risk weight.

²³ Loans guaranteed under Eximbank's Working Capital Guarantee Program, however, receive a 20 percent risk weight.

Most guaranteed student loans are guaranteed by a state agency or nonprofit organization that does not have the full faith and credit backing of the state. The loans are then indirectly guaranteed or reinsured by the U.S. government's Guaranteed Student Loan Program. Under the program, a minimum percentage of the loan is reinsured, but a higher percentage could be guaranteed if the bank has experienced an overall low default rate on guaranteed student loans. Only the portion of the loan covered by the minimum guarantee under the program may be assigned to the 20 percent risk category; the remainder should be assigned a 100 percent risk weight.

Claims on, or Guaranteed by, a U.S. Government-Sponsored Agency

U.S. government-sponsored agencies are agencies originally established or chartered by the federal government to serve public purposes specified by the U.S. Congress. Such agencies generally carry out functions performed directly by the central government in other countries. The obligations of government-sponsored agencies generally are not explicitly guaranteed by the full faith and credit of the U.S. government. Claims (including securities, loans, and leases) on, or guaranteed by, such agencies are assigned to the 20 percent risk category. U.S. government-sponsored agencies include, but are not limited to, the College Construction Loan Insurance Association, Farm Credit Administration, Federal Agricultural Mortgage Corporation, Federal Home Loan Bank System, Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac), Federal National Mortgage Association (FNMA or Fannie Mae), Financing Corporation (FICO), Postal Service, Resolution Funding Corporation (REFCORP), Student Loan Marketing Association (SLMA or Sallie Mae), Smithsonian Institution, and Tennessee Valley Authority (TVA).

Loans Secured by First Liens on One- to Four-Family Residential Properties and Multifamily Residential Properties

Qualifying loans on one- to four-family residential properties, either owner-occupied or rented (as defined in the instructions to the call report), are accorded a 50 percent risk weight under the

guidelines. Also eligible for the 50 percent risk weight are loans to builders with substantial project equity for the construction of one- to four-family residences that have been presold under firm contracts to purchasers who have obtained firm commitments for permanent qualifying mortgage loans and have made substantial earnest-money deposits.

In addition, qualifying multifamily residential loans that meet certain criteria may be assigned to the 50 percent risk category. These criteria are as follows: All principal and interest payments must have been made on time for at least one year preceding placement in the 50 percent risk category, amortization of the principal and interest must occur within 30 years, the minimum original maturity for repayment of principal cannot be less than seven years, and annual net operating income (before debt service) generated by the property during the most recent fiscal year must not be less than 120 percent of the loan's current annual debt service (115 percent if the loan is based on a floating interest rate). In the case of cooperative or other not-for-profit housing projects, the property must generate sufficient cash flow to provide comparable protection to the bank.

To ensure that only qualifying residential mortgage loans are assigned to this preferential risk weight, examiners are to review the one- to four-family and multifamily residential real estate loans that are included in the 50 percent risk category. Such loans are not eligible for preferential treatment unless they meet the following criteria: The loans are made subject to prudent underwriting standards, the loans are performing in accordance with their original terms and are not delinquent for 90 days or more or carried on nonaccrual status, and the loan-to-value ratios are conservative.²⁴ For the purpose of this last criterion, the loan-to-value ratio should be based on the value of the property determined by the most current appraisal or, if appropriate, the most current evaluation. Normally, this would be the appraisal or evaluation performed at the time the loan was originated.²⁵

If a bank has assigned a 50 percent risk weight to residential mortgage loans made for

24. A conservative loan-to-value ratio for loans secured by multifamily residential property must not exceed 80 percent (or 75 percent if the loan is based on a floating interest rate).

25. When both first and junior liens are held by the bank and no intervening liens exist, these transactions are treated as single loans secured by a first lien for the purpose of determining the loan-to-value ratio.

the purpose of speculative real estate development or whose eligibility for such preferential treatment is otherwise questionable, and the amounts of nonqualifying loans are readily identifiable, such loans should be reassigned to the 100 percent risk-weight category. If material evidence exists that a bank has assigned a preferential risk weight to residential mortgage loans of questionable eligibility, but the amount of the inappropriately weighted amount cannot be readily identified, the overall evaluation of the bank's capital adequacy should reflect a higher capital requirement than would otherwise be the case.

Accrued Interest

Banks normally report accrued interest on loans and securities in "Other Assets" on the Call Report. The majority of banks will risk-weight the entire amount of accrued interest at 100 percent. However, for risk-based capital purposes, a bank is permitted to allocate accrued interest among the risk categories associated with the underlying claims, provided the bank has systems in place to carry out such an allocation accurately.

Off-Balance-Sheet Activities

Off-balance-sheet transactions include recourse obligations, direct-credit substitutes, residual interests, and asset- and mortgage-backed securities. The treatments for direct-credit substitutes, assets transferred with recourse, and securities issued in connection with asset securitizations and structured financings are described later in this section. The terms *asset securitizations* or *securitizations*, as used in this subsection, include structured financings, as well as asset-securitization transactions.

Assets Sold with Recourse

For risk-based capital adequacy purposes, a bank must hold capital against assets sold with recourse if the bank retains any risk of loss. To qualify as an asset sale with recourse, a transfer of assets must first qualify as a sale according to the GAAP criteria set forth in paragraph 14 of the Financial Accounting Standards Board's Statement No. 140 (FAS 140), "Accounting for

Transfers and Servicing of Financial Assets and Extinguishments of Liabilities." These criteria are summarized in the definition of "transfers of financial assets" in the glossary to the commercial bank Call Report instructions. If a transfer of assets does not meet these criteria, the assets must remain on the bank's balance sheet and are subject to the standard risk-based capital charge.

If a transfer of assets qualifies as a sale under GAAP but the bank retains any risk of loss or obligation for payment of principal or interest, then the transfer is considered to be a sale with recourse. A more detailed definition of an asset sale with recourse may be found in the definition of "sales of assets for risk-based capital purposes" in the glossary to the commercial bank Call Report instructions. Although the assets are removed from a bank's balance sheet in an asset sale with recourse, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guaranties or collateral. This assignment also applies when the contractual terms of the recourse agreement limit the seller's risk to a percentage of the value of the assets sold or to a specific dollar amount.

If, however, the risk retained by the seller is limited to some fixed percentage of any losses that might be incurred and there are no other provisions resulting in the direct or indirect retention of risk by the seller, the maximum amount of possible loss for which the selling bank is at risk (the stated percentage times the amount of assets to which the percentage applies) is subject to risk-based capital requirements. The remaining amount of assets transferred would be treated as a sale that is not subject to the risk-based capital requirements. For example, a seller would treat a sale of \$1 million in assets with a recourse provision that the seller and buyer proportionately share in losses incurred on a 10 percent and 90 percent basis, respectively, and with no other retention of risk by the seller, as a \$100,000 asset sale with recourse and a \$900,000 sale not subject to risk-based capital requirements.

There are several exceptions to the general reporting rule for recourse transactions. The first exception applies to recourse transactions for which the amount of recourse the institution is contractually liable for is less than the capital requirement for the assets transferred under the recourse agreement. For such transactions, a bank must hold capital equal to its maximum contractual recourse obligation. For example,

assume an institution transfers a \$100 pool of commercial loans and retains a recourse obligation of 2 percent. Ordinarily, the bank would be subject to an 8 percent capital charge, or \$8. Because the recourse obligation is only 2 percent, however, the bank would be required to hold capital of \$2 against the recourse exposure. This capital charge may be reduced further by the balance of any associated noncapital GAAP recourse liability account.

A second exception to the general rule applies to the transfer of small-business loans and to the transfer of leases on personal property with recourse. A bank that is considered to be well capitalized according to the Federal Reserve's prompt-corrective-action framework should include in risk-weighted assets only the amount of retained recourse—instead of the entire amount of assets transferred—in connection with a transfer of small-business loans or a transfer of leases on personal property with recourse, provided two conditions are met. First, the transaction must be treated as a sale under GAAP; second, the bank must establish a noncapital reserve that is sufficient to cover the bank's estimated liability under the recourse arrangement. With the Board's approval, this exception may also apply to a bank that is considered to be adequately capitalized under the prompt-corrective-action framework. The total outstanding amount of recourse retained under such transactions may not exceed 15 percent of a bank's total risk-based capital without Board approval.

Definitions

The capital adequacy guidelines provide special treatment for recourse obligations, direct-credit substitutes, residual interests, and asset- and mortgage-backed securities involved in asset-securitization activities. A brief discussion of some of the primary definitions follows.

Credit derivatives. Credit derivative means a contract that allows one party (the protection purchaser) to transfer the credit risk of an asset or off-balance-sheet credit exposure to another party (the protection provider). The value of a credit derivative is dependent, at least in part, on the credit performance of a "reference asset."

Credit-enhancing representations and warranties. When a bank transfers assets, including

servicing rights, it customarily makes representations and warranties concerning those assets. When a bank purchases loan-servicing rights, it may also assume representations and warranties made by the seller or a prior servicer. These representations and warranties give certain rights to other parties and impose obligations on the seller or servicer of the assets. To the extent a bank's representations and warranties function as credit enhancements to protect asset purchasers or investors from credit risk, they are considered as recourse or direct-credit substitutes.

The Federal Reserve's risk-based capital adequacy rule is consistent with the agencies' long-standing recourse treatment of representations and warranties that effectively guarantee the performance or credit quality of transferred loans. However, banks typically make a number of factual warranties that are unrelated to the ongoing performance or credit quality of transferred assets. These warranties entail operational risk, as opposed to the open-ended credit risk inherent in a financial guaranty, and are not considered recourse or a direct-credit substitute. Warranties that create operational risk include warranties that assets have been underwritten or collateral appraised in conformity with identified standards, as well as warranties that provide for the return of assets in instances of incomplete documentation, fraud, or misrepresentation.

Warranties can impose varying degrees of operational risk. For example, a warranty that asset collateral has not suffered damage from potential hazards entails a risk that is offset to some extent by prudent underwriting practices requiring the borrower to provide hazard insurance to the bank. A warranty that asset collateral is free of environmental hazards may present acceptable operational risk for certain types of properties that have been subject to environmental assessment, depending on the circumstances. The appropriate limits for these operational risks are monitored through supervision of a bank's loan-underwriting, -sale, and -servicing practices. Also, a bank that provides warranties to loan purchasers and investors must include associated operational risks in its risk management of exposures arising from loan-sale or securitization-related activities. Banks should be prepared to demonstrate to examiners that operational risks are effectively managed.

Recourse or direct-credit-substitute treatment is required for warranties providing assurances

about the actual value of asset collateral, including that the market value corresponds to its appraised value or that the appraised value will be realized in the event of foreclosure and sale. Warranties such as these, which make representations about the future value of a loan or related collateral, constitute an enhancement of the loan transferred, and thus are recourse arrangements or direct-credit substitutes. When a seller represents that it “has no knowledge” of circumstances that could cause a loan to be other than investment quality, the representation is not recourse. Banks may limit recourse exposure with warranties that directly address the condition of the asset *at the time of transfer* (that is, creation of an operational warranty) and by monitoring compliance with stated underwriting standards. Alternatively, banks might create warranties with exposure caps that would permit it to take advantage of the low-level-recourse rule.

The definition of credit-enhancing representations and warranties excludes warranties—such as early-default clauses and similar warranties that permit the return of, or premium-refund clauses covering, one- to four-family residential first mortgage loans that qualify for a 50 percent risk weight for a maximum period of 120 days from the date of transfer. These warranties may cover only those loans that were originated within one year of the date of transfer.

A premium-refund clause is a warranty that obligates a seller who has sold a loan at a price in excess of par, that is, at a premium, to refund the premium, either in whole or in part, if the loan defaults or is prepaid within a certain period of time. Premium-refund clauses that cover assets guaranteed, in whole or in part, by the U.S. government, a U.S. government agency, or a government-sponsored enterprise are not included in the definition of credit-enhancing representations and warranties, provided the premium-refund clauses are for a period not to exceed 120 days from the date of transfer. The definition also does not include warranties that permit the return of assets in instances of misrepresentation, fraud, or incomplete documentation.

Early-default clauses. Early-default clauses typically give the purchaser of a loan the right to return the loan to the seller if the loan becomes 30 or more days delinquent within a stated period after the transfer, for example, four months after transfer. Once the stated period has

expired, the early-default clause will no longer trigger recourse treatment, provided there are no other provisions that constitute recourse.

Direct-credit substitutes. The term *direct-credit substitute* refers to an arrangement in which a bank assumes, in form or in substance, credit risk associated with an on- or off-balance-sheet asset or exposure that was not previously owned by the bank (third-party asset), and the risk assumed by the bank exceeds the pro rata share of its interest in the third-party asset. If the bank has no claim on the third-party asset, then the bank’s assumption of any credit risk on the third-party asset is a direct-credit substitute.

The term direct-credit substitute explicitly includes items such as purchased subordinated interests, agreements to cover credit losses that arise from purchased loan-servicing rights, credit derivatives, and lines of credit that provide credit enhancement. Some purchased subordinated interests, such as credit-enhancing I/O strips, are also residual interests for regulatory capital purposes.

Direct-credit substitutes include, but are not limited to—

- financial standby letters of credit that support financial claims on a third party that exceed a bank’s pro rata share of losses in the financial claim;
- guarantees, surety arrangements, credit derivatives, and similar instruments backing financial claims that exceed a bank’s pro rata share in the financial claim;
- purchased subordinated interests or securities that absorb more than their pro rata share of losses from the underlying assets;
- credit derivative contracts under which the bank assumes more than its pro rata share of credit risk on a third-party exposure;
- loans or lines of credit that provide credit enhancement for the financial obligations of an account party;
- purchased loan-servicing assets if the servicer is responsible for credit losses or if the servicer makes or assumes credit-enhancing representations and warranties with respect to the loans serviced (mortgage-servicer cash advances that meet the conditions of section III.B.3.a.x. of the guidelines (12 CFR 208, appendix A) are not direct-credit substitutes);
- clean-up calls on third-party assets (clean-up calls that are 10 percent or less of the original pool balance that are exercisable at the option

- of the bank are not direct-credit substitutes); and
- liquidity facilities that provide liquidity support to ABCP (other than eligible ABCP liquidity facilities).

Clean-up calls. A clean-up call is an option that permits a servicer or its affiliate (which may be the originator) to take investors out of their positions in a securitization before all of the transferred loans have been repaid. The servicer accomplishes this by repurchasing the remaining loans in the pool once the pool balance has fallen below some specified level. This option in a securitization raises long-standing agency concerns that a bank may implicitly assume a credit-enhancing position by exercising the option when the credit quality of the securitized loans is deteriorating. An excessively large clean-up call facilitates a securitization servicer's ability to take investors out of a pool to protect them from absorbing credit losses, and thus may indicate that the servicer has retained or assumed the credit risk on the underlying pool of loans.

Generally, clean-up calls (whether or not they are exercised) are treated as recourse and direct-credit substitutes. The purpose of treating large clean-up calls as recourse or direct-credit substitutes is to ensure that a bank is not able to provide credit support to the trust investors by repaying its investment when the credit quality of the pool is deteriorating without holding capital against the exposure. The focus should be on the arrangement itself and not the exercise of the call. Thus, the existence, not the exercise, of a clean-up call that does not meet the requirements of the risk-based capital rule will trigger treatment as a recourse obligation or a direct-credit substitute. A clean-up call can function as a credit enhancement because its existence provides the opportunity for a bank (as servicer or an affiliate of a servicer) to provide credit support to investors by taking an action that is within the contractual terms of the securitization documents.

Because clean-up calls can also serve an administrative function in the operation of a securitization, a limited exemption exists for these options. When an agreement permits a bank that is a servicer or an affiliate of the servicer to elect to purchase loans in a pool, the agreement is not considered a recourse obligation or a direct-credit substitute if the agreement permits the banking organization to purchase the

remaining loans in a pool when the balance of those loans is equal to or less than 10 percent of the original pool balance. This treatment will also apply to clean-up calls written with reference to less than 10 percent of the outstanding principal amount of securities. If, however, an agreement permits the remaining loans to be repurchased when their balance is greater than 10 percent of the original pool balance, the agreement is considered to be a recourse obligation or a direct-credit substitute. The exemption from recourse or direct-credit-substitute treatment for a clean-up call of 10 percent or less recognizes the real market need to be able to call a transaction when the costs of keeping it outstanding are burdensome. However, to minimize the potential for using such a feature as a means of providing support for a troubled portfolio, a bank that exercises a clean-up call should not repurchase any loans in the pool that are 30 days or more past due. Alternatively, the bank should repurchase the loans at the lower of their estimated fair value or their par value plus accrued interest.

Banks that repurchase assets pursuant to a clean-up call may do so based on an aggregate fair value for all repurchased assets. Banks do not have to evaluate each individual loan remaining in the pool at the time a clean-up call is exercised to determine fair value. Rather, the overall repurchase price should reflect the aggregate fair value of the assets being repurchased so that the bank is not overpaying for the assets and, in so doing, providing credit support to the trust investors. Examiners will review the terms and conditions relating to the repurchase arrangements in clean-up calls to ensure that transactions are done at the lower of fair value or par value plus accrued interest. Banks should be able to support their fair-value estimates. If the Federal Reserve concludes that a bank has repurchased assets at a price that exceeds the lower of these two amounts, the clean-up call provisions in its future securitizations may be treated as recourse obligations or direct-credit substitutes. Regardless of the size of the clean-up call, the Federal Reserve will closely scrutinize and take appropriate supervisory action for any transaction in which the bank repurchases deteriorating assets for an amount greater than a reasonable estimate of their fair value.

Eligible ABCP liquidity facility. An eligible ABCP liquidity facility is a liquidity facility that supports ABCP, in form or in substance, and is

subject to an asset-quality test at the time of draw that precludes funding against assets that are 90 days or more past due or in default. In addition, if the assets that an eligible ABCP liquidity facility is required to fund against are externally rated assets or exposures at the inception of the facility, the facility can be used to fund only those assets or exposures that are externally rated investment grade at the time of funding. Notwithstanding the eligibility requirements set forth in the two preceding sentences, a liquidity facility will be considered an eligible ABCP liquidity facility if the assets that are funded under the liquidity facility and which do not meet the eligibility requirements are guaranteed, either conditionally or unconditionally, by the U.S. government or its agencies or by the central government of an OECD country.

Externally rated. Externally rated is a term which means that an instrument or obligation has received a credit rating from a nationally recognized statistical rating organization.

Face amount. The face amount is the notional principal, or face value, amount of an off-balance-sheet item; the amortized cost of an asset not held for trading purposes; and the fair value of a trading asset.

Financial asset. A financial asset is cash or other monetary instrument, evidence of debt, evidence of an ownership interest in an entity, or a contract that conveys a right to receive or exchange cash or another financial instrument from another party.

Financial standby letters of credit. A financial standby letter of credit means a letter of credit or similar arrangement that represents an irrevocable obligation to a third-party beneficiary—

- to repay money borrowed by, advanced to, or for the account of a second party (the account party), or
- to make payment on behalf of the account party, in the event that the account party fails to fulfill its obligation to the beneficiary.

Spread accounts that function as credit-enhancing interest-only strips. A spread account is an on-balance-sheet asset that functions as a credit enhancement and that can represent an interest in expected interest and fee cash flows

derived from assets an organization has sold into a securitization. In those cases, the spread account is considered to be a “credit-enhancing interest-only strip” and is subject to the concentration limit. (See SR-02-16.) However, any portion of a spread account that represents an interest in cash that has already been collected and is held by the trustee is a “residual interest” subject to dollar-for-dollar capital, but is not a credit-enhancing interest-only strip subject to the concentration limit. For example, assume that a bank books a single spread-account asset that is derived from two separate cash-flow streams:

- *A receivable from the securitization trust that represents cash that has already accumulated in the spread account.* In accordance with the securitization documents, the cash will be returned to the bank at some date in the future after having been reduced by amounts used to reimburse investors for credit losses. Based on the date when the cash is expected to be paid out to the bank, the present value of this asset is currently estimated to be \$3.
- *A projection of future cash flows that are expected to accumulate in the spread account.* In accordance with the securitization documents, the cash, to the extent collected, will also be returned to the bank at some date in the future after having been reduced by amounts used to reimburse investors for credit losses. Based on the date when the cash is expected to be paid out to the bank, the present value of this asset is currently estimated to be \$2.

Both components of the above spread account are considered to be residual interests under the current capital standards because both represent on-balance-sheet assets subject to more than their pro rata share of losses on the underlying portfolio of sold assets. However, the \$2 asset that represents the bank’s retained interest in future cash flows exposes the organization to a greater degree of risk because the \$2 asset presents additional uncertainty as to whether it will ever be collected. This additional uncertainty associated with the recognition of future subordinated excess cash flows results in the \$2 asset being treated as a credit-enhancing interest-only strip, a subset of residual interests.

The face amount of all of the bank’s credit-enhancing interest-only strips is first subject to a 25 percent of tier 1 capital concentration limit.

Any portion of this face amount that exceeds 25 percent of tier 1 capital is deducted from tier 1 capital. This limit will affect both a bank's risk-based and leverage capital ratios. The remaining face amount of the bank's credit-enhancing interest-only strips, as well as the face amount of the spread-account receivable for cash already held in the trust, is subject to the dollar-for-dollar capital requirement established for residual interests, which affects only the risk-based capital ratios.

Credit-enhancing interest-only strips. A credit-enhancing interest-only (I/O) strip is an on-balance-sheet asset that, in form or substance, (1) represents the contractual right to receive some or all of the interest due on transferred assets and (2) exposes the bank to credit risk that exceeds its pro rata claim on the underlying assets, whether through subordination provisions or other credit-enhancing techniques. Thus, credit-enhancing I/O strips include any balance-sheet asset that represents the contractual right to receive some or all of the remaining interest cash flow generated from assets that have been transferred into a trust (or other special-purpose entity), after taking into account trustee and other administrative expenses, interest payments to investors, servicing fees, reimbursements to investors for losses attributable to the beneficial interests they hold, and reinvestment income and ancillary revenues²⁶ on the transferred assets. Credit-enhancing I/O strips are generally carried on the balance sheet at the present value of the expected net cash flow that the banking organization reasonably expects to receive in future periods on the assets it has securitized, adjusted for some level of prepayments if relevant to that asset class, and discounted at an appropriate market interest rate. Typically, when assets are transferred in a securitization transaction that is accounted for as a sale under GAAP, the accounting recognition given to the credit-enhancing I/O strip on the seller's balance sheet results in the recording of a gain on the portion of the transferred assets that has been sold. This gain is recognized as income, thus increasing the bank's capital position. The economic substance of a transaction will be used to determine whether a particular interest cash flow functions as a credit-enhancing I/O strip, and the Federal Reserve reserves the right to identify other cash flows or

spread-related assets as credit-enhancing I/O strips on a case-by-case basis. For example, including some principal payments with interest and fee cash flows will not otherwise negate the regulatory capital treatment of that asset as a credit-enhancing I/O strip. Credit-enhancing I/O strips include both purchased and retained interest-only strips that serve in a credit-enhancing capacity, even though purchased I/O strips generally do not result in the creation of capital on the purchaser's balance sheet.

Loan-servicing arrangements. The definitions of recourse and direct-credit substitute cover loan-servicing arrangements if the bank, as servicer, is responsible for credit losses associated with the serviced loans. However, cash advances made by residential mortgage servicers to ensure an uninterrupted flow of payments to investors or the timely collection of the mortgage loans are specifically excluded from the definitions of recourse and direct-credit substitute, provided the residential mortgage servicer is entitled to reimbursement for any significant advances and this reimbursement is not subordinate to other claims. To be excluded from recourse and direct-credit-substitute treatment, the bank, as servicer, should make an independent credit assessment of the likelihood of repayment of the servicer advance before advancing funds, and should only make such an advance if prudent lending standards are met. Risk-based capital is assessed only against the amount of the cash advance, and the advance is assigned to the risk-weight category appropriate to the party obligated to reimburse the servicer.

If a residential mortgage servicer is not entitled to full reimbursement, then the maximum possible amount of any nonreimbursed advances on any one loan must be contractually limited to an insignificant amount of the outstanding principal on that loan. Otherwise, the servicer's obligation to make cash advances will not be excluded from the definitions of recourse and direct-credit substitute. Banks that act as servicers should establish policies on servicer advances and use discretion in determining what constitutes an "insignificant" servicer advance. The Federal Reserve will exercise its supervisory authority to apply recourse or direct-credit-substitute treatment to servicer cash advances that expose a bank, acting as servicer, to excessive levels of credit risk.

26. According to FAS 140, ancillary revenues include such revenues as late charges on the transferred assets.

Liquidity facility. A liquidity facility refers to a

legally binding commitment to provide liquidity support to ABCP by lending to, or purchasing assets from, any structure, program, or conduit in the event that funds are required to repay maturing ABCP.

Mortgage-servicer cash advance. A mortgage-servicer cash advance represents funds that a residential mortgage loan servicer advances to ensure an uninterrupted flow of payments, including advances made to cover foreclosure costs or other expenses to facilitate the timely collection of the loan.

A mortgage-servicer cash advance is not a recourse obligation or a direct-credit substitute if—

- the servicer is entitled to full reimbursement and this right is not subordinated to other claims on the cash flows from the underlying asset pool; or
- for any one loan, the servicer's obligation to make nonreimbursable advances is contractually limited to an insignificant amount of the outstanding principal balance of that loan.

Nationally recognized statistical rating organization (NRSRO). An NRSRO is an entity that is recognized by the Division of Market Regulation of the Securities and Exchange Commission (or any successor division) (the commission) as a nationally recognized statistical rating organization for various purposes, including the commission's uniform net capital requirements for brokers and dealers.

Recourse. Recourse means the retention by a bank, in form or in substance, of any credit risk directly or indirectly associated with an asset it has transferred that exceeds a pro rata share of the bank's claim on the asset. If a bank has no claim on a transferred asset, then the retention of any risk of credit loss is recourse. A recourse obligation typically arises when a bank transfers assets and retains an explicit obligation to repurchase the assets or absorb losses due to a default on the payment of principal or interest or any other deficiency in the performance of the underlying obligor or some other party. The definition of recourse is consistent with the banking agencies' long-standing use of this term, and incorporates existing agency practices regarding retention of risk in asset sales.

Second-lien positions do not, in most circumstances, constitute recourse for the bank receive-

ing the third-party enhancement. Second mortgages or home equity loans generally will not be considered recourse arrangements unless they actually function as credit enhancements.

Third-party enhancements (for example, insurance protection) purchased by the originator of a securitization for the benefit of investors also do not generally constitute recourse. The purchase of enhancements for a securitization, when the bank is completely removed from any credit risk, will not, in most instances, constitute recourse. However, if the purchase or premium price is paid over time and the size of the payment is a function of the third-party's loss experience on the portfolio, such an arrangement indicates an assumption of credit risk and would be considered recourse.

Recourse may also exist implicitly if a bank provides credit enhancement beyond any contractual obligation to support assets it has sold. The following are examples of recourse arrangements:

- credit-enhancing representations and warranties made on the transferred assets
- loan-servicing assets retained pursuant to an agreement under which the bank will be responsible for credit losses associated with the loans being serviced (mortgage-servicer cash advances that meet the conditions of section III.B.3.a.x. of the guidelines (12 CFR 208, appendix A) are not recourse arrangements)
- retained subordinated interests that absorb more than their pro rata share of losses from the underlying assets
- assets sold under an agreement to repurchase, if the assets are not already included on the balance sheet
- loan strips sold without contractual recourse, when the maturity of the transferred loan is shorter than the maturity of the commitment under which the loan is drawn
- credit derivatives issued that absorb more than the bank's pro rata share of losses from the transferred assets
- clean-up calls at inception that are greater than 10 percent of the balance of the original pool of transferred loans (clean-up calls that are 10 percent or less of the original pool balance that are exercisable at the option of the bank are not recourse arrangements)
- liquidity facilities that provide liquidity support to ABCP (other than eligible ABCP liquidity facilities)

Residual interests. Residual interests are defined as any on-balance-sheet asset (1) that represents an interest (including a beneficial interest) created by a transfer that qualifies as a sale (in accordance with GAAP) of financial assets, whether through a securitization or otherwise, and (2) that exposes a bank to credit risk directly or indirectly associated with the transferred assets that exceeds a pro rata share of the bank's claim on the asset, whether through subordination provisions or other credit-enhancement techniques. Residual interests generally do not include interests purchased from a third party, except for credit-enhancing I/O strips. Examples of residual interests (assets) include credit-enhancing I/Os; spread accounts; cash-collateral accounts; retained subordinated interests; accrued but uncollected interest on transferred assets that, when collected, will be available to serve in a credit-enhancing capacity; and similar on-balance-sheet assets that function as a credit enhancement. The functional-based definition reflects the fact that securitization structures vary in the way they use certain assets as credit enhancements. Residual interests therefore include any retained on-balance-sheet asset that functions as a credit enhancement in a securitization, regardless of how a bank refers to the asset in financial or regulatory reports.

In general, the definition of residual interests includes only an on-balance-sheet asset that represents an interest created by a transfer of financial assets treated as a sale under GAAP, in accordance with FAS 140. Interests retained in a securitization or transfer of assets accounted for as a financing under GAAP are generally excluded from the definition of residual interest. In the case of GAAP financings, the transferred assets remain on the transferring bank's balance sheet and are, therefore, directly included in both the leverage and risk-based capital calculations. Further, when a transaction is treated as a financing, no gain is recognized from an accounting standpoint.

Sellers' interests generally do not function as a credit enhancement. Thus, if a seller's interest shares losses on a pro rata basis with investors, such an interest would not be considered a residual interest. However, banks should recognize that sellers' interests that are structured to absorb a disproportionate share of losses will be considered residual interests.

The definition of residual interest also includes overcollateralization and spread accounts because these accounts are susceptible to the potential

future credit losses within the loan pools that they support, and thus are subject to valuation inaccuracies. Spread accounts and overcollateralizations that do not meet the definition of credit-enhancing I/O strips generally do not expose a bank to the same level of risk as credit-enhancing I/O strips, and thus are excluded from the concentration limit.

The capital treatment for a residual interest applies when a bank effectively retains the risk associated with that residual interest, even if the residual is sold. The economic substance of the transaction will be used to determine whether the bank has transferred the risk associated with the residual-interest exposure. Banks that transfer the risk on residual interests, either directly through a sale or indirectly through guarantees or other credit-risk-mitigation techniques, and then reassume this risk in any form will be required to hold risk-based capital as though the residual interest remained on the bank's books. For example, if a bank sells an asset that is an on-balance-sheet credit enhancement to a third party and then writes a credit derivative to cover the credit risk associated with that asset, the selling bank must continue to risk-weight, and hold capital against, that asset as a residual interest as if the asset had not been sold.

Risk participation. Risk participation means a participation in which the originating party remains liable to the beneficiary for the full amount of an obligation (for example, a direct-credit substitute) notwithstanding that another party has acquired a participation in that obligation.

Securitization. Securitization is the pooling and repackaging by a special-purpose entity of assets or other credit exposures into securities that can be sold to investors. Securitization includes transactions that create stratified credit-risk positions whose performance is dependent on an underlying pool of credit exposures, including loans and commitments.

Sponsor. A sponsor refers to a bank that establishes an ABCP program; approves the sellers permitted to participate in the program; approves the asset pools to be purchased by the program; or administers the program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance with the program documents and with the program's credit and investment policy.

Structured finance program. A structured finance program refers to a program where receivable interests and asset-backed securities issued by multiple participants are purchased by a special-purpose entity that repackages those exposures into securities that can be sold to investors. Generally, structured finance programs allocate credit risks between the participants and the credit enhancement provided to the program.

Recourse Obligations, Direct-Credit Substitutes, Residual Interests, and Asset- and Mortgage-Backed Securities

The risk-based capital treatment for recourse obligations, direct-credit substitutes, and asset- and mortgage-backed securities in connection with asset securitizations and structured financings is described below. The capital treatment described in this subsection applies to the bank's own positions.²⁷

For banks that comply with the *market-risk rules*, except for liquidity facilities supporting ABCP (in form or in substance), positions in the trading book that arise from asset securitizations, including recourse obligations, residual interests, and direct-credit substitutes, should be treated according to the market-risk rules. However, these banks remain subject to the 25 percent concentration limit for credit-enhancing I/O strips.

Credit-Equivalent Amount

The credit-equivalent amount for a recourse obligation or a direct-credit substitute is the full amount of the credit-enhanced assets for which the bank directly or indirectly retains or assumes credit risk, multiplied by a 100 percent conversion factor. This treatment, however, does not apply to externally rated positions, senior positions not externally rated, residual interests, certain internally rated positions, and certain small-business loans and leases on personal property transferred with recourse.

Risk-Weight Factor for Off-Balance-Sheet Recourse Obligations and Direct-Credit Substitutes

To determine the bank's risk-weight factor for off-balance-sheet recourse obligations and direct-credit substitutes, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral. For a direct-credit substitute that is an on-balance-sheet asset (for example, a purchased subordinated security), a bank must calculate risk-weighted assets using the amount of the direct-credit substitute and the full amount of the assets it supports, that is, all the more senior positions in the structure. Direct-credit substitutes that have been syndicated or in which risk participations have been conveyed or acquired are considered off-balance-sheet items that are converted at a 100 percent conversion factor. (See section III.D.1. of the guidelines (12 CFR 208, appendix A) for more capital-treatment details.)

Ratings-Based Approach—Externally Rated Positions

Each loss position in an asset-securitization structure functions as a credit enhancement for the more senior loss positions in the structure. A multilevel ratings-based approach is used to assess capital requirements on recourse obligations, residual interests (except credit-enhancing I/O strips), direct-credit substitutes, and senior and subordinated securities in asset securitizations. The approach uses credit ratings from the rating agencies to measure relative exposure to credit risk and determine the associated risk-based capital requirement. Using these credit ratings provides a way to use determinations of credit quality that are relied on by investors and other market participants to differentiate the regulatory capital treatment for loss positions representing different gradations of risk.

Under the ratings-based approach, the capital requirement for a position is computed by multiplying the face amount of the position by the appropriate risk weight, determined in accordance with the following tables.²⁸ Table 2 maps

27. The treatment also applies to banks that hold positions in their trading book but that are not otherwise subject to the market-risk rules.

28. The rating designations (for example, AAA, BBB, A-1, and P-1) used in the tables are illustrative only and do not indicate any preference for, or endorsement of, any particular rating-agency designation system.

Table 2—Risk-Weight Assignments for Externally Rated Long-Term Positions

<i>Long-term rating category</i>	<i>Rating-designation</i>	
	<i>examples</i>	<i>Risk weight</i>
Highest or second-highest investment grade	AAA, AA	20 percent

long-term ratings to the appropriate risk weights. Table 3 maps short-term ratings for asset-backed commercial paper to the appropriate risk weights. The Federal Reserve has the authority, however, to override the use of certain ratings or the ratings on certain instruments, either on a case-by-case basis or through broader supervisory policy, if necessary or appropriate to address the risk that an instrument poses to a bank.

The ratings-based approach can be used for certain designated asset-backed securities (including asset-backed commercial paper), recourse obligations, direct-credit substitutes, and residual interests (other than credit-enhancing I/O strips). Credit-enhancing I/O strips have been excluded from the ratings-based approach because of their high risk profile. While the ratings-based approach is available for both traded and untraded positions, the approach applies different requirements to each type of position.

Ratings-Based Qualification for Corporate Bonds or Other Securities

Corporate bonds or other securities not related in any way to a securitization or structured finance program do not qualify for the ratings-based approach. Only mortgage- and asset-backed securities, recourse obligations, direct-credit substitutes, and residual interests (except credit-

enhancing I/O strips) retained, assumed, or issued in connection with a securitization or structured finance program qualify for the ratings-based approach.

Corporate debt instruments, municipal bonds, and other securities that are not related to a securitization or structured finance program do not meet these definitions, and thus do not qualify for the ratings-based approach.

Traded Positions

A traded position is only required to be rated by one rating agency. A traded position is defined as a position that is externally rated and is retained, assumed, or issued in connection with an asset securitization, where there is a reasonable expectation that, in the near future, the rating will be relied on by unaffiliated investors to purchase the position or will be relied on by an unaffiliated third party to enter into a transaction involving the position, such as a purchase, loan, or repurchase agreement.

For a traded position that has received an external rating on a long-term position that is one grade below investment grade or better, or that has received a short-term rating that is investment grade, the bank multiplies the face amount of the position by the appropriate risk weight, determined in accordance with tables 2 and 3. Stripped mortgage-backed securities and

other similar instruments, such as interest-only or principal-only strips that are not credit enhancements, must be assigned to the 100 percent risk category. If a traded position has received more than one external rating, the lowest single rating will apply. Moreover, if a rating changes, the bank must use the new rating.

Table 3, for short-term ratings, is not identical to table 2, for long-term ratings, because the rating agencies do not assign short-term ratings using the same methodology as they use for long-term ratings. Each short-term rating category covers a range of longer-term rating categories.²⁹ For example, a P-1 rating could map to a long-term rating that is as high as Aaa or as low as A3.

Externally Rated, Nontraded Positions

For a rated, but untraded, position to be eligible for the ratings-based approach, it must meet certain conditions. To qualify, the position (1) must be rated by more than one rating agency; (2) must have received an external rating on a long-term position that is one grade below investment grade or better or, for a short-term position, a rating that is investment grade or better by all rating agencies providing a rating; (3) must have ratings that are publicly available; and (4) must have ratings that are based on the same criteria used to rate traded securities. If the ratings are different, the lowest single rating will determine the risk-weight category to which the position will be assigned. This treatment does not apply to a credit-enhancing I/O strip.

Split or Partially Rated Instruments

For instruments that have been assigned separate ratings for principal and interest (split or partially rated instruments), the Federal Reserve will apply to the entire instrument the risk weight that corresponds to the lowest component rating. For example, a purchased subordinated security whose principal component is rated BBB, but whose interest component is rated B, is subject to the gross-up treatment accorded to direct-credit substitutes rated B or

lower. Similarly, if a portion of an instrument is unrated, the entire position will be treated as if it was unrated. In addition to this regulatory capital treatment, the Federal Reserve may also, as appropriate, adversely classify and require write-downs for an other-than-temporary impairment on unrated and below-investment-grade securities, including split or partially rated securities. (See SR-02-16.)

Senior Positions Not Externally Rated

A position that is not externally rated (an unrated position), but that is senior or preferred in all respects (including collateralization and maturity) to a rated position that is traded, is treated as if it had the rating assigned to the rated position. The bank must satisfy the Federal Reserve that such treatment is appropriate. Senior unrated positions qualify for the risk weighting of the subordinated rated positions in the same securitization transaction as long as the subordinated rated position (1) is traded and (2) remains outstanding for the entire life of the unrated position, thus providing full credit support until the unrated position matures.

Recourse obligations and direct-credit substitutes (other than residual interests) that do not qualify for the ratings-based approach (or for the internal-ratings, program-ratings, or computer-program-ratings approaches outlined below) receive “gross-up” treatment, that is, the bank holding the position must hold capital against the amount of the position, plus all more senior positions, subject to the low-level-exposure requirement.³⁰ This grossed-up amount is placed into a risk-weight category according to the obligor or, if relevant, according to the guarantor or nature of the collateral. The grossed-up amount multiplied by both the risk weight and 8 percent is never greater than the full capital charge that would otherwise be imposed on the

30. Gross-up treatment means that a position is combined with all more senior positions in the transaction. The result is then risk-weighted based on the obligor or, if relevant, the guarantor or the nature of the collateral. For example, if a bank retains a first-loss position (other than a residual interest) in a pool of mortgage loans that qualify for a 50 percent risk weight, the bank would include the full amount of the assets in the pool, risk-weighted at 50 percent, in its risk-weighted assets for purposes of determining its risk-based capital ratio. The low-level-exposure rule provides that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a bank is contractually liable.

29. See, for example, *Moody's Global Ratings Guide*, June 2001, p.3.

assets if they were on the banking organization's balance sheet.³¹

Residual Interests

Credit-Enhancing I/O Strips

After applying the concentration limit to credit-enhancing I/O strips (both purchased and retained), a bank must maintain risk-based capital for a credit-enhancing I/O strip (both purchased and retained), regardless of the external rating on that position, equal to the remaining amount of the credit-enhancing I/O strip (net of any existing associated deferred tax liability), even if the amount of risk-based capital required to be maintained exceeds the full risk-based capital requirement for the assets transferred. Transactions that, in substance, result in the retention of credit risk associated with a transferred credit-enhancing I/O strip will be treated as if the credit-enhancing I/O strip was retained by the bank and not transferred.

Other Residual Interests

Residual interests that are not eligible for the ratings-based approach receive dollar-for-dollar treatment. Dollar-for-dollar treatment means, effectively, that one dollar in total risk-based capital must be held against every dollar of a residual interest retained on the balance sheet (net of any existing associated deferred tax liability), even if the amount of risk-based capital required to be maintained exceeds the full risk-based capital requirement for the assets transferred. This capital treatment applies to all residual interests, except for credit-enhancing I/O strips that have already been deducted from tier 1 capital under the concentration limit.³²

Transactions that, in substance, result in the retention of credit risk associated with a transferred residual interest will be treated as if the residual interest was retained by the bank and not transferred.

When the aggregate capital requirement for residual interests and other recourse obligations in connection with the same transfer of assets exceeds the full risk-based capital requirement for those assets, a bank must maintain risk-based capital equal to the greater of the risk-based capital requirement for the residual interest or the full risk-based capital requirement for the assets transferred.

Accrued Interest Receivables Held on Credit Card Securitizations

In a typical credit card securitization, an institution transfers a pool of credit card receivables to a trust, as well as the rights to receive future payments of principal, interest, and fee income from those receivables. If a securitization transaction qualifies as a sale under FAS 140, the selling institution removes the receivables that were sold from its reported assets and continues to carry any retained interests in the transferred receivables on its balance sheet; the right to these future cash flows should be reported as an accrued interest receivable (AIR) asset.^{33,34} Any accrued amounts (cash flows) the institution collects (for example, accrued fees and finance charges) generally must be transferred to the trust and will be used first by the trustee for the benefit of third-party investors to satisfy more senior obligations and for the payment of trust expenses (such as servicing fees, investor-certificate interest, and investor-principal charge-offs). Any remaining excess fee and finance charges will flow back to the seller.

Because the AIR asset constitutes a subordinated residual (retained) interest in the trans-

31. For assets that are assigned to the 100 percent risk-weight category, the minimum capital charge is 8 percent of the amount of assets transferred, and banking organizations are required to hold 8 cents of capital for every dollar of assets transferred with recourse. For assets that are assigned to the 50 percent risk-weight category, the minimum capital charge is 4 cents of capital for every dollar of assets transferred with recourse.

32. Residual interests that are retained or purchased credit-enhancing I/O strips are first subject to a capital concentration limit of 25 percent of tier 1 capital. For risk-based capital purposes (but not for leverage capital purposes), once this concentration limit is applied, a banking organization must then hold dollar-for-dollar capital against the face amount of credit-enhancing I/O strips remaining.

33. The AIR represents fees and finance charges that have been accrued on receivables that the institution has securitized and sold to other investors. For example, in credit card securitizations, this accrued interest receivable asset may include both finance charges billed but not yet collected and finance charges accrued but not yet billed on the securitized receivables.

34. Some institutions may categorize part or all of this receivable as a loan, a "due from trust" account, a retained interest in the trust, or as part of an interest-only strip receivable.

ferred securitized assets, it meets the definition of recourse exposure for risk-based capital purposes. Recourse exposures (such as the AIR asset) require risk-based capital against the full, risk-weighted amount of the assets transferred with recourse, subject to the low-level-recourse rule.³⁵ The AIR asset serves as a credit enhancement to protect third-party investors in the securitization from credit losses, and it meets the definition of a residual interest under the risk-based capital adequacy rules for the treatment of recourse arrangements. Under those rules, an institution must hold dollar-for-dollar capital against residual interests, even if that amount exceeds the full equivalent risk-based capital charge on the transferred assets.³⁶ The institution is expected to hold risk-based capital in an amount consistent with the subordinated nature of the AIR asset.

In accounting for the sale, the AIR asset is treated as a subordinated retained interest of credit card receivables when computing the gain or loss on sale. Consistent with GAAP, this means that the value of the AIR, at the date of transfer, must be adjusted based on its relative fair (market) value. This adjustment will typically result in the carrying amount of the AIR being lower than its book (face) value prior to securitization. The AIR should be reported in regulatory reports as “Other Assets” and not as a loan receivable. (See SR-02-12 and SR-02-22).

Other Unrated Positions

A position (but not a residual interest) maintained in connection with a securitization and that is not rated by a rating agency may be risk-weighted based on the bank’s internal determination of the credit rating of the position, as specified in table 4, multiplied by the face amount of the position. The bank may use three approaches to determine the capital requirements for certain unrated direct-credit substitutes and recourse obligations. Under each of

these approaches, the bank must satisfy the Federal Reserve that the use of the approach is appropriate for the particular bank and for the exposure being evaluated. The risk weight that may be applied to an exposure under these alternative approaches is limited to a minimum of 100 percent.

Internal Risk-Rating Systems for Asset-Backed Commercial Paper Programs

A bank that has a qualifying internal risk-rating system can use that system to apply the ratings-based approach to its unrated direct-credit substitutes in asset-backed commercial paper programs. Internal risk ratings could be used to qualify such a credit enhancement for a risk weight of 100 percent or 200 percent under the ratings-based approach, but not for a risk weight of less than 100 percent.

Most sophisticated banking organizations that participate extensively in the asset-securitization business assign internal risk ratings to their credit exposures, regardless of the form of the exposure. Usually, internal risk ratings more finely differentiate the credit quality of a banking organization’s exposures than the categories the banking agencies use to evaluate credit risk during bank examinations (pass, substandard, doubtful, or loss). An individual bank’s internal risk ratings may be associated with a certain probability of default, loss in the event of default, and loss volatility.

The credit enhancements that sponsors obtain for their commercial paper conduits are rarely rated or traded. If an internal risk-ratings approach were not available for these unrated credit enhancements, the provider of the enhancement would have to obtain two ratings solely to avoid the gross-up treatment that would otherwise apply to nontraded positions in asset securitizations for risk-based capital purposes. However, before a provider of an enhancement decides whether to provide a credit enhancement for a particular transaction (and at what price), the provider will generally perform its own analysis of the transaction to evaluate the amount of risk associated with the enhancement. An internal risk-ratings approach, therefore, is potentially less costly than a ratings-based approach that relies exclusively on ratings by the rating agencies for the risk weighting of these positions.

35. The low-level-recourse rule limits the maximum risk-based capital requirement to the lesser of a banking organization’s maximum contractual exposure or the full capital charge against the outstanding amount of assets transferred with recourse.

36. For a complete description of the appropriate capital treatment for recourse, residual interests, and credit-enhancing interest-only strips, see “Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations,” 66 *Fed. Reg.* 59614 (November 29, 2001).

Table 4—Risk-Weight Assignments for Unrated Positions Using the Alternative Approaches¹

<i>Rating category</i>	<i>Rating-designation examples</i>	<i>Risk weight</i>
Highest or second-highest investment grade	AAA, AA	100 percent
Third-highest investment grade	A	100 percent
Lowest investment grade	BBB	100 percent
One category below investment grade	BB	200 percent

1. such as the internal ratings approach

Internal risk ratings that correspond to the rating categories of the rating agencies can be mapped to risk weights under the Federal Reserve's capital standards. This mapping can be done in a way that would make it possible to differentiate the riskiness of various unrated direct-credit substitutes in asset-backed commercial paper programs based on credit risk. The use of internal risk ratings, however, may raise concerns about the accuracy and consistency of the ratings, especially because the mapping of ratings to risk-weight categories will give banks an incentive to rate their risk exposures in a way that minimizes the effective capital requirement. A bank engaged in asset-backed commercial paper securitization activities that wishes to use the internal risk-ratings approach must therefore be able to demonstrate to the satisfaction of the Federal Reserve, before relying on its internal ratings, that the bank's internal credit-risk rating system is adequate. Adequate internal risk-rating systems usually have the following characteristics:

- The internal risk ratings are an integral part of an effective risk-management system that explicitly incorporates the full range of risks arising from the bank's participation in securitization activities. The system must also fully take into account the effect of such activities on the bank's risk profile and capital adequacy.
- The ratings link to measurable outcomes, such as the probability that a position will experience any losses, the expected losses on that position in the event of default, and the degree of variance in losses given default on that position.
- The ratings separately consider the risk associated with the underlying loans and borrow-

ers, as well as the risk associated with the specific positions in a securitization transaction.

- The ratings identify gradations of risk among "pass" assets, and not just among assets that have deteriorated to the point that they fall into "watch" grades. Although it is not necessary for a bank to use the same categories as the rating agencies, its internal ratings must correspond to the ratings of the rating agencies so that the Federal Reserve can determine which internal risk rating corresponds to each rating category of the rating agencies. A bank would be responsible for demonstrating, to the satisfaction of the Federal Reserve, how these ratings correspond with the rating-agency standards that are used as the framework for the asset-securitization portion of the risk-based capital rule. This correlation is necessary so that the mapping of credit ratings to risk-weight categories in the ratings-based approach can be applied to internal ratings.
- The ratings classify assets into each risk grade using clear, explicit criteria, even for subjective factors.
- Independent credit-risk-management or loan-review personnel assign or review the credit-risk ratings. These personnel should have adequate training and experience to ensure that they are fully qualified to perform this function.
- An internal audit procedure periodically verifies that internal risk ratings are assigned in accordance with the bank's established criteria.³⁷

37. The audit may be performed by any group within the organization that is qualified to audit the system and is independent of both the group that makes the decision to extend credit to the asset-backed commercial paper program and the groups that develop and maintain the internal credit-risk rating system. (See SR-02-16.)

- The performance of internal ratings is tracked over time to evaluate how well risk grades are being assigned, make adjustments to the rating system when the performance of the rated positions diverges from assigned ratings, and adjust individual ratings accordingly.
- Credit-risk rating assumptions are consistent with, or more conservative than, the credit-risk rating assumptions and methodologies of the rating agencies.

If it determines that a bank's rating system is not adequate, the Federal Reserve may preclude the bank from applying the internal risk-ratings approach to new transactions for risk-based capital purposes until the deficiencies have been remedied. Additionally, depending on the severity of the problems identified, the Federal Reserve may decline to rely on the internal risk ratings that the bank had applied to previous transactions for purposes of determining its regulatory capital requirements.

Ratings of Specific Unrated Positions in Structured Financing Programs

A bank may also use a rating obtained from a rating agency for an unrated direct-credit substitute or recourse obligation (other than a residual interest) that is assumed or retained in connection with a structured finance program, if a rating agency has reviewed the terms of the program (according to the specifications set by the rating agency) and stated a rating for positions associated with the program. If the program has options for different combinations of assets, standards, internal credit enhancements, and other relevant factors, and if the rating agency specifies ranges of rating categories to them, the bank may apply the rating category that corresponds to the bank's position. To rely on a program rating, the bank must demonstrate to the Federal Reserve's satisfaction that the credit-risk rating assigned to the program meets the same standards generally used by rating agencies for rating traded positions.

The bank must also demonstrate to the Federal Reserve's satisfaction that the criteria underlying the rating agency's assignment of ratings for the structured financing program are satisfied for the particular position. If a bank participates in a securitization sponsored by another party, the Federal Reserve may authorize the bank to use this approach based on a programmatic

rating obtained by the sponsor of the program.

Banks with limited involvement in securitization activities may find the above alternative to be useful. In addition, some banks extensively involved in securitization activities already rely on ratings of the credit-risk positions under their securitization programs as part of their risk-management practices. Such banks can rely on these ratings for regulatory capital purposes if the ratings are part of a sound overall risk-management process and the ratings reflect the risk of nontraded positions to the banks.

This approach in a structured financing program can be used to qualify a direct-credit substitute or recourse obligation (but not a residual interest) for a risk weight of 100 percent or 200 percent of the face value of the position under the ratings-based approach, but not for a risk weight of less than 100 percent.

Credit-Assessment Computer Programs

A bank (particularly a bank with limited involvement in securitization activities) may use an internal ratings-based approach if it is using an acceptable credit-assessment computer program, developed by a rating agency, to determine the rating of a direct-credit substitute or a recourse obligation (but not a residual interest) issued in connection with a structured finance program. To be used by a bank for risk-based capital purposes, a computer program must have been developed by a rating agency. Further, the bank must demonstrate to the satisfaction of the Federal Reserve that the computer program's credit assessments correspond credibly and reliably to the rating standards of the rating agencies for traded positions in securitizations and with the rating of traded positions in the financial markets. The latter would generally be shown if investors and other market participants significantly used the computer program for risk-assessment purposes. In addition, the bank must demonstrate to the Federal Reserve's satisfaction that the program was designed to apply to its particular direct-credit substitute or recourse exposure and that it has properly implemented the computer program. In general, sophisticated banks with extensive securitization activities should use this approach only if the computer program is an integral part of their risk-management systems and if the bank's systems fully capture the risks from its securitization activities. This computer-program approach can

be used to qualify a direct-credit substitute or recourse obligation (but not a residual interest) for a risk weight of 100 percent or 200 percent of the face value of the position under the ratings-based approach, but not for a risk weight of less than 100 percent.

Limitations on Risk-Based Capital Requirements

Low-Level Exposure

If a bank's maximum contractual exposure to loss retained or assumed in connection with a recourse obligation or a direct-credit substitute, except for a residual interest, is less than the effective risk-based capital requirement for the enhanced assets, the risk-based capital requirement is limited to the maximum contractual exposure, less any recourse liability account established in accordance with GAAP. This limitation does not apply when a bank provides credit enhancement beyond any contractual obligation to support assets it has sold.

Mortgage-Related Securities or Participation Certificates Retained in a Mortgage Loan Swap

If a bank holds a mortgage-related security or a participation certificate as a result of a mortgage loan swap with recourse, capital is required to support the recourse obligation plus the percentage of the mortgage-related security or participation certificate that is not covered by the recourse obligation. The total amount of capital required for the on-balance-sheet asset and the recourse obligation, however, is limited to the capital requirement for the underlying loans, calculated as if the bank continued to hold the loans as on-balance-sheet assets.

Related On-Balance-Sheet Assets

If a recourse obligation or a direct-credit substitute also appears as a balance-sheet asset, the balance-sheet asset is not included in a bank's risk-weighted assets to the extent the value of the balance-sheet asset is already included in the off-balance-sheet credit-equivalent amount for the recourse obligation or direct-credit substitute. In the case of loan-servicing assets and

similar arrangements with embedded recourse obligations or direct-credit substitutes, both the on-balance-sheet assets and the related recourse obligations and direct-credit substitutes must be separately risk-weighted and incorporated into the risk-based capital calculation.

Asset-Backed Commercial Paper Program Assets and Related Minority Interests

An asset-backed commercial paper (ABCP) program typically is a program through which a bank provides funding to its corporate customers by sponsoring and administering a bankruptcy-remote special-purpose entity that purchases asset pools from, or extends loans to, those customers.³⁸ The asset pools in an ABCP program might include, for example, trade receivables, consumer loans, or asset-backed securities. The ABCP program raises cash to provide funding to the bank's customers, primarily (that is, more than 50 percent of the ABCP's issued liabilities) through the issuance of externally rated commercial paper into the market. Typically, the sponsoring bank provides liquidity and credit enhancements to the ABCP program. These enhancements aid the program in obtaining high credit ratings that facilitate the issuance of the commercial paper.³⁹

Under the Board's risk-based capital rule, a bank that qualifies as a primary beneficiary and must consolidate an ABCP program that is defined as a variable interest entity under GAAP may exclude the consolidated ABCP program's assets from risk-weighted assets provided that the bank is the sponsor of the ABCP program. If a bank excludes such consolidated ABCP program assets, the bank must assess the appropriate risk-based capital charge against any exposures of the bank arising in connection with such ABCP programs, including direct-credit substitutes, recourse obligations, residual interests, liquidity facilities, and loans, in accordance with

38. The definition of ABCP program generally includes structured investment vehicles (entities that earn a spread by issuing commercial paper and medium-term notes and using the proceeds to purchase highly rated debt securities) and securities arbitrage programs.

39. A bank is considered the sponsor of an ABCP program if it establishes the program; approves the sellers permitted to participate in the program; approves the asset pools to be purchased by the program; or administers the program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance with the program documents and with the program's credit and investment policy.

sections III.B.5., III.C., and III.D. of the risk-based capital rule (12 CFR 208, appendix A). When calculating the bank's tier 1 and total capital, any associated minority interests must also be excluded from tier 1 capital. As a result of FIN 46-R, banks are to include all assets of consolidated ABCP programs as part of their on-balance-sheet assets, for purposes of calculating the tier 1 leverage capital ratio.

A bank is able to exclude ABCP program assets from its risk-weighted asset base only with respect to those programs for which it is the sponsor and that meet the rule's definition of an ABCP program. Thus, a bank sponsoring a program issuing ABCP that does not meet the rule's definition of an ABCP program must continue to include the program's assets in the institution's risk-weighted asset base.

Liquidity facilities supporting ABCP. Liquidity facilities supporting ABCP often take the form of commitments to lend to, or purchase assets from, the ABCP programs in the event that funds are needed to repay maturing commercial paper. Typically, this need for liquidity is due to a timing mismatch between cash collections on the underlying assets in the program and scheduled repayments of the commercial paper issued by the program.

A bank that provides liquidity facilities to ABCP is exposed to credit risk regardless of the term of the liquidity facilities. For example, an ABCP program may require a liquidity facility to purchase assets from the program at the first sign of deterioration in the credit quality of an asset pool, thereby removing such assets from the program. In such an event, a draw on the liquidity facility exposes the bank to credit risk.

Short-term commitments with an original maturity of one year or less expose banks to a lower degree of credit risk than longer-term commitments. This difference in the degree of credit risk is reflected in the risk-based capital requirement for the different types of exposure. The Board's capital guidelines impose a 10 percent credit-conversion factor on eligible short-term liquidity facilities supporting ABCP. A 50 percent credit-conversion factor applies to eligible long-term ABCP liquidity facilities. These credit-conversion factors apply regardless of whether the structure issuing the ABCP meets the rule's definition of an ABCP program. For example, a capital charge would apply to an eligible short-term liquidity facility that provides liquidity support to ABCP where the

ABCP constitutes less than 50 percent of the securities issued by the program, thus causing the issuing structure not to meet the rule's definition of an ABCP program. However, if a bank (1) does not meet this definition and must include the program's assets in its risk-weighted asset base or (2) otherwise chooses to include the program's assets in risk-weighted assets, then no risk-based capital requirement will be assessed against any liquidity facilities provided by the bank that support the program's ABCP. Ineligible liquidity facilities will be treated as recourse obligations or direct-credit substitutes for the purposes of the Board's risk-based capital guidelines.

The resulting credit-equivalent amount would then be risk-weighted according to the underlying assets or the obligor, after considering any collateral or guarantees, or external credit ratings, if applicable. For example, if an eligible short-term liquidity facility providing liquidity support to ABCP covered an asset-backed security (ABS) externally rated AAA, then the notional amount of the liquidity facility would be converted at 10 percent to an on-balance-sheet credit-equivalent amount and assigned to the 20 percent risk-weight category appropriate for AAA-rated ABS.⁴⁰

Overlapping exposures to an ABCP program. A bank may have multiple overlapping exposures to a single ABCP program (for example, both a program-wide credit enhancement and multiple pool-specific liquidity facilities to an ABCP program that is not consolidated for risk-based capital purposes). A bank must hold risk-based capital only once against the assets covered by the overlapping exposures. Where the overlapping exposures are subject to different risk-based capital requirements, the bank must apply the risk-based capital treatment that results in the highest capital charge to the overlapping portion of the exposures.

For example, assume a bank provides a program-wide credit enhancement that would absorb 10 percent of the losses in all of the underlying asset pools in an ABCP program and pool-specific liquidity facilities that cover 100 percent of each of the underlying asset pools. The bank would be required to hold capital against 10 percent of the underlying asset

40. See section 4030.1 and also the Board staff's October 12, 2007, legal interpretation regarding the risk-based capital treatment of ABCP liquidity facilities.

pools because it is providing the program-wide credit enhancement. The bank would also be required to hold capital against 90 percent of the liquidity facilities it is providing to each of the underlying asset pools.

If different banks have overlapping exposures to an ABCP program, however, each organization must hold capital against the entire maximum amount of its exposure. As a result, while duplication of capital charges will not occur for individual banks, some systemic duplication may occur where multiple banking organizations have overlapping exposures to the same ABCP program.

Asset-quality test. For a liquidity facility, either short- or long-term, that supports ABCP *not* to be considered a recourse obligation or a direct-credit substitute, it must meet the rule's definition of an *eligible ABCP liquidity facility*. An eligible ABCP liquidity facility must meet a reasonable asset-quality test that, among other things, precludes funding assets that are 90 days or more past due or in default. When assets are 90 days or more past due, they typically have deteriorated to the point where there is an extremely high probability of default. Assets that are 90 days past due, for example, often must be placed on nonaccrual status in accordance with the agencies' Uniform Retail Credit Classification and Account Management Policy.⁴¹ Further, they generally must also be classified substandard under that policy.

The rule's asset-quality test specifically allows a bank to reflect certain guarantees providing credit protection to the bank providing the liquidity facility. In particular, the "days-past-due limitation" is not applied with respect to assets that are either conditionally or unconditionally guaranteed by the U.S. government or its agencies or by another OECD central government. To qualify as an eligible ABCP liquidity facility, if the assets covered by the liquidity facility are initially externally rated (at the time the facility is provided), the facility can be used to fund only those assets that are externally rated investment grade at the time of funding.

The practice of purchasing assets that are externally rated below investment grade out of an ABCP program is considered the equivalent of providing credit protection to the commercial paper investors. Thus, liquidity facilities permitting purchases of below-investment-grade secu-

rities will be considered either recourse obligations or direct-credit substitutes. However, the "investment-grade" limitation is not applied in the asset-quality test with respect to assets that are conditionally or unconditionally guaranteed by the U.S. government or its agencies or by another OECD central government. If the asset-quality tests are not met (that is, if a bank actually funds through the liquidity facility assets that do not satisfy the facility's asset-quality tests), the liquidity facility will be considered a recourse obligation or a direct-credit substitute and generally will be converted at 100 percent.

Risk-Based Capital Treatment of Certain Off-Balance-Sheet Items and Certain Other Types of Transactions

Distinction Between Financial and Performance Standby Letters of Credit

For risk-based capital purposes, the vast majority of standby letters of credit a bank issues are considered financial in nature. On the one hand, in issuing a financial standby letter of credit, a bank guarantees that the account party will fulfill a contractual financial obligation that involves payment of money. On the other hand, in issuing a performance standby letter of credit, a bank guarantees that the account party will fulfill a contractual nonfinancial obligation, that is, an obligation that does not entail the payment of money. For example, a standby letter of credit that guarantees that an insurance company will pay as required under the terms of a policy is deemed to be financial and is converted at 100 percent, while a letter of credit that guarantees a contractor will pave a street according to certain specifications is deemed to be performance related and is converted at 50 percent. Financial standby letters of credit have a higher conversion factor in large part because, unlike performance standby letters of credit, they tend to be drawn down only when the account party's financial condition has deteriorated.

Participations of Off-Balance-Sheet Transactions

If a standby letter of credit or commitment has been participated to other institutions in the form of a syndication, as defined in the instructions to the Call Report, that is, if each bank is

41. See 65 *Fed. Reg.* 36904 (June 12, 2000).

responsible only for its pro rata share of loss and there is no recourse to the originating bank, each bank includes only its pro rata share of the standby or commitment in its risk-based capital calculation.

The treatment differs, however, if the participation takes the form of a conveyance of a risk participation. In such a participation, the originating bank remains liable to the beneficiary for the full amount of the standby or commitment if the institution that has acquired the participation fails to pay when the instrument is drawn. Under this arrangement, the originating bank is exposed to the credit risk of the institution that has acquired the conveyance rather than that of the account party. Accordingly, for risk-based capital purposes, the originating bank should convert the full amount of the standby or commitment to an on-balance-sheet credit-equivalent amount. The credit-equivalent amount of the portion of the credit that has not been conveyed is assigned to the risk category appropriate to the obligor, after giving effect to any collateral or guarantees. The portion that has been conveyed is assigned either to the same risk category as the obligor or to the risk category appropriate to the institution acquiring the participation, whichever category carries the lower risk weight. Any remainder is assigned to the risk category appropriate to the obligor, guarantor, or collateral. For example, the pro rata share of the full amount of the assets supported, in whole or in part, by a direct-credit substitute conveyed as a risk participation to a U.S. domestic depository institution or foreign bank is assigned to the 20 percent risk category. Risk participations with a remaining maturity of over one year that are conveyed to non-OECD banks are to be assigned to the 100 percent risk category, unless a lower risk category is appropriate to the obligor, guarantor, or collateral.

Commitments

Commitments are defined as any legally binding arrangements that obligate a bank to extend credit in the form of loans or leases; to purchase loans, securities, or other assets; or to participate in loans and leases. Commitments also include overdraft facilities, revolving credit, home equity and mortgage lines of credit, eligible ABCP liquidity facilities, and similar transactions. Normally, commitments involve a written contract or agreement and a commitment fee, or some

other form of consideration. Commitments are included in weighted-risk assets regardless of whether they contain “material adverse change” clauses or other provisions that are intended to relieve the issuer of its funding obligation under certain conditions. In the case of commitments structured as syndications, where the bank is obligated solely for its pro rata share, only the bank’s proportional share of the syndicated commitment is taken into account in calculating the risk-based capital ratio.

Commitments to make off-balance-sheet transactions. As specified in the instructions to the Call Report, a commitment to make a standby letter of credit is considered to be a standby letter of credit. Accordingly, such a commitment should be converted to an on-balance-sheet credit-equivalent amount at 100 percent if it is a commitment to make a financial standby letter of credit or at 50 percent if it is a commitment to make a performance standby letter of credit.

A commitment to make a commitment is treated as a single commitment whose maturity is the combined maturity of the two commitments. For example, a 6-month commitment to make a 1-year commitment is considered to be a single 18-month commitment. Since the maturity is over one year, such a commitment would receive the 50 percent conversion factor appropriate to long-term commitments, rather than the zero percent conversion factor that would be accorded to separate unrelated short-term commitments of six months and one year.

A commitment to make a commercial letter of credit may be treated either as a commitment or as a commercial letter of credit, whichever results in the lower conversion factor. Normally, this would mean that a commitment under one year to make a commercial letter of credit would be treated as a commitment and converted at zero percent, while a similar commitment of over one year would be treated as a commercial letter of credit and converted at 20 percent.

If a commitment facility is structured so that it can be drawn down in several forms, such as a standby letter of credit, a loan, or a commercial letter of credit, the entire facility should be treated as a commitment to extend credit in the form that incurs the highest capital charge. Thus, if a facility could be drawn down in any of the three forms just cited, the entire facility would be treated as a commitment to issue a standby letter of credit and would be converted

at 100 percent, rather than treated as a commitment to make a loan or commercial letter of credit, which would have a lower conversion factor.

Unused commitments. Except for eligible ABCP liquidity facilities,⁴² unused portions of commitments, including underwriting commitments, and commercial and consumer credit commitments that have an original maturity of one year or less are converted at zero percent.

Unused commitments that have an original maturity of over one year are converted at 50 percent. For this purpose, original maturity is defined as the length of time between the date the commitment is issued and the earliest date on which (1) the bank has the permanent ability to, at its option, unconditionally cancel⁴³ (without cause) the commitment⁴⁴ and (2) the bank is scheduled to (and as a normal practice actually does) review the facility to determine whether the unused commitment should be extended. (It should be noted that the term of any loan advances that can be made under a commitment is not taken into account in determining the commitment's maturity.) Under this definition of original maturity, commitments with a nominal original maturity of more than one year can be treated as having a maturity of one year or less for risk-based capital purposes only if the issuing bank (1) has full and unconditional discretion to cancel the commitment without cause and without notice on each and every day after the first year and (2) conducts at least annually a formal credit review of the commitment, including an assessment of the credit quality of the obligor.

It should be noted that a bank is not deemed able to unconditionally cancel a commitment if it is required to give, or is presumed to be required to give, any advance notice of cancellation. Accordingly, so-called evergreen commitments, which require the bank to give

advance notice of cancellation to the obligor or which permit the commitment to roll over automatically (that is, on the same terms and without a thorough credit review) unless the bank gives notice otherwise, are not unconditionally cancelable. Thus, any such commitment whose term from date of issuance could exceed one year is subject to the 50 percent conversion factor.

A bank may issue a commitment that expires within one year, with the understanding that the commitment will be renewed upon expiration subject to a thorough credit review of the obligor. Such a commitment may be converted at zero percent only if (1) the renegotiation process is carried out in good faith, involves a full credit assessment of the obligor, and allows the bank flexibility to alter the terms and conditions of the new commitment; (2) the bank has absolute discretion to decline renewal or extension of the commitment; and (3) the renegotiated commitment expires within 12 months from the time it is made. Some commitments contain unusual renegotiation arrangements that would give the borrower a considerable amount of advance notice that a commitment would not be renewed. Provisions of this kind can have the effect of creating a rolling commitment arrangement that should be treated for risk-based capital purposes as a long-term commitment and should therefore be converted to a credit-equivalent amount at 50 percent. Normally, the renegotiation process should take no more than six to eight weeks, and in many cases it should take a shorter period of time. The renegotiation period should immediately precede the expiration date of the commitment and should be reasonably short and appropriate to the complexity of the transaction. The reasons for provisions in a commitment arrangement that would appear to allow for a protracted renegotiation period should be thoroughly documented by the bank and reviewed by the examiner.

As mentioned above, a commitment to make a commitment is treated as a single commitment whose maturity is the combined maturity of the two commitments. Although such commitments whose combined maturity is in excess of one year are generally considered long-term, if the customer has a bona fide business reason for requesting a new commitment to supersede the unexpired one, such as an unanticipated increase in the volume of business or a change in the customer's cash flow and credit needs, then the commitment would not automatically be consid-

42. Unused portions of eligible ABCP liquidity facilities with an original maturity of one year or less are converted at 10 percent.

43. A bank's option to cancel a commitment under a material adverse change clause is not considered to be an option to unconditionally cancel a commitment.

44. In the case of consumer home equity or mortgage lines of credit secured by liens on one- to four-family residential properties, the bank is deemed able to unconditionally cancel the commitment for the purpose of this criterion if, at its option, it can prohibit additional extensions of credit, reduce the credit lines, and terminate the commitment to the full extent permitted by relevant federal law.

ered long-term. However, if the bank exhibits a pattern and practice of extending short-term commitments before their expiration—either for one customer or more broadly within the bank—then such extended commitments would be viewed as long-term. This treatment generally would apply to all commitments, including traditional commercial paper liquidity lines.

Other criteria for determining whether a facility is short- or long-term include the actual level of risk associated with the transaction and whether that level of risk is more characteristic of a long-term (as opposed to a short-term) commitment. Liquidity facilities issued in connection with asset-backed commercial paper programs, when judged by these criteria, seem to possess risk characteristics that are less than those associated with typical short-term commercial loan commitments. One of these characteristics is the short-term nature of the securitized receivables. The receivables that are securitized in asset-backed commercial paper programs tend to be of very short average maturity—often in the range of 30 to 60 days. Advances under asset-backed commercial paper liquidity facilities generally are very rare, and when such advances are made, it is against pools of very high-quality performing receivables that would generally liquidate very quickly. These facilities are further protected against credit risk by significant amounts of overcollateralization, as well as other credit enhancements.

A series of short-term commitments would generally be treated as a single commitment whose original maturity is the combined maturities of the individual commitments in the series. Also, a commitment may be structured to be drawn down in a number of tranches, some exercisable in one year or less and others exercisable in over one year. The full amount of such a commitment is deemed to be over one year and converted at 50 percent. Some long-term commitments may permit the customer to draw down varying amounts at different times to accommodate, for example, seasonal borrowing needs. The 50 percent conversion factor should be applied to the maximum amount that could be drawn down under such commitments.

Credit-Equivalent Computations for Derivative Contracts

Applicable derivative contracts. Credit-equivalent amounts are computed for each of the

following off-balance-sheet contracts:

- interest-rate contracts
 - single-currency interest-rate swaps
 - basis swaps
 - forward rate agreements
 - interest-rate options purchased (including caps, collars, and floors purchased)
 - any other instrument linked to interest rates that gives rise to similar credit risks (including when-issued securities and forward deposits accepted)
- exchange-rate contracts
 - cross-currency interest-rate swaps
 - forward foreign-exchange-rate contracts
 - currency options purchased
 - any other instrument linked to exchange rates that gives rise to similar credit risks
- equity derivative contracts
 - equity-linked swaps
 - equity-linked options purchased
 - forward equity-linked contracts
 - any other instrument linked to equities that gives rise to similar credit risks
- commodity (including precious metal) derivative contracts
 - commodity-linked swaps
 - commodity-linked options purchased
 - forward commodity-linked contracts
 - any other instrument linked to commodities that gives rise to similar credit risks
- credit derivatives
 - credit-default swaps
 - total-rate-of-return swaps
 - other types of credit derivatives

Exceptions. Exchange-rate contracts with an original maturity of 14 or fewer calendar days and derivative contracts traded on exchanges that require daily receipt and payment of cash-variation margin may be excluded from the risk-based ratio calculation. Gold contracts are accorded the same treatment as exchange-rate contracts, except that gold contracts with an original maturity of 14 or fewer calendar days are included in the risk-based ratio calculation. Over-the-counter options purchased are included and treated in the same way as other derivative contracts.

Calculation of credit-equivalent amounts. The credit-equivalent amount of a derivative contract (excluding credit derivatives) that is not subject to a qualifying bilateral netting contract is equal to the sum of—

Table 5—Conversion-Factor Matrix

<i>Remaining maturity</i>	<i>Interest-rate</i>	<i>Foreign-exchange-rate and gold</i>	<i>Equity</i>	<i>Precious metals (excluding gold)</i>	<i>Other commodity (excluding precious metals)</i>
One year or less	0.0	1.0	6.0	7.0	10.0
Over one to five years	0.5	5.0	8.0	7.0	12.0
Over five years	1.5	7.5	10.0	8.0	15.0

- the current exposure (sometimes referred to as the replacement cost) of the contract, and
- an estimate of the potential future credit exposure of the contract.

The current exposure is determined by the mark-to-market value of the contract. If the mark-to-market value is positive, then the current exposure is equal to that mark-to-market value. If the mark-to-market value is zero or negative, then the current exposure is zero. Mark-to-market values are measured in dollars, regardless of the currency or currencies specified in the contract, and should reflect changes in the underlying rates, prices, and indexes, as well as in counterparty credit quality.

The potential future credit exposure of a contract, including a contract with a negative mark-to-market value, is estimated by multiplying the notional principal amount of the contract by a credit-conversion factor. Banks should use, subject to examiner review, the effective rather than the apparent or stated notional amount in this calculation. The conversion factors (in percent) are in table 5. The Board has noted that these conversion factors, which are based on observed volatilities of the particular types of instruments, are subject to review and modification in light of changing volatilities or market conditions.

For a contract that is structured such that on specified dates any outstanding exposure is settled and the terms are reset so that the market value of the contract is zero, the remaining maturity is equal to the time until the next reset date. Such resetting interest-rate contracts must have a minimum conversion factor of 0.5 percent.

For a contract with multiple exchanges of principal, the conversion factor is multiplied by the number of remaining payments in the con-

tract. A derivative contract not included in the definitions of interest-rate, exchange-rate, equity, or commodity contracts is included in the risk-based capital calculation and is subject to the same conversion factors as a commodity, excluding precious metals.

No potential future credit exposure is calculated for a single-currency interest-rate swap in which payments are made based on two floating-rate indexes, so-called floating/floating or basis swaps. The credit exposure on these contracts is evaluated solely on the basis of their mark-to-market values.

Avoidance of double-counting. In certain cases, credit exposures arising from derivative contracts may be reflected, in part, on the balance sheet. To avoid double counting these exposures in the assessment of capital adequacy and, perhaps, assigning inappropriate risk weights, examiners may need to exclude counterparty credit exposures arising from the derivative instruments covered by the guidelines from balance-sheet assets when calculating a bank's risk-based capital ratios. This exclusion will eliminate the possibility that an organization could be required to hold capital against both an off-balance-sheet and on-balance-sheet amount for the same item. This treatment is not accorded to margin accounts and accrued receivables related to interest-rate and exchange-rate contracts.

The aggregate on-balance-sheet amount excluded from the risk-based capital calculation is equal to the lower of—

- each contract's positive on-balance-sheet amount, or
- its positive market value included in the off-balance-sheet risk-based capital calculation.

For example, a forward contract that is marked to market will have the same market value on the balance sheet as is used in calculating the credit-equivalent amount for off-balance-sheet exposures under the guidelines. Therefore, the on-balance-sheet amount is not included in the risk-based capital calculation. When either the contract's on-balance-sheet amount or its market value is negative or zero, no deduction from on-balance-sheet items is necessary for that contract.

If the positive on-balance-sheet asset amount exceeds the contract's market value, the excess (up to the amount of the on-balance-sheet asset) should be included in the appropriate risk-weight category. For example, a purchased option will often have an on-balance-sheet amount equal to the fee paid until the option expires. If that amount exceeds market value, the excess of carrying value over market value would be included in the appropriate risk-weight category for purposes of the on-balance-sheet portion of the calculation.

Netting of swaps and similar contracts. Netting refers to the offsetting of positive and negative mark-to-market values in the determination of a current exposure to be used in the calculation of a credit-equivalent amount. Any legally enforceable form of bilateral netting (that is, netting with a single counterparty) of derivative contracts is recognized for purposes of calculating the credit-equivalent amount provided that—

- the netting is accomplished under a written netting contract that creates a single legal obligation, covering all included individual contracts, with the effect that the organization would have a claim to receive, or an obligation to receive or pay, only the net amount of the sum of the positive and negative mark-to-market values on included individual contracts if a counterparty, or a counterparty to whom the contract has been validly assigned, fails to perform due to default, insolvency, liquidation, or similar circumstances;
- the bank obtains written and reasoned legal opinions that in the event of a legal challenge—including one resulting from default, insolvency, liquidation, or similar circumstances—the relevant court and administrative authorities would find the bank's exposure to be such a net amount under—
 - the law of the jurisdiction in which the counterparty is chartered or the equiva-

lent location in the case of noncorporate entities, and if a branch of the counterparty is involved, then also under the law of the jurisdiction in which the branch is located;

- the law that governs the individual contracts covered by the netting contract; and
- the law that governs the netting contract;
- the bank establishes and maintains procedures to ensure that the legal characteristics of netting contracts are kept under review in light of possible changes in relevant law; and
- the bank maintains documentation in its files that is adequate to support the netting of rate contracts, including a copy of the bilateral netting contract and necessary legal opinions.

A contract containing a walkaway clause is not eligible for netting for purposes of calculating the credit-equivalent amount.

By netting individual contracts for the purpose of calculating credit-equivalent amounts of derivative contracts, a bank represents that it has met the requirements of the risk-based measure of the capital adequacy guidelines for bank holding companies and that all the appropriate documents are in the organization's files and available for inspection by the Federal Reserve. The Federal Reserve may determine that a bank's files are inadequate or that a netting contract, or any of its underlying individual contracts, may not be legally enforceable. If such a determination is made, the netting contract may be disqualified from recognition for risk-based capital purposes, or underlying individual contracts may be treated as though they are not subject to the netting contract.

The credit-equivalent amount of contracts that are subject to a qualifying bilateral netting contract is calculated by adding—

- the current exposure of the netting contract (net current exposure), and
- the sum of the estimates of the potential future credit exposures on all individual contracts subject to the netting contract (gross potential future exposure), adjusted to reflect the effects of the netting contract.

The net current exposure of the netting contract is determined by summing all positive and negative mark-to-market values of the individual contracts included in the netting contract. If the net sum of the mark-to-market values is

positive, then the current exposure of the netting contract is equal to that sum. If the net sum of the mark-to-market values is zero or negative, then the current exposure of the netting contract is zero. The Federal Reserve may determine that a netting contract qualifies for risk-based capital netting treatment even though certain individual contracts may not qualify. In these instances, the nonqualifying contracts should be treated as individual contracts that are not subject to the netting contract.

Gross potential future exposure (A_{gross}) is calculated by summing the estimates of potential future exposure for each individual contract subject to the qualifying bilateral netting contract. The effects of the bilateral netting contract on the gross potential future exposure are recognized through the application of a formula that results in an adjusted add-on amount (A_{net}). The formula, which employs the ratio of net current exposure to gross current exposure (NGR), is expressed as—

$$A_{\text{net}} = (0.4 \times A_{\text{gross}}) + 0.6(\text{NGR} \times A_{\text{gross}})$$

The NGR may be calculated in accordance with either the counterparty-by-counterparty approach or the aggregate approach. Under the counterparty-by-counterparty approach, the NGR is the ratio of the net current exposure for a netting contract to the gross current exposure of the netting contract. The gross current exposure is the sum of the current exposures of all individual contracts subject to the netting contract. Net negative mark-to-market values for individual netting contracts with the same counterparty may not be used to offset net positive mark-to-market values for other netting contracts with the same counterparty.

Under the aggregate approach, the NGR is the ratio of the sum of all the net current exposures for qualifying bilateral netting contracts to the sum of all the gross current exposures for those netting contracts (each gross current exposure is calculated in the same manner as in the counterparty-by-counterparty approach). Net negative mark-to-market values for individual counterparties may not be used to offset net positive current exposures for other counterparties.

A bank must consistently use either the counterparty-by-counterparty approach or the aggregate approach to calculate the NGR. Regardless of the approach used, the NGR should be applied individually to each qualify-

ing bilateral netting contract to determine the adjusted add-on for that netting contract.

In the event a netting contract covers contracts that are normally excluded from the risk-based ratio calculation—for example, exchange-rate contracts with an original maturity of 14 or fewer calendar days or instruments traded on exchanges that require daily payment and receipt of cash-variation margin—an institution may elect to either include or exclude all mark-to-market values of such contracts when determining net current exposure, provided the method chosen is applied consistently.

Examiners should review the netting of off-balance-sheet derivative contracts used by banks when calculating or verifying risk-based capital ratios to ensure that the positions of such contracts are reported gross, unless the net positions of those contracts reflect netting arrangements that comply with the netting requirements listed previously.

Credit Derivatives

Credit derivatives are off-balance-sheet arrangements that allow one party (the beneficiary) to transfer credit risk of a reference asset—which the beneficiary may or may not own—to another party (the guarantor).⁴⁵ Many banks increasingly use these instruments to manage their overall credit-risk exposure. In general, credit derivatives have three distinguishing features:

- the transfer of the credit risk associated with a reference asset through contingent payments based on events of default and, usually, the prices of instruments before, at, and shortly after default (reference assets most often take the form of traded sovereign and corporate debt instruments or syndicated bank loans)
- the periodic exchange of payments or the payment of a premium rather than the payment of fees customary with other off-balance-sheet credit products, such as letters of credit
- the use of an International Swap Derivatives Association (ISDA) master agreement and the legal format of a derivatives contract

45. Credit derivatives generally fall into three basic transaction types: total-rate-of-return swaps, credit-default swaps, and credit-default or credit-linked notes. For a more in-depth description of these types of credit derivatives, see the Federal Reserve's *Trading and Capital-Markets Activities Manual*, section 4350.1, "Credit Derivatives," as well as SR-96-17.

For risk-based capital purposes, total-rate-of-return swaps and credit-default swaps generally should be treated as off-balance-sheet direct-credit substitutes.⁴⁶ The notional amount of a contract should be converted at 100 percent to determine the credit-equivalent amount to be included in the risk-weighted assets of a guarantor.⁴⁷ A bank that provides a guarantee through a credit derivative transaction should assign its credit exposure to the risk category appropriate to the obligor of the reference asset or any collateral. On the other hand, a bank that owns the underlying asset upon which effective credit protection has been acquired through a credit derivative may, under certain circumstances, assign the unamortized portion of the underlying asset to the risk category appropriate to the guarantor (for example, the 20 percent risk category if the guarantor is an OECD bank).

Whether the credit derivative is considered an eligible guarantee for purposes of risk-based capital depends on the actual degree of credit protection. The amount of credit protection actually provided by a credit derivative may be limited depending on the terms of the arrangement. In this regard, for example, a relatively restrictive definition of a default event or a materiality threshold that requires a comparably high percentage of loss to occur before the guarantor is obliged to pay could effectively limit the amount of credit risk actually transferred in the transaction. If the terms of the credit derivative arrangement significantly limit the degree of risk transference, then the beneficiary bank cannot reduce the risk weight of the “protected” asset to that of the guarantor bank. On the other hand, even if the transfer of credit risk is limited, a bank providing limited credit protection through a credit derivative should hold appropriate capital against the underlying exposure while it is exposed to the credit risk of the reference asset.

A bank providing a guarantee through a credit derivative may mitigate the credit risk associated with the transaction by entering into an offsetting credit derivative with another counterparty—a so-called back-to-back position. A bank that has entered into such a position may treat the first credit derivative as being guaranteed by the offsetting transaction for risk-based capital purposes. Accordingly, the notional amount of the first credit derivative may be assigned to the risk category appropriate to the counterparty providing credit protection through the offsetting credit derivative arrangement (for example, the 20 percent risk category if the counterparty is an OECD bank).

In some instances, the reference asset in the credit derivative transaction may not be identical to the underlying asset for which the beneficiary has acquired credit protection. For example, a credit derivative used to offset the credit exposure of a loan to a corporate customer may use as the reference asset a publicly traded corporate bond of that customer, with the credit quality of the bond serving as a proxy for the on-balance-sheet loan. In such a case, the underlying asset would still generally be considered guaranteed for capital purposes, as long as both the underlying asset and the reference asset are obligations of the same legal entity and have the same level of seniority in bankruptcy. In addition, a bank offsetting credit exposure in this manner would be obligated to demonstrate to examiners that (1) there is a high degree of correlation between the two instruments; (2) the reference instrument is a reasonable and sufficiently liquid proxy for the underlying asset so that the instruments can be reasonably expected to behave in a similar manner in the event of default; and (3) at a minimum, the reference asset and underlying asset are subject to mutual cross-default provisions. A bank that uses a credit derivative that is based on a reference asset that differs from the protected underlying asset must document the credit derivative being used to offset credit risk, and must link it directly to the asset or assets whose credit risk the transaction is designed to offset. The documentation and the effectiveness of the credit derivative transaction are subject to examiner review. A bank providing credit protection through such an arrangement must hold capital against the risk exposures that are assumed.

Some credit derivative transactions provide credit protection for a group or basket of reference assets and call for the guarantor to absorb

46. Unlike total-rate-of-return swaps and credit-default swaps, credit-linked notes are on-balance-sheet assets or liabilities. A guarantor bank should assign the on-balance-sheet amount of the credit-linked note to the risk category appropriate to either the issuer or the reference asset, whichever is higher. For a beneficiary bank, cash consideration received in the sale of the note may be considered as collateral for risk-based capital purposes.

47. A guarantor bank that has made cash payments representing depreciation on reference assets may deduct such payments from the notional amount when computing credit-equivalent amounts for capital purposes.

losses on only the first asset in the group that defaults. Once the first asset in the group defaults, the credit protection for the remaining assets covered by the credit derivative ceases. If examiners determine that the credit risk for the basket of assets has effectively been transferred to the guarantor and the beneficiary banking organization owns all of the reference assets included in the basket, then the beneficiary may assign the asset with the smallest dollar amount in the group—if less than or equal to the notional amount of the credit derivative—to the risk category appropriate to the guarantor. Conversely, a bank extending credit protection through a credit derivative on a basket of assets must assign the contract's notional amount of credit exposure to the highest risk category appropriate to the assets in the basket.

In addition to holding capital against credit risk, a bank that is subject to the market-risk rule (see “Market-Risk Measure” earlier in this section) must hold capital against market risk for credit derivatives held in its trading account. (For a description of market-risk capital requirements for credit derivatives, see SR-97-18.)

Using Credit Derivatives to Synthetically Replicate Collateralized Loan Obligations

Credit derivatives can be used to synthetically replicate collateralized loan obligations (CLOs). Banking organizations (BOs) can use CLOs and their synthetic variants to manage their balance sheets and, in some instances, transfer credit risk to the capital markets. Such transactions allow economic capital to be more efficiently allocated, resulting in, among other things, improved shareholders' returns.

The issue for BOs is how synthetic CLOs should be treated under the risk-based and leverage capital guidelines.⁴⁸ Supervisors and examiners need to fully understand these complex structures and identify the relative degree of transference and retention of the securitized portfolio's credit risk. They must determine whether the institution's regulatory capital is adequate given the retained credit exposures.

A CLO is an asset-backed security that is usually supported by a variety of assets, including whole commercial loans, revolving-credit

facilities, letters of credit, banker's acceptances, or other asset-backed securities. In a typical CLO transaction, the sponsoring banking organization (SBO) transfers the loans and other assets to a bankruptcy-remote special-purpose vehicle (SPV), which then issues asset-backed securities consisting of one or more classes of debt. This type of transaction represents a so-called cash-flow CLO. It enables the sponsoring institution (SI) to reduce its leverage and risk-based capital requirements, improve its liquidity, and manage credit concentrations.

The first synthetic CLO (issued in 1997) used credit-linked notes (CLNs).⁴⁹ Rather than transferring assets to the SPV, the sponsoring bank issued CLNs to the SPV, individually referencing the payment obligation of a particular company, or “reference obligor.” The notional amount of the CLNs issued equaled the dollar amount of the reference assets the sponsor was hedging on its balance sheet. Other structures have evolved that use credit-default swaps to transfer credit risk and create different levels of risk exposure, but that hedge only a portion of the notional amount of the overall reference portfolio.⁵⁰

Traditional CLO structures usually transfer assets into the SPV. In synthetic securitizations, the underlying exposures that make up the reference portfolio remain in the institution's banking book.⁵¹ The credit risk is transferred into the SPV through credit-default swaps or CLNs. The institution is thus able to maintain client confidentiality and avoid sensitive client-relationship issues that arise from loan-transfer-notification requirements, loan-assignment provisions, and loan-participation restrictions.

Corporate credits are assigned to the 100 percent risk-weighted asset category. In the case of high-quality investment-grade corporate exposures, the associated 8 percent capital requirement may exceed the economic capital that the sponsoring bank sets aside to cover the credit

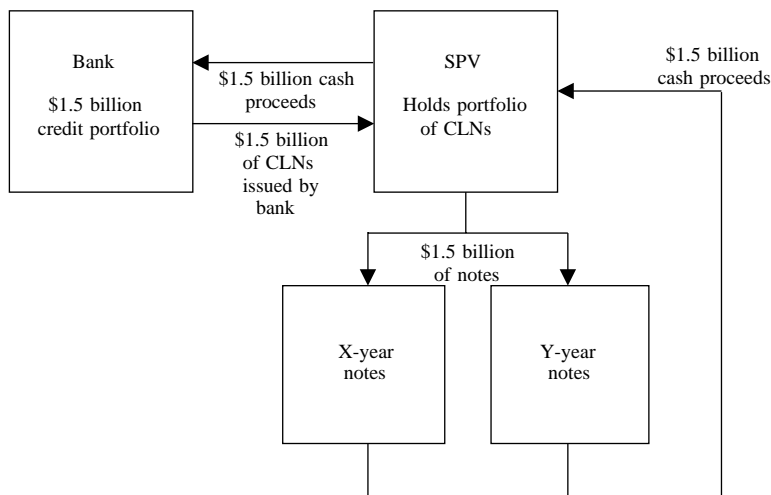

49. CLNs are obligations whose principal repayment is conditioned upon the performance of a referenced asset or portfolio. The assets' performance may be based on a variety of measures, such as movements in price or credit spread, or the occurrence of default.

50. A credit-default swap is similar to a financial standby letter of credit in that the institution writing the swap provides, for a fee, credit protection against credit losses associated with a default on a specified reference asset or pool of assets.

51. “Banking book” refers to nontrading accounts. See the definition of “trading accounts” in the glossary for the instructions to the bank Call Report.

48. See SR-99-32 and its November 15, 1999, attachment, an FRB-OCC capital interpretation on synthetic CLOs.

Figure 1—Transaction 1

risk of the transaction. Therefore, one of the apparent motivations behind CLOs and other securitizations is to more closely align the SI's regulatory capital requirements with the economic capital required by the market.

Synthetic CLOs can raise questions about their capital treatment when calculating the risk-based and leverage capital ratios. Capital treatments for three synthetic CLO transactions follow. They are discussed from the perspective of the investors and the SBOs.

Transaction 1—Entire notional amount of the reference portfolio is hedged. In the first type of synthetic securitization, the SBO, through a synthetic CLO, hedges the entire notional amount of a reference-asset portfolio. An SPV acquires the credit risk on a reference portfolio by purchasing CLNs issued by the SBO. The SPV funds the purchase of the CLNs by issuing a series of notes in several tranches to third-party investors. The investor notes are in effect collateralized by the CLNs. Each CLN represents one obligor and the bank's credit-risk exposure to that obligor, which could take the form of bonds, commitments, loans, and counterparty exposures. Since the noteholders are exposed to the full amount of credit risk associated with the individual reference obligors, all of the credit risk of the reference portfolio is shifted from the sponsoring bank to the capital markets. The dollar amount of notes issued to investors equals the notional amount of the reference portfolio.

In the example shown in figure 1, this amount is \$1.5 billion.

If any obligor linked to a CLN in the SPV defaults, the SI will call the individual CLN and redeem it based on the repayment terms specified in the note agreement. The term of each CLN is set so that the credit exposure (to which it is linked) matures before the maturity of the CLN, which ensures that the CLN will be in place for the full term of the exposure to which it is linked.

An investor in the notes issued by the SPV is exposed to the risk of default of the underlying reference assets, as well as to the risk that the SI will not repay principal at the maturity of the notes. Because of the linkage between the credit quality of the SI and the issued notes, a downgrade of the sponsor's credit rating most likely will result in the notes also being downgraded. Thus, a BO investing in this type of synthetic CLO should assign the notes to the higher of the risk categories appropriate to the underlying reference assets or the issuing entity.

For purposes of risk-based capital, the SBOs may treat the cash proceeds from the sale of CLNs that provide protection against underlying reference assets as cash collateralizing these assets.⁵² This treatment would permit the refer-

52. The CLNs should not contain terms that would significantly limit the credit protection provided against the underlying reference assets, for example, a materiality threshold that requires a relatively high percentage of loss to occur

ence assets, if carried on the SI's books, to be assigned to the zero percent risk category to the extent that their notional amount is fully collateralized by cash. This treatment may be applied even if the cash collateral is transferred directly into the general operating funds of the institution and is not deposited in a segregated account. The synthetic CLO would not confer any benefits to the SBO for purposes of calculating its tier 1 leverage ratio because the reference assets remain on the organization's balance sheet.

Transaction 2—High-quality, senior risk position in the reference portfolio is retained. In the second type of synthetic CLO transaction, the SBO hedges a portion of the reference portfolio and retains a high-quality, senior risk position that absorbs only those credit losses in excess of the junior-loss positions. In some recent synthetic CLOs, the SBO has used a combination of credit-default swaps and CLNs to essentially transfer to the capital markets the credit risk of a designated portfolio of the organization's credit exposures. Such a transaction allows the SI to allocate economic capital more efficiently and to significantly reduce its regulatory capital requirements.

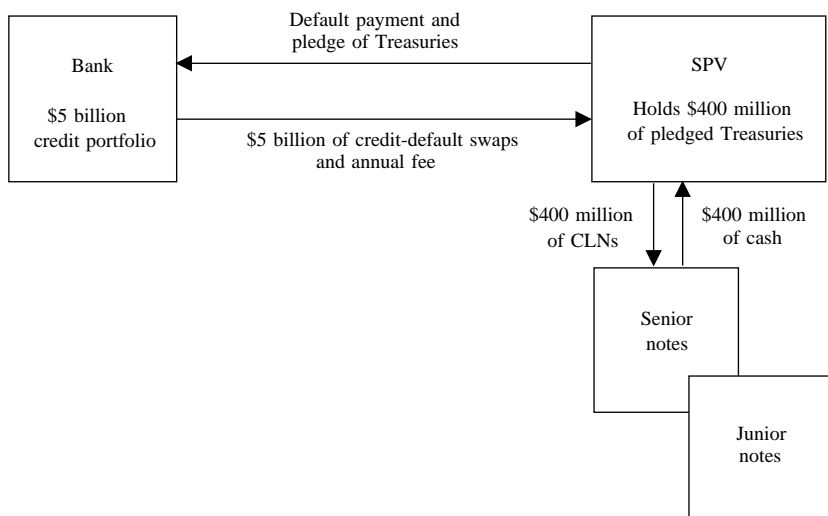

before CLN payments are adversely affected, or a structuring of CLN post-default payments that does not adequately pass through credit-related losses on the reference assets to investors in the CLNs.

In the structure illustrated in figure 2, the SBO purchases default protection from an SPV for a specifically identified portfolio of banking-book credit exposures, which may include letters of credit and loan commitments. The credit risk on the identified reference portfolio (which continues to remain in the sponsor's banking book) is transferred to the SPV through the use of credit-default swaps. In exchange for the credit protection, the SI pays the SPV an annual fee. The default swaps on each of the obligors in the reference portfolio are structured to pay the average default losses on all senior unsecured obligations of defaulted borrowers.

To support its guarantee, the SPV sells CLNs to investors and uses the cash proceeds to purchase U.S. government Treasury notes. The SPV then pledges the Treasuries to the SBO to cover any default losses.⁵³ The CLNs are often issued in multiple tranches of differing seniority and in an aggregate amount that is significantly less than the notional amount of the reference portfolio. The amount of notes issued typically is set at a level sufficient to cover some multiple of expected losses, but well below the notional amount of the reference portfolio being hedged.

53. The names of corporate obligors included in the reference portfolio may be disclosed to investors in the CLNs.

Figure 2—Transaction 2

There may be several levels of loss in this type of synthetic securitization. The first-loss position may consist of a small cash reserve, sufficient to cover expected losses. The cash reserve accumulates over a period of years and is funded from the excess of the SPV's income (that is, the yield on the Treasury securities plus the credit-default-swap fee) over the interest paid to investors on the notes. The investors in the SPV assume a second-loss position through their investment in the SPV's senior and junior notes, which tend to be rated AAA and BB, respectively. Finally, the SBO retains a high-quality, senior risk position that would absorb any credit losses in the reference portfolio that exceed the first- and second-loss positions.

Typically, no default payments are made until the maturity of the overall transaction, regardless of when a reference obligor defaults. While operationally important to the SBO, this feature has the effect of ignoring the time value of money. Thus, the Federal Reserve expects that when the reference obligor defaults under the terms of the credit derivative and when the reference asset falls significantly in value, the SBO should, in accordance with GAAP, make appropriate adjustments in its regulatory reports to reflect the estimated loss that takes into account the time value of money.

For risk-based capital purposes, BOs investing in the notes must assign them to the risk weight appropriate to the underlying reference assets.⁵⁴ The SBO for such transactions must include in its risk-weighted assets its retained senior exposure in the reference portfolio, to the extent these underlying assets are held in its banking book. The portion of the reference portfolio that is collateralized by the pledged Treasury securities may be assigned a zero percent risk weight. Unless the SBO meets the stringent minimum conditions for transaction 2 that are outlined in the minimum conditions explanation below, the remainder of the portfolio should be risk-weighted according to the obligor of the exposures.

When the SI has virtually eliminated its credit-risk exposure to the reference portfolio through the issuance of CLNs, and when the other stringent minimum conditions are met, the institution may assign the uncollateralized por-

tion of its retained senior position in the reference portfolio to the 20 percent risk weight. However, to the extent that the reference portfolio includes loans and other on-balance-sheet assets, an SBO involved in such a synthetic securitization would not realize any benefits in the determination of its leverage ratio.

In addition to the three stringent minimum conditions, the Federal Reserve may impose other requirements as it deems necessary to ensure that the SI has virtually eliminated all of its credit exposure. Furthermore, the Federal Reserve retains the discretion to increase the risk-based capital requirement assessed against the retained senior exposure in these structures, if the underlying asset pool deteriorates significantly.

Federal Reserve staff will make a case-by-case determination, based on a qualitative review, as to whether the senior retained portion of an SBO's synthetic securitization qualifies for the 20 percent risk weight. The SI must be able to demonstrate that virtually all the credit risk of the reference portfolio has been transferred from the banking book to the capital markets. As they do when BOs are engaging in more traditional securitization activities, examiners must carefully evaluate whether the institution is fully capable of assessing the credit risk it retains in its banking book and whether it is adequately capitalized given its residual risk exposure. The Federal Reserve will require the SBO to maintain higher levels of capital if it is not deemed to be adequately capitalized given the retained residual risks. In addition, an SI involved in synthetic securitizations must adequately disclose to the marketplace the effect of the transaction on its risk profile and capital adequacy.

The Federal Reserve may consider an SBO's failure to require the investors in the CLNs to absorb the credit losses that they contractually agreed to assume to be an unsafe and unsound banking practice. In addition, such a failure generally would constitute "implicit recourse" or support to the transaction, which would result in the SBO's losing preferential capital treatment on its retained senior position.

If an SBO of a synthetic securitization does not meet the stringent minimum conditions, it may still reduce the risk-based capital requirement on the senior risk position retained in the banking book by transferring the remaining credit risk to a third-party OECD bank through the use of a credit derivative. Provided the credit derivative transaction qualifies as a guarantee

54. Under this type of transaction, if a structure exposes investing BOs to the creditworthiness of a substantive issuer, for example, the SI, then the investing institutions should assign the notes to the higher of the risk categories appropriate to the underlying reference assets or the SI.

under the risk-based capital guidelines, the risk weight on the senior position may be reduced from 100 percent to 20 percent. Institutions may not enter into nonsubstantive transactions that transfer banking-book items into the trading account to obtain lower regulatory capital requirements.⁵⁵

Minimum conditions. The following stringent minimum conditions are those that SIs must meet to use the synthetic securitization capital treatment for transaction 2. The Federal Reserve may impose additional requirements or conditions as deemed necessary to ascertain that the SBO has sufficiently isolated itself from the credit-risk exposure of the hedged reference portfolio.

- *Condition 1—Demonstration of transfer of virtually all of the risk to third parties.* Not all transactions structured as synthetic securitizations transfer the level of credit risk needed to receive the 20 percent risk weight on the retained senior position. To demonstrate that a transfer of virtually all of the risk has been achieved, institutions must—
 - produce credible analyses indicating a transfer of virtually all of the credit risk to substantive third parties;
 - ensure the absence of any early-amortization or other credit performance-contingent clauses;⁵⁶
 - subject the transaction to market discipline through the issuance of a substantive amount of notes or securities to the capital markets;
 - have notes or securities rated by a nationally recognized credit rating agency;
 - structure a senior class of notes that receives the highest possible investment-grade rating, for example, AAA, from a nationally recognized credit rating agency;
 - ensure that any first-loss position retained by the SI in the form of fees, reserves, or

other credit enhancements—which effectively must be deducted from capital—is no greater than a reasonable estimate of expected losses on the reference portfolio; and

- ensure that the SI does not reassume any credit risk beyond the first-loss position through another credit derivative or any other means.
- *Condition 2—Demonstration of ability to evaluate remaining banking-book risk exposures and provide adequate capital support.* To ensure that the SI has adequate capital for the credit risk of its unhedged exposures, an institution is expected to have adequate systems that fully account for the effect of those transactions on its risk profiles and capital adequacy. In particular, its systems should be capable of fully differentiating the nature and quality of the risk exposures an institution transfers from the nature and quality of the risk exposures it retains. Specifically, to gain capital relief institutions are expected to—
 - have a credible internal process for grading credit-risk exposures, including (1) adequate differentiation of risk among risk grades, (2) adequate controls to ensure the objectivity and consistency of the rating process, and (3) analysis or evidence supporting the accuracy or appropriateness of the risk-grading system;
 - have a credible internal economic capital-assessment process that defines the institution to be adequately capitalized at an appropriate insolvency probability and that readjusts, as necessary, its internal economic capital requirements to take into account the effect of the synthetic-securitization transaction. In addition, the process should employ a sufficiently long time horizon to allow necessary adjustments in the event of significant losses. The results of an exercise demonstrating that the organization is adequately capitalized after the securitization transaction must be presented for examiner review;
 - evaluate the effect of the transaction on the nature and distribution of the nontransferred banking-book exposures. This analysis should include a comparison of the banking book's risk profile and economic capital requirements before and after the transaction, including the mix of exposures by risk grade and business or economic sector. The analysis should also

55. For instance, a lower risk weight would not be applied to a nonsubstantive transaction in which the SI (1) enters into a credit derivative transaction to pass the credit risk of the senior retained portion held in its banking book to an OECD bank and then (2) enters into a second credit derivative transaction with the same OECD bank, in which it reassumes into its trading account the credit risk initially transferred.

56. Early-amortization clauses may generally be defined as features that are designed to force a wind-down of a securitization program and rapid repayment of principal to asset-backed securities investors if the credit quality of the underlying asset pool deteriorates significantly.

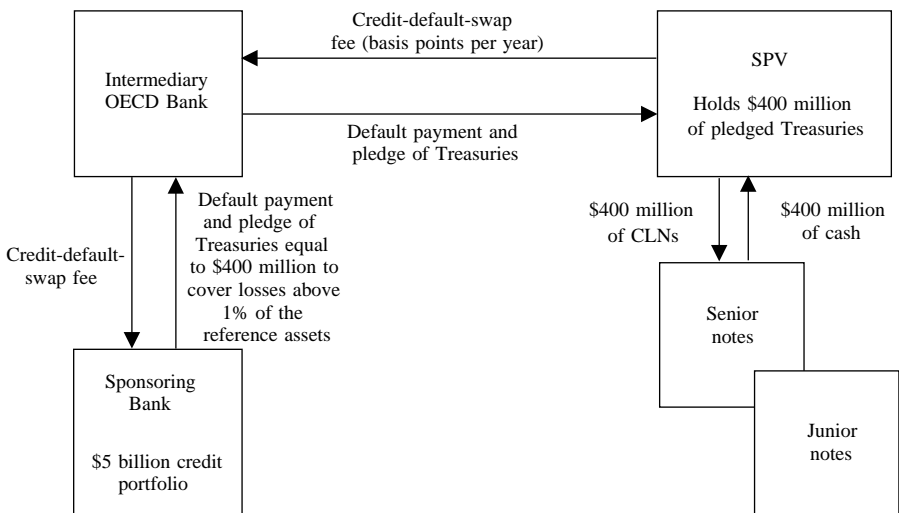

- identify any concentrations of credit risk and maturity mismatches. Additionally, the bank must adequately manage and control the forward credit exposure that arises from any maturity mismatch. The Federal Reserve retains the flexibility to require additional regulatory capital if the maturity mismatches are substantive enough to raise a supervisory concern. Moreover, as stated above, the SBO must demonstrate that it meets its internal economic capital requirement subsequent to the completion of the synthetic securitization; and
 - perform rigorous and robust forward-looking stress testing on nontransferred exposures (remaining banking-book loans and commitments), transferred exposures, and exposures retained to facilitate transfers (credit enhancements). The stress tests must demonstrate that the level of credit enhancement is sufficient to protect the sponsoring bank from losses under scenarios appropriate to the specific transaction.
- *Condition 3—Provide adequate public disclosures of synthetic CLO transactions regarding their risk profile and capital adequacy.* In their

10-K and annual reports, SIs must adequately disclose to the marketplace the accounting, economic, and regulatory consequences of synthetic CLO transactions. In particular, institutions are expected to disclose—

- the notional amount of loans and commitments involved in the transaction;
- the amount of economic capital shed through the transaction;
- the amount of reduction in risk-weighted assets and regulatory capital resulting from the transaction, both in dollar terms and in terms of the effect in basis points on the risk-based capital ratios; and
- the effect of the transaction on the distribution and concentration of risk in the retained portfolio by risk grade and sector.

Transaction 3—Retention of a first-loss position. In the third type of synthetic transaction, the SBO may retain a subordinated position that absorbs first losses in a reference portfolio. The SBO retains the credit risk associated with a first-loss position and, through the use of credit-default swaps, passes the second- and senior-loss positions to a third-party entity, most often an OECD bank. The third-party entity, acting as an intermediary, enters into offsetting credit-

Figure 3—Transaction 3

default swaps with an SPV, thus transferring its credit risk associated with the second-loss position to the SPV.⁵⁷ The SPV then issues CLNs to the capital markets for a portion of the reference portfolio and purchases Treasury collateral to cover some and multiple of expected losses on the underlying exposures. (See figure 3.)

Two alternative approaches could be used to determine how the SBO should treat the overall transaction for risk-based capital purposes. The first approach employs an analogy to the low-level capital rule for assets sold with recourse. Under this rule, a transfer of assets with recourse that contractually is limited to an amount less than the effective risk-based capital requirements for the transferred assets is assessed a total capital charge equal to the maximum amount of loss possible under the recourse obligation. If this rule was applied to an SBO retaining a 1 percent first-loss position on a synthetically securitized portfolio that would otherwise be assessed 8 percent capital, the SBO would be required to hold dollar-for-dollar capital against the 1 percent first-loss risk position. The SI would not be assessed a capital charge against the second and senior risk positions.⁵⁸

The second approach employs a literal reading of the capital guidelines to determine the SBO's risk-based capital charge. In this instance, the one percent *first-loss position* retained by the SI would be treated as a guarantee, that is, a direct-credit substitute, which would be assessed an 8 percent capital charge against its face value of one percent. The *second-loss position*, which is collateralized by Treasury securities, would be viewed as fully collateralized and subject to a zero percent capital charge. The senior-loss position guaranteed by the intermediary bank would be assigned to the 20 percent risk category appropriate to claims guaranteed by OECD banks.⁵⁹

It is possible that the second approach may result in a higher risk-based capital requirement than the dollar-for-dollar capital charge imposed by the first approach. This depends on whether the reference portfolio consists primarily of loans to private obligors or of undrawn long-term commitments, which generally have an effective risk-based capital requirement that is one-half of the requirement for loans, since such commitments are converted to an on-balance-sheet credit-equivalent amount using the 50 percent conversion factor. If the reference pool consists primarily of drawn loans to private obligors, then the capital requirement on the senior loss position would be significantly higher than if the reference portfolio contained only undrawn long-term commitments. As a result, the capital charge for the overall transaction could be greater than the dollar-for-dollar capital requirement set forth in the first approach.

SIs will be required to hold capital against a retained first-loss position in a synthetic securitization equal to the higher of the two capital charges resulting from application of the first and second approaches, as discussed above. Further, although the SBO retains only the credit risk associated with the first-loss position, it still should continue to monitor all the underlying credit exposures of the reference portfolio to detect any changes in the credit-risk profile of the counterparties. This is important to ensure that the institution has adequate capital to protect against unexpected losses. Examiners should determine whether the sponsoring bank has the capability to assess and manage the retained risk in its credit portfolio after the synthetic securitization is completed. For risk-based capital purposes, BOs investing in the notes must assign them to the risk weight appropriate to the underlying reference assets.⁶⁰

Reservation of Authority

The Federal Reserve reserves its authority to determine, on a case-by-case basis, the appropriate risk weight for assets and credit-equivalent

57. Because the credit risk of the senior position is not transferred to the capital markets but remains with the intermediary bank, the SBO should ensure that its counterparty is of high credit quality, for example, at least investment grade.

58. A BO that sponsors this type of synthetic securitization would not realize any benefits with respect to the determination of its leverage ratio since the reference assets remain on the SI's balance sheet.

59. If the intermediary is a BO, then it could place both sets of credit-default swaps in its trading account and, if subject to the Federal Reserve's market-risk capital rules, use its general-market-risk model and, if approved, specific-risk model to calculate the appropriate risk-based capital requirement. If the specific-risk model has not been approved, then the SBO

would be subject to the standardized specific-risk capital charge.

60. Under this type of transaction, if a structure exposes investing BOs to the creditworthiness of a substantive issuer, for example, the SI, then the investing institutions should assign the notes to the higher of the risk categories appropriate to the underlying reference assets or the SI.

amounts and the appropriate credit-conversion factor for off-balance-sheet items. The Federal Reserve's exercise of this authority may result in a higher or lower risk weight for an asset or credit-equivalent amount, or in a higher or lower credit-conversion factor for an off-balance-sheet item. This reservation of authority explicitly recognizes that the Federal Reserve retains sufficient discretion to ensure that banks, as they develop novel financial assets, will be treated appropriately under the regulatory capital standards. Under this authority, the Federal Reserve reserves its right to assign risk positions in securitizations to appropriate risk categories on a case-by-case basis, if the credit rating of the risk position is determined to be inappropriate.

Board Approved Exceptions to Risk-Based Capital Guidelines (Reservation of Authority) Involving Securities Lending

Securities lent by a bank are treated in one of two ways, depending upon whether the lender is at risk of loss. If a bank, as agent for a customer, lends the customer's securities and does not indemnify the customer against loss, then the transaction is excluded from the risk-based capital calculation. Alternatively, if a bank lends its own securities or, acting as agent for a customer, lends the customer's securities and indemnifies the customer against loss, the transaction is converted at 100 percent and assigned to the risk-weight category appropriate to the obligor, or, if applicable, to any collateral delivered to the lending bank or the independent custodian acting on the lending bank's behalf. When a bank is acting as agent for a customer in a transaction involving the lending or sale of securities that is collateralized by cash delivered to the bank, the transaction is deemed to be collateralized by cash on deposit for purposes of determining the appropriate risk-weight category, provided that (1) any indemnification is limited to no more than the difference between the market value of the securities and the cash collateral received and (2) any reinvestment risk associated with that cash collateral is borne by the customer. See the "Risk-Weighting Process" discussion in this section and also the discussion in section 2030.1 on bank dealer securities-lending or -borrowing transactions.

Certain agency securities-lending arrangements (May 2003 exception for "cash-collateral transactions"). In response to a bank's inquiry, the Board issued a May 14, 2003, interpretation for the risk-based capital treatment of certain European agency securities' lending arrangements in which the bank, acting as agent, lends securities of a client and receives cash collateral from the borrower. The transaction is marked-to-market daily and a positive margin of cash collateral relative to the market value of the securities lent is maintained at all times. If the borrowing counterparty defaults on the securities loaned through, for example, failure to post margin when required, the transaction is immediately terminated and the cash collateral is used by the bank to repurchase in the market the securities lent in order to restore them to the client. The bank indemnifies its client against the risk that, in the event of counterparty default, the amount of cash collateral may be insufficient to repurchase the amount of securities lent. Thus, the indemnification is limited to the difference between the value of the cash collateral and the repurchase price of the replacement securities. In addition, the bank, again acting as agent, reinvests, on the client's behalf, the cash collateral received from the borrower. The reinvestment transaction takes the form of a cash loan to a counterparty that is fully collateralized by government or corporate securities (through, for example, a reverse repurchase agreement). Like the first transaction, the reinvestment transaction is subject to daily marking-to-market and remarking and is immediately terminable in the event of counterparty default. The bank issues an indemnification to the client against the reinvestment risk, which is similar to the indemnification the bank gives on the original securities-lending transaction.

The Federal Reserve Board's current risk-based capital guidelines treat indemnifications issued in connection with agency securities-lending activities as off-balance-sheet guarantees that are subject to capital charges. Under the guidelines, the bank's first indemnification would receive the risk weight of the securities-borrowing counterparty because of the bank's indemnification of the client's reinvestment risk on the cash collateral. (See 12 CFR 208, appendix A, section III.D.1.c.) The bank's second indemnification would receive the lower of the risk weight of the reverse repurchase counterparty or the collateral, unless it was fully collateralized with margin by OECD government

securities, which would qualify for a zero percent risk weight. (See 12 CFR 208, appendix A, sections III.D.1.a. and b.)

The bank inquired about the possibility of assigning a zero percent risk weight for both indemnifications, given the low risk they pose to the bank. The Board approved an exception to its risk-based capital guidelines for the bank's agency securities-lending transactions. The Board approved this exception under the reservation of authority provision contained in the guidelines. This provision permits the Board, on a case-by-case basis, to determine the appropriate risk weight for any asset or off-balance-sheet item that imposes risks on a bank that are incommensurate with the risk weight otherwise specified in the guidelines. (See 12 CFR 208, appendix A, section III.A.)

This exception applies to the bank's agency securities-lending transactions collateralized by cash where the bank indemnifies its client against (1) the risk that, in the event of default by the securities borrower, the amount of cash collateral may be insufficient to repurchase the amount of securities lent and (2) the reinvestment risk associated with lending the cash collateral in a transaction fully collateralized by securities (for example, in a reverse repurchase transaction).

The capital treatment the Board approved for these transactions relies upon an economic measurement of the amount of risk exposure the bank has to each of its counterparties. Under this approved approach, the bank does not use the notional amount of underlying transactions that are subject to client indemnifications as the exposure amount for risk-based capital purposes. Rather, the bank must use an economic exposure amount that takes into account the market value of collateral and the market price volatilities of (1) the instruments delivered by the bank to the counterparty and (2) the instruments received by the bank from the counterparty. This approach builds on best practices of banks for measuring their credit exposure amounts for purposes of managing internal single-borrower exposure limits, as well as upon existing concepts incorporated in the Basel Accord and the Board's risk-based capital and market risk rules. The bank, under this exception, is required to determine an unsecured loan equivalent amount for each of the counterparties to which, as agent, the bank lends securities collateralized by cash or lends cash collateralized by securities. As described below, the

unsecured loan equivalent amount will be assigned the risk weight appropriate to the counterparty.

To determine the unsecured loan equivalent amount, the bank must add together its current exposure to the counterparty and a measure for potential future exposure (PFE) to the counterparty. The current exposure is the sum of the market value of all securities and cash lent to the counterparty under the bank's indemnified arrangements, less the sum of all securities and cash received from the counterparty as collateral under the indemnified arrangements. The PFE calculation is to be based on the market volatilities of the securities lent and the securities received, as well as any foreign exchange rate volatilities associated with any cash or securities lent or received.

The Board considered two methods for incorporating market volatilities into the PFE calculation: (1) the bank's own estimates of those volatilities based on a year's historical observation of market prices with no recognition of correlation effects or (2) a value-at-risk (VaR) type model. The bank was calculating daily, counterparty VAR estimates for its agency lending transactions and it had a VaR model that had been approved for purposes of the Board's market risk rule. The Board determined that the bank could use a VaR model to calculate the PFE for each of its counterparties.

The bank must calculate the VaR using a five-day holding period and a 99th percentile one-tailed confidence interval based on market price data over a one-year historical observation period. The data set used should be updated no less frequently than once every three months and should be reassessed whenever market prices are subject to material changes. For each counterparty, the bank is required to calculate daily an unsecured loan equivalent amount, including the VaR PFE component. These calculations will be subject to supervisory review to ensure they are in line with the quarter-end calculations used to determine regulatory capital requirements.

To qualify for the capital treatment outlined above, the securities-lending and cash loan transactions covered by the bank's indemnification must meet the following conditions:

- the transactions are fully collateralized
- any securities lent or taken as collateral are eligible for inclusion in the trading book and are liquid and readily marketable

- any securities lent or taken as collateral are marked-to-market daily
- the transactions are subject to a daily margin maintenance requirement

Further, the transactions must be executed under a bilateral netting agreement or an equivalent arrangement. These arrangements must (1) provide the non-defaulting party the right to promptly terminate and close out all transactions under the agreement upon an event of default, including insolvency or bankruptcy of the counterparty; (2) provide for the netting of gains and losses on transactions (including the value of any collateral) terminated and closed out under the agreement so that a single net amount is owed by one party to the other; (3) allow for the prompt liquidation or setoff of collateral upon the occurrence of an event of default; (4) be conducted, together with the rights arising from the conditions required in provisions 1 and 3 above, under documentation that is legally binding on all parties and legally enforceable in each relevant jurisdiction upon the occurrence of an event of default and regardless of the counterparty's insolvency or bankruptcy; and (5) be conducted under documentation for which the bank has completed sufficient legal review to verify it meets provision 4 above and for which the bank has a well-founded legal basis for reaching this conclusion.

With regard to the counterparty VaR model that the bank uses, the bank is required to conduct regular and rigorous backtesting procedures, subject to supervisory review, to ensure the validity of the correlation factors used by the bank and the stability of these factors over time. The bank was not subject to a formal backtesting procedure requirement at the time the letter was issued. However, if supervisory review determines that the bank's counterparty VaR model or its backtesting procedures have material deficiencies and the bank does not take appropriate and expeditious steps to rectify those deficiencies, supervisors may take action to adjust the bank's capital calculations. Such action could range from imposing a multiplier on the VaR estimates of PFE calculated by the bank to disallowing the use of its counterparty VaR model and requiring use of the own estimates approach to determine the PFE component of the unsecured loan equivalent amounts.

The capital treatment that the Board approved in the letter has been and will be made available to similarly situated institutions that

request and receive Board approval for such treatment.

Certain agency securities-lending arrangements (August 2006 exception for "securities-collateral transactions"). In response to an inquiry made by a bank, a Board interpretation was issued on August 15, 2006, which discussed the regulatory capital treatment of certain securities-lending transactions. In these transactions, the bank, acting as agent for its clients, lends its clients' securities and receives liquid securities collateral in return (the securities-collateral transactions).⁶¹ Each securities loan is marked-to-market daily, and the bank calls for additional margin as needed to maintain a positive margin of collateral relative to the market value of the securities lent at all times. The bank also agrees to indemnify its clients against the risk that, in the event of borrower default, the market value of the securities collateral is insufficient to repurchase the amount of securities lent.

If the borrower were to default, the bank would be in a position to terminate a securities-collateral transaction and sell the collateral in order to purchase securities to replace the securities that were originally lent. The bank's exposure under a securities-collateral transaction would be limited to the difference between the purchase price of the replacement securities and the market value of the securities collateral.

The bank requested that the Federal Reserve Board approve another exception to the capital guidelines that would permit the bank to measure its exposure amounts for risk-based capital purposes with respect to the securities-collateral transactions under the methodology of the bank's prior May 14, 2003, approval (the prior approval). The Board, again, determined that, under its current risk-based capital guidelines, the capital charges for these securities-lending arrangements would exceed the amount of economic risk posed to the bank, which would result in capital charges that would be significantly out of proportion to the risk posed. The Board therefore approved an August 15, 2006, exception to its risk-based capital guidelines according to the prior approval, allowing the bank to compute its regulatory capital for these transactions using a loan-equivalent methodology. In so doing, the bank would assign the risk weight of the counterparty to the exposure amount of all such

61. The liquid securities collateral includes government agency, government-sponsored entity, corporate debt or equity, or asset-backed or mortgage-backed securities.

transactions with the counterparty. Specifically, the Board granted the bank its request to use an unsecured loan equivalent amount (calculated as current exposure plus a VaR-modeled PFE) for the securities-collateral transactions for risk-based capital purposes. The Board approved the exception under the reservation authority provision contained in its capital guidelines.

Overall Assessment of Capital Adequacy

The following factors should be taken into account in assessing the overall capital adequacy of a bank.

Capital Ratios

Capital ratios should be compared with regulatory minimums and with peer-group averages. Banks are expected to have a minimum total risk-based capital ratio of 8 percent. However, because risk-based capital does not take explicit account of the quality of individual asset portfolios or the range of other types of risks to which banks may be exposed, such as interest-rate, liquidity, market, or operational risks, banks are generally expected to operate with capital positions above the minimum ratios. Institutions with high or inordinate levels of risk are also expected to maintain capital well above the minimum levels.

The minimum tier 1 leverage ratio is 3 percent. However, an institution operating at or near these levels is expected to have well-diversified risk, including no undue interest-rate risk exposure, excellent asset quality, high liquidity, and good earnings, and to generally be considered a strong banking organization, rated composite 1 under the CAMELS rating system of banks. For all but the most highly rated banks meeting the above conditions, the minimum tier 1 leverage ratio is 3 percent plus an additional cushion of at least 100 to 200 basis points.

Impact of Management

Strategic planning. One of management's most important functions is to lead the organization by designing, implementing, and supporting an effective strategic plan. Strategic planning is a long-term approach to integrating asset deploy-

ment, funding sources, capital formation, management, marketing, operations, and information systems to achieve success. Strategic planning helps the organization more effectively anticipate and adapt to change. Management must also ensure that planning information as well as corporate goals and objectives are effectively communicated throughout the organization. Effective strategic planning allows the institution to be more proactive than reactive in shaping its own future. The strategic plan should clearly outline the bank's capital base, anticipated capital expenditures, desirable capital level, and external capital sources. Each of these areas should be evaluated in consideration of the degree and type of risk that management and the board of directors are willing to accept.

Growth. Capital is necessary to support a bank's growth; however, it is the imposition of required capital ratios that controls growth. Because a bank has to maintain a minimum ratio of capital to assets, it will only be able to grow so fast. For example, a rapid growth in a bank's loan portfolio may be a cause of concern, for it could indicate that a bank is altering its risk profile by reducing its underwriting standards.

Dividends. Examiners should review historical and planned cash-dividend payout ratios to determine whether dividend payments are impairing capital adequacy.⁶² Excessive dividend payouts may result from several sources:

- If the bank is owned by a holding company, the holding company may be requiring excessive dividend payments from the bank to fund the holding company's debt-repayment program, expansion goals, or other cash needs.
- The bank's board of directors may be under pressure from individual shareholders to provide funds to repay bank stock debt or to use for other purposes.
- Dividends may be paid or promised to support a proposed equity offering.

Access to additional capital. Banks that do not generate sufficient capital internally may require external sources of capital. Large, independent institutions may solicit additional funding from the capital markets. Smaller institutions may rely on a bank holding company or a principal shareholder or control group to provide addi-

62. See also "Dividends," section 4070.1.

tional funds, or on the issuance of new capital instruments to existing or new investors. Current shareholders may resist efforts to obtain additional capital by issuing new capital instruments because of the diluting effect of the new capital. In deciding whether to approve obtaining additional capital in this manner, shareholders must weigh the dilution against the possibility that, without the additional funds, the institution may fail.

Under Federal Reserve policy, a bank holding company is expected to serve as a source of strength to its subsidiary banks. A bank holding company can fulfill this obligation by having enough liquidity to inject funds into the bank or by having access to the same sources of additional capital, that is, current or existing shareholders, as outlined above.

Financial Considerations

Capital levels and ratios should be evaluated in view of the bank's overall financial condition, including the following areas.

Asset quality. The final supervisory judgment on a bank's capital adequacy may differ significantly from conclusions that may be drawn solely from the level of a bank's risk-based capital ratio. Generally, the main reason for this difference is the evaluation of asset quality. Final supervisory judgment of a bank's capital adequacy should take into account examination findings, particularly those on the severity of problem and classified assets and investment or loan portfolio concentrations, as well as on the adequacy of the bank's allowance for loan and lease losses.

Balance-sheet composition. A bank whose earning assets are not diversified or whose credit culture is more risk-tolerant is generally expected to operate with higher capital levels than a similar-sized institution with well-diversified, less-risky investments.

Earnings. An adequately capitalized, growing bank should have a consistent pattern of capital augmentation by earnings retention. Poor earnings can have a negative effect on capital adequacy in two ways. First, any losses absorbed by capital reduce the ability of the remaining capital to fulfill that function. Second, the impact of losses on capital is magnified by the fact that

a bank generating losses is incapable of replenishing its capital accounts internally.

Funds management. A bank with undue levels of interest-rate risk should be required to strengthen its capital positions, even though it may meet the minimum risk-based capital standards. Assessments of capital adequacy should reflect banks' appropriate use of hedging instruments. Other things being equal, banks that have appropriately hedged their interest-rate exposure will be permitted to operate with lower levels of capital than those banks that are vulnerable to interest-rate changes. While the Federal Reserve does not want to discourage the use of legitimate hedging vehicles, some instruments, in particular interest-only strips (IOs) and principal-only strips (POs), raise concerns. IOs and POs have highly volatile price characteristics as interest rates change, and they are generally not considered appropriate investments for most banks. However, some sophisticated banks may have the expertise and systems to appropriately use IOs and POs as hedging vehicles.

Off-balance-sheet items and activities. Once funded, off-balance-sheet items become subject to the same capital requirements as on-balance-sheet items. A bank's capital levels should be sufficient to support the quality and quantity of assets that would result from a significant portion of these items being funded within a short time.

Adequacy of and Compliance with Capital-Improvement Plans

Capital-improvement plans are required for banks operating with capital ratios below regulatory minimums as required by the prompt-corrective-action part of the Federal Deposit Insurance Act, as well as for some banks operating under supervisory actions. Examiners should review any such plans and determine their adequacy and reasonableness, keeping in mind that banks may meet required capital-to-asset ratios in three ways:

- They may issue more capital. In doing so, banks must weigh the need for additional capital against the dilution of market value that will result.
- They may retain earnings rather than paying them out as dividends.

- They may sell assets. By reducing the amount of total assets, a bank reduces the amount of capital necessary to meet the required ratios.

Inadequate Allowance for Loan and Lease Losses

An inadequate allowance for loan and lease losses (ALLL) will require an additional charge to current income. Any charge to current income will reduce the amount of earnings available to supplement tier 1 capital. Because the amount of the ALLL that can be included in tier 2 capital is limited to 1.25 percent of gross risk-weighted assets, an additional provision may increase the ALLL level above this limit, thereby resulting in the excess portion being excluded from tier 2 capital.

Ineligible Collateral and Guarantees

The risk-based capital guidelines recognize only limited types of collateral and guarantees. Other types of collateral and guarantees may support the asset mix of the bank, particularly within its loan portfolio. Such collateral or guarantees may serve to substantially improve the overall quality of a loan portfolio and other credit exposures, and should be considered in the overall assessment of capital adequacy.

Market Value of Bank Stock

Examiners should review trends in the market price of the bank's stock and whether stock is trading at a reasonable multiple of earnings or a reasonable percentage (or multiple) of book value. A bank's low stock price may merely be an indication that it is undervalued, or it may be indicative of regional or industry-wide problems. However, a low-valued stock may also indicate that investors lack confidence in the institution; such lack of support could impair the bank's ability to raise additional capital in the capital markets.

Subordinated Debt in Excess of Limits

The total of term subordinated debt and intermediate-term preferred stock that may be

included in tier 2 capital is limited to 50 percent of tier 1 capital. Amounts issued or outstanding in excess of this limit are not included in the risk-based capital calculation but should be taken into consideration when assessing the bank's funding and financial condition.

Unrealized Asset Values

Banks often have assets on their books that are carried at significant discounts below current market values. The excess of the market value over the book value (historical cost or acquisition value) of assets such as investment securities or banking premises may represent capital to the bank. These unrealized asset values are not included in the risk-based capital calculation but should be taken into consideration when assessing capital adequacy. Particular attention should be given to the nature of the asset, the reasonableness of its valuation, its marketability, and the likelihood of its sale.

Accounting for Defined Benefit Pension and Other Postretirement Plans

In September 2006, the Financial Accounting Standards Board adopted the Statement of Financial Accounting Standard No. 158, "Employers Accounting for Defined Benefit Pension and Other Postretirement Plans" (FAS 158). The standard requires, as early as December 31, 2006, that a bank, bank holding company, or other banking or thrift organization that sponsors a single-employer defined benefit postretirement plan—such as a pension plan or health care plan—to recognize the overfunded or underfunded status of each such plan as an asset or liability on its balance sheet with corresponding adjustments recognized in accumulated other comprehensive income (AOCI), a component of equity capital. After a banking organization initially applies FAS 158, changes in the benefit plan asset or liability reported on the organization's balance sheet will be recognized in the year in which the changes occur and will result in an increase or decrease in AOCI. Postretirement plan amounts carried in AOCI are adjusted as they are subsequently recognized in earnings as components of the plans' net periodic benefit cost.

The Federal Reserve Board, along with other federal bank and thrift regulatory agencies (the

Agencies⁶³), issued a joint press release on December 14, 2006, in which they announced that FAS 158 will not affect a banking organizations' regulatory capital. The agencies decided, until they can determine otherwise through a rulemaking, that banks should exclude from regulatory capital any amounts recorded in AOCI resulting from the adoption and application of FAS 158. The purpose of this exclusion is to neutralize the effect of the application of FAS 158 on regulatory capital, including the reporting of the risk-based and leverage capital measures.

TIER 1 LEVERAGE RATIO FOR STATE MEMBER BANKS

The Federal Reserve has adopted a minimum ratio of tier 1 capital to average total assets to assist in the assessment of the capital adequacy of state member banks. The principal objective of this measure (which is intended to be used as a supplement to the risk-based capital measure) is to place a constraint on the maximum degree to which a state member bank can leverage its equity capital base.

The guidelines implementing the tier 1 leverage ratio are found in Regulation H (12 CFR 208), appendix B, and apply to all state member banks on a consolidated basis. The ratio is to be used in the examination and supervisory process, as well as in the analysis of applications acted on by the Federal Reserve.

A bank's tier 1 leverage ratio is calculated by dividing its tier 1 capital (the numerator of the ratio) by its average total consolidated assets (the denominator of the ratio). For purposes of calculating this ratio during an examination, examiners may use the bank's average total assets as of the last Call Report date. The ratio will be calculated using period-end assets whenever necessary, on a case-by-case basis. For the purpose of this leverage ratio, the definition of tier 1 capital as set forth in the risk-based capital guidelines in appendix A of the Federal Reserve's Regulation H is used. Average total consolidated assets are defined as the quarterly average total assets (defined net of the allowance for loan and lease losses) reported on the bank's Reports of Condition and Income (Call Reports), less good-

will; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, are in excess of 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, are in excess of 25 percent of tier 1 capital; amounts of credit-enhancing interest-only strips that are in excess of 25 percent of tier 1 capital; all other identifiable intangible assets; any investments in subsidiaries or associated companies that the Federal Reserve determines should be deducted from tier 1 capital; deferred tax assets that are dependent on future taxable income, net of their valuation allowance, in excess of the limitations set forth in section II.B. of appendix A of Regulation H; and the amount of the total adjusted carrying value of nonfinancial equity investments that is subject to a deduction from tier 1 capital.

Under the tier 1 leverage ratio guidelines, the minimum level of tier 1 capital to total assets for strong state member banks is 4 percent, unless they are rated composite 1 under the UFIRS (CAMELS) rating system of banks. Institutions not meeting these characteristics, as well as institutions with supervisory, financial, or operational weaknesses, are expected to operate well above minimum capital standards. Institutions experiencing or anticipating significant growth are also expected to maintain capital ratios, including tangible capital positions, well above the minimum levels. Moreover, higher capital ratios may be required for any banking institution if warranted by its particular circumstances or risk profile. In all cases, institutions should hold capital commensurate with the level and nature of the risks, including the volume and severity of problem loans, to which they are exposed.

A bank that does not have a 4 percent leverage ratio (3 percent if it is rated a composite CAMELS 1) is considered undercapitalized under the prompt-corrective-action framework and must file a capital-restoration plan that meets certain requirements.

De Novo Banks

Initial capital in a de novo state member bank should be reasonable in relation to the bank's location, business plan, competitive environment, and state law. At a minimum, however, a

63. The Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision.

de novo bank must maintain a tangible tier 1 leverage ratio (core capital elements minus all intangible assets divided by average total assets minus all intangible assets) of 9 percent for the first three years of operations. The applicant must provide projections of asset growth and earnings performance that reasonably support the bank's ability to maintain this ratio without

reliance on additional capital injections. Even though a 9 percent tangible leverage ratio is not required after the third year, de novo banks are expected to maintain capital ratios that are commensurate with ongoing safety-and-soundness concerns and that are generally well in excess of regulatory minimums. (See SR-91-17.)

Assessment of Capital Adequacy

Examination Objectives

Effective date May 2000

Section 3020.2

1. To determine the adequacy of capital.
2. To determine compliance with the risk-based and tier 1 leverage capital adequacy guidelines.
3. To determine if the policies, practices, and procedures with regard to the capital adequacy guidelines are adequate.
4. To determine if the bank's officers and employees are operating in conformity with the Board's established capital adequacy guidelines.
5. To evaluate the propriety and consistency of the bank's present and planned level of capitalization in light of the risk-based and leverage capital guidelines, as well as existing conditions and future plans.
6. To initiate corrective action when policies, procedures, or capital are deficient.
7. To evaluate whether—
 - a. the institution is fully capable of assessing the credit risk associated with the collateralized loan obligations (CLOs) it retains in its banking book (nontrading accounts); and
 - b. the institution is adequately capitalized given its residual risk exposure involving CLOs.

VERIFICATION OF THE RISK-BASED CAPITAL RATIO

Examiners should verify that the bank has adequate systems in place to compute and document its risk-based capital ratios. Small banks with capital ratios well in excess of established minimums may not have a system explicitly designed to capture risk-based capital information. In addition, depending on a bank's current capital structure and ratios, all procedures may not apply.

1. Verify that the bank is correctly reporting the risk-based capital information requested on the Reports of Condition and Income.

For the qualifying components of capital (the ratio's numerator):

2. Determine if management is adhering to the underlying terms of any currently outstanding stock issues.
3. Review common stock to ensure that the bank is in compliance with the terms of any underlying agreements and to determine if more than one class exists. When more than one class exists, review the terms for any preference or nonvoting features. If the terms include such features, determine whether the class of common stock qualifies for inclusion in tier 1 capital.
4. Review any perpetual and long-term preferred stock for the following:
 - a. Compliance with terms of the underlying agreements carefully noting—
 - adherence to the cumulative or noncumulative nature of the stock and
 - adherence to any conversion rights.
 - b. Proper categorization as tier 1 or tier 2 for capital adequacy purposes, noting the following requirements:
 - Tier 1 perpetual preferred stock must have the following characteristics:
 - no maturity date
 - cannot be redeemed at the option of the holder
 - unsecured
 - ability to absorb losses
 - ability and legal right for issuer to defer or eliminate dividends

- any issuer-redemption feature must be subject to prior Federal Reserve approval
- noncumulative
- fixed rate or traditional floating or adjustable rate
- must not contain features that would require or create an incentive for the issuer to redeem or repurchase the instrument, such as an “exploding rate,” an auction-rate pricing mechanism, or a feature that allows the stock to be converted into increasing numbers of common shares

- Perpetual preferred stock, includable within tier 2 capital without a sublimit, must have the characteristics listed above for tier 1 perpetual preferred stock, but perpetual preferred stock does not otherwise qualify for inclusion in tier 1 capital. For example, cumulative or auction-rate perpetual preferred stock, which does not qualify for tier 1 capital, may be includable in tier 2 capital.
5. Verify that minority interest in equity accounts of consolidated subsidiaries included in tier 1 capital consists only of qualifying tier 1 capital elements. Determine whether any perpetual preferred stock of a subsidiary that is included in minority interest is secured by the subsidiary's assets; if so, that stock may not be included in capital.
 6. Review the intermediate-term preferred stock and subordinated debt instruments included in capital for the following:
 - a. Compliance with terms of the underlying agreements, noting that subordinated debt containing the following terms may not be included in capital:
 - interest payments tied to the bank's financial condition
 - acceleration clauses or broad conditions of events of default that are inconsistent with safe and sound banking practices
 - b. Compliance with restrictions on the inclusion of such instruments in capital by verifying that the aggregate amount

of both types of instruments does not exceed 50 percent of tier 1 capital (net of goodwill) and that the portions includable in tier 2 capital possess the following characteristics:

- unsecured
 - minimum five-year original weighted average maturity
 - in the case of subordinated debt, contains terms stating that the debt (1) is not a deposit, (2) is not insured by a federal agency, (3) cannot be redeemed without prior approval from the Federal Reserve, and (4) is subordinated to depositors and general creditors
- c. Appropriate amortization, if the instruments have a remaining maturity of less than five years.
7. Determine, through review of minutes of board of directors meetings, if a stock offering or subordinated debt issue is being considered. If so, determine that management is aware of the risk-based capital requirements for inclusion in capital.
8. Review any mandatory convertible debt securities for the following:
- a. Compliance of the terms with the criteria set forth in 12 CFR 225 (Regulation Y), appendix B.
 - b. Notification in the terms of agreement that the redemption or repurchase of such securities before maturity is subject to prior approval from the Federal Reserve.
 - c. The treatment of the portions of such securities covered by the issuance of common or perpetual preferred stock dedicated to the repayment of the securities, bearing in mind the following:
 - The amount of the security covered by dedicated stock should be treated as subordinated debt and is subject, together with other subordinated debt and intermediate-term preferred stock, to a sublimit within tier 2 capital of 50 percent of tier 1 capital, as well as to amortization in the last five years of life.
 - The portion of a mandatory convertible security that is not covered by dedication qualifies for inclusion in tier 2 capital without any sublimit and without being subject to amortization in the last five years of life.
9. Verify that the amount of the allowance for loan and lease losses included in tier 2 capital has been properly calculated and disclosed, and verify that the supporting computations of that amount have been adequately documented.
- For the calculation of risk-weighted assets (the ratio's denominator):
10. Determine whether the bank consolidates, in accordance with the Financial Accounting Standards Board's FIN 46-R, the assets of any asset-backed commercial paper (ABCP) program that it sponsors.
- a. Determine whether the bank's ABCP program meets the definition of a *sponsored ABCP program* under the Federal Reserve's risk-based capital guidelines. If the bank does consolidate the assets of an ABCP program, review the documentation of its risk-based capital ratio calculations, and determine whether the associated ABCP program's assets and minority interests were excluded from the bank's risk-weighted asset base (and also if they were excluded from tier 1 capital—the ratio's numerator). See section III.B.6. of the risk-based capital guidelines (12 CFR 208, appendix A).
 - b. Determine whether any of the bank's liquidity facilities meet the definition and requirements of an *eligible ABCP liquidity facility* under the Federal Reserve's risk-based capital guidelines. See section III.B.3.a.iv. of the risk-based capital guidelines (12 CFR 208, appendix A).
 - c. Determine from the bank's supporting documentation of its risk-based capital ratios whether the bank held risk-based capital against its eligible ABCP liquidity facilities.
 - d. Determine whether the bank applied the correct conversion factors to the eligible ABCP liquidity facilities when it determined the amount of risk-weighted assets for its risk-based capital ratios. See section III.D. of the risk-based capital guidelines (12 CFR 208, appendix A).
 - For those eligible ABCP liquidity facilities having an original maturity of one year or less, determine if a 10 percent credit-conversion factor was used.
 - For those eligible ABCP liquidity facilities having an original maturity

- exceeding one year, determine if a 50 percent credit-conversion factor should have been used.
- e. Determine if ineligible ABCP liquidity facilities were treated as direct-credit substitutes or as recourse obligations, as required by the risk-based capital guidelines.
11. Verify that each on- and off-balance-sheet item has been assigned to the appropriate risk category in accordance with the risk-based capital guidelines. Close attention should be paid to the underlying obligor, collateral, and guarantees, and to assignment to a risk category based on the terms of a claim. The claim should be assigned to the risk category appropriate to the highest risk option available under the terms of the transaction. Verify that the bank's documentation supports the assignment of preferential risk weights. If necessary, recalculate the value of risk-weighted assets.
 12. Verify that all off-balance-sheet items have been converted properly to credit-equivalent amounts based on the risk-based capital guidelines. Close attention should be paid to the proper reporting of assets sold with recourse, financial and performance standby letters of credit, participations of off-balance-sheet transactions, and commitments.

VERIFICATION OF THE TIER 1 LEVERAGE RATIO

1. Verify that the bank has correctly calculated tier 1 capital in accordance with the definition of tier 1 capital, as set forth in the risk-based capital guidelines.
2. Verify that the bank has properly calculated average total consolidated assets, which are defined as the quarterly average total assets as reported on the Call Report, less goodwill and any other intangible assets and any investments in subsidiaries that the Federal Reserve determines should be deducted from tier 1 capital.

OVERALL ASSESSMENT OF CAPITAL ADEQUACY

1. For banks that do not meet the minimum risk-based tier 1 leverage capital standards or that are otherwise considered to lack sufficient capital to support their activities, examine the bank's capital plans for achieving adequate levels of capital. In conjunction with management of the appropriate Reserve Bank, determine whether the plans are acceptable to the Federal Reserve. Review and comment on these plans and any progress achieved in meeting the requirements.
2. The review processes discussed in "Overall Conclusions Regarding Condition of the Bank," section 5020.1, require an evaluation of the propriety and consistency of the bank's present and planned level of capitalization in light of existing conditions and future plans. In this regard, the examiner assigned to assessing capital adequacy should do the following:
 - a. Using the latest Uniform Bank Performance Report (UBPR), analyze applicable ratios involving capital funds, comparing these ratios with those of the bank's peer group and investigating trends or significant variations from peer-group averages.
 - b. Determine, with regard to the bank's overall financial condition, that the bank's capital is sufficient to compensate for any instabilities or deficiencies in the asset and liability mix and in quality, as described in the "Funds Management" paragraph ("Financial Considerations" subsection of section 3020.1).
 - c. Determine if the bank's earnings performance enables it to fund its expansion adequately, to remain competitive in the market, and to replenish or increase its capital funds as needed.
 - d. Analyze trends in the bank's deposit and borrowed funds structure to determine whether capital is maintained at a level sufficient to sustain depositor and lender confidence.
 - e. If the allowance for loan and lease losses is determined to be inadequate, analyze the impact of current and potential losses on the bank's capital structure. See "Analytical Review and Income and Expense," section 4010.1.
 - f. Consider the impact of any management deficiencies on present and projected capital.
 - g. Determine if there are any assets or contingent accounts whose quality rep-

- resents an actual or potential serious weakening of capital.
- h. Consider the potential impact of any proposed changes in controlling ownership (if approved) on the projected capital position.
 - i. Analyze assets that are considered undervalued on the balance sheet and carried at below-market values. The excess of fair value over cost may represent an additional cushion to the bank.
 - j. Consider the cushion for absorbing losses that may be provided by any subordinated debt or intermediate-term preferred stock not included in tier 2 capital because of the 50 percent of tier 2 capital limitation, or that is not included in capital for tier 1 leverage ratio purposes.
 - k. Analyze any collateral and guarantees supporting assets that may not be taken into account for risk-based or tier 1 leverage capital purposes, and consider these collateral and guarantees in the overall assessment of capital adequacy.
 - l. Evaluate the bank's overall asset quality, and determine whether the bank needs to strengthen its capital position based on the following:
 - the severity of problem and classified assets
 - investment or loan-portfolio concentrations
 - the adequacy of loan-loss reserves
 - m. Analyze the bank's interest-rate risk and use of hedging instruments. Determine if the bank should strengthen its capital position because of undue levels of risk. Review hedging instruments for the use of interest-only strips (IOs) and principal-only strips (POs) (which raise concerns), and review management's expertise in using hedging instruments.
 - n. Determine whether the sponsoring bank is able to assess and manage the retained risk in its credit portfolio after the issuance of synthetic collateralized loan obligations (CLOs).
 - o. If the bank has used the special risk-based regulatory capital treatment for synthetic CLOs, verify that the stringent minimum conditions have been met for that treatment.
3. Review capital adjustments such as goodwill and intangible assets by performing the following procedures:
 - a. Verify the existence of adequate documentation concerning book and fair values and the amortization method.
 - b. Verify that intangibles are being reduced in accordance with the amortization method. If the book carrying amount exceeds the fair value, the intangible should be written down or off.
 - c. Determine if the bank is performing a quarterly review of the book and fair values and the quality of all intangibles.
 - d. Verify that goodwill and other nonqualifying identifiable intangibles are deducted from tier 1 capital.
 - e. Determine the proper inclusion of other identifiable intangibles included in tier 1 capital by verifying that the criteria and limitations outlined in the risk-based capital guidelines are met.
 4. In light of the analysis conducted in step 2 (under "Overall Assessment of Capital Adequacy"), and in accordance with the Federal Reserve's capital adequacy guidelines, determine any appropriate supervisory action with regard to the bank's capital adequacy.
 5. Review the following items with the examiner-in-charge in preparation for discussion with appropriate management:
 - a. all deficiencies noted with respect to the capital accounts
 - b. the adequacy of present and projected capital
 6. Ascertain through minutes, reports, etc., or through discussions with management, how the future plans of the bank (for example, growth through commercial lending, retail operations, etc.) will affect the bank's asset quality, capital position, and other areas of its balance sheet.
 7. Prepare comments for the examination report on the bank's capital position, including any deficiencies noted.
 8. Update the workpapers with any information that will facilitate future examinations.

Assessment of Capital Adequacy

Internal Control Questionnaire

Effective date November 1993

Section 3020.4

Review the bank's internal controls, policies, practices, and procedures concerning capital. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

GENERAL

1. Has the bank established procedures to ensure that—
 - a. all components of capital are accurately categorized and reported for purposes of the risk-based and leverage capital measures?
 - b. all on-and off-balance-sheet items are accurately risk-weighted and reported for purposes of the risk-based capital measures?
 - c. categorization of on- and off-balance-sheet items and capital for purposes of the risk-based capital measures is adequately documented?
 - d. the bank is in compliance with the terms of any contractual agreements underlying capital instruments?
 - e. management and the board of directors consider the requirements of the risk-based capital guidelines for inclusion in capital of stock or debt prior to issuance?
2. Does the bank prepare a periodic analysis of its risk-based and leverage capital positions to assess capital adequacy for both current and anticipated needs?
- *3. Has the board of directors authorized specific bank officers to—
 - a. sign stock certificates?
 - b. maintain custody of unissued stock certificates?
 - c. maintain stock journals and records?
- *4. Are capital transactions verified by more than one person before stock certificates are issued?
- *5. Are stock certificates and debentures handled by persons who do not also record those transactions?
- *6. Does the bank maintain a stock certificate book with certificates serially numbered by the printer?
- *7. Is the stock certificate book maintained under dual control?
- *8. Does the bank's policy prohibit the signing of blank stock certificates?
- *9. Does the bank maintain a shareholders' ledger that shows the total number of shares owned by each stockholder?
- *10. Does the bank maintain a stock transfer journal disclosing names, dates, and amounts of transactions?
- *11. Does the bank cancel surrendered stock certificates?
- *12. Are inventories of unissued notes or debentures—
 - a. maintained under dual control?
 - b. counted periodically by someone other than the person responsible for their custody?
- *13. When transfers are made—
 - a. are notes or debentures surrendered and promptly cancelled?
 - b. are surrendered notes or debentures inspected to determine that proper assignment has been made and that new notes or debentures agree in amount?

CONCLUSION

14. Indicate additional procedures used in arriving at conclusions.
15. Are internal controls of capital adequate based on a composite evaluation, as evidenced by answers to the foregoing questions?

Assessing Risk-Based Capital—Direct-Credit Substitutes Extended to ABCP Programs

Effective date October 2007

Section 3030.1

The Federal Reserve Board and the other federal banking agencies (the agencies)¹ amended their risk-based capital standards on November 29, 2001, to adopt a new capital framework for banking organizations (includes bank holding companies) engaged in securitization activities (the securitization capital rule).² In March 2005, the agencies issued interagency guidance that clarifies how banking organizations are to use internal ratings that they assign to asset pools purchased by their asset-backed commercial paper (ABCP) programs in order to appropriately risk-weight any direct-credit substitutes (for example, guarantees) extended to such programs. For state member bank examination purposes, the interagency guidance has been reformatted for examiner use as examination objectives, examination procedures, and an internal control questionnaire. The guidance uses the term “banking organization.” In this section, the guidance should be interpreted to mean the application of the risk-based capital guidelines to all state member banks on a consolidated basis.

The guidance sets forth an analytical framework for assessing the broad risk characteristics of direct-credit substitutes³ that a banking organization provides to an ABCP program it sponsors. The guidance provides specific information on evaluating direct-credit substitutes issued in the form of program-wide credit enhancements, as well as an approach to determine the risk-based capital charge for these enhancements. (See SR-05-6 and its attachment. Also, see sections 3020.1, “Assessment of Capital Adequacy,” and 4030.1, “Asset Securitization.”)

The securitization capital rule permits banking organizations with qualifying internal risk-rating systems to use those systems to apply the

internal-ratings approach to their unrated direct-credit substitutes extended to ABCP programs⁴ that they sponsor by mapping internal risk ratings to external rating equivalents. These external credit rating equivalents are organized into three ratings categories: investment-grade (BBB and above) credit risk, high non-investment-grade (BB+ through BB-) credit risk, and low non-investment-grade (below BB-) credit risk. These rating categories can then be used to determine whether a direct-credit substitute provided to an ABCP program should be (1) assigned to a risk weight of 100 percent or 200 percent or (2) subject to the “gross-up” treatment, as summarized in the table on the next page.⁵ (See appendix A for a more detailed description of ABCP programs.)

As the table indicates, the minimum risk weight available under the internal risk-ratings approach is 100 percent, regardless of the internal rating.⁶ Conversely, positions rated below BB- receive the gross-up treatment. That is, the banking organization holding the position must maintain capital against the amount of the position plus all more senior positions.⁷ Application of gross-up treatment, in many cases, will result in a full dollar-for-dollar capital charge (the equivalent of a 1,250 percent risk weight) on direct-credit substitutes that fall into the low non-investment-grade category. In addition, the risk-based capital requirement applied to a direct-credit substitute is subject to the low-level-exposure rule. Under the rule, the amount of required risk-based capital would be limited to the lower of a full dollar-for-dollar capital charge against the direct-credit substitute or the effective risk-based capital charge (for example, 8 percent) for the entire amount of assets in the

1. The Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision.

2. See 66 *Fed. Reg.* 59614 (November 29, 2001). See also 12 C.F.R. 208, appendix A, section III.B.3.

3. *Direct-credit substitute* means an arrangement in which a banking organization assumes, in form or in substance, credit risk associated with an on- or off-balance-sheet credit exposure that it did not previously own (that is, a third-party asset) and the risk it assumes exceeds the pro rata share of its interest in the third-party asset. If the banking organization has no claim on the third-party asset, then the organization’s assumption of any credit risk with respect to the third-party asset is a direct-credit substitute.

4. ABCP programs include multiseller ABCP conduits, credit arbitrage ABCP conduits, and structured investment vehicles.

5. The rating designations (for example, “BBB-” and “BB+”) used in the table are illustrative only and do not indicate any preference for, or endorsement of, any particular rating designation system.

6. Exposures externally rated by a nationally recognized statistical rating organization (NRSRO) above BBB+ are eligible for lower risk weights (that is, 20 percent for AAA and AA, 50 percent for A).

7. *Gross-up treatment* means that a position is combined with all more senior positions in the transaction. The resulting amount is then risk-weighted based on the obligor or, if relevant, the guarantor or the nature of the collateral.

<i>Internal risk-rating equivalent</i>	<i>Ratings category</i>	<i>Risk weighting</i>
BBB- or better	Investment grade	100%
BB+ to BB-	High non-investment grade	200%
Below BB-	Low non-investment grade	Gross-up treatment

ABCP program.⁸

The use of internal risk ratings under the securitization capital rule is limited to determining the risk-based capital charge for unrated direct-credit substitutes that banking organizations provide to ABCP programs. Thus, banking organizations may not use the internal-ratings approach to derive the risk-based capital requirement for unrated direct-credit substitutes extended to other transactions. Approved use of the internal rating-based approach for ABCP programs under the securitization capital rule will have no bearing on the overall appropriateness of a banking organization's internal risk-rating system for other purposes.

Most rated commercial paper issued out of an ABCP program is supported by program-wide credit enhancement, which is a direct-credit substitute. Often the sponsoring banking organization provides, in whole or in part, program-wide credit enhancement to the ABCP program. Program-wide credit enhancement may take a number of different forms, including an irrevocable loan facility, a standby letter of credit, a financial guarantee, or a subordinated debt.

The interagency guidance also discusses the weakest-link approach. This approach is used for calculating the risk-based capital requirement and assumes that the risk of the program-wide credit enhancement is directly dependent on the quality (that is, internal rating) of the riskiest transaction(s) within the ABCP program. (See step 9 of the examination procedures, section 3030.3.) More specifically, the weakest-link concept presupposes the probability that the program-wide credit enhancement that will be drawn is equal to the probability of default of the transaction(s) with the weakest transaction risk rating.

A process is provided that is designed to aid in determining the regulatory capital treatment for program-wide credit enhancements, provided to an ABCP program. The *key underlying principles* are as follows:

1. The determination of the credit quality of the program-wide credit enhancement shall be based on the risk of draw and subsequent loss, which depends directly on the quality of the credit-enhanced assets funded through the ABCP program.
2. An estimate of the risk of draw for the program-wide credit enhancement is derived from the quality (rating) of the riskiest credit(s) within the ABCP program, which is often indicated by the internal rating a banking organization assigns to a transaction's pool-specific liquidity facility. Other credit risks (for example, seller/servicer risk) to the program-wide credit enhancement may also be considered.
3. The weakest-link approach assigns risk-based capital against the program-wide credit enhancement in rank order of the internal ratings starting with the lowest-rated positions supported by the program-wide credit enhancement. Therefore, if all of the positions supported by the program-wide credit enhancement are internally rated investment grade, the banking organization would risk-weight the notional amount of the program-wide credit enhancement at 100 percent and there would be no need to proceed further. However, for positions supported by the program-wide credit enhancement that are non-investment grade, banking organizations can use the formula-driven weakest-link approach illustrated in step 9 of the examination procedures to generate the appropriate amount of risk-based capital to be assessed against an unrated position.

8. The low-level-exposure rule provides that the dollar amount of risk-based capital required for a recourse obligation or direct-credit substitute should not exceed the maximum dollar amount for which a banking organization is contractually liable. (See 12 C.F.R. 208, appendix A, section III.B.3.g.i.)

ASSESSMENT OF INTERNAL RATING SYSTEMS

The guidance is organized in the form of a decision tree that (1) provides an outline of the key decisions that examiners and sponsoring banking organizations should consider when reviewing internal risk-rating systems for ABCP programs and (2) provides supervisors with more-specific information on how to assess the adequacy of these systems. Many of the qualitative and quantitative factors used to evaluate risk in this guidance are comparable with rating agency criteria (for example, criteria from S&P, Moody's, and Fitch) because the ABCP program sponsors generally use the rating methodologies of nationally recognized statistical rating organizations (NRSROs) when assessing the credit quality of their risk exposures to ABCP programs. The guidance has two primary goals:

- provide information to banking organizations to ensure the accuracy and consistency of the ratings assigned to transactions in an ABCP program
- assist supervisors in assessing the adequacy of a banking organization's internal risk-rating system based on the nine key criteria set forth in the securitization capital rule⁹

9. 12 C.F.R. 208, appendix A, III.B.3.f.i.

APPENDIX A—OVERVIEW OF ABCP PROGRAMS

ABCP programs provide a means for corporations to obtain relatively low-cost funding by selling or securitizing pools of homogenous assets (for example, trade receivables) to special-purpose entities (SPEs/ABCP programs). The ABCP program raises funds for purchase of these assets by issuing commercial paper into the marketplace. The commercial paper investors are protected by structural enhancements provided by the seller (for example, overcollateralization, spread accounts, early-amortization triggers, etc.) and by credit enhancements (for example, subordinated loans or guarantees) provided by banking organization sponsors of the ABCP program and by other third parties. In addition, liquidity facilities are also present to ensure the rapid and orderly repayment of commercial paper should cash-flow difficulties emerge. ABCP programs are nominally capitalized SPEs that issue commercial paper. A sponsoring banking organization establishes the ABCP program but usually does not own the conduit's equity, which is often held by unaffiliated third-party management companies that specialize in owning such entities, and are structured to be bankruptcy remote.

Typical Structure

ABCP programs are funding vehicles that banking organizations and other intermediaries establish to provide an alternative source of funding to themselves or their customers. In contrast to term securitizations, which tend to be amortizing, ABCP programs are ongoing entities that usually issue new commercial paper to repay maturing commercial paper. The majority of ABCP programs in the capital markets are established and managed by major international commercial banking organizations. As with traditional commercial paper, which has a maximum maturity of 270 days, ABCP is short-term debt that may either pay interest or be issued at a discount.

Types of ABCP Programs

Multiseller programs generally provide working capital financing by purchasing or advancing against receivables generated by multiple corporate clients of the sponsoring banking organizations. These programs are generally well diversified across both sellers and asset types.

Single-seller programs are generally established to fund one or more types of assets originated by a single seller. The lack of diversification is generally compensated for by increased program-wide credit enhancement.

Loan-backed programs fund direct loans to corporate customers of the ABCP program's sponsoring banking organization. These loans are generally closely managed by the banking organization and have a variety of covenants designed to reduce credit risk.

Securities-arbitrage programs invest in securities that generally are rated AA- or higher. They generally have no additional credit enhancement at the seller/transaction level because the securities are highly rated. These programs are typically well diversified across security types. The arbitrage is mainly due to the difference between the yield on the securities and the funding cost of the commercial paper.

Structured investment vehicles (SIVs) are a form of a securities-arbitrage program. These ABCP programs invest in securities typically rated AA-

or higher. SIVs operate on a market-value basis similar to market value CDOs in that they must maintain a dynamic overcollateralization ratio determined by analysis of the potential price volatility on securities held in the portfolio. SIVs are monitored daily and must meet strict liquidity, capitalization, leverage, and concentration guidelines established by the rating agencies.

Key Parties and Roles

Key parties for an ABCP program include the following:

- program management/administrators
- credit-enhancement providers
- liquidity-facility providers
- seller/servicers
- commercial paper investors

Program Management

The sponsor of an ABCP program initiates the creation of the program but typically does not own the equity of the ABCP program, which is provided by unaffiliated third-party investors. Despite not owning the equity of the ABCP program, sponsors usually retain a financial stake in the program by providing credit enhancement, liquidity support, or both, and they play an active role in managing the program. Sponsors typically earn fees—such as credit-enhancement, liquidity-facility, and program-management fees—for services provided to their ABCP programs.

Typically, an ABCP program makes arrangements with various agents/servicers to conduct the administration and daily operation of the ABCP program. This includes such activities as purchasing and selling assets, maintaining operating accounts, and monitoring the ongoing performance of each transaction. The sponsor is also actively engaged in the management of the ABCP program, including underwriting the assets purchased by the ABCP program and the type/level of credit enhancements provided to the ABCP program.

Credit-Enhancement Providers

The sponsoring banking organization typically provides pool-specific and program-wide backup

liquidity facilities, and program-wide credit enhancements, all of which are usually unrated (pool-specific credit enhancement, such as overcollateralization, is provided by the seller of the assets). These enhancements are fundamental for obtaining high investment-grade ratings on the commercial paper issued to the market by the ABCP program. Seller-provided credit enhancement may exist in various forms and is generally sized based on the type and credit quality of the underlying assets as well as the quality and financial strength of seller/servicers. Higher-quality assets may only need partial support to achieve a satisfactory rating for the commercial paper. Lower-quality assets may need full support.

Liquidity-Facility Providers

The sponsoring banking organization and in some cases, unaffiliated third parties, provide pool-specific or program-wide liquidity facilities. These backup liquidity facilities ensure the timely repayment of commercial paper under certain conditions, such as financial market disruptions or if cash-flow timing mismatches occur, but generally not under conditions associated with the credit deterioration of the underlying assets or the seller/servicer to the extent that such deterioration is beyond what is permitted under the related asset-quality test.

Commercial Paper Investors

Commercial paper investors are typically institutional investors, such as pension funds, money market mutual funds, bank trust departments, foreign banks, and investment companies. Commercial paper maturities range from 1 day to 270 days, but most frequently are issued for 30 days or less. There is a limited secondary market for commercial paper since issuers can closely match the maturity of the paper to the investors' needs. Commercial paper investors are generally repaid from the reissuance of new commercial paper or from cash flows stemming from the underlying asset pools purchased by the program. In addition, to ensure timely repayment in the event that new commercial paper cannot be issued or if anticipated cash flows from the underlying assets do not occur, ABCP programs utilize backup liquidity facilities. In addition, the banking organization

can purchase the ABCP from the conduit if the commercial paper cannot be issued. Pool-specific and program-wide credit enhancements also protect commercial paper investors from deterioration of the underlying asset pools.

The Loss Waterfall

The loss waterfall diagram (on the next page) for the exposures of a typical ABCP program generally has four legally distinct layers. However, most legal documents do not specify which form of credit or liquidity enhancement is in a priority position after pool-specific credit enhancement is exhausted due to defaults. For example, after becoming aware of weakness in the seller/servicer or in asset performance, an ABCP program sponsor may purchase assets out of the conduit using pool-specific liquidity. Liquidity agreements must be subject to a valid asset-quality test that prevents the purchase of defaulted or highly delinquent assets. Liquidity facilities that are not limited by such an asset-quality test are to be viewed as credit enhancement and are subject to the risk-based capital requirements applicable to direct-credit substitutes.

Pool-Specific Credit Enhancement

The form and size of credit enhancement for each particular asset pool is dependent upon the nature and quality of the asset pool and the seller/servicer's risk profile. In determining the level of credit enhancement, consideration is given to the seller/servicer's financial strength, quality as a servicer, obligor concentrations, and obligor credit quality, as well as the historic performance of the asset pool. Credit enhancement is generally sized to cover a multiple level of historical losses and dilution for the particular asset pool. Pool-specific credit enhancement can take several forms, including overcollateralization, cash reserves, seller/servicer guarantees (for only highly rated seller/servicers), and subordination. Credit enhancement can either be dynamic (that is, increases as the asset pool's performance deteriorates) or static (that is, fixed percentage). Pool-specific credit enhancement is generally provided by the seller/servicer (or carved out of the asset pool in the case of overcollateralization) but may be provided by other third parties.

The Loss Waterfall

The ABCP program sponsor or administrator will generally set strict eligibility requirements for the receivables to be included in the purchased asset pool. For example, receivable eligibility requirements will establish minimum credit ratings or credit scores for the obligors and the maximum number of days the receivable can be past due.

Usually the purchased asset pools are structured (credit-enhanced) to achieve a credit-quality equivalent of investment grade (that is, BBB or higher). The sponsoring banking organization will typically utilize established rating agency criteria and structuring methodologies to achieve the desired internal rating level. In certain instances, such as when ABCP programs purchase ABS, the pool-specific credit enhancement is already built into the purchased ABS and is reflected in the security's credit rating. The internal rating on the pool-specific liquidity facility provided to support the purchased asset pool will reflect the inclusion of the pool-

specific credit enhancement and other structuring protections.

Program-Wide Credit Enhancement

The second level of contractual credit protection is the program-wide credit enhancement, which may take the form of an irrevocable loan facility, a standby letter of credit, a surety bond from a monoline insurer, or an issuance of subordinated debt. Program-wide credit enhancement protects commercial paper investors if one or more of the underlying transactions exhaust the pool-specific credit enhancement and other structural protections. The sponsoring banking organization or third-party guarantors are providers of this type of credit protection. The program-wide credit enhancement is generally sized by the rating agencies to cover the potential of multiple defaults in the underlying portfolio of transactions within ABCP conduits and takes into

account concentration risk among seller/servicers and industry sectors.

Pool-Specific Liquidity

Pool-specific liquidity facilities are an important structural feature in ABCP programs because they ensure investors of timely payments on the issued commercial paper by smoothing timing differences in the payment of interest and principal on the pooled assets and ensuring payments in the event of market disruptions. The types of liquidity facilities may differ among various ABCP programs and may even differ among asset pools purchased by a single ABCP program. For instance, liquidity facilities may be structured either in the form of (1) an asset-purchase agreement, which provides liquidity to the ABCP program by purchasing nondefaulted assets from a specific asset pool, or (2) a loan to the ABCP program, which is repaid solely by the cash flows from the underlying assets.¹⁰ Some older ABCP programs may have both pool-specific liquidity and program-wide liquidity coverage, while more-recent ABCP programs tend to utilize only pool-specific facilities. Typically, the seller-provided credit enhancement continues to provide credit protection on an asset pool that is purchased by a liquidity banking organization so that the institution is protected against credit losses that may arise due to subsequent deterioration of the pool.

Pool-specific liquidity, when drawn prior to the ABCP program's credit enhancements, is subject to the credit risk of the underlying asset pool. However, the liquidity facility does not provide direct-credit enhancement to the commercial paper holders. Thus, the pool-specific liquidity facility generally is in an economic second-loss position after the seller-provided credit enhancements and prior to the program-wide credit enhancement even when the legal documents state that the program-wide credit enhancement would absorb losses prior to the pool-specific liquidity facilities. This is because the sponsor of the ABCP program would most likely manage the asset pools in such a way that deteriorating portfolios or assets would be put to the liquidity banking organizations prior to any

10. Direct-liquidity loans to an ABCP program may be termed a *commissioning agreement* (most likely in a foreign bank program) and may share in the security interest in the underlying assets when commercial paper ceases to be issued due to deterioration of the asset pool.

defaults that would require a draw against the program-wide credit enhancement.¹¹ While the liquidity banking organization is exposed to the credit risk of the underlying asset pool, the risk is mitigated by the seller-provided credit enhancement and the asset-quality test.¹² At the time that the asset pool is put to the liquidity banking organization, the facility is usually fully drawn because the entire amount of the pool that qualifies under the asset-quality test is purchased by the banking organization. However, with respect to revolving transactions (such as credit card securitizations) it is possible to average less than 100 percent of the commitment.

Program-Wide Liquidity

The senior-most position in the waterfall, program-wide liquidity, is provided in an amount sufficient to support that portion of the face amount of all the commercial paper that is issued by the ABCP program that is necessary to achieve the desired external rating on the issued paper. Program-wide liquidity also provides liquidity in the event of a short-term disruption in the commercial paper market. In some cases, a liquidity banking organization that extends a direct liquidity loan to an ABCP program may be able to access the program-wide credit enhancement to cover losses while funding the underlying asset pool.

APPENDIX B—CREDIT-APPROVAL MEMORANDUM

The credit-approval memorandum typically should include a description of the following:

1. *Transaction structure.* In the beginning of the credit-approval memorandum, the sponsoring banking organization will outline the structure of the transaction, which includes a

11. In fact, according to the contractual provisions of some conduits, a certain level of draws on the program-wide credit enhancement is a condition for unwinding the conduit program, which means that this enhancement is never meant to be used.

12. An asset-quality test or liquidity-funding formula determines how much funding the liquidity banking organization will extend to the conduit based on the quality of the underlying asset pool at the time of the draw. Typically, liquidity banking organizations will fund against the conduit's purchase price of the asset pool less the amount of defaulted assets in the pool.

discussion of the asset type that would be purchased by the ABCP program and the liquidity facilities (and possibly credit enhancements) that the sponsoring banking organization is providing to the transaction. Generally, the sponsoring banking organization indicates the type and dollar volume of the liquidity facility that the institution is seeking to extend to the transaction, such as a \$250 million short-term pool-specific liquidity facility, as well as the type of first-loss credit enhancement that is provided by the seller, such as overcollateralization. The asset purchase by the ABCP conduit from the seller may be described as a two-step sale that first involves the sale of the assets (for example, trade receivables) to an SPV on a true-sale basis and then involves the sale of the assets by the SPV to the ABCP program. Other features of the structure should be described, such as if the transaction is a revolving transaction with a one-year revolving period.

In addition, the sponsoring banking organization typically obtains true-sale and non-consolidation opinions from the seller's external legal counsel. The opinions should identify the various participants in the transaction—including the seller, servicer, and trustee—as appropriate. For instance, the seller of the assets is identified as the party that would act as the servicer of the assets and who is responsible for all the representations and warranties associated with the sold assets.

2. *Asset seller's risk profile.* The assessment of the asset seller's risk profile should consider its past and expected future financial performance, its current market position and expected competitiveness going forward, as well as its current debt ratings. For example, the sponsor may review the seller's leverage, generation of cash flow, and interest coverage ratios, and whether the seller is at least investment grade. Also, the sponsoring banking organization may attempt to anticipate the seller's ability to continue to perform under more-adverse economic conditions. In addition, some sponsors may take other information into account, such as KMV ratings, to confirm their internal view of the seller's financial strength.
3. *Underwriting standards.* A discussion of the seller's current and historical underwriting standards should be included in the transac-

tion summary. For certain types of assets, such as auto loans, the sponsoring banking organization should consider the seller's use of credit scoring and the minimum acceptable loan score that may be included in the asset pool. In addition, the credit-approval memorandum may include an indication of whether the underwriting standards have remained relatively constant over time or whether there has been a recent tightening or loosening.

4. *Asset-eligibility criteria.* In order to reduce the ABCP program's exposure to higher-risk assets, an ABCP program generally specifies minimum asset-eligibility criteria. This is particularly true for revolving transactions since the seller's underwriting standards may change so that the credit quality of the assets purchased by the ABCP program can be adversely affected. While eligibility criteria may be designed for specific transactions, there is a common set of criteria that are generally applicable, including those that exclude the purchase of defaulted assets or assets past due more than a specified number of days appropriate for the specific transaction; limiting excess concentration to an individual obligor; excluding the purchase of assets of obligors that are affiliates of the seller; or limiting the tenor of the assets to be purchased. Other criteria also may require that the obligor be a resident of a certain country and that the asset is payable in a particular currency. All of these criteria are intended to reduce the credit risk inherent in the asset pool to be purchased by the ABCP program. A strong set of eligibility criteria may reduce the necessary credit enhancement provided by the selling organization.
5. *Collection process.* Often, if the seller/servicer has a senior unsecured debt rating of at least BBB-, cash collections may be commingled with the seller/servicer's cash until such time as periodic payments are required to be made to the ABCP program. Documentation should provide an ABCP program with the ability to take steps to control the cash flows when necessary and include covenants to redirect cash flows or cause the segregation of funds into a bankruptcy-remote SPE upon the occurrence of certain triggers. A description of how checks, cash, and debit payments are to be handled may be discussed. For instance, documentation may

- state that payments by check must be processed on the same day they are received by the lockbox and that after the checks clear, the cash is deposited in a segregated collection account at the sponsoring banking organization. Also, the documents may describe the types of eligible investments in which the cash may be invested, which are usually highly rated, liquid investments such as government securities and A1/P1+ commercial paper.
6. *Assets' characteristics.* Usually, a transaction summary will provide a description of the assets that will be sold into the program and outline relevant pool statistics. For instance, there likely will be a discussion of the weighted average loan balance, weighted average credit score (if appropriate), weighted average original term, and weighted average coupon, as well as the ranges of each characteristic. In addition, the portfolio may be segmented by the sponsoring banking organization's internal-rating grades to give an indication of each segment's average credit quality (as evidenced by an average credit score) and share of the portfolio's balances. Many times, the sponsor will identify concentrations to individual obligors or geographic areas, such as states.
 7. *Dilution.* Certain asset types (for example, trade receivables) purchased by ABCP programs may be subject to dilution, which is the evaporation of the asset due to customer returns of sold goods, warranty claims, disputes between the seller and its customers, as well as other factors. For instance, the seller of the assets to the ABCP program may permit its customers to return goods, at which point the receivables cease to exist. The likelihood of this risk varies by asset type and is typically addressed in the transaction summary. For instance, in sales of credit card receivables to an ABCP program, the risk of dilution is small due to the underlying diversity of the obligors and merchants. While the pool-specific liquidity facilities often absorb dilution initially, the seller generally is required to establish a reserve to cover a multiple of expected dilution, which is based on historical information. The adequacy of the dilution reserve is reviewed at the inception of the transaction and may or may not be incorporated in the seller-provided credit enhancement that is provided on the pool of assets sold to the ABCP program.
 8. *Historical performance.* As a prelude to sizing the pool-specific credit enhancement provided by the seller, the sponsoring banking organization will review the historical performance of the seller's portfolio, including consideration of losses (that is, loss rate and loss severity), delinquencies, dilutions, and the turnover rate.¹³ An indication of the direction of losses and delinquencies, and the reasons behind any increase or decrease are often articulated. For instance, an increase in losses may reflect losses due to specific industry-related problems and general economic downturns. Typically, the rating agencies prefer at least three years' worth of historical information on the performance of the seller's asset pools, although the rating agencies periodically permit transactions to have less information. As a result, a sponsoring banking organization likely will require the same degree of information as a rating agency whether this is a full three-year history or a lesser amount, as appropriate, when assessing the credit quality of its liquidity and credit-enhancement exposures.
 9. *Termination events.* ABCP programs usually incorporate commercial paper stop-issuance or wind-down triggers to mitigate losses that may result from a deteriorating asset pool or some event that may hinder the ABCP programs' ability to repay maturing commercial paper. Such triggers may be established at either the pool level or program-wide level, and may, if hit, require the ABCP program to immediately stop issuing commercial paper to fund (1) new purchases from a particular seller or (2) any new purchases regardless of the seller. In addition, such triggers may require the ABCP program to begin liquidating specific asset pools or its entire portfolio.
- The rating agencies consider these structural safeguards, which are designed to protect the ABCP program from credit deterioration over time, in determining the rating on an ABCP program's commercial paper. In many ABCP programs, there may be a provision that requires the program to wind down if a certain percentage of the program-wide credit enhancement has been used to

13. The turnover rate of a receivables portfolio is a measure of how fast the outstanding assets are paid off. For example, if a seller had sales of \$4,000 in the prior year and an average portfolio balance of \$1,000, then the turnover rate of the portfolio is four.

cover losses (for example, 25 percent).

Examples of pool-specific triggers include the insolvency or bankruptcy of the seller/servicer; downgrade of the seller's credit rating below a specific rating grade; or deterioration of the asset pool to the point where charge-offs, delinquencies, or dilution rises

above predetermined levels. Program-wide triggers may include (1) the ABCP program's failure to repay maturing commercial paper or (2) when draws reduce the program-wide credit enhancement below a stated threshold.

Assessing Risk-Based Capital (RBC)—Direct-Credit Substitutes Extended to ABCP Programs

Examination Objectives

Effective date October 2007

Section 3030.2

Unless otherwise specified, examiners should weigh the importance and significance of the objectives being assessed when he or she determines a final conclusion.

INTERNAL RISK-RATING SYSTEM

1. To determine if the banking organization has a robust internal risk-rating system.
2. To determine if the banking organization generally has sound risk-management practices and principles.

INTERNAL RISK-RATING SYSTEM FOR ABCP SECURITIZATION EXPOSURES

1. To determine the extent to which the banking organization integrates its ABCP internal risk-rating process with its credit-risk management framework.
2. To qualitatively assess the suitability of the banking organization's risk-rating process relative to the transactions and type of assets securitized.
3. To assess the adequacy of the credit-approval process.

INTERNALLY RATED EXPOSURES

1. To determine whether the banking organization applies its internal risk-rating system to liquidity facilities and credit enhancements extended to ABCP programs.
2. To determine whether the assigned internal ratings incorporate all of the risks associated with rated exposures extended to ABCP programs.

MONITORING OF ABCP PROGRAMS BY RATING AGENCIES

1. To confirm that the commercial paper issued

by the ABCP programs is rated by one or more nationally recognized statistical rating organizations (NRSROs).

2. To verify that NRSROs are monitoring the ABCP programs in order to ensure the maintenance of minimum standards for the respective ABCP program's rating.

UNDERWRITING STANDARDS AND MANAGEMENT OVERSIGHT

1. To assess the quality and robustness of the underwriting process.

INTERNAL-RATING CONSISTENCY WITH RATINGS ISSUED BY THE RATING AGENCIES

1. To confirm that whenever ABCP program transactions are externally rated, internal ratings are consistent with, or more conservative than, those issued by NRSROs.

FIRST-LOSS POSITION FOR PROGRAM-WIDE CREDIT ENHANCEMENT

1. To ascertain the rank order, if possible, of the risk assumed by the various direct-credit substitutes and liquidity facilities in the ABCP program—determining the order in which various exposures would absorb losses.
2. To determine if third-party investors provide program-wide credit enhancement to the ABCP conduit.
3. To determine if the spread that third-party investors or the banking organization charges for taking program-wide credit-enhancement risk is generally within the market's investment-grade pricing range.

CONCENTRATIONS OF NON-INVESTMENT GRADE SELLER/SERVICERS

1. To determine if the sponsoring banking organization is exposed to an inordinate amount of seller/servicer risk.

UNDERLYING ASSETS OF THE ABCP PROGRAM STRUCTURED TO INVESTMENT-GRADE RISK

1. To obtain the internal rating for the program-wide credit enhancement in order to deter-

mine the banking organization's assessment of the credit quality of the risk exposure.

2. To rank-order the underlying transactions in the ABCP program on the basis of internal risk ratings in order to determine the notional amount of transactions falling in each of the three ratings categories: investment grade (BBB- or better), high non-investment grade (BB+ to BB-), and low non-investment grade (below BB-).
3. To determine a risk-based capital requirement for the program-wide credit enhancement.

Assessing Risk-Based Capital (RBC)—Direct-Credit Substitutes Extended to ABCP Programs

Examination Procedures

Effective date October 2007

Section 3030.3

DECISION TREE

The decision tree is intended to assist examiners in determining the adequacy of the internal rating systems used for rating direct-credit substitutes extended to asset-backed commercial paper (ABCP) programs. If examiners consider a banking organization's internal rating system adequate, then the institution may use the internal ratings assigned to calculate the risk-based capital charge for unrated direct-credit substitutes, including program-wide credit enhancements. The determination process can essentially be broken down into individual steps that start by answering broad fundamental risk questions and end with examining more-detailed ABCP program-specific characteristics.

The first six steps (1–6) of the process focus on evaluating the banking organization's risk-rating system, while the final three steps (7–9) are used to determine the amount of risk-based capital to be assessed against program-wide credit enhancements.

PERFORMING THE EXAMINATION PROCEDURES

Examiners should be mindful that evaluating the adequacy of internal risk-rating systems generally depends on both subjective judgments and objective information generated in each step of the process. When performing the examination procedures, the examiner may determine that certain observed weaknesses in meeting specific supervisory expectations may not necessarily be severe enough to conclude that the internal risk-rating system is inadequate. In some cases, compensating strengths in components of the risk-rating system may offset observed weaknesses. However, examiners should take such weaknesses into consideration in formulating their overall conclusion and consider them when developing recommendations to improve the internal risk-rating process. Failure to meet the regulatory requirements and follow the supervisory guidance typically is an indication of unsafe and unsound banking practices in the risk management of ABCP programs. Where failures are observed, examiners should conclude that use of

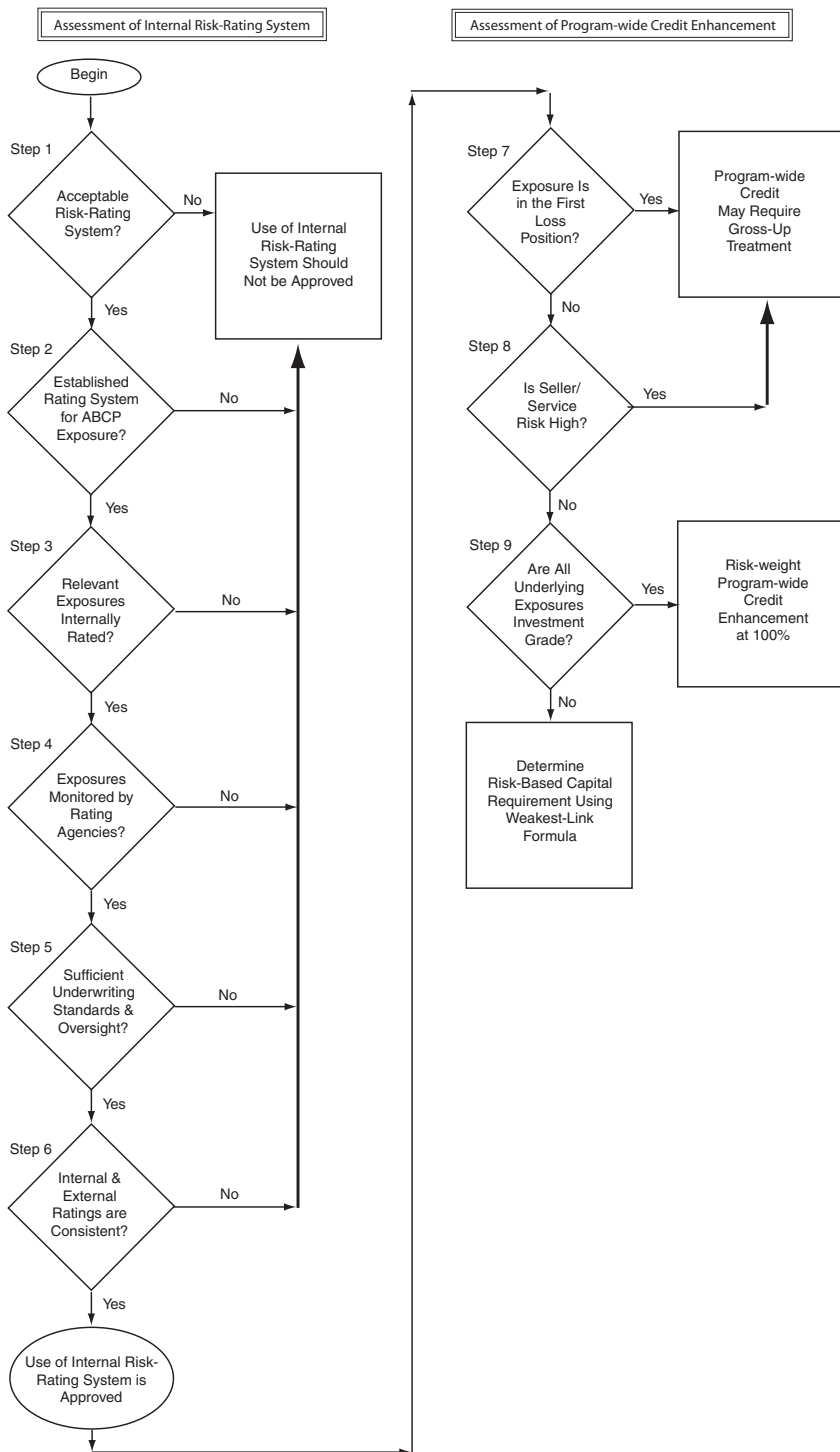

the internal-ratings approach for exposures to ABCP programs is inappropriate for purposes of the respective provisions of the risk-based capital rule.

While this guidance has been designed to address common industry underwriting and risk-management practices, it may not sufficiently address all circumstances. For unique cases not adequately addressed by the guidance, examiners should review the specific facts and circumstances with the responsible Reserve Bank management in conjunction with the Board's Banking Supervision and Regulation staff before rendering a final conclusion.

Organizing the Examination Process

When organizing the examination, examiners should note if the banking organization operates multiple ABCP conduits. In some cases, a banking organization may manage individual ABCP conduits out of different legal entities or lines of business, and each conduit may focus on different business strategies.

1. Before initiating the examination process, determine—
 - a. the number of ABCP conduits sponsored by the banking organization,
 - b. which ABCP conduits have direct-credit substitutes provided by the banking organization, and
 - c. from what areas within the organization these activities are conducted.
2. When multiple ABCP conduits exist, assess whether the banking organization applies the internal risk-rating system consistently to each program with identical policies, procedures, and controls.
3. If the banking organization operates ABCP program activities out of different legal entities or lines of business, or if the application of an internal rating system varies from program to program, evaluate the adequacy of each unique application.
4. Consider limiting any Federal Reserve approval of the use of internal ratings to those programs that have been examined and determined to meet the requirements outlined in this guidance.

- Banking organizations may have established ABCP lines of business from which they coordinate client relationships, transaction-origination activities, funding activities, and ABCP conduit management. An inspection of such “front-office” operations can provide important insight into the unique characteristics of the banking organization’s ABCP program. Examiners should focus the examination’s review on the areas of the organization where credit decisions and credit-risk management are housed and where oversight of the internal risk-rating system is maintained.
5. Consider the factors listed below while conducting the banking organization’s examination. When any of these factors are observed, perform a more thorough review of its internal controls, risk management, and potential weaknesses before approving the banking organization’s internal risk-rating system.

Although observation of a single factor may not be compelling enough for withholding approval, the examiner’s observation of one or more of these factors should result in the adoption of a more conservative bias as the examination procedures are performed.

If a combination of the risk factors identified below is observed during the examination process, the examiner may determine that the internal risk-rating system should not be relied upon for assessing the risk-based capital treatment for direct-credit substitutes provided to ABCP programs.

The following factors should be considered:

1. The sponsoring banking organization has a short track record and is inexperienced in the management of an ABCP program.
2. The transaction-specific credit enhancement is solely in the form of excess spread.
3. Significantly higher ABCP program costs exist for program-wide credit enhancement as compared with the internal and external benchmarks for investment-grade risk.
4. The sponsoring banking organization fails to maintain historical ratings-migration data or the migration data of required credit-enhancement levels.
5. There is an excessive number of transaction-rating migrations (both internal and external), or excessive collateral calls are necessary to enhance transaction-level credit

enhancement to maintain an internal risk rating.

6. The transactional due-diligence, approval, or execution documentation is poorly prepared.
7. A significant number of problem transactions are taken out of the ABCP program through liquidity draws.
8. There is no independent review or oversight of the internal rating system or the assigned transaction ratings. A review conducted by internal parties within the sponsoring/administrating banking organization may still be considered independent so long as the business unit conducting the review does not report to the unit that is responsible for the ABCP program’s transactions.
9. The transaction-underwriting and risk-management functions of an ABCP program sponsor/administrator, other than routine outside audit reviews, are delegated to unaffiliated third parties.
10. The ABCP conduit commercial paper is not rated lower than A-2/P2 on an ongoing basis by the rating agencies.

If examiners observe either of the following two factors, the banking organization should not receive Federal Reserve approval to use the internal-ratings approach. (See the examination procedures for more detail.)

11. The banking organization does not have, in the examiner’s view, an established or acceptable internal risk-rating system to assess the credit quality of its exposures to its ABCP programs.
12. Relevant direct-credit substitutes or liquidity facilities are not internally risk rated.

Step 1—Acceptable Internal Risk-Rating Systems

1. Determine if the banking organization is able to satisfactorily demonstrate how its internal risk-rating system corresponds to the rating agencies’ standards used as the framework for complying with the securitization requirements in the risk-based capital rule. Ascertain whether the credit ratings map to the risk-weight categories in the ratings-based approach so they can be applied to internal ratings.

2. If a separate supervisory team has conducted a detailed evaluation of the robustness and effectiveness of the banking organization's overall internal ratings system, use the inspection work to assess the application of internal ratings specific to the banking organization's ABCP programs. Consider reducing the procedures to a quick review of the previous examination's findings.
3. If there was no previous evaluation of the banking organization's risk-rating system or if documentation of the evaluation findings is unavailable, perform a full review of the organization's risk-rating system.
4. Ascertain whether the banking organization's overall risk-rating process is generally consistent with the fundamental elements of sound risk management and with the rating assumptions and methodologies of the rating agencies.
 - a. Determine if the internal ratings are incorporated into the credit-approval process and are considered in the pricing of credit.
 - b. Find out if the internal lending and exposure limits are linked to internal ratings.
5. Verify that the internal risk-rating system for ABCP programs contains the following nine criteria:
 - a. The internal credit-risk system is an integral part of the banking organization's risk-management system, which explicitly incorporates the full range of risks arising from its participation in securitization activities.
 - b. Internal credit ratings are linked to measurable outcomes, such as the probability that the position will experience any loss, the position's expected loss given default, and the degree of variance in losses given default on that position.
 - c. The banking organization's internal credit-risk system separately considers (1) the risk associated with the underlying loans or borrowers and (2) the risk associated with the structure of a particular securitization transaction.
 - d. The banking organization's internal credit-risk system identifies gradations of risk among "pass" assets and other risk positions.
 - e. The banking organization has clear, explicit criteria, including subjective factors, that are used to classify assets into each internal risk grade.
 - f. The banking organization has independent credit-risk management or loan-review personnel assigning or reviewing the credit-risk ratings.
 - g. The banking organization has an internal audit procedure that periodically verifies that internal risk ratings are assigned in accordance with the organization's established criteria.
 - h. The banking organization (1) monitors the performance of the internal credit-risk ratings assigned to nonrated, nontraded direct-credit substitutes over time to determine the appropriateness of the initial credit-risk rating assignment and (2) adjusts individual credit-risk ratings, or the overall internal credit-risk ratings system, as needed.
 - i. The internal credit-risk system makes credit-risk rating assumptions that are consistent with, or more conservative than, the credit-risk rating assumptions and methodologies of the nationally recognized statistical rating organizations (NRSROs).

If all of the above supervisory guidance is not adhered to, the use of internal ratings under the risk-based capital rule should not be approved.

Step 2—Use of an Established Internal Risk-Rating System Tailored to ABCP Securitization Exposures

1. Determine if an internal rating system exists that assesses exposures (for example, liquidity facilities) provided to ABCP programs.
2. Ascertain whether there is evidence that the ABCP internal risk-rating process is an integrated component of the enterprise-wide credit-risk management process. This includes—
 - a. risk ratings that are a fundamental portfolio management tool and
 - b. internal ratings that are considered in credit and pricing decisions.
3. Evaluate whether the management team and staff are experienced with the types of assets and facilities internally rated for the ABCP program.
4. Determine if there is meaningful differentiation of risk. Verify that—
 - a. separate ratings are applied to borrowers and facilities that separately consider the

- risk associated with the underlying loans and borrowers, as well as the risk associated with the specific positions in a securitization transaction, and
- b. a distinct set of rating criteria exists for each grade. The banking organization should have classified its assets into each risk grade using clear, explicit criteria, even for subjective factors.
5. Verify that the risk-ratings criteria for ABCP transactions are documented with specific methodologies detailed for different asset types.
 6. Find out if the banking organization includes a transaction summary¹ as part of its credit-approval process. The transaction summary should include a description of the following: transaction structure, seller/servicer's risk profile,² relevant underwriting criteria, asset-eligibility criteria, collection process, asset characteristics, dilution and historical loss rates, and trigger and termination events. (See appendix B of section 3030.1 for a more detailed description of the above transaction-summary categories.)
 7. Before reaching a final assessment, consult with the other examiners who have conducted reviews of the banking organization's other risk-rating systems, including the corporate risk-rating system.

Step 3—Relevant Internally Rated Exposures

1. Verify that the banking organization internally rates all relevant exposures to ABCP programs, such as pool-specific liquidity facilities.
2. Ascertain if the banking organization maps its internal ratings to the full scale of external ratings provided by the NRSROs.

Step 4—ABCP Program Monitored by Rating Agencies

1. Verify that the commercial paper issued by

1. The transaction summary may not be specifically identified, but its elements would be part of the credit-approval process.

2. The seller/servicer's risk profile may be developed by a group within the banking organization other than the ABCP program group and incorporated into the transaction summary by reference.

- the ABCP program has been rated in the second-highest short-term rating category (A2, P2, or F2) or higher.
2. Confirm that there is evidence that rating agencies are actively monitoring the structuring methodologies and credit quality of the transactions purchased by the ABCP conduit.
 - a. *Prescreened programs.* Confirm that NRSROs are prescreening each new transaction placed in the ABCP program.
 - b. *Post-review programs.* Find out if ABCP program transactions are monitored by the NRSROs via monthly or quarterly reports. Determine if the banking organization is promptly forwarding information on new transactions and transactions experiencing deterioration to the NRSROs (for example, through monthly reports).

Step 5—Sufficient Underwriting Standards and Management Oversight

1. Determine if the banking organization has internal policies addressing underwriting standards that are applicable to ABCP programs.
2. For each ABCP transaction, ascertain whether the institution applies the following factors in its underwriting process:

a. *General Portfolio Characteristics:*

- an understanding of the operations of the businesses that originates the assets being securitized
- a review of the general terms offered to the customer
- a determination of the quality of assets and from which legal entity assets are originated
- a determination of customer, industry, and geographic concentrations
- an understanding of the recent trends in the business that may affect any historical information about the assets

b. *Legal Structure of the Transaction:*

- A general structuring of transactions as “bankruptcy-remote” via a legal “true sale” of assets rather than as

secured loans. (This reduces the likelihood that a creditor of the seller can successfully challenge the security interest in the asset pool in the event of seller insolvency.) Determine if the banking organization maintains copies of true-sale opinions in the facility file or as a part of the facility's legal documents.

- An appropriate management level in the credit-approval hierarchy that is responsible for reviewing transactions that do not have a bankruptcy-remote “true-sale” structure.
- Uniform commercial code (UCC) filings and searches on securitized assets. (UCC filings are often needed to ensure that asset transfers resist third-party attack [that is, are “perfected”]). UCC searches often ensure that asset transfers are not subject to a higher-priority security interest (that is, that the banking organization's interests are “first priority”). If such filings and searches have not been performed, examiners should make further inquiry. There may be a satisfactory reason for not using the UCC filing system.
- Transactions that include a contractual representation or a legal opinion ensuring that there are no provisions, such as negative pledges or limitations on the sale of assets, that would prohibit the securitization transaction.

c. Transaction-Specific Credit Enhancements

Transaction-specific credit enhancement takes a variety of forms depending upon the asset type. For instance, credit enhancement relating to trade receivables may consist of the following types of reserves:

- loss reserve—reserves related to obligor default risk
- dilution reserve—reserves related to non-cash reductions of balances
- servicing reserve—reserves related to fees for servicing and trustees

The loss and dilution reserves typically account for most of the reserves.

Reserves may take a number of different forms, including recourse to the seller (if the seller is of high credit quality), funded cash reserves, and over-collateralization.

- (1) Determine if the credit-approval chain carefully scrutinizes transactions in which reserves are in the form of recourse to a seller with weak credit quality.
- (2) Ascertain if the banking organization's criteria for structuring the appropriate reserve levels are generally consistent with rating agency criteria for a particular asset class.
- (3) Review and consider the relevant rating agency methodology when evaluating reserves for any particular transaction.

d. Eligibility Criteria

Eligibility criteria are structured into securitization transactions to restrict (or limit) the inclusion of certain categories of receivables as appropriate to the particular transaction. Examples of such restricted categories may include:

- delinquent receivables (based on a stated aging policy, such as 30 days past due)
- receivables of bankrupt obligors
- foreign receivables
- affiliate receivables
- receivables of obligors with delinquent balances above a certain amount
- bill and hold receivables
- unearned receivables
- non-U.S.-dollar-denominated receivables
- receivables subject to offset
- disputed receivables
- receivables with a payment date beyond a specified time horizon
- post-petition receivables

The above list is illustrative and should not be considered comprehensive.

- (1) Conduct further analysis when there is a lack of any specific eligibility criteria (for example, those listed above) that warrants a further determination as to whether the banking

organization has taken appropriate measures to alleviate any particular risk arising from the lack of a specific feature.

e. Concentrations

- (1) Analyze obligor, industry, and geographic concentrations.
- (2) Ascertain if the appropriate concentration limits have been established within transaction documents, often within the eligibility criteria.

f. Trigger Events and Termination Events

The inclusion of trigger and termination events plays a critical role in securitization structures. It is standard practice to have trigger or termination events related to the performance of the assets and, depending upon the asset type, to the seller/servicer. Trigger events are comparable to performance covenants in corporate debt and provide a lender with the ability to accelerate a transaction, when appropriate. In addition, such triggers create incentives that allow the seller and the banking organization to negotiate higher levels of credit enhancement or add further restrictions to eligibility criteria when the receivables' performance metrics indicate deterioration beyond an established trigger level. In a similar way, termination events are established to begin the early termination of the transaction when the receivable performance deteriorates. Typical trigger events are based on one or more of the following performance metrics:

- asset coverage ratio
- delinquencies
- losses
- dilution

Termination events may include these same metrics but may also include the bankruptcy, insolvency, change of control of the seller/servicer, or the failure of the servicer to perform its responsibilities in full.

g. Due-Diligence Reviews

- (1) Ascertain if the banking organization conducts due-diligence reviews prior to closing its ABCP transactions. Determine if such reviews were tailored to the asset type being securitized and the availability of audit information. A frequent public asset-backed securities (ABS) issuer that accesses conduit funding or a seller that has strong credit quality may be eligible for a post-closing review, provided recent audit results are obtained. If not, it should be subject to pre-closing review. For example, a review tailored to trade receivables should focus on most of the following:
 - Confirming the receivable information (balances, sales, dilution, write-offs, etc.) previously provided by the seller, with the seller's books and records over at least two reporting periods. Such a review might be performed by a third-party auditor.
 - Sampling invoices against the seller's aged trial balance to test the accuracy of agings.
 - Sampling past invoices to determine ultimate resolution (paid, credited, written-off, etc.)
 - Sampling credits against their respective invoices to test the dilution horizon.
 - Sampling write-offs to determine timing and reasons for write-offs.
 - Reviewing significant customer concentrations, including delinquent balances.
 - Determining systems capability with respect to transaction reporting and compliance.
 - Reviewing credit files for completeness and conformity with credit policies.
 - Reviewing collection systems and determining the portion of cash going into segregated lockboxes or bank accounts.
 - Reviewing internal and external auditor reports to the extent that such documents are available for review.

- Noting any unusual items that may complicate the receivable transaction.
- (2) Determine if ABCP transactions are reviewed at least annually.
- Confirm that the banking organization verifies the accuracy of the monthly servicer's transaction reports, including compliance with sale and servicing requirements.
 - Determine if an increased review frequency is needed for any issues raised in prior reviews, transactions with higher-risk sellers, and transactions serviced out of multiple locations.

h. Cash Management

- (1) Assess a seller's cash-management practices. Commingling of cash collections can cause a loss in the perfected security interest of cash flows, particularly in the event of seller insolvency.
- Determine if, preferably, the banking organization requires that all payment collections flow into a single, segregated lockbox account to minimize cash-commingling risk.
 - For trade receivables, find out if the banking organization requires that the cash collections be reinvested in new receivables to eliminate cash-commingling risk.
- (2) For higher-risk sellers, determine if the banking organization—
- establishes an account in the name of the trust or special-purpose vehicle (SPV) into which collections could be swept on a daily basis or
 - requires that settlement be done weekly, or daily, ensuring that there are always sufficient receivables to cover investments and reserves.

i. Reporting

When underwriting a portfolio, it is important to decide what information

should be required in the monthly report.

- (1) Determine if quarterly, or more frequent, reports for a trade receivable transaction include the following:
- beginning balances
 - sales
 - cash collections
 - dilution or credits
 - write-offs
 - ending balances
 - delinquencies by aging bucket
 - ineligible assets
 - total eligible receivables
 - excess concentrations
 - net receivable balance
 - conduit investment
 - conduit's purchased interest
 - calculation of receivable performance termination events
 - top 10 obligor concentrations
- (2) Ascertain if the banking organization has established other special reporting requirements based on the particular pool of receivables being securitized.

j. Receivable Systems

- (1) Because of the significant reporting requirements in a securitization transaction, verify that the banking organization assesses—
- the seller's receivable systems to determine if they will be sufficient to provide the required information and
 - the seller's data backup and disaster recovery systems.

k. Quality of Seller/Servicer

- (1) Verify that the banking organization performs an assessment of the creditworthiness of the seller that is conducted from the relationship side.
- (2) Determine if the banking organization conducts a more focused assessment on the seller/servicer's management team that is involved in the day-to-day receivables operation (that is, credit, accounting, sales, servicing, etc.).

l. Performance Monitoring

- (1) Find out whether the banking organization has developed and uses a performance-monitoring plan that periodically monitors the portfolio.
 - Determine if there is appropriate monitoring that allows the designated administrator to review relevant pool performance to evaluate the level of available funding under the asset-quality tests in the related liquidity facility.
 - Determine if the banking organization tests these conditions when the seller reports performance data relating to an underlying transaction (usually monthly or quarterly).

Typically, a liquidity facility has a funding condition based on asset quality whereby the liquidity provider will not advance against any receivable that is considered defaulted. A performance-monitoring plan may entail monitoring the run rate of defaulted assets so that the potential losses do not exceed the loss protection.

m. Post-Closing Monitoring

- (1) Determine if the banking organization's underwriting team assists the portfolio management team in developing all of the items that should be tracked on the transaction, including the development of a spreadsheet that ensures the capture and calculation of the appropriate information.

n. Underwriting Exceptions

- (1) If a banking organization approves a transaction after it has agreed to an exception from standard underwriting procedures, find out if the banking organization closely monitors and periodically evaluates the policy exception.

Banking organizations may utilize variations of the above-listed underwriting standards.

- (2) Evaluate the robustness of the underwriting process and determine if it is comparable to stated rating agency criteria. If weaknesses in the underwriting process are found, determine if there are any existing compensating strengths and any other relevant factors to be considered when determining its overall assessment.
- (3) If the examiner determines that the supervisory expectations generally are not met, he or she should not recommend to the appropriate Reserve Bank supervisory official that the use of internal ratings, under the securitization capital rule, be approved.

Step 6—Consistency of Internal Ratings of ABCP Program's Exposures with Ratings Issued by the Rating Agencies

1. Find out if any underlying transactions funded through ABCP programs are externally rated by one or more rating agencies.
2. Confirm if the mapping of the internal ratings assigned to these transactions is consistent with, or more conservative than, those issued by NRSROs.
3. When the underlying transactions are split-rated by two or more rating agencies, determine if the internal ratings are consistent with the most conservative (lowest) external rating.
4. Ascertain that the above exceptions do not represent more than a small fraction of the total number of transactions that are externally rated. If such exceptions exist, determine if there are generally an equal or larger percentage of externally rated transactions where internal ratings are more conservative than the external rating.

If supervisory expectations are not met, then the internal risk-rating system may not be appropriately mapped to the external ratings of an NRSRO. In such cases, further review of the adequacy of the banking organization's risk-rating system must be undertaken before the use of internal ratings under the securitization capital rule can be approved.

Determine Adequacy of Internal Ratings Systems

If, through the examination process, the internal risk-rating system utilized for ABCP exposures is found to be inadequate, then the banking organization may not apply the internal risk-ratings approach to ABCP exposures for risk-based capital purposes until the organization has remedied the deficiencies. Banking organizations that have adequate risk-rating systems that are well integrated into risk-management processes applied to ABCP programs may be approved for use of the internal risk-ratings approach.

Once a banking organization's internal rating system is deemed adequate, the organization may use its internal ratings to slot ABCP exposures, including pool-specific liquidity facilities, into the appropriate rating category (investment grade, high non-investment grade, and low non-investment grade), and apply the corresponding risk weights. However, due to the unique nature of program-wide credit enhancements, further guidance is provided in steps 7 through 9 to help establish the appropriate capital requirement.

Step 7—Determination of Whether Program-Wide Credit Enhancements Are in the First-Loss Position

1. Determine if the ABCP program documentation confirms that the program-wide credit enhancement is not the first-loss credit enhancement for any transaction in the ABCP program and is, at worst, in the second-economic-loss position, usually after transaction-specific credit enhancements.
2. Verify if the spread charged for the program-wide credit enhancement is the spread range of investment-grade exposures of a term securitization. Consider other factors that may influence pricing, such as availability of the credit enhancement.
3. Find out if the financial guarantee providers, such as AMBAC, FSA, and FGIC, participate in a program-wide credit-enhancement tranche either on a senior position or on a pari-passu position with other providers. The risk taken by these institutions is usually investment grade.
 - a. Compare the price of the guarantee charged by these institutions to the pricing

ranges of non-investment-grade and investment-grade exposures of the sponsoring banking organization, the loan syndication market, and the bond market. This may be a gauge as to whether a third party considers the risk as investment grade or non-investment grade.

- b. Reference such sources for reviewing market pricing as Loan Pricing Corporation's Gold Sheets and Bloomberg (for bond spreads). A range or average pricing for both investment-grade and non-investment-grade syndicated loans can be found in the Gold Sheets.
- c. Similarly, review also the price the sponsor/banking organization is charging for its respective portion of the program-wide credit enhancement.

Step 8—Risk Levels Posed by Concentrations of Non-Investment-Grade Seller/Servicees

1. Confirm that the banking organization's internal risk-rating systems properly account for the existence of seller/servicer risk.

An asset originator (that is, the entity selling the assets to the ABCP program) typically is the servicer and essentially acts as the portfolio manager for the ABCP program's investment. The servicer identifies receivables eligible for the ABCP program and manages to preserve the investment on behalf of the banking organization sponsoring the ABCP program. As previously discussed, servicer risk can be partially mitigated through seller allocation and structuring payments to protect against commingling of cash.

2. Determine if the banking organization has specific transaction structures, such as a backup servicer, in place to mitigate servicer risk.
3. Ascertain if exposure to an excessive number of non-investment-grade servicers adversely affects the overall credit quality of the ABCP program, exposing the conduit to the higher bankruptcy risk that inherently exists with non-investment-grade obligors.
4. Use the benchmarks below to assess the banking organization's potential exposures to non-investment-grade seller/servicer con-

centrations in its ABCP program. Depending on the circumstances, concentrations exceeding these benchmarks may be considered as unsafe and unsound banking practices.

- a. Determine, based on the grid below, the percentage of securitized assets from non-investment-grade servicers to the total outstandings of an ABCP program that has a lower weighted average rating of all the transactions in the program. For example, if the ABCP program transactions have a weighted average rating equivalent to “BBB,” no more than 30 percent of the total outstandings of the ABCP program should be represented by non-investment-grade seller/servicers. However, an ABCP program that has transactions structured to a higher weighted average rating, such as a single “A” equivalent, could have up to 60 percent of the outstandings originated by non-investment-grade seller/servicers without causing undue concerns.

<i>Weighted average rating equivalent of transactions</i>	<i>Servicer percentage below investment grade</i>
AA	90%
AA–	80%
A+	70%
A	60%
A–	50%
BBB+	40%
BBB	30%
BBB–	20%
BB+	10%

Step 9—The Portion of Underlying Assets of the ABCP Program Structured to Investment-Grade Risk

1. Determine the appropriate amount of risk-based capital that should be assessed against the program-wide credit enhancement based on the internal risk ratings of the underlying transactions in the ABCP program.
 - a. If *all* underlying transactions are rated investment grade, risk-weight the notional amount of the program-wide credit enhancement at 100 percent.
 - b. If one or more of the underlying transac-

tions are internally rated below investment grade, then consider using the following weakest-link approach to calculate an appropriate risk-based capital charge for the program-wide credit enhancement.

The approach takes into account the internal ratings assigned to each underlying transaction in an ABCP program. These transaction-level ratings are typically based on the internal assessment of a transaction’s pool-specific liquidity facility and the likelihood of its being drawn. The transactions are rank-ordered by their internal rating and then bucketed into the three ratings categories: investment grade, high non-investment grade, and low non-investment grade. The program-wide credit enhancement is then assigned an appropriate risk weight based upon the notional amount of transactions in each ratings bucket.

Under the weakest-link approach, the risk of loss corresponds first to the weakest transactions to which the program-wide credit enhancement is exposed. Banking organizations should begin with the lowest bucket (low non-investment grade) and then move to the next-highest rating bucket until the entire amount of the program-wide credit enhancement has been assigned. The assigned risk weights and their associated capital charges are then aggregated. However, if the risk-based capital charge for the non-investment-grade asset pools equals or exceeds the 8 percent charge against the entire amount of assets in the ABCP program, then the risk-based capital charge is limited to the 8 percent against the program’s assets.

Banking organizations that sponsor ABCP programs may have other methodologies to quantify risk across multiple exposures. For example, collateralized debt obligation (CDO) ratings methodology takes into account both the probability of loss on each underlying transaction and correlations between the underlying transactions. This and other methods may generate capital requirements equal to or more conservative than those arrived at via the weakest-link method. Regardless of the approach used, well-managed institutions should be able to support their risk-based capital calculations.

Weakest-Link Formula

IF $[(0.16 * NI1) + NI2^{**}] \geq (0.08 * PROG)$, THEN $RBC = (0.08 * PROG)$
 Else

Capital = $[0.08 * (PWC - (NI1 + NI2))] + 0.16 * NI1 + [NI2^{**}]$

**Although the term NI2 should reflect a gross-up charge under the securitization capital rule (that is, an effective 1,250 percent risk weight), for the sake of simplicity a dollar-for-dollar charge is used here. The reason for using dollar-for-dollar is based on the assumption that the NI2 portion of an ABCP pool is typically smaller than the gross-up charge would be on the entire pool. Thus, instead of grossing-up the NI2 portion and then applying the low-level-exposure rule (which, if NI2 is less than the gross-up charge, will yield a dollar-for-dollar capital charge), the term just assumes the dollar-for-dollar amount.

In any event, the risk-based capital charge on the program-wide credit enhancement will never exceed the maximum contractual amount of that program-wide credit enhancement (that is, the low-level-exposure rule).

RBC = Risk-based capital

PROG = Notional amount of all underlying exposures in the program

PWC = Notional amount of program-wide credit enhancement

IG = Notional amount of exposures rated BBB- or better

NI1 = Notional amount of exposures rated between BB+ and BB-

NI2 = Notional amount of exposures rated below BB-

Example 1

ABCP program size (PROG) = \$1,000 MM

Program-wide credit enhancement (PWC) = \$100 MM

Total amount of investment grade (IG) = \$995 MM

Total amount of high non-investment grade (NI1) = \$4 MM

Total amount of low non-investment grade (NI2) = \$1 MM

Example 2

ABCP program size (PROG) = \$1,000 MM

Program-wide credit enhancement (PWC) = \$150 MM

Total amount of investment grade (IG) = \$940 MM

Total amount of high non-investment grade (NI1) = \$50 MM

Total amount of low non-investment grade (NI2) = \$10 MM

Weakest Link

RBC = IF $[(0.16 * 4) + 1] \geq (0.08 * 1,000)$, then
 $RBC = (0.08 * 1,000)$
 $= \$1.64 \text{ MM} < \80 MM

Else

$RBC = [(0.08 * (100 - (4 + 1))] + (0.16 * 4) + (1)$

$RBC = (7.60) + (0.64) + (1)$
 $= \$ 9.24 \text{ MM}$

Weakest Link

RBC = IF $[(0.16 * 50) + 10] \geq (0.08 * 1,000)$, then
 $RBC = (0.08 * 1,000) = \$18 \text{ MM}$
 $< \$80 \text{ MM}$

Else

$RBC = [(0.08 * (150 - (50+10))] + (0.16 * 50) + (10)$

$RBC = (7.20) + (8.00) + (10)$
 $= \$25.2\text{MM}$

Example 3

ABCP program size (PROG) = \$1,000 MM
 Program-wide credit enhancement (PWC) = \$150 MM

Total amount of investment grade (IG) = \$0 MM

Total amount of high non-investment grade (NI1) = \$500 MM

Total amount of low non-investment grade (NI2) = \$500 MM

Weakest Link

RBC = IF $[(0.16 * 500) + 500] \geq (0.08 * 1,000)$,
 THEN RBC = $(0.08 * 1,000) = \$580 \text{ MM} >$
 \$80 MM

Therefore,

RBC = $(0.08 * 1,000) = \$80 \text{ MM}$

Because \$580 MM is greater than the \$80 MM capital charge that would apply if all of the assets supported by the PWC were on-balance-sheet, the maximum risk-based capital charge is \$80 MM.

When the sum of all non-investment-grade asset pools (that is, NI1 + NI2) exceeds the amount of the program-wide credit enhancement, the weakest-link formula would result in

too much risk-based capital being assessed. If this situation arises, banking organizations should first apply the gross-up treatment to the NI2 asset pools and then assess 16 percent risk-based capital against an amount of the NI1 asset pools that, when added with the NI2 asset pools, would equal the amount of the program-wide credit enhancement. For example, if the program-wide credit enhancement is \$100 on underlying transactions totaling \$1,000, and the underlying exposures are \$10 low non-investment grade, \$100 high non-investment grade, and \$890 investment grade, then risk weighting will be based on the gross-up approach for \$10 and assigning the remaining \$90 to the 200 percent risk-weight category, as shown below:

$\$10 * 1,250\% * 8\%$	=	\$10.00
$\$90 * 200\% * 8\%$	=	\$14.40
Total		<u>\$24.40</u>

Finally, the aggregate capital charge, \$24.40 in this case, is then compared to the capital charge imposed on the underlying transactions if all the program assets were on the banking organization's balance sheet (that is, $0.08 * \$1,000 = \80); the lower amount prevails. This establishes the capital charge for the program-wide credit enhancement.

Assessing Risk-Based Capital—Direct-Credit Substitutes Extended to ABCP Programs Internal Control Questionnaire

Effective date October 2007

Section 3030.4

1. Does the banking organization have an acceptable risk-rating system?
2. Does the banking organization use an established internal risk-rating system tailored to ABCP securitization exposures?
3. Are the relevant exposures internally rated?
4. Are the ABCP programs monitored by rating agencies?
5. Are there sufficient underwriting standards and management oversight?
6. Are internal ratings of ABCP program exposures consistent with ratings issued by the rating agencies?
7. Is program-wide credit enhancement in the first-loss position?
8. Do concentrations of non-investment-grade seller/services pose an excessive level of risk?
9. What portion of the underlying assets of the ABCP programs is structured to investment-grade risk?

[Reserved]

INTRODUCTION

This section is designed to help the examiner develop an overview of a bank's financial condition and results of operations through the use of analytical review techniques. It also provides procedures to assist in evaluating the reasonableness and reliability of the bank's income and expense accounts. (However, no analytical view of a bank's operating results is complete without due consideration of the stability and probable continuity of the earnings. In this regard, the examiner must remain cognizant of the inextricable links between liquidity and earnings and the implications of a bank's funds-management decisions, particularly those dealing with interest-rate risk.

GENERAL EXAMINATION APPROACH

The review and analysis of the bank's financial condition and results of operations should begin during the pre-examination analysis of the bank (see "Examination Strategy and Risk-Focused Examinations," section 1000). Pre-examination analysis is meant to determine potential problem areas so that proper staff levels and appropriate examination procedures can be used. The analysis will be performed using the most recent Uniform Bank Performance Report (UBPR). (See "Federal Reserve System Surveillance Program," section 1020.)

Questions raised during the preliminary review should be answered and substantiated soon after commencing the examination, while performing the more comprehensive analytical review. The analytical review should use the UBPR financial statements and reports, detail trial balances, analyses of accounts, financial budgets, statistical information, and any other relevant data available at the bank. Explanations for unusual conditions identified during the review, and work performed to substantiate such explanations, should be documented in the examination workpapers.

If internal or external auditors have not performed adequate audit procedures relating to income and expenses, the examiner should test check computations for accuracy and trace entries to appropriate accounts. (See "Internal

Control," section 1010, for a discussion of procedures to use in reviewing the audit work of others.)

ANALYTICAL REVIEW

Analytical review involves a comparison of detail balances or statistical data on a period-to-period basis in an effort to substantiate reasonableness without systematic examination of the transactions that make up the account balances. Analytical review is based on the assumption that comparability of period-to-period balances and ratios shows them to be free from significant error. A well-performed analytical review not only benefits the examination by providing an understanding of the bank's operations, but also highlights matters of interest and potential problem situations which, if detected early, might avert more serious problems.

Analytical Tools

The basic analytical tools available to the examiner are the UBPR and the bank's financial statements. Internally prepared statements and supplemental schedules, if available, are excellent additions to an in-depth analytical review. The information from those schedules may give the examiner considerable insight into the interpretation of the bank's basic financial statements. However, internally prepared information alone is not sufficient to adequately analyze the financial condition of the bank. To properly understand and interpret financial and statistical data, the examiner should be familiar with current economic conditions and with any secular, cyclical, or seasonal factors in the nation, region, and local area, including general industry conditions. Economic and industry information, reports, and journals are an important source for knowledge of industry conditions. Finally, the examiner should be knowledgeable about new banking laws and pending legislation that could have a material impact on financial institutions.

Review of Financial Statements

An analytical review of a bank's financial statements requires professional judgment and an

inquiring attitude. During the analysis, the examiner should avoid details not specifically related to his or her objective so that excessive time is not spent analyzing relatively immaterial amounts.

Generally, it is more efficient to review financial data that have been rounded to the nearest thousand. Undue precision in computing and reviewing ratios should be avoided. An evaluation of the meaning of the ratios and amounts being compared is important; little can be gained by computing ratios for totally unrelated items. When comparing bank data to peer-group data, the examiner should consider whether the bank is typical of its peer group (a group of banks of similar size and reporting characteristics). For example, the bank might be of comparable size to its peers, but still be atypical because its earning assets are composed principally of agricultural loans or mortgage loans. The age of the institution should also be taken into account when using peer-group data, as newly chartered *de novo* banks tend to produce distorted ratios (versus the peer group).

Alternative accounting treatments for similar transactions among peer banks also should be considered because they may produce significantly different results. The analytical review must be based on figures derived under valid accounting practices consistently applied, particularly in the accrual areas. Accordingly, during the analytical review, the examiner should determine any material inconsistencies in the application of accounting principles.

The examiner also should be aware of the difficulty of interpreting the cash basis accounting method. Any required adjustments should be documented and explained in the workpapers and examination report.

UBPR

Another analytical tool available to the examiner is the UBPR. The user's guide for the UBPR explains how a structured approach to financial analysis should be followed. This approach breaks down the income stream into its major components of interest margin performance, overhead, noninterest income, loan-loss provisions, tax factors, and extraordinary items. These major components can then be broken down into various subcomponents. Also, the balance-sheet composition, along with economic conditions, must be analyzed to explain

the income stream and its possible future variability.

In addition to UBPR analysis and review of bank financial statements, the examiner should incorporate a review of management's budget and/or projections into his or her analysis. A review of projections and individual variances from the operating budget can often provide valuable insight into an institution's prior and future earnings. The examiner should also verify the reasonableness of the budgeted amounts, frequency of budget review by bank management and the board of directors, and level of involvement of key bank personnel in the budget process.

The primary source of information used to prepare UBPRs are the Consolidated Reports of Condition and Income, which are filed quarterly. The content and frequency of these reports are sufficient to allow the reviewer of the UBPR to detect unusual or significantly changed circumstances within a bank, and they normally will be adequate for the purposes of analytical review. Accordingly, the examiner must check these consolidated reports to ensure the resulting accuracy of the UBPRs.

Frequently, the examiner may be interested in a more detailed and current review of the bank than that provided by the UBPR system. Under certain circumstances, UBPR procedures may need to be supplemented because—

- asset-quality information must be linked to the income stream;
- more detailed information is necessary on asset-liability maturities and matching;
- more detailed information is necessary on other liquidity aspects, as they may affect earnings;
- yield or cost information, which may be difficult to interpret from the report, is needed;
- certain income or expense items may need clarification, as well as normal examination validation;
- volume information, such as the number of demand deposits, certificates of deposit, and other accounts, is not reported, and vulnerability in a bank subject to concentrations normally should be considered;
- components of interest and fees on loans are not reported separately by category of loan; thus, adverse trends in the loan portfolio may not be detected (For example, the yield of a particular bank's loan portfolio may be similar to those of its peer group, but the examiner

may detect an upward trend in yields for a specific category of loans. That upward trend might be partially or wholly offset by a downward trend of yields in another category of loans, and the examiner should consider further investigating the circumstances applicable to each of those loan categories. A change in yields could be a result of a change in the bank's "appetite" for certain types of loans or may indicate a change in loan underwriting standards.); or

- income or expense resulting from a change in the bank's operations, such as the opening of a new branch or starting of a mortgage banking activity or trust department, may skew performance ratios. (When there has been a significant change in a bank's operations, the examiner should analyze the potential impact of the change on future bank earnings.)

Written Analysis

After the examiner has completed the analytical review of income and expense, he or she should prepare a written analysis to be submitted to the examiner-in-charge. This evaluation should include, but is not limited to, a review of the bank's—

- quality and future prospects for core income;
- ability to cover losses and maintain adequate capital, including compliance with the minimum capital standard;
- earnings levels and trends;
- composition of earnings and sustainability of

the various earnings components (This may include a discussion of balance-sheet composition, particularly the volume and type of earning assets and off-balance-sheet items, if applicable.);

- peer-group comparisons;
- vulnerability to interest-rate and other market or price risks;
- income and expense accounts, and their reliability, including applicable accounting practices, internal controls, and audit methods;
- compliance with laws and regulations relating to earnings and dividends; and
- budgeting process and the levels of management involved in it.

Examiners should consider the adequacy of provisions to the loan-loss reserve. If the examiners conducting the asset quality review determine that the loan-loss reserve is inadequate, the bank's earnings are inflated and should be restated accordingly. In turn, this determination should be factored into the examiner's assessment of management, including its responsibility to maintain an adequate loan-loss reserve.

Consideration should also be given to the interrelationships that exist between the dividend-payout ratio, the rate of growth of retained earnings, and the adequacy of bank capital. Examiners should consider the extent to which extraordinary items, securities transactions, and taxes affect net income. The links between earnings and liquidity and the implications of a bank's funds management decisions, particularly with respect to interest-rate sensitivity, should also be fully analyzed.

Analytical Review and Income and Expense Examination Objectives

Effective date May 1996

Section 4010.2

1. To detect significantly changed circumstances before or as early as possible during the examination so that any impact on the determination of the scope and conduct of the examination may be assessed.
2. To analyze the financial position and operations of the bank and to investigate any unusual fluctuations.
3. To assist in determining the reliability of the bank's financial information and the consistency of the application of accounting principles.
4. To determine if accounting policies, practices, procedures, and internal controls relating to income and expenses are adequate.
5. To determine the scope and adequacy of the audit function.
6. To determine compliance with laws and regulations relating to income and expenses to the extent that such compliance is not covered elsewhere in the examination.
7. To initiate corrective action when deficiencies or violations of law or regulation have been discovered.

Analytical Review and Income and Expense Examination Procedures

Effective date March 1984

Section 4010.3

1. Obtain the Uniform Bank Performance Report and, through a general review of it, note any conditions of interest particularly significant changes in trends and levels of income and expense categories that would indicate present problems or shifts in business emphasis including new directions or activities undertaken.
2. Determine early in the examination if any significant changes have occurred in:
 - Operations.
 - Accounting practices or records.
 - Financial reporting.
 - General business conditions.
3. If selected for implementation complete or update the Income and Expense section of the Internal Control Questionnaire.
4. Based on the evaluation of internal controls, the work performed by internal/external auditors and the results of performing the above procedures, determine the scope of the examination.
5. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures.
6. Obtain the bank's current financial statements, internal operating reports, interim financial statements, reports filed with the Federal Reserve and daily statements of condition or other available financial information, then review balances and amounts relative to information in the UBPR staying alert for the development or continuation of adverse trends and other significant or unusual trends or fluctuations. Primary considerations should include whether:
 - Significant structural changes are occurring in the bank that may impact the earnings stream.
 - The bank is making use of tax carrybacks or carryforwards.
 - Earnings are static or declining as a percentage of total resources.
 - Income before securities gains and losses is decreasing as a percentage of total revenues.
 - The ratio of operating expense to operating revenue is increasing.
 - Earnings trends are inconsistent.
 - The spread between interest earned and interest paid is decreasing.
 - Loan losses are increasing.
 - Provisions for loan losses are sufficient to cover loan losses and maintain reserves at an adequate level.
 - There is evidence that sources of interest and other revenues have changed since the last examination.
 - Earnings are deemed inadequate to provide increased capitalization commensurate with the bank's growth.
7. Obtain and review the bank's formalized planning procedures, profit plans, budgets, mid- and long-range financial plans, economic advisory reports, and any progress reports related to any of those and:
 - a. Compare actual results to budgeted amounts.
 - b. Determine the impact of any broad and important specific goals which have been set.
 - c. Determine the frequency of planning revisions.
 - d. Determine what triggers a specific plan revision.
 - e. Determine who initiates plan revisions.
 - f. Determine whether explanations are required for significant variations and whether causes are ascertained in implementing corrective action.
 - g. Determine the sources of input for forecasts, plans and budgets.
 - h. Extract any information considered relevant to the completion of "Management Assessment" and "Overall Conclusions Regarding Condition of the Bank."
8. Scan ledger accounts for unusual entries, as considered necessary. Examples of such items include:
 - Significant deviations from the normal amounts of recurring entries.
 - Unusual debit entries in income accounts or unusual credit entries in expense accounts.
 - Significant entries from an unusual source, such as a journal entry.
 - Significant entries in "other income" or "other expense" which may indicate fees or service losses on an off balance sheet activity (i.e., financial advisory or underwriting services).

9. Investigate, as appropriate, conditions of interest disclosed by the procedures in steps 1 and 2 and 6 through 8 by:
 - a. Discussing exceptions or questionable findings with the examiner responsible for conducting those aspects of the examination which are most closely related to the item of interest, to determine if a satisfactory explanation already has been obtained.
 - b. Reviewing copies of work papers prepared by internal auditors or management that explain account fluctuations from prior periods or from budgeted amounts.
 - c. Discussing unresolved items with management.
 - d. Reviewing underlying supporting data and records, as necessary, to substantiate explanations advanced by management.
 - e. Performing any other procedures considered necessary to substantiate the authenticity of the explanations given.
 - f. Reaching a conclusion as to the reasonableness of any explanations offered by other examiners or management and deciding whether extensions of examination or verification procedures are necessary.
10. Determine compliance with appropriate laws and regulations.
11. Review with officers of the bank and prepare, in appropriate report format, listings of:
 - a. Deficiencies in and deviations from, policies, practices, procedures, and internal controls.
 - b. Violations of law.
 - c. Adverse trends.
 - d. Any UBPR peer group or local constructed peer group data which should be brought to the attention of management.
 - e. Comments on earnings.
12. Update workpapers with any information that will facilitate future examinations.

Analytical Review and Income and Expense

Internal Control Questionnaire

Effective date March 1984

Section 4010.4

Review the bank's internal controls, policies, practices and procedures over income and expenses. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

GENERAL

1. Does the bank have a budget? If so:
 - a. Is it reviewed and approved by managerial personnel and/or the board of directors?
 - b. Is it periodically reviewed and updated for changed conditions?
 - c. Are periodic statements compared to budget and are explanations of variances reviewed by management?
 - d. Is a separate budget prepared by the manager of each department or division?
2. Does the bank's accounting system provide sufficiently detailed breakdowns of accounts to enable it to analyze fluctuations?
- *3. Are the general books of the bank maintained by someone who does not have access to cash?
4. Are all general ledger entries processed through the proof department?
5. Are all entries to the general ledger supported by a general ledger ticket?
6. Do general ledger tickets, both debit and credit, bear complete approvals, descriptions and an indication of the offset?
- *7. Are all general ledger entries approved by a responsible person other than the general ledger bookkeeper or person associated with its preparation?
8. Is the general ledger posted daily?
9. Is a daily statement of condition prepared?
- *10. Are corrections to ledgers made by posting a correcting entry and not by erasing (manual system) or deleting (computerized system) the incorrect entry?
11. Are supporting worksheets or other records maintained on accrued expenses and taxes?
12. Are those supporting records periodically reconciled with the appropriate general ledger controls?

PURCHASES

- *13. If the bank has a separate purchasing department, is it independent of the accounting and receiving departments?
- *14. Are purchases made only on the basis of requisitions signed by authorized individuals?
- *15. Are all purchases routed through a purchasing department or personnel functioning in that capacity?
16. Are all purchases made by means of pre-numbered purchase orders sent to vendors?
17. Are all invoices received checked against purchase orders and receiving reports?
18. Are all invoices tested for clerical accuracy?
19. Are invoice amounts credited to their respective accounts and tested periodically for accuracy?

DISBURSEMENTS

- *20. Is the payment for all purchases, except minor items, made by official checks?
- *21. Does the official signing the check review all supporting documents?
- *22. Are supporting vouchers and invoices cancelled to prevent re-use?
- *23. Are duties and responsibilities in the following areas segregated?
 - a. Authorization to issue expense checks?
 - b. Preparation of expense checks?
 - c. Signing of expense checks?
 - d. Sending of expense checks?
 - e. Use and storage of facsimile signatures?
 - f. General ledger posting?
 - g. Subsidiary ledger posting?

PAYROLL

24. Is the payroll department separate from the personnel department?
25. Are signed authorizations on file for all payroll deductions including W-4s for withholding?
26. Are salaries authorized by the board of directors or its designated committee?

27. Are individual wage rates authorized in writing by an authorized officer?
28. Are vacation and sick leave payments fixed or authorized?
29. Are payrolls paid from a special bank account or directly credited to the employee's demand deposit account?
30. Are time records reviewed and signed by the employee's supervisor?
31. Are double checks made of hours, rates, deductions, extension, and footings?
32. Are payroll signers independent of the persons approving hours worked and preparation of the payroll?
33. If a check signing machine is used, are controls over its use adequate (such as a dual control)?
34. Are payrolls subject to final officer approval?
35. Are the names of persons leaving employment of the bank reported promptly, in writing, to the payroll department?
36. Are payroll expense distributions reconciled with the general payroll payment records?

CONCLUSION

37. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
38. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate, inadequate).

Funds management is at the core of sound bank planning and financial management. Although funding practices, techniques, and norms have been revised substantially in recent years, funds management is not a new concept. It is the process of managing the spread between interest earned and interest paid while ensuring adequate liquidity. Therefore, funds management has two components—liquidity and interest-rate risk management.

To evaluate a bank's funds management, an understanding of the bank, its customer mix, the nature of its assets and liabilities, and its economic and competitive environment is required. No single theory can be applied universally to all banks.

LIQUIDITY

Liquidity is the ability to accommodate decreases in liabilities and to fund increases in assets. A bank has adequate liquidity when it can obtain sufficient funds, either by increasing liabilities or converting assets, promptly and at a reasonable cost. Liquidity is essential in all banks to compensate for expected and unexpected balance-sheet fluctuations and to provide funds for growth. The price of liquidity is a function of market conditions and the market's perception of risks, both interest-rate and credit, as reflected in the bank's on-balance-sheet and off-balance-sheet activities. Additionally, market perceptions of a bank's management and strategic direction can be critical to the price of liquidity. To the extent that liquidity needs are met through holdings of high-quality short-term assets, the price of liquidity is the income sacrificed by not holding longer-term or lower-quality assets. If liquidity needs are not met through liquid asset holdings, a bank may be forced to restructure or acquire additional liabilities under adverse market conditions.

Liquidity exposure can stem from both internally (institution-specific) and externally generated factors. Sound liquidity-risk management should address both types of exposure. External liquidity risks can be geographic (such as the premiums required on deposits within a certain state), systemic (such as the adverse effects on several large banks of the near failure of a large regional bank), or instrument-specific (such as

the collapse of a floating-rate-note market). Internal liquidity risk relates largely to how an institution is perceived in its various markets: local, regional, national, or international.

An analysis of the following factors will help to determine the adequacy of a bank's liquidity position:

- historical funding requirements
- current liquidity position
- anticipated future funding needs
- sources of funds
- options for reducing funding needs or attracting additional funds
- current and anticipated asset quality
- current and future earnings capacity
- current and planned capital position

To satisfy its funding needs, a bank must perform one or a combination of the following:

- dispose of liquid assets
- increase short-term borrowings (or issue additional short-term deposit liabilities)
- decrease holdings of less-liquid assets
- increase liabilities of a term nature
- increase capital funds

All banks are affected by changes in the economic climate, so the monitoring of economic and money market trends is key to liquidity planning. Sound financial management can minimize the negative effects of these trends while accentuating the positive ones. Factors that management should consider in liquidity planning include—

- internal costs of funds,
- maturity and repricing mismatches in the balance sheet,
- anticipated funding needs,
- economic and market forecasts, and
- the need to maintain a plan that ensures adequate access to a diversified array of readily accessible, confirmed funding sources, including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings.

Management must have an effective contingency plan that identifies minimum and maximum liquidity needs and weighs alternative courses of action designed to meet those needs.

Some factors that may affect a bank's liquidity include—

- a decline in earnings,
- an increase in nonperforming assets,
- deposit concentrations,
- a downgrading by a rating agency,
- expanded business opportunities,
- acquisitions, and
- new tax initiatives.

Once liquidity needs have been determined, management must decide how to meet them through asset management, liability management, or a combination of both.

See also the “Liquidity Risk” sections (3005.1 to 3005.5) of the Federal Reserve System's *Trading and Capital-Markets Activities Manual* for additional guidance on evaluating an institution's liquidity management.

Sound Liquidity-Risk Management

Sound liquidity-risk management requires the following four elements.¹

- Well-established strategies, policies, and procedures for managing both the sources and uses of an institution's funds across various tenors or time frames. (This includes assessing and planning for short-term, intermediate-term, and long-term liquidity needs.)
- Liquidity-risk measurement systems that are appropriate for the size and complexity of the institution. (Depending upon the institution, such measurement systems can range from simple gap-derived cash-flow measures to very sophisticated cash-flow simulation models.)
- Adequate internal controls and internal audit processes. (Internal controls and internal audit reviews are needed to ensure compliance with internal liquidity-management policies and procedures.)
- Comprehensive liquidity contingency planning. (Contingency plans need to be well

designed and should span a broad range of potential liquidity events that are tailored to an institution's specific business lines and liquidity-risk profile.)

Adequate liquidity contingency planning is critical to the ongoing maintenance of the safety and soundness of any depository institution. Contingency planning starts with an assessment of the possible liquidity events that an institution might encounter. The types of potential liquidity events considered should range from high-probability/low-impact events that can occur in day-to-day operations to low-probability/high-impact events that can arise through institution-specific or systemic market or operational circumstances. Responses to these events should be assessed in the context of their implications for an institution's short-term, intermediate-term, and long-term liquidity profile. A fundamental principle in designing contingency plans for each of these liquidity tenors is to ensure adequate diversification in the potential sources of funds that could be used to provide liquidity. Such diversification should not only focus on the number of potential funds providers but on the underlying stability, availability, and flexibility of funds sources in the context of the type of liquidity event they are expected to address.

Liquidity-Risk Management Using the Federal Reserve's Primary Credit Program

The Federal Reserve's primary credit program (discount window) offers depository institutions an additional source of available funds (at a rate above the target federal funds rate) for managing short-term liquidity risks.² Management should fully assess the potential role that the Federal Reserve's primary credit program might play in managing their institution's liquidity. The primary credit program can be a viable source of very short-term backup funds. Management may find it appropriate to incorporate the availability of the primary credit program into their institution's diversified liquidity-management policies, procedures, and contingency plans. The primary credit program has the following attributes that make the discount win-

1. See the July 23, 2003, Interagency Advisory on the Use of the Federal Reserve's Primary Credit Program in Effective Liquidity Management, issued by the federal financial institution regulatory agencies. The interagency advisory supplements and does not replace existing agency guidance or policy. See also section 4010.0 of the *Bank Holding Company Supervision Manual*.

2. See section 3010.1 for further discussion of the Federal Reserve's credit programs that are available to qualifying institutions.

dow a viable source of backup or contingency funding for short-term purposes:

- Primary credit provides a simpler, less-burdensome administrative process and a more accessible source of backup, short-term funding.
- Primary credit can enhance diversification in short-term funding contingency plans.
- Borrowings can be secured with an array of collateral, including consumer and commercial loans.
- Requests for primary credit advances can be made anytime during the day.³
- There are no restrictions on the use of short-term primary credit.

If an institution incorporates primary credit into its contingency plans, the institution should ensure that it has in place with the appropriate Reserve Bank the necessary collateral arrangements and documentation. This is particularly important when the intended collateral consists of loans or other assets that may involve significant processing or lead time for pledging to the Reserve Bank.

It is a long-established sound practice for institutions to periodically test all sources of contingency funding. Accordingly, if an institution incorporates primary credit in its contingency plans, management should occasionally test the institution's ability to borrow at the discount window. The goal of such testing is to ensure that there are no unexpected impediments or complications in the case that such contingency lines need to be used.

Institutions should ensure that any planned use of primary credit is consistent with the stated purposes and objectives of the program. Under the primary credit program, the Federal Reserve generally expects to extend funds on a very short-term basis, usually overnight. Therefore, as with any other type of short-term contingency funding, institutions should ensure that any use of primary credit facilities for short-term liquidity contingencies is accompanied by viable take-out or exit strategies to replace this funding expeditiously with other sources of funding. Institutions should factor into their contingency plans an analysis of their eligibility for primary credit under various scenarios, recognizing that if their financial condi-

tion were to deteriorate, primary credit may not be available. Under those scenarios, secondary credit may be available.

Another critical element of liquidity management is an appropriate assessment of the costs and benefits of various sources of potential liquidity. This assessment is particularly important in managing short-term and day-to-day sources and uses of funds. Given the above-market rates charged on primary credit, institutions should ensure that they adequately assess the higher costs of this form of credit relative to other available sources. Extended use of any type of relatively expensive source of funds can give rise to significant earnings implications which, in turn, may lead to supervisory concerns.

It is also important to note that the Federal Reserve's primary credit facility is only one of many tools institutions may use in managing their liquidity-risk profiles. An institution's management should ensure that the institution maintains adequate access to a diversified array of readily available and confirmed funding sources, including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings. (See SR-03-15.)

Supervisory and Examiner Considerations

Because primary credit can serve as a viable source of backup, short-term funds, supervisors and examiners should view the occasional use of primary credit as appropriate and unexceptional. At the same time, however, supervisors and examiners should be cognizant of the implications that too-frequent use of this source of relatively expensive funds may have for the earnings, financial condition, and overall safety and soundness of the institution. Overreliance on primary credit borrowings, or any one source of short-term contingency funds, regardless of the relative costs, may be symptomatic of deeper operational or financial difficulties. Importantly, the use of primary credit, as with the use of any potential sources of contingency funding, is a management decision that must be made in the context of safe and sound banking practices.

ASSET MANAGEMENT

Liquidity needs may be met by manipulating the bank's asset structure through the sale or planned runoff of a reserve of readily marketable assets.

3. Advances generally are booked at the end of the business day.

Because many banks (primarily the smaller ones) tend to have little influence over the size of their total liabilities, liquid assets enable a bank to provide funds to satisfy increased loan demand.

Banks that rely solely on asset management concentrate on adjusting the price and availability of credit and the level of liquid assets held in response to a change in customer asset and liability preferences. However, assets that are often assumed to be liquid are sometimes difficult to liquidate. For example, investment securities may be pledged against public deposits or repurchase agreements or may be heavily depreciated because of interest-rate changes. Trading accounts cannot be reduced materially if banks must maintain adequate inventories for their customers. Furthermore, the holding of liquid assets for liquidity purposes is less attractive because of their thin profit spreads.

Management must also consider the cost of maintaining liquidity. An institution that maintains a strong liquidity position may do so at the opportunity cost of generating higher earnings.

The amount of liquid assets a bank should hold depends on the stability of its deposit structure and the potential for rapid expansion of its loan portfolio. If deposit accounts are composed primarily of small stable accounts, a relatively low allowance for liquidity is necessary. Additionally, management must consider the current and expected ratings by regulatory and rating agencies when planning liquidity needs. A higher allowance for liquidity is required when—

- high interest rates increase the potential for deposit disintermediation,
- recent trends show a substantial increase or reduction in large deposits or borrowings,
- a significant portion of deposits are short-term municipal special assessment-type accounts,
- a substantial portion of the loan portfolio consists of large static loans with little likelihood of reduction,
- large unused lines of credit or commitments to lend are expected to be used in the near term,
- a strong relationship exists between individual deposit accounts and principal employers in the trade area who have financial problems, or
- a concentration of credit has been extended to industries with current or anticipated financial problems.

assets are in terms of both time and cost, is of primary importance in asset management. To maximize profitability, management must carefully weigh the full return on liquid assets (yield plus liquidity value) against the higher return associated with less-liquid assets. Income derived from higher-yielding assets may be offset if a forced sale, at less than book value, is necessary because of adverse balance-sheet fluctuations.

Seasonal, cyclical, or other factors may cause aggregate outstanding loans and deposits to move in opposite directions and result in loan demand that exceeds available deposit funds. A bank relying strictly on asset management would restrict loan growth to a level that could be supported by available deposits. As an alternative, liquidity needs may be met through liability sources, such as federal funds purchased and the sale of securities under agreements to repurchase, which would allow the bank to meet the loan demand of its trade area. If short-term funding is not readily available in the marketplace, the bank may qualify for borrowings from the local Federal Reserve Bank. The decision whether to use liability sources should be based on a complete analysis of seasonal, cyclical, and other factors and on the costs involved. In addition to supplementing asset liquidity, liability sources of liquidity may be an alternative even when asset sources are available. The number of banks relying solely on manipulation of the asset structure to meet liquidity needs is declining rapidly.

Asset liquidity, or how “salable” the bank’s

LIABILITY MANAGEMENT

Liquidity needs can be met through the discretionary acquisition of funds on the basis of interest rate competition. This does not preclude the option of selling assets to meet funding needs, and conceptually, the availability of asset and liability options should result in a lower liquidity maintenance cost. The alternative costs of available discretionary liabilities can be compared to the opportunity cost of selling various assets. The major difference between liquidity in larger banks and in smaller banks is that larger banks are better able to control the level and composition of their liabilities and assets. When funds are required, larger banks have a wider variety of options from which to select the least costly method of generating funds. In addition, discretionary access to the money markets should reduce the size of the liquid asset “buffer” that would be needed if the bank were solely dependent upon asset management to obtain funds.

The ability to obtain additional liabilities represents liquidity potential. The marginal cost of liquidity, the cost of incremental funds acquired, is of paramount importance in evaluating liability sources of liquidity. Consideration must be given to such factors as the frequency with which the banks must regularly refinance maturing purchased liabilities, as well as an evaluation of the bank’s ongoing ability to obtain funds under normal market conditions. The obvious difficulty in estimating the latter is that, until the bank goes to the market to borrow, it cannot determine with complete certainty that funds will be available and/or at a price which will maintain a positive yield spread. Changes in money market conditions may cause a rapid deterioration in a bank’s capacity to borrow at a favorable rate. In this context, liquidity represents the ability to attract funds in the market when needed, at a reasonable cost vis-à-vis asset yield.

As previously noted the access of a large bank to discretionary funding sources is a function of its position and reputation in the money markets. Although smaller institutions do not have a “name” in those markets, they are not precluded from liability management. The scope and volume of smaller institution’s operations is somewhat limited, however, particularly as they attempt to access the brokered or purchased CD market.

Although the acquisition of funds at a competitive cost has enabled many banks to meet

expanding customer loan demand, misuse or improper implementation of liability management can have severe consequences. Further, liability management is not riskless. For example,

- Purchased funds may not always be available at a reasonable cost when needed. If the market loses confidence in a bank, the availability of purchased funds may be threatened.
- Concentrations in funding sources increase liquidity risk. For example, a bank relying heavily on foreign interbank deposits will experience funding problems if overseas markets perceive instability in U.S. banks or the economy. Replacing foreign source funds might be difficult and costly because the domestic market may view the bank’s sudden need for funds negatively.
- Over-reliance on liability management may cause a tendency to minimize holdings of short-term securities, relax asset liquidity standards, and result in a large concentration of short-term liabilities supporting assets of longer maturity. During times of tight money, this could cause an earnings squeeze and an illiquid condition.
- If rate competition develops in the money market, a bank may incur a high cost of funds and may elect to lower credit standards to book higher yielding loans and securities. If a bank is purchasing liabilities to support assets which are already on its books, the higher cost of purchased funds may result in a negative yield spread.
- When national monetary tightness occurs, heightened interest rate discrimination, or tiering, may develop, and may make the cost of purchased funds prohibitive to all but a small number of money center banks. Therefore, banks with limited funding sources should avoid heavy reliance on purchased funds.
- Preoccupation with obtaining funds at the lowest possible cost, without considering maturity distribution, greatly intensifies a bank’s exposure to the risk of interest rate fluctuations.

In all banks, and particularly those relying on wholesale funding sources, management must constantly be aware of the composition, characteristics, and diversification of its funding sources.

Real or perceived deterioration in the financial condition of a bank because of weak asset quality, fraud, or external economic developments will adversely affect wholesale and retail funding. The extent of market reaction depends on the composition and risk tolerance of the bank's funding base. (Risk tolerance is the willingness and ability of an individual or institution to borrow/lend money for a given risk and reward).

Many factors affect the risk tolerance of funds providers, including these:

- Obligations to fiduciary investors, such as money market funds, trust funds and pensions.
- Reliance on rating firms—bylaws or internal guidelines may prohibit placing funds in banks that have low ratings.
- Obligations to disclose information on investment holdings.
- Self-interest in maintaining an orderly marketplace—for this reason major banks are slow in eliminating funding to other banks.
- Having a personal contact at the bank to provide timely and accurate information about its financial condition.

The following common fund providers are ranked generally (while subject to change) from the least to the most risk tolerant:

- Money market funds.
- Trust funds.
- Pension funds.
- Money market brokers-dealers
 - small denomination certificates of deposit (under \$100,000) sold through broker-dealers; and
 - large denomination certificates of deposit (\$100,000 and over) sold through brokers-dealers
- Regional banks.
- Government agencies.
- Community banks.
- Insurance companies.
- Corporations.
- Multinational banks.
- Individuals.

POLICY/MANAGEMENT REPORTING SYSTEMS

Regardless of the method or combination of

methods chosen to manage a bank's liquidity position, it is of key importance that the bank formulate a policy and develop a measurement system to ensure that liquidity requirements are monitored and met on an ongoing basis. This should be done in anticipation of future occurrences, both expected and unexpected. It should also reflect the bank's strategy for managing its investment portfolio and the potential for those investments to provide liquidity to the bank. Such a policy should recognize the unique characteristics of the bank and should reflect its goals. The scope of the policy will vary with the sophistication of the institution.

The policy should provide for coordination between concerned bank departments and should establish clear responsibility for decisions affecting liquidity. Senior management should be apprised regularly of liquidity conditions. Furthermore, the policy should set forth guidelines delineating appropriate levels of liquidity. Examples of some typical guidelines are listed below:

- A limit on the loan to deposit ratio.
- A limit on the loan to capital ratio.
- A general limit on the relationship between anticipated funding needs and available sources for meeting those needs (for example: the ratio of anticipated needs/primary sources shall not exceed ____ percent).
- Primary sources for meeting funding needs should be quantified.
- Flexible limits on the percentage reliance on a particular liability category (for example: negotiable certificates of deposit should not account for more than ____ percent of total liabilities).
- Limits on the dependence on individual customers or market segments for funds in liquidity position calculations.
- Flexible limits on the minimum/maximum average maturity for different categories of liabilities (for example: the average maturity of negotiable certificates of deposit shall not be less than ____ months).
- Minimum liquidity provision to be maintained to sustain operations while necessary longer-term adjustments are made.

A workable management information system is integral to making sound funds management decisions. Reports containing certain basic information should be prepared and reviewed regularly. Report content and format will vary

from bank to bank depending on the characteristics of the bank and the funds management methods and practices used. Normally, a good management information system will contain reports detailing liquidity needs and the sources of funds available to meet those needs. (The maturity distribution of assets and liabilities and

expected funding of commitments would prove useful in preparing this report.) Additionally, policies should establish, and the management information system should be able to track, contingency liquidity plans for use in a variety of emergency funding situations.

Asset/Liability Management

Examination Objectives

Effective date November 1990

Section 4020.2

1. To evaluate the management of the bank's assets, liabilities, and off-balance-sheet position to determine if management is planning adequately for liquidity needs, and if the bank can effectively meet anticipated and potential liquidity needs.
2. To determine if reasonable parameters have been established for the bank's liquidity position and if the bank is operating within those established parameters.
3. To determine if internal management reports provide the necessary information for informed liquidity decisions and for monitoring the results of those decisions.
4. To urge corrective action when liquidity policies, practices, or procedures are deficient.
5. To determine if guidelines and procedures have been developed to assess the adequacy of the following: a formal contingency plan; the level of liquid assets; the ability of the bank to liquidate the loan and investment portfolios; the level of term deposits and funding lines; and whether committed funds lines are needed.

Asset/Liability Management

Examination Procedures

Effective date November 2003

Section 4020.3

1. If internal controls or the internal audit function is determined to be inadequate, complete or update the internal control questionnaire, and prepare a brief description of the bank's liquidity policies and practices.
2. Review the UBPR interim financial statements and internal management reports to assess the asset/liability mix and trends, paying particular attention to—
 - a. deposit composition and stability,
 - b. the ratios of loan commitments to total loans and of standby letters of credit to total loans,
 - c. the loan-to-deposit ratio (at community banks),
 - d. the ratio of temporary investments to volatile liabilities, and
 - e. the ratio of pledged securities to total securities.

When performing steps 3 through 9, evaluate the effectiveness of internal management reporting systems in providing for adequate liquidity management.
3. Determine if management has properly planned for liquidity needs.
 - a. Are well-established strategies, policies, and procedures for managing both the sources and uses of an institution's funds across various tenors or time frames in place, and do these strategies include assessing and planning for short-term, intermediate-term, and long-term liquidity needs?
 - b. Are there liquidity-risk measurement systems appropriate for the size and complexity of the institution?
 - c. Are the short-term sources of funds to meet anticipated or potential needs adequate?
 - d. Has management—
 - reviewed the internal management report detailing liquidity requirements and sources of liquidity, and
 - evaluated the bank's ability to meet anticipated or potential needs?
4. To determine if management is adequately planning for intermediate-term and longer-term liquidity or funding needs—
 - a. discuss with management or review the bank's budget projections for the appropriate planning period;
- b. ascertain if management has planned the future direction of the bank, noting the projected growth, source of funding for the growth, and any projected changes in asset or liability mix;
- c. evaluate future plans regarding liquidity needs, ascertaining whether the bank can reasonably achieve the amounts and types of funding projected and can achieve the amounts and types of asset growth projected; and
- d. ascertain whether the appropriate interest-rate sensitivity concerns have been addressed in planning long-term funding strategies.
5. Assess the reasonableness of bank-established parameters for the use of volatile liabilities.
 - a. Does the liquidity policy incorporate limits on both the volume and intended use of such liabilities?
 - b. Does the policy establish permissible ranges for maturity mismatches between volatile liabilities and assets being supported by these liabilities?
6. Review the adequacy of the bank's contingency liquidity plan.
 - a. Does management's plan ensure adequate access to a diversified array of readily accessible confirmed funding sources, including liquid assets such as high-grade investment securities and a diversified mix of wholesale and retail borrowings?
 - b. Has management determined what potential funding losses could occur if unexpected financial or operational problems arise?
 - c. Have alternative funding sources or assets that could be sold to cover such losses been identified?
 - d. Is the contingency plan well designed, and does it span a broad range of potential liquidity events that are tailored to an institution's specific business lines and liquidity-risk profile?
7. Does the liquidity policy restrict borrowings from affiliated banks to reasonable levels?
8. Does the liquidity policy provide appropriate

ate control and supervision of the volume of loan commitments and other off-balance-sheet activities?

9. Are adequate internal controls and internal audit processes in place? Do the internal controls and internal audit reviews ensure compliance with internal liquidity-management policies and procedures?
10. Discuss the following issues with management, and summarize your findings in the report:
 - a. the quality of the bank's planning to meet liquidity needs and the current ability of the bank to meet anticipated and potential liquidity needs
 - b. the quality of administrative control and internal management reporting systems
 - c. where appropriate, the effect of liquidity management decisions on earnings
11. Update the workpapers with any information that will facilitate future examinations. Discuss with senior management the findings of the examination of their liquidity policies and practices.

Asset/Liability Management

Internal Control Questionnaire

Effective date November 2003

Section 4020.4

1. Has the board of directors, consistent with its duties and responsibilities, reviewed and ratified funds-management policies, practices and procedures that include—
 - a. lines of authority and responsibility for liquidity management decisions?
 - b. a formal mechanism to coordinate asset and liability management decisions?
 - c. a method to identify liquidity needs and the means to meet those needs?
 - d. guidelines for the level of liquid assets and other sources of funds in relationship to anticipated and potential needs?
2. Does the planning and budgeting function consider liquidity requirements?
3. Have provisions been made for the preparation of internal management reports that are an adequate basis for ongoing liquidity management decisions and for monitoring the results of the decisions?
4. Are internal management reports concerning liquidity needs and sources of funds to meet those needs prepared regularly and reviewed as appropriate by senior management and the board of directors?
5. Is the information obtained in questions 1–4 an adequate basis for evaluating internal controls over asset/liability management in that there are no significant additional deficiencies that impair any control? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
6. On the basis of a composite evaluation, as evidenced by answers to the foregoing questions, are the internal controls and internal audit procedures considered adequate? Do the internal controls and internal audit reviews ensure compliance with internal liquidity management policies and procedures?

Many banking organizations (BOs) have substantially increased their securitization activities. Asset securitization typically involves the transfer of potentially illiquid on-balance-sheet assets (for example, loans, leases, and other assets) to a third party or trust. In turn, the third party or trust issues certificates or notes to investors. The cash flow from the transferred assets supports repayment of the certificates or notes. BOs use asset securitization to access alternative funding sources, manage concentrations, improve financial-performance ratios, and more efficiently meet customer needs. Assets typically securitized include credit card receivables and automobile receivable paper, commercial and residential first mortgages, commercial loans, home-equity loans, and student loans.

Managing the risks of securitization activities poses increasing challenges, which may be less obvious and more complex than the risks of traditional lending activities. Securitization can involve credit, liquidity, operational, legal, and reputational risks in concentrations and forms that may not be fully recognized by bank management or adequately incorporated into an institution's risk-management systems. In reviewing these activities, examiners should assess whether BOs fully understand and adequately manage the full range of risks involved in securitization activities.

BOs have been involved with asset-backed securities (ABS), both as investors in them and as major participants in the securitization process. The federal government encourages the securitization of residential mortgages. In 1970, the Government National Mortgage Association (GNMA or Ginnie Mae) created the first publicly traded mortgage-backed security. Shortly thereafter, the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac), both government-sponsored agencies, also developed mortgage-backed securities. The guarantees on the securities that these government or government-sponsored entities provide ensure investors of the payment of principal and interest. These guarantees have greatly facilitated the securitization of mortgage assets. Banks also securitize other types of assets, such as nonperforming loans and lease receivables.

While the objectives of securitization may vary from institution to institution, there are

essentially five benefits that can be derived from securitized transactions. First, the sale of assets may reduce regulatory costs. The removal of an asset from an institution's books reduces capital requirements and reserve requirements on the deposits funding the asset. Second, securitization provides originators with an additional source of funding or liquidity. The process of securitization basically converts an illiquid asset into a security with greater marketability. Securitized issues often require a credit enhancement, which results in a higher credit rating than what would normally be obtainable by the institution itself. Consequently, these issues may provide the institution with a cheaper form of funding. Third, securitization may be used to reduce interest-rate risk by improving the institution's asset-liability mix. This is especially true if the institution has a large investment in fixed-rate, low-yield assets. Fourth, by removing assets, the institution enhances its return on equity and assets. Finally, the ability to sell these securities worldwide diversifies the institution's funding base, which reduces the bank's dependence on local economies.

While securitization activities can enhance both credit availability and bank profitability, the risks of these activities must be known and managed. Accordingly, BOs should ensure that their overall risk-management process explicitly incorporates the full range of risks involved in their securitization activities, and examiners should assess whether institutions fully understand and adequately manage these risks. Specifically, examiners should determine whether institutions are recognizing the risks of securitization activities by (1) adequately identifying, quantifying, and monitoring these risks; (2) clearly communicating the extent and depth of these risks in reports to senior management and the board of directors and in regulatory reports; (3) conducting ongoing stress testing to identify potential losses and liquidity needs under adverse circumstances; and (4) setting adequate minimum internal standards for allowances or liabilities for losses, capital, and contingency funding. Incorporating asset-securitization activities into BO's risk-management systems and internal capital-adequacy allocations is particularly important since the current regulatory capital rules may not fully capture the economic substance of the risk exposures arising from many of these activities.

Senior management and directors must have the requisite knowledge of the effect of securitization on the BO's risk profile, and they must be fully aware of the accounting, legal, and risk-based capital nuances of this activity. BOs must fully and accurately distinguish and measure the risks that are transferred versus those that are retained, and they must adequately manage the retained portion. It is essential that BOs engaging in securitization activities have appropriate front- and back-office staffing; internal and external accounting and legal support; audit or independent-review coverage; information systems capacity; and oversight mechanisms to execute, record, and administer these transactions correctly.

Appropriate valuation and modeling methodologies must be used. They must be able to determine the initial and ongoing fair value of retained interests. Accounting rules (generally accepted accounting principles, or GAAP) provide a method to recognize an immediate gain (or loss) on the sale through booking a "retained interest." The carrying value, however, of that interest must be fully documented, based on reasonable assumptions, and regularly analyzed for any subsequent impairment in value. The best evidence of fair value is a quoted market price in an active market. When quoted market prices are not available, accounting rules allow fair value to be estimated. This estimate must be based on the "best information available in the circumstances."¹ An estimate of fair value must be supported by reasonable and current assumptions. If a best estimate of fair value is not practicable, the asset is to be recorded at zero in financial and regulatory reports.

Unforeseen market events that affect the discount rate or performance of receivables supporting a retained interest can swiftly and dramatically alter its value. Without appropriate internal controls and independent oversight, an institution that securitizes assets may inappropriately generate "paper profits" or mask actual losses through flawed loss assumptions, inaccurate prepayment rates, and inappropriate discount rates. Liberal and unsubstantiated assumptions can result in material inaccuracies in financial statements; substantial write-downs of retained interests; and, if retained interests rep-

resent an excessive concentration of the sponsoring institution's capital, the institution's demise.

An institution's failure to adequately understand the risks inherent in its securitization activities and to incorporate risks into its risk-management systems and internal capital allocations may constitute an unsafe and unsound banking practice. Furthermore, retained interests that lack objectively verifiable support or that fail to meet these supervisory standards will be classified as loss and disallowed for inclusion as assets of the institution for regulatory capital purposes. (See SR-99-37.) Accordingly, for those institutions involved in asset securitization or providing credit enhancements in connection with loan sales and securitization, examiners should assess whether the institutions' systems and processes adequately identify, measure, monitor, and control *all* the risks involved in its securitization activities. Examiners also will review an institution's valuation of retained interests and the concentration of these assets relative to capital. Consistent with existing supervisory authority, BOs may be required, on a case-by-case basis, to hold additional capital commensurate with their risk exposures.² An excessive dependence on securitizations for day-to-day core funding can present significant liquidity problems during times of market turbulence or if there are difficulties specific to the BO.

Traditional lending activities are generally funded by deposits or other liabilities, with both the assets and related liabilities reflected on the balance sheet. Liabilities must generally increase in order to fund additional loans. In contrast, the securitization process generally does not increase on-balance-sheet liabilities in proportion to the volume of loans or other assets securitized. As discussed more fully below, when banking organizations securitize their assets and these transactions are treated as sales, both the assets and the related ABS (liabilities) are removed from the balance sheet. The cash proceeds from the securitization transactions are generally used to originate or acquire additional loans or other assets for securitization, and the process is

1. See Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities."

2. For instance, an institution that has high concentrations of retained interests relative to its capital or is otherwise at risk from impairment of these assets may be subject to this requirement.

repeated. Thus, for the same volume of loan originations, securitization results in lower assets and liabilities compared with traditional lending activities.

THE SECURITIZATION PROCESS

As depicted in figure 1, the asset-securitization process begins with the segregation of loans or leases into pools that are relatively homogeneous with respect to credit, maturity, and interest-rate risks. These pools of assets are then transferred to a trust or other entity known as an issuer because it issues the securities or ownership interests that are acquired by investors. These ABS may take the form of debt, certificates of beneficial ownership, or other instruments. The issuer is typically protected from bankruptcy by various structural and legal arrangements. A sponsor that provides the assets to be securitized owns or otherwise establishes the issuer.

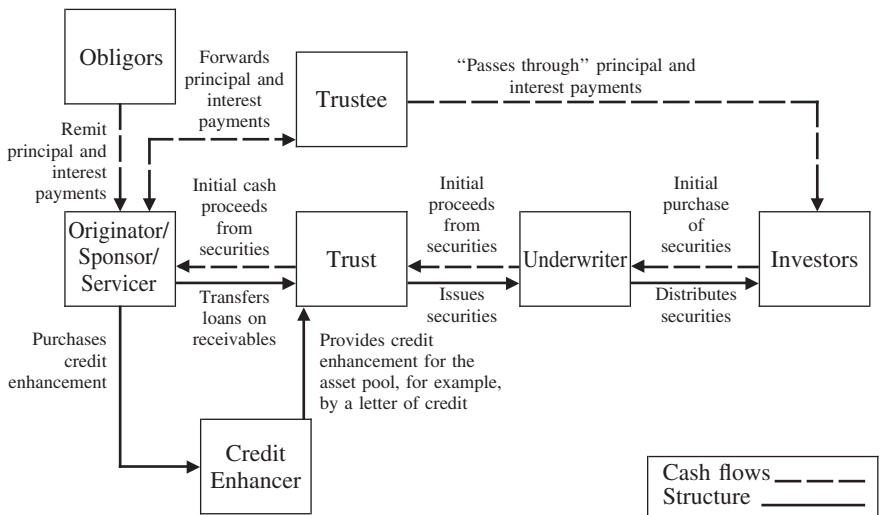

Each issue of ABS has a servicer that is responsible for collecting interest and principal payments on the loans or leases in the underlying pool of assets and for transmitting these funds to investors (or a trustee representing them). A trustee is responsible for monitoring

the activities of the servicer to ensure that it properly fulfills its role.

A guarantor may also be involved to ensure that principal and interest payments on the securities will be received by investors on a timely basis, even if the servicer does not collect these payments from the obligors of the underlying assets. Many issues of mortgage-backed securities are either guaranteed directly by GNMA, which is backed by the full faith and credit of the U.S. government, or by Fannie Mae or Freddie Mac, which are government-sponsored agencies that are perceived by the credit markets to have the implicit support of the federal government. Privately issued mortgage-backed securities and other types of ABS generally depend on some form of credit enhancement provided by the originator or third party to insulate the investor from a portion of or all credit losses. Usually, the amount of the credit enhancement is based on several multiples of the historical losses experienced on the particular asset backing the security.

The structure of an asset-backed security and the terms of the investors' interest in the collateral can vary widely depending on the type of collateral, the desires of investors, and the use of credit enhancements. Securitizations typically carve up the risk of credit losses from the

Figure 1—Pass-through, asset-backed securities: structure and cash flows

underlying assets and distribute it to different parties. The *first-dollar*, or most subordinate, loss position is first to absorb credit losses, and the most *senior* investor position is last to absorb losses; there may also be one or more loss positions in between (*second-dollar* loss positions). Each loss position functions as a credit enhancement for the more senior positions in the structure. In other words, when ABS reallocate the risks in the underlying collateral (particularly credit risk), the risks are moved into security tranches that match the desires of investors. For example, senior-subordinated security structures give holders of senior tranches greater credit-risk protection—albeit at lower yields—than holders of subordinated tranches. Under this structure, at least two classes of asset-backed securities, a senior and a junior or subordinated class, are issued in connection with the same pool of collateral. The senior class is structured so that it has a priority claim on the cash flows from the underlying pool of assets. The subordinated class must absorb credit losses on the collateral before losses can be charged to the senior portion. Because the senior class has this priority claim, cash flows from the underlying pool of assets must first satisfy the requirements of the senior class. Only after these requirements have been met will the cash flows be directed to service the subordinated class.

Credit Enhancement

ABS can use various forms of credit enhancements to transform the risk-return profile of underlying collateral. These include third-party credit enhancements, recourse provisions, overcollateralization, and various covenants and indentures. The sponsor of the asset securitization may provide a portion of the total credit enhancement internally, as part of the securitization structure, through the use of excess spread accounts, overcollateralization, retained subordinated interests, or other similar on-balance-sheet assets. When these or other on-balance-sheet internal enhancements are provided, the enhancements are “residual interests” and are a form of recourse.³

A seller may also arrange for a third party to provide credit enhancement in an asset securiti-

zation. If the third-party enhancement is provided by another bank, the other bank assumes some portion of the assets’ credit risk. All forms of third-party enhancements, that is, all arrangements in which a bank assumes credit risk from third-party assets or other claims that it has not transferred, are referred to as *direct-credit substitutes*. The economic substance of a bank’s credit risk from providing a direct-credit substitute can be identical to its credit risk from retaining recourse on assets it has transferred. Third-party credit enhancements include standby letters of credit, collateral or pool insurance, or surety bonds from third parties. Many asset securitizations use a combination of recourse and third-party enhancements to protect investors from credit risk. When third-party enhancements are not provided, the selling bank ordinarily retains virtually all of the credit risk on the assets transferred.

Some ABS, such as those backed by credit card receivables, typically use a *spread account*. This account is actually an escrow account. The funds in this account are derived from a portion of the spread between the interest earned on the assets in the underlying pool and the lower interest paid on securities issued by the trust. The amounts that accumulate in the account are used to cover credit losses in the underlying asset pool up to several multiples of historical losses on the particular asset collateralizing the securities. Overcollateralization, a form of credit enhancement covering a predetermined amount of potential credit losses, occurs when the value of the underlying assets exceeds the face value of the securities.

A similar form of credit enhancement is the cash-collateral account, which is established when a third party deposits cash into a pledged account. The use of cash-collateral accounts, which are considered by enhancers to be loans, grew as the number of highly rated banks and other credit enhancers declined in the early 1990s. Cash-collateral accounts eliminate *event risk*, or the risk that the credit enhancer will have its credit rating downgraded or that it will not be able to fulfill its financial obligation to absorb losses and thus provide credit protection to investors in a securitization.

An investment banking firm or other organization generally serves as an underwriter for ABS. In addition, for asset-backed issues that are publicly offered, a credit-rating agency will analyze the policies and operations of the originator and servicer, as well as the structure,

3. Purchased credit-enhancing interest-only strips are also considered “residual interests.”

underlying pool of assets, expected cash flows, and other attributes of the securities. Before assigning a rating to the issue, the rating agency will also assess the extent of loss protection provided to investors by the credit enhancements associated with the issue.

TYPES OF ASSET-BACKED SECURITIES

Asset securitization involves different types of capital-market instruments. (For more information, see the *Trading and Capital-Markets Activities Manual*, section 4105.1, “Asset-Backed Securities and Asset-Backed Commercial Paper,” and section 4110.1, “Residential Mortgage-Backed Securities.”) These instruments may be structured as “pass-throughs” or “pay-throughs.” Under a pass-through structure, the cash flows from the underlying pool of assets are passed through to investors on a pro rata basis. This type of security may be a single-class instrument, such as a GNMA pass-through, or a multiclass instrument, such as a real estate mortgage investment conduit (REMIC).⁴

The pay-through structure, with multiple classes, combines the cash flows from the underlying pool of assets and reallocates them to two or more issues of securities that have different cash-flow characteristics and maturities. An example is the collateralized mortgage obligation (CMO), which has a series of bond classes, each with its own specified coupon and stated maturity. In most cases, the assets that make up the CMO collateral pools are pass-through securities. Scheduled principal payments and any prepayments from the underlying collateral go first to the earliest maturing class of bonds. This first class of bonds must be retired before the principal cash flows are used to retire the later bond classes. The development of the

pay-through structure resulted from the desire to broaden the marketability of these securities to investors who were interested in maturities other than those generally associated with pass-through securities.

Multiple-class ABS may also be issued as derivative instruments, such as “stripped” securities. Investors in each class of a stripped security will receive a different portion of the principal and interest cash flows from the underlying pool of assets. In their purest form, stripped securities may be issued as interest-only (IO) strips, for which the investor receives 100 percent of the interest from the underlying pool of assets, and as principal-only (PO) strips, for which the investor receives all of the principal.

In addition to these securities, other types of financial instruments may arise as a result of asset securitization, as follows:

- *Servicing assets.* These assets become a distinct asset recorded on the balance sheet when contractually separated from the underlying assets that have been sold or securitized and when the servicing of those assets is retained. (See FAS 140 for more information.) In addition, servicing assets are created when organizations purchase the right to act as servicers for loan pools. The value of the servicing assets is based on the contractually specified servicing fees, net of servicing costs.
- *Interest-only strips receivables.* These cash flows are accounted for separately from servicing assets and reflect the right to future interest income from the serviced assets in excess of the contractually specified servicing fees.
- *ABS residuals.* These residuals (sometimes referred to as “residuals,” “residual interests,” or “retained interests” represent claims on any cash flows that remain after all obligations to investors and any related expenses have been met. The excess cash flows may arise as a result of overcollateralization or from reinvestment income. Residuals can be retained by sponsors or purchased by investors in the form of securities.

RISKS ASSOCIATED WITH ASSET SECURITIZATION

While clear benefits accrue to banking organizations that engage in securitization activities

4. In the early 1980s, collateralized mortgage obligations (CMOs), or multiple-class securities, were introduced to help minimize the reinvestment and interest-rate risks inherent in the traditional fixed-rate mortgage-backed security. As a result of the Tax Reform Act of 1986, the REMIC was created. The REMIC is a more flexible mortgage security that expanded the appeal of the CMO structure to a wider investor base and offered preferred tax status to both investors and issuers. Today, almost all CMOs are issued in REMIC form. (“The ABCs of CMOs, REMICs and IO/POs: Rocket Science Comes to Mortgage Finance,” *Journal of Accountancy*, April 1991, p. 41.)

and invest in ABS, these activities have the potential to increase the overall risk profile of the banking organization if they are not carried out prudently. For the most part, the types of risks that financial institutions encounter in the securitization process are identical to those that they face in traditional lending transactions, including credit risk, concentration risk, interest-rate risk (including prepayment risk), operational risk, liquidity risk, moral-recourse risk, and funding risk. However, since the securitization process separates the traditional lending function into several limited roles, such as originator, servicer, credit enhancer, trustee, and investor, the types of risks that a bank will encounter will differ depending on the role it assumes.

Investor-Specific Risks

Investors in ABS will be exposed to varying degrees of credit risk, that is, the risk that obligors will default on principal and interest payments. Like the investors in the direct investments of the underlying assets, ABS investors are also subject to the risk that the various parties in the securitization structure, for example, the servicer or trustee, will be unable to fulfill their contractual obligations. Moreover, investors may be susceptible to concentrations of risks across various asset-backed security issues (1) through overexposure to an organization that performs various roles in the securitization process or (2) as a result of geographic concentrations within the pool of assets providing the cash flows for an individual issue. Also, since the secondary markets for certain ABS are limited, investors may encounter greater than anticipated difficulties (liquidity risk) when seeking to sell their securities. Furthermore, certain derivative instruments, such as stripped asset-backed securities and residuals, may be extremely sensitive to interest rates and exhibit a high degree of price volatility. Therefore, they may dramatically affect the risk exposure of investors unless used in a properly structured hedging strategy. Examiner guidance in the *Trading and Capital-Markets Activities Manual*, section 3000.1, “Investment Securities and End-User Activities,” is directly applicable to ABS held as investments.

Issuer-Specific Risks

Banking organizations that issue ABS may be subject to pressures to sell only their best assets, thus reducing the quality of their own loan portfolios. On the other hand, some banking organizations may feel pressures to relax their credit standards because they can sell assets with higher risk than they would normally want to retain for their own portfolios.

To protect their name in the market, issuers may face pressures to provide “moral recourse” by repurchasing securities backed by loans or leases they have originated that have deteriorated and become nonperforming. Funding risk may also be a problem for issuers when market aberrations do not permit the issuance of asset-backed securities that are in the securitization pipeline.

Servicer-Specific Risks

Banking organizations that service securitization issues must ensure that their policies, operations, and systems will not permit breakdowns that may lead to defaults. Substantial fee income can be realized by acting as a servicer. An institution already has a fixed investment in its servicing systems, and achieving economies of scale relating to that investment is in its best interest. The danger, though, lies in overloading the system’s capacity, thereby creating enormous out-of-balance positions and cost overruns. Servicing problems may precipitate a technical default, which in turn could lead to the premature redemption of the security. In addition, expected collection costs could exceed fee income. (For further guidance, examiners should see section 2040.3, “Loan Portfolio Management: Examination Procedures,” under the “Loan Portfolio Review and Analysis” heading.)

ACCOUNTING ISSUES

Sale or Borrowing Treatment

Asset-securitization transactions are frequently structured to obtain certain accounting treatments, which in turn affect reported measures of profitability and capital adequacy. In transferring assets into a pool to serve as collateral for ABS, a key question is whether the transfer should be treated as a sale of the assets or as a

collateralized borrowing, that is, a financing transaction secured by assets. Treating these transactions as a sale of assets results in their being removed from the banking organization's balance sheet, thus reducing total assets relative to earnings and capital, and thereby producing higher performance and capital ratios.⁵ Treating these transactions as financings, however, means that the assets in the pool remain on the balance sheet and are subject to capital requirements and the related liabilities-to-reserve requirements.⁶

Valuation and Modeling Processes for Retained Interests

The methods and models BOs use to value retained interests and the difficulties in managing exposure to these volatile assets can raise supervisory concerns. Under GAAP, a BO recognizes an immediate gain (or loss) on the sale of assets by recording its retained interest at fair value. The valuation of the retained interest is based on the present value of future cash flows in excess of the amounts needed to service the bonds and cover credit losses and other fees of the securitization vehicle.⁷

Determinations of fair value should be based on reasonable, conservative assumptions about factors such as discount rates, projected credit losses, and prepayment rates. Bank supervisors expect retained interests to be supported by verifiable documentation of fair value in accordance with GAAP. In the absence of such support, the retained interests should not be carried as assets on an institution's books, but should be charged off. Other supervisory concerns include failure to recognize and hold sufficient capital against recourse obligations generated by securitizations, and the absence of an adequate and independent audit function.

The method and key assumptions used to value the retained interests and servicing assets or liabilities must be reasonable and fully documented. The key assumptions in all valuation

analyses include prepayment or payment rates, default rates, loss-severity factors, and discount rates. Institutions are expected to take a logical and conservative approach when developing securitization assumptions and capitalizing future income flows. It is important that management quantifies the assumptions at least quarterly on a pool-by-pool basis and maintains supporting documentation for all changes to the assumptions as part of the valuation. Policies should define the acceptable reasons for changing assumptions and require appropriate management approval.

An exception to this pool-by-pool valuation analysis may be applied to revolving-asset trusts if the master-trust structure allows excess cash flows to be shared between series. In a master trust, each certificate of each series represents an undivided interest in all of the receivables in the trust. Therefore, valuations are appropriate at the master-trust level.

To determine the value of the retained interest at inception, and to make appropriate adjustments going forward, the institution must implement a reasonable modeling process to comply with FAS 140. Management is expected to employ reasonable and conservative valuation assumptions and projections, and to maintain verifiable objective documentation of the fair value of the retained interest. Senior management is responsible for ensuring that the valuation model accurately reflects the cash flows according to the terms of the securitization's structure. For example, the model should account for any cash collateral or overcollateralization triggers, trust fees, and insurance payments if appropriate. The board and management are accountable for the model builders' possessing the necessary expertise and technical proficiency to perform the modeling process. Senior management should ensure that internal controls are in place to provide for the ongoing integrity of management information systems (MIS) associated with securitization activities.

As part of the modeling process, the risk-management function should ensure that periodic validations are performed to reduce vulnerability to model risk. Validation of the model includes testing the internal logic, ensuring empirical support for the model assumptions, and back-testing the models using actual cash flows on a pool-by-pool basis. The validation process should be documented to support conclusions. Senior management should ensure the validation process is independent from line man-

5. See FAS 140 for criteria that must be met for the securitization of assets to be accounted for as a sale.

6. Note, however, that the Federal Reserve's Regulation D (12 CFR 204) defines what constitutes a reservable liability of a depository institution. Thus, although a given transaction may qualify as an asset sale for call report purposes, it nevertheless could result in a reservable liability under Regulation D. See the call report instructions for further guidance. Also, see section 3020.1, "Assessment of Capital Adequacy."

7. See FAS 140.

agement and from the modeling process. The audit scope should include procedures to ensure that the modeling process and validation mechanisms are both appropriate for the institution's circumstances and executed consistently with its asset-securitization policy.

Use of Outside Parties

Third parties are often engaged to provide professional guidance and support regarding an institution's securitization activities, transactions, and valuing of retained interests. The use of outside resources does not relieve directors of their oversight responsibility, nor does it relieve senior management of its responsibilities to provide supervision, monitoring, and oversight of securitization activities, particularly the management of the risks associated with retained interests. Management is expected to have the experience, knowledge, and abilities to discharge its duties; understand the nature and extent of the risks that retained interests present; and have the policies and procedures necessary to implement an effective risk-management system to control such risks. Management must have a full understanding of the valuation techniques employed, including the basis and reasonableness of underlying assumptions and projections.

Market Discipline and Disclosures

Transparency through public disclosure is crucial to effective market discipline and can reinforce supervisory efforts to promote high standards in risk management. Timely and adequate information on the institution's asset-securitization activities should be disclosed. The information in the disclosures should be comprehensive; however, the amount of disclosure that is appropriate will depend on the volume of securitizations and complexity of the BO. Well-informed investors, depositors, creditors, and other counterparties can provide a BO with strong incentives for maintaining sound risk-management systems and internal controls. Adequate disclosure allows market participants to better understand the BO's financial condition and apply market discipline, thus creating incentives to reduce inappropriate risk-taking or inadequate risk-management practices. Examples

of sound disclosures include—

- accounting policies for measuring retained interests, including a discussion of the impact of key assumptions on the recorded value;
- the process and methodology used to adjust the value of retained interests for changes in key assumptions;
- risk characteristics, both quantitative and qualitative, of the underlying securitized assets;
- the role of retained interests as credit enhancements to special-purpose entities and other securitization vehicles, including a discussion of techniques used for measuring credit risk; and
- sensitivity analyses or stress testing conducted by the BO, showing the effect of changes in key assumptions on the fair value of retained interests.

CAPITAL ADEQUACY

As with all risk-bearing activities, institutions should fully support the risk exposures of their securitization activities with adequate capital. Banking organizations should ensure that their capital positions are sufficiently strong to support *all* the risks associated with these activities on a fully consolidated basis and should maintain adequate capital in all affiliated entities engaged in these activities. The Federal Reserve's risk-based capital guidelines establish *minimum* capital ratios, and those banking organizations exposed to high or above-average degrees of risk are expected to operate significantly *above* the minimum capital standards.

The current regulatory capital rules may not fully incorporate the economic substance of the risk exposures involved in many securitization activities. Therefore, when evaluating capital adequacy, examiners should ensure that banking organizations that (1) sell assets with recourse, (2) assume or mitigate credit risk through the use of credit derivatives, or (3) provide direct-credit substitutes and liquidity facilities to securitization programs are accurately identifying and measuring these exposures and maintaining capital at aggregate levels sufficient to support the associated credit, market, liquidity, reputational, operational, and legal risks.

Examiners should review the substance of securitizations when assessing underlying risk exposures. For example, partial, first-loss direct-

credit substitutes providing credit protection to a securitization transaction can, in substance, involve the same credit risk as would be involved in holding the entire asset pool on the institution's balance sheet. Examiners should ensure that banks have implemented reasonable methods for allocating capital against the economic substance of credit exposures arising from early-amortization events and liquidity facilities associated with securitized transactions. These liquidity facilities are usually structured as short-term commitments in order to avoid a risk-based capital requirement, even though the inherent credit risk may be similar to that of a guarantee.⁸

If, in the examiner's judgment, an institution's capital level is not sufficient to provide protection against potential losses from the above credit exposures, this deficiency should be reflected in the banking organization's CAMELS rating. Furthermore, examiners should discuss the capital deficiency with the institution's management and, if necessary, its board of directors. Such an institution will be expected to develop and implement a plan for strengthening the organization's overall capital adequacy to levels deemed appropriate given all the risks to which it is exposed.

RISK-BASED CAPITAL PROVISIONS AFFECTING ASSET SECURITIZATION

The risk-based capital framework assigns risk weights to loans, ABS, off-balance-sheet credit enhancements, and other assets related to securitization.⁹ Second, banks that transfer assets with recourse to the seller as part of the securitization process are explicitly required to hold capital against their off-balance-sheet credit

exposures. However, the specific capital requirement will depend on the amount of recourse retained by the transferring institution and the type of asset sold with recourse. Third, banking organizations that provide credit enhancement to asset-securitization issues through standby letters of credit or by other means must hold capital against the related off-balance-sheet credit exposure.

Assigning Risk Weights

The risk weights assigned to an asset-backed security generally depend on the issuer and on whether the assets that compose the collateral pool are mortgage-related assets or assets guaranteed by a U.S. government agency. ABS issued by a trust or single-purpose corporation and backed by nonmortgage assets generally are to be assigned a risk weight of 100 percent.

Securities guaranteed by U.S. government agencies and those issued by U.S. government-sponsored agencies are assigned risk weights of 0 percent and 20 percent, respectively, because of the low degree of credit risk. Accordingly, mortgage pass-through securities guaranteed by GNMA are placed in the risk category of 0 percent. In addition, securities such as participation certificates and CMOs issued by Fannie Mae or Freddie Mac are assigned a 20 percent risk weight.

However, several types of securities issued by Fannie Mae and Freddie Mac are excluded from the lower risk weight and slotted in the 100 percent risk category. Residual interests (for example, CMO residuals) and subordinated classes of pass-through securities or CMOs that absorb more than their pro rata share of loss are assigned to the 100 percent risk-weight category. Furthermore, high-risk mortgage-derivative securities and all stripped, mortgage-backed securities, including IOs, POs, and similar instruments, are assigned to the 100 percent risk-weight category because of their high price volatility and market risk.

A privately issued mortgage-backed security that meets the criteria listed below is considered a direct or indirect holding of the underlying mortgage-related assets and is generally assigned to the same risk category as those assets (for example, U.S. government agency securities, U.S. government-sponsored agency securities, FHA- and VA-guaranteed mortgages, and con-

8. For further guidance on distinguishing, for risk-based capital purposes, whether a facility is a short-term commitment or a direct-credit substitute, see SR-92-11, "Asset-Backed Commercial Paper Programs." Essentially, facilities that provide liquidity, but which also provide credit protection to secondary-market investors, are to be treated as direct-credit substitutes for purposes of risk-based capital.

9. In addition to being subject to risk-based capital requirements, servicing assets are also subject to capital limitations. The total amount of servicing assets (including both mortgage-servicing assets and nonmortgage-servicing assets) and purchased credit-card relationships that may be included in a bank's capital may not, in the aggregate, exceed 100 percent of tier 1 capital. The total amount of nonmortgage-servicing assets and purchased credit-card relationships is subject to a separate aggregate sublimit of 25 percent of tier 1 capital.

ventional mortgages). However, under no circumstances will a privately issued mortgage-backed security be assigned to the 0 percent risk category. Therefore, private issues that are backed by GNMA securities will be assigned to the 20 percent risk category as opposed to the 0 percent category appropriate to the underlying GNMA securities. The criteria that a privately issued mortgage-backed security must meet to be assigned the same risk weight as the underlying assets are as follows:

- The underlying assets are held by an independent trustee, and the trustee has a first-priority, perfected security interest in the underlying assets on behalf of the holders of the security.
- The holder of the security has an undivided pro rata ownership interest in the underlying mortgage assets, or the trust or single-purpose entity (or conduit) that issues the security has no liabilities unrelated to the issued securities.
- The cash flow from the underlying assets of the security in all cases fully meets the cash-flow requirements of the security without undue reliance on any reinvestment income.
- No material reinvestment risk is associated with any funds awaiting distribution to the holders of the security.

Those privately issued mortgage-backed securities that do not meet the above criteria are to be assigned to the 100 percent risk category.

If the underlying pool of mortgage-related assets is composed of more than one type of asset, then the entire class of mortgage-backed securities is assigned to the category appropriate to the highest risk-weighted asset in the asset pool. For example, if the security is backed by a pool consisting of U.S. government-sponsored agency securities (for example, Freddie Mac participation certificates) that qualify for a 20 percent risk weight and conventional mortgage loans that qualify for the 50 percent risk category, then the security would receive the 50 percent risk weight.

While not set forth specifically in the risk-based capital guidelines, securities backed by student loans that meet the above-mentioned criteria may also be considered an indirect holding of the underlying assets and assigned to the same risk category as those assets. For instance, the U.S. Department of Education conditionally guarantees banks originating student loans for 98 percent of each loan under the Federal Family Education Loan Program. The

guaranteed portion of the student loans is eligible for the 20 percent risk category. Therefore, senior ABS that are supported solely by student loans that are conditionally guaranteed by the Department of Education and that meet the four criteria listed above may be assigned to the 20 percent risk category to the extent they are guaranteed. As with mortgage-backed securities, subordinated student loan-backed securities and securities backed by pools of conditionally guaranteed and nonguaranteed student loans would be assigned to the 100 percent risk category.

Banks report their activities in accordance with GAAP, which permits asset-securitization transactions to be treated as sales when certain criteria are met even when there is recourse to the seller. In accordance with the RBC guideline, banks are required to hold capital against the off-balance-sheet credit exposure arising from the contingent liability associated with the recourse provisions. This exposure, generally the outstanding principal amount of the assets sold with recourse, is considered a direct-credit substitute that is converted at 100 percent to an on-balance-sheet credit-equivalent amount for appropriate risk weighting.

Recourse Obligations

For regulatory purposes, recourse is generally defined as an arrangement in which an institution retains the risk of credit loss in connection with an asset transfer, if the risk of credit loss exceeds a pro rata share of its claim on the assets.¹⁰ In addition to broad contractual language that may require the seller to support a securitization, recourse can arise from retained interests, retained subordinated security interests, the funding of cash-collateral accounts, or other forms of credit enhancements that place a BO's earnings and capital at risk. These enhancements should generally be aggregated to determine the extent of a BO's support of securitized assets. Although an asset securitization qualifies for sales treatment under GAAP, the underlying assets may still be subject to regulatory risk-

10. See the risk-based capital treatment for sales with recourse at 12 CFR 3, appendix A, section (3)(b)(1)(iii) (for the OCC), and 12 CFR 567.6(a)(2)(i)(c) (for the OTS). For a further explanation of recourse, see the glossary of the call report instructions at "sales of assets for risk-based capital purposes."

based capital requirements. Assets sold with recourse should generally be risk-weighted as if they had not been sold.

Credit-Equivalent Amounts and Risk Weights of Recourse Obligations and Direct-Credit Substitutes

The credit-equivalent amount for a recourse obligation or direct-credit substitute is the full amount of the credit-enhanced assets for which the bank directly or indirectly retains or assumes credit risk, multiplied by a 100 percent conversion factor. A bank that extends a partial direct-credit substitute, for example, a financial standby letter of credit that absorbs the first 10 percent of loss on a transaction, must maintain capital against the full amount of the assets being supported.

To determine the bank's risk-weighted assets for an off-balance-sheet recourse obligation, a third-party direct-credit substitute, or a letter of credit, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral. For a direct-credit substitute that is an on-balance-sheet asset, for example, a purchased subordinated security, a bank must calculate risk-weighted assets using the amount of the direct-credit substitute and the full amount of the assets it supports, that is, all the more senior positions in the structure. This treatment is subject to the low-level-exposure rule discussed below. (The risk-based capital treatment for asset securitizations is discussed in more detail in section 3020.1.)

If a bank has no claim on a transferred asset, then the retention of any risk of credit loss is recourse. A recourse obligation typically arises when a bank transfers assets and retains an explicit obligation to repurchase the assets or absorb losses due to a default on the payment of principal or interest, or due to any other deficiency in the performance of the underlying obligor or some other party. Recourse may also exist implicitly if a bank provides credit enhancement beyond any contractual obligation to support assets it has sold. The following are examples of recourse arrangements:

- credit-enhancing representations and warranties made on the transferred assets
- loan-servicing assets retained under an agreement that requires the bank to be responsible

for credit losses associated with the loans being serviced (mortgage-servicer cash advances that meet the conditions of section III.B.3.a.viii. of the capital adequacy guidelines (12 CFR 208, appendix A) are not recourse arrangements)

- retained subordinated interests that absorb more than their pro rata share of losses from the underlying assets
- assets sold under an agreement to repurchase, if the assets are not already included on the balance sheet
- loan strips sold without contractual recourse when the maturity of the transferred loan is shorter than the maturity of the commitment under which the loan is drawn
- credit derivatives issued that absorb more than the bank's pro rata share of losses from the transferred assets
- clean-up calls at inception that are greater than 10 percent of the balance of the original pool of transferred loans (clean-up calls that are 10 percent or less of the original pool balance and that are exercisable at the option of the bank are not recourse arrangements)

The risk-based capital treatment for asset securitizations is discussed in detail in section 3020.1. In general, a multilevel, ratings-based approach is used to assess the capital requirements on recourse obligations, residual interests (except credit-enhancing interest-only (I/O) strips), direct-credit substitutes, and senior and subordinated securities in asset securitizations, based on their relative exposure to credit risk. Credit ratings from rating agencies are used to measure relative exposure to credit risk and to determine the associated risk-based capital requirement. The Federal Reserve is relying on these credit ratings to make determinations of credit quality for the regulatory capital treatment for loss positions that represent different gradations of credit risk, the same as investors and other market participants. As discussed later in this section, residual interests are subject to (1) a dollar-for-dollar capital charge and (2) a 25 percent of tier 1 capital concentration limit on a subset of residual interests, credit-enhancing I/O strips.

Implicit Recourse Provided to Asset Securitizations

Implicit recourse arises when a bank provides

credit support to one of more of its securitizations beyond its contractual obligation. Implicit recourse, like contractual recourse, exposes an institution to the risk of loss arising from deterioration in the credit quality of the underlying assets of the securitization. Implicit recourse is of supervisory concern because it demonstrates that the securitizing institution is reassuming risk associated with the securitized assets—risk that the institution initially transferred to the marketplace. For risk-based capital purposes, banks deemed to be providing implicit recourse are generally required to hold capital against the entire outstanding amount of assets sold, as though the assets remained on the bank's books.

Banks have typically provided implicit recourse in situations where the originating bank perceived that the failure to provide this support, even though not contractually required, would damage its future access to the asset-backed securities market. An originating bank can provide implicit recourse in a variety of ways. The ultimate determination as to whether implicit recourse exists depends on the facts. The following actions point to a finding of implicit recourse:

- selling assets to a securitization trust or other special-purpose entity (SPE) at a discount from the price specified in the securitization documents, which is typically par value
- purchasing assets from a trust or other SPE at an amount greater than fair value
- exchanging performing assets for nonperforming assets in a trust or other SPE
- funding credit enhancements^{10a} beyond contractual requirements

By providing implicit recourse, a bank signals to the market that it still holds the risks inherent in the securitized assets, and, in effect, the risks have not been transferred. Accordingly, examiners must be attentive to banks that provide implicit support, given the risk these actions pose to a bank's financial condition. Increased attention should be given to situations where a bank is more likely to provide implicit support.

Particular attention should be paid to revolving securitizations, such as those used for credit card lines and home equity lines of credit, in

which receivables generated by the lines are sold into the securitizations. These securitizations typically provide that, when certain performance criteria hit specified thresholds, no new receivables can be sold into the securitization, and the principal on the bonds issued will begin to pay out. These early-amortization events are intended to protect investors from further deterioration in the underlying asset pool. Once an early-amortization event has occurred, the bank could have difficulties using securitization as a continuing source of funding and, at the same time, have to fund the new receivables generated by the lines of credit on its balance sheet. Thus, banks have an incentive to avoid early amortization by providing implicit support to the securitization.

Examiners should be alert for securitizations that are approaching early-amortization triggers, such as a decrease in the excess spread^{10b} below a certain threshold or an increase in delinquencies beyond a certain rate. Providing implicit recourse can pose a degree of risk to a bank's financial condition and to the integrity of its regulatory and public financial statements and reports. Examiners should review securitization documents (for example, pooling and servicing agreements) to ensure that the selling institution limits any post-sale support to that specified in the terms and conditions in the securitization documents. Examiners should also review a sample of receivables transferred between the seller and the trust to ensure that these transfers were conducted in accordance with the contractual terms of the securitization, particularly in cases where the overall credit quality of the securitized loans or receivables has deteriorated. While banks are not prohibited from providing implicit recourse, such support will generally result in higher capital requirements.

Examiners should recommend that prompt supervisory action be taken when implicit recourse is identified. To determine the appropriate action, examiners need to understand the bank's reasons for providing support and the extent of the impact of this support on the bank's earnings and capital. As with contractual recourse, actions involving noncontractual post-sale credit enhancement generally result in the requirement that the bank hold risk-based capital against the entire outstanding amount of the

10a. Credit enhancements include retained subordinated interests, asset-purchase obligations, overcollateralization, cash-collateral accounts, spread accounts, and interest-only strips.

10b. Excess spread generally is defined as finance-charge collections minus certificate interest, servicing fees, and charge-offs allocated to the series.

securitized assets. Supervisors may require the bank to bring all assets in existing securitizations back on the balance sheet for risk-based capital purposes, as well as require the bank to increase its minimum capital ratios. Supervisors may also prevent a bank from removing assets from its risk-weighted asset base on future transactions until the bank demonstrates its intent and ability to transfer risk to the marketplace. In addition, supervisors may consider other actions to ensure that the risks associated with implicit recourse are adequately reflected in the capital ratios. For example, supervisors may require the bank to deduct residual interests from tier 1 capital as well as hold risk-based capital on the underlying assets.

The following examples illustrate post-sale actions that banks have taken on assets they have securitized. These examples are intended to provide guidance on whether these actions would be considered implicit recourse for risk-based capital and other supervisory purposes. A key factor in each scenario and analysis is the potential risk of loss the bank's earnings and capital may be exposed to as a result of its actions.

Account removal: Example 1a

Facts. A bank originates and services credit card receivables throughout the country. The bank decides to divest those credit card accounts of customers who reside in specific geographic areas where the bank lacks a significant market presence. To achieve the maximum sales price, the sale must include both the credit card relationships and the receivables. Because many of the credit card receivables are securitized through a master-trust structure, the bank needs to remove the receivables from the trust. The affected receivables are not experiencing any unusual performance problems. In that respect, the charge-off and delinquency ratios for the receivables to be removed from the trust are substantially similar to those for the trust as a whole.

The bank enters into a contract to sell the specified credit card accounts before the receivables are removed from the trust. The terms of the transaction are arm's length, wherein the bank will sell the receivables at market value. The bank separately agrees to purchase the receivables from the trust at this same price. Therefore, no loss is incurred as a result of removing the receivables from the trust. The bank will only remove receivables from the trust

that are due from customers located in the geographic areas where the bank lacks a significant market presence, and it will remove all such receivables from the trust.

Analysis. The removal of the above-described receivables from the trust does not constitute implicit recourse for regulatory capital purposes. Supporting factors for this conclusion include the following:

- The bank's earnings and capital are not exposed to actual or potential risk of loss as a result of removing the receivables from the trust.
- There is no indication that the receivables are removed from the trust because of performance concerns.
- The bank is removing the receivables from the trust for a legitimate business purpose other than to systematically improve the quality of the trust's assets. The legitimate business purpose is evidenced by the bank's pre-arranged, arm's-length sale agreement that facilitates exiting the business in identified geographic locations.

Examiners should review the terms and conditions of the transaction to ensure that the market value of the receivables is documented and well supported before concluding that this transaction does not represent implicit recourse. Examiners should also ensure that the selling bank has not provided the purchaser with any guarantees or credit enhancements on the sold receivables.

Account removal: Example 1b

Facts. After the establishment of a master trust for a pool of credit card receivables, the receivables in the trust begin to experience adverse performance. A combination of lower-than-expected yields and higher-than-anticipated charge-offs on the pool causes spreads to compress significantly (although not to zero). The bank's internally generated forecasts indicate that spreads will likely become negative in the near future.

Management takes action to support the trust by purchasing the low-quality (delinquent) receivables from the trust at par, although their market value is less than par. The receivables purchased from the trust represent approximately one-third of the trust's total receivables.

This action improves the overall performance of the trust and avoids a potential early-amortization event.

Analysis. The purchase of low-quality receivables from a trust at par constitutes implicit recourse for regulatory capital purposes. The purchase of low-quality receivables at an above-market price exposes the bank's earnings and capital to potential future losses from assets that had previously been sold. Accordingly, the bank is required to hold risk-based capital for the remaining assets in the trust as if they were retained on the balance sheet, as well as hold capital for the assets that were repurchased.

Additions of future assets or receivables:
Example 2a

Facts. Months after the issuance of credit card asset-backed securities, charge-offs and delinquencies on the underlying pool of receivables rise dramatically. A rating agency places the securities on watch for a potential rating downgrade, causing the bank to negotiate additional credit support for the securitized assets. The securitization documents require the bank to transfer new receivables to the securitization trust at par value. However, to maintain the rating on the securities, the bank begins to sell replacement receivables into the trust at a discount from par value.

Analysis. The sale of receivables to the trust at a discount constitutes implicit recourse for regulatory capital purposes. The sale of assets at a discount from the price specified in the securitization documents, par value in this example, exposes earnings and capital to future losses. The bank must hold regulatory capital against the outstanding assets in the trust.

Additions of future assets or receivables:
Example 2b

Facts. A bank established a credit card master trust. The receivables from the accounts placed in the trust were, on average, of lesser quality than the receivables from accounts retained on the bank's balance sheet. Under the criteria for selecting the receivables to be transferred to the master trust, the bank was prevented from including the better-performing affinity accounts in the initial pool of accounts because the affinity-relationship contract was expiring. The bank

and the affinity client subsequently revised the terms of their contract, enabling the affinity accounts to meet the selection criteria and be included in future securitization transactions. Later, rising charge-offs within the pool of receivables held by the trust caused spread compression in the trust. To improve the performance of the assets in the trust, the bank begins to include the better-performing and now-eligible receivables from the affinity accounts among the receivables sold to the trust. This action improves the trust's performance, including its spread levels and charge-off ratios. However, the replacement assets were sold at par in accordance with the terms of the trust agreement, so no current or future charge to the bank's earnings or capital will result from these asset sales. As another result of this action, the performance of the trust's assets closely tracks the credit card receivables that remain on the bank's balance sheet.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. The bank did not incur any additional risk to earnings or capital after the affinity accounts met the selection criteria for replacement assets and after the associated receivables were among the receivables sold to the trust. The replacement assets were sold at par in accordance with the terms of the trust agreement, so no future charge to earnings or capital will result from these asset sales. The sale of replacement assets into a master-trust structure is part of normal trust management.

In this example, the credit card receivables that remain on the bank's balance sheet closely track the performance of the trust's assets. Nevertheless, examiners should ascertain whether a securitizing bank sells disproportionately higher-quality assets into securitizations while retaining comparatively lower-quality assets on its books; if so, examiners should consider the effect of this practice on the bank's capital adequacy.

Additions of future assets or receivables:
Example 2c

Facts. A bank establishes a credit card master trust composed of receivables from accounts that were generally of lower quality than the receivables retained on the bank's balance sheet. The difference in the two portfolios is primarily due to logistical and operational problems that

prevent the bank from including certain better-quality affinity accounts in the initial pool from which accounts were selected for securitization. Rising charge-offs and other factors later result in margin compression on the assets in the master trust, which causes some concern in the market regarding the stability of the outstanding asset-backed securities. A rating agency places several securities on its watch list for a potential rating downgrade. In response to the margin compression, as part of the bank's contractual obligations, spread accounts are increased for all classes by trapping excess spread in conformance with the terms and conditions of the securitization documents. To stabilize the quality of the receivables in the master trust as well as to preclude a downgrade, the bank takes several actions beyond its contractual obligations:

- Affinity accounts are added to the pool of receivables eligible for inclusion in the trust. This change results in improved overall trust performance. However, these receivables are sold to the trust at par value, consistent with the terms of the securitization documents, so no current or future charge to the bank's earnings or capital will result from these asset sales.
- The charge-off policy for cardholders that have filed for bankruptcy is changed from criteria that were more conservative than industry standards and the FFIEC Uniform Retail Credit Classification and Account Management Policy to criteria that conform to industry standards and the FFIEC's policy.
- Charged-off receivables held by the trust are sold to a third party. The funds generated by this sale, effectively accelerating the recovery on these receivables, improve the trust's spread performance.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. None of the noncontractual actions results in a loss or exposes the bank's earnings or capital to the risk of loss. Because of the margin compression, the bank is obligated to increase the spread accounts in conformance with the terms and conditions of the securitization documents. To the extent this results in an increase in the value of the subordinated spread accounts (residual interests) on the bank's balance sheet, the bank will need to hold additional capital on a dollar-for-dollar basis for the additional credit risk it retains. In contrast, if the

bank increased the spread accounts beyond its contractual obligation under the securitization documents in order to provide additional protection to investors, this action would be considered a form of implicit recourse. None of the other actions the bank took would affect the bank's earnings or capital:

- Like other additions to credit card trusts, the additions of receivables from the new affinity accounts were made at par value, in accordance with the securitization documents. Therefore, the addition of receivables to the new affinity accounts would not affect the bank's earnings or capital.
- The trust's policy on the timing of charge-offs on accounts of cardholders who have filed for bankruptcy was changed to meet the less-stringent standards of the industry and those required under the Federal Reserve's policy to improve trust performance, at least temporarily. Nonetheless, this would not affect the bank's earnings or capital.
- In accordance with the securitization documents, proceeds from recoveries on charged-off accounts are the property of the trust. These and other proceeds would continue to be paid out in accordance with the pooling and servicing agreement. No impact on the bank's earnings or capital would result.

Modification of loan-repayment terms:

Example 3

Facts. In performing the role of servicer for its securitization, a bank is authorized under its pooling and servicing agreement to modify loan-repayment terms when it appears that this action will improve the likelihood of repayment on the loan. These actions are part of the bank's process of working with customers who are delinquent or otherwise experiencing temporary financial difficulties. All of the modifications are consistent with the bank's internal loan policy. However, in modifying the loan terms, the contractual maturity of some loans may be extended beyond the final maturity date of the most junior class of securities sold to investors. When this occurs, the bank repurchases these loans from the securitization trust at par.

Analysis. The modification of terms and repurchase of loans held by the trust constitutes implicit recourse for regulatory capital pur-

poses. The combination of the loan-term modification for securitized assets and the subsequent repurchase constitutes implicit recourse. While the modification of loan terms is permitted under the pooling and servicing agreement, the repurchase of loans with extended maturities at par exposes the bank's earnings and capital to potential risk of loss.

Servicer's payment of deficiency balances:
Example 4

Facts. A wholly owned subsidiary of a bank originates and services a portfolio of home equity loans. After liquidation of the collateral for a defaulted loan, the subsidiary makes the trust whole in terms of principal and interest if the proceeds from the collateral are not sufficient. However, there is no contractual commitment that requires the subsidiary to support the pool in this manner. The payments made to the trust to cover deficient balances on the defaulted loans are not recoverable under the terms of the pooling and servicing agreement.

Analysis. The subsidiary's action constitutes implicit recourse to the bank for regulatory capital purposes. This action is considered implicit recourse because it adversely affects the bank's earnings and capital since the bank absorbs losses on the loans resulting from the actions taken by its subsidiary. Further, no mechanism exists to provide for, and ensure that, the subsidiary will be reimbursed for the payments made to the trust. In addition, examiners will consider any servicer advance a credit enhancement if the servicer is not entitled to full reimbursement^{10c} or if the reimbursement is subordinate to other claims.

Reimbursement of credit enhancer's actual losses: Example 5

Facts. A bank sponsoring a securitization arranges for an unrelated third party to provide a first-loss credit enhancement, such as a financial standby letter of credit that will cover losses up to the first 10 percent of the securitized assets. The bank agrees to pay a fixed amount as an annual premium for this credit enhancement.

^{10c}. A servicer advance will also be considered a form of credit enhancement if, for any one loan, nonreimbursable advances are not contractually limited to an insignificant amount of that loan's outstanding principal.

The third party initially covers actual losses that occur in the underlying asset pool in accordance with its contractual commitment under the letter of credit. Later, the selling bank agrees not only to pay the credit enhancer the annual premium on the credit enhancement, but also to reimburse the credit enhancer for the losses it absorbed during the preceding year. This reimbursement for actual losses was not originally provided for in the contractual arrangement between the bank and the credit-enhancement provider.

Analysis. The selling bank's subsequent reimbursement of the credit-enhancement provider's losses constitutes implicit recourse because the bank's reimbursement of losses went beyond its contractual obligations. Furthermore, the Federal Reserve would consider any requirement contained in the original credit-enhancement contract that obligates the bank to reimburse the credit-enhancement provider for its losses to be a recourse arrangement.

Low-Level Exposure

Securitization transactions involving recourse may be eligible for "low-level-recourse" treatment.¹¹ A bank that contractually limits its maximum off-balance-sheet recourse obligation or direct-credit substitute (except credit-enhancing I/O strips) to an amount less than the effective risk-based capital requirement for the enhanced assets is required to hold risk-based capital equal to the maximum contractual exposure,¹² less any recourse liability established in accordance with GAAP. The low-level-recourse capital treatment thus applies to transactions accounted for as sales under GAAP. The low-level-exposure rule provides that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a bank is contractually liable, less any recourse liability account established in accordance with GAAP. The limitation does not apply when the bank provides credit enhancement beyond any con-

11. See the Federal Reserve's Regulation H, appendix A. See also 60 *Fed. Reg.* 17986, April 10, 1995 (OCC); 60 *Fed. Reg.* 8177, February 13, 1995 (FRB); and 60 *Fed. Reg.* 15858, March 28, 1995 (FDIC). The OTS low-level-recourse rule is found at 12 CFR 567.6(a)(2)(i)(c).

12. For example, the effective risk-based capital requirement generally would be 4 percent for residential mortgages and 8 percent for commercial loans.

tractual obligation to support assets it has sold. The low-level capital treatment applies to low-level-recourse transactions involving all types of assets, including commercial loans and residential mortgages.

Low-level-recourse transactions can arise when a bank sells or securitizes assets and uses contractual cash flows, such as spread accounts and I/O strips receivables, as a credit enhancement for the sold or securitized assets. A spread account is an escrow account that a bank typically establishes to absorb losses on receivables it has sold in a securitization, thereby providing credit enhancement to investors in the securities backed by the receivables, for example, credit card receivables. As defined in paragraph 14 of FAS 140, an I/O strip receivable is the contractual right to receive some or all of the interest due on a bond, a mortgage loan, or other interest-bearing financial assets. I/O strips are to be measured at fair value with gains or losses recognized either in earnings (if classified as trading) or a separate component of shareholders' equity (if classified as available-for-sale). Paragraph 14 of FAS 140 states that I/O strips, retained interests in securitizations, loans, other receivables, or other financial assets that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment (except for instruments that are within the scope of Statement of Financial Accounting Standards No. 133 (FAS 133), "Accounting for Derivative Instruments and Hedging Activities," shall be subsequently measured like investments in debt securities classified as available-for-sale or trading under Statement of Financial Accounting Standards No. 115 (FAS 115), "Accounting for Certain Investments in Debt and Equity Securities." Retained interests that lack objectively verifiable support or that fail to meet the supervisory standards (discussed previously in this section) will be classified as loss and disallowed as assets of the BO for regulatory capital purposes.

Another divergence from the general risk-based capital treatment for assets sold with recourse concerns small-business obligations. Qualifying institutions that transfer small-business obligations with recourse are required, for risk-based capital purposes, to maintain capital against only the amount of recourse retained, provided two conditions are met. First, the transactions must be treated as a sale under GAAP. Second, the transferring institutions must

establish, pursuant to GAAP, a noncapital reserve sufficient to meet the reasonably estimated liability under their recourse arrangements.

Banking organizations will be considered qualifying institutions for the purpose of treatment of recourse for small-business organizations if, pursuant to the Board's prompt-corrective-action regulation (12 CFR 208.40), they are well capitalized or, by order of the Board, adequately capitalized.¹³ To qualify, an institution must be determined to be well capitalized or adequately capitalized without taking into account the preferential capital treatment for any previous transfers of small-business obligations with recourse. The total outstanding amount of recourse retained by a qualifying BO on transfers of small-business obligations receiving the preferential capital treatment cannot exceed 15 percent of the institution's total risk-based capital.

Standby Letters of Credit

Banking organizations that issue standby letters of credit as credit enhancements for ABS issues must hold capital against these contingent liabilities under the risk-based capital guidelines. According to the guidelines, financial standby letters of credit are direct-credit substitutes. A direct-credit substitute is an arrangement in which a bank assumes, in form or substance, credit risk associated with an on- or off-balance-sheet credit exposure that it did not previously own (a third-party asset), and the risk assumed by the bank exceeds the pro rata share of its interest in the third-party asset. If the bank has no claim on the third-party asset, then its

13. Under 12 CFR 208.43, a state member bank is deemed to be well capitalized if it (1) has a total risk-based capital ratio of 10.0 percent or greater; (2) has a tier 1 risk-based capital ratio of 6.0 percent or greater; (3) has a leverage ratio of 5.0 percent or greater; and (4) is not subject to any written agreement, order, capital directive, or prompt-corrective-action directive issued by the Board pursuant to section 8 of the FDI Act, the International Lending Supervision Act of 1983, or section 38 of the FDI Act or any regulation thereunder to meet and maintain a specific capital level for any capital measure.

A state member bank is deemed to be adequately capitalized if it (1) has a total risk-based capital ratio of 8.0 or greater, (2) has a tier 1 risk-based capital ratio of 4.0 percent or greater, (3) has a leverage ratio of 4.0 percent or greater or a leverage ratio of 3.0 percent or greater if the bank is rated composite 1 under the CAMELS rating system in its most recent examination and is not experiencing or anticipating significant growth, and (4) does not meet the definition of a well-capitalized bank.

assumption of *any* credit risk with respect to the third-party asset is a direct-credit substitute. Direct-credit substitutes are converted in their entirety to credit-equivalent amounts. The credit-equivalent amounts are then risk-weighted according to their credit rating, like other direct-credit substitutes, and the risk weight for the corresponding credit rating.

Concentration Limits Imposed on Residual Interests

The creation of a residual interest (the debit) typically results in an offsetting gain on sale (the credit), and thus the generation of an asset. Banking organizations that securitize high-yielding assets with long durations may create a residual-interest asset value that exceeds the risk-based capital charge that would be in place if it had not sold the assets. Serious problems can arise for those banking organizations that distribute earnings too generously, only to be faced later with a downward valuation and charge-off of part or all of the residual interests.

Under the Federal Reserve's capital adequacy guidelines, there is a dollar-for-dollar capital charge on residual interests and a concentration limit on a subset of residual interests, credit-enhancing I/O strips. These strips include any on-balance-sheet assets that represent a contractual right to receive some or all of the interest due on transferred assets, after taking into account trustee and other administrative expenses, interest payments to investors, servicing fees, reimbursements to investors for losses attributable to beneficial interests they hold, and reinvestment income and ancillary revenues (for example, late fees) on the transferred assets. Credit-enhancing I/O strips expose the bank to more than its pro rata share of credit risk and are limited to 25 percent of tier 1 capital, whether they are retained or purchased. Any amount of credit-enhancing I/O strips that exceeds the 25 percent limit will be deducted from tier 1 capital and assets. An example of the concentration calculation required for banks that hold credit-enhancing I/O strips is described below.

A bank has purchased and retained on its balance sheet credit-enhancing I/O strips with a face amount of \$100, and it has tier 1 capital of \$320 (before any disallowed servicing assets,

disallowed purchased credit-card relationships, disallowed credit-enhancing I/O strips, disallowed deferred tax assets, and amounts of nonfinancial equity investments required to be deducted). To determine the amount of credit-enhancing I/O strips that fall within the concentration limit, the bank would multiply the tier 1 capital of \$320 by 25 percent, which is \$80. The amount of credit-enhancing I/O strips that exceeds the concentration limit, in this case \$20, is deducted from tier 1 capital for risk-based and leverage capital calculations and from assets.

Credit-enhancing I/O strips that are not deducted from tier 1 capital (that is, the remaining \$80 in the above example), along with all other residual interests not subject to the concentration limit, are subject to a dollar-for-dollar capital requirement. Banks are not required to hold capital for more than 100 percent of the amount of the residual interest. Credit-enhancing I/O strips are not aggregated with any servicing assets or purchased credit-card relationships for purposes of calculating the 25 percent concentration limit.

Continuing the above illustration, once a bank deducts the \$20 in disallowed credit-enhancing I/O strips, it must hold \$80 in total capital for the \$80 that represents the credit-enhancing I/O strips not deducted from tier 1 capital. The \$20 deducted from tier 1 capital, plus the \$80 in total risk-based capital required under the dollar-for-dollar treatment, equals \$100, the face amount of the credit-enhancing I/O strips. Banks may apply a net-of-tax approach to any credit-enhancing I/O strips that have been deducted from tier 1 capital, as well as to the remaining residual interests subject to the dollar-for-dollar treatment. A bank is permitted, but not required, to net the deferred tax liabilities recorded on its balance sheet, if any, that are associated with the residual interests. This netting of the deferred tax liabilities may result in a bank's holding less than 100 percent capital against residual interests.

Normally, a sponsor will eventually receive any excess cash flow remaining from securitizations after investor interests have been met. As previously stated, residual interests are vulnerable to sudden and sizeable write-downs that can hinder a bank's access to the capital markets; damage its reputation in the marketplace; and, in some cases, threaten its solvency. An institution's board of directors and management are expected to develop and implement policies

that limit the amount of residual interests that may be carried as a percentage of total equity capital, based on the results of their valuation and modeling processes. Well-constructed internal limits also lessen the incentives for an institution's personnel to engage in activities designed to generate near-term "paper profits" that may be at the expense of the institution's long-term financial position and reputation.

Asset-Backed Commercial Paper Programs

Although banks' involvement in the securitization of commercial paper has increased significantly over time, asset-backed commercial paper programs differ from other methods of securitization. One difference is that more than one type of asset may be included in the receivables pool.¹⁴ Moreover, in certain cases, the cash flow from the receivables pool may not necessarily match the payments to investors because the maturity of the underlying asset pool does not always parallel the maturity of the structure of the commercial paper. Consequently, when the paper matures, it is usually rolled over or funded by another issue. In certain circumstances, a maturing issue of commercial paper cannot be rolled over. To address this problem, many banks have established backup liquidity facilities. Certain banks have classified these backup facilities as pure liquidity facilities, despite the credit-enhancement element present in them, and, as a result, have incorrectly assessed the risks associated with these facilities. In these cases, the backup liquidity facilities have been more similar to direct-credit substitutes than to loan commitments.

Risk-Based Capital Exclusion of Asset-Backed Commercial Paper Program Assets and Related Minority Interests

An asset-backed commercial paper (ABCP) program typically is a program through which a bank provides funding to its corporate customers by sponsoring and administering a

bankruptcy-remote special-purpose entity that purchases asset pools from, or extends loans to, those customers.¹⁵ The asset pools in an ABCP program might include, for example, trade receivables, consumer loans, or ABS. The ABCP program raises cash to provide funding to the bank's customers through the issuance of externally rated commercial paper into the market. Typically, the sponsoring bank provides liquidity and credit enhancements to the ABCP program. These enhancements aid the program in obtaining high credit ratings that facilitate the issuance of the commercial paper.¹⁶

In January 2003, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46), which was effective the first annual reporting period after June 15, 2003. FIN 46 required, for the first time, the consolidation of variable interest entities (VIEs) onto the balance sheets of companies deemed to be the primary beneficiaries of those entities. FASB revised FIN 46 in December 2003 as FIN 46-R (effective for publicly owned banking organizations by March 31, 2004). FIN 46-R requires the consolidation of many ABCP programs onto the balance sheets of BOs. Banks that are required to consolidate ABCP program assets must include all of the program assets (mostly receivables and securities) and liabilities (mainly commercial paper) on their balance sheets for purposes of the bank Reports of Condition and Income (Call Reports).

Sponsoring BOs generally face limited risk exposure to ABCP programs. This risk usually is confined to the credit enhancements and liquidity-facility arrangements that sponsoring BOs provide to these programs. In addition, operational controls and structural provisions, along with overcollateralization or other credit enhancements provided by the companies that sell assets into ABCP programs, mitigate the risks to which sponsoring BOs are exposed.

15. The definition of *ABCP program* generally includes structured investment vehicles (entities that earn a spread by issuing commercial paper and medium-term notes and using the proceeds to purchase highly rated debt securities) and securities arbitrage programs.

16. A bank is considered the *sponsor of an ABCP program* if it establishes the program; approves the sellers permitted to participate in the program; approves the asset pools to be purchased by the program; or administers the program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance with the program documents and with the program's credit and investment policy.

14. See the Federal Reserve System's Supervision and Regulation Task Force on Securitization, "An Introduction to Asset Securitization," issued as an attachment to SR-90-16. See also "Asset-Backed Commercial Paper Programs," *Federal Reserve Bulletin*, February 1992.

Because of the limited risks, the agencies¹⁷ adopted on July 17, 2004 (effective September 30, 2004) a revised rule that permits sponsoring BOs to exclude from risk-weighted assets (for purposes of calculating the risk-based capital ratios) ABCP program assets that require consolidation under FIN 46-R (subject to certain requirements).

Under the Board's risk-based capital rule, a bank that must consolidate an ABCP program that is defined as a VIE under GAAP may exclude the consolidated ABCP program assets from risk-weighted assets, provided that the bank is the sponsor of the ABCP program. If a bank excludes such consolidated ABCP program assets, the bank must assess the appropriate risk-based capital charge against any exposures of the bank arising in connection with such ABCP programs, including direct-credit substitutes, recourse obligations, residual interests, liquidity facilities, and loans, in accordance with sections III.B.5., III.C., and III.D. (12 CFR 208, appendix A) of the risk-based capital rule. When calculating the bank's tier 1 and total capital, any associated minority interests must also be excluded from tier 1 capital. As a result of FIN 46-R, banks are to include all assets of consolidated ABCP programs as part of their on-balance-sheet assets for purposes of calculating the tier 1 leverage capital ratio.

A bank is able to exclude ABCP program assets from its risk-weighted asset base only with respect to those programs for which it is the sponsor and that meet the rule's definition of an *ABCP program*. An ABCP program is defined as a program that primarily issues (that is, more than 50 percent) externally rated commercial paper backed by assets or other exposures held in a bankruptcy-remote, special-purpose entity. Thus, a bank sponsoring a program issuing ABCP that does not meet the rule's definition of an ABCP program must continue to include the program's assets in the institution's risk-weighted asset base.

Liquidity facilities supporting ABCP. Liquidity facilities supporting ABCP often take the form of commitments to lend to, or to purchase assets from, the ABCP programs in the event that funds are needed to repay maturing commercial paper. Typically, this need for liquidity is due to

a timing mismatch between cash collections on the underlying assets in the program and scheduled repayments of the commercial paper issued by the program.

A bank that provides liquidity facilities to ABCP is exposed to credit risk, regardless of the term of the liquidity facilities. For example, an ABCP program may require a liquidity facility to purchase assets from the program at the first sign of deterioration in the credit quality of an asset pool, thereby removing such assets from the program. In such an event, a draw on the liquidity facility exposes the bank to credit risk.

Short-term commitments with an original maturity of one year or less expose banks to a lower degree of credit risk than longer-term commitments. This difference in the degree of credit risk is reflected in the risk-based capital requirement for the different types of exposures through liquidity facilities.

The Board's risk-based capital guidelines impose a 10 percent credit-conversion factor on unused portions of eligible short-term liquidity facilities supporting ABCP. Under the risk-based capital guidelines and the Board's interpretations thereof, the credit conversion factor for an eligible ABCP liquidity facility is based on whether the facility has an original maturity of one year or less.¹⁸ A 50 percent credit-conversion factor applies to eligible ABCP liquidity facilities having a maturity greater than one year. To be an eligible ABCP liquidity facility and qualify for the 10 or 50 percent credit-conversion factor, the facility must be subject to an asset quality test at the time of inception that does not permit funding against (1) assets that are 90 days or more past due, (2) assets that are in default, and (3) assets or exposures that are externally rated below investment grade at the time of funding if the assets or exposures were externally rated at the inception of the facility. However, a liquidity facility may also be an eligible liquidity facility if it funds against assets that are guaranteed—either conditionally or unconditionally—by the U.S. government, U.S. government agencies, or by an OECD central government, regardless of whether the assets are 90 days past due, in default, or externally rated investment grade.

The 10 or 50 percent credit-conversion factors apply, regardless of whether the structure

17. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

18. See the Board staff's October 12, 2007, legal interpretation regarding the risk-based capital treatment of ABCP liquidity facilities.

issuing the ABCP meets the rule's definition of an ABCP program. For example, a capital charge would apply to an eligible short-term liquidity facility that provides liquidity support to ABCP where the ABCP constitutes less than 50 percent of the securities issued by the program, thus causing the issuing structure not to meet the rule's definition of an ABCP program. However, if a bank (1) does not meet this definition and must include the program's assets in its risk-weighted asset base or (2) otherwise chooses to include the program's assets in risk-weighted assets, then no risk-based capital requirement will be assessed against any liquidity facilities provided by the bank that support the program's ABCP. Ineligible liquidity facilities will be treated as recourse obligations or direct-credit substitutes for the purposes of the Board's risk-based capital guidelines.

The Board's risk-based capital guidelines do not specifically mandate, authorize, or prohibit a look-through approach to eligible ABCP liquidity facilities. The Federal Reserve and other federal banking agencies have taken the position that a risk weight may be applied to the credit equivalent amount of an eligible ABCP liquidity facility by looking through to the underlying assets of the ABCP conduit after considering any collateral or guarantees, or external credit ratings, if applicable. For example, if an eligible short-term liquidity facility providing liquidity support to ABCP covered an asset-backed security (ABS) externally rated AAA, then the notional amount of the liquidity facility would be converted at 10 percent to an on-balance-sheet credit-equivalent amount and assigned to the 20 percent risk-weight category appropriate for AAA-rated ABS.

Overlapping exposures to an ABCP program. A bank may have multiple overlapping exposures to a single ABCP program (for example, both a program-wide credit enhancement and multiple pool-specific liquidity facilities to an ABCP program that is not consolidated for risk-based capital purposes). A bank must hold risk-based capital only once against the assets covered by the overlapping exposures. Where the overlapping exposures are subject to different risk-based capital requirements, the bank must apply the risk-based capital treatment that results in the highest capital charge to the overlapping portion of the exposures.

For example, assume a bank provides a program-wide credit enhancement that would

absorb 10 percent of the losses in all of the underlying asset pools in an ABCP program and also provides pool-specific liquidity facilities that cover 100 percent of each of the underlying asset pools. The bank would be required to hold capital against 10 percent of the underlying asset pools because it is providing the program-wide credit enhancement. The bank would also be required to hold capital against 90 percent of the liquidity facilities it is providing to each of the underlying asset pools. For risk-based capital purposes, the bank would not be required to hold capital against any credit enhancements or liquidity facilities that comprise the same program assets.

If different banks have overlapping exposures to an ABCP program, however, each organization must hold capital against the entire maximum amount of its exposure. As a result, while duplication of capital charges will not occur for individual banks, some systemic duplication may occur where multiple BOs have overlapping exposures to the same ABCP program.

Asset-quality test. For a liquidity facility, either short- or long-term, that supports ABCP *not* to be considered a recourse obligation or a direct-credit substitute, it must meet the risk-based capital rule's definition of an *eligible ABCP liquidity facility*. An eligible ABCP liquidity facility must meet a reasonable asset-quality test that, among other things, precludes funding against assets that are 90 days or more past due or in default. When assets are 90 days or more past due, they typically have deteriorated to the point where there is an extremely high probability of default. Assets that are 90 days past due, for example, often must be placed on nonaccrual status in accordance with the agencies' Uniform Retail Credit Classification and Account Management Policy.¹⁹ Further, they generally must also be classified substandard under that policy.

In addition to the above, if the assets covered by the liquidity facility are initially externally rated (at the time the facility is provided), the facility can be used to fund only those assets that are externally rated investment grade at the time of funding. The practice of purchasing assets that are externally rated below investment grade out of an ABCP program is considered to be the equivalent of providing credit protection to the commercial paper investors. Thus, liquidity facilities permitting purchases of below-

19. See 65 *Fed. Reg.* 36904 (June 12, 2000).

investment-grade securities will be considered either recourse obligations or direct-credit substitutes.

However, neither the “90-days-past-due” limitation nor the “investment grade” limitation apply to the asset-quality test with respect to assets that are conditionally or unconditionally guaranteed by the U.S. government or its agencies or by another OECD central government.

An ABCP liquidity facility is considered to be in compliance with the requirement for an asset quality test if (1) the liquidity provider has access to certain types of acceptable credit enhancements and (2) the notional amount of such credit enhancements available to the liquidity facility provider exceeds the amount of underlying assets that are 90 days or more past due, defaulted, or below investment grade for which the liquidity provider may be obligated to fund under the facility. In this circumstance, the liquidity facility may be considered “eligible” for purposes of the risk-based capital rule because the provider of the credit enhancement generally bears the credit risk of the assets that are 90 days or more past due, in default, or below investment grade rather than the banking organization providing liquidity.^{19a}

The following forms of credit enhancements are generally acceptable for purposes of satisfying the asset quality test:

- “funded” credit enhancements that the BO may access to cover delinquent, defaulted, or below-investment-grade assets, such as over-collateralization, cash reserves, subordinated securities, and funded spread accounts;
- surety bonds and letters of credit issued by a third party with a nationally recognized statistical rating organization with a rating of single A or higher that the BO may access to cover delinquent, defaulted, or below-investment-grade assets, provided that the surety bond or letter of credit is irrevocable and legally enforceable; and
- one month’s worth of excess spread that the BO may access to cover delinquent, defaulted, or below-investment-grade assets if the following conditions are met: (1) excess spread is contractually required to be trapped when it falls below 4.5 percent (measured on an annu-

alized basis) and (2) there is no material adverse change in the BO’s ABCP underwriting standards. The amount of available excess spread may be calculated as the average of the current month’s and the two previous months’ excess spread.

Recourse directly to the seller, other than the funded credit enhancements enumerated above, regardless of the seller’s external credit rating, is not an acceptable form of credit enhancement for purposes of satisfying the asset quality test. Seller recourse—for example, a seller’s agreement to buy back nonperforming or defaulted loans or downgraded securities—may expose the liquidity provider to an increased level of credit risk. A decline in the performance of assets sold to an ABCP conduit may signal impending difficulties for the seller.

If the amount of acceptable credit enhancement associated with the pool of assets is less than the current amount of assets that are 90 days or more past due, in default, or below investment grade that the liquidity facility provider may be obligated to fund against, the liquidity facility should be treated as recourse or a direct credit substitute. The full amount of assets supported by the liquidity facility would be subject to a 100 percent credit conversion factor.^{19b} The Federal Reserve Board reserves the right to deem an otherwise eligible liquidity facility to be, in substance, a direct credit substitute if a member bank uses the liquidity facility to provide credit support.

The bank is responsible for demonstrating to the Federal Reserve Board whether acceptable credit enhancements cover the 90 days or more past due, defaulted, or below-investment-grade assets that the organization may be obligated to fund against in each seller’s asset pool. If the bank cannot adequately demonstrate satisfaction of the conditions in the above-referenced inter-agency guidance, the Federal Reserve Board further reserves the right to determine that a credit enhancement is unacceptable for purposes of the requirement for an asset quality test and, therefore, it may deem the liquidity facility to be ineligible.

Market risk capital requirements for ABCP programs. Any facility held in the trading book whose primary function, in form or in substance, is to provide liquidity to ABCP—even if the

^{19a}. See SR-05-13 and its attachment, “Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper Liquidity Facilities and the Resulting Risk-Based Capital Treatment.”

^{19b}. See 12 CFR 208, appendix A, section III.B.3.b.i.

facility does not qualify as an eligible ABCP liquidity facility under the rule—will be subject to the banking-book risk-based capital requirements. Specifically, banks are required to convert the notional amount of all trading-book positions that provide liquidity to ABCP to credit-equivalent amounts by applying the appropriate banking-book credit-conversion factors. For example, the full amount of all eligible ABCP liquidity facilities with an original maturity of one year or less will be subject to a 10 percent conversion factor, regardless of whether the facility is carried in the trading account or the banking book.

SOUND RISK-MANAGEMENT PRACTICES

An institution must incorporate the risks involved in its securitization activities into its overall risk-management system. The system should entail (1) inclusion of risk exposures in reports to the institution's senior management and board to ensure proper management oversight; (2) adoption of appropriate policies, procedures, and guidelines to manage the risks involved; (3) appropriate measurement and monitoring of risks; and (4) assurance of appropriate internal controls to verify the integrity of the management process with respect to these activities.

Board and Senior Management Oversight

Both the board of directors and senior management are responsible for ensuring that they fully understand the degree to which the organization is exposed to the credit, market, liquidity, operational, legal, and reputational risks involved in the institution's securitization activities. They are also responsible for ensuring that the formality and sophistication of the techniques used to manage these risks are commensurate with the nature and volume of the organization's activities. Institutions with significant securitization activities are expected to have more elaborate and formal approaches to manage the risk of these activities. The board should approve all significant policies relating to the management of risk arising from securitization activities and should ensure that risk exposures are fully

incorporated in board reports and risk-management reviews.

Policies and Procedures

Senior management is responsible for ensuring that the risks arising from securitization activities are adequately managed on both a short-term and long-run basis. Management should ensure that adequate policies and procedures are in place for incorporating the risk of these activities into the overall risk-management process of the institution. Such policies should ensure that the economic substance of the risk exposures generated by these activities is fully recognized and appropriately managed. In addition, BOs involved in securitization activities should have appropriate policies, procedures, and controls for underwriting ABS; funding the possible return of revolving receivables (for example, credit card receivables and home-equity lines); and establishing limits on exposures to individual institutions, types of collateral, and geographic and industrial concentrations. The institution's directors and managers need to ensure that—

- independent risk-management processes are in place to monitor securitization-pool performance on an individual and aggregate transaction level (an effective risk-management function includes appropriate information systems to monitor securitization activities);
- conservative valuation assumptions and modeling methodologies are used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis;
- audit or internal-review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets the institution retains (the findings of such reviews should be reported directly to the board or an appropriate board committee);
- accurate and timely risk-based capital calculations are maintained, including recognition and reporting of any recourse obligation resulting from securitization activity;
- internal limits are in place to govern the maximum amount of retained interests as a

- percentage of total equity capital; and
- the institution has a realistic liquidity plan in place in case of market disruptions.

Independent Risk-Management Function

Institutions engaged in securitizations need to have an independent risk-management function commensurate with the complexity and volume of their securitizations and their overall risk exposures. The risk-management function should ensure that securitization policies and operating procedures, including clearly articulated risk limits, are in place and appropriate for the institution's circumstances. A sound asset-

securitization policy should include or address, at a minimum—

- a written and consistently applied accounting methodology;
- regulatory reporting requirements;
- valuation methods, including FAS 140 residual-value assumptions, and procedures to formally approve changes to those assumptions;
- a management reporting process; and
- exposure limits and requirements for both individual- and aggregate-transaction monitoring.

It is essential that the risk-management function monitor origination, collection, and default-management practices. This includes regular evaluations of the quality of underwriting, soundness of the appraisal process, effectiveness of collections activities, ability of the default-management staff to resolve severely delinquent loans in a timely and efficient manner, and appropriateness of loss-recognition practices. Because the securitization of assets can result in the current recognition of anticipated income, the risk-management function should pay particular attention to the types, volumes, and risks of assets being originated, transferred, and serviced. Senior management and the risk-management staff must be alert to any pressures on line managers to originate abnormally large volumes or higher-risk assets to sustain ongoing income needs. Such pressures can lead to a compromise of credit-underwriting standards. This may accelerate credit losses in future periods, impair the value of retained interests, and potentially lead to funding problems.

Risk Measurement and Monitoring

An institution's risk-management function should include information and risk-measurement and -monitoring systems that fully incorporate the risks involved in its securitization activities. BOs must be able to identify credit exposures from all securitization activities, as well as measure, quantify, and control those exposures on a fully consolidated basis. The economic substance of the credit exposures of securitization activities should be fully incorporated into the institution's efforts to quantify its credit risk, including efforts to establish more formal grading of credits to allow for statistical estimation of loss-probability distributions. Securitization

activities should also be included in any aggregations of credit risk by borrower, industry, or economic sector.

An institution's information systems should identify and segregate those credit exposures arising from the institution's loan-sale and securitization activities. Such exposures include the sold portions of participations and syndications, exposures arising from the extension of credit-enhancement and liquidity facilities, the effects of an early-amortization event, and the investment in ABS. The management reports should provide the board and senior management with timely and sufficient information to monitor the institution's exposure limits and overall risk profile.

Stress Testing

The use of stress testing, including combinations of market events that could affect a BO's credit exposures and securitization activities, is another important element of risk management. Stress testing involves identifying possible events or changes in market behavior that could have unfavorable effects on the institution, and assessing the organization's ability to withstand them. Stress testing should consider not only the probability of adverse events but also likely worst-case scenarios. Stress testing should be done on a consolidated basis and should consider, for instance, the effect of higher-than-expected levels of delinquencies and defaults, as well as the consequences of early-amortization events with respect to credit card securities, that could raise concerns regarding the institution's capital adequacy and its liquidity and funding capabilities. Stress-test analyses should also include contingency plans for possible management actions in certain situations.

Internal Controls

One of management's most important responsibilities is establishing and maintaining an effective system of internal controls. Among other things, internal controls should enforce the official lines of authority and the appropriate separation of duties in managing the risks of the institution. These internal controls must be suitable for the type and level of risks at the institution, given the nature and scope of its

activities. Moreover, these internal controls should ensure that financial reporting is reliable (in published financial reports and regulatory reports), including adequate allowances or liabilities for expected losses.

Effective internal controls are essential to an institution's management of the risks associated with securitization. When properly designed and consistently enforced, a sound system of internal controls will help management safeguard the institution's resources; ensure that financial information and reports are reliable; and comply with contractual obligations, including securitization covenants. Internal controls will also reduce the possibility of significant errors and irregularities, and assist in their timely detection. Internal controls typically (1) limit authorities; (2) safeguard access to and use of records; (3) separate and rotate duties; and (4) ensure both regular and unscheduled reviews, including testing.

Operational and managerial standards have been established for internal control and information systems.²⁰ A system of internal controls should be maintained that is appropriate to the institution's size and nature, its scope, and the risk of its activities.²¹

Audit Function or Internal Review

The institution's board of directors is responsible for ensuring that its audit staff or independent-review function is competent to review its securitization activities. The audit function should perform periodic reviews of securitization activities, including transaction testing and verification, and report all findings to the board or appropriate board committee. The audit function also may be useful to senior management in identifying and measuring risk related to securitization activities. Principal audit targets should include compliance with securitization policies, operating and accounting

procedures (FAS 140), deal covenants, and the accuracy of MIS and regulatory reports. The audit function also should confirm that the institution's regulatory reporting process is designed and managed to facilitate timely and accurate report filing. Furthermore, when a third party services loans, the auditors should perform an independent verification of the existence of the loans to ensure that balances reconcile to internal records.

Management Information Systems

An institution's reporting and documentation methods must support the initial valuation of any retained interests and provide ongoing impairment analyses of these assets. Pool-performance information will help well-managed institutions ensure, on a qualitative basis, that a sufficient amount of economic capital is being held to cover the various risks inherent in securitization transactions. The absence of an adequate management information system (MIS) will hinder management's ability to monitor specific pool performance and securitization activities. MIS reports, at a minimum, should address the following:

- *Securitization summaries for each transaction.* The summary should include relevant transaction terms such as collateral type, facility amount, maturity, credit-enhancement and subordination features, financial covenants (termination events and spread-account capture "triggers"), right of repurchase, and counterparty exposures. Management should ensure that the summaries for each transaction are distributed to all personnel associated with securitization activities.
- *Performance reports by portfolio and specific product type.* Performance factors include gross portfolio yield, default rates and loss severity, delinquencies, prepayments or payments, and excess spread amounts. The reports should reflect the performance of assets, both on an individual-pool basis and total managed assets. These reports should segregate specific products and different marketing campaigns.
- *Vintage analysis for each pool using monthly data.* Vintage analysis will help management understand historical performance trends and their implications for future default rates, prepayments, and delinquencies, and therefore retained interest values. Management can use

20. See the safety-and-soundness standards for national banks at 12 CFR 30 (OCC) and for savings associations at 12 CFR 570 (OTS).

21. Institutions that are subject to the requirements of FDIC regulation 12 CFR 363 should include an assessment of the effectiveness of internal controls over their asset-securitization activities as part of management's report on the overall effectiveness of the system of internal controls over financial reporting. This assessment implicitly includes the internal controls over financial information that is included in regulatory reports.

these reports to compare historical performance trends with underwriting standards, including the use of a validated credit-scoring model, to ensure loan pricing is consistent with risk levels. Vintage analysis also helps in the comparison of deal performance at periodic intervals and validates retained-interest valuation assumptions.

- *Static-pool cash-collection analysis.* A static-pool cash-collection analysis involves reviewing monthly cash receipts relative to the principal balance of the pool to determine the cash yield on the portfolio, comparing the cash yield to the accrual yield, and tracking monthly changes. Management should compare monthly the timing and amount of cash flows received from the trust with those projected as part of the FAS 140 retained-interest valuation analysis. Some master-trust structures allow excess cash flow to be shared between series or pools. For revolving-asset trusts with this master-trust structure, management should perform a cash-collection analysis for each master-trust structure. These analyses are essential in assessing the actual performance of the portfolio in terms of default and prepayment rates. If cash receipts are less than those assumed in the original valuation of the retained interest, this analysis will provide management and the board with an early warning of possible problems with collections or extension practices and impairment of the retained interest.
- *Sensitivity analysis.* A sensitivity analysis measures the effect of changes in default rates, prepayment or payment rates, and discount rates to assist management in establishing and validating the carrying value of the retained interest. Stress tests should be performed at least quarterly. Analyses should consider potential adverse trends and determine “best,” “probable,” and “worst-case” scenarios for each event. Other factors that need to be considered are the impact of increased defaults on collections staffing, the timing of cash flows, spread-account capture triggers, overcollateralization triggers, and early-amortization triggers. An increase in defaults can result in higher-than-expected costs and a delay in cash flows, thus decreasing the value of the retained interests. Management should periodically quantify and document the potential impact to both earnings and capital and should report the results to the board of directors. Management should incorporate this

analysis into their overall interest-rate risk measurement system.²² Examiners will review the institution’s analysis and the volatility associated with retained interests when assessing the Sensitivity to Market Risk component rating (the “S” in the CAMELS rating system for banks or the “R” for the BHC RFI/C(D) rating system).²³

- *Statement of covenant compliance.* Ongoing compliance with deal-performance triggers as defined by the pooling and servicing agreements should be affirmed at least monthly. Performance triggers include early amortization, spread capture, changes to overcollateralization requirements, and events that would result in servicer removal.

Securitization Covenants Linked to Supervisory Actions or Thresholds

A bank’s board of directors and senior management are responsible for initiating policies and procedures and for monitoring processes and internal controls that will provide reasonable assurance that the bank’s contracts and commitments do not include detrimental covenants that affect the safety and soundness of the bank. When examiners review a bank’s securitization contracts and related documentation, they should be alert to any covenants that use adverse supervisory actions or the breach of supervisory thresholds as triggers for early-amortization events or the transfer of servicing. Examples of such supervisory actions include a downgrade in the organization’s CAMELS rating, an enforcement action, or a downgrade in a bank’s prompt-corrective-action capital category. The inclusion of supervisory-linked covenants in securitization documents is considered to be an “unsafe and unsound banking practice” that undermines the objective of supervisory actions and thresholds. An early amortization or transfer of servicing triggered by such events can create or exacerbate liquidity and earnings problems for a bank that may lead to further deterioration in its financial condition.

22. The Joint Agency Policy Statement on Interest-Rate Risk (see SR-96-13 and section 4090.1) advises institutions with a high level of exposure to interest-rate risk relative to capital that they will be directed to take corrective action.

23. See the appendix to section 5020.1 (section A.5020.1) for a description of the CAMELS rating system. See SR-04-18 for a description of the RFI/C(D) rating system.

Covenants that contain triggers tied, directly or indirectly, to supervisory actions or thresholds can also result in the early amortization of a securitization at a time when the sponsoring organization's ability to access other funding sources is limited. If an early-amortization event occurs, investors may lose confidence in the stability of the sponsoring organization's asset-backed securities, thus limiting its ability to raise new funds through securitization. At the same time, the organization must fund new receivables on the balance sheet, potentially resulting in liquidity problems. Moreover, the existence of a supervisory-linked trigger potentially could inhibit supervisors from taking action intended to address problems at a troubled institution because the action could trigger an event that worsens the institution's condition or causes its failure.

The Federal Reserve and the other federal banking agencies (the OCC, the FDIC, and the OTS) also are concerned that covenants related to supervisory actions may obligate a bank's management to disclose confidential examination information, such as the CAMELS rating. Disclosure of such information by a bank's directors, officers, employees, attorneys, auditors, or independent auditors, without explicit authorization by the institution's primary regulator, violates the agencies' information-disclosure rules and may result in follow-up supervisory actions. (See SR-02-14.)

Because of the supervisory concerns about covenants linked to supervisory actions, a federal bank interagency advisory was issued on May 23, 2002. The advisory emphasizes that a bank's management and board of directors should ensure that covenants related to supervisory actions or thresholds are not included in securitization documents. Covenants that provide for the early termination of the transaction or compel the transfer of servicing due, directly or indirectly, to the occurrence of a supervisory action or event will be criticized, under appropriate circumstances, as an unsafe and unsound banking practice. The agencies also may take other supervisory actions, such as requiring additional capital or denying capital relief for risk-based capital calculations, regardless of the GAAP treatment.

Examiners should consider the potential impact of such covenants in existing transactions when evaluating both the overall condition of the bank and the specific component ratings of capital, liquidity, and management. Early-

amortization triggers will specifically be considered in the context of the bank's overall liquidity position and contingency funding plan. For organizations with limited access to other funding sources or a significant reliance on securitization, the existence of these triggers presents a greater degree of supervisory concern. Any bank that uses securitization as a funding source should have a viable contingency funding plan in the event it can no longer access the securitization market. Examiners should encourage bank management to amend, modify, or remove covenants linked to supervisory actions from existing transactions. Any impediments a bank may have to taking such actions should be documented and discussed with the appropriate supervisory staff of its responsible Reserve Bank.

APPRAISALS AND MORTGAGE-BACKED SECURITIES

Under 12 CFR 225.63(a)(8), an appraisal performed by a state-certified or -licensed appraiser is not required for any real estate-related financial transaction in which a regulated institution purchases a loan or interest in a loan; pooled loans; or an interest in real property, including mortgage-backed securities, provided that the appraisal prepared for each pooled loan or real property interest met the requirements of the regulation. Banks must establish procedures for determining and ensuring that applicable appraisals meet the requirements.

EXAMINATION GUIDELINES FOR ASSET SECURITIZATION

A banking organization may be involved in originating the assets to be pooled, packaging the assets for securitization, servicing the pooled assets, acting as trustee for the pool, providing credit enhancements, underwriting or placing the ABS, or investing in the securities. Individual securitization arrangements often possess unique features, and the risks addressed in this abbreviated version of the examiner guidelines²⁴

24. A complete version of the "Examination Guidelines for Asset Securitization" is attached to SR-90-16.

do not apply to all securitization arrangements. Conversely, arrangements may entail risks not summarized here. Examiners should judge a banking organization's exposure to securitization with reference to the specific structures in which the organization is involved and the degree to which the organization has identified exposures and implemented policies and controls to manage them. Examiners may tailor the scope of their examinations if the banking organization's involvement in securitization is immaterial relative to its size and financial strength.

A banking organization participating in securitization, in any capacity, should ensure that the activities are clearly and logically integrated into the overall strategic objectives of the organization. The management of the organization should understand the risks and should not rely excessively on outside expertise to make crucial decisions regarding securitization activities.

As mentioned earlier, the degree of securitization exposure faced by an individual banking organization depends on the role of the organization in the securitization process. An organization involved in the issuance of ABS as originator, packager, servicer, credit enhancer, underwriter, or trustee may face combinations and degrees of risk different than those faced by an organization that only invests in ABS. Examiners should assess a BO's level, identification, and management of risks within the context of its roles.

A BO should conduct an independent analysis of its exposures before participating in any aspect of securitization and should continue to monitor its exposures throughout its involvement. The analysis and subsequent monitoring should take into account the entire securitization arrangement, emphasizing different risks according to the role that the organization plays. Excessive reliance on opinions of third parties and reported collateral values should be avoided.

An organization involved in the issuance of ABS should scrutinize the underlying assets, giving consideration to their yield, their maturity, their credit risk, their prepayment risk, and the accessibility of collateral in cases of default, as well as the structure of the securitization arrangement and the ability of the other participants in the transaction to meet their obligations. On the other hand, a BO investing in ABS can be expected to place greater emphasis on the characteristics of the ABS as securities, paying attention primarily to credit risk, prepayment

risk, liquidity risk, and concentration risk; the underlying assets and structure of the securitization arrangement would be evaluated only within this context.

Appropriate policies, procedures, and controls should be established by a BO before participating in asset securitization. Controls should include well-developed management information systems. In addition, significant policies and procedures should be approved and reviewed periodically by the organization's board of directors.

In addition to evaluating and monitoring exposure to particular securitization deals, a BO should manage its overall exposure on a consolidated holding company basis. Management of these exposures should include—

- reasonable limits on geographic and industrial concentrations, as well as on exposures to individual institutions;
- internal systems and controls to monitor these exposures and provide periodic and timely reports to senior management and the board of directors on performance and risks; and
- procedures for identifying potential or actual conflicts of interest and policies for resolving those conflicts.

The following general guidelines are intended to help examiners assess the exposures of banks and bank holding companies to asset securitization.

Banking Organizations Involved in Issuing or Managing ABS

A BO involved in the issuance of ABS as originator, packager, servicer, credit enhancer, underwriter, or trustee should analyze the assets underlying the asset-backed security and the structure of the arrangement, including—

- the characteristics and expected performance of the underlying assets,
- the BO's ability to meet its obligations under the securitization arrangement, and
- the ability of the other participants in the arrangement to meet their obligations.

Analysis of the underlying assets should be conducted independently by each participant in the process, giving consideration to yield,

maturity, credit risk, prepayment risk, and the accessibility of collateral in cases of default. An originator should further consider the impact of securitization on the remaining asset portfolio and on the adequacy of loan-loss reserves and overall capital.

Financial position and operational capacity should be adequate to meet obligations to other parties in a securitization arrangement, even under adverse scenarios. Accordingly, a BO should ensure that the pricing of services is adequate to cover costs over the term of the obligation, as well as to compensate for associated risks. Further, the organization should have contingency plans to transfer responsibilities to another institution in the event that those responsibilities can no longer be fulfilled. Examiners should determine that the BO has policies and controls for managing contractual obligations, including management of collateral, if applicable. Staffing levels should be adequate to fulfill responsibilities.

If a BO's obligations, under a securitization agreement, are subcontracted to other parties, an assessment of the subcontractor's financial position and operational capacity should be conducted before delegating responsibility. Further, the subcontractor's financial position and compliance with contractual obligations should be monitored periodically.

A BO involved in issuing ABS should make certain that the agreement permits it to assess the ability of other participants in the securitization arrangement to meet their obligations (considering obligations that they may have under other securitization arrangements). The rights and obligations of each of the participants under possibly novel legal and institutional arrangements should be clearly documented.

Funding and liquidity management for originators and packagers of securitized assets should avoid excessive reliance on the device of securitization. Originators and packagers should monitor the securitization market closely, develop a broad customer base for their securitization activities, and maintain diversified funding sources.

BOs should not rely excessively on the expertise of a single individual or a small group of individuals, either inside or outside the organization, for the management of participation in securitization activities. Examiners should ensure that an organization acting as trustee for ABS follows the usual standards for trust services.

Policy and Portfolio Analysis

Credit risk. Institutions should be aware that the credit risk involved in many securitization activities may not always be obvious. For certain types of loan-sales and securitization transactions, a BO may actually be exposed to essentially the same credit risk as in traditional lending activities, even though a particular transaction may, superficially, appear to have isolated the institution from any risk exposure. In such cases, removal of an asset from the balance sheet may not result in a commensurate reduction in credit risk. Transactions that can give rise to such instances include loan sales with recourse; credit derivatives; direct-credit substitutes, such as letters of credit; and liquidity facilities extended to securitization programs, as well as certain asset-securitization structures, such as the structure typically used to securitize credit card receivables.

The partial, first-loss recourse obligations an institution retains when selling assets, and the extension of partial credit enhancements (for example, 10 percent letters of credit) in connection with asset securitization, can be sources of concentrated credit risk by exposing institutions to the full amount of expected losses on the protected assets. For instance, the credit risk associated with whole loans or pools of assets that are sold to secondary-market investors can often be concentrated within the partial, first-loss recourse obligations retained by the BOs that are selling and securitizing the assets. In these situations, even though institutions may have reduced their exposure to catastrophic loss on the assets sold, they generally retain the same credit-risk exposure that they would have had if they continued to hold the assets on their balance sheets.

In addition to recourse obligations, institutions assume concentrated credit risk through the extension of partial direct-credit substitutes, such as through the purchase (or retention) of subordinated interests in their own asset securitizations or through the extension of letters of credit. For example, BOs that sponsor certain asset-backed commercial paper programs, or so-called remote-origination conduits, can be exposed to high degrees of credit risk even though it may seem that their notional exposure is minimal. A remote-origination conduit lends directly to corporate customers referred to it by the sponsoring BO that used to lend directly to these same borrowers. The conduit funds this

lending activity by issuing commercial paper that, in turn, is guaranteed by the sponsoring BO. The net result is that the sponsoring institution has much the same credit-risk exposure through this guarantee that it would have had if it had made the loans directly and held them on its books. This is an off-balance-sheet transaction, however, and its associated risks may not be fully reflected in the institution's risk-management system.

Furthermore, BOs that extend liquidity facilities to securitized transactions, particularly to asset-backed commercial paper programs, may be exposed to high degrees of credit risk which may be subtly embedded within a facility's provisions. Liquidity facilities are commitments to extend short-term credit to cover temporary shortfalls in cash flow. While all commitments embody some degree of credit risk, certain commitments extended to asset-backed commercial paper programs to provide liquidity may subject the extending institution to the credit risk of the underlying asset pool, often trade receivables, or of a specific company using the program for funding. Often, the stated purpose of these liquidity facilities is to provide funds to the program to retire maturing commercial paper when a mismatch occurs in the maturities of the underlying receivables and the commercial paper, or when a disruption occurs in the commercial paper market. However, depending on the provisions of the facility—such as whether the facility covers dilution of the underlying receivable pool—credit risk can be shifted from the program's explicit credit enhancements to the liquidity facility.²⁵ Such provisions may enable certain programs to fund riskier assets and yet maintain the credit rating on the program's commercial paper without increasing the program's credit-enhancement levels.

The structure of various securitization transactions can also result in an institution's retaining the underlying credit risk in a sold pool of assets. Examples of this contingent credit-risk retention include credit card securitizations in which the securitizing organization explicitly sells the credit card receivables to a master trust, but, in substance, retains the majority of the economic risk of loss associated with the assets because of the credit protection provided to

25. Dilution essentially occurs when the receivables in the underlying asset pool—before collection—are no longer viable financial obligations of the customer. For example, dilution can arise from returns of consumer goods or unsold merchandise by retailers to manufacturers or distributors.

investors by the excess yield, spread accounts, and structural provisions of the securitization. Excess yield provides the first level of credit protection that can be drawn upon to cover cash shortfalls between the principal and coupon owed to investors and the investors' pro rata share of the master trust's net cash flows. The excess yield is equal to the difference between the overall yield on the underlying credit card portfolio and the master trust's operating expenses.²⁶ The second level of credit protection is provided by the spread account, which is essentially a reserve funded initially from the excess yield.

In addition, the structural provisions of credit card securitizations generally provide credit protection to investors through the triggering of early-amortization events. Such an event usually is triggered when the underlying pool of credit card receivables deteriorates beyond a certain point and requires that the outstanding credit card securities begin amortizing early to pay off investors before the prior credit enhancements are exhausted. As the early amortization accelerates the redemption of principal (paydown) on the security, the credit card accounts that were assigned to the master credit-card trust return to the securitizing institution more quickly than had originally been anticipated. Thus, the institution is exposed to liquidity pressures and any further credit losses on the returned accounts.

Examiner procedures for reviewing credit risk are outlined below:

- Examiners should review a BO's policies and procedures to ensure that the organization follows prudent standards of credit assessment and approval for all securitization exposure. Procedures should include an initial thorough and independent credit assessment of each loan or pool for which it has assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure.
- Examiners should determine that rigorous credit standards are applied, regardless of the role an organization plays in the issuance of ABS. The servicer, credit enhancer, and under-

26. The monthly excess yield is the difference between the overall yield on the underlying credit card portfolio and the master trust's operating expenses. It is calculated by subtracting from the gross portfolio yield (1) the coupon paid to investors; (2) charge-offs for that month; and (3) a servicing fee, usually 200 basis points, paid to the banking organization sponsoring the securitization.

writer must perform assessments and approvals independent of and distinct from reviews provided by the originator or packager.

- Major policies and procedures, including internal credit-review and -approval procedures and in-house exposure limits, should be reviewed periodically and approved by the institution's board of directors.
- Failure, fraud, or mismanagement on the part of one participant in an ABS issue could result in loss to any of the other institutions involved in the issue. A BO involved in securitization should have adequate procedures for evaluating the internal control procedures and financial strength of other institutions with which it is involved.
- Securitization arrangements may remove a credit enhancer from direct access to the collateral. The remedies available to a BO involved in the provision of credit enhancement in the event of a default should be clearly documented.
- Examiners should ensure that, regardless of the role an institution plays in securitization, ABS documentation clearly specifies the limitations of the institution's legal responsibility to assume losses.
- Examiners should verify that a banking organization acting as originator, packager, or underwriter has written policies addressing the repurchase of assets and other reimbursement to investors in the event that a defaulted package results in losses exceeding any contractual credit enhancement. A BO that repurchases defaulted assets or pools in contradiction of the underlying agreement in effect sets a standard by which it could potentially be found legally liable for all "sold" assets. A BO that responds in this manner to the "moral hazard" or reputational risk arising from its securitization activities may face additional risk from other areas of its securitization activities. Examiners should review any situations in which the organization has repurchased or otherwise reimbursed investors for poor-quality assets.
- A BO's records should be reviewed to ensure that credit, pricing, and servicing standards for securitized assets are equivalent to standards for assets that remain on the books. The quality of securitized assets should be accurately characterized to investors and other parties to the securitization arrangement to avoid unforeseen pressures to repurchase defaulted issues.

- Pricing policies and practices should be reviewed to determine that they incorporate an analysis of the tradeoff between risk and return.
- Examiners should consider securitization risks when analyzing the adequacy of an organization's capital or reserve levels. Adverse credit risk should be classified accordingly.

Concentration risk. A banking organization involved in originating, packaging, servicing, underwriting, or enhancing the creditworthiness of ABS must take special care to follow in-house diversification requirements for aggregate outstandings to a particular institution, industry, or geographic area. Examiner procedures for reviewing concentration risk are outlined below:

- When determining compliance with internal credit-exposure limits, securitization exposure should be aggregated with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees, commitments, and any other investments involving the same obligor.
- Examiners should review all pools of sold assets for industrial or geographic concentrations. Excessive exposures to an industry or region among these assets should be noted in the review of the BO's loan portfolio.
- Inherent in securitization is the risk that, if another party involved in the securitization arrangement becomes unable to perform according to contract terms, the issue might default even while the underlying credits are performing. This credit exposure to the other managing parties in a securitization transaction should be included under a BO's general line to those institutions. Examiners should, therefore, ensure that, in addition to policies limiting direct credit exposure, an institution has developed exposure limits with respect to particular originators, credit enhancers, and servicers.

Reputational risk. The securitization activities of many institutions may also expose them to significant reputational risks. Often, BOs that sponsor the issuance of asset-backed securities act as servicers, administrators, or liquidity providers in the securitization transactions. These institutions must be aware of the potential losses and risk exposure associated with reputational risk that arise from these securitization activities. The securitization of assets whose perfor-

mance has deteriorated may result in a negative market reaction that could increase the spreads on an institution's subsequent issuances. To avoid a possible increase in their funding costs, institutions have supported their securitization transactions by improving the performance of the securitized asset pool (for example, by selling discounted receivables or adding higher-quality assets to the securitized asset pool). Thus, an institution's voluntary support of its securitization in order to protect its reputation can adversely affect the sponsoring or issuing organization's earnings and capital.

Liquidity and market risk. The existence of recourse provisions in asset sales, the extension of liquidity facilities to securitization programs, and early-amortization triggers of certain asset-securitization transactions can involve significant liquidity risk to institutions engaged in these securitization activities. Institutions should ensure that their liquidity contingency plans fully incorporate the potential risk posed by their securitization activities. When new ABS are issued, the issuing banking organization should determine their potential effect on its liquidity at the inception of each transaction and throughout the life of the securities to better ascertain its future funding needs.

An institution's contingency plans should consider the need to obtain replacement funding and specify the possible alternative funding sources, in the event of the amortization of outstanding ABS. Replacement funding is particularly important for securitizations of revolving receivables, such as credit cards, in which an early amortization of the ABS could unexpectedly return the outstanding balances of the securitized accounts to the issuing institution's balance sheet. Early amortization of a banking organization's ABS could impede an institution's ability to fund itself—either through reissuance or other borrowings—since the institution's reputation with investors and lenders may be adversely affected. Moreover, the liquidity risk and market risk to which ABS are subject may be exacerbated by thin secondary markets for them. Examiner procedures for reviewing liquidity and market risk are outlined below:

- Examiners should review the policies of a BO engaged in underwriting, looking for situations in which it cannot sell underwritten ABS. Credit review, funding capabilities, and approval limits should allow the institution to

purchase and hold unsold securities. In the absence of this analysis, the institution should only handle ABS on a best-efforts basis. All potential credit exposure should be within legal lending limits.

- Examiners should ensure that a BO engaged in underwriting or market making has implemented adequate hedging or other risk-management policies to limit its exposure to adverse price movements.
- Examiners should determine whether an organization targets certain loans at origination to be packaged and securitized. If so, examiners should review the length of time these assets are held while being processed. Examiners should review management information systems reports to age targeted loans and to determine if there is any decline in value while the loans are in the pipeline. Loans held for resale in this pipeline should be segregated and carried at the lower of cost or market value.

Transfer risk and operational risk. Transfer risk is analogous to liquidity risk. It is the risk that an organization with obligations under securitization arrangements may wish to relinquish those obligations but may not be able to do so. Operational risk arises from uncertainty about an organization's ability to meet its obligations under securitization arrangements and may arise from insufficient computer resources or from a failure of fees to cover associated costs. An organization filling a role that potentially requires long-term resource commitments, such as servicer or credit enhancer, is most susceptible to transfer risk and operational risk. Examiner procedures for reviewing transfer and operational risk are outlined below:

- Examiners should determine that a BO has reviewed the relevant contracts to verify that they are free of any unusual features that increase the potential cost of transfer of obligations.
- Examiners should ascertain that a BO has evaluated the fee structure of the securitization to determine that fees are sufficient to cover the costs of associated services. Further, examiners should determine that a BO has reviewed the projected cash flow from the underlying assets to ensure that principal and interest payments will be timely and will be sufficient to cover costs, even under adverse scenarios.

- A servicer or credit enhancer subcontracting or participating responsibilities should initially assess the financial condition and reputation of any organization to which responsibility may be delegated. Subsequent periodic monitoring by the servicer or credit enhancer should assess the financial condition of organizations to which responsibility has been delegated, as well as their compliance with contractual obligations. Trustees should, likewise, monitor the financial condition and compliance of all participants in the securitization arrangement.

Conflicts of interest. With respect to the various functions performed by a BO, the potential for conflicts of interest exists when an organization plays multiple roles in securitization. Policies and procedures must address this potential conflict, especially the risk of legal ramifications or negative market perceptions if the organization appears to compromise its fiduciary responsibility to obligors or investors. Examiner procedures for reviewing conflicts of interest are outlined below:

- Examiners should review a BO's policies for disclosure of confidential but pertinent information about the underlying assets and obligors. An organization involved in the origination or processing of a securitization transaction should have written statements from obligors allowing the disclosure of pertinent confidential information to potential investors. In addition, the underwriting bank must follow proper procedures of due diligence.
- If the securitization business of an originator, underwriter, or credit enhancer is volume-driven, legal obligations or prudent banking practices may be breached. Examiners should review credit standards used in analyzing assets earmarked for securitization to determine that sound banking practices are not being compromised to increase volume or to realize substantial fees.
- Examiners should determine that the organization's policies addressing activities at various subsidiaries or affiliates are managed consistently and prudently in compliance with regulatory policies.

Legal Review and Liability

The complexity of asset-securitization transac-

tions requires a BO that participates in them in any capacity to fully investigate all applicable laws and regulations, to establish policies and procedures to ensure legal review of all securitization activities, and to take steps to protect the organization from liability in the case of problems with particular asset-backed issues. Organizations and examiners should be aware of the continual evolution of criteria on the types of assets that may be securitized and the types of BOs that may engage in the various aspects of securitization. Examiner procedures for checking an institution's legal-review and liability-protection measures are outlined below:

- Different responsibilities in connection with securitizations may be split among various subsidiaries of an organization. Examiners should, therefore, review the overall risk exposure to an organization. Specifically, examiners should be alert to situations in which the structure of a securitization obscures the concentration risk in individual ABS or in a portfolio of ABS. Examiners should also be mindful of structures that may effectively conceal low-quality assets or contingent liabilities from examination scrutiny and possible classification.
- Examiners should review a BO's insurance coverage to determine if it is sufficient to cover its fiduciary responsibilities under securitization arrangements. At least one rating agency requests that servicers carry errors and omissions insurance that will cover a minimum of 5 percent of the outstanding obligation.
- Private placements of ABS are not subject to the same legal-disclosure requirements as public placements. An organization involved in private placements of ABS should, therefore, exercise special caution with regard to disclosure of the risks and attributes of the securitized assets.

Banking Organizations Investing in ABS

ABS may appear similar to corporate notes; however, ABS possess many unique characteristics that affect their riskiness as investments. A BO should independently analyze all potential risk exposures before investing in ABS and should continue to monitor exposures throughout the life of the ABS. Analyses should focus

primarily on characteristics of ABS, such as credit risk, concentrations of exposures, interest-rate risk, liquidity risk, market risk, and prepayment risk. As an integral part of these analyses, a BO investing in ABS should evaluate the underlying assets, the participants in the securitization arrangement, and the structure of the securitization arrangement, although it should not be expected to analyze these factors in the same detail as BOs involved in the issuance of ABS.

Any purchase of ABS should be consistent with the overall objectives of the organization. The securities should constitute an integrated component of the investment or hedging plans of the organization and should not be purchased for speculative purposes. A banking organization should not rely on investment or trading strategies, which depend on the existence of liquid secondary ABS markets.

Policy and Portfolio Analysis

Credit risk. While ABS are often insulated, to some extent, from the credit risk of the underlying assets, credit risk is still affected by a number of factors, in addition to the performance of the underlying asset pool. These factors include the ability of the parties involved in the securitization arrangement to fulfill their obligations and the structure of the securitization itself.

In the event of default by obligors or other failure of the securitization structure, access to collateral may be difficult and recourse to the various providers of credit enhancement may be time-consuming and costly. Some forms of credit enhancement may be revocable. Banking organizations should not place undue reliance on collateral values and credit enhancement in evaluating ABS.

In many cases, ratings of the creditworthiness of ABS issues are available from external credit agencies. A banking organization may use credit ratings as a source of information, but should not depend solely on external agencies' evaluations of creditworthiness. Unrated ABS should be subject to particular scrutiny. Examiner procedures for reviewing credit risk are outlined below:

- Examiners should determine that a banking organization does not rely solely on conclusions of external rating services in evaluating ABS.
 - Examiners should determine that a banking organization investing in ABS has independently made use of available documents in evaluating the credit risk of ABS. These documents include indentures, trustee reports, rating-agency bulletins, and prospectuses.
 - Examiners should determine that a banking organization investing in privately placed ABS is aware of the differences in disclosure requirements between publicly placed and privately placed securities, and has taken extra steps to obtain and analyze information relevant to the evaluation of holdings of any privately placed ABS.
 - Major policies and procedures, including internal credit-review and -approval procedures and in-house exposure limits, should be reviewed periodically and approved by the institution's board of directors.
 - Failure, fraud, or mismanagement on the part of another party could result in loss to investors. A banking organization should have adequate procedures for assessing the financial strength and operational capacity of institutions involved in enhancing the credit quality of or managing an ABS issue.
 - A banking organization should have procedures for evaluating the structural soundness of securitization arrangements for ABS in which it invests. The degree of investor control over transfer of servicing rights should be clearly delineated.
 - Securitization arrangements may remove the ultimate investor from direct access to the collateral; the remedies available to an investor, in the event of default, should be clearly documented.
- Concentration risk.* Banking organizations may face concentrations of risk within the pool of assets, underlying an individual ABS issue, across different ABS issues, or through combinations of ABS and other credit exposures. Banking organizations that invest in ABS must

- Examiners should review a BO's policies and procedures to ensure that the organization follows prudent standards of credit assessment

take special care to follow in-house diversification requirements for aggregate outstandings to a particular institution, industry, or geographic area. Examiner procedures for reviewing concentration risk are outlined below:

- When determining compliance with internal credit-exposure limits, securitization exposure should be aggregated with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees and commitments, and any other investments involving the same obligor.
- Inherent in securitization is the risk that, if another party involved in the transaction becomes unable to perform, according to contract terms, the issue might default, even while the underlying credits are performing. Examiners should, therefore, ensure that, in addition to policies limiting direct credit exposure, an institution has developed exposure limits for particular credit enhancers, servicers, or trustees. Credit exposure to the other managing parties in a securitization should be included under a BO's general line to those institutions.
- Examiners should review the ABS portfolio for any industrial or geographic concentrations. Excessive exposures to a particular industry or region within the portfolio should be noted in the examiner's review.

Liquidity risk and market risk. Limited secondary markets may make ABS, especially unrated or innovative ABS, less liquid than many other debt instruments. Examiner procedures for reviewing liquidity and market risk are outlined below:

- If an investing bank is purchasing securitized assets for trading purposes, the examiner should ensure that the trading assets are carried at market value or at the lower of market or book value, and that market values are determined regularly. The risks involved are similar in character to the risks involved in trading other marketable securities. As with any trading activity, the BO must take proper steps to analyze market character and depth.
- A banking organization investing in ABS should not depend on secondary-market liquidity for the securities, especially in the case of ABS involving novel structures or innovative types of assets.
- Management information systems should provide management with timely and periodic

information on the historical costs, market values, and unrealized gains and losses on ABS held in investment, trading, or resale portfolios.

Prepayment risk. The prepayment of assets underlying ABS may create prepayment risk for an investor in ABS. Prepayment risk may not be adequately reflected in agency ratings of ABS. Examiner procedures for reviewing prepayment risk are outlined below:

- Examiners should determine that a BO investing in ABS has analyzed the prepayment risk of ABS issues in its portfolio. Special care should be taken in the analysis of issues involving multiple tranches.
- Prepayment risk for ABS should be incorporated into an organization's net income-at-risk model, if such a model is used.

Legal Review

Examiners should review policies and procedures for compliance with applicable state lending limits and federal law, such as section 5136 of the Revised Codes. These requirements must be analyzed to determine whether a particular ABS issue is considered a single investment or a loan to each of the creditors underlying the pool. Collateralized mortgage obligations may be exempt from this limitation, if they are issued or guaranteed by an agency or instrumentality of the U.S. government.

Internal Audit and Management Information Systems

A BO's management of securitization risk depends on the providing of timely and accurate information about the organization's exposure to those responsible for monitoring risks. Examiners must be aware that a BO's involvement in asset securitization can be very extensive and place significant demands on systems without being readily evident, either as an on-balance-sheet exposure or a contingent liability. System overload or other technical default in the organization's systems could render the organization unable to provide proper monitoring or servicing. While the risk is not clearly associated with

the servicer (whose responsibility is long term and requires ongoing resource commitments), systems breakdowns may have risk implications for the credit enhancer and trustee. Examiners should ensure that internal auditors examine all facets of securitization regularly, as outlined below:

- Examiners should ensure that internal systems and controls adequately track the performance and condition of internal exposures and should monitor the organization's compliance with internal procedures and limits. In addition, adequate audit trails and internal-audit coverage should be provided.
- Cost-accounting systems should be adequate to permit a reliable determination of the profitability and volatility of asset-securitization activities.
- Management information systems and reporting procedures should be reviewed to determine that they—
 - provide a listing of all securitizations for which the banking organization is either originator, servicer, credit enhancer, underwriter, trustee, or investor;
 - provide concentration listings by industry and geographic area;
 - generate information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters;
 - generate information on portfolio aging and performance relative to expectations; and
 - provide periodic and timely information to senior management and directors on the organization's involvement in, and credit exposure arising from, securitization.

Asset Securitization

Examination Objectives

Effective date November 2004

Section 4030.2

1. To determine if the bank is in compliance with laws, regulations, and policy statements.
2. To determine if the bank has originated, serviced, credit-enhanced, served as a trustee for, or invested in securitized assets.
3. To determine that securitization activities are integrated into the overall strategic objectives of the organization.
4. To determine that management has an appropriate level of experience in securitization activities.
5. To ensure that the bank does not hold any asset-backed securities that are inappropriate, for example, interest-only strips (IOs) and principal-only strips (POs), given the size of the bank and the sophistication of its operations.
6. To ensure that all asset-backed securities owned, any assets sold with recourse, retained interests, and variable interest entities (VIEs) (for example, asset-backed commercial paper (ABCP) programs that are defined as VIEs under GAAP) are properly accounted for on the bank's books and are correctly reported on the bank's regulatory reports.
7. To determine that sources of credit risk are understood, properly analyzed, and managed, without excessive reliance on credit ratings by outside agencies.
8. To determine that credit, operational, and other risks are recognized and addressed through appropriate policies, procedures, management reports, and other controls.
9. To determine if officers are operating in conformance with established bank policies and procedures.
10. To determine whether liquidity and market risks are recognized and whether the organization is excessively dependent on securitization as a substitute for day-to-day core funding or as a source of income.
11. To determine that steps have been taken to minimize the potential for conflicts of interest arising from the institution's securitization activities.
12. To determine that possible sources of structural failure in securitization transactions are recognized and that the organization has adopted measures to minimize the impact of these failures if they occur.
13. To determine that the organization is aware of the legal risks and uncertainty of various aspects of securitization.
14. To determine that concentrations of exposure in the underlying asset pools, asset-backed securities portfolio, or structural elements of securitization transactions are avoided.
15. To determine that all sources of risk are evaluated at the inception of each securitization activity and are monitored on an ongoing basis.
16. To determine whether the institution's retained interests from asset securitization are properly documented, valued, and accounted for.
17. To verify that the amount of retained interests not supported by adequate documentation has been charged off and that the assets involved in those retained interests are not used for risk-based calculation purposes.
18. To ascertain the existence of sound risk modeling, management information systems (MIS), and disclosure practices for asset securitization.
19. To obtain assurances that the board of directors and management oversee sound policies and internal controls concerning the recording of asset-securitization transactions and any valuation of retained interests derived therefrom.
20. To determine that capital is commensurate with, and that there are accurate determinations of, the risk weights for the risk exposures arising from recourse obligations, direct-credit substitutes, asset- and mortgage-backed securities, ABCP programs and ABCP liquidity facilities, and other asset-securitization transactions.
21. To determine whether there is an independent audit function that is capable of evaluating asset-securitization activities and any associated retained interests.
22. To initiate corrective action if policies, practices, procedures, or internal controls are deficient or when violations of law, regulations, or policy statements are disclosed.

Asset Securitization Examination Procedures

Effective date November 2004

Section 4030.3

1. a. Request a schedule of all asset-backed securities owned by the bank. Reconcile the balance of these assets to the subsidiary ledgers of the balance sheet, and review credit ratings assigned to these securities by independent rating agencies. Determine that the accounting methods and procedures used for these assets, at inception and throughout the carrying life, are appropriate.
- b. Request and review information on the types and amount of assets that have been securitized by the bank. In addition, request information concerning potential contractual or contingent liability arising from any guarantees, underwriting, and servicing of the securitized assets.
2. Review the parent company's policies and procedures to ensure that its banking and nonbanking subsidiaries follow prudent standards of credit assessment and approval for all securitization exposure. Procedures should include a thorough and independent credit assessment of each loan or pool for which it has assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure. If a banking organization (BO) invests in asset-backed securities (ABS), determine whether it relies solely on conclusions of external rating services when evaluating the securities.
3. Determine that rigorous credit standards are applied regardless of the role the organization plays in the securitization process, for example, servicer, credit enhancer, or investor.
4. Determine that major policies and procedures, including internal credit-review and credit-approval procedures and "in-house" exposure limits, are reviewed periodically and approved by the bank's board of directors.
5. Determine whether adequate procedures for evaluating the organization's internal control procedures and the financial strength of the other institutions involved in the securitization process are in place.
6. Obtain the documentation outlining the remedies available to provide credit enhancement in the event of a default. Both originators and purchasers of securitized assets should have prospectuses on the issue. Obtaining a copy of the prospectus can be an invaluable source of information. Prospectuses generally contain information on credit enhancement, default provisions, subordination agreements, etc. In addition to the prospectus, obtain the documentation confirming the purchase or sale of a security.
7. Ensure that, regardless of the role an institution plays in securitization, the documentation for an asset-backed security clearly specifies the limitations of the institution's legal responsibility to assume losses.
8. Determine the existence of independent risk-management processes and management information systems (MIS). Determine whether these processes and systems are being used to monitor securitization-pool performance on an aggregate and individual transaction level.
9. Verify whether the BO, acting as originator, packager, or underwriter, has written policies addressing the repurchase of assets and other measures to reimburse investors in the event that a defaulted package results in losses exceeding any contractual credit enhancement. The repurchase of defaulted assets or pools in contradiction of or outside the terms of the underlying agreement in effect sets a standard by which a banking organization could potentially be found legally liable for all "sold" assets. Review and report any situations in which the organization has repurchased or otherwise reimbursed investors for poor-quality assets.
10. Classify adverse credit risk associated with the securitization of assets when analyzing the adequacy of an organization's capital or reserve levels. Evaluate credit risk of ABS, and classify any adverse credit risk. List classified assets. Evaluate the impact of the classification on capital adequacy and the overall soundness of the institution.
11. Aggregate securitization exposures with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees and commitments, and any other investments involving the same obligor when

- determining compliance with internal credit-exposure limits.
12. Review the bank's valuation assumptions and modeling methodology used for ABS to determine if they are conservative and appropriate and are being used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis.
 13. Determine if audit or internal-review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets that the institution retains.
 14. Review the risk-based capital calculations, and determine if they include recognition and the correct reporting of any recourse obligations, direct-credit substitutes, residual interests, asset- and mortgage-backed securities, asset-backed commercial paper (ABCP) programs, liquidity facilities, and other transactions involving such securitization activities.
 15. Determine if the bank consolidates, in accordance with GAAP (FASB's FIN 46-R, "Consolidation of Variable Interest Entities"), the assets of any ABCP program or other such program that it sponsors.
 - a. Determine if the bank's ABCP program met the definition of a sponsored ABCP program under the risk-based capital guidelines.
 - b. Verify that the assets of the bank's eligible ABCP program and any associated minority interest were excluded from the bank's calculation of its risk-based capital ratios.
 - c. Ascertain whether the liquidity facilities the bank extends to the ABCP program satisfy the risk-based capital definition and requirements, including the appropriate asset-quality test, of an eligible ABCP program liquidity facility. (See 12 CFR 208, appendix A, III.B.3.a.iv.)
 - d. Determine whether the bank applied the correct credit-conversion factor to eligible ABCP liquidity facilities when it determined the amount of risk-weighted assets for its risk-based capital ratios. (See 12 CFR 208, appendix A, section III.D.)
 - e. Determine if all ineligible ABCP liquidity facilities were treated as either direct-credit substitutes or as recourse obligations, as required by the risk-based capital guidelines.
 - f. If the bank had multiple positions with overlapping exposures, determine if the bank applied the risk-based capital treatment that resulted in the highest capital charge. (See 12 CFR, appendix A, section III.B.6.c.)
 16. Ascertain that internal limits govern the amount of retained interests held as a percentage of total equity capital.
 17. Establish that an adequate liquidity contingency plan is in place and will be used in the event of market disruptions. Determine whether liquidity problems may arise as the result of an overdependence on asset-securitization activities for day-to-day core funding.
 18. Determine whether consistent, conservative accounting practices are in place that satisfy the reporting requirements of regulatory supervisors, GAAP reporting requirements, and valuation assumptions and methods. Ascertain that adequate disclosures of asset-securitization activities are made commensurate with the volume of securitizations and the complexities of the institution.
 19. Establish that risk-exposure limits and requirements exist and are adhered to on an aggregate and individual transaction basis.
 20. Review securitized assets for industrial or geographic concentrations. Excessive exposures to an industry or region among the underlying assets should be noted in the review of the loan portfolio.
 21. Ensure that, in addition to policies limiting direct credit exposure, an institution has developed exposure limits for particular originators, credit enhancers, trustees, and servicers.
 22. Review the policies of the banking organization engaged in underwriting, watching for situations in which it cannot sell underwritten asset-backed securities. Credit review, funding capabilities, and approval limits should allow the institution to purchase and hold unsold securities. All potential credit exposure should be within legal lending limits.
 23. Ensure that internal systems and controls adequately track the performance and condition of internal exposures and monitor the organization's compliance with internal procedures and limits. In addition, adequate audit trails and internal audit coverage

- should be provided. Ensure that the reports have adequate scope and frequency of detail.
24. Determine that management information systems provide—
 - a. a listing of each securitization transaction in which the organization is involved;
 - b. a listing of industry and geographic concentrations;
 - c. information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters;
 - d. information regarding portfolio monthly vintage or aging and information on a portfolio's performance by specific product type relative to expectations;
 - e. periodic and timely information to senior management and directors on the organization's involvement in, and credit exposure arising from, securitization;
 - f. static-pool cash-collection analysis;
 - g. sensitivity analysis; and
 - h. a statement of covenant compliance.
 25. Ensure that internal auditors examine all facets of securitization regularly.
 26. Review policies and procedures for compliance with applicable state lending limits and federal law, such as section 5136 of the Revised Codes. These requirements must be analyzed to determine whether a particular asset-backed-security issue is considered a single investment or a loan to each of the creditors underlying the pool. Collateralized mortgage obligations may be exempt from this limitation, if they are issued or guaranteed by an agency or instrumentality of the U.S. government.
 27. Determine whether the underwriting of ABS of affiliates is—
 - a. rated by an unaffiliated, nationally recognized statistical rating organization; or
 - b. issued or guaranteed by Fannie Mae, FHLMC, or GNMA, or represents interests in such obligations.
 28. Determine if purchases of high-risk mortgage-backed securities were made to reduce the overall interest-rate risk of the bank. Determine if the bank evaluates and documents at least quarterly whether these securities have reduced the interest-rate risk.
 29. Review and discuss any documentation exceptions, violations, internal control exceptions, and classifications with management, and obtain management's response.
 30. Review the bank's liquidity agreements with any asset-backed commercial paper programs and determine whether the agreements have any credit-related components. Is the bank required to purchase the assets? Are these assets repurchased from the bank? If the facility is determined to be a commitment, determine whether its maturity is short term or long term. Do any of the liquidity agreements contain a material adverse clause or any other credit-contingency provision?

Asset Securitization

Internal Control Questionnaire

Effective date November 2004

Section 4030.4

Review the bank's internal controls, policies, practices, and procedures for all aspects of asset securitization. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information.

POLICIES

1. Does the bank employ the services of a securities dealer? If so, does the bank rely solely on the advice of such dealer when purchasing asset-backed securities for the bank's investment portfolio? Does the bank have persons who are responsible for reviewing or approving the investment manager's acquisitions? Are minimum criteria established for selecting a securities dealer?
2. Has the board of directors, consistent with its duties and responsibilities, reviewed and ratified asset-securitization policies, practices, and procedures? Do these policies, practices, and procedures—
 - a. require an initial thorough and independent credit assessment of each pool for which the bank has assumed credit risk, as either a participant in the securitization process or as an investor?
 - b. address the bank's repurchase of assets and other forms of reimbursement to investors, when the bank is acting as the originator, packager, or underwriter, in the event that a default results in losses exceeding any contractual credit enhancement?
 - c. ensure that the credit, pricing, and servicing standards for securitized assets are equivalent to standards for assets that remain on the bank's books?
 - d. ensure that the credit, pricing, and servicing standards and that compliance with any provisions relating to government guarantees are reviewed periodically by the board of directors?
 - e. establish in-house diversification requirements for aggregate outstanding exposures to a particular institution, industry, or geographic area?
 - f. hedge the bank's exposure to adverse

- price movements when it is engaged in underwriting or market-making activities?
3. Are the bank's securitization policies reviewed and reaffirmed at least annually to determine if they are compatible with changing market conditions?

INTERNAL CONTROL AND MANAGEMENT INFORMATION SYSTEMS

1. Do the internal systems and controls adequately track the performance and condition of internal exposures, and do the systems monitor the bank's compliance with internal procedures and limits? Are adequate audit trails and internal audit coverage provided?
2. Do the cost accounting systems provide a reliable determination of the profitability and volatility of asset-securitization activities?
3. Are management information systems and reporting procedures adequate in that they provide—
 - a. a listing of all securitizations for which the bank is either originator, servicer, credit enhancer, underwriter, or trustee?
 - b. a listing of industry and geographic concentrations?
 - c. information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters?
 - d. information regarding portfolio aging and performance relative to expectations?
 - e. periodic and timely information to senior management and directors on the organization's involvement in, and credit exposure arising from, securitization?
 - f. credit ratings assigned by independent rating agencies to all asset-backed securities held by the bank?
4. Do management information systems and reporting procedures adequately document the bank's calculation and determination of risk-based capital ratios (including the assignment of the appropriate risk-based capital charges (risk weights and credit-conversion factors)) against the exposures arising from asset-backed and mortgage-backed securitization transactions or activities, including asset-backed commercial paper programs

(including exposures arising from direct-credit substitutes, recourse obligations, residual interests, liquidity facilities, and

mortgage-backed and other types of asset-backed loans)?

Elevated-Risk Complex Structured Finance Activities

Effective date October 2007

Section 4033.1

This section sets forth the Interagency Statement on Sound Practices Concerning Elevated-Risk Complex Structured Finance Activities, issued January 11, 2007.¹ The supervisory guidance addresses risk-management principles that should assist institutions to identify, evaluate, and manage the heightened legal and reputational risks that may arise from their involvement in complex structured finance transactions (CSFTs). The guidance is focused on sound practices related to CSFTs that may create heightened legal or reputational risks to the institution and are defined as “elevated-risk CSFTs.” Such transactions are typically conducted by a limited number of large financial institutions.² (See SR-07-05.)

INTERAGENCY STATEMENT ON SOUND PRACTICES CONCERNING ELEVATED-RISK COMPLEX STRUCTURED FINANCE ACTIVITIES

Financial markets have grown rapidly over the past decade, and innovations in financial instruments have facilitated the structuring of cash flows and allocation of risk among creditors, borrowers, and investors in more efficient ways. Financial derivatives for market and credit risk, asset-backed securities with customized cash-flow features, specialized financial conduits that manage pools of assets, and other types of structured finance transactions serve important business purposes, such as diversifying risks, allocating cash flows, and reducing cost of capital. As a result, structured finance transactions have become an essential part of U.S. and international capital markets. Financial institutions have played and continue to play an active and important role in the development of structured finance products and markets, including the market for the more complex variations of structured finance products.

When a financial institution³ participates in a

CSFT, it bears the usual market, credit, and operational risks associated with the transaction. In some circumstances, a financial institution also may face heightened legal or reputational risks due to its involvement in a CSFT. For example, in some circumstances, a financial institution may face heightened legal or reputational risk if a customer’s regulatory, tax, or accounting treatment for a CSFT, or disclosures to investors concerning the CSFT in the customer’s public filings or financial statements, do not comply with applicable laws, regulations, or accounting principles. Indeed, in some instances, CSFTs have been used to misrepresent a customer’s financial condition to investors, regulatory authorities, and others. In these situations, investors have been harmed and financial institutions have incurred significant legal and reputational exposure. In addition to legal risk, reputational risk poses a significant threat to financial institutions because the nature of their business requires them to maintain the confidence of customers, creditors, and the general marketplace.

The agencies⁴ have long expected financial institutions to develop and maintain robust control infrastructures that enable them to identify, evaluate, and address the risks associated with their business activities. Financial institutions also must conduct their activities in accordance with applicable statutes and regulations.

Scope and Purpose of Statement

The agencies issued this statement to describe the types of risk-management principles they believe may help a financial institution to identify CSFTs that may pose heightened legal or reputational risks to the institution and to evalu-

1. See 72 *Fed. Reg.* 1372, January 11, 2007.

2. The statement will not affect or apply to the vast majority of financial institutions, including most small institutions.

3. As used in this statement, the term *financial institution* or *institution* refers to state member banks and bank holding companies (other than foreign banking organizations) in the

case of the Board of Governors of the Federal Reserve System (FRB); to national banks in the case of the Office of the Comptroller of the Currency (OCC); to federal and state savings associations and savings and loan holding companies in the case of the Office of Thrift Supervision (OTS); to state nonmember banks in the case of the Federal Deposit Insurance Corporation (FDIC); and to registered broker-dealers and investment advisers in the case of the Securities and Exchange Commission (SEC). The U.S. branches and agencies of foreign banks supervised by the FRB, the OCC, and the FDIC also are considered to be financial institutions for purposes of this statement.

4. The federal banking agencies (the FRB, the OCC, the FDIC, and the OTS) and the SEC.

ate, manage, and address these risks within the institution's internal control framework.

Structured finance transactions encompass a broad array of products with varying levels of complexity. Most structured finance transactions, such as standard public mortgage-backed securities transactions, public securitizations of retail credit cards, asset-backed commercial paper conduit transactions, and hedging-type transactions involving "plain vanilla" derivatives and collateralized loan obligations, are familiar to participants in the financial markets, and these vehicles have a well-established track record. These transactions typically would not be considered CSFTs for the purpose of this statement.

Because this statement focuses on sound practices related to CSFTs that may create heightened legal or reputational risks—transactions that typically are conducted by a limited number of large financial institutions—it will not affect or apply to the vast majority of financial institutions, including most small institutions. As in all cases, a financial institution should tailor its internal controls so that they are appropriate in light of the nature, scope, complexity, and risks of its activities. Thus, for example, an institution that is actively involved in structuring and offering CSFTs that may create heightened legal or reputational risk for the institution should have a more formalized and detailed control framework than an institution that participates in these types of transactions less frequently. The internal controls and procedures discussed in this statement are not all-inclusive, and, in appropriate circumstances, an institution may find that other controls, policies, or procedures are appropriate in light of its particular CSFT activities.

Because many of the core elements of an effective control infrastructure are the same regardless of the business line involved, this statement draws heavily on controls and procedures that the agencies previously have found to be effective in assisting a financial institution to manage and control risks and identifies ways in which these controls and procedures can be effectively applied to elevated-risk CSFTs. Although this statement highlights some of the most significant risks associated with elevated-risk CSFTs, it is not intended to present a full exposition of all risks associated with these transactions. Financial institutions are encouraged to refer to other supervisory guidance prepared by the agencies for further information

concerning market, credit, operational, legal, and reputational risks as well as internal audit and other appropriate internal controls.

This statement does not create any private rights of action and does not alter or expand the legal duties and obligations that a financial institution may have to a customer, its shareholders, or other third parties under applicable law. At the same time, adherence to the principles discussed in this statement would not necessarily insulate a financial institution from regulatory action or any liability the institution may have to third parties under applicable law.

Identification and Review of Elevated-Risk CSFTs

A financial institution that engages in CSFTs should maintain a set of formal, written, firm-wide policies and procedures that are designed to allow the institution to identify, evaluate, assess, document, and control the full range of credit, market, operational, legal, and reputational risks associated with these transactions. These policies may be developed specifically for CSFTs, or included in the set of broader policies governing the institution generally. A financial institution operating in foreign jurisdictions may tailor its policies and procedures as appropriate to account for, and comply with, the applicable laws, regulations, and standards of those jurisdictions.⁵

A financial institution's policies and procedures should establish a clear framework for the review and approval of individual CSFTs. These policies and procedures should set forth the responsibilities of the personnel involved in the origination, structuring, trading, review, approval, documentation, verification, and execution of CSFTs. Financial institutions may find it helpful to incorporate the review of new CSFTs into their existing new-product policies. In this regard, a financial institution should define what constitutes a "new" complex structured finance product and establish a control process for the approval of such new products. In determining

5. In the case of U.S. branches and agencies of foreign banks, these policies, including management, review, and approval requirements, should be coordinated with the foreign bank's group-wide policies developed in accordance with the rules of the foreign bank's home-country supervisor and should be consistent with the foreign bank's overall corporate and management structure as well as its framework for risk management and internal controls.

whether a CSFT is new, a financial institution may consider a variety of factors, including whether it contains structural or pricing variations from existing products; whether the product is targeted at a new class of customers; whether it is designed to address a new need of customers; whether it raises significant new legal, compliance, or regulatory issues; and whether it or the manner in which it would be offered would materially deviate from standard market practices. An institution's policies should require new complex structured finance products to receive the approval of all relevant control areas that are independent of the profit center before the product is offered to customers.

Identifying Elevated-Risk CSFTs

As part of its transaction and new-product approval controls, a financial institution should establish and maintain policies, procedures, and systems to identify elevated-risk CSFTs. Because of the potential risks they present to the institution, transactions or new products identified as elevated-risk CSFTs should be subject to heightened reviews during the institution's transaction or new-product approval processes. Examples of transactions that an institution may determine warrant this additional scrutiny are those that (either individually or collectively) appear to the institution during the ordinary course of its transaction approval or new-product approval process to—

- lack economic substance or business purpose;
- be designed or used primarily for questionable accounting, regulatory, or tax objectives, particularly when the transactions are executed at year-end or at the end of a reporting period for the customer;
- raise concerns that the client will report or disclose the transaction in its public filings or financial statements in a manner that is materially misleading or inconsistent with the substance of the transaction or applicable regulatory or accounting requirements;
- involve circular transfers of risk (either between the financial institution and the customer or between the customer and other related parties) that lack economic substance or business purpose;
- involve oral or undocumented agreements that, when taken into account, would have a

material impact on the regulatory, tax, or accounting treatment of the related transaction, or the client's disclosure obligations;⁶

- have material economic terms that are inconsistent with market norms (for example, deep "in the money" options or historic rate rollovers); or
- provide the financial institution with compensation that appears substantially disproportionate to the services provided or investment made by the financial institution or to the credit, market, or operational risk assumed by the institution.

The examples listed previously are provided for illustrative purposes only, and the policies and procedures established by financial institutions may differ in how they seek to identify elevated-risk CSFTs. The goal of each institution's policies and procedures, however, should remain the same: to identify those CSFTs that warrant additional scrutiny in the transaction or new-product approval process due to concerns regarding legal or reputational risks.

Financial institutions that structure or market, act as an advisor to a customer regarding, or otherwise play a substantial role in a transaction may have more information concerning the customer's business purpose for the transaction and any special accounting, tax, or financial disclosure issues raised by the transaction than institutions that play a more limited role. Thus, the ability of a financial institution to identify the risks associated with an elevated-risk CSFT may differ depending on its role.

Due Diligence, Approval, and Documentation Process for Elevated-Risk CSFTs

Having developed a process to identify elevated-risk CSFTs, a financial institution should implement policies and procedures to conduct a heightened level of due diligence for these transactions. The financial institution should design these policies and procedures to allow personnel at an appropriate level to understand and evaluate the potential legal or reputational risks presented by

6. This item is not intended to include traditional, nonbinding "comfort" letters or assurances provided to financial institutions in the loan process where, for example, the parent of a loan customer states that the customer (i.e., the parent's subsidiary) is an integral and important part of the parent's operations.

the transaction to the institution and to manage and address any heightened legal or reputational risks ultimately found to exist with the transaction.

Due diligence. If a CSFT is identified as an elevated-risk CSFT, the institution should carefully evaluate and take appropriate steps to address the risks presented by the transaction, with a particular focus on those issues identified as potentially creating heightened levels of legal or reputational risk for the institution. In general, a financial institution should conduct the level and amount of due diligence for an elevated-risk CSFT that is commensurate with the level of risks identified. A financial institution that structures or markets an elevated-risk CSFT to a customer, or that acts as an advisor to a customer or investors concerning an elevated-risk CSFT, may have additional responsibilities under the federal securities laws, the Internal Revenue Code, state fiduciary laws, or other laws or regulations and, thus, may have greater legal- and reputational-risk exposure with respect to an elevated-risk CSFT than a financial institution that acts only as a counterparty for the transaction. Accordingly, a financial institution may need to exercise a higher degree of care in conducting its due diligence when the institution structures or markets an elevated-risk CSFT or acts as an advisor concerning such a transaction than when the institution plays a more limited role in the transaction.

To appropriately understand and evaluate the potential legal and reputational risks associated with an elevated-risk CSFT that a financial institution has identified, the institution may find it useful or necessary to obtain additional information from the customer or to obtain specialized advice from qualified in-house or outside accounting, tax, legal, or other professionals. As with any transaction, an institution should obtain satisfactory responses to its material questions and concerns prior to consummation of a transaction.⁷

In conducting its due diligence for an elevated-risk CSFT, a financial institution should independently analyze the potential risks to the institution from both the transaction and the institution's overall relationship with the customer. Institutions should not conclude that a transaction identified as being an elevated-risk

CSFT involves minimal or manageable risks solely because another financial institution will participate in the transaction or because of the size or sophistication of the customer or counterparty. Moreover, a financial institution should carefully consider whether it would be appropriate to rely on opinions or analyses prepared by or for the customer concerning any significant accounting, tax, or legal issues associated with an elevated-risk CSFT.

Approval process. A financial institution's policies and procedures should provide that CSFTs identified as having elevated legal or reputational risk are reviewed and approved by appropriate levels of control and management personnel. The designated approval process for such CSFTs should include representatives from the relevant business line(s) and/or client management, as well as from appropriate control areas that are independent of the business line(s) involved in the transaction. The personnel responsible for approving an elevated-risk CSFT on behalf of a financial institution should have sufficient experience, training, and stature within the organization to evaluate the legal and reputational risks, as well as the credit, market, and operational risks to the institution.

The institution's control framework should have procedures to deliver the necessary or appropriate information to the personnel responsible for reviewing or approving an elevated-risk CSFT to allow them to properly perform their duties. Such information may include, for example, the material terms of the transaction, a summary of the institution's relationship with the customer, and a discussion of the significant legal, reputational, credit, market, and operational risks presented by the transaction.

Some institutions have established a senior management committee that is designed to involve experienced business executives and senior representatives from all of the relevant control functions within the financial institution (including such groups as independent risk management, tax, accounting, policy, legal, compliance, and financial control) in the oversight and approval of those elevated-risk CSFTs that are identified by the institution's personnel as requiring senior management review and approval due to the potential risks associated with the transactions. While this type of management committee may not be appropriate for all financial institutions, a financial institution should establish processes that assist the institution in con-

7. Of course, financial institutions also should ensure that their own accounting for transactions complies with applicable accounting standards, consistently applied.

sistently managing the review and approval of elevated-risk CSFTs on a firm-wide basis.⁸

If, after evaluating an elevated-risk CSFT, the financial institution determines that its participation in the CSFT would create significant legal or reputational risks for the institution, the institution should take appropriate steps to address those risks. Such actions may include declining to participate in the transaction, or conditioning its participation upon the receipt of representations or assurances from the customer that reasonably address the heightened legal or reputational risks presented by the transaction. Any representations or assurances provided by a customer should be obtained before a transaction is executed and be received from, or approved by, an appropriate level of the customer's management. A financial institution should decline to participate in an elevated-risk CSFT if, after conducting appropriate due diligence and taking appropriate steps to address the risks from the transaction, the institution determines that the transaction presents unacceptable risk to the institution or would result in a violation of applicable laws, regulations, or accounting principles.

Documentation. The documentation that financial institutions use to support CSFTs is often highly customized for individual transactions and negotiated with the customer. Careful generation, collection, and retention of documents associated with elevated-risk CSFTs are important control mechanisms that may help an institution monitor and manage the legal, reputational, operational, market, and credit risks associated with the transactions. In addition, sound documentation practices may help reduce unwarranted exposure to the financial institution's reputation.

A financial institution should create and collect sufficient documentation to allow the institution to—

- document the material terms of the transaction;
- enforce the material obligations of the counterparties;
- confirm that the institution has provided the customer any disclosures concerning the trans-

action that the institution is otherwise required to provide; and

- verify that the institution's policies and procedures are being followed and allow the internal audit function to monitor compliance with those policies and procedures.

When an institution's policies and procedures require an elevated-risk CSFT to be submitted for approval to senior management, the institution should maintain the transaction-related documentation provided to senior management as well as other documentation, such as minutes of the relevant senior management committee, that reflect senior management's approval (or disapproval) of the transaction, any conditions imposed by senior management, and the factors considered in taking such action. The institution should retain documents created for elevated-risk CSFTs in accordance with its record retention policies and procedures as well as applicable statutes and regulations.

Other Risk-Management Principles for Elevated-Risk CSFTs

General business ethics. The board and senior management of a financial institution also should establish a "tone at the top" through both actions and formalized policies that sends a strong message throughout the financial institution about the importance of compliance with the law and overall good business ethics. The board and senior management should strive to create a firm-wide corporate culture that is sensitive to ethical or legal issues as well as the potential risks to the financial institution that may arise from unethical or illegal behavior. This kind of culture coupled with appropriate procedures should reinforce business-line ownership of risk identification and encourage personnel to move ethical or legal concerns regarding elevated-risk CSFTs to appropriate levels of management. In appropriate circumstances, financial institutions may also need to consider implementing mechanisms to protect personnel by permitting the confidential disclosure of concerns.⁹ As in other areas of financial institution

8. The control processes that a financial institution establishes for CSFTs should take account of, and be consistent with, any informational barriers established by the institution to manage potential conflicts of interest, insider trading, or other concerns.

9. The agencies note that the Sarbanes-Oxley Act of 2002 requires companies listed on a national securities exchange or inter-dealer quotation system of a national securities association to establish procedures that enable employees to submit

management, compensation and incentive plans should be structured, in the context of elevated-risk CSFTs, so that they provide personnel with appropriate incentives to have due regard for the legal-, ethical-, and reputational-risk interests of the institution.

Reporting. A financial institution's policies and procedures should provide for the appropriate levels of management and the board of directors to receive sufficient information and reports concerning the institution's elevated-risk CSFTs to perform their oversight functions.

Monitoring compliance with internal policies and procedures. The events of recent years evidence the need for an effective oversight and review program for elevated-risk CSFTs. A financial institution's program should provide for periodic independent reviews of its CSFT activities to verify and monitor that its policies and controls relating to elevated-risk CSFTs are being implemented effectively and that elevated-risk CSFTs are accurately identified and have received proper approvals. These independent reviews should be performed by appropriately qualified audit, compliance, or other personnel in a manner consistent with the institution's overall framework for compliance monitoring, which should include consideration of issues such as the independence of reviewing personnel from the business line. Such monitoring may include more-frequent assessments of the risk arising from elevated-risk CSFTs, both individually and within the context of the overall customer relationship, and the results of this monitoring should be provided to an appropriate level of management in the financial institution.

Audit. The internal audit department of any financial institution is integral to its defense against fraud, unauthorized risk taking, and damage to the financial institution's reputation. The internal audit department of a financial institution should regularly audit the financial institution's adherence to its own control procedures relating to elevated-risk CSFTs, and further assess the adequacy of its policies and

procedures related to elevated-risk CSFTs. Internal audit should periodically validate that business lines and individual employees are complying with the financial institution's standards for elevated-risk CSFTs and appropriately identifying any exceptions. This validation should include transaction testing for elevated-risk CSFTs.

Training. An institution should identify relevant personnel who may need specialized training regarding CSFTs to be able to effectively perform their oversight and review responsibilities. Appropriate training on the financial institution's policies and procedures for handling elevated-risk CSFTs is critical. Financial institution personnel involved in CSFTs should be familiar with the institution's policies and procedures concerning elevated-risk CSFTs, including the processes established by the institution for identification and approval of elevated-risk CSFTs and new complex structured finance products and for the elevation of concerns regarding transactions or products to appropriate levels of management. Financial institution personnel involved in CSFTs should be trained to identify and properly handle elevated-risk CSFTs that may result in a violation of law.

CONCLUSION

Structured finance products have become an essential and important part of the U.S. and international capital markets, and financial institutions have played an important role in the development of structured finance markets. In some instances, however, CSFTs have been used to misrepresent a customer's financial condition to investors and others, and financial institutions involved in these transactions have sustained significant legal and reputational harm. In light of the potential legal and reputational risks associated with CSFTs, a financial institution should have effective risk-management and internal control systems that are designed to allow the institution to identify elevated-risk CSFTs; to evaluate, manage, and address the risks arising from such transactions; and to conduct those activities in compliance with applicable law.

concerns regarding questionable accounting or auditing matters on a confidential, anonymous basis. (See 15 USC 78j-1(m).)

Bank management is responsible for controlling risk at a level deemed acceptable for the organization. An effective risk-management program begins with the identification of exposures that could disrupt the timely and accurate delivery of business services or result in unexpected financial claims on bank resources. Risk management also involves the implementation of cost-effective controls and the shifting, transfer, or assignment of risk to third parties through insurance coverage or other risk-transfer techniques. Although the design and sophistication of risk-management procedures varies from bank to bank, each institution's decision-making process should effectively identify; control; and, when or where appropriate, result in some transfer of risk. The risk-assessment program should be conducted annually to establish whether potential service disruptions and estimated risk-related financial costs and losses can be contained at levels deemed acceptable to bank management and the board of directors. Note that insurance can provide a bank with the resources to restore business operations and financial stability only *after* an unanticipated event has occurred, but a bank's own risk-management controls can prevent and minimize losses before they occur.

RISK-MANAGEMENT PROGRAM

A sound operational risk-management program requires the annual review of all existing business operations and a risk assessment of all proposed services. Identified risks should be analyzed to estimate their potential and probable levels of loss exposure. While the historical loss experience of the bank and other service providers may be helpful in quantifying loss exposure, technological and societal changes may result in exposure levels that differ from historical experience. Nevertheless, current exposure estimates should be derived from the bank's historical loss experience and augmented with industry experience. In addition, the bank's insurance broker or agent should be a source of advice.

Management must decide the most appropriate method for addressing a particular risk. Although many factors influence this decision, the purpose of risk management is to minimize

the probability of losses and the net costs associated with them. In that context, cost is broadly defined to include—

- the direct and consequential cost of loss-prevention measures (controls), plus
- insurance premiums, plus
- losses sustained, including the consequential effects and expenses to reduce such losses, minus
- recoveries from third parties and indemnities from insurers on account of such losses, plus
- pertinent administrative costs.

Bank risks with potentially high or even catastrophic financial consequences should be eliminated or substantially mitigated whenever possible, even when the risk's frequency of occurrence is low. These risks can be eliminated by discontinuing operations where appropriate or by assigning the risk exposure to other parties using third-party service providers. When the exposure cannot be shifted to other parties or otherwise mitigated, the bank must protect itself with appropriate levels of insurance. Certain loss exposures may be deemed reasonable because their probability of frequency and severity of loss are low, the level of expected financial loss or service disruption is minimal, or the costs associated with the recovery of assets and restoration of services are low.

Bank management may decide to reduce insurance premiums and claims-processing costs by self-insuring for various types of losses, setting higher deductible levels, lowering the coverage limits for insurance purchased, and narrowing coverage terms and conditions. A financial organization's primary defenses against loss are adequate internal controls and procedures, which insurance is intended to complement, not replace. Thus, an overall appraisal of the organization's control environment is a significant consideration in determining the adequacy of the insurance program. To the extent that controls are lacking, the need for additional insurance coverage increases. These determinations should be based on the results of the risk assessment and be consistent with the limits established by the board of directors. Insurance decisions may also be influenced by the insurance broker's advice regarding current insurance market and premium trends.

Following September 2001, insurance companies reevaluated their position on providing coverage for acts of terrorism. As a result, terrorism coverage has become expensive or unavailable. The bank's "schedule of insurance" should note which policies contain exclusions, sublimits, or large deductibles for losses incurred as a result of terrorism.

When selecting insurance carriers, banks should consider the financial strength and claims-paying capacity of the insurance underwriter, as well as the robustness or strength of the supervisory regime to which the insurer is subject. This procedure is important for all significant policy-coverage lines. Rating agencies typically consider a number of insurers vulnerable, and some underwriters may have large environmental exposures but capped equity resources. Many large commercial enterprises acquire insurance coverage from foreign companies or from subsidiaries of U.S. insurers domiciled in the Caribbean or other countries. The quality of insurance supervision in many foreign countries may not meet the standards expected in the United States.

TYPES OF RISKS

Business risks generally fall into three categories: (1) physical property damage, (2) liability resulting from product failure or unintended employee performance, and (3) loss of key personnel. Common property risks are fires or natural disasters such as storms and earthquakes, but acts of violence or terrorism can also be included in this category. Risk-management programs for property damage should consider not only the protection and replacement of the physical plant, but also the effects of business interruptions, loss of business assets, and reconstruction of records.

Insurance programs increasingly cover the consequences of the second category, product failure or unintended employee performance. These risks include the injury or death of employees, customers, and others; official misconduct; and individual and class-action lawsuits alleging mistreatment or the violation of laws or regulations. All aspects of a bank's operation are susceptible to liability risks. While property-loss levels can be estimated with relative confidence, jury awards for personal injury or product liability, and the related litigation

costs, often exceed expectations. In addition, it can be difficult to identify potential sources of liability exposure.

The third category, personnel risk, concerns those exposures associated with the loss of key personnel through death, disability, retirement, or resignation, as well as threats to all employees and third parties arising out of crimes such as armed robbery and extortion. The consequences of personnel loss are often more pronounced in small and medium-sized banks that do not have the financial resources to support a broad level of management.

INSURANCE PROGRAM

Program Objectives

A bank's insurance program should match the objectives of its management, the director-approved risk guidelines, and its individual risk profile. Insurance is primarily the transfer of the financial effect of losses and should be considered as only a part of the broader risk-management process. In that sense, it is imperative that management understands the costs and benefits of the bank's insurance program.

Due to the fluid nature of the insurance market and insurance products, there is no standard program or contract structure. Rather, many different insurance policies, coverages, endorsements, limits, deductibles, and payment plans fit together to form an insurance program. Based on the size and scope of a bank's operations, broader or narrower coverage, higher or lower limits, and separate policies may be purchased. Insurance programs should be customized to the risks that each bank faces. If a bank is particularly susceptible to a specific risk, purchasing additional insurance for that risk may be prudent.

A policy's deductible size and coverages, and the limits purchased, determine how much risk the bank has retained. Likewise, the payment plan of an insurance policy greatly influences the amount of risk transferred. An insurance policy alone does not represent significant risk transfer if the payment plan includes reimbursement to the insurance company for all losses, usually subject to a maximum. These reimburse-

ment, loss-sensitive, or retrospectively rated plans can be viewed more as a risk-financing tool than as risk transfer. Management should understand and quantify the total “all-in” cost of these plans, as well as how these costs correspond with the risk guidelines approved by the directors.

Common Insurance-Policy Components and Concepts

There is a difference between “policy” and “coverage,” but the two terms are often used interchangeably. The term “policy” usually refers to the actual insurance contract, while the term “coverage” refers to the types of risks to which the policy is designed to respond. For example, a directors’ and officers’ policy may include employment-practices liability (EPL) coverage. However, the bank may also purchase a separate EPL policy.

An “endorsement” is a modification to a policy. Endorsements can be either a simple change in wording from the original contract or a more complex addition or deletion of a coverage section. To expand on the example above, EPL coverage is often endorsed onto a directors’ and officers’ policy. When an endorsement adds a coverage to a policy, it is often called a “rider.”

The “limit of insurance” is the dollar amount of insurance protection purchased. Each policy has a different limit, and some may have separate limits for separate coverages provided under the same policy. Policies usually include a “per-occurrence” and an “aggregate” limit. The per-occurrence limit is the most the insurer will pay under the policy for any one insured event, while the policy aggregate is the most the insurer will pay in total, regardless of the number and size of insurable events.

“Deductibles” and “self-insured retentions (SIRs)” are the dollar amounts the bank must contribute to the loss before insurance applies.¹ They are effectively the same concept, with the difference being a deductible reduces the limits of insurance while a SIR does not. A deductible is included within or as part of the limits. A SIR is outside or in addition to the provided limits. For example, a \$5 million policy limit with a \$1 million deductible consists of \$4 million of

protection and the \$1 million deductible. A \$5 million policy limit with a \$1 million SIR provides \$5 million in protection after the \$1 million dollar SIR is paid by the bank. As in any clause of an insurance contract, the terms can be negotiated so a deductible does not reduce the limits.

“Occurrence” and “claims made” are two separate types of coverage bases of policies that differ as to the period protected, when claims are recognized, and when the policies are “triggered” or respond. Under an occurrence, or “loss-sustained,” form the amount and type of coverage (if any) for the loss event is based on the policy that was in force when the event took place or occurred, regardless of when a claim is submitted. Under a claims-made, or “discovery,” policy, the insurance policy in force when the loss event was discovered and reported to the insurance company would apply, regardless of when the event causing the claim occurred. Both types of policies have provisions regarding prompt claims-reporting to insurers. However, claims-made policies are usually stricter and their coverage may be compromised by failing to report claims in a timely manner.

Self-Insurance or Alternative Risk Transfer

There are numerous nontraditional insurance programs that larger, more complex banking organizations employ. These programs include, but are not limited to, captive insurance companies, individual or group self-insurance, risk-retention groups, and purchasing groups. These alternative risk-transfer (ART) programs are complex, and they should include common bank policies and procedures. For example, the bank should have access to individuals with insurance expertise. Outside consultants, qualified insurance brokers, and bank directors or management with insurance expertise are an integral part of a successful ART program. The ART program should also incorporate stop-loss provisions and reinsurance coverage to cap the organization’s exposure to severe claims or unexpected loss experience.

COMMON POLICIES AND COVERAGES

The following is not intended to be a compre-

1. An organization can maintain an unfunded reserve for loss-retention purposes.

hensive list of policies and coverages available, but rather a listing and description of those that banks most frequently purchase. The list is divided into three general types of insurance: liability, property, and life insurance. A fourth category is included for aircraft and aviation insurance, which consists of various types of property and liability coverage. While this last coverage category may be unnecessary for most banking organizations, for those institutions that do have exposure to risks associated with aircraft ownership, the risks may be exceptionally large.

Fidelity Insurance Bond

Liability insurance is sometimes called “third-party insurance” because three parties are involved in a liability loss: the insured, the insurance company, and the party (the claimant) who is injured or whose property is damaged by the insured. The insurance company pays the claimant on behalf of the insured if the insured is legally liable for the injury or damage. An insured’s legal liability for injury is often the result of a negligent act, but there are other sources of liability. Several examples of liability insurance are discussed below.

Fidelity bond coverage provides reimbursement for loss from employee dishonesty; robbery; burglary; theft; forgery; mysterious disappearance; and, in specified instances, damage to offices or fixtures of the insured. Coverage applies to all banking locations except automated teller machines, for which coverage must be specifically added. All banks should obtain fidelity bond coverage that is appropriate for their business needs.

The most widely used form of fidelity bond is the Financial Institution Bond (FIB), Standard Form No. 24 (formerly named the bankers’ blanket bond). Standard Form No. 24 is a claims-made, or discovery, form. The “basic” FIB has four insuring agreements or parts. Employee Dishonesty/Fidelity (Clause A) covers dishonest or fraudulent acts committed by employees. On-Premises (Clause B) covers losses from burglary, misplacement, or an unexplained disappearance that occurs on premises. In-Transit (Clause C) covers losses from burglary, misplacement, or an unexplained disappearance that occurs while the property is in transit. Counterfeit Currency (Clause F) covers losses from accepting counterfeit currency.

In addition to the basic four FIB insuring agreements, Forgery or Alteration (Clause D) and Securities (Clause E) may also appear on the standard form. (These coverages may not be a component of the most basic insurance program for a small bank.) Significant enhancements and additional coverages are often endorsed onto the FIB. Any misrepresentation, omission, concealment, or incorrect statement of material fact in the insurance application is grounds for rescission of the fidelity bond by the underwriting insurance company.

When the bank under examination is a subsidiary of a bank holding company, and the holding company has purchased one fidelity bond to cover all affiliated banks, the examiner should determine that the policy is sufficient to cover the exposures of the subsidiary bank being examined. Examiners also should determine that any policy premiums the subsidiary bank pays to the parent holding company are not disproportionate to the bank’s benefits from the group policy and that such premiums are consistent with the fair-market requirements of section 23B of the Federal Reserve Act. Split-limit coverage may reduce protection if a loss involves the collusion of subsidiary bank employees or other affiliates of a bank holding company.

Clause A: Fidelity (Employee Dishonesty)

Clause A covers losses resulting directly from dishonest or fraudulent acts an officer or employee commits, either acting alone or in collusion with others. The employee must have had a manifest intent to cause a loss to the financial institution, and the employee or another person or entity must obtain financial benefit from the dishonest or fraudulent act. Officers, attorneys retained by the bank, persons provided by an employment contractor, and nonemployee data processors who are performing services for the insured are typically all considered “employees.” If any of the loss results from loans, that part of the loss is covered only if the employee was in collusion with other parties to the transaction and the employee received a minimum financial-benefit amount, as specified in the policy. (“Financial benefit” does not include any employee benefits earned in the normal course of employment, including salaries, commissions, fees, bonuses, promotions, awards, profit-sharing plans, or pensions.) Clause A should not prevent the recovery of losses from

employee dishonesty that are concealed by fictitious loans.

Clause B: On-Premises

Clause B covers losses of property (as defined in the bond) that occur on premises as a result of robbery, burglary, larceny, misplacement, theft, or a mysterious and unexplained disappearance. Under specified conditions, damage to offices and equipment may be covered under this clause. However, premises coverage should not be confused with standard fire or other types of property insurance.

Clause C: In-Transit

Clause C covers loss of property that is in transit. The property typically must be in the custody of (1) a natural person acting as a messenger for the insured, (2) a transportation company transporting the property in an armored motor vehicle, or (3) a transportation company transporting the property by means other than an armored motor vehicle. When an armored vehicle is not used by a transportation company, “property” is generally limited to records, certified securities, and negotiable instruments that are not payable to the bearer, are not endorsed, and have no restrictive endorsements. Some insuring agreements insure certain financial institution employees that carry cash.

Clause D: Forgery or Alteration

Clause D covers forgery, which is the signing of the name of another person or organization with the intent to deceive. Clause D also covers losses resulting from the alteration of any negotiable instrument. Evidences of debt, which the bank receives either over-the-counter or through clearings, are not usually covered. Fraudulent items received through an electronic funds transfer system are generally excluded.

Clause E: Securities

Clause E covers losses that result from a bank’s extending credit or assuming liability on the faith of original securities, documents, or written instruments that are forged, altered, lost, or stolen. These include but are not limited to a

certificated security, a title, a deed or mortgage, a certificate of origin or title, an evidence of debt, a security agreement, an instruction to a Federal Reserve Bank, and a statement of uncertificated security of a Federal Reserve Bank. Coverage is included for certain counterfeit securities and instruments. The bank must have acted in good faith and had actual physical possession of the original instrument.

Clause F: Counterfeit Currency

Clause F provides coverage for losses resulting from the receipt of counterfeit money. The coverage is counterfeit money of the United States, Canada, or any other country where the insured maintains a branch office.

Common FIB Extensions, Riders, or Endorsements

Fidelity bond protection can be extended by purchasing additional coverage through extensions, riders, and endorsements. If a bank has significant risk exposures in certain areas, these additional protections should be considered. The most common of these protections are listed below.

Extortion/Threats to Persons or Property

The extortion/threats to persons or property rider insures against loss of property that is surrendered away from a banking office as the result of a threat to do bodily harm to a director, trustee, employee, or relative, or of threats to damage banking premises or property. While a bank may add this coverage with a rider to its FIB, many banks purchase a separate, more comprehensive policy or endorse this coverage onto the directors’ and officers’ policy.

Trading Losses

The trading-loss rider amends the FIB exclusion by providing coverage for trading losses resulting directly from employee dishonesty.

Automated Teller Machines

The automated teller machine (ATM) rider cov-

ers losses of money from, or damage to, an unattended ATM that results from robbery, burglary, or theft.

Electronic or Computer Systems

The electronic or computer-systems rider covers direct losses caused by fraudulent funds transfers originated through the bank's computer systems. The fraud may be caused by a dishonest employee, customer, or third party.

Unauthorized Signatures

The unauthorized-signature rider covers losses resulting from a bank's acceptance, cashing, or payment of any negotiable instrument or withdrawal order that bears an unauthorized signature. An "unauthorized signature" is not forged, but is the signature of an individual who is not an authorized signatory on the account.

Fraudulent Mortgages

The fraudulent-mortgages rider insures against loan losses that result from a bank's accepting or acting on mortgages or deeds of trust that have defective signatures. "Defective signatures" are those obtained through fraud or trickery or under false pretenses.

Counterfeit Checks

The counterfeit-check rider insures against loss from counterfeit checks and other negotiable instruments. The coverage applies whether or not the counterfeit instruments are forged.

Service Contractors

The service-contractor rider covers loss resulting from fraudulent or dishonest acts committed by a servicing contractor. A "servicing contractor" services real estate and home-improvement mortgages, as well as tax and insurance escrow accounts; manages real property; or provides other related services. The coverage extends to losses resulting from the contractor's failure to forward collected funds to the bank when the servicing contractor has committed to do so.

Money-Order Issuer's

With a money-order-issuer's rider, coverage is expanded to authorized third parties that issue registered checks or personal money orders on behalf of the insured.

Liability Insurance

Electronic and Computer Crimes

To broaden the electronic and computer-systems rider that is normally attached to the FIB, an additional electronic and computer-crime rider may be purchased. This rider is a "companion policy" that covers losses the bank may incur from having (1) transferred, paid, or delivered any funds or property; (2) established any credit; or (3) debited any account or given value as a direct result of fraudulent input of electronic data or computer instructions into the insured's computer. These losses may result from someone's unauthorized access to a terminal or the bank's communications lines, or from the fraudulent preparation of tapes or computer programs. Under this rider, coverage may include electronic funds transfer systems, the bank's proprietary systems, and voice instructions given over the telephone. Losses caused by software programmers and consultants, ATM systems, computer viruses, software piracy, computer extortion, and facsimiles may also be covered.

Excess Bank Employee Dishonesty Bond

The excess bank employee dishonesty bond adds limits over and above the FIB. Often an FIB cannot be purchased with limits that are large enough to satisfy the risk-transfer needs of larger banks. When this occurs, the bank may purchase an excess bond that would respond if a claim is larger than the per-occurrence limits on the FIB or if the aggregate limit of the FIB has been exhausted. The most common form of this coverage is the excess bank employee dishonesty blanket bond, Standard Form No. 28.

Combination Safe Depository

Combination safe depository insurance consists of two coverage sections that can be purchased

together or separately. Coverage (A) applies to losses when the bank is legally obligated to pay for loss of a customer's property held in safe deposit boxes (including loss from damage or destruction). Coverage (B) generally covers loss, damage, or destruction of property in customers' safe deposit boxes, whether or not the bank is legally liable, when the loss results from an activity other than employee dishonesty, such as robbery or burglary.

Directors' and Officers' Liability

Directors' and officers' (D&O) liability insurance usually has three coverage parts: Side A, Side B, and Entity Securities Coverage (C). Side A covers the directors and officers individually for alleged wrongful acts. Side B reimburses the bank for money it has paid to or on behalf of its directors and officers to indemnify them for damages they may be liable for as a result of alleged wrongful acts. Entity Securities Coverage protects the corporation against securities claims. Subject to many exclusions and definitions, a "wrongful act" means any actual or alleged act, error, omission, misstatement, misleading statement, neglect, or breach of duty. D&O policies are primarily written on a claims-made basis. Larger banks will purchase excess D&O coverage. Like the FIB, there are numerous coverages or enhancements that can be endorsed onto a D&O policy.

Entity errors and omissions. The entity errors and omissions (E&O) insurance rider extends coverage to the financial institution as an entity for wrongful acts. A separate, more robust E&O policy may also be purchased. The separate policy is commonly referred to as bankers' professional liability.

Fiduciary liability and ERISA errors and omissions. Fiduciary liability (or fiduciary errors and omissions) extends insurance coverage for management of the bank's own employee pension or profit-sharing plans. A separate, more robust fiduciary policy may be purchased to expand further the coverage of the bank's management of its own plans. Without this additional special endorsement, neither the fiduciary errors and omissions nor the bank's directors' and officers' liability insurance will cover liability arising under the Employee Retirement Income Secu-

urity Act of 1974 (ERISA). For protection against exposure arising from a breach of fiduciary duty under ERISA, a special ERISA errors and omissions endorsement is required (also called fiduciary or employee benefit plan liability). In addition to bank trust departments, banks whose only fiduciary responsibilities relate to their employee benefit plan should consider this coverage. A related specialized coverage called IRA/Keogh errors and omissions is also available.

For properties held or managed by a bank's trust department, a master or comprehensive policy is often obtained instead of individual policies. A master policy protects the trust-account properties from fire or other loss and insures the accounts and the bank against third-party liability in connection with the properties. The master policy does not usually cover claims by trust customers against the bank for negligence, errors, or violations resulting in loss to fiduciary accounts. However, separate fiduciary (or trust department) errors and omissions policies incorporate these areas.

Trust Errors and Omissions

Trust errors and omissions insurance provides coverage for wrongful acts while the bank is acting as trustee, guardian, conservator, or administrator. This is a claims-made policy that can be endorsed onto the D&O policy.

Employment-Practices Liability

Employment-practices liability (EPL) insurance provides coverage for an entity against employee claims of wrongful termination, discrimination, sexual harassment or "wrongful employment acts." This is usually a claims-made policy that can be endorsed onto the D&O policy.

Bankers' Professional Liability

Bankers' professional liability (BPL-E&O) provides coverage for claims resulting from any actual or alleged wrongful acts, errors, or omissions bank employees commit in the performance of professional duties. Coverage can be broadened to include securities E&O, insurance agent E&O, brokerage service E&O, and notary E&O.

Mortgage Impairment

Mortgage-impairment insurance coverage protects the bank's interest, as mortgagee, from loss when contractually required insurance on real property held as collateral has inadvertently not been obtained. Upon discovery of the lack of required coverage, the bank has a limited time to either induce the borrower to obtain the required insurance or to place the insurance on its own.

Mortgage Errors and Omissions

Mortgage errors and omissions insurance, a broader version of mortgage-impairment coverage, provides coverage for direct damage and E&O losses to either the bank or the borrower. Mortgage E&O coverage also applies to the bank's mishandling of real estate taxes, life and disability insurance, and escrowed insurance premiums. Claims must result in a loss to the mortgaged property.

Commercial General Liability

Commercial general liability (CGL) insurance protects against claims of bodily injury or property damage for which the business may be liable and which may arise from the bank's premises, operations, and products. In addition to bodily injury and property damage, CGL can include liability coverage for various other offenses that might give rise to claims, such as libel, slander, false arrest, and advertising injury. A CGL policy can be underwritten on either an occurrence or a claims-made basis.

Workers' Compensation and Employers' Liability

Workers' compensation insurance covers injuries or deaths of employees caused by accidents in the course of employment. Workers' compensation insurance consists of two basic coverage parts: statutory benefits and employers' liability (EL). The two are mutually exclusive remedies to an employee injured on the job. EL protects a company from a lawsuit filed by an employee, while statutory benefits coverage provides medical care and long-term disability, death, or other benefits. State laws govern these provisions, so the provisions differ from state to state. The

statutory coverage of workers' compensation is a no-fault system intended to benefit both the injured employee and the employer.

Automobile Liability and Physical Damage

Automobile liability insurance provides third-party liability protection for bodily injury or property damage resulting from accidents that involve the bank's vehicles. First-party coverage for damage to the vehicles is also provided. This coverage should be extended to include—

- nonowned and hired coverage, if employees use personal autos or rent autos while on bank business;
- coverage for autos that have been repossessed; and
- garage-keeper's liability, if the bank rents its parking facilities to customers or the public.

Umbrella and Excess Liability

Umbrella and excess liability insurance offers additional liability limits in excess of the coverage limits of any policy over which it "attaches" or becomes effective. Basic umbrella coverage attaches to CGL and automobile insurance and to the employers' liability section of workers' compensation policies. An excess liability policy attaches over an umbrella policy. More complex insurance programs may include both umbrella and excess liability policies that attach over the D&O, E&O, EPL, or other insurance.

Property Insurance

Several types of insurance coverage are available to help banks recover from property damage. Some of the more common types of property coverages are briefly described below.

Broad Form Property Insurance

Property insurance insures against the loss of or damage to real and personal property. The loss or damage may be caused by perils such as fire,

theft, windstorm, hail, explosion, riot, aircraft, motor vehicles, vandalism, malicious mischief, riot and civil commotion, and smoke.

Fire

Fire insurance covers all losses directly attributed to fire, including damage from smoke or water and chemicals used to extinguish the fire. Additional fire damage for the building contents may be included, but often is written in combination with the policy on the building and permanent fixtures. Most fire insurance policies contain “co-insurance” clauses, meaning that insurance coverage must be maintained at a fixed proportion of the replacement value of the building. If a bank fails to maintain the required relationship of protection, all losses will be reimbursed at the ratio of the amount of the insurance carried to the amount required, applied to the value of the building at the time of the loss. When determining insurable value for fire insurance purposes, the basis typically is the cost of replacing the property with a similar kind or quality at the time of loss. Different types of values, however, may be included in policies, and care should be taken to ensure that the bank is calculating the correct value for its needs.

Business Personal Property

Traditionally known as “contents” insurance, business personal property insurance affords insurance protection coverage for the furniture, fixtures, equipment, machinery, merchandise, materials, and all other personal property owned by the bank and used in its business.

Blanket Coverage

Blanket insurance covers, in a single contract, either multiple types of property at a single location or one or more types of property at multiple locations.

Builder’s Risk

Builder’s-risk insurance is commercial property coverage specifically for buildings that are in the course of construction.

Business Interruption

Business-interruption insurance indemnifies the insured against losses arising from its inability to continue normal operations and functions of the business. Coverage is triggered by the total or partial suspension of business operations due to the loss of, loss of use of, or damage to all or part of the bank’s buildings, plant machinery, equipment, or other personal property, when the loss is the result of a covered cause.

Contingent business-interruption insurance is also available to cover the bank’s loss of earnings caused by a loss to another business that is one of its major suppliers or customers. This insurance is also known as “business income from dependent properties.”

Crimes

Crime insurance covers money, securities, merchandise, and other property from various criminal causes of loss, such as burglary, robbery, theft, and employee dishonesty.

Data Processing

Data processing insurance coverage provides loss protection if data processing systems break down. This insurance also covers the additional expense incurred in making the system operational again.

Difference in Conditions

A difference-in-conditions (DIC) insurance contract is a separate coverage that expands or supplements property insurance that was written on a named-perils basis. A DIC policy will cover the property on an all-risk basis, subject to certain exclusions.

Ocean and Inland Marine

Ocean marine insurance covers ships and their cargo against such causes as fire, lightning, and “perils of the seas.” These include high winds, rough waters, running aground, and collision with other ships or objects.

Inland marine insurance was originally developed to provide coverage for losses to

cargo transported over land. It now covers limited types of property in addition to goods in transit.

Valuable Papers and Destruction of Records

Valuable-papers and destruction-of-records insurance coverage is for the physical loss or damage to valuable papers and records of the insured. The coverage includes practically all types of printed documents or records except money.

Accounts Receivable

Accounts-receivable insurance covers losses that occur when an insured is unable to collect outstanding accounts because of damage to or destruction of the accounts-receivable records that was caused from a peril covered in the policy.

Cash Letters

Cash-letter insurance covers the costs for reproducing cash-letter items and items that remain uncollectible after a specified period of time. Generally, these policies do not cover losses due to dishonest acts of employees.

First-Class, Certified, and Registered Mail

The insurance coverage for first-class, certified, and registered mail provides protection on the shipment of property sent through the mail, as well as during transit by messenger or carrier to and from the post office. The insurance is principally used to cover registered mail in excess of the maximum \$25,000 insurance provided by the U.S. Postal Service.

Commercial Multiple Peril

Commercial multiple peril insurance encompasses a range of insurance coverages, including property and liability. Small institutions may purchase this package policy when stand-alone policies are excessive or inefficient.

Life Insurance

Common types of life insurance policies purchased by banks are described below.

Key Person

When the death of a bank officer, or key person, would be of such consequence to the bank as to give it an insurable interest, key-person life insurance would insure the bank on the life of this individual.

Split-Dollar

In split-dollar life insurance, the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, death benefit, or both. See SR-93-37 (“Split-Dollar Life Insurance,” June 18, 1993) and its attachments for further discussion of the Federal Reserve’s position on these arrangements between bank holding companies and their subsidiary banks.

Bank-Owned

Bank-owned life insurance consists of tax-advantaged insurance policies that are purchased to cover the lives of bank officers and other highly compensated employees. The policies may be used as a funding mechanism for employee pension and benefit plans. The bank is the owner and beneficiary of the policy, and the cash value of the policy is considered an asset of the bank.

Aircraft or Aviation Insurance

Although aviation-liability exposures are frequently overlooked in the myriad of other financial institution exposures, they have tremendous potential for large catastrophic losses and must be addressed by senior risk-management executives at all financial institutions. Often hidden or obscure, aviation liability ranges from the more typical owned and nonowned liability and physical-damage exposures to the more exotic exposures from hangar-keepers, aviation products, and airport or heliport premises. In view of the specialized nature of aviation exposures, it is

important that the bank deal with knowledgeable and experienced agents or brokers and underwriters in developing its aviation insurance program. While exposure categories overlap significantly, the following summary highlights the key areas of concern to most financial institutions.

Aviation Liability

Aviation liability insurance can be written to include aviation-products liability, all owned or nonowned exposures, and passenger liability. A bank's umbrella liability insurance program should also apply over the aviation policy's limit.

Nonowned Exposures

While many banks do not feel the need for aviation insurance because they do not own an aircraft, they may overlook liability exposures from nonowned aircraft and may, in fact, need this coverage. For example, an employee may use a personal aircraft on bank business, or lease or rent an aircraft to ferry customers or employees to a distant meeting. Financing or leasing an aircraft could create a nonowned exposure, even though the aircraft is not under bank control.

Most aviation-underwriting markets have programs available to meet the above exposures. However, additional exposures may require special coverage. Banks should consider the following situations:

- If the bank repairs and maintains the aircraft, it may incur a products-liability exposure after control is relinquished to others, such as when the aircraft is sold.
- If the bank finances aircraft, maintaining only a security interest, it becomes an owner when it repossesses the aircraft. In this case, there could be a definite need for both liability and physical-damage coverage. The coverage may be written at the time of repossession or negotiated in advance of the need for it. The bank should not attempt to continue coverage for its exposure under the borrower's policy.

All-Risk Physical Damage

To protect the bank's security interest in an

aircraft hull, borrowers should be required to maintain full-value, all-risk physical-damage insurance (both ground-risk and in-flight coverage) in favor of the bank. However, a number of warranties in aircraft insurance policies could void the contract, so bankers are further advised to require that a borrower's hull insurance policy contain a breach-of-warranty endorsement to protect the bank if the borrower or owner violates provisions of the policy. The underwriter should agree to give the bank at least 30 days' advance notice of any change in the policy. Depending on the use of the aircraft, special consideration should be given to the territorial limits of coverage, as well as to confiscation protection. Since breach-of-warranty endorsements, like aircraft insurance policies, are far from standard, it is important that the bank understand and agree with the underwriter's language. It is particularly appropriate to review the consequences of potential recovery to the lien holder if the aircraft is damaged while a delinquency exists on the note.

Bank as Lessor

If the bank's security interest is that of the lessor, aviation liability insurance should be carried by the bank as lessor and also by the customer as lessee. In certain cases, it may be appropriate to require the lessee, through his or her underwriter, to provide the equivalent of the breach-of-warranty endorsement to the liability program and physical-damage coverage. The bank may also consider obtaining contingent lessor's liability.

Airport Premises and Hangar-Keepers

Airport-premises and hangar-keeper's insurance apply if the bank repossesses real estate on which an airport facility exists and continues to operate, or if the bank permits use of the facility pending further sale. In either case, the bank may assume liability exposures associated with the control tower, as well as airport-premises liability. Both the bank's comprehensive general liability and aviation liability programs should be reviewed for proper coverage.

If the bank owns or operates a hangar for its aircraft and attempts to share the burden of costs with others by renting aircraft space, it can pick up exposure to hangar-keeper's liability, unless

the contract is properly worded. Appropriate consideration should be given to hold-harmless indemnification clauses, any regular or special insurance requirements, and waivers of subrogation.

Accidental Death and Dismemberment and Travel

Accidental death and dismemberment and travel insurance is another aspect of aviation insurance that banking institutions should consider. Many insurance programs for accidental death and dismemberment and corporate business travel accidents exclude coverage in corporate-owned, -leased, or -hired aircraft. Banks need to review the language of these policies carefully to be certain that they provide necessary and adequate coverages for the use of such aircraft.

RECORDKEEPING

The diversity of available insurance policies and their coverages emphasize the need for banks to maintain a concise, easily referenced schedule of their insurance coverage, referred to as the “schedule of insurance.” These records should include the following information:

- insurance coverages provided, with major exclusions detailed
- the underwriter
- deductible amounts
- upper limits on policies
- terms of the policies

- dates that premiums are due
- premium amounts
- claim-reporting procedures

In preparation for policy renewal, the bank’s risk manager and insurance broker organize much of the bank’s relevant insurance data into a “submission.” The submission may include—

- historical, current, and forecasted exposure information, such as sales, number and type of employees, property characteristics and values, and number and type of autos;
- loss and claim history by line of insurance, including detailed information on large claims, loss development, and litigation;
- information on company risk-management policies and financials; and
- specifications on desired coverages, terms and conditions, limits, deductibles, and payment plans.

The submission is delivered to the insurance company underwriter and forms the basis for determining premiums, rates, limits, and the program structure. The information may give the examiner a sense of why premiums and coverages change from year to year and whether purchased limits are sufficient.

Banks should retain the original policies and supporting documents for appropriate time periods. Records of losses should also be maintained, regardless of whether the bank was reimbursed. This information indicates areas where internal controls may need to be improved and is useful in measuring the level of risk exposure in a particular area.

Management of Insurable Risks

Examination Objectives

Effective date May 2002

Section 4040.2

1. To determine whether insurance is effectively integrated into the operational-risk-management program, and whether the insurance is appropriate, in light of the institution's internal-control environment.
2. To determine if insurance coverage adequately protects against significant or catastrophic loss.
3. To determine if recordkeeping practices are sufficient to enable effective risk and insurance management.
4. To ascertain if, and ensure that, the risk manager has initiated corrective action when policies, practices, procedures, or internal controls are deficient or when violations of banking laws and regulations have been noted.

Management of Insurable Risks

Examination Procedures

Effective date May 2002

Section 4040.3

1. If selected for implementation, complete or update the “Bank Risk and Insurance Management” section of the internal control questionnaire.
 2. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. From the examiner who is assigned to “internal control,” obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors and risk managers. Determine if appropriate corrections have been made.
 3. Determine if the bank has designated a qualified risk manager, with expertise in insurance programs, to be responsible for loss control. If not, determine which officer handles the risk- and insurance-management function and whether external consultants are employed in designing the insurance program.
 4. Obtain the bank’s schedule of insurance policies in force and the renewal submissions. If the bank does not maintain a schedule, request that the bank complete a schedule of existing insurance coverage.
 - a. Determine whether there have been any material changes in insurance coverage, limits, or deductibles since the last examination and the reasons for such changes. Do the changes reflect—
 - revised business strategies, the bank structure, operating processes, or technology systems that affect insurable risks, and
 - shifts to self-insurance or co-insurance or a change in insurance carriers?
 - b. If there have been material changes, determine how they are being managed.
 5. Using the bank-prepared summary of insurance coverage, determine that coverage conforms to the guidelines for maximum loss exposure, as established by the board of directors.
 - a. Determine whether the use of insurance is in accordance with board-approved risk-management policies and guidelines.
 - b. If the bank self-insures, determine what methods are used for this purpose; how the value of self-insurance is quantified; and how “premiums” are accounted for, funded, allocated, and tracked.
 6. Determine whether insurance coverage provides adequate protection for the bank. The quality of internal controls and the audit function must be considered when making this assessment.
 - a. Determine whether the bank manages its insurance coverage as an element of the operational-risk-management program.
 - b. Determine whether the insurance program is managed on a corporate-wide basis or within each business unit.
 - c. Identify any products, processes, or systems that the bank is not able to obtain insurance coverage for and determine how the associated risk is being managed.
 - d. Determine whether the bank maintains a database of operational-loss events, the comprehensiveness of the database, and the claims history of operational losses.
 - e. Review the due-diligence process used to assess the qualifications of providers of insurance coverage, including primary reinsurers.
 7. If the bank’s fidelity insurance has lapsed, determine that the appropriate Federal Reserve Bank has been notified.
 8. Determine that the bank has adequate procedures to ensure that—
 - a. reports of losses are filed with the bonding company pursuant to policy provisions,
 - b. premiums are paid before policy expiration dates,
 - c. policies are renewed without a lapse of coverage at expiration dates, and
 - d. material changes in exposures are reported to the bank’s insurance agent or broker and result in appropriate insurance-policy endorsements.
- If the procedures are deficient, verify that reports have been filed as required and premiums have been paid.
9. Review any significant financial institution bond claims that were filed since the last examination to determine—

- a. any adverse effect on the bank's condition,
 - b. whether the incident (or incidents) reflects any deficiencies with respect to internal controls and procedures, and
 - c. whether management has taken appropriate steps to correct any deficiencies and made appropriate reports to the board of directors.
10. Prepare, in appropriate report form, and discuss with appropriate officers—
- a. recommended corrective action when policies, practices, procedures, or internal controls are deficient;
 - b. recommended improvements in the risk-management program that relate to insurance;
 - c. important areas in which insurance coverage is either nonexistent or inadequate in view of current circumstances; and
 - d. any other deficiencies noted.
11. Update the workpapers with any information that will facilitate future examinations.

Management of Insurable Risks

Internal Control Questionnaire

Effective date May 2002

Section 4040.4

Review the bank's internal controls, policies, practices, and procedures for its own insurance coverage. The bank's risk-management system should be documented completely and concisely and should include, where appropriate, the risk-assessment matrix, a narrative description, flow-charts, the schedule of insurance coverage, policy forms, renewal submissions, and other pertinent information.

BANK RISK AND INSURANCE MANAGEMENT

1. Does the bank have established insurance guidelines that provide for—
 - a. a reasonably frequent, and at least annual, determination of risks the bank assumes or transfers, including high-dollar and low-probability events?
 - b. limits as to the amount of risk that may be retained or self-insured?
 - c. periodic appraisals of major fixed assets to be insured?
 - d. a credit or financial analysis of the insurance companies who have issued policies to the bank?
2. Does the bank have a risk manager who is responsible for assessing and developing controls to deal with the consolidated risks of the institution?
3. Is the bank's insurance program managed as an element of its overall operational-risk-management program; that is, are insurance coverages reviewed and coordinated by the person handling the operational-risk-management function?
4. Does the bank use the services of a professionally knowledgeable insurance agent, broker, direct writer, or consultant to assist in selecting and providing advice on alternative means of providing insurance coverage?
5. Does the bank's security officer coordinate his or her activities with the person responsible for handling the operational-risk-management function?
6. Does the bank maintain a concise, easily referenced schedule of existing insurance coverage?
7. Does the bank maintain records, by type of risk, to facilitate an analysis of the bank's experience in costs, claims, losses, and settlements under the various insurance policies in force?
8. Is a complete schedule of insurance coverage presented to the board of directors at least annually for review and approval? Does the schedule include the respective insurance premiums (net costs), claims, and loss experience, and is this information reviewed as part of this process?

CONCLUSION

1. Is the foregoing information an adequate basis for evaluating internal control; that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
2. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Purchase and Risk Management of Life Insurance

Effective date November 2005

Section 4042.1

State member banks may purchase bank-owned life insurance (BOLI) as principal if such purchases are permitted for national banks and permitted under state law. The legal authority and guidance for acquiring permissible BOLI and for engaging in insurance activities is discussed within the following interagency statement. When such insurance purchases or insurance activities are not permissible for national banks, a determination of permissibility depends on a decision of the FDIC (1) that the investment or activity would not pose any significant risk to the insurance fund and (2) that the bank continues to comply with the required capital standards.

The bank supervisory agencies have concerns that some banks have committed a significant amount of capital to BOLI without having an adequate understanding or a proper assessment of the full array of risks it poses—especially risks that are difficult to measure, such as liquidity, transaction/operational, reputation, and compliance/legal risks. Banks are therefore expected to implement appropriate risk-management processes, including meaningful risk limits, before implementing or adding to a BOLI program. The following interagency guidance was developed for banks and savings associations (institutions) and examination staff to help ensure that risk-management practices for BOLI are consistent with safe and sound business practices. The interagency statement was issued on December 7, 2004.

INTERAGENCY STATEMENT ON THE PURCHASE AND RISK MANAGEMENT OF LIFE INSURANCE

This interagency statement¹ provides general guidance for banks and savings associations (institutions) regarding supervisory expectations for the purchase of and risk management for BOLI. Guidance is also provided for split-dollar arrangements and the use of life insurance as security for loans. The agencies are providing

this guidance to help ensure that institutions' risk-management processes for BOLI are consistent with safe and sound banking practices. Among the safe and sound banking practices discussed in this statement are (1) the need for senior management and board oversight of BOLI, including both a thorough pre-purchase analysis of risks and rewards and post-purchase risk assessment and (2) the permissibility of BOLI purchases and holdings, as well as their risks and associated safety-and-soundness considerations. The statement's appendix [titled appendix A for this section of the manual] contains a discussion of insurance types and the purposes for which institutions commonly purchase life insurance, as well as a glossary of BOLI-related terminology [titled appendix B for this section].

The statement's guidance for the pre-purchase analysis of life insurance applies to all BOLI contracts entered into after December 7, 2004. The guidance concerning the ongoing risk management of BOLI subsequent to its purchase applies to all holdings of life insurance regardless of when purchased. Institutions that purchase life insurance after December 7, 2004, that are not in compliance with this guidance may be subject to supervisory action. Institutions that entered into BOLI contracts before this date will be evaluated according to each agency's pre-purchase guidance in effect at that time.

Compliance with the supervisory guidance in this statement regarding permissible uses for insurance (e.g., recovery of the costs of providing benefits) does not determine whether the policy satisfies state insurable interest requirements.

Legal Authority

National banks may purchase and hold certain types of life insurance under 12 USC 24 (Seventh), which provides that national banks may exercise "all such incidental powers as shall be necessary to carry on the business of banking." Federal savings associations also may purchase and hold certain types of life insurance incidental to the express powers granted under the Home Owners' Loan Act. The OCC and OTS have delineated the scope of these authorities through various interpretations addressing the

1. Adopted by the Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS) (the agencies).

permissible use of life insurance by national banks and federal savings associations.

Under these authorities, national banks and federal savings associations may purchase life insurance in connection with employee compensation and benefit plans, key-person insurance, insurance to recover the cost of providing pre- and post-retirement employee benefits, insurance on borrowers, and insurance taken as security for loans. The OCC and OTS may approve other uses on a case-by-case basis.

National banks and federal savings associations may *not* purchase life insurance—

- for speculation;
- to provide funds to acquire shares of stock from the estate of a major shareholder upon the shareholder's death, for the further purpose of controlling the distribution of ownership in the institution;
- as a means of providing estate-planning benefits for insiders, unless the benefit is a part of a reasonable compensation package; or
- to generate funds for normal operating expenses other than employee compensation and benefits.

National banks and federal savings associations may not hold life insurance in excess of their risk of loss or cost to be recovered. For example, once an individual no longer qualifies as a key person because of retirement, resignation, discharge, change of responsibilities, or for any other reason, the risk of loss has been eliminated. Therefore, national banks and federal savings associations may be required to surrender or otherwise dispose of key-person life insurance held on an individual who is no longer a key person. Typically, term or declining term insurance is the most appropriate form of life insurance for key-person protection.

National banks and federal savings associations may hold equity-linked variable life insurance policies (that is, insurance policies with a return tied to the performance of a portfolio of equity securities held in a separate account² of the insurance company) only for the purpose of

economically hedging their equity-linked obligations under employee benefit plans. As discussed more fully in the section on “Price Risk,” for equity-linked variable life insurance holdings to be permissible, the national bank or federal savings association must demonstrate that—

- it has a specific, equity-linked obligation; and
- both at the inception of the hedge and on an ongoing basis, changes in the value of the equity-linked variable life insurance policy are highly correlated with changes in the value of the equity-linked obligation.

If a national bank or federal savings association does not meet these requirements, the equity-linked variable life insurance holdings are not permissible. The use of equity-linked variable life insurance holdings as a long-term hedge against general benefit costs is not permissible because the life insurance is not hedging a specific equity-linked liability and does not meet the “highly correlated” requirement.

As a general matter, the ability of state-chartered banks to purchase insurance (including equity-linked variable life insurance) is governed by state law. In some instances, state laws permit state-chartered banks to engage in activities (including making investments) that

2. A separate account is a design feature that is generally available to purchasers of whole life or universal life whereby the policyholder's cash surrender value is supported by assets segregated from the general assets of the carrier. Under such an arrangement, the policyholder neither owns the underlying separate account nor controls investment decisions (e.g., timing of investments or credit selection) in the underlying separate account that is created by the insurance carrier on its behalf. Nevertheless, the policyholder assumes all investment and price risk.

go beyond the authority of a national bank. The Federal Deposit Insurance Act (section 24) generally requires insured state-chartered banks to obtain the FDIC's consent before engaging as principal in activities (including making investments) that are not permissible for a national bank. Similarly, the Federal Deposit Insurance Act (section 28) generally requires a state-chartered savings association to obtain the FDIC's consent prior to engaging as principal in activities (including making investments) that are not permissible for a federal savings association. While insured state-chartered banks and state savings associations may seek the FDIC's consent to make purchases of life insurance that would not be within the authority of a national bank or federal savings association, such banks and savings associations should be aware that the FDIC will not grant permission to make life insurance purchases if the FDIC determines that doing so would present a significant risk to the deposit insurance fund or that engaging in such purchases is inconsistent with the purposes of federal deposit insurance.

Accounting Considerations

Institutions should follow generally accepted accounting principles (GAAP) applicable to life insurance for financial and regulatory reporting purposes. Financial Accounting Standards Board (FASB) Technical Bulletin No. 85-4, "Accounting for Purchases of Life Insurance" (TB 85-4), discusses how to account for holdings of life insurance. Under TB 85-4, only the amount that could be realized under an insurance contract as of the balance-sheet date (that is, the CSV reported to the institution by the carrier, less any applicable surrender charges not reflected by the insurance carrier in the reported CSV) is reported as an asset. The guidance set forth in TB 85-4 concerning the carrying value of insurance on the balance sheet is generally appropriate for all forms of BOLI.

An institution may purchase multiple permanent insurance policies from the same insurance carrier with each policy having its own surrender charges. In some cases, the insurance carrier will issue a rider or other contractual provision stating that it will waive the surrender charges if all of the policies are surrendered at the same time. Because it is not known at any balance-sheet date whether one or more of the policies

will be surrendered before the deaths of those insured, the possibility that the institution will surrender all of these policies simultaneously and avoid the surrender charges is a gain contingency. Under FASB Statement No. 5, "Accounting for Contingencies," "[c]ontingencies that might result in gains usually are not reflected in the accounts since to do so might be to recognize revenue prior to its realization." Accordingly, an institution should report each of the insurance policies on its balance sheet at the policy's CSV reported by the insurance carrier, less any applicable surrender charges not reflected in the reported CSV, without regard to the existence of the rider.

In accordance with the instructions for Consolidated Reports of Condition and Income and Thrift Financial Reports, an institution should report the carrying value of its BOLI holdings as an "other asset" and the earnings on these holdings should be reported as "other noninterest income."

The agencies have seen a number of cases in which institutions have failed to account properly for a type of deferred compensation agreement, commonly referred to as a revenue-neutral plan or an indexed retirement plan. The accounting for such plans is separate and distinct from the accounting for BOLI. However, because many institutions buy BOLI to help offset the cost of providing such deferred compensation, the agencies have issued guidance addressing the accounting requirements for both deferred compensation agreements and BOLI. See the Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance, dated February 11, 2004, for a complete description, including examples, of the appropriate accounting treatment.

Supervisory Guidance on BOLI

Before entering into a BOLI contract, institutions should have a comprehensive risk-management process for purchasing and holding BOLI. A prudent risk-management process includes—

- effective senior management and board oversight;
- comprehensive policies and procedures, including appropriate limits;

- a thorough pre-purchase analysis of BOLI products; and
- an effective ongoing system of risk assessment, management, monitoring, and internal control processes, including appropriate internal audit and compliance frameworks.

The risks associated with temporary (term) insurance are significantly less than those arising from holdings of permanent insurance. Accordingly, the risk-management process for temporary insurance may take this difference into account and need not be as extensive as the risk-management process for permanent insurance.

Senior Management and Board Oversight

The safe and sound use of BOLI depends on effective senior management and board oversight. Regardless of an institution's financial capacity and risk profile, the board must understand the complex risk characteristics of the institution's insurance holdings and the role this asset is intended to play in the institution's overall business strategy. Although the board may delegate decision-making authority related to purchases of BOLI to senior management, the board remains ultimately responsible for ensuring that the purchase and holding of BOLI is consistent with safe and sound banking practices.

An institution holding life insurance in a manner inconsistent with safe and sound banking practices is subject to supervisory action. Where ineffective controls over BOLI risks exist, or the exposure poses a safety-and-soundness concern, the appropriate agency may take supervisory action against the institution, including requiring the institution to divest affected policies, irrespective of potential tax consequences.

Policies and Procedures

Consistent with prudent risk-management practices, each institution should establish internal policies and procedures governing its BOLI holdings, including guidelines that limit the aggregate CSV of policies from any one insurance company as well as the aggregate CSV of policies from all insurance companies. When establishing these internal CSV limits, an institution should consider its legal lending limit, the

capital concentration threshold, and any applicable state restrictions on BOLI holdings.³ In this regard, given the liquidity, transaction/operational, reputation, and compliance/legal risks associated with BOLI, it is generally not prudent for an institution to hold BOLI with an aggregate CSV that exceeds 25 percent of the institution's capital as measured in accordance with the relevant agency's concentration guidelines.⁴ Therefore, the agencies expect an institution that plans to acquire BOLI in an amount that results in an aggregate CSV in excess of 25 percent of capital, or any lower internal limit, to gain prior approval from its board of directors or the appropriate board committee. The agencies particularly expect management to justify that any increase in BOLI resulting in an aggregate CSV above 25 percent of capital does not constitute an imprudent capital concentration. An institution holding BOLI in an amount that approaches or exceeds the 25 percent of capital concentration threshold can expect examiners to more closely scrutinize the risk-management policies and controls associated with the BOLI assets and, where deficient, to require corrective action.

When seeking the board's approval to purchase or increase BOLI, management should inform the board members of the existence of this interagency statement, remind them of the illiquid nature of the insurance asset, advise them of the potential adverse financial impact of early surrender, and identify any other significant risks associated with BOLI. Such risks might include, but are not limited to, the costs associated with changing carriers in the event of a decline in the carrier's creditworthiness and the potential for noncompliance with state insurable interest requirements and federal tax law.

3. In July 1999, the OTS adopted a policy that savings associations may not invest more than 25 percent of their total capital in BOLI without first notifying and obtaining authorization from their OTS Regional Office. In order to maintain strong and effective communications with institutions under its supervision, the OTS retains this policy. The other agencies may also institute approval or notification requirements.

4. Each agency's definition of a concentration differs slightly. Institutions should refer to the definition provided by their supervisory agency when measuring the CSV of BOLI as a percentage of capital: OCC Bulletin 95-7 for national banks; FRB *Commercial Bank Examination Manual*, section 2050.1, for state member banks; FDIC *Manual of Examination Policies*, section 11.1, for insured state nonmember banks; and OTS *Thrift Activities Handbook*, section 211, for savings associations.

Pre-purchase Analysis

The objective of the pre-purchase analysis is to help ensure that the institution understands the risks, rewards, and unique characteristics of BOLI. The nature and extent of this analysis should be commensurate with the size and complexity of the potential BOLI purchases and should also take into account existing BOLI holdings. A mark of a well-managed institution is the maintenance of adequate records concerning its pre-purchase analyses, usually including documentation of the purpose and amount of insurance needed.

An effective pre-purchase analysis involves the following management actions:

Step 1—Identify the need for insurance and determine the economic benefits and appropriate insurance type. An institution should determine the need for insurance by identifying the specific risk of loss to which it is exposed or the specific costs to be recovered. It is not appropriate to purchase life insurance to recover a loss that the institution has already incurred. An institution's purchase of insurance to indemnify it against a specific risk of loss does not relieve it from other responsibilities related to managing that risk. The type of BOLI product, e.g., general⁵ or separate account, and its features should be appropriate to meet the identified needs of the institution. The appendix [appendix A] contains a description of insurance types and design features.

An institution should analyze the cost and benefits of planned BOLI purchases. The analysis should include the anticipated performance of the BOLI policy and an assessment of how the purchase will accomplish the institution's objectives. Before purchasing BOLI, an institution should analyze projected policy values (CSV and death benefits) using multiple illustrations of these projections provided by the carrier, some of which incorporate the institution's own assumptions. An institution should consider using a range of interest-crediting rates and mortality-cost assumptions. In some cases, the net yield (after mortality costs) could be negative, particularly for separate-account products. The potential for unfavorable net yields

5. A general account is a design feature that is generally available to purchasers of whole or universal life insurance whereby the general assets of the insurance company support the policyholder's CSV.

underscores the importance of carefully evaluating BOLI costs and benefits across multiple scenarios, both currently and into the future.

Step 2—Quantify the amount of insurance appropriate for the institution's objectives. An institution should estimate the size of the employee benefit obligation or the risk of loss to be covered and ensure that the amount of BOLI purchased is not excessive in relation to this estimate and the associated product risks. When using BOLI to recover the cost of providing employee benefits, the estimated present value of the expected future cash flows from BOLI, less the costs of insurance, should not exceed the estimated present value of the expected after-tax employee benefit costs. In situations where an institution purchases BOLI on a group of eligible employees, it may estimate the size of the obligation or the risk of loss for the group on an aggregate basis and compare that to the aggregate amount of insurance to be purchased. This estimate should be based on reasonable financial and actuarial assumptions. State insurable interest laws may further restrict or limit the amount of insurance that may be purchased on a group of employees. Management must be able to support, with objective evidence, the reasonableness of all of the assumptions used in determining the appropriate amount of insurance coverage needed by the institution, including the rationale for its discount rates and cost projections.

Step 3—Assess the vendor's qualifications. When making a decision about vendors, an institution should consider its own knowledge of insurance risks, the vendor's qualifications, and the amount of resources the institution is willing to spend to administer and service the BOLI. Depending on the role of the vendor, the vendor's services can be extensive and may be critical to successful implementation and operation of a BOLI plan, particularly for the more complex separate-account products.

While it is possible to purchase insurance directly from insurance carriers, the vast majority of insurance purchases are made through vendors—either brokers, consultants, or agents. A vendor may design, negotiate, and administer the BOLI policy. An institution should ensure that it understands the product it is purchasing and that it selects a product that best meets its needs. Management, not just the vendor, must demonstrate a familiarity with the technical

details of the institution's insurance assets, and be able to explain the reasons for and the risks associated with the product design features they have selected.

An institution that uses a vendor should make appropriate inquiries to satisfy itself about the vendor's ability to honor its long-term commitments, particularly when the vendor is expected to be associated with the institution's insurance program over an extended period of time. The institution should evaluate the adequacy of the vendor's services and its reputation, experience, financial soundness, and commitment to the BOLI product. Vendors typically earn a large portion of their commissions upon the sale of the product, yet they often retain long-term servicing responsibilities for their clients. The vendor's commitment to investing in the operational infrastructure necessary to support BOLI is a key consideration in vendor selection.

An institution should be aware that the vendor's financial benefit from the sale of insurance may provide the vendor with an incentive to emphasize the benefits of a BOLI purchase to the institution without a commensurate explanation of the associated risks. Therefore, reliance solely upon pre-packaged, vendor-supplied compliance information does *not* demonstrate prudence with respect to the purchase of insurance. An institution should not delegate its selection of product design features to its vendors. An institution that is unable to demonstrate a thorough understanding of BOLI products it has purchased and the associated risks may be subject to supervisory action.

Step 4—Review the characteristics of the available insurance products. There are a few basic types of life insurance products in the marketplace. These products, however, can be combined and modified in many different ways. The resulting final product can be quite complex. Furthermore, certain permanent insurance products have been designed specifically for banks. These products differ from other forms of corporate-owned life insurance (COLI) policies in that the policies designed for banks are generally structured without surrender or front-end sales charges in order to avoid having to report these charges as expenses when initially recording the carrying value. However, BOLI products may have lower net yields than COLI products due to the absence of these charges. An institution should review the characteristics of the various insurance products available, under-

stand the products it is considering purchasing, and select those with the characteristics that best match the institution's objectives, needs, and risk tolerance.

Design features of permanent insurance policies determine (1) whether the policy is a general account, separate account, or hybrid product;⁶ (2) whether the insurance contract is a modified endowment contract (MEC) that carries certain tax penalties if surrendered; and (3) the method used to credit earnings to the policy. Some implications of these design features are discussed in more detail in the "Risk Management of BOLI" section of this interagency statement.

When purchasing insurance on a key person or a borrower, management should consider whether the institution's need for the insurance might end before the insured person dies. An institution generally may not hold BOLI on a key person or a borrower once the key person leaves the institution or the borrower has either repaid the loan, or the loan has been charged off. Therefore, the maturity of the term or declining term insurance should be structured to match the expected tenure of the key person or the maturity of the loan, respectively. Permanent insurance generally is not an appropriate form of life insurance under these circumstances.

Step 5—Select the carrier. To achieve the tax benefits of insurance, institutions must hold BOLI policies until the death of the insured. Therefore, carrier selection is one of the most critical decisions in a BOLI purchase and one that can have long-term consequences. While a broker or consultant may assist the institution in evaluating carrier options, the institution alone retains the responsibility for carrier selection. Before purchasing life insurance, an institution should perform a credit analysis on the selected carrier(s) in a manner consistent with safe and sound banking practices for commercial lending. A more complete discussion of the credit-analysis standards is included in the "Credit Risk" section of this interagency statement.

Management should review the product design, pricing, and administrative services of proposed carriers and compare them with the institution's needs. Management should also review the carrier's commitment to the BOLI product, as well as its credit ratings, general reputation, experi-

6. A hybrid product combines features of both general- and separate-account products.

ence in the marketplace, and past performance. Carriers not committed to general-account BOLI products may have an incentive to lower the interest-crediting rate on BOLI over time, reducing the favorable economics of the product. The interest-crediting rate refers to the gross yield on the investment in the insurance policy, that is, the rate at which the cash value increases before considering any deductions for mortality cost, load charges, or other costs that are periodically charged against the policy's cash value. Insurance companies frequently disclose both a current interest-crediting rate and a guaranteed minimum interest-crediting rate. Institutions should be aware that the guaranteed minimum interest-crediting rate may be periodically reset in accordance with the terms of the insurance contract. As a result, the potential exists for a decline in the interest-crediting rate.

While institutions can exercise what is known as a 1035 exchange⁷ option to change carriers, there are some practical constraints to using this option. First, the institution must have an insurable interest in each individual to be insured under the new carrier's policy. In a 1035 exchange, former employees of the institution may not be eligible for coverage under the new policy because state insurable interest laws may prohibit their eligibility. Second, the original carrier may impose an exchange fee specifically applicable to such 1035 exchanges.

Step 6—Determine the reasonableness of compensation provided to the insured employee if the insurance results in additional compensation. Insurance arrangements that are funded by the institution and that permit the insured officer, director, or employee to designate a beneficiary are a common way to provide additional compensation or other benefits to the insured. Split-dollar life insurance arrangements are often used for this purpose. Before an institution enters into a split-dollar arrangement or otherwise purchases insurance for the benefit of an officer, director, or employee, the institution should identify and quantify its compensation objective and ensure that the arrangement is consistent with that objective. The compensation provided by the split-dollar or other insurance arrangement should be combined with all other com-

pensation provided to the insured to ensure that the insured's total compensation is not excessive. Excessive compensation is considered an unsafe and unsound banking practice. Guidelines for determining excessive compensation can be found in the Interagency Guidelines Establishing Standards for Safety and Soundness.⁸

Because shareholders and their family members who are not officers, directors, or employees of an institution do not provide goods or services to the institution, they should not receive compensation from the institution. This includes compensation in the form of split-dollar life insurance arrangements.

Prior to an institution's purchase of a life insurance policy to be used in a split-dollar life insurance arrangement, the institution and the insured should enter into a written agreement. Written agreements usually describe the rights of the institution, the insured individual, and any other parties (such as trusts or beneficiaries) to the policy's CSV and death benefits. It is important for an institution to be aware that ownership of the policy by the employee, a third party, or a trust (non-institution owner) may not adequately protect the institution's interest in the policy because the institution ordinarily will not have the sole right to borrow against the CSV or to liquidate the policy in the event that funds are needed to provide liquidity to the institution. Moreover, if a non-institution owner borrows heavily against the CSV, an institution's ability to recover its premium payments upon the death of the insured may be impaired.

At a minimum, an institution's economic interest in the policy should be equal to the premiums paid plus a reasonable rate of return, defined as a rate of return that is comparable to returns on investments of similar maturity and credit risk.

Split-dollar life insurance has complex tax and legal consequences. An institution considering entering into a split-dollar life insurance arrangement should consult qualified tax, legal, and insurance advisers.

Step 7—Analyze the associated risks and the ability to monitor and respond to those risks. An institution's pre-purchase analysis should include a thorough evaluation of all significant risks, as

7. A 1035 exchange is a tax-free replacement of an insurance policy for another insurance contract covering the same person in accordance with section 1035 of the Internal Revenue Code.

8. For national banks, appendix A to 12 CFR 30; for state member banks, appendix D-1 to 12 CFR 208; for insured state nonmember banks, appendix A to 12 CFR 364; for savings associations, appendix A to 12 CFR 570.

well as management's ability to identify, measure, monitor, and control those risks. An explanation of key risks (liquidity, transaction/operational, reputation, credit, interest rate, compliance/legal, and price) is included in the "Risk Management of BOLI" section of this interagency statement.

Step 8—Evaluate the alternatives. Regardless of the purpose of BOLI, a comprehensive pre-purchase analysis will include an analysis of available alternatives. Prior to acquiring BOLI, an institution should thoroughly analyze the risks and benefits, compared to alternative methods for recovering costs associated with the loss of key persons, providing pre- and post-retirement employee benefits, or providing additional employee compensation, as appropriate.

Step 9—Document the decision. A well-managed institution maintains adequate documentation supporting its comprehensive pre-purchase analysis, including an analysis of both the types and design of products purchased and the overall level of BOLI holdings.

Risk Management of BOLI

Risk assessment and risk management are vital components of an effective BOLI program. In addition to conducting a risk assessment as part of a thorough pre-purchase analysis, monitoring BOLI risks on an ongoing basis is important, especially for an institution whose aggregate BOLI holdings represent a capital concentration. Management of an institution should review the performance of the institution's insurance assets with its board of directors at least annually. More-frequent reviews are appropriate if there are significant anticipated changes to the BOLI program such as additional purchases, a decline in the financial condition of the insurance carrier(s), anticipated policy surrenders, or changes in tax laws or interpretations that could have an impact on the performance of BOLI. This risk-management review should include, but not necessarily be limited to:

- *Comprehensive assessment of the specific risks discussed in this section.*⁹

- *Identification of which employees are, or will be, insured (e.g., vice presidents and above, employees of a certain grade level).* For example, an institution that acquires another institution that owns BOLI may acquire insurance on individuals that it would not insure under its own standards. While the acquiring institution need not correct such exceptions, it is important to know that such exceptions exist.
- *Assessment of death benefit amounts relative to employee salaries.* Such information helps management to assess the reputation and insurable interest risks associated with disproportionately large death benefits.
- *Calculation of the percentage of insured persons still employed by the institution.* Larger institutions often find that their policies insure more former employees than current employees. This information can help the institution assess reputation risk.
- *Evaluation of the material changes to BOLI risk-management policies.*
- *Assessment of the effects of policy exchanges.* Exchanges typically are costly and it is a sound practice to review the costs and benefits of such actions.
- *Analysis of mortality performance and impact on income.* Material gains from death benefits can create reputation risks.
- *Evaluation of material findings from internal and external audits and independent risk-management reviews.*
- *Identification of the reason for, and tax implications of, any policy surrenders.* In some cases, institutions have surrendered BOLI policies and incurred tax liabilities and penalties. Formal assessment of the costs and benefits of a surrender is a useful component of sound corporate governance.
- *Peer analysis of BOLI holdings.* To address reputation risk, an institution should compare its BOLI holdings relative to capital to the holdings of its peers to assess whether it is an outlier.

Liquidity Risk

Liquidity risk is the risk to earnings and capital arising from an institution's inability to meet its obligations when they come due without incur-

9. All of the risks discussed in this section are applicable to permanent insurance. In contrast, because temporary insurance does not have a savings component or a CSV, it does not

expose an institution to liquidity, interest-rate, or price risk. These risks need not be evaluated in the comprehensive assessment of the risks of temporary insurance.

ring unacceptable losses. Before purchasing permanent insurance, management should recognize the illiquid nature of the product and ensure that the institution has the long-term financial flexibility to hold the asset in accordance with its expected use. The inability to hold the life insurance until the death(s) of the insured(s) when the death benefits will be collected may compromise the success of the BOLI plan. An institution generally does not receive any cash flow from the insurance until the death benefit is paid. Depending upon the age of the insured population, it is possible that an institution that insures a small number of employees may not recognize any cash flow from the insurance for many years. The illiquid nature of insurance assets, combined with the difficulty of projecting liquidity needs far into the future, is a major reason an institution should keep its BOLI holdings below the agencies' concentration guidelines. Examiners will consider an institution's BOLI holdings when assessing liquidity and assigning the liquidity component rating.

The purchase of BOLI may negatively affect an institution's liquidity position, both because BOLI is one of the least liquid assets on an institution's balance sheet, and because institutions normally fund BOLI purchases through the sale of liquid assets (e.g., marketable securities). To access the CSV of BOLI, the institution must either surrender or borrow against the policy. In accordance with the policy contract and federal tax laws, the surrender of a policy may subject an institution to surrender charges, tax liabilities for previously untaxed increases in the CSV, and tax penalties. Borrowing against the CSV is disadvantageous in most cases due to limitations on the ability to deduct interest on the borrowing and other possible adverse tax consequences.

A BOLI product qualifying as a modified endowment contract (MEC) for tax purposes has particular liquidity disadvantages. If an institution surrenders a MEC, it will incur a tax liability on the increase in the policy's CSV from earnings on the policy since its inception and may incur an additional tax penalty for early surrender.

In order to avoid such additional tax penalties, an institution may opt to purchase a non-MEC contract. A non-MEC contract permits the policy owner to surrender the policy without incurring the additional tax penalty that, under certain circumstances, applies to MECs. Moreover, depending on the terms of the insurance contract, an institution generally may withdraw

up to the basis (that is, the original amount invested) without creating a taxable event. However, a non-MEC policy increases in complexity if it is in the form of a separate account covered by a stable value protection (SVP) contract. An SVP contract protects the policy owner from declines in the value of the assets in the separate account arising from changes in interest rates, thereby mitigating price risk and earnings volatility. An SVP contract is most often used in connection with fixed-income investments. Institutions should recognize that SVP providers often place restrictions on the amount that may be withdrawn from the separate account, thereby reducing the liquidity of the BOLI asset. An institution considering the purchase of a non-MEC for its potential liquidity advantages compared to a MEC also should be aware of contractual provisions, such as 1035 exchange fees and "crawl-out" restrictions,¹⁰ which may limit such advantages.

Transaction/Operational Risk

As it applies to BOLI, transaction/operational risk is the risk to earnings and capital arising from problems caused by the institution's failure to fully understand or to properly implement a transaction. Transaction/operational risk arises due to the variety and complexity of life insurance products, as well as tax and accounting treatments. To help mitigate this risk, management should have a thorough understanding of how the insurance product works and the variables that dictate the product's performance. The variables most likely to affect product performance are the policy's interest-crediting rate, mortality cost, and other expense charges.

Transaction/operational risk is also a function of the type and design features of a life insurance contract. With a general-account product, there are only two parties to the contract: the policy owner and the insurance carrier. With a separate-account product, the insurance carrier has a separate contract with an investment manager. There could also be an SVP provider with whom the carrier has a separate contract.

Transaction/operational risk may also arise as a result of the variety of negotiable features associated with a separate-account product.

¹⁰ A crawl-out restriction limits the amount of CSV eligible for a 1035 exchange or surrender over a period of time.

These include the investment options; the terms, conditions, and cost of SVP; and mortality options. Deferred acquisition costs (DAC) represent the insurance carrier's up-front costs associated with issuing an insurance policy, including taxes and commissions and fees paid to agents for selling the policy. The carrier charges the policyholder for these costs and capitalizes the DAC, including the prepayment of taxes in accordance with federal tax law. As the carrier recovers the DAC in accordance with applicable tax law, it credits the amount to the separate-account policyholder. Once it has been credited to the institution, the DAC is essentially a receivable from the carrier and, therefore, represents a general-account credit exposure.

Separate-account policies have additional transaction risks that can result from accounting requirements. Several institutions have had to restate their earnings because of contractual provisions in their policies that were ambiguous with respect to the amount of the CSV available upon surrender of the policy. Because BOLI must be carried at the amount that could be realized under the insurance contract as of the balance-sheet date, if any contractual provision related to costs, charges, or reserves creates uncertainty regarding the realization of a policy's full CSV, the agencies will require an institution to record the BOLI net of those amounts. As part of an effective pre-purchase analysis, an institution should thoroughly review and understand how the accounting rules will apply to the BOLI policy it is considering purchasing.

Tax and Insurable Interest Implications

Before the purchase of BOLI and periodically thereafter, management should also explicitly consider the financial impact (e.g., tax provisions and penalties) of surrendering a policy. Recent adverse press coverage of corporate-owned life insurance (COLI) should serve as a reminder to institutions that the current tax law framework, as it applies to BOLI, is always subject to legislative changes. A tax change that makes future BOLI cash flows subject to income tax, while perhaps deemed unlikely by many institutions, would have a negative impact on the economics of the BOLI holdings. An institution should recognize that earnings from BOLI could make it subject to the alternative minimum tax.

Institutions should also recognize that their actions, subsequent to purchase, could jeopardize the tax-advantaged status of their insurance holdings. The risk that a life insurance policy could be characterized by the Internal Revenue Service (IRS) as an actively managed investment is particularly relevant to separate-account policies. Many larger institutions prefer separate-account products because of perceived lower credit risk and greater transparency (that is, explicit disclosure of costs). Assets held by the insurance company on behalf of the policy owners in the separate account are intended to be beyond the reach of the insurance company's general creditors in the event of insolvency; however, the protected status of separate-account assets is generally untested in the courts. While the separate-account structure helps to mitigate an institution's credit exposure to the insurance carrier, the institution can have no "control" over investment decisions (e.g., timing of investments or credit selection) in the underlying account. Generally, allocating separate-account holdings across various divisions of an insurance company's portfolio does not raise concerns about "control," but other actions that a policy owner takes may be construed as investment control and could jeopardize the tax-advantaged status.

To benefit from the favorable tax treatment of insurance, a BOLI policy must be a valid insurance contract under applicable state law and must qualify under applicable federal law. Institutions must have an insurable interest in the covered employee, as set forth in applicable state laws. Furthermore, the favorable tax-equivalent yields of BOLI result only when an institution generates taxable income. Institutions that have no federal income tax liability receive only the nominal interest-crediting rate as a yield. In such an environment, BOLI loses much of its yield advantage relative to other investment alternatives.

Some institutions seem to have drawn comfort from assurances from insurance carriers that the carrier would waive lack of insurable interest as a defense against paying a claim. While the carrier may indeed make a payment, such payment may not necessarily go to the institution. Such assurances may not be sufficient to satisfy the IRS requirements for a valid insurance contract, nor do they eliminate potential claims from the estate of the insured that might seek to claim insurance proceeds on the basis that the institution lacked an insurable interest.

For example, some institutions have established out-of-state trusts to hold their BOLI assets. While such trusts may have legitimate uses, such as to gain access to an insurance carrier's product, in some cases the purpose is to avoid unfavorable insurable interest laws in the institution's home state and to domicile the policy in a state with more lenient requirements. In some cases, institutions have not made employees aware that they have taken out insurance on their lives.

A recent Fifth Circuit Court of Appeals ruling demonstrates the potential danger of this approach. A Texas employer used a Georgia trust to hold life insurance policies on its employees in Texas, and the trust agreement provided that the insurable interest law of Georgia should apply. In a lawsuit brought by the estate of a deceased employee, the court ignored this provision because the insured employee was not a party to the trust agreement. It then found that the insurable interest law of Texas applied and under that state's law, the employer did not have an insurable interest in the employee. The result was that the employer was not entitled to the insurance death benefits.¹¹ The outcome in this case suggests that institutions that have used, or are considering using, an out-of-state trust to take advantage of more-favorable insurable interest laws in another state should assess whether they could be vulnerable to a similar legal challenge.

Institutions should have appropriate legal review to help ensure compliance with applicable tax laws and state insurable interest requirements. Institutions that insure employees for excessive amounts may be engaging in impermissible speculation or unsafe and unsound banking practices. The agencies may require institutions to surrender such policies.

Reputation Risk

Reputation risk is the risk to earnings and capital arising from negative publicity regarding an institution's business practices. While this risk arises from virtually all bank products and services, reputation risk is particularly prevalent in BOLI because of the potential perception issues associated with an institution's owning or benefiting from life insurance on employees.

11. *Mayo v. Hartford Life Insurance Company*, 354 F.3d 400 (5th Cir. 2004).

A well-managed institution will take steps to reduce the reputation risk that may arise as a result of its BOLI purchases, including maintaining appropriate documentation evidencing informed consent by the employee, prior to purchasing insurance. Some institutions assert that they make employees aware via employee handbooks, manuals, or newsletters of the possibility that the institution may acquire life insurance on them. Although such disclosure may satisfy state insurance requirements, any approach that does not require formal employee consent may significantly increase an institution's reputation risk.

Some institutions have begun to purchase separate-account, non-MEC product designs in order to address the liquidity concerns with MEC policies. One consequence of this product design choice, however, is that it has become increasingly common for institutions to insure a very large segment of their employee base, including non-officers. Because non-MEC designs have a higher ratio of death benefit to premium dollar invested, some institutions have, therefore, taken out very high death benefit policies on employees, including lower-level employees, further adding to reputation risk and highlighting the importance of obtaining explicit consent.

Credit Risk

Credit risk is the potential impact on earnings and capital arising from an obligor's failure to meet the terms of any contract with the institution or otherwise perform as agreed. All life insurance policyholders are exposed to credit risk. The credit quality of the insurance company and duration of the contract are key variables. With insurance, credit risk arises from the insurance carrier's contractual obligation to pay death benefits upon the death of the insured, and if applicable, from the carrier's obligation to pay the CSV (less any applicable surrender charges) upon the surrender of the policy.

Most BOLI products have very long-term (30- to 40-year) expected time frames for full collection of cash proceeds, i.e., the death benefit. For general-account policies, the CSV is an unsecured, long-term, and nonamortizing obligation of the insurance carrier. Institutions record and carry this claim against the insurance company as an asset.

Before purchasing BOLI, an institution should conduct an independent financial analysis of the insurance company and continue to monitor its condition on an ongoing basis. The institution's credit-risk-management function should participate in the review and approval of insurance carriers. As with lending, the depth and frequency of credit analysis (both initially and on an ongoing basis) should be a function of the relative size and complexity of the transaction and the size of outstanding exposures. Among other things, an institution should consider its legal lending limit, concentration guidelines (generally defined as the aggregate of direct, indirect, and contingent obligations and exposures that exceed 25 percent of the institution's capital), and any applicable state restrictions on BOLI holdings when assessing its broader credit-risk exposure to insurance carriers. To measure credit exposures comprehensively, an institution should aggregate its exposures to individual insurance carriers, and the insurance industry as a whole, attributable to both BOLI policies and other credit relationships (e.g., loans and derivatives exposures).

There are product design features of a BOLI policy that can reduce credit risk. As noted earlier, an institution can purchase separate-account products, where the institution assumes the credit risk of the assets held in the separate account, rather than the direct credit risk of the carrier as would be the case in a general-account policy. With separate-account policies, the insurance carrier owns the assets, but maintains the assets beyond the reach of general creditors in the event of the insurer's insolvency. However, even with a separate-account policy, the policy owner incurs some general-account credit-risk exposure to the insurance carrier associated with the carrier's mortality and DAC reserves. Amounts equal to the mortality and DAC reserves are owed to the policyholder and represent general-account obligations of the insurance carrier. In addition, the difference, if any, between the CSV and the minimum guaranteed death benefit would be paid out of the insurance carrier's general account.

A separate-account policy may have a stable value protection (SVP) contract issued by the insurance carrier or by a third party that is intended to protect the policyholder from most declines in fair value of separate-account assets. In general, the provider of an SVP contract agrees to pay any shortfall between the fair value of the separate-account assets when the

policy owner surrenders the policy and the cost basis of the separate account to the policy owner. Under most arrangements, the insurance carrier is not responsible for making a payment under the SVP contract if a third-party protection provider fails to make a required payment to it. The SVP contract thus represents an additional source of credit risk for a separate-account product. The policyholder's exposure under an SVP contract is to both the protection provider, which must make any required payment to the insurance carrier, and the carrier, which must remit the payment received from the protection provider to the institution. Because of this exposure, an institution should also evaluate the repayment capacity of the SVP provider.

State insurance regulation governing reserve requirements for insurance carriers, state guaranty funds, and reinsurance arrangements help to reduce direct credit risks from general-account exposures. Further, an institution can use a 1035 exchange to exit a deteriorating credit exposure, although most policies impose fees for the exchange. While credit risk for existing general- and separate-account policies may be low currently, the extremely long-term nature of a BOLI policy underscores the fact that credit risk remains an important risk associated with life insurance products. Strong current credit ratings offer no guarantee of strong credit ratings 20, 30, or 40 years into the future.

Interest-Rate Risk

Interest-rate risk is the risk to earnings and capital arising from movements in interest rates. Due to the interest-rate risk inherent in general-account products, it is particularly important that management fully understand how these products expose the policyholder to interest-rate risk before purchasing the policy. The interest-rate risk associated with these products is primarily a function of the maturities of the assets in the carrier's investment portfolio, which often range from four to eight years. When purchasing a general-account policy, an institution chooses one of a number of interest-crediting options (that is, the method by which the carrier will increase the policy's CSV). Using the "portfolio" crediting rate, the institution will earn a return based upon the existing yield of the carrier's portfolio each year. Using the "new money" crediting rate, the institution earns a

return based upon yields available in the market at the time it purchases the policy.

Separate-account products may also expose the institution to interest-rate risk, depending on the types of assets held in the separate account. For example, if the separate-account assets consist solely of U.S. Treasury securities, the institution is exposed to interest-rate risk in the same way as holding U.S. Treasury securities directly in its investment portfolio. However, because the institution cannot control the separate-account assets, it is more difficult for the institution to control this risk. Accordingly, before purchasing a separate-account product, an institution's management should thoroughly review and understand the instruments governing the investment policy and management of the separate account. Management should understand the risk inherent within the separate account and ensure that the risk is appropriate for the institution. The institution also should establish monitoring and reporting systems that will enable management to monitor and respond to interest-rate fluctuations and their effect on separate-account assets.

Compliance/Legal Risk

Compliance/legal risk is the risk to earnings and capital arising from violations of, or nonconformance with, laws, rulings, regulations, prescribed practices, or ethical standards. Failure to comply with applicable laws, rulings, regulations, and prescribed practices could compromise the success of a BOLI program and result in fines or penalties imposed by regulatory authorities or loss of tax benefits. Among the legal and regulatory considerations that an institution should evaluate are compliance with state insurable interest laws, the Employee Retirement Income Security Act of 1974 (ERISA), Federal Reserve Regulations O and W (12 CFR 215 and 223, respectively), the Interagency Guidelines Establishing Standards for Safety and Soundness, the requirements set forth under the "Legal Authority" section of this document, and federal tax regulations applicable to BOLI.

Tax benefits are critical to the success of most BOLI plans. Accordingly, an institution owning separate-account BOLI must implement internal policies and procedures to ensure that it does not take any action that might be interpreted as exercising "control" over separate-account assets. This is especially important for privately

placed policies in which the institution is the only policyholder associated with the separate-account assets.

When purchasing BOLI, institutions should be aware that the splitting of commissions between a vendor and the institution's own subsidiary or affiliate insurance agency presents compliance risk. The laws of most states prohibit the payment of inducements or rebates to a person as an incentive for that person to purchase insurance. These laws may also apply to the person receiving the payment. When an insurance vendor splits its commission with an institution's insurance agency that was not otherwise involved in the transaction, such a payment may constitute a prohibited inducement or rebate. Accordingly, an institution should assure itself that this practice is permissible under applicable state law and in compliance with Federal Reserve Regulation W before participating in any such arrangement. Moreover, payments to an affiliate that did not perform services for the institution could also raise other regulatory and supervisory issues.

Due to the significance of the compliance risk, institutions should seek the advice of counsel on these legal and regulatory issues.

Price Risk

Price risk is the risk to earnings and capital arising from changes in the value of portfolios of financial instruments. Accounting rules permit owners of insurance contracts to account for general-account products using an approach that is essentially based on cost plus accrued earnings. However, for separate-account products without SVP, the accounting would largely be based on the fair value of the assets held in the account because this value is the amount that could be realized from the separate account if the policy is surrendered. (See "Accounting Considerations" above.) Typically, the policyholder of separate-account products assumes all price risk associated with the investments within the separate account. Usually, the insurance carrier will provide neither a minimum CSV nor a guaranteed interest-crediting rate for separate-account products. Absent an SVP contract, the amount of price risk generally depends upon the type of assets held in the separate account.

Because the institution does not control the separate-account assets, it is more difficult for it to control the price risk of these assets than if

they were directly owned. To address income-statement volatility, an institution may purchase an SVP contract for its separate-account policy. The SVP contract is designed to ensure that the amount that an institution could realize from its separate-account policy, in most circumstances, remains at or above the cost basis of the separate account to the policyholder. Institutions should understand, however, that SVP contracts protect against declines in value attributable to changes in interest rates; they do not cover default risk. Moreover, one purpose of the SVP contract is to reduce volatility in an institution's reported earnings. To realize any economic benefit of the SVP contract, an institution would have to surrender the policy. Since policy surrender is nearly always an uneconomic decision, the SVP contract provides, in a practical sense, accounting benefits only.

Before purchasing a separate-account life insurance product, management should thoroughly review and understand the instruments governing the investment policy and management of the separate account. Management should understand the risk inherent in the separate account and ensure that the risk is appropriate. If the institution does not purchase SVP, management should establish monitoring and reporting systems that will enable it to recognize and respond to price fluctuations in the fair value of separate-account assets.

Under limited circumstances it is legally permissible for an institution to purchase an equity-linked variable life insurance policy if the policy is an effective economic hedge against the institution's equity-linked obligations under employee benefit plans.¹² An effective economic hedge exists when changes in the economic value of the liability or other risk exposure being hedged are matched by counterbalancing changes in the value of the hedging instrument. Such a relationship would exist where the obligation under an institution's deferred compensation plan is based upon the value of a stock market index and the separate account contains a stock mutual fund that mirrors the performance of that index. Institutions need to be aware that this economic hedge may not qualify as a hedge for accounting purposes. Thus, the use of equity-linked variable life insurance policies to economically hedge equity-linked obligations may

not have a neutral effect on an institution's reported earnings.

Unlike separate-account holdings of debt securities, SVP contracts on separate-account equity holdings are not common. The economic hedging criteria for equity-linked insurance products lessen the effect of price risk because changes in the amount of the institution's equity-linked liability are required to offset changes in the value of the separate-account assets. If the insurance cannot be characterized as an effective economic hedge, the presence of equity securities in a separate account is impermissible, and the agencies will require institutions to reallocate the assets unless retention of the policy is permitted under federal law.¹³

In addition to the general considerations discussed previously, which are applicable to any separate-account product, an institution should perform further analysis when purchasing a separate-account product involving equity securities. At a minimum, the institution should:

1. Compare the equity-linked liability being hedged (e.g., deferred compensation) and the equity securities in the separate account. Such an analysis considers the correlation between the liability and the equity securities, expected returns for the securities (including standard deviation of returns), and current and projected asset and liability balances.
2. Determine a target range for the hedge effectiveness ratio (e.g., 95 to 105 percent) and establish a method for measuring hedge effectiveness on an ongoing basis. The institution should establish a process for altering the program if hedge effectiveness drops below acceptable levels. Consideration should be given to the potential costs of program changes.
3. Establish a process for analyzing and reporting to management and the board the effect of the hedge on the institution's earnings and capital ratios. The analysis usually considers results both with and without the hedging transaction.

13. Insured state banks and state savings associations may request the FDIC's consent to retain the policies, but consent will not be granted if it is determined that retaining the policies presents a significant risk to the appropriate insurance fund.

12. Insured state banks and state savings associations may make such purchases only if permitted to do so under applicable state law.

Risk-Based Capital Treatment

If an institution owns a general-account insurance product, it should apply a 100 percent risk weight to its claim on the insurance company for risk-based capital purposes. A BOLI investment in a separate-account insurance product, however, may expose the institution to the market and credit risks associated with the pools of assets in the separate account. The assets in a pool may have different risk weights, similar to the assets held in a mutual fund in which an institution has invested. For risk-based capital purposes, if an institution can demonstrate that the BOLI separate-account policy meets the requirements below, it may choose to “look through” to the underlying assets to determine the risk weight.

Criteria for a Look-Through Approach

To qualify for the “look-through” approach, separate-account BOLI assets must be protected from the insurance company’s general creditors in the event of the insurer’s insolvency. An institution should document its assessment, based upon applicable state insurance laws and other relevant factors, that the separate-account assets would be protected from the carrier’s general creditors. If the institution does not have sufficient information to determine that a BOLI separate-account policy qualifies for the look-through approach, the institution must apply the standard risk weight of 100 percent to this asset.

In addition, when an institution has a separate-account policy, the portion of the carrying value of the institution’s insurance asset that represents general-account claims on the insurer, such as deferred acquisition costs (DAC) and mortality reserves that are realizable as of the balance-sheet date, and any portion of the carrying value attributable to an SVP contract, are not eligible for the look-through approach. These amounts should be risk-weighted at the 100 percent risk weight applicable to claims on the insurer or the SVP provider, as appropriate.

Look-Through Approaches

When risk-weighting a qualifying separate-account policy, an institution may apply the highest risk weight for an asset permitted in the

separate account, as stated in the investment agreement, to the entire carrying value of the separate-account policy, except for any portions of the carrying value that are general-account claims or are attributable to SVP. In no case, however, may the risk weight for the carrying value of the policy (excluding any general-account and SVP portions) be less than 20 percent.

Alternatively, an institution may use a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy (excluding any general-account and SVP portions). The pro rata approach is based on the investment limits stated in the investment agreement for each class of assets that can be held in the separate account, with the constraint that the weighted average risk weight may not be less than 20 percent. If the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, the institution must use the highest risk weight for the maximum amount permitted in that asset class, and then proceed to the next-highest risk weight until the permitted amounts equal 100 percent.

For example, if a separate-account investment agreement permits a maximum allocation of 60 percent for corporate bonds, 40 percent for U.S. government-sponsored enterprise debt securities, and 60 percent for U.S. Treasury securities, then the institution must risk-weight 60 percent of the carrying value of the separate-account investment (excluding any portion attributable to SVP) at the 100 percent risk weight applicable to corporate bonds and the remaining 40 percent at the 20 percent risk weight for U.S. government-sponsored enterprise debt securities. Because the sum of the permitted allocation for corporate bonds and government-sponsored enterprise debt securities totals 100 percent, the institution cannot use the zero percent risk weight for U.S. Treasury securities. However, if the permitted allocation for U.S. government-sponsored enterprise debt securities was 30 percent rather than 40 percent, the institution could risk-weight the remaining 10 percent of the carrying value of its investment at the zero percent risk weight for U.S. Treasuries.

Regardless of the look-through approach an institution employs, the weighted average risk weight for the separate-account policy (excluding any general-account and SVP portions) may not be less than 20 percent, even if all the assets in the separate account would otherwise qualify

for a zero percent risk weight. Furthermore, the portion of the carrying value of the separate-account policy that represents general-account claims on the insurer, such as realizable DAC and mortality reserves, and any portion of the carrying value attributable to an SVP contract, should be risk-weighted at the risk weight applicable to the insurer or the SVP provider, as appropriate.

The following example demonstrates the appropriate risk-weight calculations for the pro rata approach, incorporating the components of a BOLI separate-account policy that includes general-account claims on the insurer as well as the investment allocations permitted for differ-

ent asset classes in the separate-account investment agreement.

Example. The separate-account investment agreement requires the account to hold a minimum of 10 percent in U.S. Treasury obligations. It also imposes a maximum allocation of 50 percent in mortgage-backed securities issued by U.S. government-sponsored enterprises, and a maximum allocation of 50 percent in corporate bonds. Assume that the portion of the carrying value of the separate-account policy attributable to realizable DAC and mortality reserves equals \$10 and that the portion attributable to the SVP totals \$10.

Carrying value of separate-account policy	\$100.00
Less: Portion attributable to DAC and mortality reserves	10.00
Portion attributable to SVP	10.00
Net carrying value of separate-account policy available for pro rata	<u>\$ 80.00</u>

Risk-weight calculation:

U.S. Treasury @ 10% x \$80 = \$8 x 0% RW	0.00
Corporate bonds @ 50% x \$80 = \$40 x 100% RW	\$ 40.00
GSE MBS @ 40% x \$80 = \$32 x 20% RW	<u>6.40</u>
Separate-account risk-weighted assets subject to pro rata	\$ 46.40
Add back: DAC and mortality reserves = \$10 x 100% RW	\$ 10.00
Add back: SVP = \$10 x 100% RW	<u>10.00</u>
General-account and SVP risk-weighted assets	\$ 20.00
Total BOLI-related risk-weighted assets	<u>\$ 66.40</u>

Summary

The purchase of BOLI can be an effective way for institutions to manage exposures arising from commitments to provide employee compensation and pre- and post-retirement benefits. Consistent with safe and sound banking practices, institutions must understand the risks associated with this product and implement a risk-management process that provides for the identification and control of such risks. A sound pre-purchase analysis, meaningful ongoing monitoring program, reliable accounting process, and accurate assessment of risk-based capital requirements are all components of the type of risk-

management process the agencies expect institutions to employ.

Where an institution has acquired BOLI in an amount that approaches or exceeds agency concentration levels, examiners will more closely scrutinize the components of the risk-management process and the institution's associated documentation. Where BOLI has been purchased in an impermissible manner, ineffective controls over BOLI risks exist, or a BOLI exposure poses a safety-and-soundness concern, the appropriate agency may take supervisory action, including requiring the institution to divest affected policies, irrespective of tax consequences.

Appendix A—Common Types of Life Insurance

Life insurance can be categorized into two broad types: temporary (also called “term”) insurance and permanent insurance. There are numerous variations of these products. However, most life insurance policies fall within one (or a combination) of the following categories.

Temporary (Term) Insurance

Temporary (term) insurance provides life insurance protection for a specified time period. Death benefits are payable only if the insured dies during the specified period. If a loss does not occur during the specified term, the policy lapses and provides no further protection. Term insurance premiums do not have a savings component; thus, term insurance does not create cash surrender value (CSV).

Permanent Insurance

In contrast to term insurance, permanent insurance is intended to provide life insurance protection for the entire life of the insured, and its premium structure includes a savings component. Permanent insurance policy premiums typically have two components: the insurance component (e.g., mortality cost, administrative fees, and sales loads) and the savings component. Mortality cost represents the cost imposed on the policyholder by the insurance company to cover the amount of pure insurance protection for which the insurance company is at risk.

The savings component typically is referred to as CSV. The policyholder may use the CSV to make the minimum premium payments necessary to maintain the death benefit protection and may access the CSV by taking out loans or making partial surrenders. If permanent insurance is surrendered before death, surrender charges may be assessed against the CSV. Generally, surrender charges are assessed if the policy is surrendered within the first 10 to 15 years.

Two broad categories of permanent insurance are:

- *Whole life.* A traditional form of permanent insurance designed so that fixed premiums are

paid for the entire life of the insured. Death benefit protection is provided for the entire life of the insured, assuming all premiums are paid.

- *Universal life.* A form of permanent insurance designed to provide flexibility in premium payments and death benefit protection. The policyholder can pay maximum premiums and maintain a very high CSV. Alternatively, the policyholder can make minimal payments in an amount just large enough to cover mortality and other insurance charges.

Purposes for Which Institutions Commonly Purchase Life Insurance

Key person. Institutions often purchase life insurance to protect against the loss of “key persons” whose services are essential to the continuing success of the institution and whose untimely death would be disruptive. For example, an institution may purchase insurance on the life of an employee or director whose death would be of such consequence to the institution as to give it an insurable interest in his or her life. The determination of whether an individual is a key person does not turn on that individual’s status as an officer or director, but on the nature of the individual’s economic contribution to the institution.

The first step in indemnifying an institution against the loss of a key person is to identify the key person. The next and possibly most difficult step is estimating the insurable value of the key person or the potential loss of income or other value that the institution may incur from the untimely death of that person.

Because the most appropriate method for determining the value of a key person is dependent upon individual circumstances, the agencies have not established a formula or a specific process for estimating the value of a key person. Instead, the agencies expect institutions to consider and analyze all relevant factors and use their judgment to make a decision about the value of key persons.

Key-person life insurance should not be used in place of, and does not diminish the need for, adequate management-succession planning. Indeed, if an institution has an adequate management-succession plan, its reliance on a key person should decline as the person gets closer to retirement.

Financing or cost recovery for benefit plans. Like other businesses, institutions often use life insurance as a financing or cost-recovery vehicle for pre- and post-retirement employee benefits, such as individual or group life insurance, health insurance, dental insurance, vision insurance, tuition reimbursement, deferred compensation, and pension benefits.

Permanent insurance is used for this purpose. In these arrangements, an institution insures the lives of directors or employees in whom it has an insurable interest to reimburse the institution for the cost of employee benefits. The group of insured individuals may be different from the group that receives benefits. The institution's obligation to provide employee benefits is separate and distinct from the purchase of the life insurance. The life insurance purchased by the institution remains an asset even after the employer's relationship with an insured employee is terminated. The employees who receive benefits, whether insured or not, have no ownership interest in the insurance (other than their general claim against the institution's assets arising from the institution's obligation to provide the stated employee benefits).

There are two common methods of financing employee benefits through the purchase of life insurance. The first is the cost-recovery method, which usually involves present-value analysis. Typically, the institution projects the amount of the expected benefits owed to employees and then discounts this amount to determine the present value of the benefits. Then, the institution purchases a sufficient amount of life insurance on the lives of certain employees so that the gain (present value of the life insurance proceeds less the premium payments) from the insurance proceeds reimburses the institution for the benefit payments. Under this method, the institution absorbs the cost of providing the employee benefits and the cost of purchasing the life insurance. The institution holds the life insurance and collects the death benefit to reimburse the institution for the cost of the employee benefits and the insurance.

The second method of financing employee benefits is known as cost offset. With this method, the institution projects the annual employee benefit expense associated with the benefit plan. Then, the institution purchases life insurance on the lives of certain employees. The amount earned on the CSV each year should not exceed the annual benefit expense.

Split-dollar life insurance arrangements. Institutions sometimes use split-dollar life insurance arrangements to provide retirement benefits and death benefits to certain employees as part of their compensation. Under split-dollar arrangements, the employer and the employee share the rights to the policy's CSV and death benefits. The employer and the employee may also share premium payments. If the employer pays the entire premium, the employee may need to recognize taxable income each year in accordance with federal income tax regulations.

Split-dollar arrangements may be structured in a number of ways. The two most common types of split-dollar arrangements are:

- *Endorsement split-dollar.* The employer owns the policy and controls all rights of ownership. The employer provides the employee an endorsement of the portion of the death benefit specified in the plan agreement with the employee. The employee may designate a beneficiary for the designated portion of the death benefit. Under this arrangement, the employer typically holds the policy until the employee's death. At that time, the employee's beneficiary receives the designated portion of the death benefits, and the employer receives the remainder of the death benefits.
- *Collateral-assignment split-dollar.* The employee owns the policy and controls all rights of ownership. Under these arrangements, the employer usually pays the entire premium or a substantial part of the premium. The employee assigns a collateral interest in the policy to the employer that is equal to the employer's interest in the policy. The employer's interest in the policy is set forth in the split-dollar agreement between the employer and the employee. Upon retirement, the employee may have an option to buy the employer's interest in the insurance policy. This transfer of the employer's interest to the employee is typically referred to as a "roll-out." If a "roll-out" is not provided or exercised, the employer does not receive its interest in the policy until the employee's death.

Split-dollar life insurance is a very complex subject that can have unforeseen tax and legal consequences. Internal Revenue Service regulations issued in 2003¹⁴ govern the taxation of

14. 68 *Fed. Reg.* 54336 (Sept. 17, 2003), chiefly codified at 26 CFR 1.61-22 and 1.7872-15.

split-dollar life insurance arrangements entered into or materially modified after September 17, 2003.¹⁵ These rules provide less favorable tax treatment to split-dollar arrangements than existed previously. Institutions considering entering into a split-dollar life insurance arrangement should consult qualified tax, insurance, and legal advisers.

Life insurance on borrowers. State law generally recognizes that a lender has an insurable interest in the life of a borrower to the extent of the borrower's obligation to the lender. In some states, the lender's insurable interest may equal the borrower's obligation plus the cost of insurance and the time value of money. Institutions are permitted to protect themselves against the risk of loss from the death of a borrower. This protection may be provided through self-insurance, the purchase of debt-cancellation contracts, or by the purchase of life insurance policies on borrowers.

Institutions can take two approaches in purchasing life insurance on borrowers. First, an institution can purchase life insurance on an individual borrower for the purpose of protecting the institution specifically against loss arising from that borrower's death. Second, an institution may purchase life insurance on borrowers in a homogeneous group of loans employing a cost-recovery technique similar to that used in conjunction with employee benefit plans. Under this method, the institution insures the group of borrowers for the purpose of protecting the institution from loss arising from the death of any borrower in the homogeneous pool. Examples of homogeneous pools of loans include consumer loans that have distinctly similar characteristics, such as automobile loans, credit card loans, and residential real estate mortgages.

When purchasing insurance on an individual borrower, an institution should, given the facts and circumstances known at the time of the insurance purchase, make a reasonable effort to structure the insurance policy in a manner consistent with the expected repayment of the borrower's loan. To accomplish this, management should estimate the risk of loss over the life of the loan and match the anticipated insurance proceeds to the risk of loss. Generally, the risk of loss will be closely related to the out-

standing principal of the debt. The insurance policy should be structured so that the expected insurance proceeds never substantially exceed the risk of loss.

When purchasing life insurance on borrowers in a homogeneous pool of loans, an institution's management should, given the facts and circumstances known at the time of the insurance purchase, make a reasonable effort to match the insurance proceeds on an aggregate basis to the total outstanding loan balances. If allowed by state law, institutions may match the insurance proceeds to the outstanding loan balances plus the cost of insurance on either a present-value or future-value basis. This relationship should be maintained throughout the duration of the program.

The purchase of life insurance on a borrower is not an appropriate mechanism for effecting a recovery on an obligation that has been charged off, or is expected to be charged off, for reasons other than the borrower's death. In the case of a charged-off loan, the purchase of life insurance on the borrower does not protect the institution from a risk of loss since the loss has already occurred. Therefore, the institution does not need to purchase insurance. Acquiring insurance that an institution does not need may subject the institution to unwarranted risks, which would be an unsafe and unsound banking practice. In the case of a loan that the institution expects to charge off for reasons other than the borrower's death, the risk of loss is so pronounced that the purchase of life insurance by the institution at that time would be purely speculative and an unsafe and unsound banking practice.

Internal Revenue Code section 264(f) disallows a portion of an institution's interest deduction for debt incurred to purchase life insurance on borrowers. Institutions considering the purchase of insurance on borrowers should consult their tax advisers to determine the economic viability of this strategy.

Life insurance as security for loans. Institutions sometimes take an interest in an existing life insurance policy as security for a loan. Institutions also make loans to individuals to purchase life insurance, taking a security interest in the policy, a practice known as "insurance-premium financing." As with any other type of lending, extensions of credit secured by life insurance should be made on terms that are consistent with safe and sound banking practices. For instance, the borrower should be obligated to repay the

15. Split-dollar arrangements entered into prior to September 17, 2003, and not materially modified thereafter may be treated differently.

loan according to an appropriate amortization schedule.

Generally, an institution may not rely on its security interest in a life insurance policy to extend credit on terms that excuse the borrower from making interest and principal payments during the life of the borrower with the result that the institution is repaid only when the policy matures upon the death of the insured. Lending on such terms is generally speculative and an unsafe and unsound banking practice.

Institutions may acquire ownership of life insurance policies for debts previously contracted (DPC) by invoking their security interest in a policy after a borrower defaults. Consistent with safety and soundness, institutions should use their best efforts to surrender or otherwise dispose of permanent life insurance acquired for DPC at the earliest reasonable opportunity.¹⁶ In the case of temporary insurance acquired for DPC, retention until the next renewal date or the next premium date, whichever comes first, will be considered reasonable.

Appendix B—Glossary

Cash surrender value (CSV). The value available to the policyholder if the policy is surrendered. If no loans are outstanding, this amount is generally available in cash. If loans have been made, the amount available upon surrender is equal to the cash surrender value less the outstanding loan (including accrued interest).

Deferred acquisition costs (DAC). DAC represents the insurance carrier's up-front costs associated with issuing an insurance policy, including taxes and commissions and fees paid to agents for selling the policy. The carrier charges the policyholder for these costs. Carriers capitalize DAC and recover them in accordance with applicable tax law. As the carrier recovers DAC, it credits the amount to the policyholder.

Experience-rated pricing. A pricing method that bases prices for insurance products on the actual expenses and claims experience for the pool of individuals being insured.

General account. A design feature that is gen-

erally available to purchasers of whole or universal life insurance whereby the general assets of the insurance company support the policy's CSV.

Interest-crediting rate. The gross yield on the investment in the insurance policy, that is, the rate at which the cash value increases before considering any deductions for mortality cost, load charges, or other costs that are periodically charged against the policy's cash value.

There are a number of crediting rates, including "new money" and "portfolio." Using the "portfolio" crediting rate, the institution will earn a return based upon the existing yield of the insurance carrier's portfolio each year. Using the "new money" crediting rate, the institution will earn a return based upon yields available in the market at the time it purchases the policy.

Modified endowment contract (MEC). Type of policy that is defined in Internal Revenue Code section 7702A. A MEC generally involves the payment of a single premium at the inception of the contract; thus, it fails the so-called seven-pay test set forth in the statute. MECs are denied some of the favorable tax treatment usually accorded to life insurance. For example, most distributions, including loans, are treated as taxable income. An additional 10 percent penalty tax also is imposed on distributions in some circumstances. However, death benefits remain tax-free.

Mortality charge. The pure cost of the life insurance death benefit within a policy. It represents a cost to the purchaser and an income item to the carrier. Mortality charges retained by the insurance carrier are used to pay claims.

Mortality reserve. In separate-account products, the mortality reserve represents funds held by an insurance carrier outside of the separate account to provide for the payment of death benefits.

Non-MEC. An insurance contract that is not categorized as a MEC under Internal Revenue Code section 7702A.

Separate account. A separate account is a design feature that is generally available to purchasers of whole life or universal life whereby the policyholder's CSV is supported by assets segregated from the general assets of the carrier. Under such an arrangement, the policyholder

¹⁶ The OCC has generally directed national banks to surrender or divest permanent life insurance acquired for DPC within 90 days of obtaining control of the policy.

neither owns the underlying separate account nor controls investment decisions (e.g., timing of investments or credit selection) in the underlying separate account that is created by the insurance carrier on its behalf. Nevertheless, the policyholder assumes all investment and price risk.

Seven-pay test. The seven-pay test is a test set forth in Internal Revenue Code section 7702A that determines whether or not a life insurance product is a MEC for federal tax purposes.

Split-dollar life insurance. A split-dollar life insurance arrangement splits the policy's premium and policy benefits between two parties, usually an employer and employee. The two parties may share the premium costs while the policy is in effect, pursuant to a prearranged contractual agreement. At the death of the insured or the termination of the agreement, the parties split the policy benefits or proceeds in accordance with their agreement.

Stable value protection (SVP) contracts. In general, an SVP contract pays the policy owner of a separate account any shortfall between the fair value of the separate-account assets when the policy owner surrenders the policy and the cost basis of the separate account to the policy owner. The cost basis of the separate account typically would take into account the fair value of the assets in the account when the policy was initially purchased, the initial fair value of assets added to the account thereafter, interest credited to the account, the amount of certain redemptions and withdrawals from the account, and credit losses incurred on separate-account assets. Thus, SVP contracts mitigate price risk. SVP contracts are most often used in connection with fixed-income investments.

1035 exchange. A tax-free replacement of an insurance policy for another contract covering the same person(s) in accordance with section 1035 of the Internal Revenue Code.

Variable life insurance. Variable life insurance policies are investment-oriented life insurance policies that provide a return linked to an underlying portfolio of securities. The portfolio typically is a group of mutual funds chosen by the insurer and housed in a separate account, with the policyholder given some discretion in choosing among the available investment options.

Appendix C—Interagency Interpretations of the Interagency Statement on the Purchase and Risk Management of Life Insurance

The federal banking and thrift agencies developed responses to questions regarding the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance. A summary of these interpretations is included below to provide clarification on a wide variety of matters pertaining to financial reporting, credit-exposure limits, concentration limits, and the appropriate methodologies to use for calculating the amount of insurance an institution may purchase.

Legal Authority—State and Federal Law

As a general matter, the ability of state-chartered banks to purchase insurance (including equity-linked variable life insurance) is governed by state law. Section 24 of the Federal Deposit Insurance Act (the FDI Act) generally requires insured state-chartered banks to obtain the consent of the Federal Deposit Insurance Corporation (FDIC) before engaging as principal in activities (including making investments) that are not permissible for a national bank. Some state bank regulatory agencies have issued their own BOLI guidance or directives for their respective state-chartered institutions. A state-chartered institution should follow any BOLI guidance or directive issued by its state supervisory authority that is more restrictive than the interagency statement. Generally, if state law or policy is less restrictive than the interagency statement, a state-chartered institution should follow the interagency statement. If federal law is less restrictive than state law, a state-chartered institution should follow the state law.

Permissibility of Equity-Linked Securities in Separate-Account BOLI

The interagency statement states that national banks and federal savings associations may hold equity-linked variable life insurance policies (that is, insurance policies with a return tied to the performance of a portfolio of equity securities held in a separate account of the insurance company) only in very limited circumstances.

Similarly, state member banks may also hold equity-linked variable life insurance policies only in very limited circumstances. Because the range of instruments with equity-like characteristics varies significantly, the permissibility of each such instrument must be analyzed on a case-by-case basis. Furthermore, the agencies have significant concerns regarding whether an institution properly understands the complex risk profile that securities with “equity-like” characteristics often present. Some securities, even if legally permissible, may be inappropriate for the vast majority of financial institutions, whether held in an investment portfolio or a separate-account BOLI product. The agencies’ April 1998 Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities provides guidance on the appropriateness of investments and risk-management expectations.

Senior Management and Board Oversight—Establishing BOLI Concentration Limits

Each institution should establish internal policies and procedures governing its BOLI holdings that limit the aggregate cash surrender value (CSV) of policies from any one insurance company as well as the aggregate CSV of policies from all insurance companies. The inter-agency statement is not intended to loosen the standards with respect to prior BOLI guidance. The agencies have rigorous expectations regarding the establishment of prudent limits and appropriate board and management oversight of the limit-setting process. Accordingly, exceptions will be subject to increased supervisory attention. The agencies continue to expect institutions to adopt per-carrier limits for BOLI, keeping in mind legal lending limits. Although the federal statutory and regulatory lending limits do not, as a general rule, impose a per-carrier legal constraint on BOLI because BOLI is not a loan, BOLI nevertheless does represent a long-term credit exposure. The agencies expect institutions to manage credit exposures in a prudent manner, irrespective of whether the exposure is subject to a statutory or regulatory limit. If an institution establishes an aggregate limit for BOLI based upon its applicable capital concentration threshold, it would seldom be prudent to have its per-carrier limit equal to the aggregate limit. Apart from credit

considerations, it is also important to diversify BOLI exposures in order to control transaction risks that may be associated with an individual carrier’s policies.

Per-Carrier Limits

Institutions should establish a per-carrier limit for separate-account policies. Diversification among carriers reduces transaction risks. Institutions should also explicitly consider whether it is appropriate to combine general- and separate-account exposures from the same carrier for purposes of measuring exposure against internal limits. The agencies believe that institutions, based upon their risk tolerance and understanding of insurance risks, should determine for themselves whether to combine such policies. In this regard, the agencies note that separate-account policies also present general-account credit exposures. For example, deferred acquisition costs (DAC) and mortality reserves associated with separate-account policies are general obligations of the insurance carrier. Moreover, when the death of an insured occurs, the difference between the death benefit amount and the cash surrender value comes from the carrier’s general account. Finally, the actual credit exposure under a BOLI policy may be many times greater than the carrying value of the policy currently recorded on the institution’s balance sheet, given the typical relationship between CSV and policy death benefits. Institutions should keep these factors in mind when evaluating whether and, if so, how to aggregate general- and separate-account exposures for purposes of monitoring compliance with internal limits.

Legal Limits and Concentrations

When establishing internal CSV limits, an institution should consider its legal lending limit, the capital concentration thresholds, and any applicable state restrictions on BOLI holdings. The following are the agencies’ capital concentration definitions:

- The FDIC uses 25 percent of tier 1 capital to measure a capital concentration.
- The other agencies use tier 1 capital plus the allowance for loan and lease losses (ALLL).

A state-chartered institution should be guided by the more restrictive of the applicable state and federal limitations and thresholds. For example, if a state defines BOLI as an extension of credit subject to a statutory or regulatory lending limit, or otherwise imposes a per-carrier limit on BOLI, then institutions subject to that state's jurisdiction should ensure that their BOLI exposure to an individual carrier does not exceed the applicable state limit.

Permissibility of Holding Life Insurance on Former Employees and Former Key Persons

A well-managed institution adequately documents the purpose for which it is acquiring BOLI, as part of its pre-purchase analysis. When an institution purchases life insurance on a group of employees (whether it is a group policy or a series of individual policies) as a means to finance or recover the cost of employee benefits, and one or more of the insured employees is no longer employed by the bank, the insurance coverage may be retained by the institution provided—

- the application of the cost-recovery or cost-offset method (see “Quantifying the Amount of Insurance Appropriate for the Institution’s Objectives” below) indicates that the amount of insurance held is not in excess of the amount required to recover or offset the cost of the institution’s employee benefits,
- the policy is not specifically designated to cover only loss of income to the banking organization that may arise from the death of the employee,
- the coverage continues to qualify as an insurable interest under applicable state law, and
- the insurance asset continues to be a permissible holding under applicable state law for state-chartered institutions.

Additionally, if the policy no longer qualifies as insurance under the applicable state insurable-interest law, the policy may no longer be eligible for favorable tax treatment. These conditions apply to “benefits BOLI” despite the fact that the former employee was a “key person.”

This is in contrast to true key-person insurance, in which the institution purchases life insurance on a key person in order to protect itself from financial loss in the event of that

person’s death. The interagency statement provides that a national bank or federal savings association may be required to surrender or otherwise dispose of key-person life insurance held on an individual who is no longer a key person because the institution will no longer suffer a financial loss from the death of that person. However, when an individual upon whom key-person life insurance has been held is no longer a key person, an institution may be able to recharacterize its objective for the insurance policy as recovery of the cost of providing employee benefits. In such cases, the institution must demonstrate, through appropriate analysis and quantification, that the insurance coverage satisfies the retention conditions, as set forth in the preceding paragraph. For a state-chartered institution, the recharacterization and retention of such key-person life insurance must be permissible under applicable state law. In circumstances where a national bank or federal savings association would be required to surrender or otherwise dispose of key-person life insurance, a state-chartered institution must also surrender or otherwise dispose of a key-person policy unless the retention of the policy is permitted under applicable state law and the institution obtains the FDIC’s consent to continue to hold the policy under section 24 or section 28 of the FDI Act, as appropriate.

Quantifying the Amount of Insurance Appropriate for the Institution’s Objectives

Institutions are responsible for ensuring that they do not purchase excessive amounts of insurance coverage on their employees relative to salaries paid and the costs of benefits to recover. Examiners will evaluate an institution’s BOLI holdings and make a supervisory judgment as to whether insurance amounts on employees are so excessive as to constitute speculation or an unsafe or unsound practice on a case-by-case basis, as they do for other aspects of an institution’s operations. Such an evaluation would be based on the totality of the circumstances.

Institutions may use either the cost-recovery or cost-offset method to quantify the amount of insurance permissible for purchase to finance or recover employee benefit costs. When using the cost-offset approach, an institution must ensure that the projected increase in CSV each year

over the expected duration of the BOLI is less than or equal to the expected employee benefit expense for that year. When using the cost-recovery method, regardless of an institution's quantification method, management must be able to support, with objective evidence, the reasonableness of all assumptions used in determining the appropriate amount of insurance coverage needed, including the rationale for its discount rates (when the cost-recovery method is used) and cost projections.

Applicability of Prior Guidance for Split-Dollar Arrangements

The pre-purchase analysis guidance in the interagency statement applies to life insurance policies used in split-dollar arrangements that are acquired after December 7, 2004. The guidance concerning the ongoing risk management of life insurance after its purchase applies to life insurance policies, including those used in split-dollar arrangements, regardless of when acquired.

The FDIC's prior guidance on split-dollar arrangements, which was included in supervisory guidance on BOLI that was issued in 1993, has been superseded; until the issuance of the interagency statement, the FDIC had generally followed the Office of the Comptroller of the Currency's prior guidelines from 2000. Otherwise, the prior guidance issued by the agencies on split-dollar life insurance remains in effect. Each agency issued the interagency statement under its own bulletin, letter, or notice. For example, the Federal Reserve Board's issuance of the interagency statement is cross-referenced in SR-04-19, and the prior guidance on split-dollar life insurance arrangements is not superseded.

Accounting Considerations

An institution may purchase multiple permanent insurance policies from the same insurance carrier, with each policy having its own surrender charges. In some cases, the insurance carrier will issue a rider or other contractual provision stating that it will waive the surrender charges if all of the policies are surrendered at the same time. Because it is not known at any balance-sheet date whether one or more of the policies will be surrendered before the deaths of the insureds, the possibility that the institution will

surrender all of these policies simultaneously and avoid the surrender charges is a gain contingency. This guidance should be applied to all insurance policies held by an institution regardless of when they were acquired. Therefore, an institution that has purchased BOLI is required to report the CSV on the bank's balance sheet net of the surrender charges (even if the policies have been in force for some time and the institution's auditors have not previously required reporting the CSV net of the surrender charges).

Based on the agencies' review of FASB Technical Bulletin No. 85-4, "Accounting for Purchases of Life Insurance" (TB 85-4), including its appendix, the agencies believe that TB 85-4 is intended to be applied on a policy-by-policy basis. It, therefore, does not permit the aggregation of multiple separate policies for balance-sheet-measurement purposes. Accordingly, the agencies do not intend to defer to institutions or their auditors on this issue. As of the balance-sheet date, an institution should determine the amount that could be realized under each separate insurance policy on a stand-alone basis without regard to the existence of other insurance policies or riders covering multiple policies. If a single insurance policy covers more than one individual, the realizable amount of the entire policy should be determined. A single insurance policy covering multiple individuals should not be subdivided into hypothetical separate policies for each covered individual, even if the carrier reports CSVs for each covered individual.

If a change in an institution's accounting for its holdings of life insurance is necessary for regulatory reporting purposes, the institution should follow Accounting Principles Board Opinion No. 20, "Accounting Changes" (APB 20).¹⁷ APB 20 defines various types of accounting changes and addresses the reporting of corrections of errors in previously issued financial statements. APB 20 states that "[e]rrors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared."

17. Effective December 15, 2005, APB 20 will be replaced by FASB Statement No. 154, "Accounting Changes and Error Corrections—A replacement of APB Opinion No. 20 and FASB Statement No. 3."

For regulatory reporting purposes, an institution must determine whether the reason for a change in its accounting for its holdings of life insurance meets the APB 20 definition of an accounting error. If the reason for the change meets this definition and the amount is material, the error should be reported as a prior-period adjustment in the institution's regulatory reports. Otherwise, the effect of the correction of the error should be reported in current earnings. If the effect of the correction of the error is material, the institution should also consult with its primary federal regulatory agency to determine whether any previously filed regulatory reports should be amended. For the Call Report, the institution should report the amount of the adjustment in Schedule RI-A, item 2, "Restatements due to corrections of material accounting errors and changes in accounting principles," with an explanation in Schedule RI-E, item 4. The effect of the correction of the error on income and expenses since the beginning of the period in which the correction of prior-period earnings is reported should be reflected in each affected income and expense account on a year-to-date basis in the Call Report Income Statement (Schedule RI), not as a direct adjustment to retained earnings.

Rate of Return to the Bank in Split-Dollar Insurance Arrangements

The agencies would consider the institution's economic interest in a split-dollar life insurance arrangement policy, at a minimum, to be a return of the premiums paid plus a reasonable rate of return. The agencies would generally consider a reasonable rate of return to be one that provides the bank a return that is commensurate with alternative investments having similar risk characteristics (including credit quality and term) at the time in which the bank enters into the split-dollar arrangement. The rate of return is to be calculated net of any payments made (or to be made) from insurance proceeds to the employee's beneficiaries.

The agencies look at the economic value of compensation arrangements when determining the reasonableness of split-dollar compensation, but the agencies do not rely solely on income tax rules for determining this economic value. Other factors that the agencies might consider include, but are not limited to, the benefit of a split-dollar arrangement to the employee as a percentage of salary and the expected length of time until the institution recovers its invested funds.

Purchase and Risk Management of Life Insurance

Examination Objectives

Effective date November 2005

Section 4042.2

1. To determine the level and direction of risk that purchases and holdings of life insurance pose to the state member bank, and to recommend corrective action, as appropriate.
2. To perform—
 - a. a risk assessment that summarizes the level of inherent risk by risk category, and
 - b. an assessment of the adequacy of the board of directors' and management's oversight of the activity, including an assessment of the bank's internal control framework.
3. To ensure that the risk assessment considers a state member bank's purchase and risk management of its—
 - a. broad bank-owned life insurance (BOLI) programs, in which life insurance is purchased on a group of employees to offset employee benefit programs and the bank is the beneficiary;
 - b. split-dollar insurance arrangements for individual (usually senior-level) bank employees; and
 - c. holdings of key-person insurance.
4. Recognizing that management may not be as familiar with insurance products as it is with more-traditional bank products, to adequately identify and assess the risks of BOLI, as well as the risk exposures that may arise from purchases and holdings of life insurance.¹
5. To apply a forward-looking approach to the review of a bank's purchase and risk management of life insurance, recognizing that the bank may be exposed to increasing operational risks as a result of its large purchases or holdings of this product. These risks may arise from—
 - a. separate-account assets that contain holdings of complex equity-linked notes and derivative products;
 - b. the growing use of guaranteed minimum death benefits and other complex guarantee structures, which may increase the operational risk to banks purchasing significant amounts of life insurance; and
 - c. the potential losses that could result from—
 - inadequate recordkeeping, which may be related to tracking the potentially large variety of contracts and agreements and the potentially large number of insured current and former employees covered by the contracts, and
 - a failure to ensure that contract agreements between the insurance company, the vendor(s), and the employees are properly executed and honored.

1. As noted in more depth in section 4042.1, the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance, these risks include opera-

tional, liquidity, credit, legal, and reputational risk. Operational risk arises in part from the vast array of new life insurance products and structures being offered and from the complexity of tax considerations related to the products, under various state insurable-interest and federal tax laws.

Purchase and Risk Management of Life Insurance

Examination Procedures

Effective date May 2006

Section 4042.3

PRELIMINARY RISK ASSESSMENT

1. Consider the following, among other relevant criteria as appropriate, when determining whether to include the review of bank-owned life insurance (BOLI) in the examination scope:
 - a. the volume, growth, and complexity of BOLI purchases and holdings
 - Consider the amount of the bank's BOLI holdings, measured by the total of their cash surrender values (CSVs) as a percentage of capital, and determine whether the resulting percentage is an asset concentration of capital. (For state member banks, the Federal Reserve has defined the capital base for determining this concentration threshold to be a percentage of tier 1 capital plus the allowance for loan and lease losses.) Determine whether the BOLI holdings have grown or declined significantly in recent years, when compared with the BOLI holdings of peer banks (consult the Federal Reserve System's intranet for applicable surveillance and monitoring data).
 - Obtain a breakout of the CSV of BOLI assets, as reported on the bank's balance sheet, including the amounts attributable to split-dollar insurance arrangements, general BOLI plans covering a group of employees to recover the cost of employee compensation and benefit programs, and the amount, if any, attributable to key-person insurance.
 - Obtain a listing of the amount of the bank's reimbursable premium payments under split-dollar life insurance arrangements and the amount receivable for these policies, which is to be booked as "other assets" on the bank's balance sheet.
 - Determine whether a portion of the CSV is in separate-account holdings of a life insurance company. If the bank has separate-account holdings, determine (1) the composition of the underlying separate-account assets and (2) if these assets constitute higher-risk investments, including equity-linked notes, mortgage-backed securities with significant interest-rate risk, or other investments entailing significant market risk.
 - b. BOLI concentrations
 - Determine whether any of the life insurance policies are held in out-of-state trusts. If so, ascertain—
 - whether management and the board of directors can demonstrate that they have performed an independent legal analysis to ensure that the legal structure employed does not jeopardize the bank's insurable interest in the insurance policies or its access to the policy proceeds, as applicable; and
 - whether the trust arrangement inappropriately disadvantages the bank (for example, by permitting inappropriate investments or permitting the insured or the beneficiary to borrow against the policy holding in such a way that could jeopardize the bank's ability to recover amounts owed to it under the trust agreement).
 - Determine if there is a CSV concentration of life insurance to one carrier in excess of 25 percent that includes both separate-account and general-account BOLI holdings.
 - Determine if there are any market-risk concentrations within the underlying separate-account assets, including, for example, interest-sensitive fixed-income holdings.
 - Determine if there are any equity-linked notes or direct equity holdings in the separate accounts.
 - Determine if the bank holds any large-exposure life insurance policies on particular individuals. If so, determine if the policies are split-dollar arrangements and, if so—
 - whether the board or a board committee has evaluated the rea-

- sonableness of the compensation as part of the employee's overall compensation package, and
- whether the board or a board committee has determined that the overall compensation is appropriate.
- c. the appropriateness and recency of materials presented to the bank's board of directors concerning the bank's purchase and risk management of life insurance relative to its insurance purchases and holdings
 - d. the appropriateness and recency of audits and compliance reviews of the bank's purchases and risk management of life insurance
 - e. the overall financial condition of the bank, its supervisory rating, and any concerns or potential concerns about its liquidity
2. Depending upon the outcome of the preliminary risk assessment and other relevant factors, consider performing the following examination procedures.

OPERATIONAL-RISK ASSESSMENT

Senior Management and Board Oversight

1. Evaluate whether board and senior management oversight is effective and ensures that the bank's purchases and holdings of BOLI are consistent with safe and sound banking practices.
2. Determine whether the board of directors understands the complex risk characteristics of the bank's insurance holdings and the role of BOLI in the bank's overall business strategy.

Accounting Considerations

3. Determine if the bank's financial and regulatory reporting of its life insurance activities follows applicable generally accepted accounting principles (GAAP), including the following guidance:
 - a. *Financial Accounting Standards Board (FASB) Technical Bulletin No. 85-4*,

“Accounting for Purchases of Life Insurance” (TB 85-4). Only the amount that can be realized under an insurance contract as of the balance-sheet date (that is, the CSV reported to the bank by the insurance carrier, less any applicable surrender charges not reflected by the insurance carrier in the reported CSV) is reported as an asset. Since there is no right of offset, a BOLI investment is reported as an asset separately from any deferred compensation liability, provided that it was not purchased in connection with a tax-qualified plan.

- b. *Call Report instructions*. The bank is required to report the carrying value of its BOLI holdings (CSV net of applicable surrender charges) as a component of “other assets” and to report the earnings on these holdings as “other noninterest income.”
4. Verify that the bank's deferred compensation agreements were accounted for using the guidance in the February 11, 2004, Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance.
 5. Verify that any accounts receivable that represent the bank's reimbursable life insurance premiums paid are recorded as unimpaired account receivables (for example, life insurance policies that are not impaired as a result of declining CSVs backing the obligations or employees borrowing against CSVs). (Impaired amounts should be expensed.)

Policies and Procedures

6. Assess the adequacy of the bank's policies and procedures governing its BOLI purchases and holdings, including its guidelines to limit the aggregate CSV of policies from one insurance company as well as limit the aggregate CSV of policies from all insurance companies.
7. Verify if the bank's board of directors or the board's designated committee approved BOLI purchases in excess of 25 percent of capital or in excess of any lower internal limit. (For state member banks, the Federal Reserve has defined the capital base for determining this concentration threshold to be a percentage of tier 1 capital plus the

- allowance for loan and lease losses.)
8. Determine the reasonableness of the bank's internal limits and whether management and the board of directors have considered, before purchasing BOLI, the bank's legal lending limit, its applicable state and federal capital concentration threshold, and any other applicable state restrictions on BOLI.
 9. For banks that may have other credit exposures to insurance companies, determine if the bank has considered the credit exposures arising from its BOLI purchases when assessing its overall credit exposure to a carrier and to the insurance industry.
 10. Determine whether the bank's management has justified and analyzed the risks associated with a significant increase in the bank's BOLI holdings.
 11. Determine if the bank has advised its board of directors of the existence of the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance and of the risks associated with BOLI.

Pre-Purchase Analysis

12. Ascertain whether the bank maintains adequate records of its pre-purchase analysis of BOLI.
13. Evaluate whether the bank's board of directors, or a designated board committee, and senior management understand the risks, rewards, and unique characteristics of BOLI.

Need for Insurance, Economic Benefits, and Appropriate Insurance Type

14. Determine whether the bank identified the specific risk of loss to which it is exposed or the specific costs to be recovered by the purchase of life insurance.
15. Determine whether the bank analyzed the costs and benefits of planned BOLI purchases.

Amount of Insurance Appropriate for the Institution's Objectives

16. Find out if the bank estimated the size of its employee benefit obligation or the risk of

- loss to be covered in order to ensure that the amount of BOLI purchased was not excessive in relation to this estimate and the associated product risks.
17. Determine whether management can support, with objective evidence, the reasonableness of all of the assumptions used in determining the appropriate amount of insurance coverage needed by the bank, including the rationale for its discount rates and cost projections.

Vendor Qualifications

18. Evaluate whether the bank's management assessed its own knowledge of insurance risks, the vendor's qualifications, the amount of resources the bank is willing to spend to administer and service the BOLI, and the vendor's ability to honor the long-term financial commitments associated with BOLI.

Characteristics of Available Insurance Products

19. Evaluate whether the bank's management has reviewed and understands the characteristics of the various life insurance products available and of the products it has acquired.
20. Ascertain if and how the bank's management reviewed and selected the life insurance product characteristics that best matched its objectives, needs, and risk tolerance. Ascertain whether management evaluated and documented, before the bank acquired BOLI, the risks of the variety and complexity of life insurance products considered, how the selected insurance product works, the variables that affect the product's performance, and the applicable tax and accounting treatments.
21. Determine whether the bank's management reviewed and documented its consideration of the types and design features of BOLI. Determine whether management reviewed and documented the negotiable features associated with a separate-account insurance product (for example, its investment options, terms, and conditions; the cost of stable value protection (SVP); deferred acquisition costs (DAC); and mortality options) and with any SVP provider that

may have been separately contracted by the insurance carrier.

22. Verify that the bank's management conducted a thorough review of life insurance policies before acquiring the policies. Ascertain if management determined how the accounting rules would apply to those policies and if it understood any ambiguous contract provisions, such as costs, charges, or reserves, that may affect the amount of a policy's CSV.

Tax and Insurable-Interest Implications

23. For the bank's pre-acquisition review of BOLI and its subsequent BOLI purchases, verify that the bank's management considered and documented its analysis of the financial impact of surrendering a policy (for example, any tax implications).
24. Verify that the bank's management obtained appropriate legal reviews. An appropriate legal review ensures that—
- the bank complies with applicable tax and state insurable-interest requirements, and
 - the bank's insured amounts are *not* excessive (therefore, the bank is not involved in impermissible speculation or unsafe and unsound banking practices).

Carrier Selection

25. Find out if the bank (1) reviewed the BOLI product's design and pricing and the administrative services of the proposed carrier and (2) compared these services with those of other insurance carriers.
26. Ascertain whether the bank's management reviewed the selected carrier's ongoing long-term ability to commit to the BOLI product, as well as its credit ratings, general reputation, experience in the marketplace, and past performance.
27. Determine if the bank performed a credit analysis on the selected BOLI carriers and if the analysis was consistent with safe and sound banking practices for commercial lending.

Split-Dollar or Other Insurance Arrangements That Result in Additional Insured Employee Compensation

28. When a bank acquires insurance that permits a bank officer or employee to designate a beneficiary or provides the officer or employee with additional compensation, determine if the bank identified and quantified its total compensation objective. Determine if the bank ensured (1) that the acquired split-dollar life or other insurance arrangement was consistent with that objective, including when insurance compensation is combined with all other compensation being provided, and (2) that the total compensation was not excessive.
29. Verify that the bank and the insured have entered into a written agreement that specifically states the bank's rights, the insured individual's rights, and the rights of any other parties (trusts or beneficiaries) to the policy's CSV and death benefits.
30. Verify that the bank's shareholders and their family members (who are not bank officers, directors, or employees and who do not provide goods and services to the bank) do not receive compensation in the form of split-dollar life or other insurance coverage benefits.
31. Determine whether the bank's management has assessed the bank's ability to borrow against the CSV of its split-dollar life insurance policies, as well as the ability of other parties (whether an insured officer, employee, or noninstitution owner) to borrow against the policy CSV, without impairing the bank's financial interest in the policy proceeds. Determine also—
- if the bank can liquidate the policy in order to meet liquidity needs; or
 - if the bank effects an early policy surrender (such as might occur if an employee terminates his or her employment), if the surrender would preclude the bank from recovering its premium payments and a market rate of return on the premiums invested.
32. Determine if and how management verified that the bank would be able to recover its premium payments plus a market rate of return on the premiums invested, after the payment of policy proceeds to the employee's beneficiary under the split-dollar arrangement.

Other Elements of Pre-Purchase Analysis

33. Ascertain whether the bank's management thoroughly evaluated all significant risks. Determine whether management has established procedures to identify, measure, monitor, and control those risks.
34. Find out if the bank, before acquiring BOLI, thoroughly analyzed its associated risks and benefits. As appropriate, determine whether the bank compared the risks of BOLI with those of alternative methods for recovering costs associated with the loss of key persons, providing pre- and post-retirement employee benefits, or providing additional employee compensation.

Post-Purchase Analysis

35. Find out if management reviewed at least annually the bank's life insurance purchases and holdings with the bank's board of directors.¹ Ascertain if the review included, at a minimum—
 - a. a comprehensive assessment of the specific risks associated with the bank's permanent insurance acquisitions;
 - b. an identification of the bank's employees who are or will be insured (for example, vice presidents and above, employees of a certain grade level, etc.);
 - c. an assessment of death benefit amounts relative to employee salaries;
 - d. a calculation of the percentage of insured persons still employed by the bank;
 - e. an evaluation of the material changes to BOLI risk-management policies;
 - f. an assessment of the effects of policy exchanges;
 - g. an analysis of mortality performance and the impact on income;
 - h. an evaluation of material findings from internal and external audits and independent risk-management reviews;
 - i. an identification of the reason for, and the tax implications of, any policy surrenders; and

1. More-frequent reviews should be conducted if significant changes to the BOLI program are anticipated, such as additional purchases, a decline in the financial condition of the insurance carrier(s), anticipated policy surrenders, or changes in tax laws or interpretations that could have an impact on the performance of BOLI.

- j. a peer analysis of BOLI holdings.

LIQUIDITY-RISK ASSESSMENT

1. Find out if management, before the bank's purchase of permanent insurance, recognized the illiquid nature of the bank's acquisition of its permanent insurance products. Determine whether management ensured that the bank had the long-term financial flexibility to continue holding the insurance assets for their full term of expected use.
2. Determine if management, before the bank's purchase of permanent insurance, adequately considered the contractual arrangements and product types that limit product liquidity in order to best optimize the value of the bank's insurance assets and their possible future use as liquidity and funding sources. Contract provisions that should be considered include—
 - a. 1035 exchange fees and "crawl-out restrictions;"
 - b. provisions that would result in the product's categorization for federal tax purposes as a modified endowment contract (MEC) or a non-MEC contract, and
 - c. SVP contract provisions that may limit the bank's ability to surrender a policy early or that would increase the cost of an early surrender.

REPUTATION-RISK ASSESSMENT

1. Ascertain whether the bank has taken steps, including obtaining written consent from its insured officers and employees, to reduce its reputation risk that may result from BOLI purchases.
2. Determine if the bank maintains appropriate documentation evidencing that it obtained a formal written consent from its insured officers and employees.
3. Find out what segment of the employee base the bank has insured (i.e., officers or non-officers) and if the bank has taken out very high death benefit policies on employees, including lower-level employees.

CREDIT-RISK ASSESSMENT

1. Determine if the bank's management con-

ducted an independent financial analysis of the insurance carrier before the bank's purchase of a life insurance policy.

- a. Ascertain if management continues to monitor the life insurance company's condition on an ongoing basis.
 - b. Verify that the bank's credit-risk management function participated in the review and approval of insurance carriers.
2. Determine whether the bank considered its legal lending limit, its credit concentration guidelines (the aggregate exposures to individual insurance carriers and the life insurance industry, including other bank credit relationships, such as credit exposures involving loans and derivatives), and any state restrictions on BOLI holdings.
 3. Determine whether the bank's credit analysis of its BOLI holdings evaluated whether the policies to be acquired were either separate-account or general-account policies.
 - a. Find out whether the separate-account policies included an SVP contract to protect the bank (as a policyholder) from declines in the fair value of separate-account assets.
 - b. Ascertain if the bank evaluated the insurance carrier's separately contracted SVP provider's repayment capacity.
 4. Find out if the bank has acquired an SVP contract for its separate-account policy in order to reduce income-statement volatility. (SVP contracts protect against declines in value attributable to changes in interest rates; they do not cover default risk.)
 5. If the bank has not purchased an SVP contract, determine if management has established and maintained monitoring and reporting systems that will recognize and respond to price fluctuations in the fair value of separate-account assets.
 6. If the bank has purchased an equity-linked variable life insurance policy, determine whether it is characterized as an effective economic hedge against the bank's equity-linked obligations under its employee benefit plans. (An effective hedge exists when changes in the economic value of the liability or other risk exposure being hedged are matched by counterbalancing changes in the value of the hedging instruments. The economic hedging criteria for equity-linked insurance products lessen the effect of price risk because changes in the amount of the equity-linked liability are required to offset changes in the value of the separate-account assets.)
 7. If the bank is purchasing or has purchased a separate-account insurance product involving equity securities, determine if the bank's management has performed further analysis that—
 - a. compares the equity-linked liability being hedged and the equity securities in the separate account,
 - b. determines a target range for the hedge-effectiveness ratio and establishes a method for measuring ongoing hedge effectiveness, and
 - c. establishes a process for analyzing and reporting to management and the board of directors the effect of the hedge on the bank's earnings and capital ratios (both with and without the hedging transaction).

MARKET-RISK ASSESSMENT

1. Determine whether management fully understood (before the bank purchased its separate-account products)—
 - a. how the life insurance products expose the bank to interest-rate risk;
 - b. the instruments governing the investment policy, as well as how the separate account is managed;
 - c. the inherent risk of a separate account; and
 - d. whether the bank's risk from the purchase of separate-account products was appropriate.
2. For general-account products, ascertain if management understands the interest-crediting option the bank chose when purchasing the insurance policy.
3. Find out if the bank has established and if it maintains appropriate monitoring and reporting systems for interest-rate fluctuations and their effect on separate-account assets.

COMPLIANCE/LEGAL-RISK ASSESSMENT

1. Determine whether the bank's compliance

- and audit functions have evaluated its compliance with applicable state insurable-interest and federal tax laws in order to protect the bank's earnings and capital from the loss of tax benefits or from the imposition of fines or penalties by regulatory authorities for violations of, or noncompliance with, laws, rulings, regulations, prescribed practices, and ethical standards.
2. When the bank owns separate-account BOLI, determine whether the bank has implemented and maintains internal control policies and procedures that adequately ensure that it does not take any action that might be interpreted as exercising "control" over separate-account assets.
 3. Determine whether the bank split commissions between a vendor and the bank's own subsidiary or affiliate insurance agency when purchasing life insurance. If so, determine whether the bank's compliance function has assessed the bank's compliance with state and federal securities and insurance laws regarding fee and commission arrangements.
 4. Ascertain whether the bank seeks and documents the advice of legal counsel when determining legal and regulatory issues, requirements, and concerns related to its potential purchase or ownership of BOLI.
 5. For a general-account insurance product, determine if the bank has assigned a standard risk weight of 100 percent to the general-account asset.
 6. For a BOLI separate-account product (when the bank uses the look-through approach to assign risk weights according to the risk-based capital rules)—
 - a. review the bank's documentation, and determine if the bank adequately verified that the separate-account BOLI assets are protected from the insurance company's general creditors in the event of the insurance company's insolvency;
 - b. determine if the standard risk weight of 100 percent was assigned to the bank's BOLI assets when the bank's documentation is inadequate or does not exist;
 - c. verify that a 100 percent risk weight has been assigned to (1) the portion of the bank's insurance asset that represents general-account claims on the insurer (such as DAC and mortality reserves that are realizable on the balance-sheet date) and (2) any portion of the carrying value attributable to an SVP contract (or if the SVP provider is not an insurance company, verify that the correct risk weight has been assigned for that obligor); and
 - d. if the bank used a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy—
 - verify that the risk weight is applied to the separate account based on the most risky portfolio that could be held by the separate account (as stated in the investment agreement), except for any portions of the carrying value that are general-account claims attributable to either DAC or an SVP (which are generally risk-weighted at 100 percent);
 - verify that in no case may the assigned risk weight for the bank's entire separate-account holding be less than 20 percent; and
 - when the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, determine if the bank assigned the highest risk weight for the maximum amount permitted in that asset class, and then applied the next-highest risk weights to the other asset classes until the aggregate of the permitted amounts equals 100 percent.

Purchase and Risk Management of Life Insurance Internal Control Questionnaire

Effective date May 2006

Section 4042.4

Examiners should use only those internal control questions that are appropriate, given the size, complexity, and growth of a bank's bank-owned life insurance (BOLI) holdings.

PRELIMINARY RISK ASSESSMENT

1. Have the steps for conducting a preliminary risk assessment been followed, as they are set forth in section 4042.3? Have other relevant factors been considered to determine if further examination review may be warranted, in accordance with risk-focused supervision guidelines?
2. What particular factors have been identified to warrant a review of the bank's purchases and risk management of life insurance?

OPERATIONAL-RISK ASSESSMENT

Senior Management and Board of Directors Oversight

1. Has senior management and the board of directors initiated and maintained effective oversight of the bank's BOLI by—
 - a. performing a thorough pre-purchase analysis of its risks and rewards and a post-purchase risk assessment?
 - b. determining the permissibility of the bank's BOLI purchases and holdings under both the applicable state and federal requirements (whichever requirements are more restrictive)?
 - c. determining the types and kinds of risks that are associated with BOLI?
 - d. ascertaining and reviewing the safety-and-soundness considerations associated with the bank's BOLI?
 - e. understanding the complex risk characteristics of the bank's insurance holdings and what role BOLI is to play in the bank's overall business?
2. Does the bank have a comprehensive risk-management process for purchasing and holding BOLI?

Accounting Considerations

3. When accounting for its holdings of life insurance, did the bank follow the guidance in FASB's Technical Bulletin No. 85-4, "Accounting for Purchases of Life Insurance"? Are the bank's insurance policies reported on its balance sheet on the basis of each policy's cash surrender value (CSV), less any applicable surrender charges that are not reflected in the reported CSV?
4. On the bank's Call Report, did the bank's management —
 - a. report the carrying value of its BOLI holdings as an "other asset"?
 - b. report the earnings on the bank's holdings as "other noninterest income"?
 - c. report the CSV separately, as required if the CSV amount exceeded the reporting threshold?
 - d. expense only the noninvestment portion of the premium, in the case of bank-owned policies?
 - e. expense the premium for employee-owned insurance purchased by the bank and record a receivable in "other assets" for any portion of the premium to be reimbursed to the bank under a contractual agreement?
5. Were the bank's deferred compensation agreements accounted for using the guidance in the February 11, 2004, Interagency Advisory on Accounting for Deferred Compensation Agreements and Bank-Owned Life Insurance?

Policies and Procedures

6. Does the bank have comprehensive policies and procedures, including guidelines, that limit the aggregate CSV of policies from any one insurance company, as well as the aggregate CSV of policies from all insurance companies?
 - a. Does the board of directors or a designated board committee require senior management to provide adequate and appropriate justification for establishing or revising internal CSV limits on the amount of BOLI the bank holds? Does

this justification take into account the bank's legal lending limits, its capital and credit concentration threshold, and any applicable laws and regulations?

- b. Is written justification required when the amount of the bank's BOLI holdings approaches or exceeds 25 percent of the bank's capital (tier 1 capital plus the allowance for loan and lease losses)? Does the board of directors or a board committee approve this justification?

Pre-Purchase Analysis

7. Did the bank's management perform a written pre-purchase analysis of its BOLI products?
8. Did management identify the bank's need for BOLI, the appropriate type of insurance to be acquired, and the economic benefits to be derived from the purchase of BOLI? Did this analysis accomplish the following:
- identify the specific risk of loss to be covered by the insurance, or the costs the insurance is supposed to cover?
 - determine what type BOLI (for example, general- or separate-account) and what BOLI features are needed, before acquiring the product?
 - evaluate the permissibility and market risk of any underlying separate-account asset holdings, if separate-account BOLI is held?
 - analyze projected policy values (CSV and death benefits) using various interest-crediting rates and mortality cost assumptions?
 - estimate the size of the employee benefit obligation or the risk of loss to be covered? Did management ensure that the amount of BOLI coverage was appropriate for the bank's objectives and that BOLI was not excessive in relation to this estimate and the associated product risks?
 - review the range of assumptions? Was management able to justify the assumptions with objective evidence, and deem them reasonable in view of previous and expected market conditions?
 - assess whether the present value of the BOLI's expected future cash flows (net of the costs of the insurance) is less than

the estimated present value of the expected after-tax employee benefit costs, when the bank uses BOLI to recover the costs of providing employee benefits?

9. Did the bank's management —
- review and assess its own knowledge of insurance risks, the vendor's qualifications, and the amount of the bank's resources that will be needed to administer and service the BOLI?
 - demonstrate its familiarity with the technical details of the bank's insurance assets, and is management able to explain the reasons for and the risks associated with the product design features that have been selected?
 - make appropriate inquiries to determine whether the vendor has the financial ability to honor its long-term commitments over an extended period of time?
 - assure itself of the vendor's commitment to investing in the operational infrastructure that is necessary to support the BOLI?
 - undertake its own independent review and not rely solely on prepackaged, vendor-supplied compliance information (such reliance is a potential cause for supervisory action)?
 - properly evaluate the characteristics of the available insurance products against the bank's objectives, needs, and risk tolerance?
 - determine if the bank's need for insurance on key persons or on a borrower's loan resulted in a matching of the maturity of the term or declining term insurance to the key person's expected tenure or the maturity of the borrower's loan?
 - conduct a review of the insurance carrier that included—
 - a credit analysis of the potential insurance carrier (the analysis should have been performed in a manner consistent with safe and sound banking practices for commercial lending)?
 - a review of the bank's needs and a comparison of those needs with the proposed carrier's product design, pricing, and administrative services?
 - a review of the insurance carrier's commitment to the BOLI product, as well as the carrier's general reputation, experience in the marketplace, and past performance?

- i. determine whether the total amount of compensation and insurance to be provided to an employee is excessive, if the purchased BOLI will result in the payment of additional compensation?
- j. analyze the associated significant credit risks and the bank's ability to monitor and respond to those risks?
- k. as appropriate, analyze the risks and benefits of BOLI, compared with other available methods for recovering costs associated with the loss of key persons, providing pre- and post-retirement employee benefits, or providing additional employee compensation?
- l. sufficiently document its comprehensive pre-purchase analysis (including its analysis of both the types and product designs of purchased BOLI and the bank's overall level of BOLI holdings)?

Post-Purchase Analysis

10. Do management and the board of directors annually review the performance of the bank's insurance assets? Does the annual review include—
 - a. a comprehensive assessment of the specific risks associated with permanent insurance acquisitions?
 - b. an identification of employees who are or will be insured (e.g., vice presidents and above, employees of a certain grade level)?
 - c. an assessment of death benefit amounts relative to employee salaries?
 - d. a calculation of the percentage of insured persons still employed by the institution?
 - e. an evaluation of the material changes to BOLI risk-management policies?
 - f. an assessment of the effects of policy exchanges?
 - g. an analysis of mortality performance and the impact on income?
 - h. an evaluation of material findings from internal and external audits and independent risk-management reviews?
 - i. an identification of the reason for and the tax implications of any policy surrenders?
 - j. a peer analysis of BOLI holdings?

Tax and Insurable-Interest Implications

11. Has the bank's management explicitly considered the financial impact (for example, the tax provisions and penalties) of surrendering a BOLI policy?
12. Does the bank's management have or has it obtained appropriate legal review to ensure that it will be in compliance with applicable tax and state insurable-interest requirements? Is management aware of the relevant tax features of the insurance assets, including whether the bank's purchase would—
 - a. make the bank subject to the alternative minimum tax?
 - b. jeopardize the tax-advantaged status of the bank's insurance holdings?
 - c. qualify (under applicable state law) an insurable ownership interest in the BOLI policy covering the bank's officers or its employees (including any applicable state law pertaining to the insured's consent and the amounts of allowable insurance coverage for an employee)?
13. Did the bank establish an out-of-state trust to hold its BOLI assets, and, if so, has the bank adequately assessed its insurable interest, given the arrangement?

LIQUIDITY-RISK ASSESSMENT

1. Has the bank's management fully recognized and considered the illiquid nature of the BOLI to be acquired? (An institution's BOLI holdings should be considered when assessing liquidity and assigning the component rating for liquidity.)
2. Did management determine if the bank has the long-term financial flexibility to hold the insurance asset for the full term of its expected use?

REPUTATION-RISK ASSESSMENT

1. Has the bank's management implemented procedures to ensure that the bank maintains appropriate documentation that evidences employees' informed consent for the bank's purchase of insurance on their lives? Do these procedures ensure that the bank

obtains employees' explicit consent before purchasing the insurance?

2. Has the bank obtained insurance products that insure large segments of its employee base (including the bank's non-officers)? Do these policies provide very high death benefits on employees, possibly causing the bank to be exposed to increased reputation risk if explicit consent was not obtained from the employees?

CREDIT-RISK ASSESSMENT

1. Did the bank's management conduct an independent financial analysis of the insurance carrier before purchasing the life insurance policy?
 - a. Does management continue to monitor the life insurance company's financial condition on an ongoing basis?
 - b. Did the bank's credit-risk management function participate in the review and approval of insurance carriers?
2. When establishing exposure limits for aggregate BOLI holdings and exposures to individual carriers, did the bank's management consider—
 - a. the bank's legal lending limit?
 - b. the applicable state and federal credit concentration exposure guidelines?
 - c. the aggregate CSV exposures as a percentage of the bank's capital?
3. Has the bank's credit-risk management process taken into account credit exposures arising from both BOLI holdings and other credit exposures (loans, derivatives, and other insurance products) when measuring exposures to individual carriers?
4. Did the bank's credit analysis of its BOLI holdings consider whether the policies to be acquired were separate-account or general-account policies?
 - a. For the separate-account policies, did the credit review include a risk analysis of the underlying separate-account assets?
 - b. For separate-account policies that include a stable value protection (SVP) contract, has the repayment capacity of the insurance carrier's separately contracted SVP providers been evaluated?

MARKET-RISK ASSESSMENT

1. Did management adequately assess the interest-rate risk exposure of BOLI before purchasing the products for separate-account and general-account assets?
2. Has the bank's management reviewed, and does it understand the instruments governing the separate-account investment policy and its management?
 - a. Does the bank's management understand the risk inherent within the separate account?
 - b. Has the bank's management determined if the risk is appropriate?
3. Have monitoring and reporting systems been established that will enable the bank's management to monitor, measure, and appropriately manage interest-rate risk exposure from BOLI holdings when assessing the bank's overall sensitivity to interest-rate risk?

COMPLIANCE/LEGAL-RISK ASSESSMENT

1. Has the bank's audit and/or compliance function reviewed the bank's legal and regulatory requirements as they pertain to life insurance holdings? Did the review consider—
 - a. state insurable-interest laws?
 - b. the Employee Retirement Income Security Act of 1974 (ERISA)?
 - c. the Federal Reserve Board's Regulation W (12 CFR 223)?
 - d. applicable federal prohibitions on insider loans, including the Federal Reserve Board's Regulation O, that may apply to split-dollar life insurance arrangements?
 - e. the interagency guidelines for establishing standards for safety and soundness?¹
 - f. other state and federal regulations applicable to BOLI?
2. To ensure that the life insurance qualifies for its tax-advantaged status, has the bank's management implemented and maintained internal policies and procedures to ensure that "control" will not be exercised over any of the separate-account assets, espe-

1. For state member banks, see 12 CFR 208, appendix D-1.

- cially those involving privately placed policies?
3. Does the bank's board of directors, its designated board committee, and its management seek the assistance of legal counsel when determining the legal and regulatory issues related to the acquisition and holding of life insurance policies?
 4. Has management thoroughly reviewed, and does it understand, the instruments governing the investment policy and the management of a separate account, before purchasing a separate-account policy?
 5. If the bank has not purchased SVP for a separate-account BOLI policy, has management established the appropriate monitoring and reporting systems that will enable it to recognize and respond to price fluctuations in the fair value of the separate-account assets?
 6. When the bank considers or purchases a separate-account BOLI product involving equity securities, does it analyze the equity securities? Does this analysis—
 - a. compare the specific equity-linked liability being hedged against the securities held in a separate account?
 - b. establish a target ratio for hedge effectiveness, as well as a method for measuring hedge effectiveness on an ongoing basis?
 - c. establish a process for analyzing and reporting to the board of directors, its designated committee, and senior management the effect of the hedge on the bank's earnings and capital ratios (this analysis should include a consideration of the results both with and without the hedging transaction)?
 7. When reporting its risk-based capital, has the bank ensured that it accurately calculates and reports its risk-weighted assets for BOLI holdings according to the risk-based capital guidelines and the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance (see section 4042.1 and SR-04-19 and its attachment)?
 - a. For a general-account insurance product, has the bank applied a standard risk weight of 100 percent to the general-account asset?
 - b. When the bank has applied a look-through approach for separate-account holdings—
 - has management determined if BOLI assets would be protected from the insurance company's general creditors in the event of its insolvency? Has the bank documented its assessment that BOLI assets are protected?
 - has the portion of the carrying value of the separate-account policy (that reflects the amounts attributable to the insurer's DAC and mortality reserves, and any other portion that is attributable to the carrying value of an SVP contract) been risk-weighted using the 100 percent risk weight applicable to the insurer's general-account obligations? Or, if the SVP provider is not an insurance company, has the portion of the carrying value been risk-weighted as appropriate for that obligor?
 8. When the bank has used a pro rata approach to risk-weighting the carrying value of a qualifying separate-account policy, did it use the appropriate procedures, as outlined in the December 7, 2004, Interagency Statement on the Purchase and Risk Management of Life Insurance (see section 4042.1 and SR-04-19 and its attachment)?
 - a. Has the bank ensured that its assigned aggregate risk weight for all separate-account BOLI holdings will be 20 percent or more?
 - b. When the sum of the permitted investments across market sectors in the investment agreement is greater than 100 percent, was the highest risk weight applied for the maximum amount permitted in that asset class, and was the next-highest risk weight then applied until the cumulative permitted amounts equal 100 percent?

Insurance Sales Activities and Consumer Protection in Sales of Insurance

Effective date April 2008

Section 4043.1

Banking organizations have long been engaged in the sale of insurance products and annuities, although these activities historically have been subject to several restrictions. For example, until recently, national banks could sell most types of insurance, but only through an agency located in a small town. Bank holding companies also were permitted to engage in only limited insurance agency activities under the Bank Holding Company Act. State-chartered banks, on the other hand, generally have been permitted to engage in insurance sales activities as agent to the extent permitted by state law.

The Gramm-Leach-Bliley Act of 1999 (the GLB Act), however, authorized national banks and state-chartered member banks to sell all types of insurance products through a financial subsidiary. *The GLB Act generally did not change the powers of banks to sell insurance directly.* As a result of the GLB Act and marketplace developments, many banking organizations are increasing the range and volume of their insurance and annuities sales activities. To the extent permitted by applicable law, banking organizations may conduct insurance and annuity sales activities through a variety of structures and delivery channels, including ownership of an insurance underwriter or an insurance agency or broker, the employment by a bank of licensed agents, a joint marketing arrangement with a producer,¹ independent agents located at a bank's office, direct mail, telemarketing, and Internet marketing.

A banking organization may also conduct insurance or annuity sales activities through a managing general agent (MGA). An MGA is a wholesaler of insurance products and services to insurance agents. The MGA has a contractual agreement with an insurance carrier to assume

functions for the carrier, which may include marketing, accounting, data processing, policy recordkeeping, and monitoring or processing claims. The MGA may rely on various local agents or agencies to sell the carrier's products. Most states require an MGA to be licensed.

OVERVIEW AND SCOPE

The following guidance pertains to state member banks that are either directly or indirectly engaged in the sale of insurance or annuity products. Examiner guidance on performing appropriate risk assessments of a state member bank's insurance and annuity sales activities is included.² Additionally, guidance is provided for examining a state member bank's compliance with the consumer protection rules relating to insurance and annuities sales activities that are contained in the Board's December 2000 revisions to Regulation H (subpart H) (12 CFR 208.81–86), "Consumer Protection in Sales of Insurance" (CPSI). Subpart H, which became effective on October 1, 2001, implements the consumer protection requirements of the GLB Act, which are codified at 12 USC 1831x. (See 65 *Fed. Reg.* 75841, December 4, 2000.) The regulation applies not only to the sale of insurance products or annuities by the bank, but also to activities of any person engaged in insurance product or annuity sales on behalf of the bank, as discussed in this guidance. The guidance is generally not applicable to debt-cancellation contracts and debt-suspension agreements, unless these products are considered to be insurance products by the state in which the sales activities are conducted.

The GLB Act permits state member banks that are not authorized by applicable state law to sell insurance directly to do so through a financial subsidiary.³ A financial subsidiary engaged in insurance sales may be located wherever state

1. The term "producer" refers broadly to persons, partnerships, associations, limited liability corporations, etc., that hold a license to sell or solicit contracts of insurance to the public. Insurance agents and agencies are producers who, through a written contractual arrangement known as a direct appointment, represent one or more insurance underwriters. Independent agents and agencies are those producers that sell products underwritten by one or more insurance underwriters. Captive agents and agencies represent a specific underwriter and sell only its products. Brokers are producers that represent the purchaser of insurance and obtain bids from competing underwriters on behalf of their clients. State insurance laws and regulations often distinguish between an insurance agent and a broker; in practice, the terms are often used interchangeably.

2. The term "risk assessment" denotes the work product described in SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions," and entails an analysis of (1) the level of inherent risk by type of risk (operational, legal, market, liquidity, credit, and reputation risk) for a business line or business function, (2) the adequacy of management controls over that business line or business function, and (3) the direction of the risk (increasing, decreasing, or stable).

3. Rules pertaining to state member bank financial subsid-

law permits the establishment and operation of an insurance agency. Such subsidiaries, however, would be subject to state licensing and other requirements.

The Federal Reserve is responsible for evaluating the consolidated risk profile of a state member bank. This responsibility includes determining the risks posed to the state member bank from the insurance and annuity sales activities it conducts directly or indirectly, as well as determining the effectiveness of the bank's risk-management systems. However, the GLB Act also established a regulatory framework that is designed to ensure that the Federal Reserve coordinates with, and relies to the extent possible on information from, the state insurance authorities when it is supervising the insurance activities a state member bank conducts through a functionally regulated subsidiary.

Consistent with the Federal Reserve's risk-focused framework for supervising banking organizations, resources allocated to the review of insurance sales activities should be commensurate with the significance of the activities and the risk they pose to the bank. The scope of the review depends on the significance of the activity to the state member bank and the extent to which the bank is directly involved in the activity. Examiner judgment is required to tailor the reviews, as appropriate, on the basis of the legal, organizational, and risk-management structure of the state member bank's insurance and annuity sales activities and on other relevant factors.⁴

SUPERVISORY APPROACH FOR THE REVIEW OF INSURANCE AND ANNUITY SALES ACTIVITIES

Supervisory Objective

The primary objective for the review of a state member bank's insurance and annuity sales activities is to determine the level and direction

aries are found in the Board's Regulation H (12 CFR 208.71-77).

4. See SR-02-01, "Revisions to Bank Holding Company Supervision Procedures for Organizations with Total Consolidated Assets of \$5 Billion or Less," and section 1000.1 for a discussion of the Federal Reserve's risk-focused examinations and the risk-focused supervision program for community banking organizations. See also SR-97-24.

of risk such activities pose to the state member bank. The review includes insurance and annuity sales activities the state member bank conducts directly (by or in conjunction with a subsidiary or affiliate) or through a third-party arrangement. Primary risks that may arise from insurance sales activities include operational, legal, and reputational risk. If the state member bank does not adequately manage these risks, they could have an adverse impact on its earnings and capital. The examiner should produce (1) a risk assessment that summarizes the level of inherent risk to the state member bank by risk category and (2) an assessment of the adequacy of board of directors' and management oversight of the insurance and annuity sales activities, including their internal control framework. For those state member banks selling insurance or annuity products, or that enter into arrangements under which another party sells insurance or annuity products at the bank's offices or on behalf of the bank, a second objective of the review is to determine the bank's compliance with the consumer protection provisions of the GLB Act and the CPSI regulation.

State Regulation of Insurance Activities

Historically, insurance activities have primarily been regulated by the states. In 1945, Congress passed the McCarran-Ferguson Act, which granted states the power to regulate most aspects of the insurance business. The McCarran-Ferguson Act states that "no act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any state for the purpose of regulating the business of insurance, or which imposes a fee or tax upon such business, unless such Act specifically relates to the business of insurance" (15 USC 1012(b)).

State regulation of insurance producers is centered on the protection of the consumer and consists primarily of licensing and continuing education requirements for producers. A producer generally must obtain a license from each state in which it sells insurance and for each product sold. Each state in which a producer sells insurance has regulatory authority over the producer's activities in the state.

The GLB Act does include several provisions that are designed to keep states from (1) unfairly regulating a bank to prevent it from engaging in

authorized insurance activities or (2) otherwise discriminating against banks engaged in insurance activities. These provisions are complex and beyond the scope of this guidance. However, the GLB Act generally does not prohibit a state from requiring a bank or bank employee engaged in insurance sales, solicitation, or cross-marketing activities to be licensed within the state.

State insurance regulatory authorities do not conduct routine, periodic examinations of an insurance producer. A state examination of an insurance producer is generally conducted only on an ad hoc basis and is primarily based on the volume and severity of consumer complaints. The state examination may also be based in part on the producer's market share and on previous examination findings. Additionally, a review of a producer would typically not assess its financial condition.

A state's market conduct examination of *insurance sales practices* is focused at the insurance-underwriter level.⁵ The insurance underwriter is generally held accountable for compliance with state insurance laws to protect the consumer from the unfair sales practices of any producer that markets the insurance underwriter's products. Market conduct examinations of an insurance underwriter may potentially uncover a concern about a particular producer, such as a bank-affiliated producer.⁶ However, in the past, a state insurance regulatory authority has not typically examined a producer unless the producer is owned by the insurance underwriter.

Generally, market conduct examinations include reviews of the insurance underwriters' complaint handling, producer licensing, policyholder service, and marketing and sales practices. Typically, a state authority will direct a corrective action for insurance sales activity at the underwriter. The states generally have specific guidance for their market conduct examinations of life, health, and property/casualty⁷

5. Generally, market conduct reviews of *insurance underwriters* are conducted on an ad hoc basis, triggered primarily by the volume and severity of consumer complaints, and are based on the underwriter's market share or on previous examination findings. In some states, however, market conduct reviews of insurance underwriters are conducted on a periodic, three- to five-year schedule.

6. The terms "insurance underwriter," "insurer," "insurance carrier," and "insurance company" are industry terms that apply similarly to the party to an insurance arrangement who undertakes to indemnify for losses, that is, the party that assumes the principal risk under the contract.

7. Property insurance indemnifies a person who has an

lines of business—guidance that corresponds to regulations related to advertising, misrepresentations, and disclosures for these different business lines. The reports of examination issued by the state insurance departments are usually available to the public.

Because the underwriter, not the producer, is liable to the insured, the failure of an insurance producer generally would not result in financial loss to consumers or state guarantee funds. Consequently, there are no regulatory capital requirements for insurance producers, nor do states require regulatory reporting of financial statement data on insurance producers. While the underwriter is ultimately liable to the insured, in some instances, a producer and its owner may be held liable for misrepresentations, as well as for violations of laws and regulations.

Functional Regulation

Under the GLB Act, banking supervisors' reviews of insurance or securities activities conducted in a bank's functionally regulated subsidiary are not to be extensions of more traditional bank-like supervision. Rather, to the extent possible, bank supervisors are to rely on the functional regulators to appropriately supervise the insurance and securities activities of a functionally regulated subsidiary. A functionally regulated subsidiary includes any subsidiary of a bank that (1) is engaged in insurance activities and subject to supervision by a state insurance regulator or (2) is registered as a broker-dealer with the Securities and Exchange Commission. The GLB Act does *not* limit the Federal Reserve's supervisory authority with respect to a *bank* or the insurance activities conducted by a bank. The functional regulators for insurance sales activities, including the activities of insurance producers, consist of the insurance departments in each of the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, American Samoa, and Guam.

interest in a physical property for loss of the property or the loss of its income-producing abilities. Casualty insurance is primarily concerned with the legal liability for losses caused by injury to persons or damage to the property of others. It may also include such diverse forms of insurance as crime insurance, boiler and machinery insurance, and aviation insurance. Many casualty insurers also underwrite surety bonds.

The GLB Act places certain limits on the ability of the Federal Reserve to examine, obtain reports from, or take enforcement action against a functionally regulated nondepository subsidiary of a state member bank. For purposes of these limitations, a subsidiary licensed by a state insurance department to conduct insurance sales activities is considered functionally regulated only with respect to its insurance activities and any activities incidental to these activities.⁸

The GLB Act indicates that the Federal Reserve must rely, to the fullest extent possible, on information obtained by the appropriate state insurance authority of a nondepository insurance agency subsidiary of a state member bank. In addition, the Federal Reserve may examine a functionally regulated subsidiary of a state member bank only in the following situations:

- The Federal Reserve has reasonable cause to believe that the subsidiary is engaged in activities that pose a material risk to an affiliated depository institution, as determined by the responsible Reserve Bank and Board staff.
- After reviewing relevant information (including information obtained from the appropriate functional regulator), it is determined that an examination is necessary to adequately understand and assess the banking organization's systems for monitoring and controlling the financial and operational risks that may pose a threat to the safety and soundness of an affiliated depository institution.
- On the basis of reports and other available information (including information obtained from the appropriate functional regulator), there is reasonable cause to believe that the subsidiary is not in compliance with a federal law that the Federal Reserve has specific jurisdiction to enforce with respect to the subsidiary (including limits relating to transactions with affiliated depository institutions), and the Federal Reserve cannot assess such compliance by examining the state member bank or other affiliated depository institution.

Other similar restrictions limit the ability of the Federal Reserve to obtain a report directly from, or take enforcement action against, a

functionally regulated nonbank subsidiary of a state member bank. These GLB Act limitations do *not* apply to a state member bank even if the state member bank is itself licensed by a state insurance regulatory authority to conduct insurance sales activities.

Staff who are conducting reviews of state member bank insurance or annuity sales activities should be thoroughly familiar with SR-00-13, which provides guidance on reviews of functionally regulated state member bank subsidiaries. Reserve Bank staff may conduct an examination of a functionally regulated subsidiary, or request a specialized report from a functionally regulated subsidiary, only after obtaining approvals from the appropriate staff of the Board's Division of Banking Supervision and Regulation.

When preparing or updating the risk assessment of a state member bank's insurance or annuity sales activities, Federal Reserve staff, when appropriate, should coordinate their activities with the appropriate state insurance authorities. The Federal Reserve's supervision of state member banks engaged in insurance sales activities is not intended to replace or duplicate the regulation of insurance activities by the appropriate state insurance authorities.

Information Sharing with the Functional Regulator

The Federal Reserve and the National Association of Insurance Commissioners (NAIC) approved a model memorandum of understanding (MOU) on the sharing of confidential information between the Federal Reserve and individual state insurance departments.⁹ The Board also approved the delegation of authority to the Board's general counsel to execute agreements with individual states, based on this MOU. Examiners should follow required Board administrative procedures before sharing any confidential information with a state insurance regulator. (These procedures generally require Federal Reserve staff to identify and forward to Board staff for review any confidential information that may be appropriate to share with the applicable

8. For example, if a state member bank subsidiary engages in mortgage lending and is also licensed as an insurance agency, it would be considered a functionally regulated subsidiary only to the extent of its insurance sales activities.

9. The NAIC is the organization of insurance regulators from the 50 states, the District of Columbia, and the four U. S. territories. The NAIC provides a forum for the development of uniform policy among the states and territories. The NAIC is not a governmental or regulatory body.

state insurance regulator concerning insurance sales activities conducted by state member banks.) The Board's Division of Consumer and Community Affairs CP Letter 2001-11 outlines the procedures for sharing consumer complaint information with state insurance regulators.

STATUTORY AND REGULATORY REQUIREMENTS AND POLICY GUIDANCE

Privacy Rule and the Fair Credit Reporting Act

State member banks that sell insurance to consumers must comply with the privacy provisions under title V of the GLB Act (12 USC 6801–6809), as implemented by the Board's Regulation P (12 CFR 216) (the privacy rule). Functionally regulated state member bank nonbank insurance agency subsidiaries are not covered by the Federal Reserve's privacy rule; however, they must comply with the privacy regulations (if any) issued by their relevant state insurance regulator.

The privacy rule regulates a state member bank's treatment of nonpublic personal information about a "consumer," an individual who obtains a financial product or service (such as insurance) from the institution for personal, family, or household purposes. The privacy rule generally requires a bank to provide a notice to each of its customers that describes its privacy policies and practices no later than when the bank establishes a business relationship with the customer. The privacy rule also generally prohibits a bank from disclosing any nonpublic personal information about a consumer to any nonaffiliated third party, unless the bank first provides to the consumer a privacy notice and a reasonable opportunity to prevent (or "opt out" of) the disclosure, and the consumer does not opt out. The privacy rule permits a financial institution to provide a joint notice with one or more of its affiliates or other financial institutions, as identified in the privacy notice itself, provided that the notice is accurate with respect to the institution and the other institutions.

While the privacy rule applies to the sharing of nonpublic personal information by a bank with nonaffiliated third parties, the sharing of certain consumer information with affiliates or

nonaffiliates may be subject to the Fair Credit Reporting Act (FCRA) as well. For example, under the FCRA, if a bank wants to share with its insurance subsidiary information from a credit report or from a consumer application for credit (such as the consumer's assets, income, or marital status), the bank must first notify the consumer about the intended sharing and give the consumer an opportunity to opt out. The same rules would apply to an insurance company that wants to share information from credit reports or from applications for insurance with an affiliate or a third party.

Anti-Tying Prohibitions

Federal law (section 106(b) of the BHC Act Amendments of 1970 (12 USC 1972(b))) generally prohibits a bank from requiring that a customer purchase a product or service from the bank or an affiliate as a prerequisite to obtaining another product or service (or a discount on the other product or service) from the bank. This prohibition applies whether the customer is retail or institutional, or whether the transaction is on bank premises or off premises. For example, a state member bank may not require that a customer purchase insurance from the bank or a subsidiary or affiliate of the bank in order to obtain a loan from the bank (or a reduced interest rate on the loan).¹⁰

Policy Statement on Income from Sale of Credit Life Insurance

The Federal Reserve Board's Policy Statement on Income from Sale of Credit Life Insurance (see the *Federal Reserve Regulatory Service* at 3-1556) sets forth the principles and standards that apply to a bank's sales of credit life insurance and the limitations that apply to the receipt of income from those sales by certain individuals and entities associated with the bank. See also the examination procedures related to this policy statement in section 2130.3.

10. See section 2040.1 and "Tie-In Considerations of the BHC Act," section 3500.0, of the *Bank Holding Company Supervision Manual*.

RISK-MANAGEMENT PROGRAM

Elements of a Sound Insurance or Annuity Sales Program

A state member bank engaged in insurance or annuity sales activities should—

- conduct insurance sales programs in a safe and sound manner;
- have appropriate written policies and procedures in place that are commensurate with the volume and complexity of its insurance sales activities;
- obtain its board of directors' approval of the scope of the insurance and annuity sales program and of written policies and procedures for the program;
- effectively oversee the sales program activities, including third-party arrangements;
- have an effective, independent internal audit and compliance program;
- appropriately train and supervise the employees conducting insurance and annuity sales activities;
- take reasonable precautions to ensure that disclosures to customers for insurance and annuity sales and solicitations are complete and accurate and are in compliance with applicable laws and regulations;
- ensure compliance with all applicable federal, state, or other jurisdiction regulations, including compliance with sections 23A and 23B of the Federal Reserve Act as that act applies to affiliate transactions; and
- have controls in place to ensure accurate and timely financial reporting.

Every state member bank conducting insurance or annuity sales activities should have appropriate, board-approved policies, procedures, and controls in place to monitor and ensure that it complies with both federal and state regulatory requirements. Consistent with the principle of functional regulation, the Federal Reserve will rely primarily on the appropriate state insurance authorities to monitor and enforce compliance with applicable state insurance laws and regulations, including state consumer protection laws and regulations governing insurance sales.

Sales Practices and Handling of Customer Complaints

Every state member bank engaged in insurance or annuity sales activities should have board-approved policies and procedures for handling customer complaints related to these sales. The customer complaint process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. A state member bank's board of directors and senior management should also review complaints if the complaints involve significant compliance issues that may pose a risk to the state member bank.

Third-Party Arrangements

State member banks, to the extent permitted by applicable law, may enter into agreements with third parties, including unaffiliated agents or agencies, to sell insurance or annuities or provide expertise and services that otherwise would have to be developed in-house. Many banks hire third parties to assist in establishing an insurance program or to train their own insurance staff. A bank may also find it advantageous to offer more specialized insurance products through a third-party arrangement.

A state member bank's management should conduct a comprehensive review of an unaffiliated third party before entering into any arrangement to conduct insurance or annuity sales with the third party. The review should include an assessment of the third party's financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the state member bank, which includes compliance with applicable consumer protection laws and regulations.

The state member bank's board of directors or its designated committee should approve any agreements with third parties. Agreements should outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information; and define the terms for use of the state member bank's office space, equipment, and personnel. If an arrangement includes dual employees (for example, bank employees who are also employed by an independent third party), the agreement must provide for written employment contracts that specify the duties of

these employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable. The agreement should authorize the banking organization to monitor the third party's compliance with its agreement, as well as authorize the bank to have access to third-party records considered necessary to evaluate compliance. A state member bank that contracts with a functionally regulated third party should obtain from and review, as appropriate, any relevant, publicly available regulatory reports of examination of the third party.¹¹ Finally, the agreement should provide for indemnification of the institution by the unaffiliated third party for any losses caused by the conduct of the third party's employees in connection with its sales activities.

The state member bank is responsible for ensuring that any third party or dual employee selling insurance at or on behalf of the bank is appropriately trained either by the bank or the third party with respect to compliance with the minimum disclosures and other requirements of the CPSI regulation and applicable state regulations. The banking organization should obtain and review copies of third-party training and compliance materials to monitor the third party's performance of its disclosure and training obligations.

Designation, Training, and Supervision of Personnel

A state member bank hiring personnel to sell insurance or annuities should investigate the backgrounds of the prospective employees. When a candidate for employment has previous insurance industry experience, the state member bank should have procedures to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators.¹²

11. The reports of examination issued by state insurance regulators are generally public documents. Many states do not conduct periodic examinations of insurance sales activities.

12. Information from the states on the issuance and termination of producer licenses and on producers' compliance with continuing education requirements is available from the NAIC database known as the National Insurance Producer Registry (NIPR).

The state member bank should require its own insurance or annuity sales personnel or third-party sales personnel selling at or on behalf of the bank to receive appropriate training and licensing. Training should cover appropriate policies and procedures for the bank's sales of insurance and annuity products. Personnel who are referring potential or established customers to a licensed insurance producer should also be trained to ensure that referrals are made in conformance with the CPSI regulation, if applicable. The training should also include procedures and guidance to ensure that an unlicensed or referring individual cannot be deemed to be acting as an insurance agent that is subject to licensing requirements.

When insurance or annuities are sold by a state member bank or third parties at an office of, or on behalf of, the organization, the institution should have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as for supervising the referral activities of bank employees not authorized to sell these products. A state member bank also should designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as with the CPSI regulation, if applicable.

Compliance

State member banks should have policies and procedures to ensure that insurance or annuity sales activities are conducted in compliance with applicable laws and regulations (including the CPSI regulation for sales conducted by or on behalf of the state member bank) and the institution's internal policies and procedures. Compliance procedures should identify any potential conflicts of interest and how such conflicts should be addressed. For example, sales-compensation programs should be conducted in a manner that would not expose the bank to undue legal or reputation risks. The compliance procedures should also provide for a system to monitor customer complaints and their resolution. Where applicable, compliance procedures also should call for verification that third-party sales are being conducted in a manner consistent with the governing agreement with the banking organization.

The compliance function should be conducted independently of the insurance and annuity prod-

uct sales and management activities. Compliance personnel should determine the scope and frequency of their reviews, and findings of compliance reviews should be reported directly to the state member bank's board of directors or to its designated board committee.

RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

A risk assessment of insurance activities may be accomplished in the course of conducting a regularly scheduled state member bank examination or as a targeted review. The purpose of preparing the risk assessment is to determine the level and direction of risk to the bank arising from its insurance and annuity sales activities. Risks to state member banks engaged in insurance and annuity sales programs consist primarily of legal, reputational, and operational risk, all of which may lead to financial loss. After completing the risk assessment, if material concerns remain, the Board's Division of Banking Supervision and Regulation staff should be consulted for further guidance.

Legal and reputational risk may arise from a variety of sources, such as fraud; noncompliance with statutory or regulatory requirements, including those pertaining to the handling of premiums collected on behalf of the underwriter; claims processing; insurance and annuity sales practices; and the handling of "errors and omissions" claims.¹³ Other sources of legal and reputational risk may arise from failing to safeguard nonpublic customer information, a high volume of customer complaints, or public regulatory sanctions against a producer.

Legal and reputational risks may also arise from an agent's obligation to provide a customer with products that are suited to the customer's particular needs and are priced and sold in accordance with state regulations. Additionally, an agent or agency may be liable for failing to carry out the appropriate paperwork to bind a policy that it has sold to a customer, or for making an error in binding the policy. State insurance departments generally are permitted

by law to suspend or revoke a producer's license and assess monetary penalties against a producer if warranted.

Operational risk may arise from errors in processing sales-related information or from a lack of appropriate controls over systems or staff responsible for carrying out the insurance or annuity sales activities. Additionally, state member banks that have recently commenced insurance or annuity sales activities, or that are expanding their insurance or annuity sales business, also are exposed to risk arising from inadequate strategic and financial planning associated with the activities, which could result in financial loss. Examiners should be attuned to risks that may arise from inadequate controls over insurance activities, a rapid expansion of the insurance or annuity sales programs offered by the state member bank, the introduction of new products or delivery channels, and legal and regulatory developments.

Operational risk may arise from inadequate premium-payment procedures and trust-account-balance administration by an agency. When the insurance agency bills the insured, the agent must comply with requirements for forwarding the payments to the insurer and for safekeeping the funds. Inadequate internal controls over this activity may result in the inappropriate use of these funds by the agent or agency. The state member bank should ensure that appropriate controls are in place to verify that all funds that are owed to the insurer or the insured are identified in the trust account and that the account is in balance.

When conducting a risk assessment, the examiner should first obtain relevant information to determine the existence and scale of insurance or annuity sales activity. Such information is available in the state member bank's Uniform Bank Performance Report (UBPR) and in other System reports on insurance activities. Relevant reports, including applicable balance sheets and income statements for the insurance and annuity sales activities, may also be obtained from the state member bank. When preparing a risk assessment for an insurance or annuity sales activity that is conducted by a functionally regulated nonbank subsidiary of a state member bank, examiners should rely, to the fullest extent possible, on information available from the state member bank and the appropriate state insurance regulator for the subsidiary. If information that is needed to assess the risk cannot be obtained from the state member bank or the

13. Errors and omissions insurance indemnifies the insured against loss sustained because of an error or oversight by the insured. For instance, an insurance agency generally purchases this type of coverage to protect itself against such things as failing to issue a policy.

applicable functional regulator, the examiner should consult with the appropriate designated Board staff. Requests should not be made directly to a functionally regulated nonbank insurance and annuity sales subsidiary of a state member bank without first obtaining approval from the appropriate Board staff.

CONSUMER PROTECTION IN SALES OF INSURANCE RULES

Overview of the CPSI Regulation

The CPSI regulation is applicable to all insured depository institutions.¹⁴ The regulation, however, generally does not apply to nonbank affiliates or subsidiaries of a state member bank unless the company engages in the retail sale of insurance products or annuities at an office of, or on behalf of, an insured depository institution. Interpretations of the regulation issued by the federal banking agencies are found in appendix A of this section. Federal Reserve examiners are responsible for reviewing state member banks' compliance with the regulation.

The regulation applies to the retail sale of insurance products and annuities by banks or by any other person at an office of a bank, or acting on behalf of a bank. For purposes of the CPSI regulation, "office" means the premises of the bank where retail deposits are accepted. The regulation applies only to the retail sale of insurance or annuity products—that is, when the insurance is sold or marketed to an individual primarily for personal, family, or household purposes.

Misrepresentations Prohibited

The regulation prohibits a bank or other covered person from engaging in any practice or using any advertisement at any office of, or on behalf of, the bank or a subsidiary of the bank if the practice or advertisement could mislead any person or otherwise cause a reasonable person to erroneously believe—

14. The CPSI regulation applies to all federally insured depository institutions, including all federally chartered U.S. branches and state-chartered insured U.S. branches of foreign banking organizations.

- that the insurance product or annuity is backed by the federal government or the bank or is insured by the Federal Deposit Insurance Corporation (FDIC);
- that an insurance product or annuity does not have investment risk, including the potential that principal may be lost and the product may decline in value, when in fact the product or annuity does have such risks; or
- in the case of a bank or subsidiary of the bank at which insurance products or annuities are sold or offered for sale, that (1) the bank may condition approval of an extension of credit to a consumer by the bank or subsidiary on the purchase of an insurance product or annuity from the bank or a subsidiary of the bank, and (2) the consumer is not free to purchase the insurance product or annuity from another source.

The regulation also incorporates the anti-tying provisions of section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 USC 1972). Additionally, banks are prohibited from selling life or health insurance products if the status of the applicant or insured as a victim of domestic violence or as a provider of services to domestic violence victims is considered as a factor in decision making on the product, except as expressly authorized by state law.

Insurance Disclosures

The CPSI regulation also requires that a bank or a person selling insurance at an office of, or on behalf of, a bank make the following affirmative disclosures (to the extent accurate), both orally and in writing, before the completion of the initial sale of an insurance product or an annuity to a consumer. However, sales by mail or, if the consumer consents, via electronic media (such as the Internet) do not require oral disclosure.

- The insurance product or annuity is not a deposit or other obligation of, or guaranteed by, the bank or an affiliate of the bank.
- The insurance product or annuity is not insured by the FDIC or any other U.S. government agency, the bank, or (if applicable) an affiliate of the bank.
- The insurance product or annuity, if applicable, has investment risk, including the possible loss of value.

For telephone sales, written disclosures must be mailed within three business days. The above disclosures must be included in advertisements and promotional materials for insurance products and annuities, unless the advertisements or promotional materials are of a general nature and describe or list the nature of services or products offered by the bank. Disclosures must be conspicuous and readily understandable.

Credit Disclosures

When an application for credit is made in connection with the solicitation, offer, or sale of an insurance product or annuity, the consumer must be notified that the bank may not condition the extension of credit on either (1) the consumer's purchase of an insurance product or annuity from the bank or any of its affiliates or (2) the consumer's agreement not to obtain, or a prohibition on the consumer from obtaining, an insurance product or annuity from an unaffiliated entity. These disclosures must be made both orally and in writing; however, applications taken by mail or, if the consumer consents, via electronic media, do not require oral disclosure. For telephone applications, the written disclosure must be mailed within three business days. The disclosures must be conspicuous and readily understandable.

Consumer Acknowledgment

The bank must obtain written or electronic acknowledgments of the consumer's receipt of the disclosures described above at the time they are made or at the completion of the initial purchase. For telephone sales, the bank must receive an oral acknowledgment and make a reasonable effort to obtain a subsequent written or electronic acknowledgment.

Location

Insurance and annuity sales activities must take place, to the extent practicable, in an area physically segregated from one where retail deposits are routinely accepted from the general public (such as teller windows). The bank must clearly identify and delineate areas where insurance and annuity sales activities occur.

Referrals

Any person who accepts deposits from the public in an area where deposits are routinely accepted may refer a consumer to a qualified person who sells insurance products or annuities only if the person making the referral receives no more than a one-time, nominal fee of a fixed dollar amount for the referral. The amount of the referral fee may *not* depend on whether a sale results from the referral.

Qualifications

A bank may not permit any person to sell or offer insurance products or annuities at its office or on its behalf, unless that person is at all times properly qualified and licensed under applicable state law for the specific products being sold or recommended.

Relationship of the CPSI Regulation to State Regulation

The GLB Act contains a legal framework for determining the effect of the CPSI regulation on state laws governing the sale of insurance, including state consumer protection standards. In general, if a state has legal requirements that are inconsistent with, or contrary to, the CPSI regulation, initially the federal regulation does not apply in the state. However, the federal banking agencies may, after consulting with the state involved, decide to preempt any inconsistent or contrary state laws if the agencies find that the CPSI regulation provides greater protections than the state laws. It is not expected that there will be significant conflict between state and federal laws in this area. If the consumer protection laws of a particular state appear to be inconsistent with and less stringent (that is, provide less consumer protection) than the CPSI regulation, examiners should inform the staff of the Board's Division of Banking Supervision and Regulation.

Relationship to Federal Reserve Guidance on the Sale of Nondeposit Investment Products

When a bank sells insurance products or annu-

ities that also are securities (such as variable life insurance annuities), it must conform with the applicable Federal Reserve and interagency guidance pertaining to a bank's retail sales of non-deposit investment products (NDIPs).¹⁵ If the CPSI regulation and the guidance pertaining to NDIPs conflict, the CPSI regulation prevails.

Examining a State Member Bank for Compliance with the CPSI Regulation

Examinations for compliance with the CPSI regulation should be conducted consistent with the risk-focused supervisory approach when a state member bank sells insurance products or annuities directly, or when a third party sells insurance or annuities at or on behalf of, a state member bank. To the extent practicable, the examiner should conduct the review at the state member bank. In certain instances, however, the examiner's review at the state member bank may identify potential supervisory concerns about the state member bank's compliance with the CPSI regulation as it pertains to insurance or annuities sales conducted by a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance products or annuities at or on behalf of the state member bank.

If the examiner determines that an on-site review of a functionally regulated nonbank affiliate or subsidiary of the state member bank is appropriate to adequately assess the state member bank's compliance with the CPSI regulation, the examiner should discuss the situation with staff of the Board's Division of Banking Supervision and Regulation. The approval of the Division of Banking Supervision and Regulation's officer that is responsible for the supervisory policy and examination guidance pertaining to insurance and annuity sales activities should be obtained before examining or requesting any information directly from a functionally regulated nonbank affiliate or subsidiary of the state member bank that is selling insurance or annuity products at or on behalf of the state member bank.

The examination guidelines described in section 4043.3 apply to retail sales, solicitations, advertisements, or offers of insurance products and annuities by any state member bank or any

other person that is engaged in such activities at an office of the bank or on behalf of the state member bank. For purposes of the CPSI regulation, activities "on behalf of a state member bank" include activities in which a person, whether at an office of the bank or at another location, sells, solicits, advertises, or offers an insurance product or annuity and in which at least one of the following applies:

- The person represents to a consumer that the sale, solicitation, advertisement, or offer of any insurance product or annuity is by or on behalf of the bank.
- The bank refers a consumer to a seller of insurance products or annuities, and the bank has a contractual arrangement to receive commissions or fees derived from the sale of an insurance product or annuity resulting from the bank's referral.
- Documents evidencing the sale, solicitation, advertising, or offer of an insurance product or annuity identify or refer to the bank.

APPENDIX A—JOINT INTERPRETATIONS OF THE CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION

In response to a banking association's inquiries, the federal banking agencies jointly issued interpretations regarding the Consumer Protection in Sales of Insurance (CPSI) regulation.¹ A joint statement, issued on August 17, 2001, contains responses to a set of questions relating to disclosure and acknowledgment, the scope of applicability of the regulation, and compliance. Additionally, a February 28, 2003, joint statement responded to a request to clarify whether the disclosure requirements apply to renewals of pre-existing insurance policies sold before October 1, 2001, the effective date of the regulation. The issues raised and the banking agencies' responses are summarized below.

1. These letters, issued jointly by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision, may be accessed on these agencies' web sites.

15. Interagency Statement on Retail Sales of Nondeposit Investment Products, February 17, 1994. See SR-94-11.

Disclosures

Credit Disclosures

A bank or other person who engages in insurance sales activities at an office of, or on behalf of, a bank (“a covered person”) must make the credit disclosures set forth in the regulation if a consumer is solicited to purchase insurance while the consumer’s loan application is pending. A consumer’s application for credit is still “pending” for purposes of the regulation if the depository institution has approved the consumer’s loan application but not yet notified the consumer. Until the consumer is notified of the loan approval, the covered person must provide the credit disclosures if the consumer is solicited, offered, or sold insurance.

Disclosures for Sales by Mail and Telephone

The regulation requires a covered person to provide oral disclosures and to obtain an oral acknowledgment of these disclosures when sales activities are conducted by telephone. This requirement applies regardless of whether the consumer will also receive and acknowledge written disclosures in person, through the mail, or electronically.

Use of Short-Form Insurance Disclosures

There is no short form for the credit disclosures. A depository institution, however, may use the short-form insurance disclosures set forth below in visual media (such as television broadcasting, ATM screens, billboards, signs, posters, and written advertisements and promotional materials):

- NOT A DEPOSIT
- NOT FDIC-INSURED
- NOT INSURED BY ANY FEDERAL GOVERNMENT AGENCY
- NOT GUARANTEED BY THE BANK
- MAY GO DOWN IN VALUE

Acknowledgment of Disclosures

Reasonable efforts to obtain written acknowledgment. The banking agencies have not pre-

scribed any steps that must be taken for a depository institution’s efforts to obtain a written acknowledgment to be deemed “reasonable” in a transaction conducted by telephone. Examples of reasonable efforts, however, include—

- providing the consumer with a return-addressed envelope or similar means to facilitate the consumer’s return of the written acknowledgment,
- making a follow-up phone call or contact,
- sending a second mailing, or
- similar actions.

The covered person should (1) maintain documentation that the written disclosures and the request for written acknowledgment of those disclosures were mailed to the consumer and (2) should record his or her efforts to obtain the signed acknowledgment. The “reasonable efforts” policy exception for telephone sales does not apply to other types of transactions, such as mail solicitations, in which a covered person must obtain from the consumer a written (in electronic or paper form) acknowledgment.

Appropriate form or format for acknowledgment provided electronically. Electronic acknowledgments are not required to be in a specific format but must be consistent with the provisions of the CPSI regulation applicable to consumer acknowledgments. That is, the electronic acknowledgment must establish that the consumer has acknowledged receipt of the credit and insurance disclosures, as applicable.

Retention of acknowledgments by an insurance company. If an insurance company provides the disclosures and obtains the acknowledgment on behalf of a depository institution, the insurance company may retain the acknowledgment. The depository institution is responsible for ensuring that sales made “on behalf of” the depository institution are in compliance with the CPSI regulation. An insurance company may maintain documentation showing compliance with the CPSI regulation, but the depository institution should have access to such records and the records should be readily available for review by examiners.

Form of written acknowledgment. There is no prescribed form for the written acknowledg-

ment. The regulation requires, however, that a covered person obtain the consumer's acknowledgment of receipt of the complete insurance and credit disclosures.

Timing of acknowledgment receipt. A covered person must obtain the consumer's acknowledgment either at the time a consumer receives disclosures or at the time of the initial purchase of an insurance product.

Oral acknowledgment of oral disclosure. The CPSI regulation does not prescribe any specific wording for an oral acknowledgment. However, if a covered person has made the insurance and credit disclosures orally, an affirmative response to the question "Do you acknowledge that you received this disclosure?" is acceptable.

Scope of the CPSI Regulation

Applicability to Private Mortgage Insurance

Depending on the nature of a depository institution's involvement in an insurance sales transaction, the CPSI regulation may cover sales of private mortgage insurance. If the depository institution itself purchases the insurance to protect its interest in mortgage loans it has issued and merely passes the costs of the insurance on to the mortgage borrowers, the transaction is not covered by the regulation. If, however, a consumer has the option of purchasing the private mortgage insurance and (1) the depository institution offers the private mortgage insurance to a consumer or (2) any other person offers the private mortgage insurance to a consumer at an office of a depository institution, or on behalf of a depository institution, the transaction would be covered by the regulation.

Applicability to Federal Crop Insurance

The CPSI regulation does not apply to federal crop insurance that is sold for commercial or business purposes. However, if the crop insurance is purchased by an individual primarily for family, personal, or household purposes, it would be covered.

Solicitations and Applications Distributed Before, but Returned After, the Effective Date of the CPSI Regulation

Direct-mail solicitations and "take-one" applications that are distributed on or after October 1, 2001, must comply with the CPSI regulation. If a consumer seeks to purchase insurance after the effective date of the regulation in response to a solicitation or advertisement that was distributed before that date, the depository institution would be in compliance with the regulation if the institution provides the consumer, before the initial sale, with the disclosures required by the regulation. These disclosures must be both written and oral, except that oral disclosures are not required if the consumer mails in the application.

Renewals of Insurance

Renewals of insurance are not subject to the disclosure requirements (see "Disclosures" above) but are subject to other requirements of the CPSI regulation. A "renewal" of insurance means continuation of coverage involving the same type of insurance for a consumer as issued by the same carrier. A renewal need not be on the same terms and conditions as the original policy, provided that the renewal does not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the time of the initial sale. An upgrade in coverage at a time when a policy is not up for renewal would be treated as a renewal, provided that the solicitation and sale of the upgrade does not involve a different type of insurance and the consumer has previously received the disclosures required by the regulation at the initial sale.

Disclosures Required with Renewals of Insurance Coverage

The banking agencies' interpretations clarified that the CPSI regulation does not *mandate* disclosures for renewals of policies sold before October 1, 2001. Accordingly, the regulation does not require the disclosures to be furnished at the time of renewal of a policy, including a pre-existing policy. However, renewals are subject to the other provisions of the regulation. Moreover, the banking agencies would expect that, consistent with applicable safety-and-

soundness requirements, depository institutions would take reasonable steps to avoid customer confusion in connection with renewals of pre-existing policies.

“On-Behalf-of” Test and Use of Corporate Name or Logo

Under the CPSI regulation, an affiliate of a bank is not considered to be acting “on behalf of” a bank simply because the affiliate’s marketing or other materials use a corporate name or logo that is common to the bank and the affiliate. In general, this exclusion applies even if a bank and its parent holding company have a similar, but not identical, name. For example, if the names of all of the affiliates of a bank holding company share the words “First National,” an affiliate would not be considered to be engaged in an activity “on behalf of” an affiliated bank simply by using the terms “First National” as part of a corporate logo or identity. The affiliate would, however, be considered to be acting “on behalf of” an affiliated bank if the name of the bank (for example, “First National Bank”) appears in a document as the seller, solicitor, advertiser, or offeror of insurance. A transaction also would be covered if it occurs on the premises of a depository institution or if one of the other prongs of the “on-behalf-of” test is met.

Compliance

Appropriate Documentation of an Oral Disclosure or Oral Acknowledgment

There is no specific documentation requirement for oral disclosures or acknowledgments. However, other applicable regulatory reporting standards would apply. Appropriate documentation of an oral disclosure would clearly show that the covered person made the credit and insurance disclosures to a consumer. Similarly, appropriate documentation of an oral acknowledgment would clearly show that the consumer acknowledged receiving the credit and insurance disclosures. For example, a tape recording of the conversation (where permitted by applicable laws) in which the covered person made the oral disclosures and received the oral acknowledgment would be acceptable. Another example would

be a contemporaneous checklist completed by the covered person to indicate that he or she made the oral disclosures and received the oral acknowledgment. A contemporaneous note to the consumer’s file would also be adequate. The documentation should be maintained in the consumer’s file so that it is accessible to examiners.

Setting for Insurance Sales

A depository institution must identify the areas where insurance sales occur and must clearly delineate and distinguish those areas from areas where the depository institution’s retail deposit-taking activities occur. Although the banking agencies did not define how depository institutions could “clearly delineate and distinguish” insurance areas, signage or other means may be used.

APPENDIX B—GLOSSARY

For additional definitions of insurance terms, see section 4040.1.

Accident and health insurance. A type of coverage that pays benefits in case of sickness, accidental injury, or accidental death. This coverage may provide for loss of income when the insured is disabled and provides reimbursement for medical expenses when the insured is ill. The insurance can provide for debt payment if it is taken out in conjunction with a loan. (See *Credit life insurance*.)

Actuary. A professional whose function is to calculate statistically various estimates for the field of insurance, including the estimated risk of loss on an insurable interest and the appropriate level for premiums and reserves.

Admitted insurer. An insurance company licensed by a state insurance department to underwrite insurance products in that state.

Agency contract (or agreement). An agreement that establishes the contractual relationship between an agent and an insurer.

Agent. A licensed insurance company representative under contract to one or more insurance companies. Depending on the line of insurance

represented, an agent's power may include soliciting, advertising, and selling insurance; collecting premiums; claims processing; and effecting insurance coverage on behalf of an insurance underwriter. Agents are generally compensated by commissions on policies sold, although some may receive salaries.

- *Captive or exclusive agent.* An agent who represents a single insurer.
- *General agent.* An agent who is contractually awarded a specific geographic territory for an individual insurance company. They are responsible for building their own agency and usually represent only one insurer. Unlike exclusive agents, who usually receive a salary in addition to commissions, general agents are typically compensated on a commission basis only.
- *Independent agent.* An agent who is under contractual agreements with at least two different insurers. Typically, all of the independent agent's compensation originates from commissions.

Aggregate excess-of-loss reinsurance. A form of "excess-of-loss" reinsurance that indemnifies the ceding company against the amount by which all of the ceding company's losses incurred during a specific period (usually 12 months) exceed either (1) a predetermined dollar amount or (2) a percentage of the company's subject premiums. This type of contract is also commonly referred to as *stop-loss reinsurance* or *excess-of-loss ratio reinsurance*.

Allied lines. Various insurance coverages for additional types of losses and against losses by additional perils. The coverages are closely associated with and usually sold with fire insurance. Examples include coverage against loss by perils other than fire, coverage for sprinkler-leakage damage, and business-interruption coverage.

Annuity. A contract that provides for a series of payments payable over an individual's life span or other term, on the basis of an initial lump-sum contribution or series of payments made by the annuitant into the annuity during the accumulation phase of the contract.

- *Fixed-annuity contracts* provide for payments

to annuitants at fixed, guaranteed minimum rates of interests.

- *Variable-annuity contracts* provide for payments based on the performance of annuity investments. Variable-annuity contracts are usually sold based on a series of payments and offer a range of investment or funding options, such as stocks, bonds, and money market fund investments. The annuity principal and the investment return are not guaranteed as they depend on the performance of the underlying funding option.

Annuity payments may commence with the execution of the annuity contract (*immediate annuity*) or may be deferred until some future date (*deferred annuity*).

Assigned risk. A risk that is not usually acceptable to insurers and is therefore assigned to a group of insurers who are required to share in the premium income and losses, in accordance with state requirements, in order for the insurer to sell insurance in the state.

Assignment. The legal transfer of one person's interest in an insurance policy to another person or business.

Bank-owned life insurance (BOLI). Life insurance purchased and owned by a bank to fund its exposure arising from employee compensation and benefit programs. In a typical BOLI program, a bank insures a group of employees; pays the life insurance policy premiums; owns the cash values of the policies, which are booked on the bank's balance sheet as "other assets"; and is the beneficiary of the policies upon the death of any insured employee or former employee. (See SR-04-19 and section 4042.1.)

Beneficiary. The person or entity named in an insurance policy as the recipient of insurance proceeds upon the policyholder's death or when an endorsement matures. A revocable beneficiary can be changed by the policyholder at any time. An irrevocable beneficiary can be changed by the policyholder only with the written permission of the beneficiary.

Binder. A written or oral agreement, typically issued by an insurer, agent, or broker for property and casualty insurance, to indicate acceptance of a person's application for insurance and

to provide interim coverage pending the insurance company's issuance of a binding policy.

Blanket bond. Coverage for an employer for loss incurred as a result of employee dishonesty.

Boiler and machinery insurance. Insurance against the sudden and accidental breakdown of boilers, machinery, and electrical equipment, including coverage for damage to the equipment and property damage, including the property of others. Coverage can be extended to cover consequential losses, including loss from interruption of business.

Broker. A person who represents the insurance buyer in the purchase of insurance. Brokers do not have the power to bind an insurance company to an insurance contract. Once a contract is accepted, the broker is compensated for the transaction through a commission from the insurance company. An individual may be licensed as both a broker and an agent.

Bulk reinsurance. A transaction sometimes defined by statute as any quota-share, surplus aid, or portfolio reinsurance agreement through which an insurer assumes all or a substantial portion of the liability of the reinsured company.

Captive insurer. An insurance company established by a parent firm to insure or reinsure its own risks or the risks of affiliated companies. A captive may also underwrite insurable risks of unaffiliated companies, typically the risks of its customers or employees. For example, a bank may form a captive insurance company to underwrite its own directors' and officers' risks or to underwrite credit life or private mortgage insurance (third-party risks) related to its lending activities.

Cash surrender value of life insurance. The amount of cash available to a life insurance policyholder upon the voluntary termination of a life insurance policy before it becomes payable by death or maturity.

Casualty insurance. Coverage for the liability arising from third-party claims against the insured for negligent acts or omissions causing bodily injury or property damage.

Cede. To transfer to a reinsurer all or part of the

insurance or reinsurance risk underwritten by an insurance company.

Ceding commission. The fee paid to a reinsurance company for assuming the risk of a primary insurance company.

Ceding company (also cedant, reinsured, reas-sured). The insurer that transfers all or part of the insurance or reinsurance risk it has underwritten to another insurer or reinsurer via a reinsurance agreement.

Cession. The amount of insurance risk transferred to the reinsurer by the ceding company.

Churning. The illegal practice wherein a customer is persuaded to unnecessarily cancel one insurance policy in favor of buying a purportedly superior policy, often using the cash surrender value of the existing policy to pay the early premiums of the new policy. In such a transaction, the salesperson benefits from the additional commission awarded for booking a new policy.

Claim. A request for payment of a loss under the terms of a policy. Claims are payable in the manner suited to the insured risk. Life, property, casualty, health, and liability claims generally are paid in a lump sum after the loss is incurred. Disability and loss-of-time claims are paid periodically during the period of disability or through a discounted lump-sum payment.

Coinsurance. A provision in property and casualty insurance that requires the insured to maintain a specified amount of insurance based on the value of the property insured. Coinsurance clauses are also found in health insurance and require the insured to share a percentage of the loss.

Combination-plan reinsurance. A reinsurance agreement that combines the excess-of-loss and the quota-share forms of coverage within one contract, with the reinsurance premium established as a fixed percentage of the ceding company's subject premium. After deducting the excess recovery on any one loss for one risk, the reinsurer indemnifies the ceding company on the basis of a fixed quota-share percentage. If a loss does not exceed the excess-of-loss retention level, only the quota-share coverage applies.

Commission. The remuneration paid by insurance carriers to insurance agents and brokers for the sale of insurance and annuity products.

Comprehensive personal liability insurance. A type of insurance that reimburses the policyholder if he or she becomes liable to pay money for damage or injury he or she has caused to others. This coverage does not include automobile liability but does include almost every activity of the policyholder, except business operations.

Contractholder. The person, entity, or group to whom an annuity is issued.

Credit for reinsurance. A statutory accounting procedure, set forth under state insurance regulations, that permits a ceding company to treat amounts due from reinsurers as assets, or as offsets to liabilities, on the basis of the reinsurer's status.

Credit life insurance. A term insurance product issued on the life of a debtor that is tied to repayment of a specific loan or indebtedness. Proceeds of a credit life insurance policy are used to extinguish remaining indebtedness at the time of the borrower's death. The term is applied broadly to other forms of credit-related insurance that provide for debt satisfaction in the event of a borrower's disability, accident or illness, and unemployment. Credit life insurance has historically been among the most common bank insurance products.

Credit score. A number that is based on an analysis of an individual's credit history and that insurers may consider as an indicator of risk for purposes of underwriting insurance. Where not prohibited by state law, insurers may consider a person's credit history when underwriting personal lines.

Debt-cancellation contract/debt-suspension agreement. A loan term or contract between a lender and borrower whereby, for a fee, the lender agrees to cancel or suspend payment on the borrower's loan in the event of the borrower's death, serious injury, unemployment, or other specified events. The Office of the Comptroller of the Currency considers these products to be banking products. State law determines whether these products are bank or insurance products for state-chartered banks and insurance companies.

Deductible. The amount a policyholder agrees to pay toward the total amount of insurance loss. The deductible may apply to each claim for a loss occurrence, such as each automobile accident, or to all claims made during a specified period, as with health insurance.

Directors and officers liability insurance. Liability insurance covering a corporation's obligation to reimburse its directors or officers for claims made against them for alleged wrongful acts. It also provides direct coverage for company directors and officers themselves in instances when corporate indemnification is not available.

Direct premiums written. Premiums received by an underwriter for all policies written during a given time period by the insurer, excluding those received through reinsurance assumed.

Direct writer. An insurance company that deals directly with the insured through a salaried representative, as opposed to those insurers that use agents. This term also refers to insurers that operate through exclusive agents. In reinsurance, a direct writer is the company that originally underwrites the insurance policies ceded.

Disability income insurance. An insurance product that provides income payment to the insured when his or her income is interrupted or terminated because of illness or accident.

Endowment insurance. A type of life insurance contract under which the insured receives the face value of the policy if he or she survives the endowment period. Otherwise, the beneficiary receives the face value of the policy upon the death of the insured.

Errors and omissions (E&O) liability insurance. Professional liability insurance that covers negligent acts or omissions resulting in loss. Insurance agents are continually exposed to the claim that inadequate or inappropriate coverage was recommended, resulting in a lack of coverage for losses incurred. The agent or the carrier may be responsible for coverage for legitimate claims.

Excess-of-loss reinsurance. A form of reinsurance whereby an insurer pays the amount of each claim for each risk up to a limit determined in advance, and the reinsurer pays the amount of the claim above that limit up to a specific sum. It includes various types of reinsurance, such as

catastrophe reinsurance, per-risk reinsurance, per-occurrence reinsurance, and aggregate excess-of-loss reinsurance.

Excess-per-risk reinsurance. A form of excess-of-loss reinsurance that, subject to a specified limit, indemnifies the ceding company against the amount of loss in excess of a specified retention for each risk involved in each occurrence.

Excess and surplus lines. Property/casualty coverage that is unavailable from insurers licensed by the state (admitted insurers) and must be purchased from a nonadmitted underwriter.

Exposure. The aggregate of all policyholder limits of liability arising from policies written.

Face amount. The amount stated on the face of the insurance policy to be paid, depending on the type of coverage, upon death or maturity. It does not include dividend additions or additional amounts payable under accidental death or other special provisions.

Facultative reinsurance. Reinsurance of individual risks by offer and acceptance wherein the reinsurer retains the faculty to accept or reject each risk offered by the ceding company.

Facultative treaty. A reinsurance contract under which the ceding company has the option to cede and the reinsurer has the option to accept or decline classified risks of a specific business line. The contract merely reflects how individual facultative reinsurance shall be handled.

Financial guarantee insurance. Financial guarantee insurance is provided for a wide array of financial risks. Typically, coverage is provided for the fulfillment of a specific financial obligation originated in a business transaction. The insurer, in effect, is lending the debtor its own credit rating to enhance the debtor's creditworthiness.

Financial strength rating. Opinion as to an insurance company's ability to meet its senior policyholder obligations and claims. For many years, the principal rating agency for property and casualty insurers and life insurers has been A.M. Best. Other rating agencies, such as Fitch, Moody's, Standard and Poor's, and Weiss, also rate insurers.

Fixed annuity. See *Annuity*.

Flood insurance. A special insurance policy to protect against the risk of loss or damage to property caused by flooding. Regular homeowners' policies do not pay for damages caused by flooding.

General liability insurance. A broad commercial policy that covers all business liability exposures, such as product liability, completed operations, premises and operations, independent contractors, and other exposures that are not specifically excluded.

Gross premiums written. Total premiums for insurance written during a given period, before deduction for reinsurance ceded.

Group insurance. Insurance coverage typically issued to an employer under a master policy for the benefit of employees. The insurer usually does not condition coverage of the people that make up the group upon satisfactory medical examinations or other requirements. The individual members of the group hold certificates as evidence of their insurance.

Health insurance. An insurance product that provides benefits for medical expenses incurred as a result of sickness or accident, as well as income payments to replace lost income when the insured is unable to work because of illness, accident, or disability. This product may be in the form of traditional indemnity insurance or managed-care plans and may be underwritten on an individual or group basis.

Incurred but not reported (IBNR). The loss-reserve value established by insurance and reinsurance companies in recognition of their liability for future payments on losses that have occurred but have not yet been reported to them. This definition is often erroneously expanded to include adverse loss development on reported claims. The term *incurred but not enough reported (IBNER)* is being increasingly used to reflect more accurately the adverse development on inadequately reserved reported claims.

Inland marine insurance. A broad field of insurance that covers cargo being shipped by air, truck, or rail. It includes coverage for most property involved in transporting cargo as well as for bridges, tunnels, and communications systems.

Key person life insurance. Life insurance designed to cover the key employees of an employer. It may be written on a group- or an individual-policy basis.

Lapse. The termination or discontinuance of a policy resulting from the insured's failure to pay the premium due.

Liability insurance. Protects policyholders from financial loss due to liability resulting from injuries to other persons or damage to their property.

Lines. A term used in insurance to denote insurance business lines, as in "commercial lines" and "personal lines."

Long-term care insurance. Health insurance designed to supplement the cost of nursing home care or other care facilities in the event of a long-term illness or permanent disability or incapacity.

Managing general agent. A managing general agent (MGA) is a wholesaler of insurance products and services to insurance agents. An MGA receives contractual authority from an insurer to assume many of the insurance company's functions. The MGA may provide insurance products to the public through local insurance agents as well as provide services to an insurance company, including marketing, accounting, data processing, policy maintenance, and claims-monitoring and -processing services. Many insurance companies prefer the MGA distribution and management system for their insurance products because it avoids the high cost of establishing branch offices. Most states require that an MGA be licensed.

Manuscript policy. A policy written to include specific coverage or conditions not provided in a standard policy.

Morbidity. The incidence and severity of illness and disease in a defined class of insured persons.

Mortality. The rate at which members of a group die in a specified period of time or die from a specific illness.

Mortgage guarantee insurance. A product that insures lenders against nonpayment by borrowers. The policies are issued for a specified time

period. Lenders who finance more than 80 percent of the property's fair value generally require such insurance.

Mortgage insurance. Life insurance that pays the balance of a mortgage even if the borrower dies. Coverage typically is in the form of term life insurance, with the coverage declining as the debt is paid off.

Multiperil insurance. An insurance contract providing coverage against many perils, usually combining liability and physical damage coverage.

Net premiums written. The amount of gross premiums written, after deduction of premiums ceded to reinsurers.

Ninety-day loss rule. A state requirement for an insurer to establish a loss provision for reinsurance recoverables over 90 days past due.

Obligatory treaty. A reinsurance contract under which business must be ceded in accordance with contract terms and must be accepted by the reinsurer.

Policyholder. The person or entity who owns an insurance policy. This is usually the insured person, but it may also be a relative of the insured, a partnership, or a corporation.

Premium. The payment, or one of the periodic payments, a policyholder agrees to make for insurance coverage.

Private mortgage insurance (PMI). Coverage for a mortgage lender against losses due to a collateral shortfall on a defaulted residential real estate loan. Most banks require borrowers to take out a PMI policy if a downpayment of less than 20 percent of a home's value is made at the time the loan is originated. PMI does not directly benefit a borrower, although its existence provides the opportunity to purchase a home to many people who otherwise would not qualify for a loan.

Producer. A person licensed to sell, solicit, or negotiate insurance.

Professional designations and organizations. Three of the most common insurance professional designations are chartered life under-

writer (CLU), chartered property casualty underwriter (CPCU), and chartered financial consultant (ChFC). Insurance agents also join professional organizations such as the American Society of Chartered Life Underwriters, the International Association of Financial Planning, the National Association of Life Underwriters, the National Association of Health Underwriters, the American Council of Life Insurance, the Life Insurance Marketing and Research Association, the Life Underwriter Training Council, and the Million Dollar Round Table.

Pro rata reinsurance. A generic term describing all forms of “quota-share” and “surplus reinsurance,” in which the reinsurer shares a pro rata portion of the losses and premiums of the ceding company.

Property insurance. Coverage for physical damage or destruction of real property (buildings, fixtures, and permanently attached equipment) and personal property (movable items that are not attached to land) that occurs during the policy period as a result of, for example, fire, windstorm, explosion, or vandalism.

Protected cell. A structure available to captive insurers underwriting risks of unaffiliated companies whereby the assets associated with the self-insurance program of one organization are segregated to provide legal-recourse protection from creditors of protected cells providing insurance coverage to other organizations.

Quota-share reinsurance. A form of pro rata reinsurance indemnifying the ceding company for a fixed percent of loss on each risk covered in the contract in consideration of the same percentage of the premium paid to the ceding company.

Rebating. Directly or indirectly giving or offering to give any portion of the premium or any other consideration to an insurance buyer as an inducement to purchase or renew the insurance. Rebates are forbidden under most state insurance codes.

Reinsurance. Insurance placed by an underwriter (the ceding company or reinsured) in another company to transfer or reduce the amount of the risk assumed under the original insurance policy (or group of policies).

Reinsurance premium. The consideration paid by a ceding company to a reinsurer for the coverage provided by the reinsurer.

Residual market. Also known as the shared market, it covers applications for insurance that were rejected by underwriters in the voluntary market that is covered by agency direct-marketing systems, perhaps because of high loss experience by the insured party. The residual market includes government insurance programs, specialty pools, and shared market mechanisms such as assigned-risk plans.

Retrocession. A reinsurance transaction whereby a reinsurer (the retrocedant) cedes all or part of the reinsurance risks it has assumed to another reinsurer (the retrocessionaire).

Retrospective rating. An insurance plan in which the current year’s premium is based on the insured’s own loss experience for that same period, subject to a maximum and minimum.

Rider. A written attachment, also known as an endorsement, to an insurance policy that changes the original policy to meet specific requirements, such as increasing or decreasing benefits or providing coverage for specific property items beyond that provided for under the insurance company’s standard contract terms.

Self-insured retention (SIR). The percentage of a risk or potential loss assumed by an insured, whether in the form of a deductible, self-insurance, or no insurance at all.

Separate accounts. Certain life insurance assets and related liabilities that are segregated and maintained to meet specific investment objectives of contract holders, particularly those assets and liabilities associated with pension plans and variable products offered by life insurers, wherein the customer and not the insurer retains most of the investment and interest-rate risk.

Split-dollar life insurance. An arrangement that typically involves an agreement between an employer and an employee whereby the premium payment, cash values, policy ownership, and death benefits may be split. There are many variations of split-dollar arrangements, including arrangements in which a trust is created to facilitate estate planning. Split-dollar life insurance is designed to serve as a supplemental

benefit to a particular company executive. The arrangement typically involves the payment of the insurance premium by the employer, with the death benefit accruing to the employee.

Subrogation. An insurance carrier may reserve the “right of subrogation” in the event of a loss. This means that the company may choose to take action to recover the amount of a claim paid to a covered insured if a third party caused the loss. After expenses, the amount recovered must be divided proportionately with the insured to cover any deductible for which the insured was responsible.

Term life insurance. An insurance product that provides, for a specified period of time, death coverage only. Typically, it has no savings component and, therefore, no cash value. Because term insurance provides only mortality protection, it generally provides the most coverage per premium dollar. Most term life insurance policies are renewable for one or more time periods up to a stipulated maximum age; however, premiums generally increase with the age of the policyholder.

Title insurance. Insurance that protects banks and mortgagees against unknown encumbrances against real estate by indemnifying the mortgagor and property owner in the event that clear ownership of the property is clouded by the discovery of faults in the title. Title insurance policies may be issued to either the mortgagor or the mortgagee or both. Title insurance is written largely only by companies specializing in this class of insurance.

Treaty reinsurance. A reinsurance contract under which the reinsured company agrees to cede, and the reinsurer agrees to assume, risks of a particular class or classes of business.

Twisting. In insurance, twisting involves making misrepresentations to a policyholder to induce the policyholder to terminate one policy and take out another policy with another company, when it is not to the insured’s benefit. Twisting is a violation of the Unfair Trade Practices Act. Twisting is similar to the “churning” concept in securities sales, and it results in increased commissions for the inducing agent.

Umbrella liability insurance. This type of liability insurance provides excess liability protection

over the “underlying” liability insurance coverage to supplement underlying policies that have been reduced or exhausted by loss.

Underwriting. The process by which a company determines whether it can accept an application for insurance and by which it may charge an appropriate premium for those applications selected. For example, the underwriting process for life insurance classifies applicants by identifying such characteristics as age, sex, health, and occupation.

Unearned reinsurance premium. The part of the reinsurance premium that is applicable to the unexpired portion of the policies reinsured.

Universal life insurance. A form of permanent insurance designed to provide flexibility in premium payments and death benefit protection. The policyholder can pay maximum premiums and maintain a high cash surrender value. Alternatively, the policyholder can make minimal payments in an amount only large enough to cover mortality and other expense charges.

Variable annuity. See *Annuity*.

Variable life insurance. A form of whole life, or universal life, insurance in which the policyholder’s cash value is invested in “separate accounts” of the insurer. These accounts are segregated from the insurance carrier’s other asset holdings. Such separate account investments are generally not available to a carrier’s general creditors in the event of the carrier’s insolvency. The policyholder assumes the investment and price risk. Because variable life policies have investment features, life insurance agents selling these policies must be registered representatives of a broker-dealer licensed by the Financial Industry Regulatory Authority and registered with the Securities and Exchange Commission.

Vendors’ single-interest insurance. A form of force-placed insurance that is typically purchased by the bank to protect against loss or damage to loan collateral in which the bank has a security interest. The bank passes its expense for this insurance on to the consumer who has either refused or is unable to obtain property insurance.

Viatical settlement. The cashing in of a life insurance policy at a discount from face amount

by policyholders who are often terminally ill and need the money for medical care. The purchaser becomes the policyholder as well as the beneficiary and assumes the premium payments of the policy.

Whole life insurance. A fixed-rate insurance product, with premiums and death benefits guaranteed over the duration of the policy. There is

a cash value (essentially a savings account) that accrues to the policyholder tax deferred. A policyholder receives the cash value in lieu of death benefits if the policy matures or lapses before the insured's death. A policyholder also may borrow against the policy's accumulated cash value or use it to pay future premiums. For most whole life insurance policies, premiums are constant for the life of the insured's contract.

Insurance Sales Activities and Consumer Protection in Sales of Insurance

Examination Objectives

Effective date November 2003

Section 4043.2

1. To understand the volume and complexity of the state member bank's insurance or annuity program and insurance sales strategy.
 2. To assess the financial results of the insurance and annuity sales activity compared with planned results.
 3. To determine if the state member bank's insurance and annuity sales activities are effectively integrated into the risk-management, audit, and compliance functions and if the control environment is adequate.
 4. To assess the adequacy of the state member bank's controls to ensure compliance with the applicable state and federal laws and regulations.
 5. To assess the state member bank's level and direction of operational, legal, and reputational risks from the insurance or annuity sales activity.
- The following objectives apply if insurance products or annuities are sold by a bank or another person at an office of, or on behalf of, the bank.*
6. To assess the adequacy of the state member bank's oversight program for ensuring compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation. (See section 4043.1.)
 7. To assess the effectiveness of the state member bank's audit and compliance programs for the CPSI regulation.
 8. To assess the state member bank's current compliance with the CPSI regulation.
 9. To obtain commitments for corrective action when the state member bank is in violation of the CPSI regulation or when applicable policies, procedures, practices, or management oversight to protect against violations is deficient.

Insurance Sales Activities and Consumer Protection in Sales of Insurance

Examination Procedures

Effective date November 2003

Section 4043.3

RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

The examiner should consider the following procedures, as appropriate, when conducting a risk assessment to determine the level and direction of risk exposure to the state member bank that is attributable to insurance or annuity sales activity. If there are specific areas of concern, the examiner should focus primarily on those areas.

1. *Scope of activities and strategies.* Assess the significance and complexity of the insurance or annuity sales program.

- a. Obtain a general overview of the scope of the state member bank's insurance or annuity sales activities and any anticipated or recent change in or expansion of such activities.
- b. Determine the state member bank's strategy for insurance or annuity sales, including strategies for cross-selling and referrals of insurance and banking products. Determine the institution's experience with any cross-marketing programs for both insurance business generated by the bank and bank business generated by insurance producers.
- c. Obtain two years' worth of income statements, balance sheets, and budget documents for the agency's activities. Compare the expected budget items with their actual results.
- d. Determine the volume and type of insurance or annuity products and services sold or solicited.
- e. Determine what other related services the state member bank provides in connection with its insurance or annuity sales activities, such as providing risk-management services to clients seeking advice on appropriate insurance coverages, claims processing, and other activities.

2. *Insurance sales products and concentrations.*

- a. Determine the composition of sales—
 - by line of business, such as property/casualty insurance, life insurance

including annuities, and health insurance;

- by the proportion of sales to commercial and retail customers; and
 - by the portion of sales that is credit related, such as credit life and credit health insurance.
- b. Determine any sales concentrations to particular entities, industries, or bank customers.
 - c. Note any concentrations to large commercial accounts.
 - d. Determine what insurance services are provided to the bank, its employees, and bank affiliates.
3. *Legal-entity and risk-management structure for insurance or annuity sales.*
- a. Obtain an organizational chart for the legal-entity and risk-management structure for the insurance or annuity sales activities.
 - b. Determine—
 - whether the insurance or annuity sales activity is conducted in an affiliated producer, by the bank itself, through another distribution arrangement, or by a combination of these arrangements;
 - the names of any affiliated insurance agencies and the states where the affiliated insurance agencies are licensed;
 - the locations outside of the United States where insurance or annuities are sold or solicited; and
 - if any subsidiary agency operates as a financial subsidiary under the Gramm-Leach-Bliley Act.
 - c. Determine if the insurance or annuity producer is acting as a managing general agent (MGA).¹ If so, determine—
 - the scope of the MGA activities;
 - the state member bank management's

1. MGAs do not assume underwriting risk. Through contractual arrangements with an insurer, MGAs have the authority to write policies on behalf of the insurer in certain instances, thereby binding the insurer to the policy. Certain minimum provisions governing MGA agreements are delineated in the applicable National Association of Insurance Commissioners (NAIC) model law.

- assessment of the risk associated with the MGA activity; and
- what risk controls are in place to protect the state member bank from potential loss that may arise from the MGA's activities, such as loss arising from legal liability.
4. *Strategic and financial plans.* Assess management controls over the insurance and annuity sales activities.
 - a. Ascertain the state member bank management's strategic and financial plans and goals for the insurance or annuity sales activity.
 - b. Review the state member bank's due-diligence process for acquiring and pricing agencies, if applicable.
 - c. Review the state member bank's financial budgets and forecasts for the activity, particularly plans for new products, marketing strategies and marketing arrangements, and the rate of actual and expected growth for the activity.
 - d. Determine the cause for significant deviations from the plan.
 - e. Determine if any agency acquired by the state member bank is providing the expected return on investment and if the agency's revenues are covering the debt servicing associated with the purchase, if applicable.
 5. *Review of board and committee records and reports.*
 - a. Review the reports of any significant state member bank oversight committees, including relevant board of directors and board committee minutes and risk-management reports.
 - b. Determine if the board of directors, a board committee, or senior management of the state member bank reviews reports pertaining to consumer complaints and complaint resolution, information pertaining to litigation and associated losses, and performance compared with the organization's plan for the insurance and annuity sales activities.
 6. *Policies and procedures.*
 - a. Determine—
 - the adequacy of the state member bank's policies and procedures for conducting and monitoring insurance or annuity sales activities, including those policies designed to ensure adherence with federal and state laws and regulations pertaining to consumer protection;
 - whether there are appropriate policies and procedures for the handling of customer funds collected on behalf of the underwriter; accurate and timely financial reporting; complaint monitoring and resolution; effective system security and disaster-recovery plans; and policy-exception tracking and reporting; and
 - if the board of directors or its designated committee has formally approved the policies.
 - b. Obtain a detailed balance sheet for agency subsidiaries, and determine if the assets held by insurance or annuity agency subsidiaries of the state member bank are all bank-eligible investments.
 - c. Determine the independence of the state member bank's audit program applicable to the insurance and annuity sales activity. Determine if the audit program's scope, frequency, and resources are commensurate with the insurance or annuity sales activities conducted.
 - d. Determine how the state member bank selects insurance underwriters with whom to do business, as well as how the state member bank monitors the continuing performance of the underwriters.
 - e. Determine the adequacy of the oversight of the bank's board of directors over the insurance management team's qualifications, the training and licensing of personnel, and general compliance with state insurance regulations.
 - f. Review the internal controls of the state member bank related to third-party arrangements, including arrangements for sales, processing, and auditing of insurance or annuity sales activities.
 7. *Claims, litigation, and functional regulatory supervision.* Assess legal and reputational risk.
 - a. Identify any significant litigation against the state member bank arising from its insurance or annuity sales activity and the likely impact of the litigation on the state member bank.
 - b. Obtain the insurance agency's errors and omissions claims records for the past several years, including a listing of claims it has made and the amount of claims, the

- claim status, and the amount of claim payments.
- c. Review the state member bank's policies and procedures for tracking and resolving claims. Determine if they appear adequate and if they are adhered to.
 - d. Determine if the applicable functional regulator has any outstanding supervisory issues with the insurance agency.
8. *Consumer complaints.*
 - a. Determine if bank management has policies and procedures in place to assess whether consumer complaints received are likely to expose the state member bank to regulatory action, litigation, reputational damage, or other significant risk.
 - b. Obtain applicable consumer complaint files, and evaluate internal control procedures to ensure the complaints are being adequately addressed.
 9. *Audit and compliance functions.*
 - a. Determine the date of the most recent review of the insurance or annuity sales activities by the audit and compliance functions.
 - b. Determine the adequacy of the state member bank's management policies and procedures for ensuring that any deficiencies noted in such reviews are corrected, and ascertain whether any such deficiencies are being adequately addressed.²
 10. *Insurance underwriter oversight of agent/agency activities.*
 - a. Determine if there are adequate policies and procedures to review and resolve any issues or concerns raised by an insurance underwriter regarding the producers used by, or affiliated with, the state member bank.³
 - b. Determine whether any of the insurance underwriters conducted a periodic review of the producers that they engaged to sell insurance.
 11. *State supervisory insurance authorities.*
 - a. During discussions with state member bank management, determine whether state insurance regulators have raised any issues or concerns in correspondence or reports.
 - b. Consult with the state insurance regulators, as appropriate, to determine any significant supervisory issues, actions, or investigations. (For multistate agencies, contacts with states may be prioritized on the basis of the location of the agency's head office or by a determination of the significance of sales by state. Both financial examinations and market conduct examinations conducted by the state insurance departments are targeted at insurance underwriters, not agencies. Therefore, information available from the states pertaining to agencies may be very limited.)
 12. *Operational risk assessment.* Ascertain from the state member bank's management whether there are—
 - a. any significant operational problems or concerns relating to insurance or annuity sales activities;
 - b. policies and procedures in place to ensure accurate and timely reporting to the state member bank's management of insurance or annuity sales activity plans, financial results, and significant consumer complaints or lawsuits or compliance issues, such as errors and omissions claims;⁴
 - c. appropriate policies and procedures at the state member bank to ensure accurate reporting of insurance or annuity sales activity on Federal Reserve regulatory reports (Determine from applicable Board or Reserve Bank contacts if there are any outstanding issues with respect to potential reporting errors on submitted Federal Reserve reports, bank call reports, or other applicable reports. If so, seek resolution of the issues.); and
 - d. adequate disaster-recovery plans and procedures to protect the state member bank

2. Enforcement of the privacy provisions of the Gramm-Leach-Bliley Act as they relate to state member banks is the responsibility of the Board's Division of Consumer and Community Affairs. However, enforcement of the privacy provisions of the GLB Act with respect to the insurance activities of nondepository subsidiaries of a state member bank is the responsibility of the state insurance regulators.

3. Insurance underwriters generally have procedures to determine whether individual producers affiliated with agencies are selling the underwriters' products in conformance with applicable laws and regulations. The findings and conclusions of these reviews should be available to the state member bank's management.

4. Errors and omissions insurance should be in place to protect the state member bank against loss sustained because of an error or oversight, such as failure to issue an insurance policy. A tracking system to monitor errors and omission claims should be in place and monitored by the state member bank, as appropriate. See section 4040.1, "Management of Insurable Risks."

from loss of data related to insurance or annuity sales activities.

CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION

The following procedures should be risk-focused in accordance with the Federal Reserve's risk-focused framework for supervising banking organizations. The procedures should be carried out as necessary to adequately assess the state member bank's compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation.

1. Determine the role of the state member bank's board of directors and management in ensuring compliance with the CPSI regulation and applicable state consumer regulations.
2. Evaluate the management information system (MIS) reports the state member bank's board or designated committee rely on to monitor compliance with the consumer regulations and to track complaints and complaint resolution.
3. Review the state member bank's policies and procedures to ensure they are consistent with the CPSI regulation, and conduct transaction testing, as necessary, in the following areas.⁵
 - a. disclosures, advertising, and promotional materials
 - b. consumer acknowledgments
 - c. physical separation from areas of deposit-taking activities
 - d. qualifications and licensing for insurance personnel
 - e. compliance programs and internal audits
 - f. hiring, training, and supervision of insurance or annuity sales personnel employed directly by the bank, or of third parties selling insurance or annuity products at a state member bank office or on behalf of the state member bank
 - g. compensation practices and training for personnel making referrals
4. If a third party sells insurance or annuities at the state member bank's offices, or on behalf of the bank, review the state member bank's policies and procedures for ensuring that the third party complies with the CPSI regulation and other relevant policies and procedures of the bank.
5. Review the bank's process for identifying and resolving consumer complaints related to the sale of insurance products and annuities.
6. Obtain and review the record of consumer complaints related to the CPSI regulation. (These records are available from the Board's Division of Consumer and Community Affairs database. See CP letter 2001-11.)
7. Include examination findings, as appropriate, in the commercial bank examination report or in other communications to the bank, as appropriate, that pertain to safety-and-soundness reviews of the bank.

5. If the examiner determines that transaction testing of a functionally regulated nonbank affiliate of the state member bank is appropriate in order to determine the state member bank's compliance with the CPSI regulation, the examiner should first consult with and obtain approval from appropriate staff of the Board's Division of Banking Supervision and Regulation.

Insurance Sales Activities and Consumer Protection in Sales of Insurance

Internal Control Questionnaire

Effective date November 2003

Section 4043.4

RISK ASSESSMENT OF INSURANCE AND ANNUITY SALES ACTIVITIES

Program Management

1. Does the state member bank have a comprehensive program to ensure that its insurance and annuity sales activities are conducted in a safe and sound manner?
2. Does the state member bank have appropriate written policies and procedures commensurate with the volume and complexity of the insurance or annuity sales activities?
3. Has bank management obtained the approval of the bank's board of directors for the program scope and the associated policies and procedures?
4. Have reasonable precautions been taken to ensure that disclosures to customers for insurance or annuity sales and solicitations are complete and accurate, and are in compliance with applicable laws and regulations?
5. Does the state member bank effectively oversee the insurance or annuity sales activities, including those involving third parties?
6. Does the state member bank have an effective independent internal audit and compliance program in place to monitor retail sales of insurance or annuity products?
7. Does the bank appropriately train and supervise employees conducting insurance or annuity sales activities?

Management Information Systems

8. Does the state member bank's insurance program management plan establish the appropriate management information systems (MIS) necessary for the board of directors to properly oversee the bank's insurance or annuity sales activities?
9. Does MIS provide sufficient information to allow for the evaluation and measurement of the effect of actions taken to identify, track, and resolve any issues relative to

compliance with the Consumer Protection in Sales of Insurance (CPSI) regulation?

10. Does MIS include sales volumes and trends, profitability, policy exceptions and associated controls, customer complaints, and other information providing evidence of compliance with laws and established policies?

Compliance Programs and Internal Audits

11. Are there policies and procedures in place to ensure that insurance or annuity sales activities are conducted in compliance with applicable laws and regulations?
12. Do compliance procedures identify potential conflicts of interest and how such conflicts should be addressed?
13. Do the compliance procedures provide a system to monitor customer complaints and track their resolution?
14. When applicable, do compliance procedures call for verification that third-party sales are being conducted in a manner consistent with the agreement governing the third party's arrangement with the state member bank?
15. Is the compliance function conducted independently of the insurance or annuity sales and management activities?
16. Do compliance personnel determine the scope and frequency of the insurance-product review?
17. Are findings of insurance or annuity sales activity compliance reviews periodically reported directly to the state member bank's board of directors or a designated committee thereof?

CONSUMER PROTECTION IN SALES OF INSURANCE REGULATION

If applicable, review the state member bank's internal controls, policies, practices, and proce-

dures for retail insurance or annuity sales activities conducted by the bank on bank premises or on behalf of the bank. The bank's program management for such activities should be well documented and should include appropriate personnel training, as well as compliance and audit-function coverage of all efforts to ensure compliance with the provisions of the Board's CPSI regulation.

Advertising and Promotional Materials

1. Do advertising materials associated with the insurance or annuity sales program create an erroneous belief that—
 - a. an insurance product or annuity sold or offered for sale by the state member bank, or on behalf of the bank, is backed by the federal government or the bank, or that the product is insured by the FDIC?
 - b. an insurance product or annuity that involves investment risk does not, in fact, have investment risk, including the potential that principal may be lost and the product may decline in value?
2. Does a review of advertising for insurance products or annuities sold or offered for sale create an erroneous impression that—
 - a. the state member bank or an affiliate or subsidiary may condition the grant of an extension of credit to a consumer on the purchase of an insurance product or annuity by the consumer from the bank or an affiliate or subsidiary of the bank?
 - b. the consumer is not free to purchase an insurance product or annuity from another source?

Disclosures

3. In connection with the initial purchase of an insurance product or annuity by a consumer, does the initial disclosure to the consumer, except to the extent the disclosure would not be accurate, state that—
 - a. the insurance product or annuity is not a deposit or other obligation of, or is not guaranteed by, the state member bank or an affiliate of the bank?
 - b. the insurance product or annuity is not

- insured by the FDIC or any other agency of the United States, the state member bank, or (if applicable) an affiliate of the bank?
 - c. in the case of an insurance product or annuity that involves an investment risk, there is risk associated with the product, including the possible loss of value?
4. In the case of an application for credit, in connection with which an insurance product or annuity is solicited, offered, or sold, is a disclosure made that the state member bank may not condition an extension of credit on either—
 - a. the consumer's purchase of an insurance product or annuity from the bank or any of its affiliates?
 - b. the consumer's agreement not to obtain, or a prohibition on the consumer's obtaining, an insurance product or annuity from an unaffiliated entity?
 5. Are the disclosures under question 3 above provided orally and in writing before the completion of the initial face-to-face sale of an insurance product or annuity to a consumer?
 6. Are the disclosures under question 4 above made orally and in writing at the time the consumer applies in a face-to-face interaction for an extension of credit in connection with which insurance is solicited, offered, or sold?
 7. If a sale of an insurance product or annuity is conducted by telephone, are the disclosures under question 3 above provided in writing, by mail, within three business days?
 8. If an application for credit is by telephone, are the disclosures under question 4 above provided by mail to the consumer within three business days?
 9. Are the disclosures under questions 3 and 4 above provided through electronic media, instead of on paper, only if the consumer affirmatively consents to receiving the disclosures electronically, and only if the disclosures are provided in a format that the consumer may retain or obtain later?
 10. Are disclosures made through electronic media, for which paper or oral disclosures are not required, presented in a meaningful form and format?
 11. Are disclosures conspicuous, simple, direct, readily understandable, and designed to call attention to the nature and significance of the information provided?

12. Are required disclosures presented in a meaningful form and format?

Consumer Acknowledgment

13. At the time a consumer receives the required disclosures, or at the time of the consumer's initial purchase of an insurance product or annuity, is a written acknowledgment from the consumer that affirms receipt of the disclosures obtained?
14. If the required disclosures are provided in connection with a transaction that is conducted by telephone—
- has an oral acknowledgment of receipt of the disclosures been obtained, and is sufficient documentation maintained to show that the acknowledgment was given?
 - have reasonable efforts to obtain a written acknowledgment from the consumer been made?

Physical Separation from Deposit Activities

15. Does the state member bank, to the extent practicable—
- keep the area where the bank conducts transactions involving the retail sale of insurance products or annuities physically segregated from the areas where retail deposits are routinely accepted from the general public?
 - identify the areas where insurance product or annuity sales activities occur?
 - clearly delineate and distinguish insurance and annuity sales areas from the areas where the bank's retail deposit-taking activities occur?

Qualifications and Licensing

16. Does the state member bank permit any person to sell, or offer for sale, any insurance product or annuity in any part of its office, or on its behalf, only if the person is at all times appropriately qualified and licensed under applicable state insurance licensing standards for the specific products being sold or recommended?

Hiring, Training, and Supervision

17. Have background investigations of prospective employees that will sell insurance products or annuities been completed?
18. When a candidate for employment has previous insurance experience, has a review to determine whether the individual has been the subject of any disciplinary actions by state insurance regulators been completed?
19. Do all insurance or annuity sales personnel, or third-party sales personnel conducting sales activities at or on behalf of the state member bank, receive appropriate training and continue to meet licensing requirements?
20. Does training address policies and procedures for sales of insurance and annuity products, and does it cover personnel making referrals to a licensed insurance producer?
21. Does training ensure that personnel making referrals about insurance products or annuities are properly handling all inquiries so as not to be deemed to be acting as unlicensed insurance agents or registered (or equivalently trained) securities sales representatives (for insurance products that are also securities) if they are not qualified?
22. When insurance products or annuities are sold by the state member bank or third parties at an office of, or on behalf of, the organization, does the institution have policies and procedures to designate, by title or name, the individuals responsible for supervising insurance sales activities, as well as the referral activities of bank employees not authorized to sell these products?
23. Does the bank designate supervisory personnel responsible for monitoring compliance with any third-party agreement, as well as with the CPSI regulation?

Referrals

24. Are fees paid to nonlicensed personnel who are making referrals to qualified insurance or annuity salespersons limited to a one-time, nominal fee of a fixed dollar amount for each referral, and is the fee unrelated to whether the referral results in a sales transaction?

Third-Party Agreements

25. Does the state member bank's management conduct a comprehensive review of a third party before entering into any arrangement to conduct insurance or annuity sales activities through the third party?
26. Does the review include an assessment of the third party's financial condition, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including compliance with applicable consumer protection laws and regulation?
27. Does the board of directors or a designated committee thereof approve any agreement with the third party?
28. Does the agreement outline the duties and responsibilities of each party; describe the third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information; and define the terms for use of the bank's office space, equipment, and personnel?
29. Does the third-party agreement specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the CPSI regulation, if applicable?
30. Does the agreement authorize the bank to monitor a third party's compliance with the agreement, as well as to have access to third-party records considered necessary to evaluate compliance?
31. Does the agreement provide for indemnification of the institution by the third party for any losses caused by the conduct of the third party's employees in connection with its insurance or annuity sales activities?
32. If an arrangement includes dual employees, does the agreement provide for written employment contracts that specify the duties of these employees and their compensation arrangements?
33. If the state member bank contracts with a functionally regulated third party, does the bank obtain, as appropriate, any relevant regulatory reports of examination of the third party?
34. How does the state member bank ensure that a third party selling insurance or annuity products at or on behalf of the bank complies with all applicable regulations, including the CPSI regulation?
35. How does the state member bank ensure that any third party or dual employee selling insurance or annuity products at or on behalf of the bank is appropriately trained to comply with the minimum disclosures and other requirements of the Board's CPSI regulation and applicable state regulations?
36. Does the bank obtain and review copies of third-party training and compliance materials to monitor the third party's performance regarding its disclosure and training obligations?

Consumer Complaints

37. Does the state member bank have policies and procedures for handling customer complaints related to insurance and annuity sales?
38. Does the customer complaint process provide for the recording and tracking of all complaints?
39. Does the state member bank require periodic reviews of complaints by compliance personnel? Is a review by the state member bank's board and senior management required for significant compliance issues that may pose risk to the state member bank?

The examination of bank-related organizations must be of sufficient scope to determine a bank's compliance with laws and to evaluate its investments through an appraisal of related organizations' assets, earnings, and management. In addition, the examination must fully disclose the nature of the relationships between the bank and its related organizations, as well as the effects of these relationships on the operations and safety and soundness of the bank.

Various laws, rulings, and regulations have encouraged banks to expand their services by forming or acquiring related organizations. Examples include—

- permission for a member bank to purchase for its own account shares of a corporation that performs, at locations at which the bank is authorized to engage in business, functions that the bank is empowered to perform directly;
- authorization by specific laws to invest in various statutory subsidiaries; and
- permission by Federal Reserve regulations to invest in Edge Act and agreement corporations.

A bank also may be controlled by an individual or company that controls other bank or nonbank entities. No matter what the legal organization is between a bank and a related organization, a sound financial and satisfactory management relationship between both groups is essential to the bank's operation. Related organizations may assume several forms, as described later in this section.

SECTION 23A OF THE FEDERAL RESERVE ACT

Section 23A of the Federal Reserve Act (FRA) (12 USC 371c) is the primary statute governing transactions between a bank and its affiliates. Section 23A (1) designates the types of companies that are affiliates of a bank; (2) specifies the types of transactions covered by the statute; (3) sets the quantitative limitations on a bank's covered transactions with any single affiliate, and with all affiliates combined; and (4) sets forth collateral requirements for certain bank transactions with affiliates. (See also sections 2080.1 and 2080.3.)

In addition to the statutory provisions of section 23A, the Board approved the issuance of

Regulation W, which became effective April 1, 2003, and implements comprehensively sections 23A and 23B of the Federal Reserve Act. To facilitate compliance with these statutes, the rule¹ provides several exemptions and combines the statutory restrictions on transactions between a member bank and its affiliates with numerous Board interpretations and exemptions that were previously issued.

Quantitative Limits

Section 23A(a)(1)(A) states that a member bank^{1a} “may engage in a covered transaction with an affiliate only if . . . in the case of any affiliate,” the aggregate amount of covered transactions of the bank would not exceed 10 percent of the capital stock and surplus of the bank. The rule's interpretation of the 10 percent limit is consistent with the statutory language. Section 223.11 of the rule clarified that a bank that has crossed the 10 percent threshold with one affiliate may still conduct additional covered transactions with other affiliates, if transactions with all affiliates would not exceed 20 percent of the bank's capital stock and surplus.^{1b} Sections 223.11 and 223.12 of the rule set forth these quantitative limits. The rule's quantitative limits prohibit a member bank from engaging in a *new* covered transaction with that affiliate if the bank would be in excess of the 10 percent threshold with that affiliate or if the level of covered transactions with all its affiliates exceeded the 20 percent threshold. The rule generally does

1. In this section of the manual, Regulation W is referred to as “the rule” or by a specific section number of the rule.

1a. *Member bank* is defined in section 223.3(w) to mean “any national bank, state bank, banking association, or trust company that is a member of the Federal Reserve System.” Other provisions of federal law apply section 23A to state nonmember banks and savings associations. The rule also states that most subsidiaries of a member bank are to be treated as part of the member bank itself for purposes of sections 23A and 23B. The only subsidiaries of a member bank that are excluded from this treatment are financial subsidiaries, insured depository institution subsidiaries, and certain joint venture subsidiaries—companies that are generally deemed affiliates of the member bank under the regulation. This treatment of subsidiaries reflects the fact that the statute typically does not distinguish between a member bank and its subsidiaries, and all the significant restrictions of the statute apply to actions taken by a member bank “and its subsidiaries.”

1b. 12 USC 371c(a)(1).

not require a member bank to unwind existing covered transactions if the bank exceeds the 10 percent or 20 percent limit because its capital declined or a preexisting covered transaction increased in value.

The Board strongly encourages member banks with covered transactions in excess of the 10 percent threshold with any affiliate to reduce those transactions before expanding the scope or extent of the bank's relationships with other affiliates. Section 223.11 of the rule also clarifies that transactions between a bank and a financial subsidiary of the bank are not subject to the 10 percent limit of section 23A but instead are subject to the 20 percent limitation

Capital Stock and Surplus

Under section 23A, the quantitative limits on covered transactions are based on the "capital stock and surplus" of the member bank. Section 223.3(d) of the rule defines capital stock and surplus to be the sum of the member bank's tier 1 capital and tier 2 capital and the balance of the bank's allowance for loan and lease losses not included in its tier 2 capital plus the amount of any investment in a financial subsidiary that counts as a covered transaction that is required to be deducted from the bank's regulatory capital. Examiners can determine the amount of the quantitative limits based on the bank's most recent consolidated Report of Condition and Income (the Call Report).

Affiliates

The definition of an affiliate is found in section 23A of the FRA and is further defined in Regulation W. Affiliates are defined to include—

- any company that *controls* the member bank and any other company that is controlled by the company that controls the member bank;
- a bank subsidiary of the member bank;
- any company—
 - that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, by trust or otherwise, the member bank or any company that controls the member bank; or
 - in which a majority of its directors or trustees constitute a majority of the per-

sons holding any such office with the member bank or any company that controls the member bank;

- any company, including a real estate investment trust, that is sponsored and advised on a contractual basis by the member bank or any subsidiary or affiliate of the member bank;
- any investment company with respect to which a member bank or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940;
- any investment fund for which the member bank or any affiliate of the member bank serves as an investment adviser, if the member bank and its affiliates own or control in the aggregate more than 5 percent of any class of voting securities or of the equity capital of the fund;
- a depository institution that is a subsidiary of the member bank;
- a financial subsidiary of the member bank;
- any company in which a holding company of the member bank owns or controls, directly or indirectly, or acting through one or more other persons, 15 percent or more of the equity capital pursuant to the merchant banking authority in section 4(k)(4)(H) or (I) of the Bank Holding Company Act (12 USC 1843(k)(4)(H) or (I));
- any partnership for which the member bank or any affiliate of the member bank serves as a general partner or for which the member bank or any affiliate of the member bank causes any director, officer, or employee of the member bank or affiliate to serve as a general partner;
- any subsidiary of an affiliate described in paragraphs (a)(1) through (10) of section 223.2 of Regulation W; and
- any company that the Board, or the appropriate federal banking agency for the bank, determines by regulation or order to have a relationship with the member bank or any subsidiary or affiliate of the member bank, such that covered transactions by the member bank or its subsidiary with that company may be affected by the relationship, to the detriment of the member bank or its subsidiary.

The following are *not* considered to be affiliates of a bank:

- a nonbank subsidiary of that bank, unless a determination is made not to exclude such a subsidiary

- a company engaged solely in holding that bank's premises
- a company engaged solely in conducting a safe deposit business
- a company engaged solely in holding obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest
- a company in which control arises from the exercise of rights arising out of a bona fide debt previously contracted (for a limited period of time)

Definition of Affiliates by Type of Entity

Investment funds advised by the member bank or an affiliate of the member bank. As stated previously, section 23A includes as an affiliate any company that is sponsored and advised on a contractual basis by the member bank or any of its affiliates^{1c} as well as any investment company for which the member bank or its affiliate serves as an investment adviser, as defined in the Investment Company Act of 1940 (the 1940 act).^{1d} In Regulation W, the Board used its

1c. 12 USC 371c(b)(1)(D)(i).

1d. 12 USC 371c(b)(1)(D)(ii).

statutory authority to define as an affiliate any investment fund—even if not an investment company for purposes of the 1940 act—for which the member bank or an affiliate of the bank serves as an investment adviser, if the bank or an affiliate of the bank owns or controls more than 5 percent of any class of voting securities or similar interests of the fund.

Most investment funds that are advised by a member bank (or an affiliate of a member bank) are affiliates of the bank under section 23A because the funds either are investment companies under the 1940 act or are sponsored by the member bank (or an affiliate of the member bank). The member bank or its affiliate, in some instances, however, may advise but not sponsor an investment fund that is not an investment company under the 1940 act.^{1e} The advisory relationship of a member bank or affiliate with an investment fund presents the same potential for conflicts of interest regardless of whether the fund is an investment company under the 1940 act.^{1f} An investment fund typically escapes from the definition of investment company under the 1940 act because it (1) sells interests only to a limited number of investors or only to sophisticated investors or (2) invests primarily in financial instruments that are not securities.^{1g} Section 223.2(a)(6) treats any investment fund as an affiliate if the bank or an affiliate of the bank serves as an investment adviser to the fund and owns more than 5 percent of the shares of the fund.

Financial subsidiaries. In 1999, the Gramm-Leach-Bliley Act (the GLB Act) authorized banks to own “financial subsidiaries” that engage in activities not permissible for the parent bank to conduct directly, such as underwriting and dealing in bank-ineligible securities. The GLB Act amended section 23A to define a financial subsidiary of a bank as an affiliate of

the bank and thus subjected transactions between the bank and a financial subsidiary to the limitations of sections 23A and 23B.

Section 23A defines a financial subsidiary as a subsidiary of any bank (state or national) that is engaged in an activity that is not permissible for *national* banks to engage in directly (other than a subsidiary that federal law specifically authorizes national banks to own or control). Specifically, a “financial subsidiary” is defined as “any company that is a subsidiary of a bank that would be a financial subsidiary of a national bank under section 5136A of the Revised Statutes of the United States.” (See 12 USC 371c(e)(1).) Section 5136A, in turn, defines a financial subsidiary as any company that is controlled by one or more insured depository institutions, *other than* (1) a subsidiary that engages solely in activities that national banks are permitted to engage in directly or (2) a subsidiary that national banks are specifically authorized to control by the express terms of a federal statute (other than section 5136A), such as an Edge Act corporation or a small business investment company (SBIC). (See 12 USC 24a(g)(3).) Section 5136A also generally prohibits a financial subsidiary of a national bank from engaging in insurance underwriting, real estate investment and development, or merchant banking activities. (See 12 USC 24a(a)(2).) The rule defines a financial subsidiary of a bank, exempts certain companies from the definition, and sets forth special valuation and other rules for financial subsidiaries. (See sections 223.2(a)(8), 223.3(p), and 223.32 of the rule.)

Partnerships. Banks fund legitimate commercial and community development transactions through partnerships. Partnerships for which a member bank serves as a general partner are defined in Regulation W’s section 223.2(a), which also lists the entities that generally are affiliates.

Regulation W also defines an affiliate of a member bank as any partnership if the member bank or an affiliate of the bank causes any officer or employee of the bank or affiliate to serve as a general partner of the partnership (unless the partnership is an operating subsidiary of the bank, as discussed above). The rule considers a partnership an affiliate of the member bank if the bank or an affiliate of the bank causes any *director* of the bank or affiliate to serve as a general partner of the partnership (unless the partnership is an operating subsidiary of the

1e. 12 USC 371c(b)(1)(E).

1f. A member bank may face greater risk from the conflicts of interest arising from its relationships with an investment fund that is not registered as an investment company under the 1940 act because the 1940 act restricts transactions between a registered investment company and entities affiliated with the company’s investment adviser. (See 15 USC 80a-17.)

1g. The term “investment company” in the 1940 act does not include a company that is owned by qualified persons or by no more than 100 persons, provided that the company does not engage in a public offering of its securities. (See 15 USC 80a-3(c)(1) and (7).) The term also generally does not include investment funds that are engaged primarily in investing in financial instruments other than securities. (See 15 USC 80a-3(a)(1).)

bank). Also, if a company, such as a bank holding company, controls more than 25 percent of the equity through a partnership, that company is an affiliate under Regulation W.

Subsidiaries of affiliates. Regulation W's definition of an affiliate includes any company controlled by an investment fund that is an affiliate of the member bank. (See section 223.2(a)(11).) It accords affiliate status to any company controlled by an investment fund affiliate of a member bank. More broadly, the rule deems a subsidiary of an affiliate as an affiliate of the member bank. Subsidiaries of interlocking directorate affiliates (section 223.2(a)(4)) and sponsored and advised affiliates (section 223.2(a)(5)) also are treated as affiliates of the member bank. The control relationship between such statutory affiliates and their subsidiaries may affect covered transactions between the member bank and such subsidiaries to the detriment of the bank.

Companies designated by the appropriate federal banking agency. Under section 223.2(a)(12), the Board or the appropriate federal banking agency for the relevant depository institution (under authority delegated by the Board) can determine that any company that has certain relationships with a member bank or an affiliate of the bank is itself an affiliate of the bank. The Board and the federal banking agencies can thus protect depository institutions in their transactions with associated companies. A depository institution may petition the Board for review of any such affiliate determination made by the institution's appropriate federal banking agency under the general procedures established by the Board for review of actions taken under delegated authority.^{1h}

Joint venture companies. Under the terms of section 23A, subsidiaries of a member bank generally are not treated as affiliates of the bank.¹ⁱ The statute contains two specific excep-

tions to this general rule: "financial subsidiaries" of a member bank and "bank" subsidiaries of a member bank are treated as affiliates of the parent bank. The statute provides that the Board may determine that other subsidiaries of a member bank should be treated as affiliates in appropriate circumstances.^{1j}

Under section 223.2(b)(1)(iii) of the rule, certain joint venture subsidiary companies of a member bank are treated as an affiliate. A subsidiary of a member bank is treated as an affiliate if one or more affiliates of the bank, or *one or more controlling shareholders of the bank*, directly control the joint venture. For example, if a bank controls 30 percent of a company and an affiliate controls 70 percent of Company A, then Company A is an affiliate. This expansion also covers situations in which a controlling natural-person shareholder or group of controlling natural-person shareholders of the member bank (who, as natural persons, are not themselves section 23A affiliates of the bank) exercise direct control over the joint venture company.

The rule's treatment of certain bank-affiliate joint ventures as affiliates does not apply to joint ventures between a member bank and any affiliated insured depository institutions. For example, if two affiliated member banks each own 50 percent of the voting common stock of a company, the company would continue to qualify as a subsidiary and not an affiliate of each bank (despite the fact that an affiliate of each bank owned more than 25 percent of a class of voting securities of the company). The Board has retained its authority to treat such joint ventures as affiliates under section 23A on a case-by-case basis.

Employee benefit plans. Many employee stock option plans, trusts, or similar entities that exist to benefit shareholders, members, officers, directors, or employees of a member bank or its affiliates ("ESOPs") are treated as affiliates of the bank for purposes of sections 23A and 23B. The ESOP's share ownership or the interlocking management between the ESOP and its associated member bank (or BHC), in many cases, exceeds the statutory thresholds for determining that a company is an affiliate. For example, if an ESOP controls more than 25 percent of the voting shares of the bank or bank holding company, the ESOP is an affiliate. (Under sec-

^{1h}. See 12 CFR 265.3.

¹ⁱ. See 12 USC 371c(b)(1)(A) and (b)(2)(A). Section 23A defines a subsidiary of a specified company as a company that is controlled by the specified company. Under the statute, a company controls another company if the first company owns or controls 25 percent or more of a class of voting securities of the other company, controls the election of a majority of the directors of the other company, or exercises a controlling influence over the policies of the other company (12 USC 371c(b)(3) and (4)).

^{1j}. 12 USC 371c(b)(2)(A).

tion 223.2(b)(1)(iv), an ESOP of a member bank or an affiliate of the bank cannot itself avoid classification as an affiliate of the bank by also qualifying as a subsidiary of the bank. The relationship between a member bank and its or its affiliate's ESOP generally warrants coverage by sections 23A and 23B.)

Determination of Control

The definition of “control” with respect to affiliates is the same as that used in the Bank Holding Company Act (the BHC Act), that is, a company or shareholder shall be deemed to have control over another company if—

- such company or shareholder, directly or indirectly, or acting through one or more other persons, owns, controls, or has power to vote 25 percent or more of any class of voting securities of the other company;
- such company or shareholder controls in any manner the election of a majority of the directors or trustees of the other company; or
- the Board determines, after notice and opportunity for hearing, that such company or shareholder, directly or indirectly, exercises a controlling influence over the management or policies of the other company.

However, no company shall be deemed to own or control another company by virtue of its ownership or control of shares in a fiduciary capacity except (1) a company that is controlled, directly or indirectly, by a trust for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, a member bank, or (2) if the company owning or controlling such shares is a business trust.

Pursuant to the merchant banking provisions in section 4(k)(4)(H) or (I) of the BHC Act and in the Board's Regulation Y, a financial holding company (FHC) shall be presumed to control another company if the FHC directly or indirectly owns or controls 15 percent of the equity capital of the other company unless the FHC provides information acceptable to the Board demonstrating that the FHC does not control the other company.

Section 23A provides that a company or shareholder shall be deemed to have control over another company if, among other things, such company or shareholder controls in any manner the election of a majority of the “direc-

tors or trustees” of the other company.^{1k} The rule, under section 223.3(g), expands the control definition of section 23A by providing, as in Regulation Y, that control also exists when a company or shareholder controls the election of a majority of the “general partners (or individuals exercising similar functions)” of another company. A company or shareholder would be deemed to control another company (including a partnership, limited-liability company, or other similar organization) under section 23A if the company or shareholder controls the election of a majority of the principal policymakers of such other company.

Under the rule, three additional presumptions of control are provided, similar to the presumptions contained in Regulation Y. First, a company will be deemed to control securities, assets, or other ownership interests controlled by any subsidiary of the company.^{1l} Second, a company that controls instruments (including options and warrants) that are convertible or exercisable, at the option of the holder or owner, into securities, will be deemed to control the securities.^{1m} Third, a rebuttable presumption provides that a company or shareholder that owns or controls 25 percent or more of the equity capital of another company controls the other company, unless the company or shareholder demonstrates otherwise to the Board based on the facts and circumstances of the particular case. (See section 223.3(g).)

Covered Transactions

The restrictions of section 23A do not apply to every transaction between a member bank and its affiliates. The section only applies to “covered transactions” between a member bank and its affiliates.¹ⁿ The FRA defines five types of covered transactions:

- a loan or extension of credit to an affiliate
- a purchase of or an investment in securities issued by an affiliate

1k. 12 USC 371c(b)(3)(A)(ii).

1l. See 12 CFR 225.2(e)(2)(i).

1m. See 12 CFR 225.31(d)(1)(i). The rule refers more generically to convertible “instruments.” It clarifies that the convertibility presumption applies regardless of whether the right to convert resides in a financial instrument that technically qualifies as a “security” under section 23A or the federal securities laws.

1n. 12 USC 371c(b)(7).

- a purchase of assets from an affiliate, including assets subject to an agreement to repurchase from the affiliate, except for purchases of real and personal property as may be specifically exempted by the Board by order or regulation
- the acceptance of securities issued by an affiliate as collateral for a loan to any person or company (such an acceptance is prohibited if a loan is to an affiliate)
- the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate

Covered transactions must be made on terms and conditions that are consistent with safe and sound banking practices.

Among the transactions that generally are not subject to section 23A are dividends paid by a member bank to its holding company, sales of assets by a member bank to an affiliate for cash, an affiliate's purchase of securities issued by a member bank, and many service contracts between a member bank and an affiliate. Certain classes of transactions between a member bank and an affiliate are discussed below as to whether they are covered transactions for purposes of section 23A. (See section 223.3(h).)

Confirmation of a Letter of Credit Issued by an Affiliate

Section 23A includes as a covered transaction the issuance by a member bank of a letter of credit on behalf of an affiliate, including the confirmation of a letter of credit issued by an affiliate as a covered transaction. (See section 223.3(h)(5).) When a bank confirms a letter of credit, it assumes the risk of the underlying transaction to the same extent as if it had issued the letter of credit.¹⁰ Accordingly, a confirmation of a letter of credit issued by an affiliate is treated in the same fashion as an issuance of a letter of credit on behalf of an affiliate.

Credit Enhancements Supporting a Securities Underwriting

The definition of guarantee in section 23A would not include a member bank's issuance of

a guarantee in support of securities issued by a third party and underwritten by a securities affiliate of the bank.² Such a credit enhancement would not be issued "on behalf of" the affiliate. Although the guarantee does provide some benefit to the affiliate (by facilitating the underwriting), this benefit is indirect. The proceeds of the guarantee would not be transferred to the affiliate for purposes of the attribution rule of section 23A.^{2a} Section 23B would apply to the transaction and, where an affiliate was issuer as well as underwriter, the transaction would be covered by section 23A because the credit enhancement would be on behalf of the affiliate.

Cross-Guarantee Agreements and Cross-Affiliate Netting Arrangements

A cross-guarantee agreement among a member bank, an affiliate, and a nonaffiliate in which the nonaffiliate may use the bank's assets to satisfy the obligations of a defaulting affiliate is a guarantee for purposes of section 23A. The cross-guarantee arrangements among member banks and their affiliates are subject to the quantitative limits and collateral requirements of section 23A. (See section 223.3(h)(5).)

As for cross-affiliate netting arrangements (CANAs), such arrangements involve a member bank, one or more affiliates of the bank, and one or more nonaffiliates of the bank, where a nonaffiliate is permitted to deduct obligations of an affiliate of the bank to the nonaffiliate when settling the nonaffiliate's obligations to the bank. These arrangements also would include agreements in which a member bank is required or permitted to add the obligations of an affiliate of the bank to a nonaffiliate when determining the bank's obligations to the nonaffiliate.

These types of CANAs expose a member bank to the credit risk of its affiliates because the bank may become liable for the obligations of its affiliates. Because the exposure of a member bank to an affiliate in such an arrangement resembles closely the exposure of a member bank when it issues a guarantee on behalf of an affiliate, the rule explicitly includes such arrangements in the definition of covered transaction. Accordingly, the quantitative limits of section 23A would prohibit a member bank from entering into such a CANA to the extent that the

¹⁰. See UCC 5-107(2).

². See 62 *Fed. Reg.* 45295 (August 27, 1997).

^{2a}. See 12 USC 371c(a)(2).

netting arrangement does not cap the potential exposure of the bank to the participating affiliate (or affiliates).

Keepwell Agreements

In a keepwell agreement between a member bank and an affiliate, the bank typically commits to maintain the capital levels or solvency of the affiliate. The credit risk incurred by the member bank in entering into such a keepwell agreement is similar to the credit risk incurred by a member bank in connection with issuing a guarantee on behalf of an affiliate. As a consequence, keepwell agreements generally should be treated as guarantees for purposes of section 23A and, if unlimited in amount, would be prohibited by the quantitative limits of section 23A.

Extension of Credit

Section 23A includes a “loan or extension of credit” to an affiliate as a covered transaction, but does not define these terms. Section 223.3(o) of the rule defines “extension of credit” to an affiliate to mean the making or renewal of a loan to an affiliate, the granting of a line of credit to an affiliate, or the extending of credit to an affiliate in any manner whatsoever, including on an intraday basis. A nonexhaustive list of transactions is provided that the Board deems to be extensions of credit to an affiliate:

- an advance to an affiliate by means of an overdraft, cash item, or otherwise
- a sale of federal funds to an affiliate
- a lease that is the functional equivalent of an extension of credit to an affiliate^{2b}
- an acquisition by purchase, discount, exchange, or otherwise of a note or other obligation, including commercial paper or other debt securities, of an affiliate
- any increase in the amount of, extension of the maturity of, or adjustment to the interest-rate term or other material term of, an extension of credit to an affiliate^{2c}

2b. The Board would consider a full-payout, net lease permissible for a national bank under 12 USC 24 (seventh) and 12 CFR 23 to be the functional equivalent of an extension of credit.

2c. A floating-rate loan does not become a new covered transaction whenever there is a change in the relevant index (for example, LIBOR or the member bank’s prime rate) from

- any other similar transaction as a result of which an affiliate becomes obligated to pay money (or its equivalent) to a member bank^{2d}

A member bank’s purchase of a debt security issued by an affiliate is an extension of credit by the bank to the affiliate for purposes of section 23A under the rule. A member bank that buys debt securities issued by an affiliate has made an extension of credit to an affiliate under section 23A and must collateralize the transaction in accordance with the collateral requirements of section 23A. An exemption from the collateral requirements is provided for situations in which a member bank purchases an affiliate’s debt securities from a third party in a bona fide secondary-market transaction.

Prohibition on the Purchase of Low-Quality Assets

Section 23A includes a general prohibition on the purchase by a member bank of a low-quality asset from an affiliate.^{2e} Section 23A defines a low-quality asset to include (1) an asset classified as “substandard,” “doubtful,” or “loss,” or treated as “other loans specially mentioned,” in the most recent report of examination or inspection by a federal or state supervisory agency (a “classified asset”), (2) an asset in nonaccrual status, (3) an asset on which payments are more than 30 days past due, or (4) an asset whose terms have been renegotiated or compromised due to the deteriorating financial condition of the obligor.^{2f} Any asset meeting one of the above four criteria, including securities and real property, is a low-quality asset.^{2g} Regulation W

which the loan’s interest rate is calculated. If the member bank and the borrower, however, amend the loan agreement to change the interest-rate term from “LIBOR plus 100 basis points” to “LIBOR plus 150 basis points,” the parties have engaged in a new covered transaction.

2d. The definition of extension of credit would cover, among other things, situations in which an affiliate fails to pay on a timely basis for services rendered to the affiliate by the member bank.

2e. See 12 USC 371c(a)(3). Section 23A does not prohibit an affiliate from donating a low-quality asset to a member bank, so long as the bank provides no consideration for the asset.

2f. 12 USC 371c(b)(10).

2g. The federal banking agencies generally consider non-investment-grade securities to be classified assets. See, for example, the Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks (May 7,

expands the definition of low-quality assets in several respects. (See 12 CFR 223.3(v).)

First, an asset identified by examiners as an “other transfer risk problem” (OTRP) is a low-quality asset. Such assets represent credits to countries that are not complying with their external debt-service obligations but are taking positive steps to restore debt service through economic adjustment measures, generally as part of an International Monetary Fund program. Although OTRP assets are not considered classified assets, examiners are to consider these assets in their assessment of a bank’s asset quality and capital adequacy.^{2h}

Second, the rule considers a financial institution’s use of its own internal asset-classification systems. The rule includes within the definition of low-quality asset not only assets classified during the last examination but also assets classified or treated as special mention under the institution’s internal classification system (or assets that received an internal rating that is substantially equivalent to classified or special mention in such an internal system).

The purchase by a depository institution from an affiliate of assets that have been internally classified raises potentially significant safety-and-soundness concerns. The Board expects companies with internal rating systems to use the systems consistently over time and over similar classes of assets and will view as an evasion of section 23A any company’s deferral or alteration of an asset’s rating to facilitate sale of the asset to an affiliated institution.

Finally, the rule defines low-quality asset to include foreclosed property designated “other real estate owned” (OREO), until it is reviewed by an examiner and receives a favorable classification. It further defines as a low-quality asset any asset (not just real estate) that is acquired in satisfaction of a debt previously contracted (not just through foreclosure) if the asset has not yet been reviewed in an examination or inspection. Under the rule, if a particular asset is good collateral taken from a bad borrower, the asset should cease to be a low-quality asset upon examination.

Section 23A provides a limited exception to the general rule prohibiting purchase of low-

quality assets if the bank performs an independent credit evaluation and commits to the purchase of the asset before the affiliate acquires the asset.²ⁱ Section 223.15 of the rule also provides an exception from the prohibition on the purchase by a member bank of a low-quality asset from an affiliate for certain loan renewals. The rule allows a member bank that purchased a loan participation from an affiliate to renew its participation in the loan, or provide additional funding under the existing participation, even if the underlying loan had become a low-quality asset, so long as certain criteria were met. These renewals or additional credit extensions may enable both the affiliate and the participating member bank to avoid or minimize potential losses. The exception is available only if (1) the underlying loan was not a low-quality asset at the time the member bank purchased its participation and (2) the proposed transaction would not increase the member bank’s proportional share of the credit facility. The member bank must also obtain the prior approval of its entire board of directors (or its delegates) and it must give a 20 days’ post-consummation notice to its appropriate federal banking agency. A member bank is permitted to increase its proportionate share in a restructured loan by 5 percent (or by a higher percentage with the prior approval of the bank’s appropriate federal banking agency). The scope of the exemption includes renewals of participations in loans originated by any affiliate of the member bank (not just affiliated depository institutions).

Attribution Rule

The “attribution rule,” found in section 223.16, prevents a member bank from evading its restrictions by using intermediaries, and it limits the exposure that a member bank has to customers of affiliates of the bank. Any covered transaction by a member bank or its subsidiary with any person is deemed to be a transaction with an affiliate of the bank if any of the proceeds of the transaction are used for the benefit of, or are transferred to, the affiliate. For example, a member bank’s loan to a customer for the purpose of purchasing securities from the inventory of a broker-dealer affiliate of the bank would be a covered transaction under section 23A.

1979) and also table 3 in section 2020.1 of this manual. Assets identified by examiners through the Shared National Credit and International Country Exposure Review Committee processes also should be considered classified assets for purposes of section 23A.

2h. See sections 7040.1 and 7040.3.

2i. 12 USC 371c(a)(3).

Credit Transactions with an Affiliate

Valuation of Credit Transactions with an Affiliate

A credit transaction between a member bank and an affiliate initially must be valued at the amount of funds provided by the member bank to, or on behalf of, the affiliate plus any additional amount that the bank could be required to provide to, or on behalf of, the affiliate. The section 23A value of a credit transaction between a member bank and an affiliate is the *greater* of (1) the principal amount of the credit transaction; (2) the amount owed by the affiliate to the member bank under the credit transaction; or (3) the sum of (a) the amount provided to, or on behalf of, the affiliate in the transaction and (b) any additional amount that the member bank could be required to provide to, or on behalf of, the affiliate under the terms of the transaction.

The first prong of the rule's valuation formula for credit transactions ("the principal amount of the credit transaction") would likely determine the valuation of a transaction in which a member bank purchased a zero-coupon note issued by an affiliate. A member bank should value such an extension of credit at the principal, or face, amount of the note (that is, at the amount that the affiliate ultimately must pay to the bank) rather than at the amount of funds initially advanced by the bank. For example, assume a member bank purchased from an affiliate for \$50 a 10-year zero-coupon note issued by the affiliate with a face amount of \$100. The rule's valuation formula requires the member bank to value this transaction at \$100.

The second prong of the rule's valuation formula for credit transactions ("the amount owed by the affiliate") likely would determine the valuation of a transaction in which an affiliate fails to pay a member bank when due a fee for services rendered by the bank to the affiliate. This prong of the valuation formula does not include within section 23A's quantitative limits items such as accrued interest not yet due on a member bank's loan to an affiliate or the credit exposure of a member bank to an affiliate on a derivative transaction that is not the functional equivalent of a credit transaction (unless and until the affiliate defaults in making a required payment to the bank on a settlement date).

Member banks will be able to determine the section 23A value for most credit transactions under the third prong of the rule's valuation formula. Under this prong, for example, a \$100 term loan is a \$100 covered transaction, a \$300 revolving credit facility is a \$300 covered transaction (regardless of how much of the facility the affiliate has drawn down), and a guarantee backstopping a \$500 debt issuance of the affiliate is a \$500 covered transaction.

Under section 23A and the rule, a member bank has made an extension of credit to an affiliate if the bank purchases from a third party a loan previously made to an affiliate of the bank. A different valuation formula is provided for these indirect credit transactions: The member bank must value the transaction at the price paid by the bank for the loan plus any additional amount that the bank could be required to provide to, or on behalf of, the affiliate under the terms of the credit agreement.

For example, if a member bank pays a third party \$90 for a \$100 term loan that the third party previously made to an affiliate of the bank (because, for example, the loan was at a fixed rate and has declined in value because of a rise in the general level of interest rates), the covered transaction amount is \$90 rather than \$100. The lower covered-transaction amount reflects the fact that the member bank's maximum loss on the transaction is \$90 rather than the original principal amount of the loan. For another example, if a member bank pays a third party \$70 for a \$100 line of credit to an affiliate, of which \$70 had been drawn down by the affiliate, the covered-transaction amount would be \$100 (the \$70 purchase price paid by the bank for the credit plus the remaining \$30 that the bank could be required to lend under the credit line).

In another example, a member bank makes a term loan to an affiliate that has a principal amount of \$100. The affiliate pays \$2 in up-front fees to the member bank, and the affiliate receives net loan proceeds of \$98. The member bank must initially value the covered transaction at \$100.

Although the rule considers a member bank's purchase of, or investment in, a debt security issued by an affiliate as an extension of credit to an affiliate, these transactions are not valued like other extensions of credit. See section 223.23 for the valuation rules for purchases of, and investments in, the debt securities of an affiliate.

Timing of a Credit Transaction with an Affiliate

A member bank has entered into a credit transaction with an affiliate *at the time during the day* that the bank becomes legally obligated to make the extension of credit to, or issue the guarantee, acceptance, or letter of credit on behalf of, the affiliate. A covered transaction occurs at the moment that the member bank executes a legally valid, binding, and enforceable credit agreement or guarantee and does not occur only when a member bank funds a credit facility or makes payment on a guarantee. Consistent with section 23A, the rule only requires a member bank to compute compliance with its quantitative limits when the bank is about to engage in a new covered transaction. The rule does not require a member bank to compute compliance with the rule's quantitative limits on a continuous basis. See section 223.21(b)(1) of the rule.

The burden of the timing rule is significantly mitigated by the exemption for intraday extensions of credit found in section 223.42(I). The intraday credit exemption generally applies only to extensions of credit that a member bank expects to be repaid, sold, or terminated by the end of its U.S. business day. The rule generally requires a member bank to ensure its intraday compliance with section 23A when making a loan to an affiliate during the day, which the bank expects to remain a loan outstanding and on its books overnight.

Asset Purchases from an Affiliate

Regulation W provides that a purchase of assets by a member bank from an affiliate initially must be valued at the total amount of consideration given by the bank in exchange for the asset. (See section 223.22.) This consideration can take any form and includes an assumption of liabilities by the member bank. Asset purchases are a covered transaction for a member bank for as long as the bank holds the asset. The value of the covered transaction after the purchase may be reduced to reflect amortization or depreciation of the asset, to the extent that such reductions are consistent with GAAP and are reflected on the bank's financial statements.

Certain asset purchases by a member bank from an affiliate *are not* valued in accordance with the general asset-purchase valuation for-

mula. First, if the member bank buys from one affiliate a loan to a second affiliate, the bank must value the transaction as a credit transaction with the second affiliate under section 223.21. Second, if the member bank buys from one affiliate a security issued by a second affiliate, the bank must value the transaction as an investment in securities issued by the second affiliate under section 223.23. Third, if the member bank acquires an affiliate that becomes an operating subsidiary of the bank after the acquisition, the bank must value the transaction under section 223.31.

A special valuation rule applies to a member bank's purchase of a line of credit or loan commitment from an affiliate. A member bank initially must value such asset purchases at the purchase price paid by the bank for the asset plus any additional amounts that the bank is obligated to provide under the credit facility.^{2j} This special valuation rule ensures that there are limits on the amount of risk a company can shift to an affiliated bank.

In contrast with credit transactions, an asset purchase from a nonaffiliate that later becomes an affiliate generally does not become a covered transaction for the purchasing member bank. If a member bank purchases assets from a nonaffiliate in contemplation of the nonaffiliate's becoming an affiliate of the bank, however, the asset purchase becomes a covered transaction at the time the nonaffiliate becomes an affiliate. In addition, the member bank must ensure that the aggregate amount of the bank's covered transactions (including any such asset purchase from the nonaffiliate) would not exceed the quantitative limits of section 23A at the time the nonaffiliate becomes an affiliate.

The following examples are provided to assist member banks in valuing purchases of assets from an affiliate. A member bank's receipt of an encumbered asset from an affiliate ceases to be a covered transaction when, for example, the bank sells the asset.

- *Cash purchase of assets.* A member bank purchases a pool of loans from an affiliate for \$10 million. The member bank initially must value the covered transaction at \$10 million.

^{2j} A member bank would not be required to include unfunded, but committed, amounts in the value of the covered transaction if (1) the credit facility being transferred from the affiliate to the bank is unconditionally cancelable (without cause) at any time by the bank and (2) the bank makes a separate credit decision before each drawing under the facility.

Going forward, if the borrowers repay \$6 million of the principal amount of the loans, the member bank may value the covered transaction at \$4 million.

- *Purchase of assets through an assumption of liabilities.* An affiliate of a member bank contributes real property with a fair market value of \$200,000 to the member bank. The member bank pays the affiliate no cash for the property, but assumes a \$50,000 mortgage on the property. The member bank has engaged in a covered transaction with the affiliate and initially must value the transaction at \$50,000. Going forward, if the member bank retains the real property but pays off the mortgage, the member bank must continue to value the covered transaction at \$50,000. If the member bank, however, sells the real property, the transaction ceases to be a covered transaction at the time of the sale (regardless of the status of the mortgage).

Purchases of and Investments in Securities Issued by an Affiliate

Section 23A includes as a covered transaction a member bank's purchase of, or investment in, securities issued by an affiliate. Section 223.23 of the rule requires a member bank to value a purchase of, or investment in, securities issued by an affiliate (other than a financial subsidiary of the bank) at the *greater* of the bank's purchase price or carrying value of the securities. A member bank that paid no consideration in exchange for affiliate securities has to value the covered transaction at no less than the bank's carrying value of the securities.^{2k} In addition, if the member bank's carrying value of the affiliate securities increased or decreased after the bank's initial investment (due to profits or losses at the affiliate), the amount of the bank's covered transaction would increase or decrease to reflect the bank's changing financial exposure to the affiliate. However, the amount of the bank covered transaction cannot decline below the amount paid by the bank for the securities.

Several important considerations support the general carrying-value approach of this valuation rule. First, the approach is consistent with GAAP, which would require a bank to reflect its

investment in securities issued by an affiliate at carrying value throughout the life of the investment, even if the bank paid no consideration for the securities.

Second, the approach is supported by the terms of the statute, which defines both a "purchase of *and* an "investment in" securities issued by an affiliate as a covered transaction. The statute's "investment in" language indicates that Congress was concerned with a member bank's continuing exposure to an affiliate through an ongoing investment in the affiliate's securities.

Third, GLB Act amendments to section 23A support the approach. The GLB Act defines a financial subsidiary of a bank as an affiliate of the bank, but specifically provides that the section 23A value of a bank's investment in securities issued by a financial subsidiary does *not* include retained earnings of the subsidiary. The negative implication from this provision is that the section 23A value of a bank's investment in *other* affiliates *includes* the affiliates' retained earnings, which would be reflected in the bank's carrying value of the investment under the rule.

Finally, the carrying-value approach is consistent with the purposes of section 23A—limiting the financial exposure of banks to their affiliates and promoting safety and soundness. The valuation rule requires a member bank to revalue upwards the amount of an investment in affiliate securities only when the bank's exposure to the affiliate increases (as reflected on the bank's financial statements) and the bank's capital increases to reflect the higher value of the investment. In these circumstances, the valuation rule merely reflects the member bank's greater financial exposure to the affiliate and enhances safety and soundness by reducing the bank's ability to engage in additional transactions with an affiliate as the bank's exposure to that affiliate increases.

The valuation rule also provides that the covered-transaction amount of a member bank's investment in affiliate securities can be no less than the purchase price paid by the bank for the securities, even if the carrying value of the securities declines below the purchase price. Although this aspect of the valuation rule is not consistent with GAAP, using the member bank's purchase price for the securities as a floor for valuing the covered transaction is appropriate. First, it ensures that the amount of the covered transaction never falls below the amount of

^{2k}. Carrying value refers to the amount at which the securities are carried on the GAAP financial statements of the member bank.

funds actually transferred by the member bank to the affiliate in connection with the investment. In addition, the purchase-price floor limits the ability of a member bank to provide additional funding to an affiliate as the affiliate approaches insolvency. If investments in securities issued by an affiliate were valued strictly at carrying value, then the member bank could lend more funds to the affiliate as the affiliate's financial condition worsened. As the affiliate declined, the member bank's carrying value of the affiliate's securities would decline, the section 23A value of the bank's investment likely would decline, and, consequently, the bank would be able to provide additional funding to the affiliate under section 23A. This type of increasing support for an affiliate in distress is what section 23A was intended to restrict.

The examples provided below are designed to assist member banks in valuing purchases of, and investments in, securities issued by an affiliate.

- *Purchase of the debt securities of an affiliate.* The parent holding company of a member bank owns 100 percent of the shares of a mortgage company. The member bank purchases debt securities issued by the mortgage company for \$600. The initial carrying value of the securities is \$600. The member bank initially must value the investment at \$600.
- *Purchase of the shares of an affiliate.* The parent holding company of a member bank owns 51 percent of the shares of a mortgage company. The member bank purchases an additional 30 percent of the shares of the mortgage company from a third party for \$100. The initial carrying value of the shares is \$100. The member bank initially must value the investment at \$100. Going forward, if the member bank's carrying value of the shares declines to \$40, the member bank must continue to value the investment at \$100.
- *Contribution of the shares of an affiliate.* The parent holding company of a member bank owns 100 percent of the shares of a mortgage company and contributes 30 percent of the shares to the member bank. The member bank gives no consideration in exchange for the shares. If the initial carrying value of the shares is \$300, then the member bank initially must value the investment at \$300. Going forward, if the member bank's carrying value of the shares increases to \$500, the member bank must value the investment at \$500.

Securities Issued by an Affiliate as Collateral

General Valuation Rule (Section 223.24(a) and (b))

Section 23A defines as a covered transaction a member bank's acceptance of securities issued by an affiliate as collateral for a loan or extension of credit to any person or company.²¹ This type of covered transaction has two classes: one in which the only collateral for the loan is affiliate securities and another in which the loan is secured by a combination of affiliate securities and other collateral.

Under the rule, if the credit extension is secured exclusively by affiliate securities, then the transaction is valued at the full amount of the extension of credit. This approach reflects the difficulty of measuring the actual value of typically untraded and illiquid affiliate securities and conservatively assumes that the value of the securities is equal to the full value of the loan that the securities collateralize. An exception is provided to the general rule when the affiliate securities held as collateral have a ready market (as defined by section 223.42 of the rule). In that case, the transaction may be valued at the fair market value of the affiliate securities. The exception grants relief in those circumstances when the value of the affiliate securities is independently verifiable by reference to transactions occurring in a liquid market.^{2m}

Covered transactions of the second class, in which the credit extension is secured by affiliate securities and other collateral, are valued at the *lesser* of (1) the total value of the extension of credit minus the fair market value of the other collateral or (2) the fair market value of the

21. See 12 USC 371c(b)(7)(D). This covered transaction only arises when the member bank's loan is to a nonaffiliate. Under section 23A, the securities issued by an affiliate are not acceptable collateral for a loan or extension of credit to any affiliate. (See 12 USC 371c(c)(4).) If the proceeds of a loan that is secured by an affiliate's securities are transferred to an affiliate by the unaffiliated borrower (for example, to purchase assets or securities from the inventory of an affiliate), the loan should be treated as a loan to the affiliate. The loan must then be secured with collateral in an amount and of a type that meets the requirements of section 23A for loans by a member bank to an affiliate.

2m. In either case, the transaction must comply with section 23B; that is, the member bank must obtain the same amount of affiliate securities as collateral on the credit extension that the bank would obtain if the collateral were not affiliate securities.

affiliate securities (if the securities have a ready market). The rule's ready-market requirement applies regardless of the amount of affiliate collateral.²ⁿ

Exemption for Shares Issued by an Affiliated Mutual Fund

Section 223.24(c) of the rule provides an exemption for extensions of credit by a member bank that are secured by shares of an affiliated mutual fund. The rule effects the exemption by providing that an affiliated mutual fund's shares that meet the above-mentioned criteria do not count as affiliate-issued securities for purposes of the valuation rule for extensions of credit secured by affiliate-issued securities. To qualify for the exemption, the transaction must meet several conditions. First, to ensure that the affiliate collateral is liquid and trades at a fair price, the affiliated mutual fund must be an open-end investment company that is registered with the SEC under the 1940 act. Second, to ensure that the member bank can easily establish and monitor the value of the affiliate collateral, the affiliated mutual fund's shares serving as collateral for the extension of credit must have a publicly available market price. Third, to reduce the member bank's incentives to use these extensions of credit as a mechanism to support the affiliated mutual fund, the member bank and its affiliates must not own more than 5 percent of the fund's shares (excluding certain shares held in a fiduciary capacity). Finally, the proceeds of the extension of credit must not be used to purchase the affiliated mutual fund's shares serving as collateral or otherwise used to benefit an affiliate. In such circumstances, the member bank's extension of credit would be covered by section 23A's attribution rule. For example, a member bank proposes to lend \$100 to a non-affiliate secured exclusively by eligible affiliated mutual fund securities. The member bank knows that the nonaffiliate intends to use all the loan proceeds to purchase the eligible affiliated mutual fund securities that would serve as collateral for the loan. Under the attribution rule in section 223.16, the member bank must treat the loan to the nonaffiliate as a loan to an affiliate, and

2n. Under the rule, a member bank may use the higher of the two valuation options for these transactions if, for example, the bank does not have the procedures and systems in place to verify the fair market value of affiliate securities.

because securities issued by an affiliate are ineligible collateral under section 223.14, the loan would not be in compliance with section 223.14.

Merger and Acquisition Transactions Between a Member Bank and an Affiliate

Under section 223.31 (a)–(c) of the rule, there are several methods by which a member bank acquires an affiliate. The first method is when a member bank directly purchases or otherwise acquires the affiliate's assets and assumes the affiliate's liabilities. In this case, the transaction is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any separate consideration paid by the member bank for the affiliate's assets (if any) plus the amount of any liabilities assumed by the bank in the transaction.

The second method is when a member bank acquires an affiliate by merger. Because a merger with an affiliate generally results in the member bank's acquiring all the assets of the affiliate and assuming all the liabilities of the affiliate, this transaction is effectively equivalent to the purchase and assumption transaction described in the previous paragraph. Accordingly, the merger transaction also is treated as a purchase of assets, and the covered-transaction amount is equal to the amount of any separate consideration paid by the member bank for the affiliate's assets (if any) plus the amount of any liabilities assumed by the bank in the transaction.^{2o} Another illustrative structure, whereby the bank acquires an affiliate, involves the contribution or sale of a controlling block of an affiliate's shares to a member bank. For example, the parent holding company of a member bank contributes between 25 percent and 100 percent of the voting shares of a mortgage company to the member bank. The parent holding company retains no shares of the mortgage company. The member bank gives no consideration in exchange for the transferred shares. The mortgage company has total assets of \$300,000 and total liabilities of \$100,000. The mortgage company's assets do not include any loans to an

2o. As noted, section 223.3(dd) of the rule makes explicit the Board's view that these merger transactions generally involve the purchase of assets by a member bank from an affiliate.

affiliate of the member bank or any other asset that would represent a separate covered transaction for the member bank upon consummation of the share transfer. As a result of the transaction, the mortgage company becomes an operating subsidiary of the member bank. The transaction is treated as a purchase of the assets of the mortgage company by the member bank from an affiliate under paragraph (a) of section 223.31. The member bank initially must value the transaction at \$100,000, the total amount of the liabilities of the mortgage company. Going forward, if the member bank pays off the liabilities, the member bank must continue to value the covered transaction at \$100,000. However, if the member bank sells \$15,000 of the transferred assets of the mortgage company or if \$15,000 of the transferred assets amortize, the member bank may value the covered transaction at \$85,000.

As for the third type of transaction, the rule provides that the acquisition by a member bank of a company that was an affiliate of the bank before the acquisition is treated as a purchase of assets from an affiliate if (1) as a result of the transaction, the company becomes an operating subsidiary of the bank and (2) the company has liabilities, or the bank gives cash or any other consideration in exchange for the securities. The rule also provides that these transactions must be valued initially at the sum of (1) the total amount of consideration given by the member bank in exchange for the securities and (2) the total liabilities of the company whose securities have been acquired by the member bank. In effect, the rule requires member banks to treat such share donations and purchases in the same manner as if the member bank had purchased the assets of the transferred company at a purchase price equal to the liabilities of the transferred company (plus any separate consideration paid by the bank for the shares). (See 12 CFR 223.31.)

The assets and liabilities of an operating subsidiary of a member bank are treated in the rule as assets and liabilities of the bank itself for purposes of section 23A.³ The rule only imposes

asset-purchase treatment on affiliate share transfers when the company whose shares are being transferred to the member bank was an affiliate of the bank before the transfer. If the transferred company was not an affiliate before the transfer, it would not be appropriate to treat the share transfer as a purchase of assets *from an affiliate*. Similarly, the rule only requires asset-purchase treatment for affiliate share transfers when the transferred company becomes a subsidiary and not an affiliate of the member bank through the transfer.

If a bank purchases, or receives a donation, of a partial interest in an affiliate, that transaction is treated as a purchase of, or investment in securities issued by an affiliate. This type of transaction is valued according to the purchase price or GAAP carrying value. (See 12 CFR 223.23.)

Step-Transaction Exemption (Section 223.31(d) and (e))

Under section 223.31(d) of the rule, an exemption is provided for certain step transactions that are treated as asset purchases under section 223.31(a) when a BHC acquires the stock of an unaffiliated company and, immediately after consummation of the acquisition, transfers the shares of the acquired company to the holding company's subsidiary member bank. For example, a bank holding company acquires 100 percent of the shares of an unaffiliated leasing company. At that time, the subsidiary member bank of the holding company notifies its appropriate federal banking agency and the Board of its intent to acquire the leasing company from its holding company. On the day after consummation of the acquisition, the holding company transfers all of the shares of the leasing company to the member bank. No material change in the business or financial condition of the leasing company occurs between the time of the holding company's acquisition and the member bank's acquisition. The leasing company has liabilities. The leasing company becomes an operating subsidiary of the member bank at the time of the transfer. This transfer by the holding company to the member bank, although deemed an asset purchase by the member bank from an affiliate under paragraph (a) of section 223.31, would qualify for the exemption in paragraph (d) of section 223.31.

3. Because a member bank usually can merge a subsidiary into itself, transferring all the shares of an affiliate to a member bank often is functionally equivalent to a transaction in which the bank directly acquires the assets and assumes the liabilities of the affiliate. In a direct acquisition of assets and assumption of liabilities, the covered-transaction amount would be equal to the total amount of liabilities assumed by the member bank.

The rule exempts these “step” transactions under certain conditions. First, the member bank must acquire the target company immediately after the company became an affiliate (by being acquired by the bank’s holding company, for example). The member bank must acquire the entire ownership position in the target company that its holding company acquired. Also, there must be no material change in the business or financial condition of the target company during the time between when the company becomes an affiliate of the member bank and when the bank is in receipt of the company. Finally, the entire transaction must comply with the market-terms requirement of section 23B, and the bank must notify its appropriate federal banking agency and the Board, at or before the time that the target company becomes an affiliate of the bank, of its intent ultimately to acquire the target company.

Regulation W requires that the bank consummate the step transaction immediately to ensure the quality and fairness of the transaction. To the extent that the member bank acquires the target company some time after the company becomes an affiliate, the transaction looks less like a single transaction in which the bank acquires the target company and more like two separate transactions, the latter of which involves the bank acquiring assets from an affiliate. The Board recognized, however, that banking organizations may need a reasonable amount of time to address legal, tax, and business issues relating to an acquisition. Regulation W thus permits member banks to avail themselves of the step-transaction exemption if the bank acquires the target company within three months after the target company becomes an affiliate so long as the appropriate federal banking agency for the bank has approved the longer time period.

The 100 percent ownership requirement (that the member bank must acquire the entire ownership position in the target company that its holding company acquired) prevents a holding company from keeping the good subsidiaries of the target company and transferring its bad subsidiaries to the holding company’s subsidiary member bank. If a banking organization fails to meet the terms of the step-transaction exemption, the organization may be able to satisfy the conditions of the rule’s internal-corporate-reorganization exemption or may be able to obtain a case-by-case exemption from the Board.

Financial Subsidiaries

Section 23A Statutory Provisions for Financial Subsidiaries

Section 23A has several special provisions that apply to covered transactions between a bank and its financial subsidiary. Section 23A defines a “financial subsidiary” as any company that is a subsidiary of a bank that would be a financial subsidiary of a national bank under section 5136A of the Revised Statutes of the United States.^{3a} Section 5136A, in turn, defines a financial subsidiary of a national bank as any company that is controlled by one or more insured depository institutions, other than (1) a subsidiary that engages solely in activities that national banks are permitted to engage in directly (and subject to the same terms and conditions that apply to national banks) or (2) a national bank is specifically authorized by the express terms of a federal statute (other than section 5136A), such as an Edge Act corporation or an SBIC.^{3b} Section 5136A also prohibits a financial subsidiary of a national bank from engaging in insurance underwriting, real estate investment and development, or merchant banking activities.^{3c}

Under section 23A, the section’s 10 percent quantitative limit does not apply to covered transactions between a bank and any individual financial subsidiary of the bank. Accordingly, a bank may engage in covered transactions with any individual financial subsidiary up to 20 percent of the bank’s capital stock and surplus. A bank’s covered transactions with its financial subsidiaries, however, are subject to a statutory 20 percent quantitative limit. Thus, a bank may not engage in a covered transaction with any affiliate (including a financial subsidiary) if the bank’s aggregate amount of covered transactions with all affiliates (including financial subsidiaries) would exceed 20 percent of the bank’s capital stock and surplus.

Because financial subsidiaries of a bank are considered affiliates of the bank for purposes of section 23A, purchases of and investments in the securities of a financial subsidiary are covered transactions under the statute and count against the bank’s quantitative limit. A bank’s investment in its financial subsidiary, for pur-

3a. 12 USC 24a(g)(3).

3b. 12 USC 24a(a)(2).

3c. 12 USC 371c(e)(1).

poses of section 23A, shall not include the retained earnings of the financial subsidiary.

Section 23A generally applies only to transactions between (1) a bank and an affiliate of the bank and (2) a bank and a third party in which some benefit from either type of transaction accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. Section 23A establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a bank and another affiliate of the bank. First, the FRA provides that any purchase of or investment in the securities of a bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem a loan or other extensions of credit made by a bank's affiliate to any financial subsidiary of a bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasion.

Regulation W Provisions for Financial Subsidiaries

Regulation W includes, in section 223.32, several special rules that apply to transactions with financial subsidiaries.

Applicability of the 10 percent quantitative limit to transactions with a financial subsidiary. First, section 223.32(a) of the rule provides that the 10 percent quantitative limit in section 23A does not apply with respect to covered transactions between a member bank and any individual financial subsidiary of the bank. A member bank's aggregate amount of covered transactions with any individual financial subsidiary of the bank may exceed 10 percent of the bank's capital stock and surplus.^{3d} A member bank's covered transactions with its financial subsidiaries, however, are subject to the 20 percent quantitative limit in section 23A. Thus, a member bank may not engage in a covered transaction with any affiliate (including a financial subsidiary) if the bank's aggregate amount of covered transactions with all affiliates (including

financial subsidiaries) would exceed 20 percent of the bank's capital stock and surplus.

The Board notes that the exemption from the 10 percent limit for investments by a member bank in its own financial subsidiary does not apply to investments by a member bank in the financial subsidiary of an affiliated depository institution. Although the financial subsidiary of an affiliated depository institution is an affiliate of the member bank for purposes of sections 23A and 23B, the GLB Act states that only "covered transactions between a bank and any individual financial subsidiary of the bank" are not subject to the 10 percent limit in section 23A.^{3e} A member bank may not engage in a covered transaction with the financial subsidiary of an affiliated depository institution if the aggregate amount of the member bank's covered transactions with that financial subsidiary would exceed 10 percent of the bank's capital stock and surplus.

Valuation of investments in securities issued by a financial subsidiary. Because financial subsidiaries of a member bank are considered affiliates of the bank for purposes of section 23A, a member bank's purchases of and investments in the securities of its financial subsidiary are covered transactions under the statute. The GLB Act further provides that a member bank's investment in its own financial subsidiary, for purposes of section 23A, shall not include the retained earnings of the financial subsidiary.^{3f} In light of this statutory provision, the rule's section 223.32(b) contains a special valuation rule for investments by a member bank in the securities of its own financial subsidiary.^{3g} Such investments must be valued at the greater of (1) the price paid by the member bank for the securities or (2) the carrying value of the securities on the financial statements of the member bank (determined in accordance with GAAP but without reflecting the bank's pro rata share of any earnings retained or losses incurred by the financial subsidiary after the bank's acquisition of the securities).^{3h}

3e. See 12 USC 371c(e)(3)(A).

3f. GLB Act section 121(b)(1) (12 USC 371c(e)(3)(B)).

3g. The rule's special valuation formula for investments by a member bank in its own financial subsidiary does not apply to investments by a member bank in a financial subsidiary of an affiliated depository institution. Such investments must be valued using the general valuation formula set forth in section 223.23 for investments in securities issued by an affiliate and, further, may trigger the anti-evasion rule contained in section 223.32(c)(1) of the rule.

3h. The rule also makes clear that if a financial subsidiary

3d. Section 223.11 also indicates that covered transactions between a member bank and its financial subsidiary are exempt from the 10 percent limit.

This valuation rule differs from the general valuation rule for investments in securities issued by an affiliate only in that the financial subsidiary rule requires, consistent with the GLB Act, that the carrying value of the investment be computed without consideration of the retained earnings or losses of the financial subsidiary since the time of the member bank's investment. As a result of this rule, the covered-transaction amount for a member bank's investment in securities issued by its financial subsidiary generally would not increase after the investment was made except if the member bank made an additional capital contribution to the subsidiary or purchased additional securities of the subsidiary.

The following examples were designed to assist member banks in valuing investments in securities issued by a financial subsidiary of the member bank. Each example involves a securities underwriter that becomes a financial subsidiary of the member bank after the transactions described below.

- *Initial valuation.*
 - *Direct acquisition by a member bank.* A member bank pays \$500 to acquire 100 percent of the shares of a securities underwriter. The initial carrying value of the shares on the member bank's parent-only GAAP financial statements is \$500. The member bank initially must value the investment at \$500.
 - *Contribution of a financial subsidiary to a member bank.* The parent holding company of a member bank acquires 100 percent of the shares of a securities underwriter in a transaction valued at \$500 and immediately contributes the shares to the member bank. The member bank gives no consideration in exchange for the shares. The member bank initially must value the investment at the carrying value of the shares on the member bank's parent-only GAAP financial statements. Under GAAP, the member bank's initial carrying value of the shares would be \$500.
- *Carrying value not adjusted for earnings and losses of the financial subsidiary.* A member bank and its parent holding company engage in a transaction whereby the member bank

acquires 100 percent of the shares of a securities underwriter in a transaction valued at \$500. The member bank initially values the investment at \$500. In the following year, the securities underwriter earns \$25 in profit, which is added to its retained earnings. The member bank's carrying value of the shares of the underwriter is not adjusted for purposes of this part, and the member bank must continue to value the investment at \$500. If, however, the member bank contributes \$100 of additional capital to the securities underwriter, the member bank must value the aggregate investment at \$600.

Anti-evasion rules as they pertain to financial subsidiaries. Section 23A generally applies only to transactions between a member bank and an affiliate of the bank and transactions between a member bank and a third party when some benefit of the transaction accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. The GLB Act establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a member bank and another affiliate of the bank.³¹ First, the GLB Act provides that any purchase of, or investment in, securities issued by a member bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem an extension of credit made by a member bank's affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasions of the Federal Reserve Act or the GLB Act. Section 223.32(c) of the rule incorporates both of these provisions.

The Board exercised its authority under the second anti-evasion rule by stating that an extension of credit to a financial subsidiary of a member bank by an affiliate of the bank would be treated as an extension of credit by the bank itself to the financial subsidiary if the extension of credit is treated as regulatory capital of the financial subsidiary. An example of the kind of credit extension covered by this provision would be a subordinated loan to a financial subsidiary that is a securities broker-dealer where the loan is treated as capital of the subsidiary under the

is consolidated with its parent member bank under GAAP, the carrying value of the bank's investment in the financial subsidiary shall be determined based on parent-only financial statements of the bank.

31. GLB Act section 121(b)(1) (12 USC 371c(e)(4)).

SEC's net capital rules. Treating such an extension of credit as a covered transaction is appropriate because the extension of credit by the affiliate has a similar effect on the subsidiary's regulatory capital as an equity investment by the affiliate, which is treated as a covered transaction by the terms of the GLB Act (as described above). The rule generally does not prevent a BHC or other affiliate of a member bank from providing financial support to a financial subsidiary of the bank in the form of a senior or secured loan.

Derivative Transactions

Derivative transactions between a bank and its affiliates generally arise either from the risk-management needs of the bank or the affiliate. Transactions arising from the bank's needs typically arise when a bank enters into a swap or other derivative contract with a customer but chooses not to hedge directly the market risk generated by the derivative contract or is unable to hedge the risk directly because the bank is not authorized to hold the hedging asset. In order to manage the market risk, the bank may have an affiliate acquire the hedging asset. The bank would then do a "bridging" derivative transaction between itself and the affiliate maintaining the hedge.

Other derivative transactions between a bank and its affiliate are affiliate-driven. A bank's affiliate may enter into an interest-rate or foreign-exchange derivative with the bank in order to accomplish the asset-liability management goals of the affiliate. For example, a BHC may hold a substantial amount of floating-rate assets but issue fixed-rate debt securities to obtain cheaper funding. The BHC may then enter into a fixed-to-floating interest-rate swap with its subsidiary bank to reduce the holding company's interest-rate risk.

Banks and their affiliates that seek to enter into derivative transactions for hedging (or risk-taking) purposes could enter into the desired derivatives with unaffiliated companies. Banks and their affiliates often choose to use each other as their derivative counterparties, however, in order to maximize the profits of and manage risks within the consolidated financial group.

Regulation W does not require most derivative transactions to meet the quantitative and collateral requirements of section 23A. Instead, the rule requires the member bank to establish

and maintain policies and procedures designed to manage the credit exposure arising from the derivative. These policies and procedures require, at a minimum, that the bank monitor and control its exposure to its affiliates by imposing appropriate credit controls and collateral requirements.

Regulation W requires member banks to comply strictly with section 23B in their derivative transactions with affiliates. In this regard, section 23B requires a member bank to treat an affiliate no better than a *similarly situated* non-affiliate. Section 23B generally does not allow a member bank to use with an affiliate the terms and conditions it uses with its most creditworthy unaffiliated customer unless the bank can demonstrate that the affiliate is of comparable creditworthiness as the bank's most creditworthy unaffiliated customer. Instead, section 23B requires that an affiliate be treated comparably (with respect to terms, conditions, and credit limits) to the majority of third-party customers engaged in the same business, and having comparable credit quality and size as the affiliate. Because a bank generally has the strongest credit rating within a holding company, the Board generally would not expect an affiliate to obtain better terms and conditions from a member bank than the member bank receives from its major unaffiliated counterparties. In addition, market terms for derivatives among major financial institutions generally include daily marks to market and two-way collateralization above a relatively small exposure threshold.

Covering Derivatives That Are the Functional Equivalent of a Guarantee

Although most derivatives are not treated as covered transactions, section 223.33 of the rule provides that credit derivatives between a member bank and a nonaffiliate in which the bank protects the nonaffiliate from a default on, or a decline in the value of, an obligation of an affiliate of the bank are covered transactions under section 23A. Such derivative transactions are viewed as guarantees by a member bank on behalf of an affiliate (and, hence, are covered transactions) under section 23A.

The rule provides that these credit derivatives are covered transactions under section 23A and gives several examples.^{3j} A member bank is not

^{3j} In most instances, the covered-transaction amount for such a credit derivative would be the notional principal amount of the derivative.

allowed to reduce its covered-transaction amount for these derivatives to reflect hedging positions established by the bank with third parties. A credit derivative is treated as a covered transaction only to the extent that the derivative provides credit protection with respect to obligations of an affiliate of the member bank.

Collateral

There are collateral requirements for certain transactions with affiliates. Each loan or extension of credit to an affiliate or guarantee, acceptance, or letter of credit issued on behalf of an affiliate^{3k} (herein referred to as credit transactions) by a member bank or its subsidiary must be secured at the time of the transaction by collateral. The required collateral, based on its fair market value, varies according to a percentage of the credit extended,^{3l} depending on the type of collateral used to secure the transaction.^{3m} The specific collateral requirements are—

- 100 percent of the amount of the credit extended if the collateral is composed of (1) obligations of the United States or its agencies; (2) obligations fully guaranteed by the United States or its agencies as to principal and interest; (3) notes, drafts, bills of exchange, or banker's acceptances that are eligible for rediscount or purchase by a Federal Reserve Bank; or (4) a segregated, earmarked deposit account with the member bank;
- 110 percent of the amount of the credit extended if the collateral is composed of obligations of any state or political subdivision of any state;
- 120 percent of the amount of the credit extended if the collateral is composed of other debt instruments, including receivables; or
- 130 percent of the amount of the credit extended if the collateral is composed of stock, leases, or other real or personal property.

For example, a member bank makes a \$1,000 loan to an affiliate. The affiliate posts as collateral for the loan \$500 in U.S. Treasury securi-

ties, \$480 in corporate debt securities, and \$130 in real estate. The loan satisfies the collateral requirements of this section because \$500 of the loan is 100 percent secured by obligations of the United States, \$400 of the loan is 120 percent secured by debt instruments, and \$100 of the loan is 130 percent secured by real estate. The statute prohibits a member bank from counting a low-quality asset toward section 23A's collateral requirements for credit transactions with affiliates.³ⁿ A member bank must maintain a perfected security interest at all times in the collateral that secures the credit transaction.

Collateral Requirements in Regulation W

The collateral requirements for credit transactions are found in section 223.14 of the rule. Section 223.14(a) requires that a bank meet the collateral requirements only at the inception of a credit transaction with an affiliate.

Deposit account collateral. Under section 23A, a member bank may satisfy the collateral requirements of the statute by securing a credit transaction with an affiliate with a "segregated, earmarked deposit account" maintained with the bank in an amount equal to 100 percent of the credit extended.^{3o} Member banks may secure covered transactions with omnibus deposit accounts so long as the member bank takes steps to ensure that the omnibus deposit accounts fully secure the relevant covered transactions. Such steps might include substantial overcollateralization or the use of subaccounts or other recordkeeping devices to match deposits with covered transactions. To obtain full credit for any deposit accounts taken as section 23A collateral, member banks must ensure that they have a perfected, first-priority security interest in the accounts. (See section 223.14(b)(1)(i)(D).)

Ineligible collateral. The purpose of section 23A's collateral requirements is to ensure that member banks that engage in credit transactions with affiliates have legal recourse, in the event of affiliate default, to tangible assets with a value at least equal to the amount of the credit extended. The statute recognizes that certain types of assets are not appropriate to serve as collateral for credit transactions with an affiliate.

3k. 12 USC 371c(b)(7).

3l. "Credit extended" means the loan or extension of credit, guarantee, acceptance, or letter of credit.

3m. 12 USC 371c(c)(1).

3n. 12 USC 371c(c)(3).

3o. 12 USC 371c(c)(1)(A)(iv).

In particular, the statute provides that low-quality assets and securities issued by an affiliate are not eligible collateral for such covered transactions.^{3p}

Under section 223.14(c) of the rule, intangible assets are not deemed acceptable to meet the collateral requirements imposed by section 23A.⁴ Intangible assets, including servicing assets, are particularly hard to value, and a member bank may have significant difficulty in collecting and selling such assets in a reasonable period of time.

Section 23A(c) requires that credit transactions with an affiliate be “secured” by collateral. A credit transaction between a member bank and an affiliate supported only by a guarantee or letter of credit from a third party does not meet the statutory requirement that the credit transaction be secured by collateral. Guarantees and letters of credit often are subject to material adverse change clauses and other covenants that allow the issuer of the guarantee or letter of credit to deny coverage. Letters of credit and guarantees are not balance-sheet assets under GAAP and, accordingly, would not constitute “real or personal property” under section 23A. There is a particularly significant risk that a member bank may have difficulty collecting on a guarantee or letter of credit provided by a nonaffiliate on behalf of an affiliate of the bank. Accordingly, guarantees and letters of credit are not acceptable section 23A collateral.^{4a}

As noted above, section 23A prohibits a member bank from accepting securities issued by an affiliate as collateral for an extension of credit to any affiliate. The rule clarifies that securities issued by the member bank itself also are not eligible collateral to secure a credit transaction with an affiliate. Equity securities issued by a lending member bank, and debt securities issued by a lending member bank that count as regulatory capital of the bank, are not eligible collateral under section 23A. If a member bank were forced to foreclose on a credit transaction with an affiliate secured by such securities, the bank may be unwilling to liquidate the collateral promptly to recover on the

credit transaction because the sale might depress the price of the bank’s outstanding securities or result in a change in control of the bank. In addition, to the extent that a member bank is unable or unwilling to sell such securities acquired through foreclosure, the transaction would likely result in a reduction in the bank’s capital, thereby offsetting any potential benefit provided by the collateral.

Perfection and priority. Under section 223.14(d) of the rule, a member bank’s security interest in any collateral required by section 23A must be perfected in accordance with applicable law to ensure that a member bank has good access to the assets serving as collateral for its credit transactions with affiliates. This requirement ensures that the member bank has the legal right to realize on the collateral in the case of default, including a default resulting from the affiliate’s insolvency or liquidation. A member bank also is required to either obtain a first-priority security interest in the required collateral or deduct from the amount of collateral obtained by the bank the lesser of (1) the amount of any security interests in the collateral that are senior to that obtained by the bank or (2) the amount of any credits secured by the collateral that are senior to that of the bank. For example, if a member bank lends \$100 to an affiliate and takes as collateral a second lien on a parcel of real estate worth \$200, the arrangement would only satisfy the collateral requirements of section 23A if the affiliate owed the holder of the first lien \$70 or less (a credit transaction secured by real estate must be secured at 130 percent of the amount of the transaction).

The rule includes the following example of how to compute the section 23A collateral value of a junior lien: A member bank makes a \$2,000 loan to an affiliate. The affiliate grants the member bank a second-priority security interest in a piece of real estate valued at \$3,000. Another institution that previously lent \$1,000 to the affiliate has a first-priority security interest in the entire parcel of real estate. This transaction is not in compliance with the collateral requirements of this section. Because of the existence of the prior third-party lien on the real estate, the effective value of the real estate collateral for the member bank for purposes of this section is only \$2,000—\$600 less than the amount of real estate collateral required by this section for the transaction ($\$2,000 \times 130 \text{ percent} = \$2,600$).

3p. 12 USC 371c(c)(3) and (4).

4. The rule does not confine the definition of intangible assets by reference to GAAP.

4a. The rule also provides that instruments “similar” to guarantees and letters of credit are ineligible collateral. For example, in the Board’s view, a member bank cannot satisfy section 23A’s collateral requirements by purchasing credit protection in the form of a credit-default swap referencing the affiliate’s obligation.

Unused portion of an extension of credit. Section 23A requires that the “amount” of an extension of credit be secured by the statutorily prescribed levels of collateral. In general, if a member bank provides a line of credit to an affiliate, it must secure the full amount of the line of credit throughout the life of the credit. Section 223.14(f)(2) of the rule provides an exemption to the collateral requirements of section 23A for the unused portion of an extension of credit to an affiliate so long as the member bank does not have any legal obligation to advance additional funds under the credit facility until the affiliate has posted the amount of collateral required by the statute with respect to the entire used portion of the extension of credit.^{4b} In such credit arrangements, securing the unused portion of the credit line is unnecessary from a safety-and-soundness perspective because the affiliate cannot require the member bank to advance additional funds without posting the additional collateral required by section 23A. If a member bank voluntarily advances additional funds under such a credit arrangement without obtaining the additional collateral required under section 23A to secure the entire used amount (despite its lack of a legal obligation to make such an advance), the Board views this action as a violation of the collateral requirements of the statute. Even if the line of credit does not need to be secured, the entire amount of the line counts against the bank’s quantitative limit.

Purchasing affiliate debt securities in the secondary market. A member bank’s investment in the debt securities issued by an affiliate is an extension of credit by the bank to the affiliate and thus is subject to section 23A’s collateral requirements. Section 223.14(f)(3) of the rule provides an exemption that permits member banks in certain circumstances to purchase debt securities issued by an affiliate without satisfying the collateral requirements of section 23A. The exemption is available where a member bank purchases an affiliate’s debt securities from a third party in a bona fide secondary-market transaction. When a member bank buys an affiliate’s debt securities in a bona fide secondary-market transaction, the risk that the purchase is designed to shore up an ailing affiliate is reduced.

4b. This does not apply to guarantees, acceptances, and letters of credit issued on behalf of an affiliate. These instruments must be fully collateralized at inception.

Any purchase of affiliate debt securities that qualifies for this exemption would still remain subject to the quantitative limits of section 23A and the market-terms requirement of section 23B. In analyzing a member bank’s good faith under this exemption transaction, examiners should look at the time elapsed between the original issuance of the affiliate’s debt securities and the bank’s purchase, the existence of any relevant agreements or relationships between the bank and the third-party seller of the affiliate’s debt securities, any history of bank financing of the affiliate, and any other relevant information.

Credit transactions with nonaffiliates that become affiliates. Banks sometimes lend money to, or issue guarantees on behalf of, unaffiliated companies that later become affiliates of the bank. Section 223.21(b)(2) provides transition rules that exempt credit transactions from the collateral requirements in situations in which the member bank entered into the transactions with the nonaffiliate at least one year before the nonaffiliate became an affiliate of the bank.

For example, a member bank with capital stock and surplus of \$1,000 and no outstanding covered transactions makes a \$120 unsecured loan to a nonaffiliate. The member bank does not make the loan in contemplation of the nonaffiliate becoming an affiliate. Nine months later, the member bank’s holding company purchases all the stock of the nonaffiliate, thereby making the nonaffiliate an affiliate of the member bank. The member bank is not in violation of the quantitative limits of the rule’s section 223.11 or 223.12 at the time of the stock acquisition. The member bank is, however, prohibited from engaging in any additional covered transactions with the new affiliate at least until such time as the value of the loan transaction falls below 10 percent of the member bank’s capital stock and surplus. In addition, the member bank must bring the loan into compliance with the collateral requirements of section 223.14 promptly after the stock acquisition.

Exemptions from Section 23A

Section 23A authorizes the Board to grant exemptions from the statute’s restrictions if such exemptions are “in the public interest and consistent with the purposes of this section” (12

USC 371c(f)(2)). The Board has approved a number of exemptions over the past several years, most of which involve corporate reorganizations.

Section 23A exempts several types of transactions from the statute's quantitative and collateral requirements and exempts other types of transactions from the statute's quantitative, collateral, and low-quality-asset requirements.^{4c} Regulation W, subpart E, sets forth the statutory exemptions, clarifies certain of these exemptions, and exempts a number of additional types of transactions

The Board reserves the right to revoke or modify any additional exemption granted by the Board in Regulation W, if the Board finds that the exemption is resulting in unsafe or unsound banking practices. The Board also reserves the right to terminate the eligibility of a particular member bank to use any such exemption if the bank's use of the exemption is resulting in unsafe or unsound banking practices.

Covered Transactions Exempt from the Quantitative Limits and Collateral Requirements

Under the rule's section 223.41, the quantitative limits (sections 223.11 and 223.12) and the collateral requirements (section 223.14) do not apply to the following transactions. The transactions are, however, subject to the safety-and-soundness requirement (section 223.13) and the prohibition on the purchase of a low-quality asset (section 223.15).

- *Parent institution/subsidiary institution transactions.* Transactions with a depository institution if the member bank controls 80 percent or more of the voting securities of the depository institution or the depository institution controls 80 percent or more of the voting securities of the member bank.
- *Purchase of loans on a nonrecourse basis from an affiliated depository institution.*

Sister-bank exemption (section 223.41(b)). Regulation W exempts transactions with a federally insured depository institution if the same company controls 80 percent or more of the voting securities of the member bank and the depository institution. In addition, the statute provides

that covered transactions between sister banks must be consistent with safe and sound banking practices.^{4d}

The sister-bank exemption generally applies only to transactions between insured depository institutions.^{4e} The rule's definition of affiliate excludes uninsured depository institution subsidiaries of a member bank. Covered transactions between a member bank and a parent uninsured depository institution or a commonly controlled uninsured depository institution, under the rule, generally would be subject to section 23A whereas covered transactions between a member bank and a subsidiary uninsured depository institution would not be subject to section 23A.^{4f}

The sister-bank exemption, by its terms, only exempts transactions by a member bank with a sister-bank affiliate; hence, the sister-bank exemption cannot exempt a member bank's extension of credit to an affiliate that is not a sister bank (even if the extension of credit was purchased from a sister bank). For example, a member bank purchases from Sister-Bank Affiliate A a loan to Affiliate B in a purchase that qualifies for the sister-bank exemption in section 23A. The member bank's asset purchase from Sister-Bank Affiliate A would be an exempt covered transaction under section 223.41(b), but the member bank also would have acquired an extension of credit to Affiliate B, which would be a covered transaction between the member bank and Affiliate B under section 223.3(h)(1) that does not qualify for the sister-bank exemption.

Internal corporate reorganizations. Section 223.41(d) of the rule provides an exemption for asset purchases by a bank from an affiliate that are part of a one-time internal corporate reorganization of a banking organization.^{4g} The exemption includes purchases of assets in connection with a transfer of securities issued by an

4d. 12 USC 371c(a)(4).

4e. A member bank and its operating subsidiaries are considered a single unit for purposes of section 23A. Under the statute and the regulation, transactions between a member bank (or its operating subsidiary) and the operating subsidiary of a sister insured depository institution generally qualify for the sister-bank exemption.

4f. The sister-bank exemption in section 23A does not allow a member bank to avoid any restrictions on sister-bank transactions that may apply to the bank under the prompt-corrective-action framework set forth in section 38 of the FDI Act (12 USC. 1831o) and regulations adopted thereunder by the bank's appropriate federal banking agency.

4g. See 1998 *Fed. Res. Bull.* 985 and 1013-14.

4c. 12 USC 371c(d).

affiliate to a member bank, as described in section 223.31(a).

Under this exemption, a member bank would be permitted to purchase assets (other than low-quality assets) from an affiliate (including in connection with an affiliate share transfer that section 223.31 of the rule treats as a purchase of assets) exempt from the quantitative limits of section 23A if the following conditions are met.

First, the asset purchase must be part of an internal corporate reorganization of a holding company that involves the transfer of all or substantially all of the shares or assets of an affiliate or of a division or department of an affiliate.^{4h} The asset purchase must not be part of a series of periodic, ordinary-course asset transfers from an affiliate to a member bank. Second, the member bank's holding company must provide the Board with contemporaneous notice of the transaction and must commit to the Board to make the bank whole, for a period of two years, for any transferred assets that become low-quality assets.⁴ⁱ Third, a majority of the member bank's directors must review and approve the transaction before consummation. Fourth, the section 23A value of the covered transaction must be less than 10 percent of the member bank's capital stock and surplus (or up to 25 percent of the bank's capital stock and surplus with the prior approval of the bank's appropriate federal banking agency). Fifth, the member bank's holding company and all its subsidiary depository institutions must be well capitalized and well managed and must remain well capitalized upon consummation of the transaction.

Covered Transactions Exempt from the Quantitative Limits, Collateral Requirements, and Low-Quality-Asset Prohibition

The quantitative limits (sections 223.11 and 223.12), the collateral requirements (section 223.14), and the prohibition on the purchase of a low-quality asset (section 223.15) do not apply

^{4h}. The notice also must describe the primary business activities of the affiliate whose shares or assets are being transferred to the member bank and must indicate the anticipated date of the reorganization.

⁴ⁱ. The holding company can meet this criteria by either repurchasing the assets at book value plus any write-down that has been taken or by making a quarterly cash contribution to the bank equal to the book value plus any write-downs that have been taken by the bank.

to the following exempted transactions. (See section 223.42.) The transactions are, however, subject to the safety-and-soundness requirement (section 223.13). Detailed conditions or restrictions pertaining to these exemptions are discussed after this list.

- making correspondent banking deposits in an affiliated depository institution (as defined in section 3 of the FDI Act (12 USC 1813) or an affiliated foreign bank that represent an ongoing, working balance maintained in the ordinary course of correspondent business
- giving immediate credit to an affiliate for uncollected items received in the ordinary course of business
- transactions secured by cash or U. S. government securities
- purchasing securities of a servicing affiliate
- purchasing certain liquid assets
- purchasing certain marketable securities
- purchasing certain municipal securities
- purchasing from an affiliate an extension of credit subject to a repurchase agreement that was originated by a member bank and sold to the affiliate subject to a repurchase agreement or with recourse
- asset purchases from an affiliate by a newly formed member bank, if the appropriate federal banking agency for the member bank has approved the asset purchase in writing in connection with the review of the formation of the member bank
- transactions approved under the Bank Merger Act that involve federally insured depository institutions in U.S. branches and agencies of a foreign bank
- purchasing, on a nonrecourse basis, an extension of credit from an affiliate
- intraday extensions of credit
- riskless-principal transactions

Correspondent banking. Section 23A exempts from its quantitative limits and collateral requirements any deposit by a member bank in an affiliated bank or affiliated foreign bank that is made in the ordinary course of correspondent business, subject to any restrictions that the Board may impose.^{4j} Section 223.42(a) of the rule further provides that such deposits must represent ongoing, working balances maintained by the member bank in the ordinary course of

^{4j}. 12 USC 371c(d)(2).

conducting the correspondent business.^{4k} Although not required by section 23A or the Home Owners' Loan Act (HOLA), the rule also provides that correspondent deposits in an affiliated insured savings association are exempt if they otherwise meet the requirements of the exemption.

Secured credit transactions. Section 23A and section 223.42(c) of the rule exempt any credit transaction by a member bank with an affiliate that is “fully secured” by U.S. government obligations or by a “segregated, earmarked” deposit account.^{4l} A deposit account meets the “segregated, earmarked” requirement only if the account exists for the sole purpose of securing credit transactions between the member bank and its affiliates and is so identified. Under section 23A, if U.S. government obligations or deposit accounts are sufficient to *fully* secure a credit transaction, then the transaction is completely exempt. If, however, the U.S. government obligations or deposit accounts represent less than full security for the credit transaction, then the amount of U.S. government obligations or deposits counts toward the collateral requirements of section 23A, but no part of the transaction is exempt from the statute’s quantitative limits.

An additional exemption provided in the rule is consistent with the (d)(4) exemption in section 23A. A credit transaction with an affiliate will be exempt “to the extent that the transaction is and remains secured” by appropriate (d)(4) collateral. If a member bank makes a \$100 nonamortizing term loan to an affiliate that is secured by \$50 of U.S. Treasury securities and \$75 of real estate, the value of the covered transaction will be \$50. If the market value of the U.S. Treasury securities falls to \$45 during the life of the loan, the value of the covered transaction would increase to \$55. The Board expects member banks that use this expanded (d)(4) exemption to review the market value of their U.S. government obligations collateral regularly to ensure compliance with the exemption.

Purchases of assets with readily identifiable market quotes. Section 23A(d)(6) exempts the purchase of assets by a member bank from an

affiliate if the assets have a “readily identifiable and publicly available market quotation” and are purchased at their current market quotation.^{4m} The rule (section 223.42(e)) limits the availability of this exemption (the (d)(6) exemption) to purchases of assets with market prices that are recorded in widely disseminated publications that are readily available to the general public, such as newspapers with a national circulation. Because as a general matter only exchange-traded assets are recorded in such publications, this test has ensured that the qualifying assets are traded actively enough to have a true “market quotation” and that examiners can verify that the assets are purchased at their current market quotation. The rule applies if the asset is purchased at *or below* the asset’s current market quotation.⁵

If a member bank purchases from one affiliate securities issued by another affiliate, the bank has engaged in two types of covered transactions. Under the rule, although the (d)(6) exemption may exempt the one-time asset purchase from the first affiliate, it would not exempt the ongoing investment in securities issued by the second affiliate.

The (d)(6) exemption may apply to a purchase of assets that are not traded on an exchange. In particular, purchases of foreign exchange, gold, and silver, and purchases of over-the-counter (OTC) securities and derivative contracts whose prices are recorded in widely disseminated publications, may qualify for the (d)(6) exemption.

Purchases of securities with a ready market from a securities affiliate. Section 223.42(f) of the rule expands the statutory (d)(6) exemption to allow a member bank to purchase securities from an affiliate based on price quotes obtained from certain electronic screens so long as, among other things, (1) the selling affiliate is a broker-dealer registered with the SEC, (2) the securities are traded in a ready market and eligible for purchase by state member banks, (3) the securities are not purchased within 30 days of an underwriting (if an affiliate of the bank is an

4m. 12 USC 371c(d)(6).

5. The rule provides that a U.S. government obligation is an eligible (d)(6) asset only if the obligation’s price is quoted routinely in a widely disseminated publication that is readily available to the general public. Although all U.S. government obligations have low credit risk, not all U.S. government obligations trade in liquid markets at publicly available market quotations.

4k. Unlike the sister-bank exemption, the exemption for correspondent banking deposits applies to deposits placed by a member bank in an *uninsured* depository institution or foreign bank.

4l. 12 USC 371c(d)(4).

underwriter of the securities), and (4) the securities are not issued by an affiliate.

- *Broker-dealer requirement and securities purchases from foreign broker-dealers.* As stated above, the selling affiliate must be a registered broker-dealer. Broker-dealers that are registered with the SEC are subject to supervision and examination by the SEC and are required by SEC regulations to keep and maintain detailed records concerning each securities transaction conducted by the broker-dealer. In addition, SEC-registered broker-dealers have experience in determining whether a security has a “ready market” under SEC regulations. The rule does not expand the exemption to include securities purchases from foreign broker-dealers. The rule explicitly provides, however, that a member bank may request that the Board exempt securities purchases from a particular foreign broker-dealer, and the Board would consider these requests on a case-by-case basis in light of all the facts and circumstances.
- *Securities eligible for purchase by a state member bank.* The exemption requires that the bank’s purchase of securities be eligible for purchase by a state member bank. The Board determined that a member bank may purchase equity securities from an affiliate under the (d)(6) exemption, if the purchase is made to hedge the bank’s permissible customer-driven equity derivative transaction (and the purchase meets all the other requirements of the exemption).
- *No purchases within 30 days of an underwriting.* The (d)(6) rule generally prohibits a member bank from using the (d)(6) exemption to purchase securities during an underwriting, or within 30 days of an underwriting, if an affiliate of the bank is an underwriter of the securities. This provision applies unless the security is purchased as part of an issue of obligations of, or obligations fully guaranteed as to principal and interest by, the United States or its agencies. The rule includes the 30-day requirement because of the uncertain and volatile market values of securities during and shortly after an underwriting period and because of the conflicts of interest that may arise during and after an underwriting period, especially if an affiliate has difficulty selling its allotment.
- *No securities issued by an affiliate.* If a member bank purchases from one affiliate

securities issued by another affiliate, it would not exempt the investment in securities issued by the second affiliate, even though the (d)(6) exemption may exempt the asset purchase from the first affiliate. The transaction would be treated as a purchase of, or an investment in, securities issued by an affiliate.

- *Price-verification methods.* The (d)(6) exemption applies only in situations in which the member bank is able to obtain price quotes on the purchased securities from an unaffiliated electronic, real-time pricing service. The Board reaffirms its position that it would not be appropriate to use independent dealer quotations to establish a market price for a security under the new (d)(6) exemption. A security that is not quoted routinely in a widely disseminated news source or a third-party electronic financial network may not trade in a sufficiently liquid market to justify allowing a member bank to purchase unlimited amounts of the security from an affiliate.
- *Record retention.* The rule expressly includes a two-year record-retention and supporting information requirement that is sufficient to enable the appropriate federal banking agencies to ensure that the member bank is in compliance with the terms of the (d)(6) exemption.

Purchasing municipal securities. Section 223.42(g) of the rule exempts a member bank’s purchase of municipal securities from an affiliate if the purchase meets certain requirements.^{5a} First, the member bank must purchase the municipal securities from a broker-dealer affiliate that is registered with the SEC. Second, the municipal securities must be eligible for purchase by a state member bank, and the member bank must report the transaction as a securities purchase in its call report. Third, the municipal securities must either be rated by a nationally recognized statistical rating organization or must be part of an issue of securities that does not exceed \$25 million in size. Finally, the price for the securities purchased must be (1) quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks; (2) verified by reference to

^{5a} Municipal securities are defined by reference to section 3(a)(29) of the Securities Exchange Act. It defines municipal securities as direct obligations of, or obligations guaranteed as to principal or interest by, a state or agency, instrumentality, or political subdivision thereof, and certain tax-exempt industrial development bonds. (See 17 USC 78c(a)(29).)

two or more actual independent dealer quotes on the securities to be purchased or securities that are comparable to the securities to be purchased; or (3) in the case of securities purchased during the underwriting period, verified by reference to the price indicated in the syndicate manager's written summary of the underwriting.^{5b} Under any of the three pricing options, the member bank must purchase the municipal securities at or below the quoted or verified price.

Purchases of assets by newly formed banks. Section 223.42(i) of the rule exempts a purchase of assets by a newly chartered member bank from an affiliate if the appropriate federal banking agency for the bank has approved the purchase. This exemption allows companies to charter a new bank and to transfer assets to the bank free of the quantitative limits and low-quality-asset prohibition of section 23A.

Transactions approved under the Bank Merger Act. The Bank Merger Act exemption applies to transactions between a member bank and an insured depository institution affiliate. Section 223.42(j) exempts transactions between insured depository institutions that are approved pursuant to the Bank Merger Act. The rule makes the Bank Merger Act exemption available for merger and other related transactions between a member bank and a U.S. branch or agency of an affiliated foreign bank, if the transaction has been approved by the responsible federal banking agency pursuant to the Bank Merger Act, and should help ensure that such transactions do not pose significant risks to the member bank. There is no regulatory exemption for merger transactions between a national bank and its nonbank affiliate. Any member bank merging or consolidating with a nonbank affiliate may be able to take advantage of the regulatory exemption for internal-reorganization transactions contained in section 223.41(d) of the rule.

Purchases of extensions of credit—the purchase exemption.

- The purchase of an extension of credit on a nonrecourse basis from an affiliate is exempt

^{5b} Under the Municipal Securities Rulemaking Board's Rule G-11, the syndicate manager for a municipal bond underwriting is required to send a written summary to all members of the syndicate. The summary discloses the aggregate par values and prices of bonds sold from the syndicate account.

from section 23A's quantitative limits provided that—

- the extension of credit is originated by the affiliate;
- the member bank makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit; and
- the member bank does not make a blanket advance commitment to purchase extensions of credit from the affiliate. (See section 223.42(k) of the rule.)

The rule also includes a 50 percent limit on the amount of loans a bank may purchase from an affiliate under the purchase exemption. When a member bank purchases more than half of the extensions of credit originated by an affiliate, the purchases represent the principal ongoing funding mechanism for the affiliate. The member bank's status as the predominant source of financing for the affiliate calls into question the availability of alternative funding sources for the affiliate, places significant pressure on the bank to continue to support the affiliate through asset purchases, and reduces the bank's ability to make independent credit decisions with respect to the asset purchases.

- *“Substantial, ongoing funding” test.* The rule allows the appropriate federal banking agency for a member bank to reduce the 50 percent threshold prospectively, on a case-by-case basis, in those situations in which the agency believes that the bank's asset purchases from an affiliate under the exemption may cause harm to the bank.
- *Independent credit review by the bank.* To qualify for the purchase exemption under section 223.42(k), a member bank must independently review the creditworthiness of each obligor before committing to purchase each loan. Under established Federal Reserve guidance, a state member bank is required to have clearly defined policies and procedures to ensure that it performs its own due diligence in analyzing the credit and other risks inherent in a proposed transaction.^{5c} This function is not delegable to any third party, including affiliates of the member bank or government-sponsored enterprises. Accordingly, to qualify for this exemption, the member bank, independently and using its own credit policies

^{5c} See, for example, SR-97-21.

and procedures, must itself review and approve each extension of credit before giving a purchase commitment to its affiliate.

- *Purchase of loans from an affiliate must be without recourse.* In connection with a bank's purchase of loans from an affiliate, the affiliate cannot retain recourse on the loans. The rule (section 223.42(k)) specifies that the exemption does not apply in situations where the affiliate retains recourse on the loans purchased by the member bank. The rule also specifies that the purchase exemption only applies in situations where the member bank purchases loans from an affiliate that were originated by the affiliate. The exemption cannot be used by a member bank to purchase loans from an affiliate that the affiliate purchased from another lender. The exemption is designed to facilitate a member bank's using its affiliate as an origination agent, not to permit a member bank to take off an affiliate's books loans that the affiliate purchased from a third party.

Intraday extensions of credit. Section 223.42(l) of the rule provides that intraday credit extensions by a member bank to an affiliate are section 23A covered transactions but exempts all such intraday credit extensions from the quantitative and collateral requirements of section 23A if the member bank (1) maintains policies and procedures for the management of intraday credit exposure and (2) has no reason to believe that any affiliate receiving intraday credit would have difficulty repaying the credit in accordance with its terms. The establishment of policies and procedures are for—

- monitoring and controlling the credit exposure arising at any one time from the member bank's intraday extensions of credit to each affiliate and all affiliates in the aggregate and
- ensuring that any intraday extensions of credit by the member bank to an affiliate comply with the market-terms requirement of section 223.51 of the rule.

Standard under which the board may grant additional exemptions. Section 223.43 of the rule provides that exemption requests should (1) describe in detail the transaction or relationship for which the member bank seeks exemption, (2) explain why the Board should exempt the transaction or relationship, and (3) explain how the exemption would be in the public

interest and consistent with the purposes of section 23A.

Exemptions from the Attribution Rule of Section 23A

The attribution rule of section 23A provides that “a transaction by a member bank with any person shall be deemed a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, that affiliate” (12 USC 371c(a)(2)). One respective interpretation and three exemptions are discussed below.

Loans to a nonaffiliate that purchases securities or other assets through a depository institution affiliate agent or broker. The Board issued an interpretation on an insured depository institution's loan to a nonaffiliate that purchases assets through an institution's affiliate that is acting as agent. This interpretation confirms that section 23A of the FRA does not apply to extensions of credit an insured depository institution grants to customers that use the loan proceeds to purchase a security or other asset through an affiliate of the depository institution, so long as (1) the affiliate is acting exclusively as an agent or broker in the transaction and (2) the affiliate retains no portion of the loan proceeds as a fee or commission for its services.

Under this interpretation, the Board concluded that when the affiliated agent or broker retains a portion of the loan proceeds as a fee or commission, the portion of the loan not retained by the affiliate as a fee or commission would still be outside the coverage of section 23A. On the other hand, the portion of the loan retained by the affiliate as a fee or commission would be subject to section 23A because it represents proceeds of a loan by a depository institution to a third party that are transferred to, and used for the benefit of, an affiliate of the institution. The Board, however, granted an exemption from section 23A for that portion of a loan to a third party that an affiliate retains as a market-rate brokerage or agency fee.

The interpretation would not apply if the securities or other assets purchased by the third-party borrower through the affiliate of the depository institution were issued or underwritten by, or sold from the inventory of, another affiliate of the depository institution. In that case, the proceeds of the loan from the depository institution

would be transferred to, and used for the benefit of, the affiliate that issued, underwrote, or sold the assets on a principal basis to the third party.

The above-mentioned transactions are subject to the market-terms requirement of section 23B, which applies to “any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or any other person” (12 USC 371c-1(a)(2)(D)). A market-rate brokerage commission or agency fee refers to a fee or commission that is no greater than that prevailing at the same time for comparable agency transactions the affiliate enters into with persons who are neither affiliates nor borrowers from an affiliated depository institution. (See Regulation W at 12 CFR 223.16(b).)

Exemption—Loans to a nonaffiliate that purchases securities from a depository institution securities affiliate that acts as a riskless principal. The Board has granted an exemption from section 23A of the FRA for extensions of credit by an insured depository institution to customers who use the loan proceeds to purchase a security that is issued by a third party via a broker-dealer affiliate of the institution that acts as riskless principal. The exemption for riskless-principal transactions would not apply if the broker-dealer affiliate sold to the third-party borrower securities that were issued or underwritten by, or sold out of the inventory of, an affiliate of the depository institution. Riskless-principal trades, although the functional equivalent of securities brokerage transactions, involve the purchase of a security by the depository institution’s broker-dealer affiliate. Accordingly, the broker-dealer retains the loan proceeds at least for some moment in time.

There is negligible risk that loans a depository institution makes to borrowers to engage in riskless-principal trades through a broker-dealer affiliate of the depository institution would be used to fund the broker-dealer. For this reason, the Board adopted an exemption from section 23A to cover riskless-principal securities transactions engaged in by depository institution borrowers through broker-dealer affiliates of the depository institution. This exemption is applicable even if the broker-dealer retains a portion of the loan proceeds as a market-rate markup for executing the riskless-principal securities trade. (See Regulation W at 12 CFR 223.16(c)(1).)

Exemption—Loan to a nonaffiliate pursuant to a preexisting line of credit and the proceeds are

used to purchase securities from the institution’s broker-dealer affiliate. The Board approved an exemption from section 23A for loans by an insured depository institution to a nonaffiliate pursuant to a preexisting line of credit, in which the loan proceeds are used to purchase securities from a broker-dealer affiliate. In more detail, the Board exempted extensions of credit by an insured depository institution to its customers that use the credit to purchase securities from a registered broker-dealer affiliate of the institution, so long as the extension of credit is made pursuant to, and consistent with any conditions imposed in, a preexisting line of credit. This line of credit should not have been established in expectation of a securities purchase from or through an affiliate of the institution. The pre-existing requirement is an important safeguard to ensure that the depository institution did not extend credit for the purpose of inducing a borrower to purchase securities from or issued by an affiliate. The preexisting line of credit exemption may not be used in circumstances in which the line has merely been preapproved. (See Regulation W at 12 CFR 223.16(c)(3).)

Exemption—Credit card transactions. An exemption is provided from section 23A’s attribution rule for general-purpose credit card transactions that meet certain criteria. (See section 223.16(c)(4).) The rule defines a general-purpose credit card as a credit card issued by a member bank that is widely accepted by merchants that are not affiliates of the bank (such as a Visa card or Mastercard) if less than 25 percent of the aggregate amount of purchases with the card are purchases from an affiliate of the bank. Extensions of credit to unaffiliated borrowers pursuant to special-purpose credit cards (that is, credit cards that may only be used or are substantially used to buy goods from an affiliate of the member bank) are subject to the rule.

The credit card exemption includes several alternatives. First, several different methods are provided for a member bank to demonstrate that its credit card meets the 25 percent test. If a member bank has no commercial affiliates (other than those permitted for an FHC under section 4 of the BHC Act), the bank would be deemed to satisfy the 25 percent test if the bank has no reason to believe that it would fail the test. (A member bank could use this method of complying with the 25 percent test even if, for example, the bank’s FHC controls, under section 4(a)(2), 4(c)(2), or 4(k)(4)(H) of the BHC Act, several

companies engaged in nonfinancial activities.) Such a member bank would not be obligated to establish systems to verify strict, ongoing compliance with the 25 percent test. Most BHCs and FHCs should meet this test. If a member bank has commercial affiliates (beyond those permitted for an FHC under section 4 of the BHC Act), the bank would be deemed to satisfy the 25 percent test if—

- the bank establishes systems to verify compliance with the 25 percent test on an ongoing basis and periodically validates its compliance with the test, or
- the bank presents information to the Board demonstrating that its card would comply with the 25 percent test. (One way that a member bank could demonstrate that its card would comply with the 25 percent test would be to show that the total sales of the bank's affiliates are less than 25 percent of the total purchases by cardholders.)

Second, for those member banks that fall out of compliance with the 25 percent test, there is a three-month grace period to return to compliance before extensions of credit under the card become covered transactions. Third, member banks that are required to validate their ongoing compliance with the 25 percent test have a fixed method, time frames, and examples for computing compliance.

Example of calculating compliance with the 25 percent test. A member bank seeks to qualify a credit card as a general-purpose credit card under section 223.16, paragraph (c)(4)(ii)(A), of the rule. The member bank assesses its compliance under paragraph (c)(4)(iii) of this section on the 15th day of every month (for the preceding 12 calendar months). The credit card qualifies as a general-purpose credit card for at least three consecutive months. On June 15, 2005, however, the member bank determines that, for the 12-calendar-month period from June 1, 2004, through May 31, 2005, 27 percent of the total value of products and services purchased with the card by all cardholders were purchases of products and services from an affiliate of the member bank. Unless the credit card returns to compliance with the 25 percent limit by the 12-calendar-month period ending August 31, 2005, the card will cease to qualify as a general-purpose credit card as of September 1, 2005. Any outstanding extensions of credit under the

credit card that were used to purchase products or services from an affiliate of the member bank would become covered transactions at such time.

SECTION 23B OF THE FEDERAL RESERVE ACT

Regulation W, subpart F, sets forth the principal restrictions of section 23B. These include (1) a requirement that most transactions between a member bank and its affiliates be on terms and circumstances that are substantially the same as those prevailing at the time for comparable transactions with nonaffiliates; (2) a restriction on a member bank's purchase as fiduciary of assets from an affiliate unless certain criteria are met; (3) a restriction on a member bank's purchase, during the existence of an underwriting syndicate, of any security if a principal underwriter of the security is an affiliate; and (4) a prohibition on publishing an advertisement or entering into an agreement stating that a member bank will be responsible for the obligations of its affiliates. For the most part, subpart F restates the operative provisions of section 23B. The following transactions with affiliates are subject to restrictions:

- any covered transaction with an affiliate
- the sale of securities or other assets to an affiliate, including assets subject to repurchase
- the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise
- any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or to any other person
- any transaction or series of transactions with a third party—
 - if an affiliate has a financial interest in the third party or
 - if an affiliate is a participant in this transaction or series of transactions

Any transaction by a member bank or its subsidiary with any person is deemed to be a transaction with an affiliate of the bank if any of the proceeds of the transaction are used for the benefit of, or are transferred to, the affiliate. A member bank and its subsidiaries may engage in the transactions covered by section 23B of the FRA only on terms and under circumstances,

including credit standards, that are substantially the same, or at least as favorable to the bank or its subsidiary, as those prevailing at the time for comparable transactions with, or that in good faith would be offered to, nonaffiliate companies.

Section 23B also restricts the following transactions with affiliates:

- A member bank or its subsidiary cannot purchase as fiduciary any securities or other assets from any affiliate unless the purchase is permitted—
 - under the terms of the instrument creating the fiduciary relationship,
 - by court order, or
 - by the law of the jurisdiction governing the fiduciary relationship.
- A member bank or its subsidiary, whether acting as principal or fiduciary, cannot knowingly purchase or acquire, during the existence of any underwriting or selling syndicate, any security if a principal underwriter of that security is an affiliate of the bank. This limitation applies unless the purchase or acquisition of the security has been approved before it is initially offered for sale to the public by a majority of the directors of the bank. The purchase should be based on a determination that it is a sound investment for the bank irrespective of the fact that an affiliate of the bank is a principal underwriter of the securities.

Transactions Exempt from Section 23B

The market-terms requirement of section 23B applies to, among other transactions, any “covered transaction” between a member bank and an affiliate.^{5d} Section 23B(d)(3) makes clear that the term “covered transaction” in section 23B has the same meaning as the term “covered transaction” in section 23A, but does not include any transaction that is exempt under section 23A(d)—for example, transactions between sister banks, transactions fully secured by a deposit account or U.S. government obligations, and purchases of assets from an affiliate at a readily identifiable and publicly available market quotation.^{5e} Consistent with the statute, Regulation W’s section 223.52(a)(1) exempts from

section 23B any transaction that is exempt under section 23A(d).^{5f}

The rule also excludes from section 23B any covered transaction that is exempt from section 23A under section 223.42(i) or (j) (that is, asset purchases by a newly formed member bank and transactions approved under the Bank Merger Act). The Board excluded from section 23B this additional set of transactions because, in each case, the appropriate federal banking agency for the member bank involved in the transaction should ensure that the terms of the transaction are not unfavorable to the bank.

Purchases of Securities for Which an Affiliate Is the Principal Underwriter

The GLB Act amended section 23B to permit a member bank to purchase securities during an underwriting conducted by an affiliate if the following two conditions are met. First, a majority of the directors of the member bank (with no distinction drawn between inside and outside directors) must approve the securities purchase before the securities are initially offered to the public. Second, such approval must be based on a determination that the purchase would be a sound investment for the member bank regardless of the fact that an affiliate of the bank is a principal underwriter of the securities.^{5g} Section 223.53(b) includes this standard and clarifies that if a member bank proposes to make such a securities purchase in a fiduciary capacity, then the directors of the bank must base their approval on a determination that the purchase is a sound investment for the person on whose behalf the bank is acting as fiduciary.

A member bank may satisfy this director-approval requirement by obtaining specific prior director approval of each securities acquisition otherwise prohibited by section 23B(b)(1)(B). The rule clarifies, however, that a member bank also satisfies this director-approval requirement if a majority of the directors of the bank approves appropriate standards for the bank’s acquisition of securities otherwise prohibited by section 23B(b)(1)(B) and each such acquisition meets the standards adopted by the directors. In addition, a majority of the member bank’s directors

^{5f}. Regulation W will again be subsequently referred to as the “rule” or by its specified section-numbered discussion of section 23B provisions.

^{5g}. GLB Act, section 738 (12 USC 371c-1(b)(2)).

^{5d}. 12 USC 371c-1(a)(2)(A).

^{5e}. 12 USC 371c-1(d)(3).

must periodically review such acquisitions to ensure that they meet the standards and must periodically review the standards to ensure they meet the “sound investment” criterion of section 23B(b)(2). The appropriate period of time between reviews would vary depending on the scope and nature of the member bank’s program, but such reviews should be conducted by the directors at least annually. Before the passage of the GLB Act, Board staff informally allowed member banks, based on the legislative history of section 23B, to meet the director-approval requirement in this fashion, and there is no indication that Congress in the GLB Act intended to alter the procedures that a member bank could use to obtain the requisite director approval.^{5h} The rule codifies staff’s preexisting approach to the director-approval requirement.⁵ⁱ

Definition of Affiliate Under Section 23B

Section 23B states that the term “affiliate” under section 23B has the meaning given to such term in section 23A except that the term “affiliate” under section 23B does not include a “bank,” as defined in section 23A.^{5j} In the case of the sister-bank exemption, the rule’s section 223.2(c) clarifies that the only companies that qualify for the “bank” exception to section 23B’s definition of affiliate are insured depository institutions.

Advertising Restriction

In section 23B(c), the “advertising restriction” prohibits a member bank from publishing any advertisement or entering into any agreement stating or suggesting that the bank shall in any

5h. The conference report accompanying the Competitive Equality Banking Act of 1987 stated that the prior-approval requirement of section 23B(b) could be met “by the establishment in advance of specific standards by the outside directors for such acquisitions. If the outside directors establish such standards, they must regularly review acquisitions to assure that the standards have been followed, and they must periodically review the standards to assure that they continue to be appropriate in light of market and other conditions.” See *H.R. Conf. Rep. No. 100-261* at 133 (1987).

5i. The rule also provides, consistent with existing Board interpretations, that a U.S. branch, agency, or commercial lending company of a foreign bank may comply with this requirement by obtaining the required approvals and reviews from either a majority of the directors or a majority of the senior executive officers of the foreign bank.

5j. 12 USC 371c-1(d)(1).

way be responsible for the obligations of its affiliates unless the transaction satisfies the quantitative and collateral restrictions of section 23A.^{5k} The rule clarifies that section 23B(c) does not prohibit a member bank from making reference to such a guarantee, acceptance, or letter of credit in a prospectus or other disclosure document, for example, if otherwise required by law.

OPERATIONS SUBSIDIARIES

The Board has authorized member banks to establish and own operations subsidiaries. “Operations subsidiaries” are organizations that are, in effect, designed to serve as separately incorporated departments of a bank.

Member Bank Purchases of Stock of Operations Subsidiaries

The Board concluded in 1968 that “. . . a member bank may purchase for its own account shares of a corporation to perform, at locations at which the bank is authorized to engage in business, functions that the bank is empowered to perform directly” (12 CFR 250.141(i)). The Board reasoned that this authority could reasonably be interpreted as within a bank’s incidental powers to “organize its operations in the manner that it believes best facilitates the performance thereof,” and that the subsidiary essentially constitutes a separately incorporated division or department of the bank.

No specific rule requires a state member bank to give the Board prior notice of, or to acquire the Board’s approval for, the acquisition of an operations subsidiary to engage in activities that the bank itself may lawfully perform. However, section 208.3(d)(2) of Regulation H (12 CFR 208.3(d)(2)) prohibits a state member bank from causing or permitting a change in the general character of its business or in the scope of its corporate powers approved at the time of admission to membership, except with the permission of the Board.

Transactions Between a Member State Bank and Its Operations Subsidiary

The Board noted in 1970 that “[S]ince an

5k. 12 USC 371c-1(c).

operations subsidiary is in effect a part of, and subject to the same restrictions as, its parent bank, there is no reason to limit transactions between the bank and such subsidiary any more than transactions between departments of a bank.” The Board concluded that “a credit transaction by a member State bank with its operations subsidiary . . . is not a ‘loan or . . . extension of credit’ of the kind intended to be restricted and regulated by section 23A and is, therefore, outside the purview of that section” (12 CFR 223.2(b)(1)–(2)).

Operations Subsidiary Not Wholly Owned

The previously mentioned 1968 interpretation only expressly authorized state member banks to establish wholly owned operations subsidiaries,

in that a wholly owned subsidiary of a bank is functionally indistinguishable from a division or department of the bank. In enacting the GLB Act, Congress recognized the authority of national and state member banks to own and control an operations subsidiary. The GLB Act recognized traditional operations subsidiaries by distinguishing them from financial subsidiaries. A financial subsidiary is defined so as not to include a company engaged solely in activities that a parent bank may perform, subject to the limitations that govern the conduct of these activities.

The GLB Act also does not appear to require that a state member bank own 100 percent of an operations subsidiary or a financial subsidiary. The GLB Act defines the term “subsidiary” by reference to the BHC Act. Under the BHC Act, a company is a “subsidiary” of a bank holding company if the BHC (1) owns or controls 25 percent or more of the company’s voting shares, or (2) controls the election of a majority of the company’s directors.⁶

The Board thus believes that, as a result of the GLB Act and consistent with section 5136 of the Revised Statutes (12 USC 24 (seventh)) and the Board’s 1968 interpretation, a state member bank may acquire shares of a company that is not wholly owned and that (1) on consummation of the acquisition would be a subsidiary of the bank within the meaning of the BHC Act, and (2) engages only in activities in which the parent bank may engage, at locations at which the bank may engage in the activities, subject to the same limitations as if the bank were engaging in the activities directly.

FINANCIAL SUBSIDIARIES

Qualifying state member banks may control or hold an interest in a “financial subsidiary.” A financial subsidiary is any company that is controlled by one or more insured depository institutions and engages in activities that are financial in nature or incidental to a financial activity. A financial subsidiary does not include (1) a subsidiary that the state member bank is specifically authorized to hold by the express

6. See 12 USC 1841(d). A company also is considered a subsidiary of a bank holding company if the Board determines, after notice and opportunity for a hearing, that the bank holding company directly or indirectly exercises a controlling influence over the management or policies of the company.

terms of federal law (other than by section 9 of the FRA), such as an Edge Act subsidiary held under section 25 of the FRA, or (2) a subsidiary that engages only in activities that the parent bank could conduct directly and that are conducted on the same terms and conditions that govern the conduct of the activity by the state member bank. A financial subsidiary is authorized for national banks by section 5136A of the Revised Statutes (12 USC 24a) and for state banks by section 46 of the Federal Deposit Insurance Act (FDI Act) (12 USC 1831w). To implement the authorization for state member banks, a new subpart G was added to Regulation H (12 CFR 208.71 et seq.).

Investing in or Controlling a Financial Subsidiary

Under the GLB Act, a state member bank may control, or hold an interest in, a financial subsidiary only if—

- the state member bank and each of its depository institution affiliates is well capitalized and well managed;⁷
- the aggregate consolidated total assets of all the bank’s financial subsidiaries do not exceed the lesser of 45 percent of the consolidated total assets of the bank or \$50 billion;⁸
- the state member bank is one of the 100 largest insured banks and meets the following debt-rating or alternative debt-rating requirements:
 - for the 50 largest insured banks, the bank must have at least one issue of outstanding eligible debt that is currently rated in one of the three highest investment-grade rating categories by a nationally recognized statistical rating organization;⁹

7. An institution is “well capitalized” if it meets or exceeds the capital levels designated by the institution’s appropriate federal banking agency (section 38 of the FDI Act (12 USC 1831o)). A depository institution will be deemed “well managed” by references to specific examination ratings, or if its federal banking agency determines that the managerial resources are satisfactory, or if it has not been examined.

8. This dollar amount will be adjusted based on an indexing mechanism that is established jointly by the Federal Reserve Board and the Secretary of the Treasury.

9. “Eligible debt” refers to unsecured debt that has an initial maturity of more than 360 days. The debt must be issued and outstanding, may not be supported by any form of credit enhancement, and may not be held in whole or any

— for the second 50 largest insured banks, the bank must meet the issuer-credit-rating requirement for the 50 largest insured banks or the bank must meet the alternative criteria established jointly by regulation by the Secretary of the Treasury and the Federal Reserve¹⁰

(the debt-rating and alternative criteria are not applicable if the bank's financial subsidiaries engage in any newly authorized financial activities solely as agent and not as principal); and

- the state member bank obtains the Federal Reserve's approval to engage in the activities of the financial subsidiary (using the notice procedures in section 208.76 of Regulation H). The state member bank also must obtain any necessary approvals from its state supervisory authority.

Issuer-Credit-Rating Requirement

The issuer-credit-rating requirement of the rule (12 CFR 208.71) requires a long-term issuer credit rating from a nationally recognized statistical rating organization that is within the three highest investment-grade rating categories used by the organization. An "issuer credit rating" is one that assesses the bank's overall capacity and willingness to pay, on a timely basis, its unsecured financial obligations. An issuer credit rating differs from a debt rating in that it does not assess the bank's ability or willingness to make payments on any individual class or issue

significant part by affiliates or insiders of the bank or by any other person acting on behalf of or with funds from the bank or an affiliate.

10. The size of an insured bank is determined based on the consolidated total assets of the bank as of the end of each calendar year.

of debt, nor does it reflect payment priority or payment preferences among financial obligations.

For this rule, the issuer credit rating must be assigned to the national or state member bank that controls or holds an interest in a financial subsidiary. Issuer credit ratings that are assigned to a subsidiary or affiliate of the parent bank, such as a subsidiary engaged in derivatives activities, do not meet the rule's requirements. Rating organizations may issue long-term or short-term issuer credit ratings for the same bank and separate ratings for dollar-denominated and foreign-currency-denominated obligations. Only long-term issuer ratings for dollar-denominated obligations satisfy the requirements of the rule. A "long-term credit rating" means a written opinion that is issued by a nationally recognized statistical rating organization regarding the bank's overall capacity and willingness to pay on a timely basis its unsecured, dollar-denominated financial obligations maturing in no less than one year.

The Secretary of the Treasury and the Federal Reserve have determined that certain types of ratings assigned by the rating agencies indicated in table 1 currently meet the requirements of the rule, provided that the ratings assess the parent bank's ability and willingness to meet its financial obligations denominated in U.S. dollars.

Standard and Poor's may modify its AA or A ratings to include a plus (+) or minus (-) sign to show relative standing within these rating categories. Any rating from A minus to AAA would satisfy the long-term issuer-credit-rating requirement; an A minus would constitute the lowest acceptable rating in the case of Standard & Poor's and Fitch. Moody's top three investment-grade categories for long-term issuer credit ratings are Aaa, Aa, or A, with Aaa denoting the highest rating. Moody's applies numerical modifiers of 1, 2, and 3 in the Aa and A rating

Table 1—Acceptable Rating Organizations and Ratings

<i>Rating Organization</i>	<i>Type of Rating</i>	<i>Rating</i>
Standard & Poor's	Issuer credit rating (including a counterparty credit rating)	AAA, AA, or A
Moody's	Issuer credit rating	Aaa, Aa, or A
Fitch	International credit rating	AAA, AA, or A

categories, with 3 denoting the lowest end of the letter-rating modifiers. Any rating from A-3 to Aaa would satisfy the long-term issuer-credit-rating requirement; a rating of A-3 would be the lowest acceptable rating in the case of Moody's.

Prudential Standards

A state member bank that owns a financial subsidiary must comply with certain prudential safeguards. These standards pertain to the bank's capital requirements and its establishment of policies and procedures arising from financial subsidiary ownership.

As for the capital requirements, the state member bank must "deconsolidate" the assets and liabilities of all of its financial subsidiaries from those of the bank. Although the GLB Act requires a bank to deconsolidate the assets and liabilities of any financial subsidiary for regulatory capital purposes, a financial subsidiary remains a subsidiary of a state member bank. The Board will continue to review the operations and financial and managerial resources of the bank on a consolidated basis as part of the supervisory process. The Board may take appropriate supervisory action if it believes that the bank does not have the appropriate financial and managerial resources (including capital resources and risk-management controls) to conduct its direct or indirect activities in a safe and sound manner.

In addition to the deconsolidation described above, the bank must also deduct a specified percentage of the aggregate amount of the equity investment (including retained earnings) ("the aggregate amount") in all financial subsidiaries from the bank's capital and assets. Therefore, the bank must deduct—

- 50 percent of the aggregate amount from both the bank's tier 1 capital and its tier 2 capital for purposes of determining its risk-based capital ratios;
- 50 percent of the aggregate amount from the bank's tier 1 capital for purposes of determining its leverage ratios; and
- 100 percent of the aggregate amount from its tangible equity for purposes of determining its tangible equity capital ratio. It must also deduct 100 percent of the aggregate amount from the bank's risk-weighted assets, average total assets, and total assets when determining

its risk-based, leverage, and tangible capital ratios.

The bank must meet all capital requirements—including the "well-capitalized" requirement (Regulation H, section 208.71) and the capital levels established by the Board under section 38 of the FDI Act—after the adjustments described above.

The member bank must also establish and maintain policies and procedures to manage the financial and operational risks associated with its ownership of a financial subsidiary. These procedures must identify and manage financial and operational risks with the bank and its financial subsidiaries. They must adequately protect the bank from such risks and preserve the bank's separate corporate identity and the limited liability of the bank and its financial subsidiaries. In addition, a financial subsidiary of a state member bank is considered a non-subsidiary affiliate of the bank for purposes of sections 23A and 23B of the FRA and a subsidiary of the BHC (and not a subsidiary of a bank) for the purposes of the anti-tying prohibitions of the Bank Holding Company Act Amendments of 1970.

Permissible Activities for a Financial Subsidiary

A financial subsidiary can engage in three types of permissible activities:

1. Those activities that are determined to be financial in nature or incidental to financial activities under section 4(k)(4) of the BHC Act. These permissible activities include—
 - general insurance agency activities in any location and travel agency activities;
 - underwriting, dealing in, and making a market in all types of securities; and
 - any activity that the Federal Reserve determined by regulation or order to be closely related to banking or managing or controlling banks so as to be a proper incident thereto and that was in effect on the effective date of the GLB Act. (See section 225.86 of the Board's Regulation Y (12 CFR 225.86).)
2. Activities that the Secretary of the Treasury, in consultation with the Board, determines to

be financial in nature or incidental to financial activities and permissible for financial subsidiaries of national banks pursuant to section 5136A(b) of the Revised Statutes of the United States (12 USC 24a(b)).

3. Activities that the state member bank is permitted to engage in directly, subject to the same terms and conditions that govern the conduct of the activity by the state member bank (12 USC 24a(a)(2)(A)(ii)).

Impermissible Activities for a Financial Subsidiary

A financial subsidiary *may not* engage as principal in insurance underwriting (except to the extent permitted for national banks by the Comptroller of the Currency as of January 1, 1999, and not subsequently overturned in certain grandfathered title insurance activities), providing or issuing annuities, real estate investment or development (except as expressly authorized by law), and merchant banking and insurance company investment activities.

Federal Reserve Approval Requirements

Federal Reserve approval of a financial subsidiary involves a streamlined notice procedure. A state member bank must file a notice with the appropriate Reserve Bank before acquiring control of, or an interest in, a financial subsidiary, or before engaging in an additional financial activity through an existing financial subsidiary. No notice is required for a financial subsidiary to engage in an additional activity that the parent state member bank could conduct directly. The notice must include basic information on the financial subsidiary and its existing and proposed activities. In the case of an acquisition, the notice should include a description of the transaction through which the bank proposes to acquire control of or an interest in the financial subsidiary. The notice also must contain a certification that the state member bank and its depository institution affiliates meet the capital, management, and credit-rating requirements to own a financial subsidiary, as stated in the GLB Act and subpart G of Regulation H. If the notice is for the state member bank's initial affiliation with a company engaged in insurance activities,

the notice must describe the company's insurance activities and identify the states where the company holds an insurance license. A notice will be considered approved on the fifteenth day after receipt of a complete notice by the appropriate Reserve Bank, unless before that date, the notice is approved or disapproved or the bank is notified that additional time is needed to review the submitted notice.

The GLB Act permits a state member bank to acquire an interest in or control a financial subsidiary if the bank meets the criteria and requirements set forth in the rule. The Board, however, retains its general supervisory authority for state member banks and may restrict or limit the activities of, or the acquisition or ownership of a subsidiary by, a state member bank if the Board finds that the bank does not have the appropriate financial and managerial resources to conduct the activities or to acquire or retain ownership of the company.

AGRICULTURAL CREDIT CORPORATIONS

The increasing number of agricultural credit corporations and their effect on parent banks have intensified the need for their supervision. Most agricultural credit corporations come under the direct supervision of the district Federal Intermediate Credit Bank (FICB) where the corporations discount most of their loans. However, a corporation may obtain funds exclusively in the open market and avoid FICB regulation.

EDGE ACT AND AGREEMENT CORPORATIONS

U.S.-based corporations and permissible activities for their Edge Act and agreement corporation subsidiaries are described in detail in the Board's Regulation K (12 CFR 211). Edge Act and agreement corporations provide banks with a vehicle for engaging in international banking or foreign financial operations. They also have the power, with supervisory consent, to purchase and hold the stock of foreign banks and other international financial concerns. Edge Act and agreement corporations are examined by the Federal Reserve, and their respective reports of examination should be reviewed during each examination of a parent member bank. The

Federal Reserve examination report and the amount and quality of paper held by these corporations must provide the basis for evaluating the bank's investment in them.

Transactions between the parent bank and the bank's Edge Act and agreement corporation subsidiaries are not subject to the limitations in section 23A. However, they are subject to limitation under section 25 of the FRA (12 USC 601) and under the Board's Regulation K. In addition, transactions with such bank subsidiaries and the parent bank's affiliates are aggregated with transactions by the bank and its affiliates for purposes of section 23A limitations and restrictions. Transactions between a bank and Edge Act and agreement corporation subsidiaries of the bank's holding company are also subject to section 23A.

FOREIGN BANKING ORGANIZATIONS

Under section 211.21(o) of Regulation K (12 CFR 211.21(o)), the term *a foreign banking organization* means—

- a foreign bank, as defined in section 1(b)(7) of the International Banking Act (12 USC 3101(7)) that—
 - operates a branch, agency, or commercial lending company subsidiary in the United States;
 - controls a bank in the United States; or
 - controls an Edge corporation acquired after March 5, 1987; and
- any company of which the foreign bank is a subsidiary.

On March 15, 2006, the Board approved a revision to its Regulation K (effective April 19, 2006), incorporating the provisions of section 208.63 of Regulation H by reference into sections 211.5 and 211.24 of Regulation K. Edge and agreement corporations and other foreign banking organizations (that is, U.S. branches, agencies, and representative offices of foreign banks that are supervised by the Federal Reserve) must establish and maintain procedures reasonably designed to ensure and monitor compliance with the Bank Secrecy Act and related regulations. Each of these banking organizations' compliance programs must include, at a minimum, (1) a system of internal controls to ensure

ongoing compliance, (2) independent testing of compliance by the institution's personnel or by an outside party, (3) the designation of an individual or individuals responsible for coordinating and monitoring day-to-day compliance, and (4) training for appropriate personnel. (See SR-06-7.)

FOREIGN BANKS

A foreign bank is an organization that is—

- organized under the laws of a foreign country and
- engages directly in the business of banking outside the United States.

FOREIGN BANK OFFICES

A foreign bank office consists of any branch, agency, representative office, or commercial lending company subsidiary of a foreign bank in the United States.

Branches of a Foreign Bank

A branch of a foreign bank means any place of business of a foreign bank, located in any state, at which deposits are received, and that is not an agency.

Agencies

An agency of a foreign bank means any place of business of a foreign bank, located in any state, at which credit balances are maintained, checks are paid, money is lent, or, to the extent not prohibited by state or federal law, deposits are accepted from a person or entity that is not a citizen or resident of the United States. Obligations are not to be considered credit balances unless they are—

- incidental to, or arise out of the exercise of, other lawful banking powers;
- to serve a specific purpose;
- not solicited from the general public;
- not used to pay routine operating expenses in

- the United States such as salaries, rent, or taxes;
- withdrawn within a reasonable period of time after the specific purpose for which they were placed has been accomplished; and
- drawn upon in a manner reasonable in relation to the size and nature of the account.

- the foreign bank also operates one or more branches or agencies in the United States,
- the loans approved at the representative office are made by a U.S. office of the bank, and
- the loan proceeds are not disbursed in the representative office.

(See section 211.24(d)(1)(ii) of Regulation K (12 CFR 211.24(d)(1)(ii)).)

Commercial Lending Company

A *commercial lending company* means any organization, other than a bank or an organization operating under section 25 of the Federal Reserve Act (FRA) (12 USC 601–604a), organized under the laws of any state, that maintains credit balances permissible for an agency and engages in the business of making commercial loans. A commercial lending company includes any company chartered under article XII of the banking law of the state of New York. (See Regulation K, section 211.21(g) (12 CFR 211.21(g)).)

Representative Office

A *representative office* means any office of a foreign bank that is located in any state and is not a federal branch, federal agency, state branch, state agency, or commercial lending company subsidiary. (See section 211.21(x) of Regulation K (12 CFR 211.21(x)).) A representative office is usually established when a bank’s board of directors and management desire to establish a physical presence in a foreign market and very limited functions are to be (or can be made) available. A representative office cannot provide traditional banking services, such as accepting deposits or making loans directly. The office basically serves as a liaison and marketing function for the parent bank.

A U.S. subsidiary of a foreign bank may be considered to be a representative office of the foreign bank when it holds itself out to the public as a representative of the foreign bank that is acting on behalf of the foreign bank, even if the subsidiary engages in other nonbank business. In addition, an individual or a unit of a subsidiary that acts as a representative of a foreign bank from the location of the nonbank subsidiary may be treated as a representative office. A representative office may make credit decisions only if—

CORRESPONDENT BANKS

A correspondent bank provides certain services to banks located in other countries that do not have local offices or whose local office is prohibited from engaging in certain activities. Such a relationship allows a foreign bank to provide trade-related and foreign-exchange services for its multinational customers in a foreign market without having to establish a physical presence in that market.

PARALLEL-OWNED BANKING ORGANIZATIONS

A parallel-owned banking organization is created when at least one U.S. depository institution and a foreign bank^{10a} are controlled, either directly or indirectly, by the same person or group of persons^{10b} who are closely associated in their business dealings or otherwise acting in concert. Parallel-owned banking organizations do not include structures in which one depository institution is a subsidiary of the other or in which the organization is controlled by a company subject to the BHC Act or the Savings and Loan Holding Company Act.^{10c} The banking agencies consider whether “control” of a depository institution exists when a person or group of persons controls 10 percent or more of any class

10a. References to “foreign bank” or “foreign parallel bank” also include a holding company of the foreign bank and any U.S. or foreign affiliates of the foreign bank. References to “U.S. depository institution” do not include a U.S. depository institution that is controlled by a foreign bank.

10b. The term “persons” includes both business entities and natural persons, which may or may not be U.S. citizens.

10c. A bank holding company or savings and loan holding company, however, may be a component of a parallel-owned banking organization. This situation may arise when a bank holding company or savings and loan holding company controls the U.S. depository institution, and the holding company, in turn, is controlled by a person or group of persons who also controls a foreign bank.

of the depository institution's voting shares. Parallel-owned banking organizations are established and maintained for a variety of reasons, including tax and estate planning and the potential risks associated with nationalization. While these reasons may be legitimate and not prohibited by U.S. or foreign law, the structure of such organizations creates or increases certain risks and may make it more difficult for supervisors to monitor and address those risks. On April 23, 2002, the U.S. banking agencies (the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision) issued a joint agency statement that addresses the potential risks associated with parallel-owned banking organizations. The existence of one or more of the following factors may, depending on the circumstances, warrant additional inquiry:

- An individual or group of individuals acting in concert that controls a foreign bank also controls any class of voting shares of a U.S. depository institution, or financing for persons owning or controlling the shares is received from, or arranged by, the foreign bank, especially if the shares of the U.S. depository institution are collateral for the stock-purchase loan.
- The U.S. depository institution has adopted particular or unique policies or strategies similar to those of the foreign bank, such as common or joint marketing strategies, sharing of customer information, cross-selling of products, or linked web sites.
- An officer or director of the U.S. depository institution either (1) serves as an officer or director^{10d} of a foreign bank or (2) controls a foreign bank or is a member of a group of individuals acting in concert or with common ties that controls a foreign bank.
- The name of the U.S. depository institution is similar to that of the foreign bank.

Parallel-owned banking organizations present supervisory risks similar to those arising from chain banking organizations in the United States. The fundamental risk presented by these organizations is that they may be acting in a de facto organizational structure that, because it is not formalized, is not subject to comprehensive

^{10d}. The sharing of a director, by itself, is unlikely to indicate common control of the U.S. and foreign depository institutions.

consolidated supervision. Therefore, relationships between the U.S. depository institution and other affiliates may be harder to understand and monitor. To reduce these risks, the U.S. banking agencies (1) work with appropriate non-U.S. supervisors to better understand and monitor the activities of the foreign affiliates and owners; (2) share information, as appropriate, with foreign and domestic bank supervisory agencies; and (3) impose special conditions or obtain special commitments or representations related to an application or an enforcement or other supervisory action, when warranted.

Parallel-owned banking organizations may foster additional management and supervisory risks:

- Officers and directors of the U.S. depository institution may be unable or unwilling to exercise independent control to ensure that transactions with the foreign parallel bank or affiliates are legitimate and comply with applicable laws and regulations. As a result, the U.S. depository institution may be the conduit or participant in a transaction that violates U.S. law or the laws of a foreign country, or that is designed to prefer a foreign bank or nonbank entity in the group, to the detriment of the U.S. depository institution.
- Money-laundering concerns may be heightened due to the potential lack of arm's-length transactions between the U.S. depository institution and the foreign parallel bank. Specifically, the flow of funds through wires, pouch activity, and correspondent accounts may be subject to less internal scrutiny by the U.S. depository institution than usually is warranted.^{10e} This risk is greatly increased

^{10e}. On October 28, 2002, the U.S. Department of the Treasury's regulation to implement sections 313 and 319(b) of the USA Patriot Act became effective. (See 31 CFR 103.177 and 103.185.) The regulation implemented new provisions of the Bank Secrecy Act that relate to foreign correspondent accounts. A covered financial institution (CFI) (a financial institution that is covered by the regulation) is prohibited from establishing, maintaining, administering, or managing a correspondent account in the United States for, or on behalf of, a foreign shell bank (a foreign bank that has no physical presence in any country) that is not affiliated with a U.S.-domiciled financial institution or with a foreign bank that maintains a physical presence in the United States or a foreign country and that is supervised by its home-country banking authority. A CFI must take reasonable steps to ensure that a correspondent account of a foreign bank (an account established by a CFI for a foreign bank to receive deposits from, to make payments or other disbursements on behalf of a foreign bank, or to handle other financial transactions related to the foreign bank) is not being used to indirectly provide banking

when the foreign parallel bank is located in an offshore jurisdiction or other jurisdiction that limits exchange of information through bank secrecy laws, especially if the jurisdiction has been designated as a “non-cooperating country or territory” or the jurisdiction or the foreign bank has been found to be of primary money-laundering concern under the International Money Laundering Abatement and Financial Anti-Terrorism Act of 2001.

- Securities, custodial, and trust transactions may be preferential to the extent that assets, earnings, and losses are artificially allocated among parallel banks. Similarly, low-quality assets and problem loans can be shifted among parallel banks to manipulate earnings or losses and avoid regulatory scrutiny. Also, if the foreign parallel bank were to begin experiencing financial difficulties, the foreign bank or the common owners might pressure the U.S. depository institution to provide credit support or liquidity to an affiliate in excess of the legal limits of 12 USC 371c and 371c-1.
- The home country of the foreign parallel bank may have insufficient mechanisms or authority to monitor changes in ownership or to ensure arm’s-length intercompany transactions between the foreign parallel bank and other members of the group, including the U.S. depository institution, or to monitor concentrations of loans or transactions with third parties that may present safety-and-soundness concerns to the group.
- Capital may be generated artificially through the use of international stock-purchase loans. Such loans can be funded by the U.S. depository institution to the foreign affiliate or to a nonaffiliate with the purpose of supporting a loan back to the foreign affiliate and used to leverage the U.S. depository institution or vice versa. This concern is heightened for parallel-owned banking organizations if the foreign bank is not adequately supervised.
- Political, legal, or economic events in the

foreign country may affect the U.S. depository institution. Events in the foreign country, such as the intervention and assumption of control of the foreign parallel bank by its supervisor, may trigger a rapid inflow or outflow of deposits at the U.S. depository institution, thereby affecting liquidity. Foreign events may increase reputational risk to the U.S. depository institution. In addition, these events may adversely affect the foreign bank owner’s financial resources and decrease the ability of the foreign bank owner to provide financial support to the U.S. depository institution. Foreign law may change without the U.S. depository institution or the banking agencies becoming aware of the effect of legal changes on the parallel-owned banking organization, including the U.S. depository institution.

- Parallel-owned banking organizations may seek to avoid legal lending limits or limitations imposed by securities or commodities exchanges or clearinghouses on transactions by one counterparty, thereby unduly increasing credit risk and other risks to the banking organizations and others.

To minimize risks, the U.S. banking agencies coordinate the supervision of a parallel-owned banking organization’s U.S. operations. The supervisory approach may include unannounced coordinated examinations if more than one regulator has examination authority. Such examinations may be conducted if regulators suspect irregular transactions between parallel-owned banks, such as the shifting of problem assets between the depository institutions. Factors to consider in determining whether to conduct coordinated reviews of an organization’s U.S. operations include intercompany and related transactions; strategy and management of the parallel-owned banking organization; political, legal, or economic events in the foreign country; and compliance with commitments or representations made or conditions imposed in the application process or pursuant to prior supervisory action.

The U.S. depository institution’s board of directors and senior management are expected to be cognizant of the risks associated with being part of a parallel-owned banking structure, especially with respect to diversion of a depository institution’s resources, conflicts of interest, and affiliate transactions. The depository institution’s internal policies and procedures should provide guidance on how person-

services to foreign shell banks. The regulation includes recordkeeping requirements and required account-termination procedures that are to be used by CFIs having correspondent accounts of foreign banks. See SR-03-17, which discusses the additional requirements of the regulation and provides additional Bank Secrecy Act examination procedures that are designed to focus on particular areas of risk. See also SR-04-13, SR-05-9, and SR-01-29 (section 326 of the Patriot Act) for a discussion of the Patriot Act requirements for a financial institution’s customer identification program. A customer identification program should part of an institution’s overall anti-money-laundering and BSA compliance program.

nel should treat affiliates. The Federal Reserve and other U.S. banking agencies will expect to have access to such policies, as well as to the results of any audits of compliance with the policies. The agencies will seek an overview of the entire organization, as well as a better understanding of how foreign bank affiliates are supervised. Authorized bank regulatory supervisory staff will work with foreign supervisors to better understand the activities of the foreign affiliates and owners. As appropriate and feasible, and in accordance with applicable law, such authorized staff will share information regarding material developments with foreign and domestic supervisory agencies that have supervisory responsibility over relevant parts of the parallel-owned banking organization.

DOMESTIC AND FOREIGN SUBSIDIARIES

Domestic subsidiaries are any majority-owned companies, other than Edge Act or agreement corporations, domiciled in the United States and its territories and possessions. Foreign subsidiaries are any majority-owned or -controlled companies domiciled in a foreign country or any Edge Act or agreement corporation. Section 211.13 of Regulation K (12 CFR 211.13) requires foreign subsidiaries to maintain effective systems of records, controls, and reports to keep bank management informed of their activities and conditions. In particular, these systems are to provide information on risk assets, exposure to market risk, liquidity management, operations, internal controls, and conformance with management policies. Reports on risk assets must be sufficient enough to allow for an appraisal of credit quality and an assessment of exposure to loss; for that purpose, they must provide full information on the condition of material borrowers. Reports on the operations and controls are to include internal and external audits of the branch or subsidiary.

On-site examinations of foreign subsidiaries are sometimes precluded because of objections voiced by foreign directors, minority shareholders, or local bank supervisors. In addition, secrecy laws in countries such as Switzerland, Singapore, Luxembourg, and the Bahamas sometimes preclude on-site examinations. When on-site examinations cannot be performed, foreign subsidiary reports submitted according to

section 211.13 and reports submitted to foreign banking authorities must serve as the basis for evaluating the bank's investment.

Additionally, Regulation K allows for investments in foreign companies to be made under the general-consent provisions without prior approval of the Board. These investments can be sizable and can pose significant risk to the banking organization. Investments in foreign subsidiaries should be reviewed for compliance with the FRA and investment limitations in Regulation K. (See Regulation K, sections 211.8 and 211.9.)

SIGNIFICANT SUBSIDIARIES

As used in the consolidation instructions for certain regulatory reports, "significant subsidiaries" refers to subsidiaries that meet any one of the following tests:

- a majority-owned subsidiary in which the bank's direct and indirect investment and advances represent 5 percent or more of the parent bank's equity capital accounts
- a majority-owned subsidiary whose gross operating revenues amount to 5 percent or more of the parent bank's gross operating revenues
- a majority-owned subsidiary whose "income (loss) before income taxes and securities gains or losses" amounts to 5 percent or more of the parent bank's "income (loss) before income taxes and securities gains or losses"
- a majority-owned subsidiary that is the parent of one or more subsidiaries that, when consolidated, constitute a "significant subsidiary" as defined above

ASSOCIATED COMPANIES

Associated companies are those in which the bank directly or indirectly owns 20 percent to 50 percent of the outstanding common stock, unless the bank can rebut to the Federal Reserve the presumption of exercising significant influence. However, as noted above, for purposes of section 23A, affiliation is defined by 25 percent share ownership. Because of the absence of direct or indirect control, regulators have no legal authority to conduct full examinations of this type of company. Investments in these

companies are generally appraised in the same way as commercial loans, that is, by a credit analysis of the underlying financial information.

CHAIN BANKING SYSTEMS

Chain banking systems exist when an individual (or group of individuals) is a principal in two or more banking institutions, in either banks or bank holding companies or a combination of both types of institutions. In these systems, the possibility exists that problems in one or more of the entities may adversely affect the safety and soundness of the bank entities because of pressure exerted by their common principal (or principals). Examiners should determine whether the bank is a member of a chain. If so, the extent of its relationship with other links of the chain should be determined, as well as the effects these relationships have on the bank.

REAL ESTATE INVESTMENT TRUSTS AND OTHER RELATED ORGANIZATIONS

Although a bank, its parent holding company, or its nonbank affiliate may not have a direct investment in an “other related organization,” the bank may sponsor, advise, or influence the activities of these companies. The most notable examples are real estate investment trusts (REITs) or special-purpose vehicles (SPVs). Transactions between the bank and REITs and between other investment companies sponsored or advised by the bank are subject to the limitations in section 23A. In other cases, because of nonownership or a less-than-majority ownership, legal authority to conduct an examination does not exist.

A REIT may be considered an affiliate if it is sponsored and advised on a contractual basis by the member bank or by any subsidiary or affiliate of the member bank. In these cases, transactions between the bank and an affiliated REIT are subject to the requirements of section 23A. Because a REIT frequently carries a name that closely identifies it with its sponsoring bank or bank holding company, failure of the REIT could have an adverse impact on public confidence in the holding company and its subsidiaries.

The examiner should be aware of all significant transactions between the bank under exami-

nation and its related REIT in order to determine conflicts of interest and contingent risks. In several instances, REITs have encountered serious financial problems and have attempted to avoid failure by selling questionable assets to or swapping these assets with their bank affiliates. In other instances, because of the adversary relationship, REITs have been encouraged to purchase assets of inferior quality from their related organizations.

FINANCIAL HOLDING COMPANIES

Section 4(k) of the BHC Act authorizes affiliations among banks, securities firms, insurance firms, and other financial companies. It provides for the formation of financial holding companies (FHCs) and allows a BHC or foreign bank that qualifies as an FHC to engage in a broad range of activities that are (1) defined by the GLB Act to be financial in nature or incidental to a financial activity or (2) determined by the Board, in consultation with the secretary of the Treasury, to be financial in nature or incidental to a financial activity or that are determined by the Board to be complementary to a financial activity and not to pose a substantial risk to the safety and soundness of depository institutions or the financial system generally.

Certain conditions must be met for a BHC or a foreign bank to be deemed an FHC and to engage in the expanded activities. BHCs that do not qualify as FHCs are limited to engaging in those nonbanking activities that are permissible under section 4(c)(8) of the BHC Act. Section 4(k) of the BHC Act authorizes an FHC to engage in designated financial activities, including insurance and securities underwriting and agency activities, securities underwriting, merchant banking, and insurance company portfolio investment activities.

Supervisory Oversight

The Federal Reserve has supervisory oversight authority and responsibility for BHCs that operate as FHCs and for BHCs that are not FHCs. The GLB Act sets parameters for operating relationships between the Federal Reserve and other regulators. The statute differentiates between the Federal Reserve’s relations with

(1) depository institution regulators and (2) functional regulators, which include insurance, securities, and commodities regulators. The Federal Reserve's relationships with functional regulators will, in practice, depend on the extent to which an FHC is engaged in functionally regulated activities; those relationships will also be influenced by existing working arrangements between the Board and the functional regulator.

The Federal Reserve's supervisory oversight role is that of an umbrella supervisor concentrating on a consolidated or group-wide analysis

of an organization. Umbrella supervision is not an extension of more traditional bank-like supervision throughout an FHC. The FHC framework is consistent with and incorporates principles that are well established for BHCs. The FHC supervisory policy focuses on addressing supervisory practice for and relationships with FHCs, particularly those that are engaged in securities or insurance activities. (See SR-00-13.)

The Federal Reserve is responsible for the consolidated supervision of FHCs. The Federal Reserve thus assesses the holding company on a consolidated or group-wide basis. The objective is to ensure that the holding company does not threaten the viability of its depository institution subsidiaries. Depository institution subsidiaries of FHCs are supervised by their appropriate primary bank or thrift supervisor (federal and state). However, the GLB Act did not change the Federal Reserve's role as the federal bank holding company supervisor.

Nonbank (or nonthrift) subsidiaries engaged in securities, commodities, or insurance activities are to be supervised by their appropriate functional regulators. Examples of these functionally regulated subsidiaries include a broker, dealer, investment adviser, and investment company registered with and regulated by the Securities and Exchange Commission (SEC) (or, in the case of an investment adviser, registered with any state); an insurance company or insurance agent subject to supervision by a state insurance regulator; and a nonbank subsidiary engaged in activities regulated by the Commodity Futures Trading Commission (CFTC).

As the umbrella supervisor, the Federal Reserve will seek to determine that FHCs are operated in a safe and sound manner so that their financial condition does not threaten the viability of affiliated depository institutions. Oversight of FHCs (particularly those engaged in a broad range of financial activities) at the consolidated level is important because the risks associated with an FHC's activities can cut across legal entities and business lines. The purpose of FHC supervision is to identify and evaluate, on a consolidated or group-wide basis, the significant risks that exist in a diversified holding company to assess how these risks might affect the safety and soundness of depository institution subsidiaries.

The Federal Reserve's focus will be on the financial strength and stability of FHCs, their consolidated risk-management processes, and overall capital adequacy. The Federal Reserve

will review and assess internal policies, reports, and procedures, as well as the effectiveness of the FHC consolidated risk-management process. The appropriate bank, thrift, or functional regulator will continue to have primary responsibility for evaluating risks, hedging, and risk management at the legal-entity level for the entity or entities that it supervises.

Permissible Activities

Permissible activities for FHCs include any activity that the Board determined to be closely related to banking under section 4(c)(8) of the BHC Act by regulation or order that was in effect on November 12, 1999. This includes the long-standing "laundry list" of nonbanking activities for BHCs. (See section 225.28(b) of Regulation Y.) Section 225.86(a)(2) of Regulation Y lists the nonbanking activities approved for BHCs by Board order as of November 12, 1999.¹¹

Section 4(k)(4)(G) of the BHC Act also defines "financial in nature" as any activity (1) in which a BHC may engage outside the United States, and (2) that the Board has determined, by regulation or interpretations issued under section 4(c)(13) of the BHC Act that were in effect on November 11, 1999, to be usual in conducting banking or other financial services abroad. Section 225.86(b) of Regulation Y lists three activities that the Board has found to be usual in connection with the transaction of banking or other financial operations abroad.¹² The activities are providing management consulting services; operating a travel agency; and organizing, sponsoring, and managing a mutual fund. The conduct of each activity has certain prescribed limitations. Management consulting services must be advisory and not allow the FHC to control the person to whom the services are provided. These services, however, may be offered to any person on nonfinancial matters. An FHC may also operate a travel agency in connection with financial services offered by the FHC or others. Finally, a mutual fund organized, sponsored, or managed by an FHC may not

11. Section 20 company activities are not included in this list. Section 4(k)(4)(E) of the BHC Act authorizes FHCs to engage in securities underwriting, dealing, and market-making activities in a broader form than was previously authorized by Board order.

12. See section 211.10 of Regulation K (12 CFR 211.10).

exercise managerial control over the companies in which the fund invests, and the FHC must reduce its ownership of the fund, if any, to less than 25 percent of the equity of the fund within one year of sponsoring the fund (or within such additional period as the Board permits).

The activities that a BHC is authorized to engage in outside the United States under section 211.10 of Regulation K have been either (1) authorized for FHCs in a broader form by the GLB Act (for example, underwriting, distributing, and dealing in securities and underwriting various types of insurance) or (2) authorized in the same or a broader form in Regulation Y (for example, data processing activities; real and personal property leasing; and acting as agent, broker, or adviser in leasing property). Section 4(k)(4)(G) of the BHC Act and section 225.86 of Regulation Y only authorize FHCs to engage in the activities that are listed in section 211.10 of Regulation K, as interpreted by the Board. The Board has also approved activities found in individual orders issued under section 4(c)(13) of the BHC Act. Section 4(k)(4)(G) and Regulation Y do not authorize an FHC to engage in activities that the Board authorized a BHC to provide in individual orders issued under section 4(c)(13) of the BHC Act.

The remaining activities authorized by section 4(k)(4) of the BHC Act are those that are defined to be “financial in nature” under section 4(k)(4)(A) through (E), (H), and (I). (See section 225.86(c) of Regulation Y.) These activities include issuing annuity products and acting as principal, agent, or broker for purposes of insuring, guaranteeing, or indemnifying against loss, harm, damage, illness, disability, or death. Permissible insurance activities as principal include reinsuring insurance products. An FHC acting under section 4(k)(4) of the BHC Act may conduct insurance activities without regard to the restrictions on the insurance activities imposed on BHCs under section 4(c)(8). (See section 3905.0 of the *Bank Holding Company Supervision Manual* for more information pertaining to the activities of FHCs.)

BANK HOLDING COMPANIES

As defined in section 2 of the BHC Act of 1956 (12 USC 1841 et seq.), a bank holding company is any company that directly or indirectly, or acting through one or more other persons, owns,

controls, or has power to vote 25 percent or more of any class of voting securities of the bank or company; that controls in any manner the election of a majority of the directors or trustees of the bank or company; or that the Board determines, after notice and opportunity for hearing, directly or indirectly exercises controlling influence over the management or policies of the bank or company. A bank and its parent holding company are considered affiliates when the holding company controls the bank in a manner consistent with the definition of control in section 23A of the FRA. Section 23A exempts from the quantitative and collateral requirements of the law all transactions (except for the purchase of low-quality assets) between “sister” banks (banks with 80 percent or more common ownership) in a bank holding company system. A low-quality asset is any asset (1) classified “substandard,” “doubtful,” or “loss” or treated as “other loans especially mentioned” in the most recent federal or state examination report; (2) on nonaccrual status; (3) with principal or interest payments more than 30 days past due; or (4) whose terms have been renegotiated or compromised due to the deteriorated financial condition of the borrower.

Under the BHC Act, the Federal Reserve has authority to examine bank holding companies and their nonbank subsidiaries. The Federal Reserve requires periodic inspections of all bank holding companies, the frequency of which is based on the size, complexity, and condition of the organization. Often a bank holding company is inspected at the same time as the examination of its state member bank subsidiaries. In these cases, the examiner at the bank should collaborate closely with inspection personnel on those holding company issues that directly affect the condition of the bank. When the BHC inspection is not conducted simultaneously with the examination, the bank examiner should closely review the most recent report of inspection and may also need to consult the Y-series of reports regularly submitted to the Federal Reserve System by bank holding companies.

Many banks are owned by bank holding companies. To understand the effects of the holding company structure on the subsidiary bank, the examiner should evaluate the overall financial support provided by the parent company, quality of supervision and centralized functions provided, and appropriateness of intercompany transactions. Since financial and managerial issues at the bank holding company

and subsidiary bank levels are so closely connected, it is strongly recommended that a holding company inspection and its respective bank examination (or examinations) be conducted at the same time. A combined examination/inspection report, as discussed in SR-94-46, is available to facilitate this coordination when the lead subsidiary is a state member bank.

Financial Support

The holding company structure can provide its subsidiary bank with strong financial support because of its greater ability to attract and shift funds to less capital-intensive areas and to enter markets in a wider geographic area than would otherwise be possible. Financial support may take the form of capital (equity or debt) or funding of loans and investments. In general, the lower the parent bank holding company's leverage, the more it is able to serve as a source of financial strength to its bank subsidiaries. This is because less cash flow will be required from the banks for debt servicing, and the parent has more borrowing capacity, which could be used to provide funds to the bank. When the financial condition of the holding company or its non-banking subsidiaries is unsound, the operations of its subsidiary bank can be adversely affected. To service its debt or provide support to another subsidiary that is experiencing financial difficulty, the holding company may involve its bank subsidiary in the following imprudent actions:

- engaging in high-risk investments to obtain increased yields
- purchasing or swapping its high-quality assets for the parent's or other affiliate's lower-quality assets
- entering into intercompany transactions that are detrimental because of inordinately high fees or inadequate or unnecessary services
- paying excessive dividends
- making improper tax payments or unfavorably altering its tax situation

Even when the holding company's structure is financially sound, the holding company's ability to sell short- or long-term debt and to pass the proceeds down to its bank subsidiary in the form of equity capital may still present problems. That procedure is frequently referred to as "double leveraging," the amount of the

equity investment in the bank subsidiary is financed by debt. Problems may arise when the holding company must service its debt out of dividends from the subsidiary, and the subsidiary, if it encounters an earnings problem or is prevented by regulatory agreement or action, may not be able to pass dividends up to its parent.

Another potential problem may develop when the holding company sells its commercial paper and funds its subsidiary's loans with those proceeds. This may cause a liquidity problem if the maturities of the commercial paper sold and loans funded are not matched appropriately and if the volume of such funding is large in relation to the subsidiary's overall operations.

On April 24, 1987, the Federal Reserve adopted a policy statement on the responsibility of bank holding companies to act as sources of financial and managerial strength to their subsidiary banks. The Board's statement reiterates a general policy that has been expressed on numerous occasions, in accordance with authority that is provided under the BHC Act and the enforcement provisions of the FDI Act.

BHC Supervision of Subsidiaries

Bank holding companies use a variety of methods to supervise their bank subsidiaries, including—

- having holding company senior officers serve as directors on the bank's board;
- establishing reporting lines from senior bank management to corporate staff;
- formulating or providing input into key policies; and
- establishing management information systems, including internal audit and loan review.

As part of the evaluation of bank management, the examiner should be aware of these various control mechanisms and determine whether they are beneficial to the bank. Examiners should keep in mind that, even in a bank holding company organization, the directors and senior management of the bank are ultimately responsible for operating it in a safe and sound manner.

In addition, many bank functions (investment management, asset/liability management, human resources, operations, internal audit, and loan review) may be performed on behalf of the bank

by its parent bank holding company or by a nonbank affiliate. These functions are reviewed at inspections of the bank holding company. Examiners at the bank should be aware of the evaluation of these functions by inspection personnel, either at a concurrent inspection or in the report of a prior inspection. In addition, a review of these same issues at the level of the subsidiary bank is useful to determine compliance with corporate policies, corroborate inspection findings, and identify any inappropriate transactions that may have been overlooked in the more general, top-down review at the parent level.

EVALUATION OF INVESTMENTS IN AND LOANS TO BANK-RELATED ORGANIZATIONS

To properly evaluate affiliates and other bank-related organizations¹³ relative to the overall condition of the bank, the examiner must—

- know the applicable laws and regulations that define and establish limitations with respect to investments in and extensions of credit to affiliates and
- analyze thoroughly the propriety of the related organizations' carrying value, the nature of the relationships between the bank and its related organizations, and the effect of such relationships on the affairs and soundness of the bank.

The propriety of the carrying value of a bank's investment in any related organization is determined by evaluating the balance sheet and income statement of the company in which the bank has the investment. At times, this may not seem important in relation to the overall condition of the bank because the amount invested may be small relative to the bank's capital. It may appear that a cursory appraisal of the

company's assets would therefore be sufficient. However, the opposite is often true. Even though a bank's investment in a subsidiary or associated company is relatively small, the underlying legal or moral obligation may be substantial and may greatly exceed the total amount of the reported investment. If the subsidiary experiences large losses, the bank may have to recapitalize the subsidiary by injecting much more than its original investment to protect unaffiliated creditors of the subsidiary or protect its own reputation.

When examining and evaluating the bank's investment in and loans to related organizations, classified assets held by such companies should first be related to the capital structure of the company, and then be used as a basis for classifying the bank's investment in and loans to that company.

One problem that examiners may encounter when they attempt to evaluate the assets of some subsidiaries and associated companies is inadequate on-premises information. This may be especially true of foreign investments and associated companies in which the bank has less than a majority interest. In those instances, the examiner should request that adequate information be obtained during the examination and should establish agreed-on standards for that information in the future. The examiner should insist that the organization have adequate supporting information readily obtainable or available in the bank and that the information be of sufficient quality to allow for an informed evaluation of the investment. Bank management, as well as regulatory authorities, must be adequately informed of the condition of the companies in which the bank has an investment. For subsidiary companies, it is necessary that bank representatives be a party to policy decisions, have some on-premises control of the company (such as board representation), and have audit authority. In the case of an associated company, the bank should participate in company affairs to the extent practicable. Information documenting the nature, direction, and current financial status of all such companies should be maintained at the bank's head office or maintained regionally for global companies. Full audits by reputable certified public accountants are often used to provide much of this information.

For foreign subsidiaries, in addition to the audited financial information prepared for management, the bank should have on file the following:

13. Information about related organizations and interlocking directorates and officers can be obtained from the bank holding company form FR Y-6 and SEC form 10-K, if applicable, or from other required domestic and foreign regulatory reports. Further information on business interests of directors and principal officers of the bank can be obtained by reviewing information maintained by the bank in accordance with the Board's Regulation O.

- reports prepared according to the Board's Regulation K
- reports prepared for foreign regulatory authorities
- information on the country's cultural and legal influence on banking activities, current economic conditions, anticipated relaxation or strengthening of capital or exchange controls, fiscal policy, political goals, and the risk of expropriation
- adequate information to review compliance with the investment provisions of Regulation K (For each investment, information should be provided on the type of investment (equity, binding commitments, capital contributions, subordinated debt), dollar amount of the investment, percentage ownership, activities conducted by the company, legal authority for such activities, and whether the investment was made under Regulation K's general-consent, prior-notice, or specific-consent procedures. With respect to investments made under the general-consent authority, information also must be maintained that demonstrates compliance with the various limits set out in section 211.9 of Regulation K. (See Regulation K, sections 211.8 and 211.9.)

For agricultural credit corporations, the examiner-in-charge normally decides when to examine such an entity. A complete analysis of the entity's activities should always be performed if—

- the corporation is not supervised by the Federal Intermediate Credit Bank (FICB),
- the most recent FICB examination occurred over a year ago, or
- the most recent FICB examination indicates that the corporation is in less than satisfactory condition.

The extent of any analysis should be based on the examiner's assessment of the corporation's effect on the parent bank. That analysis should include, but not be limited to, a review of—

- asset quality;
- the volatility, maturity, and interest-rate sensitivity of the asset and liability structures; and
- the bank's liability for guarantees issued on behalf of the corporation.

When the same borrower is receiving funds from both the corporation and the parent bank,

and the combined exposure exceeds 25 percent of total consolidated capital, the debt should be detailed on the concentration page of the examination report. The consolidation procedures listed in the instructions for the preparation of Consolidated Reports of Condition and Income should be used when consolidating the figures of the corporation with those of its parent.

INTERCOMPANY TRANSACTIONS

As with the supervision of subsidiaries, intercompany transactions should be reviewed at both the parent level during inspections and at the subsidiary-bank level during examinations. The transactions should comply with sections 23A and 23B of the FRA and should not otherwise adversely affect the financial condition of the bank.

Intercompany Tax Payments

As set forth in the policy statement regarding intercorporate income tax accounting transactions of bank holding companies and state-chartered banks that are members of the Federal Reserve System (September 20, 1978), Federal Reserve policy relative to intercompany tax payments is to treat the bank as a separate taxpayer whose tax payments to its parent should not exceed payments it would make on a separate-entity basis. Payments should not be made to the parent before the time payments are or would have been made to the Internal Revenue Service. Refunds to the bank should be timely. Individual situations may result in complicated issues, and the examiner should consult with Reserve Bank personnel before reaching conclusions concerning a particular transaction. Bank holding company inspection report comments and bank examination report comments should be consistent concerning the nature and propriety of intercompany transactions.

Management and Other Fees

Banks often obtain goods and services from the parent bank holding company or an affiliated

nonbank subsidiary. These arrangements may benefit the bank, since the supplier may offer lower costs because of economies of scale, such as volume dealing. Furthermore, banks may be able to purchase a package of services that otherwise might not be available. However, because of the interrelationship between the bank and the supplier, examiners should ensure that the fees being paid represent reasonable reimbursement for goods and services received.

Fees paid by the bank to the parent or nonbank affiliates should have a direct relationship to, and be based solely on, the fair value of goods and services provided and a reasonable profit. Fees should compensate the affiliated supplier only for providing goods and services that meet the legitimate needs of the bank.

Banks should retain satisfactory records that substantiate the value of goods and services received, their benefit to the bank, and their cost efficiencies. There are no other minimum requirements for records, but an examiner should be able to review the records maintained and determine that fees represent reasonable payment. In general, the supplier will decide on the amount to be charged by using one of three methods:

- reimbursement for cost of goods or services
- cost plus a reasonable profit margin
- comparative fair-market value

Any of these methods may be acceptable as long as the bank can substantiate that the fees paid are reasonable for the value received. Basing fees on costs may be the most common approach since market comparisons often are difficult to obtain. A holding company may be able to offer a number of services on a cost basis to a subsidiary bank, any one of which might be contracted elsewhere for less. However, in the aggregate, the services may be cost effective or produce economies of scale for the entire organization. Nevertheless, having one or more subsidiary banks pay excessive fees for services to subsidize other unprofitable operations is not an acceptable practice.

When the servicer incurs overhead expenses, recovery of those costs is acceptable to the extent they represent a legitimate and integral part of the service rendered. Overhead includes salaries and wages, occupancy expenses, utilities, payroll taxes, supplies, and advertising. Debt-service requirements of holding companies, shareholders, or other related organizations

are not legitimate overhead expenses for a subsidiary bank.

Generally, the payment of excessive fees is considered an unsafe and unsound practice. When fees are not justified, appear excessive, do not serve legitimate needs, or are otherwise abusive, the examiner should inform the board of directors through appropriate criticism in the report of examination.

Dividends

Dividends represent a highly visible cash outflow by banks. If the dividend-payout ratio exceeds the level at which the growth of retained earnings can keep pace with the growth of assets, the bank's capital ratios will deteriorate. Examiners should evaluate the appropriateness of dividends relative to the bank's financial condition, prospects, and asset-growth forecast.

Purchases or Swaps of Assets

Asset purchases or swaps between affiliates create the potential for abuse. Regulatory concern focuses on the fairness of such asset transactions, their financial impact, and timing. Fairness and financial considerations include the quality and collectibility of such assets and liquidity effects. Asset exchanges may be a mechanism to avoid regulations designed to protect subsidiary banks from becoming overburdened with nonearning assets.

Compensating Balances

A subsidiary bank may be required to maintain excess balances at a correspondent bank that lends to other parts of the holding company organization, possibly to the detriment of the bank. The subsidiary bank may be foregoing earnings on such excess funds, which may adversely affect its financial condition.

Split-Dollar Life Insurance

Split-dollar life insurance is a type of life insurance in which the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender

value, or death benefit, or both. In some circumstances, when the subsidiary bank pays all or substantially all of the insurance premiums, an unsecured extension of credit from the bank to its parent holding company generally results because the bank has paid the holding company's portion of the premium, and the bank will not be fully reimbursed until later. In other arrangements, when the parent uses the insurance policy as collateral for loans from the subsidiary bank, the loan may not meet the collateral requirements of section 23A. In addition, split-dollar arrangements may not comply with section 23B if the return to the bank is not commensurate with the size and nature of its financial commitment. Finally, split-dollar arrangements may be considered unsafe and unsound, which could be the case if the bank is paying the entire premium but is not the beneficiary, or if it receives less than the entire proceeds of the policy. (See SR-93-37.)

Other Transactions with Affiliates

Checking accounts of the parent or nonbank subsidiaries at subsidiary banks present the

potential for overdrafts, which are regarded as unsecured extensions of credit to an affiliate by the subsidiary bank. In general, a subsidiary bank should be adequately compensated for its services or for the use of its facilities and personnel by other parts of the holding company organization. In addition, a subsidiary bank should not pay for expenses for which it does not receive a benefit (for example, the formation expenses of a one-bank holding company).

Situations sometimes arise in which more than one legal entity in a banking organization shares offices or staff. In certain cases, it can be hard to determine whether a legal entity is operating within the scope of its permissible activities. In addition, a counterparty may be unclear as to which legal entity an employee is representing. Finally, there may be expense-allocation problems and, thus, issues pertaining to sections 23A and 23B. Examiners should be aware of these concerns and make sure that institutions have the proper records and internal controls to ensure an adequate separation of legal entities. (See SR-95-34.)

Bank-Related Organizations

Examination Objectives

Effective date May 2001

Section 4050.2

1. To determine if policies, procedures, and internal controls for bank-related organizations are adequate.
2. To determine if bank and affiliate management are complying with the established policies.
3. To determine compliance with sections 23A and 23B of the Federal Reserve Act and other applicable laws and regulations involving intercompany and other transactions.
4. To evaluate the bank's investment in and loans to its related organizations, as well as the propriety of those carrying values.
5. To determine the relationships between the bank and its related organizations and the effects of those relationships on the operations and safety and soundness of the bank.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulations have been noted.

Bank-Related Organizations

Examination Procedures

Effective date November 2003

Section 4050.3

PRE-EXAMINATION ANALYSIS

During the pre-examination analysis of the bank, it should be determined which related organizations should be examined in depth. The criteria for that determination are as follows:

1. All operating subsidiaries should be examined concurrently with the regular examination of the parent bank, unless such examination is specifically waived by the Federal Reserve Bank.
2. Other subsidiaries should be examined except when relationships between the subsidiary, its parent, and other related organizations are fully disclosed by material on hand and when the subsidiary's condition or operations are determined not to be detrimental to the safety and soundness of the bank. Factors to be considered in making the determination to examine a subsidiary are as follows:
 - a. the bank's percent of ownership and dollar amount of investment in the subsidiary
 - b. nature of the subsidiary's business
 - c. types and amounts of intercompany transactions
 - d. types and amounts of participations and purchased, sold, or swapped assets between the subsidiary and the bank or other related organizations
 - e. types of services performed by the subsidiary for the bank or other related organizations
 - f. outstanding contingent liabilities by the bank in favor of the subsidiary
 - g. the bank's potential contingent liabilities, moral or legal, as a result of litigation, claims, or assessments pending against the subsidiary
3. If practical under the circumstances, the parent holding company and nonbank affiliates should be inspected in conjunction with the examination of the lead state member bank. The decision to coordinate the timing of the bank holding company inspection and the state member bank examination should be based on the nature and extent of interaction between the bank and its parent holding company and nonbank affiliates.

Factors to be considered in making the decision to coordinate the examination and inspection are as follows:

- a. dollar amount of loans or advances by the bank
- b. nature of business of the nonbank affiliates
- c. types and amount of intercompany transactions
- d. types and amounts of participations and other assets purchased, sold, or swapped
- e. types of services performed for or by the bank and fees paid or received
- f. outstanding contingent liabilities by the bank in favor of its parent or nonbank affiliates

Factors to be considered in determining whether to examine nonbanking subsidiaries within the parent holding company under inspection are detailed in the *Bank Holding Company Supervision Manual*.

EXAMINATION PROCEDURES FOR RELATED ORGANIZATIONS

The following procedural steps should be performed in all banks that have related organizations.

1. If selected for implementation, complete or update the bank-related organizations section of the internal control questionnaire.
2. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures.
3. When appropriate, obtain the following reports or forms prepared or filed since the preceding examination:
 - a. annual report on SEC Form 10-K
 - b. current report on SEC Form 8-K
 - c. quarterly report on SEC Form 10-Q
 - d. quarterly report on Federal Reserve Form Y-8
 - e. annual fiscal year-end report on Federal Reserve Form Y-6
 - f. annual report to shareholders
 - g. required reports under Federal Reserve Regulation K and to foreign banking authorities for foreign subsidiaries

- h. subsidiary and affiliate reports prepared by examiners
 - i. federal reports of examination for non-banking subsidiaries
4. Request that the bank provide a list of the names of all related organizations; the list should set forth the loans to and investments in these organizations and any management official interlocks among these organizations and the banks.
 5. Circulate a list of the names of the related organizations and the loans to and investments in these organizations. This list should be circulated among the examiners assigned to each bank department. The accuracy and completeness of this information should be verified by the recipients.
 6. Obtain, from the examiners assigned to other assets and other liabilities, information concerning receivables from or payables to related organizations.
 7. Review the bank's files and reports obtained in step 3, and transcribe for the workpapers pertinent financial data and comments regarding related organizations.
 8. Review fees paid by the bank to related organizations, bank insider-related organizations, and stockholders. Determine that the fees represent reasonable reimbursement for goods and services received by—
 - a. determining the method used to compute the charge to the bank for goods or services (cost, cost plus profit, fair market value),
 - b. reviewing documentation maintained by the bank to substantiate the fair value of the goods or services received, their benefit to the bank, and the cost efficiencies of the alternative selected,
 - c. comparing the schedule of fees currently in effect with those in effect 12 months ago, and
 - d. comparing the fees paid during the last three months with those paid for the same period one year ago.
 9. On the basis of the information obtained above, review the following for each related organization:
 - a. the quality of loans, investments, and future commitments to any related organization
 - b. the nature and volume of transactions between the related organization and the bank and—
 - the extent of any participations and the purchase, sale, or swap of assets between the bank and the related organizations, as well as the propriety of the transactions and related considerations;
 - the fees these organizations charge the bank for services rendered and the reasonableness of those fees;
 - cash transfers to or from a related organization in connection with a consolidated income tax obligation (Amounts paid should be based on that amount due if a separate return was filed. They should be paid only at such time to reasonably permit required estimated payments or final settlements to be made to the IRS.);
 - fees received by the bank from the organization for the use of bank personnel, premises, marketing services, and equipment, and the adequacy of those fees; and
 - any agreements, guarantees, pledges, or hypothecations between the bank and any related organization, if they are properly reflected on the books of the bank, and whether there are any apparent conflicts of interest.
 - c. litigation, when the related organization is a defendant in a suit and if the litigation could have an adverse effect on the bank (from SEC Form 10-K or another source)
 - d. each interlocking officer and/or director relationship as reflected by the information obtained in step 4. Determine—
 - whether fees or salaries are excessive for duties performed and
 - if adequate time is devoted to management responsibilities.
 10. *Section 23A of the Federal Reserve Act (12 USC 371c), Relations with Affiliates, and the Board's Regulation W.* By coordinating work with the examiners assigned to the various loan areas, determine compliance with laws and regulations pertaining to related organizations by performing the following procedures.
 - a. Obtain a listing of loans to affiliates.
 - b. Compare the listing with the bank's customer liability records to determine the list's accuracy and completeness.
 - c. Obtain a listing of other covered transactions with affiliates (that is, purchase of securities issued by an affiliate, pur-

- chase of assets, acceptance of securities issued by an affiliate as collateral for a loan to any person or company, or the issuance of a guarantee, acceptance, or letter of credit on behalf of an affiliate).
- d. Conduct transaction testing of intercompany affiliate transactions¹ for compliance with the limitations of section 23A of the Federal Reserve Act and the Board's Regulation W (see SR-03-02) by—
- reviewing—
 - the time elapsed between the original issuance of the affiliate's debt securities and the bank's purchase,
 - the existence of any relevant agreements or relationships between the bank and the third-party seller of the affiliate's debt securities,
 - any history of bank financing of the affiliate, and
 - any other relevant information;
 - documenting any violations or potential violations, and reaching an agreement with the directors and senior management to resolve violations quickly; and
 - considering the inclusion of "other transfer-risk problem" (OTRP) assets in the evaluation of asset quality and capital adequacy. (See section 7040.1 for a discussion of OTRP credits.)
- e. Ensure that transactions with affiliates meet the collateral requirements of section 23A.
- f. Ensure that low-quality loans have not been purchased from an affiliate.
- g. Determine that all transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
- h. *Policies and procedures.*
- Obtain the bank's policies and procedures to determine compliance with sections 23A and 23B of the Federal Reserve Act.
- Ensure the policies and procedures cover all relevant affiliates (e.g., financial subsidiaries and joint ventures) and transactions covered by section 23A, and verify that the bank treats "sponsored and advised" companies as affiliates ("Sponsored and advised" companies would include, at a minimum, any company that receives investment advice and administrative services on a contractual basis from a member bank, whose trustees or managers are selected by the bank, and that has a name similar to that of the bank.).
 - Ensure that the policies and procedures are comprehensive and include adequate controls—
 - to identify covered transactions and
 - to ensure that necessary steps are performed for identified transactions (e.g., the required collateralization of loans to affiliates).
- i. *Covered transactions.*
- If the controls for section 23A are considered adequate, use the list of covered transactions provided by the bank.
 - If controls are considered inadequate (for example, for transactions testing), review the bank's general ledger to identify transactions that are covered transactions.
 - Verify that covered transactions count against required limits and are collateralized when required.
 - If the bank uses an internal rating system for its assets, determine that the bank has not deferred or altered an asset's rating to facilitate sale of the asset to an affiliate.
 - Review controls for monitoring compliance with the established limits and for collateralizing required credit-extension transactions.
 - If controls are considered inadequate (for example, for transactions testing), ensure that covered transactions are properly valued.
 - Verify that identified covered transactions comply with the limits of sections 23A and 23B (If the covered transactions do not comply with the

1. Examples of affiliates include a bank holding company and its nonbank subsidiaries, companies under the member bank's control (see Regulation W, section 223.3(g)), any mutual fund advised by a member bank, merchant banking investments, a member bank or affiliate serving as a general partner in a partnership, and affiliates' subsidiaries. In addition, certain joint venture companies, ESOPs of banks and their affiliates, and special-purpose entities are affiliates if the regulatory definitions of control are met.

- limits, criticize the bank for inadequate controls, and discuss what steps the bank will use to correct the violations.)
- Obtain collateral listings, and verify that necessary covered transactions are adequately collateralized:
 - Verify that the values of omnibus deposit accounts used to secure covered transactions are sufficient to fully secure the relevant covered transactions.
 - Review collateral documentation to ensure that the bank’s interest is adequately perfected and prioritized (Regulation W, section 223.14(d)).
- j. *Corporate lending (funding)*. Ensure that there is compliance with the collateral requirements and quantitative limits:
- Obtain the bank’s “trial balances” of loans.
 - Check that loans to affiliates are included on the list of “covered transactions” and included in measurements for compliance with the quantitative limits. If some loans are not included, ascertain why.
 - If an exemption is being used, verify that its application is correct.
 - Verify that the loans are collateralized (using collateral listings), and review the documentation to ensure proper collateralization.
- k. *Verification of exemptions*.
- For renewal of participations involving problem loans (see Regulation W, section 223.15(b)) involving nondepository affiliates, review supporting documentation to ensure that—
 - the loan was not low quality at the time the bank purchased the participation,
 - the renewal is approved at the board committee or senior management level as appropriate, and
 - the bank’s share of the renewal does not exceed its original share by more than 5 percent (unless approved by an appropriate federal bank regulator) and that the bank notified the federal bank regulator within 20 days.
 - For retail lending (e.g., credit cards and mortgage banking) involving the funding of loans and the purchase of loans, ensure compliance with quantitative limits (for funding and compliance with collateral requirements) as follows:
 - For credit card examinations, obtain the “trial balances” of the outstanding balances, and for mortgage banking exams, obtain lists of the loans sold.
 - Check that credit card amounts generated by bank affiliates and mortgage loans sold to the bank by affiliates are included on the list of covered transactions and in measurements for compliance with the quantitative limits. If they are not included, ascertain why.
 - If an exemption is being used, verify that its use is correct.
 - Verify that loans are collateralized (using collateral), and review the documentation to ensure proper collateralization.
 - For the general-purpose credit card exemption (Regulation W, section 223.16(c)(4)), verify, through review of relevant documentation, that the bank can demonstrate that its credit card meets the less than 25 percent test through one of three available methods. (An exemption from the attribution rule for extensions of credit under a general-purpose credit card is defined as one on which “less than 25 percent of the aggregate amount of purchases are purchases from a bank affiliate.”)
 - The bank has no commercial affiliates.
 - The bank establishes systems to verify compliance with the less than 25 percent test on an ongoing basis.
 - The bank presents information to the Board of Governors to demonstrate its card would comply.
 - For purchases of extensions of credit—the “250.250 exemption” (Regulation W, section 223.42(k))—review supporting documentation to ensure that—
 - the member bank makes an independent creditworthiness evaluation before the affiliate makes or commits to make the loan,

- the bank commits to make the loan purchase before the affiliate makes the loan,
 - the bank does not make a blanket advance commitment to purchase loans, and
 - the purchases from the affiliate by the depository institution and all depository institution affiliates in the prior 12 months represent 50 percent or less of all loans originated by the affiliate during such period.
- l. If the bank is critically undercapitalized (under prompt-corrective-action rules), determine if the bank has engaged in any covered transaction, as defined in section 23A, without the prior approval of the FDIC or FRS.
- m. *Internal controls.*
- Determine the bank's methods for identifying transactions subject to sections 23A and 23B of the Federal Reserve Act. Determine if these methods adequately identify such transactions. Consider the following information:
 - internal reports (Management should document any covered transactions with affiliates.)
 - loan records
 - deposit accounts
 - accounts payable and receivable
 - board minutes
 - Determine if management understands what services its affiliates provide.
 - Determine the volume and frequency of inter-institution transactions, such as loan participations or sales, purchases or sales of other assets, bank stock loans, insider transactions, and contractual obligations for services. Review these transactions for possible noncompliance or abusive practices.
 - Review any formal or informal agreements regarding covered transactions. Determine if management adequately documents the cost, fee structure, and quality of services.
 - Determine the bank's compliance with any outstanding conditions of an approved order or commitment issued by the regulator.
- n. Determine if the affiliates are in compliance with the capital requirements of their functional regulator.
- o. If the bank has used the expanded (d)(4) exemption, determine that the bank regularly reviews the market value of its U.S. government obligations collateral.
- p. Determine that the bank's program for monitoring and controlling the credit exposure from derivative transactions with affiliates includes, at a minimum, imposing appropriate credit limits, mark-to-market requirements, and collateral requirements.
- q. Determine that the limits and requirements reflect the nature, volume, and complexity of the bank's derivatives transactions.
- r. Determine that the limits and requirements on credit exposures from derivative transactions have been approved by the board of directors of the bank or an appropriate board committee.
- s. Determine that the bank's program for monitoring and controlling the credit exposure from intraday extensions of credit to affiliates includes, at a minimum, imposing appropriate credit limits (on a per-affiliate and aggregate basis) and collateral requirements.
- t. Determine that the limits and requirements imposed by the bank reflect the volume of intraday credit transactions and the reasons for those transactions.
- u. Determine that the limits and requirements on intraday credit transactions have been approved by the board of directors of the bank or an appropriate board committee.
11. *Section 23B of the Federal Reserve Act (12 USC 371c-1), Restrictions on Transactions with Affiliates, and the Board's Regulation W.*
- a. Determine that covered transactions with affiliates comply with the restrictions in section 23B.
 - b. If the bank has derivative transactions with affiliates, determine that the bank has treated the affiliate no better than a similarly situated nonaffiliate.
 - c. Determine that management and other fees paid by the bank have a direct relationship to the value of the actual goods and services rendered, based on reasonable costs consistent with current market values for such goods and services.
 - d. Review any mortgage banking activity and servicing contracts with affiliates, if

- applicable. Give particular attention to—
- the capacity in which the affiliate is acting,
 - the nature of the services provided,
 - the billing arrangement, frequency of billing, method of computation, and the basis for fees,
 - the method of compensating the bank for balances maintained and net interest earned on warehouse loans and lines (This method should not be preferential.),
 - the pricing of loan and servicing-right sales,
 - advertising restrictions (for noncompliance).
12. *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks.*
 - a. Obtain lists of loans to executive officers and business interests of directors, executive officers, and principal shareholders from the examiner assigned to duties and responsibilities of directors.
 - b. Determine the accuracy and completeness of the list as it concerns related organizations by comparing it with information obtained from management and other examiners.
 - c. Investigate to determine undisclosed affiliate relationships if there are several directors or officers who have a common interest in the same entity by—
 - obtaining a listing of all directors for the entity that are suspected of maintaining an affiliate relationship,
 - reviewing authorizing signatures on corporate resolutions to borrow, and
 - reviewing signatory authorities on deposit signature cards.
 13. If the bank engaged in an impermissible nonbank activity, determine that it has divested itself of that activity.
 14. If the bank is a subsidiary of a holding company and the parent has sold commercial paper and funded bank loans with the proceeds, obtain or prepare the following schedules and forward them to the examiner assigned to funds management:
 - a. amount and maturities of commercial paper outstanding
 - b. amount and maturity of the assets the paper supports
 15. If the bank is a subsidiary of a holding company and if the parent has sold long-term debt and passed the proceeds down to the bank in the form of equity, obtain or prepare the following schedules and forward them to the examiner assigned to assessment of capital adequacy:
 - a. amount, maturity, and repayment terms of long-term debt sold
 - b. amount of equity capital passed to bank
 - c. expected minimum dividend payment required by bank to service the debt of the parent
 16. From the results of previous steps and discussion with management, determine if there are any anticipated changes in the related organization–bank relationship that may possibly have adverse effects on the affairs and soundness of the bank.
 17. On the basis of the above steps, determine the propriety of the carrying value and nature of the relationship between the bank and its related organizations and the effect of that relationship on the affairs and soundness of the bank.
 18. If, in the performance of the above procedures, the full nature and extent of interaction between the bank and its related organizations cannot be determined, consider the necessity of an in-depth examination of related organizations. Perform appropriate procedures in step 19, and develop additional specific procedures based on the type and scope of activities being conducted.
 19. The following procedures should be considered when an in-depth examination of a bank’s nonbank subsidiaries is deemed appropriate:
 - a. Review and analyze the liability structure of the nonbank subsidiaries.
 - Review and appraise any funding agreements with the parent bank.
 - Review all arrangements whereby the bank purchases assets, pursuant to 12 CFR 223.42(k).
 - Review and appraise any funding agreements with (including guarantees) and debt instruments issued to outside creditors.
 - Review agreements with third parties involving the outright purchase of assets to determine liability for the repurchase of assets or any other contingent liabilities.
 - b. Analyze cash flow, earnings, and tax policies of the nonbank subsidiaries. Prepare cash-flow statements for the previ-

- ous three fiscal years and compare current year-to-date with previous year-to-date.
- c. Review and evaluate capital adequacy by—
- relating the consolidated classified assets of the subsidiaries against the consolidated net worth, or by relating classifieds proportionately to the parent's investment in and advances to each subsidiary;
 - commenting on the overall capital structure of both the parent bank and specific nonbank subsidiaries, as warranted; and
 - discussing the adequacy of capital with management, and noting management's future plans to raise capital.
- d. Review and evaluate management and control policies by—
- reviewing board meeting minutes of the parent corporation, and assessing director interest in and awareness of subsidiaries;
 - reviewing and evaluating corporate management's internal audit procedures for those policies;
 - reviewing "management letters" from certified public accountants about those internal controls; and
 - reviewing shareholder records, noting significant concentrations, and, when officers or directors are involved, noting any undue influence with regard to policies, practices, and procedures.
- e. Review management's future operating plan for the subsidiary company.
- Analyze the subsidiary's earnings and capital projections for one and five years.
 - Obtain underlying assumptions for—
 - return on assets,
 - dividend retention rate,
 - asset growth rate, and
 - capital growth rate.
 - Compare projections against past operating performance, and comment on the plan.
20. Discuss findings and conclusions reached in the examination of any nonbank subsidiary with the management of that entity. Prepare comments for the examination report.
21. Prepare, in appropriate report form, and discuss with appropriate bank management the following:
- a. the adequacy of written policies on related organizations
 - b. the manner in which bank officers are operating in conformance with established policy
 - c. violations of law or regulations
 - d. the impropriety of any transaction between the related organization and the bank
 - e. loans to or investments in related organizations that the examiner questions for any reason, such as their quality, carrying value, or ultimate collection
 - f. litigation, commitments, contingent liabilities, or current or anticipated changes between the bank and its related organizations that may have adverse effects on the affairs and soundness of the bank
 - g. interlocking officer or director relationships that are detrimental to the bank under examination or to any of its related organizations
 - h. any other information that will communicate the condition of the related organization and the nature and effect of the relationship between the related organization and the bank under examination
 - i. recommended corrective action when policies, practices, or procedures are deficient
22. Consolidate information in the operating subsidiary report (or reports) for inclusion in the report of examination.
23. Consolidate financial information and any other comments concerning related organizations for inclusion, when appropriate, in the report of examination.
24. If material changes have occurred in related organizations since the most recent examination of the bank, and if the changes may have a substantial impact on the bank, this information should be communicated by separate memorandum to the Federal Reserve Bank.
25. Update the workpapers with any information that will facilitate future examinations.

Bank-Related Organizations

Internal Control Questionnaire

Effective date May 2002

Section 4050.4

Review the bank's internal controls, policies, practices, and procedures concerning related organizations. The bank's system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

POLICIES AND OBJECTIVES

1. Does the bank have written guidelines for the expansion of services through the formation or acquisition of related organizations?
2. Are established objectives and policies adhered to?
 - a. Is there an overall lending policy that would bring banking- and nonbanking-related organizations under a common set of controls?
 - b. Are bank officials an integral part of subsidiary or related-company management?
 - c. Can operating procedures be monitored from available internal or external audit reports?
3. Are periodic independent reviews performed to assess bank management's objectives and policies on the current status of their association with the related organizations?
4. Does bank management have an active role in the related organizations' audit committees, or does management retain the right to examine the companies' records, including the right to receive third-party letters from the external auditors?
5. Are policies and procedures such that the effect on the bank's liquidity is monitored when commercial paper or other proceeds are used to fund bank loans?

RECORDS

1. Are records maintained for the companies in which the bank has a capital investment, including foreign companies, so that a determination can be made of the extent of bank control, quality of assets, profitability of the company, legality of operations, and

compliance with the investment limitations of Regulation K? (See Regulation K, sections 211.8 and 211.9.)

2. Does the bank maintain current records on the form and status of each related organization (such a list should include name, location, nature of business, manner of affiliation, relationship with bank, amount of loans, investments in and other extensions of credit, security pledged, obligations of any affiliate that is used as collateral security for advances made to others, commitments, and litigation)?
3. Does the bank maintain a copy of all internal or external audit reports, including management letters and responses, of the subsidiary or related company?
4. In the case of registered bank holding companies and nonbank affiliates arising through the holding company relationship, are copies of the Federal Reserve's inspection reports and forms 10-Q, 10-K, 8-K, Y-6, and Y-8 available for review?
5. In the case of Edge Act and agreement corporations and foreign subsidiaries, are copies of Federal Reserve examination reports and foreign regulatory reports available for review?
6. Do credit files of foreign subsidiaries include information regarding a particular country's cultural and legal influences on banking activities, current economic conditions, anticipated relaxation or strengthening of capital or exchange controls, fiscal policy, political goals, and risk of expropriation?
7. Are adequate records maintained to determine compliance with the investment provisions of Regulation K, including information on the type of investment (equity, binding commitments, capital contributions, subordinated debt), the dollar amount of the investment, the percentage ownership, the activities conducted by the company, the legal authority for such activities, and whether the investment was made under Regulation K's general-consent, prior-notice, or specific-consent procedures? (See Regulation K, sections 211.8 and 211.9.)
8. Is the carrying value of all subsidiaries and related companies accounted for on the equity basis and adjusted, at least quarterly,

to reflect the reporting bank's cumulative share of the company's earnings or losses?

9. Is an objective review performed of the benefits or quality of assets received relative to the cost incurred?
10. Are money transfers between the bank and any related organization adequately documented to justify the equity of the transaction?

CONCLUSION

1. Is the foregoing information considered an adequate basis for evaluating internal con-

trols, that is, there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

2. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Banking organizations increasingly rely on information technology (IT) to conduct their operations and manage risks. The use of IT can have important implications for a banking organization's financial condition, risk profile, and operating performance and should be incorporated into the safety-and-soundness assessment of each organization. As a result, all safety-and-soundness examinations (or examination cycles) of banking organizations conducted by the Federal Reserve should include an assessment and evaluation of IT risks and risk management. Further information about banks' IT activities and examination methodology can be found in the *FFIEC Information Technology Examination Handbook* (the *IT Handbook*) and in supervisory guidance issued by the Federal Reserve and the other federal banking agencies.

ASSESSING INFORMATION TECHNOLOGY IN THE RISK-FOCUSED SUPERVISORY FRAMEWORK

The risk-focused supervisory process is evolving to adapt to the changing role of IT in banking organizations, with greater emphasis on an assessment of IT's effect on an organization's safety and soundness. Accordingly, examiners should explicitly consider IT when developing risk assessments and supervisory plans. Examiners should use appropriate judgment in determining the level of review, given the characteristics, size, and business activities of the organization. Moreover, to determine the scope of supervisory activities, close coordination is needed between general safety-and-soundness examiners and IT specialists during the risk-assessment and planning phase, as well as during on-site examinations. Given the variability of IT environments, the level of technical expertise needed for a particular examination will vary across institutions and should be identified during the planning phase of the examination. In general, examiners should accomplish the following goals during a risk-focused examination:

- Develop a broad understanding of the organization's approach to and strategy and structure for IT activities within and across business lines. Determine also the role and importance

of IT to the organization and any unique characteristics or issues.

- Incorporate an analysis of IT activities into risk assessments, supervisory plans, and scope memoranda. An organization's IT systems should be considered in relation to the size, activities, and complexity of the organization, as well as the degree of reliance on these systems across particular business lines. Although IT concerns would clearly affect an institution's operational risk profile, IT also can affect other business risks (such as credit, market, liquidity, legal, and reputational risk), depending upon the specific circumstances, and should be incorporated into these assessments as appropriate.
- Assess the organization's critical systems, that is, those that support its major business activities, and the degree of reliance those activities have on IT systems. The level of review should be sufficient to determine that the systems are delivering the services necessary for the organization to conduct its business in a safe and sound manner.
- Determine whether the board of directors and senior management are adequately identifying, measuring, monitoring, and controlling the significant risks associated with IT for the overall organization and its major business activities.

INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

The federal banking agencies jointly issued interagency guidelines establishing information security standards (the information security standards), which became effective July 1, 2001.¹ (See appendix B of this section.) The Board of Governors of the Federal Reserve System approved amendments to the standards on December 16, 2004 (effective July 1, 2005). The amended information security standards implement sections 501 and 505 of the Gramm-Leach-Bliley Act (15 USC 6801 and 6805) and section 216 of the Fair and Accurate Credit Transac-

1. See 66 *Fed. Reg.* 8616–8641 (February 1, 2001) and 69 *Fed. Reg.* 77610–77612 (December 28, 2004); Regulation H, 12 CFR 208, appendix D-2; Regulation K, 12 CFR 211.9 and 211.24; and Regulation Y, 12 CFR 225, appendix F.

tions Act of 2003 (15 USC 1681w). The Gramm-Leach-Bliley Act requires the agencies to establish financial-institution information security standards for administrative, technical, and physical safeguards for customer records and information. (See SR-01-15.)

Under the information security standards, institutions must establish an effective *written* information security program to assess and control risks to customer information. An institution's information security program should be appropriate to its size and complexity and to the nature and scope of its operations. The board of directors should oversee the institution's development, implementation, and maintenance of the information security program and also approve written information security policies and programs.

The information security program should include administrative, technical, and physical safeguards appropriate to the size and complexity of the bank and the nature and scope of its activities. The program should be designed to ensure the security and confidentiality of customer information,² protect against anticipated threats or hazards to the security or integrity of such information, protect against unauthorized access to or use of such information that could result in substantial harm or inconvenience to any customer,³ and ensure the proper disposal of customer information and consumer information. Each institution must assess risks to customer information and implement appropriate policies, procedures, training, and testing to manage and control these risks. Institutions must also report annually to the board of directors or a committee of the board of directors.

The information security standards outline specific security measures that banking organizations should consider in implementing a security program based on the size and complexity of their operations. Training and testing are also

critical components of an effective information security program. Financial institutions are required to oversee their service-provider arrangements in order to (1) protect the security of customer information maintained or processed by service providers; (2) ensure that its service providers properly dispose of customer and consumer information; and (3) where warranted, monitor its service providers to confirm that they have satisfied their contractual obligations.

The Federal Reserve recognizes that banking organizations are highly sensitive to the importance of safeguarding customer information and the need to maintain effective information security programs. Existing examination procedures and supervisory processes already address information security. As a result, most banking organizations may not need to implement any new controls and procedures.

Examiners should assess compliance with the standards during each safety-and-soundness examination, which may include targeted reviews of information technology. Ongoing compliance with the standards should be monitored as needed during the risk-focused examination process. Material instances of noncompliance should be noted in the examination report.

The information security standards apply to customer information maintained by or on behalf of state member banks and bank holding companies and the nonbank subsidiaries of each.⁴ The information security standards also address standards for the proper disposal of consumer information, pursuant to sections 621 and 628 of the Fair Credit Reporting Act (15 USC 1681s and 1681w). To address the risks associated with identity theft, a financial institution is generally required to develop, implement, and maintain, as part of its existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports.

Consumer information is defined as any record about an individual, whether in paper, electronic, or other form, that is a consumer report or is derived from a consumer report and that is maintained or otherwise possessed by or on

2. *Customer information* is defined to include any record, whether in paper, electronic, or other form, containing *non-public personal information*, as defined in Regulation P, about a financial institution's customer that is maintained by or on behalf of the institution.

3. A *customer* is defined in the same manner as in Regulation P: a consumer who has established a continuing relationship with an institution under which the institution provides one or more financial products or services to the consumer to be used primarily for personal, family, or household purposes. The definition of customer does not include a business, nor does it include a consumer who has not established an ongoing relationship with the financial institution.

4. The information security standards do not apply to brokers, dealers, investment companies, and investment advisers, or to persons providing insurance under the applicable state insurance authority of the state in which the person is domiciled. The appropriate federal agency or state insurance authority regulates insurance entities under sections 501 and 505 of the GLB Act.

behalf of the bank for a business purpose. Consumer information also means a compilation of such records.

The following are examples of consumer information:

- a consumer report that a bank obtains
- information from a consumer report that the bank obtains from its affiliate after the consumer has been given a notice and has elected not to opt out of that sharing
- information from a consumer report that the bank obtains about an individual who applies for but does not receive a loan, including any loan sought by an individual for a business purpose
- information from a consumer report that the bank obtains about an individual who guarantees a loan (including a loan to a business entity)
- information from a consumer report that the bank obtains about an employee or prospective employee

Consumer information does not include any record that does not personally identify an individual, nor does it include the following:

- aggregate information, such as the mean score, derived from a group of consumer reports
- blind data, such as payment history on accounts that are not personally identifiable, that may be used for developing credit scoring-models or for other purposes
- information from a consumer report that the bank obtains about an individual who applies for but does not receive a loan, including any loan sought by an individual for a business purpose
- information from a consumer report that the bank obtains about an individual who guarantees a loan (including a loan to a business entity)
- information from a consumer report that the bank obtains about an employee or prospective employee

An institution or banking organization is not required to implement a *uniform* information security program. For example, a bank holding company may include subsidiaries within the scope of its information security program, or the subsidiaries may implement separate information security programs. The institution or bank

holding company is expected, however, to coordinate all the elements of its information security program.

Institutions must exercise due diligence when selecting service providers, including reviewing the service provider's information security program or the measures the service provider uses to protect the institution's customer information.⁵ All contracts must require that the service provider implement appropriate measures designed to meet the objectives of the standards. Institutions must also conduct ongoing oversight to confirm that the service provider maintains appropriate security measures. An institution's methods for overseeing its service-provider arrangements may differ depending on the type of services or service provider or the level of risk. For example, if a service provider is subject to regulations or a code of conduct that imposes a duty to protect customer information consistent with the objectives of the standards, the institution may consider that duty in exercising its due diligence and oversight of the service provider. In situations where a service provider hires a subservicer (or subcontractor), the subservicer would not be considered a "service provider" under the guidelines.

Response Programs for Unauthorized Access to Customer Information and Customer Notice

Response programs specify actions that are to be taken when a financial institution suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies.⁶ A response program is the principal means for a financial institution to protect against unauthorized "use" of customer information that could lead to "substantial harm or inconvenience" to the institution's customer. For example, customer notification is an important tool that enables a customer to take steps to prevent identity theft, such as by arranging to have a fraud alert placed in his or her credit file.

The measures enumerated in the information security standards include "response programs

5. A *service provider* is deemed to be a person or entity that maintains, processes, or is otherwise permitted access to customer information through its provision of services directly to the bank.

6. See the information security standards, 12 CFR 208, appendix D-2, section III.C.

that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies.”⁷ Prompt action by both the institution and the customer following the unauthorized access to customer information is crucial to limiting identity theft. As a result, every financial institution should develop and implement a response program appropriate to its size and complexity and to the nature and scope of its activities. The program should be designed to address incidents of unauthorized access to customer information.

The Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice⁸ (the guidance) interprets section 501(b) of the Gramm-Leach-Bliley Act (the GLB Act) and the information security standards.⁹ The guidance describes the response programs, including customer notification procedures, that a financial institution should develop and implement to address unauthorized access to or use of customer information that could result in substantial harm or inconvenience to a customer.

When evaluating the adequacy of an institution’s information security program that is required by the information security standards, examiners are to consider whether the institution has developed and implemented a response program equivalent to the guidance. At a minimum, an institution’s response program should contain procedures for (1) assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused; (2) notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined later in the guidance; (3) immediately notifying law enforcement in situations involving federal criminal violations requiring immediate attention; (4) taking appropriate steps

to contain and control the incident to prevent further unauthorized access to or use of customer information, such as by monitoring, freezing, or closing affected accounts, while preserving records and other evidence; and (5) notifying customers when warranted.

The guidance does not apply to a financial institution’s foreign offices, branches, or affiliates. However, a financial institution subject to the information security standards is responsible for the security of its customer information, whether the information is maintained within or outside of the United States, such as by a service provider located outside of the United States.

The guidance also applies to *customer information*, meaning any record containing “non-public personal information” about a financial institution’s customer, whether the information is maintained in paper, electronic, or other form, *that is maintained by or on behalf of the institution*.¹⁰ (See the Board’s privacy rule, Regulation P, at section 216.3(n)(2) (12 CFR 216.3(n)(2).) Consequently, the guidance applies only to information that is within the control of the institution and its service providers. The guidance would not apply to information directly disclosed by a customer to a third party, for example, through a fraudulent web site.

The guidance also does not apply to information involving business or commercial accounts. Instead, the guidance applies to nonpublic personal information about a *customer*, as that term is used in the information security standards, namely, a consumer who obtains a financial product or service from a financial institution to be used primarily for personal, family, or household purposes and who has a continuing relationship with the institution.¹¹

Response Programs

Financial institutions should take preventative measures to safeguard customer information against attempts to gain unauthorized access to the information. For example, financial institutions should place access controls on customer information systems and conduct background checks for employees who are authorized to

7. See the information security standards, section III.C.1.g.

8. The guidance was jointly issued on March 23, 2005 (effective March 29, 2005), by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

9. See 12 CFR 208, appendix D-2, and 12 CFR 225, appendix F. The Interagency Guidelines Establishing Information Security Standards were formerly known as the Interagency Guidelines Establishing Standards for Safeguarding Customer Information.

10. See the information security standards, 12 CFR 208, appendix D-2, section I.C.2.e.

11. See the information security standards, 12 CFR 208, appendix D-2, section I.C.2.d., and the Board’s privacy rule (Regulation P), section 216.3(h) (12 CFR 216.3(h)).

access customer information.¹² However, every financial institution should also develop and implement a risk-based response program to address incidents of unauthorized access to customer information in customer information systems¹³ that occur nonetheless. A response program should be a key part of an institution's information security program.¹⁴ The program should be appropriate to the size and complexity of the institution and the nature and scope of its activities.

In addition, each institution should be able to address incidents of unauthorized access to customer information in customer information systems maintained by its domestic and foreign service providers. Therefore, consistent with the obligations in the information security standards that relate to these arrangements, and with existing guidance on this topic issued by the agencies,¹⁵ an institution's contract with its service provider should require the service provider to take appropriate actions to address incidents of unauthorized access to the financial institution's customer information, including notification to the institution as soon as possible of any such incident, to enable the institution to expeditiously implement its response program.

Components of a response program. At a minimum, an institution's response program should contain procedures for the following:

- assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused
- notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access

12. Institutions should also conduct background checks of employees to ensure that the institution does not violate 12 USC 1829, which prohibits an institution from hiring an individual convicted of certain criminal offenses or who is subject to a prohibition order under 12 USC 1818(e)(6).

13. Under the information security standards, an institution's *customer information systems* consist of all the methods used to access, collect, store, use, transmit, protect, or dispose of customer information, including the systems maintained by its service providers. See the information security standards, 12 CFR 208, appendix D-2, section I.C.2.f.

14. See SR-97-32, "Sound Practices Guidance for Information Security for Networks," for additional guidance on preventing, detecting, and responding to intrusions into financial institution computer systems.

15. See SR-00-04, "Outsourcing of Information and Transaction Processing," and the subsection "Outsourcing Information Technology."

to or use of *sensitive* customer information, as defined below

- consistent with the Suspicious Activity Report by Depository Institutions (SAR-DI) regulations,¹⁶ notifying appropriate law enforcement authorities, in addition to filing a timely SAR-DI form in situations involving federal criminal violations requiring immediate attention, such as when a reportable violation is ongoing
- taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, for example, by monitoring, freezing, or closing affected accounts, while preserving records and other evidence
- notifying customers when warranted

Where an incident of unauthorized access to customer information involves customer information systems maintained by an institution's service providers, it is the responsibility of the financial institution to notify the institution's customers and regulator. However, an institution may authorize or contract with its service provider to notify the institution's customers or regulator on its behalf.

Customer Notice

Financial institutions have an affirmative duty to protect their customers' information against unauthorized access or use. Notifying customers of a security incident involving the unauthorized access or use of the customer's information in accordance with the standard set forth below is a key part of that duty. Timely notification of customers is important to managing an institution's reputation risk. Effective notice also may reduce an institution's legal risk, assist in maintaining good customer relations, and enable the institution's customers to take steps to protect themselves against the consequences of identity theft. When customer notification is warranted, an institution may not forgo notifying its customers of an incident because the institution

16. An institution's obligation to file a SAR-DI form is set out in SAR-DI form regulations and supervisory guidance. See 12 CFR 208.62 (state member banks); 12 CFR 211.5(k) (Edge and agreement corporations); 12 CFR 211.24(f) (uninsured state branches and agencies of foreign banks); and 12 CFR 225.4(f) (bank holding companies and their nonbank subsidiaries). See SR-07-2 and its attachments and also SR-01-11, "Identity Theft and Pretext Calling."

believes that it may be potentially embarrassed or inconvenienced by doing so.

Standard for providing notice. When a financial institution becomes aware of an incident of unauthorized access to sensitive customer information, the institution should conduct a reasonable investigation to promptly determine the likelihood that the information has been or will be misused. If the institution determines that misuse of its information about a customer has occurred or is reasonably possible, it should notify the affected customer as soon as possible. Customer notice may be delayed if an appropriate law enforcement agency determines that notification will interfere with a criminal investigation and provides the institution with a written request for the delay. However, the institution should notify its customers as soon as notification will no longer interfere with the investigation.

Sensitive customer information. Under the information security standards, an institution must protect against unauthorized access to or use of customer information that could result in substantial harm or inconvenience to any customer. Substantial harm or inconvenience is most likely to result from improper access to *sensitive customer information* because this type of information is most likely to be misused, as in the commission of identity theft. For purposes of the guidance, *sensitive customer information* means a customer's name, address, or telephone number, in conjunction with the customer's Social Security number, driver's license number, account number, credit or debit card number, or a personal identification number or password that would permit access to the customer's account. Sensitive customer information also includes any combination of components of customer information that would allow someone to log onto or access the customer's account, such as a user name and password or a password and an account number.

Affected customers. If a financial institution, on the basis of its investigation, can determine from its logs or other data precisely which customers' information has been improperly accessed, it may limit notification to those customers for whom the institution determines that misuse of their information has occurred or is reasonably possible. However, there may be situations in which the institution determines that a group of

files has been accessed improperly but is unable to identify which specific customers' information has been accessed. If the circumstances of the unauthorized access lead the institution to determine that misuse of the information is reasonably possible, it should notify all customers in the group.

Content of customer notice. Customer notice should be given in a clear and conspicuous manner. The notice should describe the incident in general terms and the type of customer information that was the subject of unauthorized access or use. It should also generally describe what the institution has done to protect the customers' information from further unauthorized access. In addition, it should include a telephone number that customers can call for further information and assistance.¹⁷ The notice also should remind customers of the need to remain vigilant over the next 12 to 24 months, and to promptly report incidents of suspected identity theft to the institution. The notice should include the following additional items, when appropriate:

- a recommendation that the customer review account statements and immediately report any suspicious activity to the institution
- a description of fraud alerts and an explanation of how the customer may place a fraud alert in the customer's consumer reports to put the customer's creditors on notice that the customer may be a victim of fraud
- a recommendation that the customer periodically obtain credit reports from each nationwide credit reporting agency and have information relating to fraudulent transactions deleted
- an explanation of how the customer may obtain a credit report free of charge
- information about the availability of the FTC's online guidance regarding steps a consumer can take to protect against identity theft (The notice should encourage the customer to report any incidents of identity theft to the FTC and should provide the FTC's web site address and toll-free telephone number that customers may use to obtain the identity theft guidance

17. The institution should, therefore, ensure that it has reasonable policies and procedures in place, including trained personnel, to respond appropriately to customer inquiries and requests for assistance.

and to report suspected incidents of identity theft.¹⁸

Financial institutions are encouraged to notify the nationwide consumer reporting agencies before sending notices to a large number of customers when those notices include contact information for the reporting agencies.

Delivery of customer notice. Customer notice should be delivered in any manner designed to ensure that a customer can reasonably be expected to receive it. For example, the institution may choose to contact all affected customers by telephone, by mail, or by electronic mail, in the case of customers for whom it has a valid e-mail address and who have agreed to receive communications electronically.

IDENTITY THEFT RED FLAGS PROGRAM

The federal financial institution regulatory agencies^{18a} and the Federal Trade Commission (FTC) have issued joint regulations and guidelines on the *detection, prevention, and mitigation* of identity theft in connection with opening of certain accounts or certain existing accounts in response to the Fair and Accurate Credit Transactions Act of 2003 (The FACT Act).^{18b} The regulations require debit and credit card issuers to validate notifications of changes of address under certain circumstances. The joint rules also provide guidelines regarding reasonable policies and procedures that a user of consumer reports must employ when a consumer reporting agency sends the user a notice of address discrepancy. Financial institutions or creditors^{18c} that offer or maintain one or more

“covered accounts” must develop and implement a written Identity Theft Prevention Program (Program).^{18d} A Program is to be designed to detect, prevent, and mitigate identity theft in connection with the opening of a covered account or any existing covered account. The Program must be tailored to the entity’s size, complexity, and the nature and scope of its operations and activities.

The Board’s approval of the rule and guidelines was on October 16, 2007. The effective date for the joint final rules and guidelines is January 1, 2008. The mandatory compliance date for the rules is November 1, 2008. See section 222 of the Board’s Regulation V—Fair Credit Reporting (12 CFR 222) and 72 *Fed. Reg.* 63718- 63775, November 9, 2007.

This section incorporates certain financial institution safety and soundness provisions of the rule (Regulation V and its guidelines (Appendix J)). See also the October 10, 2008, Federal Reserve Board letter (SR-08-7/CA 08-10) and its interagency attachments.

Risk Assessment

Prior to the development of the Program, a financial institution must initially and then periodically conduct a risk assessment to determine whether it offers or maintains covered accounts. It must take into consideration: (1) the methods it provides to open its accounts; (2) the methods it provides to access accounts; and (3) its previous experiences with identity theft. If the financial institution has covered accounts, the risk assessment must evaluate its potential vulnerability to identity theft. The institution should also consider whether a reasonably foreseeable risk of identity theft may exist in connection with the accounts it offers or maintains and those that may be opened or accessed remotely, through methods that do not require face-to-face contact, such as through the internet or telephone. Financial institutions that offer or main-

18. The FTC website for the ID theft brochure and the FTC hotline phone number are www.consumer.gov/idtheft/ and 1-877-IDTHEFT. The institution may also refer customers to any materials developed pursuant to section 151(b) of the Fair and Accurate Credit Transactions Act of 2003 (the FACT Act) (educational materials developed by the FTC to teach the public how to prevent identity theft).

18a. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

18b. Section 111 of the FACT Act defines “identity theft” as “a fraud committed or attempted using the identifying information of another person.”

18c. The term financial institution should be interpreted to

mean a “financial institution or creditors” with regard to the Red Flags Program joint regulations and the accompanying interagency guidance.

18d. “Covered accounts” are (1) accounts that a financial institution offers or maintains, primarily for personal, family, or household purposes, that involves or is designed to permit multiple payments or transactions, and (2) any other account that the financial institution offers or maintains for which there is a reasonably foreseeable risk to customers or to the safety and soundness of the financial institution from identity theft.

tain business accounts that have been the target of identity theft should factor those experiences with identity theft into their determination.

The required risk assessment directs a financial institution to determine whether it will need to have a Program. If the financial institution determines that it needs a Program, the risk assessment will enable the financial institution to identify which of its accounts the Program must address. If a financial institution initially determines that it does not need to have a Program, it must periodically reassess whether it must develop and implement a Program in light of changes in the accounts that it offers or maintains.

Elements of the Program

The elements of the actual Program will vary depending on the size and complexity of the financial institution. A financial institution that determines that it is required to establish and maintain an Identity Theft Prevention Program must (1) identify relevant Red Flags for its covered accounts, (2) detect and respond to the Red Flags that have been incorporated into its Program, and (3) respond appropriately to the detected Red Flags. The Red Flags are patterns, practices, or specific activities that indicate the possible existence of identity theft or the potential to lead to identity theft. A financial institution must ensure that its Program is updated periodically to address the changing risks associated with its customers and their accounts and to the safety and soundness of the financial institution from identity theft.

Guidelines

Each financial institution that is required to implement a written Program must consider the Guidelines for Identity Theft Detection, Prevention, and Mitigation's in Appendix J (12 CFR 222, Appendix J of the rule) (the Guidelines) and include those guidelines that are appropriate in its Program. Section I of the Guidelines, "The Program," discusses a Program's design that may include, as appropriate, existing policies, procedures, and arrangements that control foreseeable risks to the institution's customers or to the safety and soundness of the financial institution from identity theft.

Identification of Red Flags

A financial institution should incorporate relevant Red Flags into the Program from sources such as (1) incidents of identity theft that it has experienced, (2) methods of identity theft that have been identified as reflecting changes in identity theft risks, and (3) applicable supervisory guidance.

Categories of Red Flags

Section II of the Guidelines, "Categories of Red Flags," provides some guidance in identifying relevant Red Flags. A financial institution should include, as appropriate:^{18c}

- alerts, notifications, or other warnings received from consumer reporting agencies or service providers, such as fraud detection services
- the presentation of suspicious documents
- the presentation of suspicious personal identifying information, such as a suspicious address change
- the unusual use of, or other suspicious activity related to, a covered account
- a notice received from customers, victims of identity theft, law enforcement authorities, or other persons regarding possible identity theft in connection with covered accounts held by the financial institution

The above categories do not represent a comprehensive list of all types of Red Flags that may indicate the possibility of identity theft. Institutions must also consider specific business lines and any previous exposures to identity theft. No specific Red Flag is mandatory for all financial institutions. Rather, the Program should follow the risk-based, nonprescriptive approach regarding the identification of Red Flags.

Detect the Program's Red Flags

In accordance with Section III of the Guidelines, each financial institution's Program should address the detection of Red Flags in connection with the opening of covered accounts and existing covered accounts. A financial institution is required to detect, prevent, and mitigate identity

^{18c} Examples of Red Flags from each of these categories are appended as Supplement A to Appendix J.

theft in connection with such accounts. The policies and procedures regarding opening a covered account subject to the Program should explain how an institution could identify information about, and verify the identity of, a person opening an account.^{18f} In the case of existing covered accounts, institutions could authenticate customers, monitor transactions, and verify the validity of change of address requests.

Respond Appropriately to any Detected Red Flags

A financial institution should consider precursors to identity theft to stop identity theft before it occurs. Section IV of the Guidelines, “Prevention and Mitigation,” states that an institution’s procedures should provide for appropriate responses to Red Flags that it has detected that are commensurate with the degree of risk posed. When determining an appropriate response, the institution should consider aggravating factors that may heighten its risk of identity theft. Such factors may include (1) a data security incident that results in unauthorized access to a customer’s account, (2) records the financial institution holds or that are held by another creditor or third party, or (3) notice that the institution’s customer has provided information related to its covered account to someone fraudulently claiming to represent the financial institution or creditor or to a fraudulent website. Appropriate responses may include the following: (1) monitoring a covered account for evidence of identity theft; (2) contacting the customer; (3) changing any passwords, security codes, or other security devices that permit access to a secured account; (4) reopening a covered account with a new account number; (5) not opening a new covered account; (6) closing an existing covered account; (7) not attempting to collect on a covered account or not selling a covered account to a debt collector; (8) notifying law enforcement; or (9) determining that no response is warranted under the particular circumstances.

Periodically Updating the Program’s Relevant Red Flags

Section V of the Guidelines, “Updating the Program,” states that a financial institution

should periodically update its Program (including its relevant Red Flags) to reflect any changes in risks to its customers or to the safety and soundness of the institution from identity theft, based on (but not limited to) factors such as

- the experiences of the financial institution with identity theft,
- changes in methods of identity theft,
- changes in methods to detect, prevent, and mitigate identity theft,
- changes in the types of accounts that the financial institution offers or maintains, and
- changes in the financial institution’s structure, including its mergers, acquisitions, joint ventures, and any business arrangements, such as alliances and service provider arrangements.

Administration of Program

A financial institution that is required to implement an identity theft protection Program must provide for the continued oversight and administration of its Program. The following are the steps that are needed in the administration of a Red Flags Program:

1. *Obtain approval from either the institution’s board of directors or any appropriate committee of the board of directors of the initial written Program;*
2. *Involve either the board of directors, a designated committee of the board of directors, or a designated senior-management-level employee in the oversight, development, implementation, and administration of the Program.* This includes
 - assigning specific responsibility for the Program’s implementation,
 - reviewing reports prepared by staff regarding the institution’s compliance (the reports should be prepared at least annually), and
 - reviewing material changes to the Program as necessary to address changing identity theft risks.
3. *Train staff:* The financial institution must train relevant staff to effectively implement and monitor the Program. Staff members who have already been trained, for example, as a part of the antifraud prevention efforts of the financial institution, do not need to be re-trained initially. Training should be pro-

^{18f}. 31 USC 5318(l) (31 CFR 103.121)

vided as changes are made to the financial institution's Program based on its periodic risk assessment.

4. *Exercise appropriate and effective oversight of service provider arrangements.* Section VI of the Guidelines, "Methods for Administering the Program," indicates a financial institution is ultimately responsible for complying with the rules and guidelines for outsourcing an activity to a third-party service provider. Whenever a financial institution engages a service provider to perform an activity in connection with one or more covered accounts, the institution should ensure that the activity of the service provider is conducted in accordance with reasonable policies and procedures designed to detect, prevent, and mitigate the risk of identity theft. With regard to the institution's oversight of its Program, periodic reports are to be issued on the Program's development, implementation, and administration.

IT EXAMINATION FREQUENCY AND SCOPE

All safety-and-soundness examinations (or examination cycles) of banking organizations conducted by the Federal Reserve should include an assessment and evaluation of IT risks and risk management. The scope of the IT assessment should generally be sufficient to assign a composite rating under the Uniform Rating System for Information Technology (URSIT). URSIT component ratings may be updated at the examiner's discretion, based on the scope of the assessment. The scope would normally be based on factors such as—

- implementation of new systems or technologies since the last examination;
- significant changes in operations, such as mergers or systems conversions;
- new or modified outsourcing relationships for critical operations;
- targeted examinations of business lines whose internal controls or risk-management systems depend heavily on IT; and
- other potential problems or concerns that may have arisen since the last examination or the need to follow up on previous examination or audit issues.

Institutions that outsource core processing functions, although not traditionally subject to IT examinations, are exposed to IT-related risks. For these institutions, some or all components of the URSIT rating may not be meaningful. In these cases, the assessment of IT activities may be incorporated directly into the safety-and-soundness rating for the institution, rather than through the assignment of an URSIT rating. The scope of the IT assessment for such institutions should evaluate the adequacy of the institution's oversight of service providers for critical processing activities and should incorporate the results of any relevant supervisory reviews of these service providers. The assessment should also include reviews of any significant in-house activities, such as management information systems and local networks, and the implementation of new technologies, such as Internet banking. As noted above, the assessment of IT should be reflected in the overall safety-and-soundness examination report and in the appropriate components of the safety-and-soundness examination rating assigned to the institution, as well as in the associated risk-profile analysis. (See SR-00-3.)

Targeted IT examinations may be conducted more frequently if deemed necessary by the Reserve Bank. A composite URSIT rating should be assigned for targeted reviews when possible. In addition, institutions for which supervisory concerns have been raised (normally those rated URSIT 3, 4, or 5) should be subject to more frequent IT reviews, until such time as the Reserve Bank is satisfied that the deficiencies have been corrected.

RISK ELEMENTS

To provide a common terminology and consistent approach for evaluating the adequacy of an organization's IT, five IT elements are defined below. These elements may be used to evaluate the IT processes at the functional business level or for the organization as a whole and to determine the impact on the business risks outlined in SR-95-51, as well as their impact on the IT rating (URSIT) discussed below. (See SR-98-9.)

1. *Management processes.* Management processes encompass planning, investment, development, execution, and staffing of IT from a corporate-wide and business-specific

- perspective. Management processes over IT are effective when they are adequately and appropriately aligned with and support the organization's mission and business objectives. Management processes include strategic planning; budgeting; management and reporting hierarchy; management succession; and a regular, independent review function. Examiners should determine if the IT strategy for the business activity or organization is consistent with the organization's mission and business objectives and whether the IT function has effective management processes to execute that strategy.
2. **Architecture.** Architecture refers to the underlying design of an automated information system and its individual components. The underlying design encompasses both physical and logical architecture, including operating environments, as well as the organization of data. The individual components refer to network communications, hardware, and software, which includes operating systems, communications software, database-management systems, programming languages, and desktop software. Effective architecture meets current and long-term organizational objectives, addresses capacity requirements to ensure that systems allow users to easily enter data at both normal and peak processing times, and provides satisfactory solutions to problems that arise when information is stored and processed in two or more systems that cannot be connected electronically. When assessing the adequacy of IT architecture, examiners should consider the ability of the current infrastructure to meet operating objectives, including the effective integration of systems and sources of data.
 3. **Integrity.** Integrity refers to the reliability, accuracy, and completeness of information delivered to the end-user. Integrity risk could arise from insufficient controls over systems or data, which could adversely affect critical financial and customer information. Examiners should review and consider whether the organization relies on information system audits or independent reviews of applications to ensure the integrity of its systems. Examiners should review the reliability, accuracy, and completeness of information delivered in key business lines.
 4. **Security.** Security risk is the risk of unauthorized disclosure or destruction of critical or

- sensitive information. To mitigate this risk, physical access and logical controls are generally provided to achieve a level of protection commensurate with the value of the information. Security risk is managed effectively when controls prevent unauthorized access, modification, destruction, or disclosure of sensitive information during creation, transmission, processing, maintenance, or storage. Examiners should ensure that operating procedures and controls are commensurate with the potential for and risks associated with security breaches, which may be either physical or electronic, inadvertent or intentional, internal or external.
5. **Availability.** Availability refers to the timely delivery of information and processes to end-users in support of business and decision-making processes and customer services. In assessing the management of availability risk, examiners should consider the capability of IT functions to provide information to the end-users from either primary or secondary sources, as well as consider the ability of back-up systems, as presented in contingency plans, to mitigate business disruption. Contingency plans should set out a process for an organization to restore or replace its information-processing resources; reconstruct its information assets; and resume its business activity from disruption caused by human error or intervention, natural disaster, or infrastructure failure (including loss of utilities and communication lines and the operational failure of hardware, software, and network communications).

UNIFORM RATING SYSTEM FOR INFORMATION TECHNOLOGY

The Uniform Rating System for Information Technology (URSIT) is an interagency examination rating system adopted by the Federal Financial Institutions Examination Council (FFIEC) agencies to evaluate the IT activities of financial institutions. The rating system includes component- and composite-rating descriptions and the explicit identification of risks and assessment factors that examiners consider in

assigning component ratings. This rating system helps examiners assess risk and compile examination findings. However, the rating system should not drive the scope of an examination. In particular, not all assessment factors or component-rating areas are required to be assessed at each examination. Examiners should use the rating system to help evaluate the entity's overall risk exposure and risk-management performance and to determine the degree of supervisory attention believed necessary to ensure that weaknesses are addressed and that risk is properly managed. (See SR-99-8.)

The URSIT rating framework is based on a risk evaluation of four general areas: audit, management, development and acquisition, and support and delivery. These components are used to assess the overall IT functions within an organization and arrive at a composite URSIT rating. Examiners evaluate the areas identified within each component to assess the institution's ability to identify, measure, monitor, and control IT risks.

In adopting the URSIT rating system, the FFIEC recognized that management practices vary considerably among financial institutions depending on their size and sophistication, the nature and complexity of their business activities, and their risk profile. For less complex information systems environments, detailed or highly formalized systems and controls are not required to receive the higher composite and component ratings.

URSIT Composite-Rating Definitions

Financial institutions rated URSIT composite 1 exhibit strong performance in every respect and generally have components rated 1 or 2. Weaknesses in IT functions are minor and are easily corrected during the normal course of business. Risk-management processes provide a comprehensive program to identify and monitor risk relative to the size, complexity, and risk profile of the entity. Strategic plans are well defined and fully integrated throughout the organization. This allows management to quickly adapt to the changing market, business, and technology needs of the entity. Management identifies weaknesses promptly and takes appropriate corrective action to resolve audit and regulatory concerns.

Financial institutions rated URSIT composite

2 exhibit safe and sound performance but may demonstrate modest weaknesses in operating performance, monitoring, management processes, or system development. Generally, senior management corrects weaknesses in the normal course of business. Risk-management processes adequately identify and monitor risk relative to the size, complexity, and risk profile of the entity. Strategic plans are defined but may require clarification, better coordination, or improved communication throughout the organization. As a result, management anticipates, but responds less quickly to changes in the market, business, and technological needs of the entity. Management normally identifies weaknesses and takes appropriate corrective action. However, greater reliance is placed on audit and regulatory intervention to identify and resolve concerns. While internal control weaknesses may exist, there are no significant supervisory concerns. As a result, supervisory action is informal and limited.

Financial institutions rated URSIT composite 3 exhibit some degree of supervisory concern due to a combination of weaknesses that may range from moderate to severe. If weaknesses persist, further deterioration in the condition and performance of the institution is likely. Risk-management processes may not effectively identify risks and may not be appropriate for the size, complexity, or risk profile of the entity. Strategic plans are vaguely defined and may not provide adequate direction for IT initiatives. As a result, management often has difficulty responding to changes in the business, market, and technological needs of the entity. Self-assessment practices are weak and generally reactive to audit and regulatory exceptions. Repeat concerns may exist, indicating that management may lack the ability or willingness to resolve concerns. While financial or operational failure is unlikely, increased supervision is necessary. Formal or informal supervisory action may be necessary to secure corrective action.

Financial institutions rated URSIT composite 4 operate in an unsafe and unsound environment that may impair the future viability of the entity. Operating weaknesses are indicative of serious managerial deficiencies. Risk-management processes inadequately identify and monitor risk, and practices are not appropriate given the size, complexity, and risk profile of the entity. Strategic plans are poorly defined and not coordinated or communicated throughout the organization. As a result, management and the board are not committed to, or may be incapable of,

ensuring that technological needs are met. Management does not perform self-assessments and demonstrates an inability or unwillingness to correct audit and regulatory concerns. Failure of the financial institution may be likely unless IT problems are remedied. Close supervisory attention is necessary and, in most cases, formal enforcement action is warranted.

Financial institutions rated URSIT composite 5 exhibit critically deficient operating performance and are in need of immediate remedial action. Operational problems and serious weaknesses may exist throughout the organization. Risk-management processes are severely deficient and provide management little or no perception of risk relative to the size, complexity, and risk profile of the entity. Strategic plans do not exist or are ineffective, and management and the board provide little or no direction for IT initiatives. As a result, management is unaware of or inattentive to the technological needs of the entity. Management is unwilling or incapable of correcting audit and regulatory concerns. Ongoing supervisory attention is necessary.

URSIT Component Ratings

Audit

Financial institutions and service providers are expected to provide independent assessments of their exposure to risks and of the quality of internal controls associated with the acquisition, implementation, and use of IT. Audit practices should address the IT risk exposures throughout the institution and the exposures of its service provider(s) in the areas of user and data center operations, client/server architecture, local and wide area networks, telecommunications, information security, electronic data interchange, systems development, and contingency planning. This rating should reflect the adequacy of the organization's overall IT audit program, including the internal and external auditor's abilities to detect and report significant risks to management and the board of directors on a timely basis. It should also reflect the internal and external auditor's capability to promote a safe, sound, and effective operation. The performance of an audit is rated based on an assessment of factors such as—

- the level of independence maintained by audit and the quality of the oversight and support provided by the board of directors and management;
- the adequacy of audit's risk-analysis methodology used to prioritize the allocation of audit resources and to formulate the audit schedule;
- the scope, frequency, accuracy, and timeliness of internal and external audit reports;
- the extent of audit participation in application development, acquisition, and testing, to ensure the effectiveness of internal controls and audit trails;
- the adequacy of the overall audit plan in providing appropriate coverage of IT risks;
- the auditor's adherence to codes of ethics and professional audit standards;
- the qualifications of the auditor, staff succession, and continued development through training;
- the existence of timely and formal follow-up and reporting on management's resolution of identified problems or weaknesses; and
- the quality and effectiveness of internal and external audit activity as it relates to IT controls.

A rating of 1 indicates strong audit performance. Audit independently identifies and reports weaknesses and risks to the board of directors or its audit committee in a thorough and timely manner. Outstanding audit issues are monitored until resolved. Risk analysis ensures that audit plans address all significant IT operations, procurement, and development activities with appropriate scope and frequency. Audit work is performed in accordance with professional auditing standards, and report content is timely, constructive, accurate, and complete. Because audit is strong, examiners may place substantial reliance on audit results.

A rating of 2 indicates satisfactory audit performance. Audit independently identifies and reports weaknesses and risks to the board of directors or audit committee, but reports may be less timely. Significant outstanding audit issues are monitored until resolved. Risk analysis ensures that audit plans address all significant IT operations, procurement, and development activities; however, minor concerns may be noted with the scope or frequency. Audit work is performed in accordance with professional auditing standards; however, minor or infrequent problems may arise with the timeliness, completeness, and accuracy of reports. Because

audit is satisfactory, examiners may rely on audit results but because minor concerns exist, examiners may need to expand verification procedures in certain situations.

A rating of 3 indicates less-than-satisfactory audit performance. Audit identifies and reports weaknesses and risks; however, independence may be compromised and reports presented to the board or audit committee may be less than satisfactory in content and timeliness. Outstanding audit issues may not be adequately monitored. Risk analysis is less than satisfactory. As a result, the audit plan may not provide sufficient audit scope or frequency for IT operations, procurement, and development activities. Audit work is generally performed in accordance with professional auditing standards; however, occasional problems may be noted with the timeliness, completeness, or accuracy of reports. Because audit is less than satisfactory, examiners must use caution if they rely on the audit results.

A rating of 4 indicates deficient audit performance. Audit may identify weaknesses and risks, but it may not independently report to the board or audit committee, and report content may be inadequate. Outstanding audit issues may not be adequately monitored and resolved. Risk analysis is deficient. As a result, the audit plan does not provide adequate audit scope or frequency for IT operations, procurement, and development activities. Audit work is often inconsistent with professional auditing standards, and the timeliness, accuracy, and completeness of reports is unacceptable. Because audit is deficient, examiners cannot rely on audit results.

A rating of 5 indicates critically deficient audit performance. If an audit function exists, it lacks sufficient independence and, as a result, does not identify and report weaknesses or risks to the board or audit committee. Outstanding audit issues are not tracked and no follow-up is performed to monitor their resolution. Risk analysis is critically deficient. As a result, the audit plan is ineffective and provides inappropriate audit scope and frequency for IT operations, procurement, and development activities. Audit work is not performed in accordance with professional auditing standards and major deficiencies are noted regarding the timeliness, accuracy, and completeness of audit reports. Because audit is critically deficient, examiners cannot rely on audit results.

Management

The management rating reflects the abilities of the board and management as they apply to all aspects of IT acquisition, development, and operations. Management practices may need to address some or all of the following IT-related risks: strategic planning, quality assurance, project management, risk assessment, infrastructure and architecture, end-user computing, contract administration of third-party service providers, organization and human resources, and regulatory and legal compliance. Generally, directors need not be actively involved in day-to-day operations; however, they must provide clear guidance regarding acceptable risk-exposure levels and ensure that appropriate policies, procedures, and practices have been established. Sound management practices are demonstrated through active oversight by the board of directors and management, competent personnel, sound IT plans, adequate policies and standards, an effective control environment, and risk monitoring. The management rating should reflect the board's and management's ability as it applies to all aspects of IT operations. The performance of management and the quality of risk management are rated based on an assessment of factors such as—

- the level and quality of oversight and support of the IT activities by the board of directors and management;
- the ability of management to plan for and initiate new activities or products in response to information needs and to address risks that may arise from changing business conditions;
- the ability of management to provide information reports necessary for informed planning and decision making in an effective and efficient manner;
- the adequacy of, and conformance with, internal policies and controls addressing the IT operations and risks of significant business activities;
- the effectiveness of risk-monitoring systems;
- the timeliness of corrective action for reported and known problems;
- the level of awareness of and compliance with laws and regulations;
- the level of planning for management succession;
- the ability of management to monitor the services delivered and to measure the organi-

zation's progress toward identified goals effectively and efficiently;

- the adequacy of contracts and management's ability to monitor relationships with third-party servicers;
- the adequacy of strategic planning and risk-management practices to identify, measure, monitor, and control risks, including management's ability to perform self-assessments; and
- the ability of management to identify, measure, monitor, and control risks and to address emerging IT needs and solutions.

A rating of 1 indicates strong performance by management and the board. Effective risk-management practices are in place to guide IT activities, and risks are consistently and effectively identified, measured, controlled, and monitored. Management immediately resolves audit and regulatory concerns to ensure sound operations. Written technology plans, policies and procedures, and standards are thorough and properly reflect the complexity of the IT environment. They have been formally adopted, communicated, and enforced throughout the organization. IT systems provide accurate, timely reports to management. These reports serve as the basis for major decisions and as an effective performance-monitoring tool. Outsourcing arrangements are based on comprehensive planning; routine management supervision sustains an appropriate level of control over vendor contracts, performance, and services provided. Management and the board have demonstrated the ability to promptly and successfully address existing IT problems and potential risks.

A rating of 2 indicates satisfactory performance by management and the board. Adequate risk-management practices are in place and guide IT activities. Significant IT risks are identified, measured, monitored, and controlled; however, risk-management processes may be less structured or inconsistently applied and modest weaknesses exist. Management routinely resolves audit and regulatory concerns to ensure effective and sound operations; however, corrective actions may not always be implemented in a timely manner. Technology plans, policies and procedures, and standards are adequate and formally adopted. However, minor weaknesses may exist in management's ability to communicate and enforce them throughout the organization. IT systems provide quality reports to management which serve as a basis

for major decisions and a tool for performance planning and monitoring. Isolated or temporary problems with timeliness, accuracy, or consistency of reports may exist. Outsourcing arrangements are adequately planned and controlled by management, and they provide for a general understanding of vendor contracts, performance standards, and services provided. Management and the board have demonstrated the ability to address existing IT problems and risks successfully.

A rating of 3 indicates less-than-satisfactory performance by management and the board. Risk-management practices may be weak and offer limited guidance for IT activities. Most IT risks are generally identified; however, processes to measure and monitor risk may be flawed. As a result, management's ability to control risk is less than satisfactory. Regulatory and audit concerns may be addressed, but time frames are often excessive and the corrective action taken may be inappropriate. Management may be unwilling or incapable of addressing deficiencies. Technology plans, policies and procedures, and standards exist but may be incomplete. They may not be formally adopted, effectively communicated, or enforced throughout the organization. IT systems provide requested reports to management, but periodic problems with accuracy, consistency, and timeliness lessen the reliability and usefulness of reports and may adversely affect decision making and performance monitoring. Outsourcing arrangements may be entered into without thorough planning. Management may provide only cursory supervision that limits their understanding of vendor contracts, performance standards, and services provided. Management and the board may not be capable of addressing existing IT problems and risks, which is evidenced by untimely corrective actions for outstanding IT problems.

A rating of 4 indicates deficient performance by management and the board. Risk-management practices are inadequate and do not provide sufficient guidance for IT activities. Critical IT risks are not properly identified, and processes to measure and monitor risks are deficient. As a result, management may not be aware of and is unable to control risks. Management may be unwilling or incapable of addressing audit and regulatory deficiencies in an effective and timely manner. Technology plans, policies and procedures, and standards are inadequate and have not been formally adopted or effectively communicated throughout the organization, and manage-

ment does not effectively enforce them. IT systems do not routinely provide management with accurate, consistent, and reliable reports, thus contributing to ineffective performance monitoring or flawed decision making. Outsourcing arrangements may be entered into without planning or analysis, and management may provide little or no supervision of vendor contracts, performance standards, or services provided. Management and the board are unable to address existing IT problems and risks, as evidenced by ineffective actions and long-standing IT weaknesses. Strengthening of management and its processes is necessary.

A rating of 5 indicates critically deficient performance by management and the board. Risk-management practices are severely flawed and provide inadequate guidance for IT activities. Critical IT risks are not identified, and processes to measure and monitor risks do not exist or are not effective. Management's inability to control risk may threaten the continued viability of the institution. Management is unable or unwilling to correct audit- and regulatory-identified deficiencies, and immediate action by the board is required to preserve the viability of the institution. If they exist, technology plans, policies and procedures, and standards are critically deficient. Because of systemic problems, IT systems do not produce management reports that are accurate, timely, or relevant. Outsourcing arrangements may have been entered into without management planning or analysis, resulting in significant losses to the financial institution or ineffective vendor services.

Development and Acquisition

The rating of development and acquisition reflects an organization's ability to identify, acquire, install, and maintain appropriate IT resources. Management practices may need to address all or parts of the business process for implementing any kind of change to the hardware or software used. These business processes include an institution's purchase of hardware or software, development and programming performed by the institution, purchase of services from independent vendors or affiliated data centers, or a combination of these activities. The business process is defined as all phases taken to implement a change, including researching alternatives available, choosing an appropriate option for the organization as a whole, and

converting to the new system or integrating the new system with existing systems. This rating reflects the adequacy of the institution's systems-development methodology and related risk-management practices for acquisition and deployment of IT. This rating also reflects the board and management's ability to enhance and replace IT prudently in a controlled environment. The performance of systems development and acquisition and related risk-management practice is rated based on an assessment of factors such as—

- the level and quality of oversight and support of systems-development and acquisition activities by senior management and the board of directors;
- the adequacy of the organizational and management structures to establish accountability and responsibility for IT systems and technology initiatives;
- the volume, nature, and extent of risk exposure to the financial institution in the area of systems development and acquisition;
- the adequacy of the institution's Systems Development Life Cycle (SDLC) and programming standards;
- the quality of project-management programs and practices that are followed by developers, operators, executive management or owners, independent vendors or affiliated servicers, and end-users;
- the independence of the quality-assurance function and the adequacy of controls over program changes;
- the quality and thoroughness of system documentation;
- the integrity and security of the network, system, and application software;
- the development of IT solutions that meet the needs of end-users; and
- the extent of end-user involvement in the system-development process.

A rating of 1 indicates strong systems-development, acquisition, implementation, and change-management performance. Management and the board routinely demonstrate successfully the ability to identify and implement appropriate IT solutions while effectively managing risk. Project-management techniques and the SDLC are fully effective and supported by written policies, procedures, and project controls that consistently result in timely and efficient project completion. An independent quality-

assurance function provides strong controls over testing and program-change management. Technology solutions consistently meet end-user needs. No significant weaknesses or problems exist.

A rating of 2 indicates satisfactory systems-development, acquisition, implementation, and change-management performance. Management and the board frequently demonstrate the ability to identify and implement appropriate IT solutions while managing risk. Project management and the SDLC are generally effective; however, weaknesses may exist that result in minor project delays or cost overruns. An independent quality-assurance function provides adequate supervision of testing and program-change management, but minor weaknesses may exist. Technology solutions meet end-user needs. However, minor enhancements may be necessary to meet original user expectations. Weaknesses may exist; however, they are not significant and are easily corrected in the normal course of business.

A rating of 3 indicates less-than-satisfactory systems-development, acquisition, implementation, and change-management performance. Management and the board may often be unsuccessful in identifying and implementing appropriate IT solutions; therefore, unwarranted risk exposure may exist. Project-management techniques and the SDLC are weak and may result in frequent project delays, backlogs, or significant cost overruns. The quality-assurance function may not be independent of the programming function, which may have an adverse impact on the integrity of testing and program-change management. Technology solutions generally meet end-user needs but often require an inordinate level of change after implementation. Because of weaknesses, significant problems may arise that could result in disruption to operations or significant losses.

A rating of 4 indicates deficient systems-development, acquisition, implementation, and change-management performance. Management and the board may be unable to identify and implement appropriate IT solutions and do not effectively manage risk. Project-management techniques and the SDLC are ineffective and may result in severe project delays and cost overruns. The quality-assurance function is not fully effective and may not provide independent or comprehensive review of testing controls or program-change management. Technology solutions may not meet the critical needs of the

organization. Problems and significant risks exist that require immediate action by the board and management to preserve the soundness of the institution.

A rating of 5 indicates critically deficient systems-development, acquisition, implementation, and change-management performance. Management and the board appear to be incapable of identifying and implementing appropriate IT solutions. If they exist, project-management techniques and the SDLC are critically deficient and provide little or no direction for development of systems or technology projects. The quality-assurance function is severely deficient or not present, and unidentified problems in testing and program-change management have caused significant IT risks. Technology solutions do not meet the needs of the organization. Serious problems and significant risks exist, which raise concern for the financial institution's ongoing viability.

Support and Delivery

The rating of support and delivery reflects an organization's ability to provide technology services in a secure environment. It reflects not only the condition of IT operations but also factors such as reliability, security, and integrity, which may affect the quality of the information-delivery system. The factors include user support and training, as well as the ability to manage problems and incidents, operations, system performance, capacity planning, and facility and data management. Risk-management practices should promote effective, safe, and sound IT operations that ensure the continuity of operations and the reliability and availability of data. The scope of this component rating includes operational risks throughout the organization. The rating of IT support and delivery is based on a review and assessment of requirements such as—

- the ability to provide a level of service that meets the requirements of the business;
- the adequacy of security policies, procedures, and practices in all units and at all levels of the financial institution;
- the adequacy of data controls over preparation, input, processing, and output;
- the adequacy of corporate contingency planning and business resumption for data centers, networks, and business units;

- the quality of processes or programs that monitor capacity and performance;
- the adequacy of controls and the ability to monitor controls at service providers;
- the quality of assistance provided to users, including the ability to handle problems;
- the adequacy of operating policies, procedures, and manuals;
- the quality of physical and electronic security, including the privacy of data; and
- the adequacy of firewall architectures and the security of connections with public networks.

A rating of 1 indicates strong IT support and delivery performance. The organization provides technology services that are reliable and consistent. Service levels adhere to well-defined service-level agreements and routinely meet or exceed business requirements. A comprehensive corporate contingency and business-resumption plan is in place. Annual contingency-plan testing and updating is performed, and critical systems and applications are recovered within acceptable time frames. A formal written data-security policy and awareness program is communicated and enforced throughout the organization. The logical and physical security for all IT platforms is closely monitored, and security incidents and weaknesses are identified and quickly corrected. Relationships with third-party service providers are closely monitored. IT operations are highly reliable, and risk exposure is successfully identified and controlled.

A rating of 2 indicates satisfactory IT support and delivery performance. The organization provides technology services that are generally reliable and consistent; however, minor discrepancies in service levels may occur. Service performance adheres to service agreements and meets business requirements. A corporate contingency and business-resumption plan is in place, but minor enhancements may be necessary. Annual plan testing and updating is performed, and minor problems may occur when recovering systems or applications. A written data-security policy is in place but may require improvement to ensure its adequacy. The policy is generally enforced and communicated throughout the organization, for example, through a security-awareness program. The logical and physical security for critical IT platforms is satisfactory. Systems are monitored, and security incidents and weaknesses are identified and resolved within reasonable time frames. Relationships with third-party service providers are

monitored. Critical IT operations are reliable and risk exposure is reasonably identified and controlled.

A rating of 3 indicates that the performance of IT support and delivery is less than satisfactory and needs improvement. The organization provides technology services that may not be reliable or consistent. As a result, service levels periodically do not adhere to service-level agreements or meet business requirements. A corporate contingency and business-resumption plan is in place but may not be considered comprehensive. The plan is periodically tested; however, the recovery of critical systems and applications is frequently unsuccessful. A data-security policy exists; however, it may not be strictly enforced or communicated throughout the organization. The logical and physical security for critical IT platforms is less than satisfactory. Systems are monitored; however, security incidents and weaknesses may not be resolved in a timely manner. Relationships with third-party service providers may not be adequately monitored. IT operations are not acceptable, and unwarranted risk exposures exist. If not corrected, weaknesses could cause performance degradation or disruption to operations.

A rating of 4 indicates deficient IT support and delivery performance. The organization provides technology services that are unreliable and inconsistent. Service-level agreements are poorly defined and service performance usually fails to meet business requirements. A corporate contingency and business-resumption plan may exist, but its content is critically deficient. If contingency testing is performed, management is typically unable to recover critical systems and applications. A data-security policy may not exist. As a result, serious supervisory concerns over security and the integrity of data exist. The logical and physical security for critical IT platforms is deficient. Systems may be monitored, but security incidents and weaknesses are not successfully identified or resolved. Relationships with third-party service providers are not monitored. IT operations are not reliable and significant risk exposure exists. Degradation in performance is evident and frequent disruption in operations has occurred.

A rating of 5 indicates critically deficient IT support and delivery performance. The organization provides technology services that are not reliable or consistent. Service-level agreements do not exist, and service performance does not

meet business requirements. A corporate contingency and business-resumption plan does not exist. Contingency testing is not performed, and management has not demonstrated the ability to recover critical systems and applications. A data-security policy does not exist, and a serious threat to the organization's security and data integrity exists. The logical and physical security for critical IT platforms is inadequate, and management does not monitor systems for security incidents and weaknesses. Relationships with third-party service providers are not monitored, and the viability of a service provider may be in jeopardy. IT operations are severely deficient, and the seriousness of weaknesses could cause failure of the financial institution if not addressed.

OUTSOURCING INFORMATION TECHNOLOGY

Banking organizations are increasingly relying on services provided by other entities to support a range of banking operations. Outsourcing of information- and transaction-processing activities, either to affiliated institutions or third-party service providers, may help banking organizations manage data processing and related personnel costs, improve services, and obtain expertise not available internally. At the same time, the reduced operational control over outsourced activities may expose an institution to additional risks. The federal banking agencies have established procedures to examine and evaluate the adequacy of institutions' controls over service providers, which can be found in the FFIEC's *IT Handbook* and related guidance. Additional information on specific areas is provided later in this section.

The FFIEC has issued the statement Risk Management of Outsourced Technology Services. (See SR-00-17.) This supplemental bank interagency guidance contains many of the same sound practices and recommendations that are in SR-00-4 (Outsourcing of Information and Transaction Processing) and this section. However, the FFIEC policy provides banking organizations with additional specific information that may be useful when considering their outsourcing risk-management practices. The guidance focuses on the risk-management process of identifying, measuring, monitoring, and controlling the risks associated with outsourcing technology

services. While outsourcing can improve banking services, help to control costs, and provide the technical assistance needed to maintain and expand product offerings, it also introduces additional risks that need to be addressed. The guidance includes four key elements to address those risks: risk assessment, service-provider selection, contract provisions and review, and ongoing service-provider monitoring. An appendix to the policy statement provides examples of considerations that may be relevant when performing due diligence in selecting a service provider, contracting with service providers, and conducting ongoing service-provider monitoring. The FFIEC policy statement and its appendix are included as appendix A at the end of this section.

In the development of the examination scope and risk profile, examiners should determine which information- and transaction-processing activities critical to the institution's core operations are outsourced. During the on-site examination, the adequacy of the institution's risk management for these critical service providers should be assessed and evaluated. The overall assessment should be reflected in the relevant components of the URSIT examination rating or the Uniform Financial Institution Rating System, if an information-systems rating is not assigned.

Outsourcing Risks

The outsourcing of information and transaction processing involves operational risks that are similar to those that arise when the functions are performed internally, such as threats to the availability of systems used to support customer transactions, the integrity or security of customer account information, or the integrity of risk-management information systems. Under outsourcing arrangements, however, the risk-management measures commonly used to address these risks, such as internal controls and procedures, are generally under the direct operational control of the service provider. Nevertheless, the serviced institution would bear the associated risk of financial loss, reputational damage, or other adverse consequences.

Some outsourcing arrangements also involve direct financial risks to the serviced institution. For example, in some transaction-processing activities, a service provider has the ability to process transactions that result in extensions of

credit on behalf of the serviced institution.¹⁹ A service provider may also collect or disburse funds, exposing the institution to liquidity and credit risks if the service provider fails to perform as expected.

Risk Management

The Federal Reserve expects institutions to ensure that controls over outsourced information- and transaction-processing activities are equivalent to those that would be implemented if the activity were conducted internally. (See SR-00-4.) The institution's board of directors and senior management should understand the key risks associated with the use of service providers for its critical operations, commensurate with the scope and risks of the outsourced activity and its importance to the institution's business. They should ensure that an appropriate oversight program is in place to monitor each service provider's controls, condition, and performance. The following eight areas should be included in this process:

1. *Risk assessment.* Before entering into an outsourcing arrangement, the institution should assess the key risks that may arise and options for controlling these risks. Factors influencing the risk assessment could include how critical the outsourced function is to the institution; the nature of activities to be performed by the service provider, including handling funds or implementing credit decisions; the availability of alternative service providers for the particular function; insurance coverage available for particular risks; and the cost and time required to switch service providers if problems arise.
2. *Selection of service provider.* In selecting a service provider for critical information- or transaction-processing functions, an institution should perform sufficient due diligence to satisfy itself of the service provider's competence and stability, both financially and operationally, to provide the expected services and meet any related commitments.²⁰
3. *Contracts.* The written contract between the institution and the service provider should clearly specify, at a level of detail commensurate with the scope and risks of the outsourced activity, all relevant terms, conditions, responsibilities, and liabilities of both parties. These would normally include terms such as—
 - required service levels, performance standards, and penalties;
 - internal controls, insurance, disaster-recovery capabilities, and other risk-management measures maintained by the service provider;
 - data and system ownership and access;
 - liability for delayed or erroneous transactions and other potential risks;
 - provisions for the institution to require and have access to internal or external audits or other reviews of the service provider's operations and financial condition;
 - compliance with any applicable regulatory requirements and access to information and operations by the institution's supervisory authorities; and
 - provisions for handling disputes, contract changes, and contract termination.
 Terms and conditions should be assessed by the institution to ensure that they are appropriate for the particular service being provided and result in an acceptable level of risk to the institution.²¹ Contracts for outsourcing of critical functions should be reviewed by the institution's legal counsel.
4. *Policies, procedures, and control.* The service provider should implement internal control policies and procedures, data-security and contingency capabilities, and other operational controls analogous to those that the institution would use if it performed the activity internally. Appropriate controls should be placed on transactions processed or funds handled by the service provider on behalf of the institution. The service provider's policies and procedures should be reviewed by client institutions.

may apply. In particular, section 23B provides that the terms of transactions between a bank and its nonbank affiliate must be comparable to the terms of similar transactions between nonaffiliated parties.

21. Additional information regarding common contract provisions can be found later in this section and in the FFIEC's *IT Handbook*. In addition, FFIEC Supervisory Policy SP-5 requires each serviced institution to evaluate the adequacy of its service provider's contingency plans.

19. For example, an institution may authorize a service provider to originate payments, such as ACH credit transfers, on behalf of customers. The institution is required by law or contract to honor these types of transactions.

20. When the service provider is affiliated with the serviced institution, sections 23A and 23B of the Federal Reserve Act

5. *Ongoing monitoring.* The institution should review the operational and financial performance of critical service providers on an ongoing basis to ensure that the service provider is meeting and can continue to meet the terms of the arrangement. The institution's staff should have sufficient training and expertise to review the service provider's performance and risk controls.
6. *Information access.* The institution must ensure that it has complete and immediate access to information that is critical to its operations and that is maintained or processed by a service provider. Records maintained at the institution must be adequate to enable examiners to review its operations fully and effectively, even if a function is outsourced.
7. *Audit.* The institution's audit function should review the oversight of critical service providers. Audits of the outsourced function should be conducted according to a scope and frequency appropriate for the particular function. Serviced institutions should conduct audits of the service provider or regularly review the service provider's internal or external audit scope and findings. Service providers should have an effective internal audit function or should commission comprehensive, regular audits from a third-party organization. The reports of external auditors are commonly based on the AICPA's Statement of Auditing Standards [SAS] No. 70 "Reports on the Processing of Transactions by Service Organizations," as amended by SAS No. 78, "Consideration of Internal Control in a Financial Statement Audit: An Amendment to Statement on Auditing Standards No. 55." These statements contain the external-auditor reporting tools commonly used for service providers. SAS 70 reports, however, should not be relied on to the same extent as an audit. There are two types of SAS 70 reports:
 - *Reports on controls placed in operation* is an auditor's report on a service organization's description of the controls that may be relevant to a user organization's internal control as it relates to an audit of financial statements. It also reports on whether such controls were suitably designed to achieve specified control objectives. Lastly, it reports on whether the controls had been placed in operation as of a specific date.
 - *Reports on controls placed in operation*

and tests of operating performance is an auditor's report on a service organization's controls as described above, but the report also includes information on whether the controls that were tested were operating with sufficient effectiveness to provide reasonable, but not absolute, assurance that the related control objectives were achieved during the period specified.

Audit results, audit reports, and management responses must be available to examiners upon request.

8. *Contingency plans.* The serviced institution should ensure adequate business-resumption planning and testing by the service provider. When appropriate based on the scope and risks of the outsourced function and the condition and performance of the service provider, the serviced institution's contingency plan may also include plans for the continuance of processing activities, either in-house or with another provider, in the event that the service provider is no longer able to provide the contracted services or the arrangement is otherwise terminated unexpectedly.

International Considerations

In general, the arrangements for outsourcing critical information- or transaction-processing functions to service providers outside the United States should be conducted according to the risk-management guidelines described above. In addition, the Federal Reserve expects that these arrangements will not diminish the ability of U.S. supervisors to effectively review the domestic or foreign operations of U.S. banking organizations and the U.S. operations of foreign banking organizations. (See SR-00-4.) In particular, examiners should evaluate the adequacy of outsourcing arrangements in the following six areas:

1. *Oversight and compliance.* The institution is expected to demonstrate adequate oversight of a foreign service provider, such as through comprehensive audits conducted by the service provider's internal or external auditors, the institution's own auditors, or foreign bank supervisory authorities. The arrangement must not hinder the ability of the institution to comply with all applicable U.S.

- laws and regulations, including, for example, requirements for accessibility and retention of records under the Bank Secrecy Act. (See the U.S. Department of the Treasury's rule at 31 CFR 103.18. See also section 208.62 of the Board's Regulation H (12 CFR 208.62) for suspicious-activity reporting and section 208.63 (12 CFR 208.63) for the Bank Secrecy Act compliance program.)
2. *Information access.* The outsourcing arrangement should not hinder the ability of U.S. supervisors to reconstruct the U.S. activities of the organization in a timely manner, if necessary. Outsourcing to jurisdictions where full and complete access to information may be impeded by legal or administrative restrictions on information flows will not be acceptable unless copies of records pertaining to U.S. operations are also maintained at the institution's U.S. office.
 3. *Audit.* Copies of the most recent audits of the outsourcing arrangement must be maintained in English at the institution's U.S. office and must be made available to examiners upon request.
 4. *Contingency plan.* The institution's contingency plan must include provisions to ensure timely access to critical information and service resumption in the event of unexpected national or geographic restrictions or disruptions affecting a foreign service provider's ability to provide services. Depending on the scope and risks of the outsourced function, this may necessitate backup arrangements with other U.S. or foreign service providers in other geographic areas.
 5. *Foreign banking organizations.* With the exception of a U.S. branch or agency of a foreign bank that relies on the parent organization for information- or transaction-processing services, foreign banking organizations should maintain at the U.S. office documentation of the home office's approval of outsourcing arrangements supporting its U.S. operations, whether to a U.S. or foreign service provider. The organization's U.S. office should also maintain documentation demonstrating appropriate oversight of the service provider's activities, such as written contracts, audit reports, and other monitoring tools. When appropriate, the Federal Reserve will coordinate with a foreign banking organization's home-country supervisor to ensure that it does not object to the outsourcing arrangement.
 6. *Foreign branches or subsidiaries of U.S. banks and Edge corporations.* Documentation relating to outsourcing arrangements of the foreign operations of U.S. banking organizations with foreign service providers should be made available to examiners upon request.

INFORMATION-PROCESSING ENVIRONMENT

Many factors influence an institution's decision about whether to use internal or external data processing services, including the initial investment, operating costs, and operational flexibility. Historically, small financial institutions, which usually lack the funds or transaction volume to justify an in-house information system, were the chief users of external data processing companies. However, as advances in technology have decreased the cost of data processing, small institutions have become much more willing to invest in an in-house information system. At the same time, some financial institutions with internal information systems have discovered that they can save money by using external data processing companies for certain banking applications. Other financial institutions have engaged national companies or facilities-management organizations to assume their processing operations, while certain holding companies have organized their data processing departments as subsidiaries to centralize operations for their affiliate institutions.

The decision to establish an internal data processing center is a major one. Any bank's board of directors and management considering such a decision should thoroughly review and consider alternatives before proceeding. While a bank may gain a number of competitive advantages from an in-house facility, there are also many risks associated with this decision. Technological advances have reduced the price of small computer networks and made them more affordable, but banks should not use this as the sole justification for an internal data processing center.

A comprehensive feasibility study should precede any decision to develop an in-house system. This study should describe the costs, benefits, and risks and also give management the opportunity to compare current and future needs with existing abilities. The FFIEC's *IT Hand-*

book contains a complete discussion of feasibility studies.

The management of a financial institution must carefully identify the organization's needs for data processing. After these needs are properly identified (including the customers' needs for these services), management must carefully evaluate how the institution can best meet them. The costs and complexity of changing data processing arrangements can be substantial, so management must ensure that all related costs and benefits are identified and considered before deciding on a service. The following are the major external providers of data processing and IT services for financial institutions.

Correspondent Banks

Small financial institutions sometimes receive their IT services from a major correspondent bank. These services may be just one of a host of services available from the correspondent. Historically, the correspondent bank has been the least expensive servicer for many institutions. Correspondent banks may offset some of their own IT costs by using their excess processing capacity to provide services to correspondents.

Affiliated Financial Institutions and Banking Organizations

IT departments in holding companies or subsidiaries are one common form of an affiliated servicer. An affiliated data center may offer cost savings to other affiliates, since all parties are generally using the same software system. The serviced institutions can eliminate the duplication of tasks, and the affiliated data center and the overall organization can realize cost savings through economies of scale. Thus, charges for IT services to affiliates are generally very competitive.

Regulatory guidelines strictly govern IT-servicing arrangements between affiliated institutions. Sections 23A and 23B of the Federal Reserve Act (12 USC 371c and 371c-1) address the question of allowable transactions between affiliates. This statute also states that the terms of transactions between affiliated parties must be comparable to the terms of similar transactions between nonaffiliated parties. An affiliated data center is allowed to set fees to recover its costs

or to recover its costs plus a reasonable profit, or to set charges for data processing services that are comparable to those of a nonaffiliated servicer. Other restrictions may also apply.

Independent Service Bureaus

Independent service bureaus are present in most areas, but mergers and acquisitions have caused the number of bureaus to decline. When management investigates a service bureau's operations, it should determine if the servicer is familiar with the IT needs of financial institutions. Determining the percentage of the service bureau's business that comes from financial institutions will help the institution select a vendor that specializes in this type of processing. Independent service bureaus are normally responsive to user requests for specialized programs, since developing these programs for clients is generally a significant source of revenue. Tailoring a software program to a particular institution's needs becomes less attractive to the independent service bureau if the institution accounts for only a small portion of the bureau's workload or if the bureau offers a standardized software package as its primary product. However, some standardized software systems allow a modest amount of processing and report adjustments without requiring servicer modifications. Also, report-generator software, which provides clients with customized reports they can prepare without any help from the service bureau, is sometimes available from service bureaus.

Cooperative Service Corporations

A cooperative service corporation is a data processing facility formed by a group of financial institutions that agrees to share the operating costs. Under the right circumstances, this arrangement works well. For this strategy to succeed, however, all members of the group must be the same approximate size and have similar IT requirements. Typically, each institution owns a share of the facility or bears a share of the costs on a pro rata basis through investment in a bank service corporation. There must be a strong working relationship among the institutions. Although the institutions are not directly involved in the data processing center's

daily operations, they are ultimately responsible for the center's success or failure.

One advantage of a cooperative service corporation is that individual institutions have increased control over the design of the data processing operation. Therefore, institutions can tailor computerized applications to meet their own needs. Resource pooling often provides for economies of scale as well, and cooperative ventures normally attract more highly skilled and more experienced employees.

Facilities-Management Providers

Medium- and large-sized financial institutions that already have an in-house data processing facility are the most likely users of facilities-management (FM) contracts. Small institutions typically do not have the work volume that is a prerequisite to hiring an FM company. Service contracts with FM companies are usually for a minimum term of five years, during which time the FM company assumes full responsibility for the institution's data processing operations. The institution pays the FM company a monthly fee to reimburse it for the costs of providing IT services plus a profit. The FM company usually carries out its tasks in the institution's former data processing center.

Financial institutions have various reasons for using FM companies, such as controlling or reducing the growth of data processing costs, ensuring better management of data center personnel, or using more modern software systems. Management of financially strained institutions may enter into FM arrangements to augment their capital position by selling their equipment or facilities to the FM company.

Although an institution's contract with an FM company may provide a quick and easy solution to data processing problems with minimal involvement of senior officials, management should be aware of potential problems. FM contracts can have clauses that require the institution to pay more for services as work volume grows and can also contain provisions for periodic increases. The contract may include a substantial penalty for cancellation. Another risk is that the FM company may make personnel changes that are not advantageous to the institution, such as reassigning its best workers elsewhere or reducing the size of the data processing staff. Bank management should make

sure that FM service contracts contain specific quality-measurement clauses and should monitor the quality of data processing services provided.

Other Purchased Services

Computer Time

A financial institution that designed its own data processing system and that maintains its own files only needs to rent computer time from an external servicer. This arrangement usually occurs when the financial institution's equipment or schedule makes it unable to handle some unusual processing task.

Time-Shared Computer Services

Most external providers of time-sharing services have a library of standardized programs available to any user. A user also may generate programs and store them in a reserved library. Financial institutions frequently use time-sharing services for financial analysis rather than recordkeeping. Applications with low input and output requirements and repetitive calculations, such as those required for a securities portfolio, lend themselves to a time-sharing arrangement. The external servicer in this arrangement normally does not maintain the client institution's data files. Financial institutions that store master files on the external servicer's equipment should maintain adequate documentation to facilitate the examination process. Under this arrangement, management should be concerned about ensuring logical and physical access to the terminal and about the availability of audit trails that indicate who has made changes to master files. Management should establish and monitor controls over passwords, terminals, and access to master files. For a complete discussion of controls over passwords and terminals, see the FFIEC's *IT Handbook*.

Satellite Processing

Satellite (remote) processing has become popular with some financial institutions that are located far away from an external servicer and that must process a large volume of transactions. A distinguishing characteristic of satellite pro-

cessing is that the institution and the data center each perform a portion of the processing. Although the institution collects the data and sometimes prepares reports, the servicer makes the necessary master-file updates. To capture data and print reports, the serviced institution must acquire a terminal-entry device, a printer, an MICR reader/sorter, and a tape or disk unit. Since the system is usually online, the serviced institution must install modems and communications lines linking it to the servicer. The level of skill necessary to perform remote job entry in a satellite system is less sophisticated than the level needed to operate an in-house system. Most of the traditional control functions remain at the institution. The FFIEC's *IT Handbook* contains further information on satellite processing, remote job entry, and distributive processing systems.

Standard Program Packages

Most bank data centers and service bureaus specialize in processing one or more standard software packages. By using the same software for several users, external servicers achieve certain operating economies, which allow them to recover initial development costs more quickly. Most standard software packages are parameter driven, providing the user with some degree of flexibility. For example, in demand deposit and savings applications, standard program modules or common subroutines often allow the user to designate the format and frequency of reports. In addition, the user may select the parameters necessary to generate certain reports, such as the number of inactive days before an account becomes dormant or the minimum dollar amount for checks listed on the large-item report. The user can also be involved in selecting the criteria for interest rates, balance requirements, and other operating values, allowing for a tailored application within a standardized software system.

Tailored Applications

If standard program packages do not meet a financial institution's needs, an external servicer can be hired to design tailored applications to process the institution's data. The institution must clearly describe the proposed system and its operations to the servicer. Internal or external

auditor participation in reviewing controls is also advisable. The initial cost of this approach is high, as are the costs of maintaining and updating the tailored applications.

OPERATIONAL AND TECHNOLOGICAL USER CONTROLS

Using computerized programs and networks, banks maintain a large number of accounts and record a high volume of transactions every day. Text-processing systems store vast amounts of correspondence. Transmission of data and funds regularly occurs over public communications links, such as telephone lines and satellite networks. The use of new technologies to transfer funds and records, while improving customer service and the institution's internal operations, has increased the potential for errors and abuse, which can result in loss of funds, lawsuits arising from damaged reputations, improper disclosure of information, and regulatory sanctions.

Controls must be implemented to minimize the vulnerability of all information and to keep funds secure. Bank management must assess the level of control necessary in view of the degree of exposure and the impact of unexpected losses on the institution. Certain practices can strengthen information and financial security. The most basic practices are the implementation of sound policies, practices, and procedures for physical security, separation of duties, internal quality control, hardware and software access controls, and audits. Bank management should institute information security controls that are designed to—

- ensure the integrity and accuracy of management information systems;
- prevent unauthorized alteration during data creation, transfer, and storage;
- maintain confidentiality;
- restrict physical access;
- authenticate user access;
- verify the accuracy of processing during input and output;
- maintain backup and recovery capability; and
- provide environmental protection against damage or destruction of information.

Although security features vary, they are usually available for all computer systems. The controls

adopted should apply to information produced and stored by both automated and manual methods.

Written policies are generally recommended and, in most cases, institutions have chosen to establish and communicate security principles in writing. However, if an institution follows sound fundamental principles to control the risks discussed here, a written policy is not necessarily required. If sound principles are not effectively practiced, management may be required to establish written policies to formally communicate risk parameters and controls. Federal Reserve System policy does, however, require written contingency and disaster-recovery plans.

Examiners should regularly conduct reviews of information security. These reviews may include an assessment of—

- the adequacy of security practices,
- compliance with security standards, and
- management supervision of information security activities.

When conducting reviews of controls over information security, examiners must understand the difference between master files and transaction files. A master file is a main reference file of information used in a computer system, such as all mortgage loans. It provides information to be used by the program and can be updated and maintained to reflect the results of the processed operation. A transaction file or detail file contains specific transaction information, such as mortgage loan payments.

Manual Controls

The following discussion covers basic operational controls in a financial institution receiving external IT services. Similar controls should also be applied to information processed by an IT department within a user's own institution.

Separation of Duties

A basic form of operational control is separation of duties. With this control in place, no one person should be able to both authorize and execute a transaction, thereby minimizing the risk of undetected improper activities. Data center personnel should not initiate transactions or correct data except when it is necessary to

complete processing in a reasonable time period. If this unusual situation arises, proper authorization should be obtained from data center and bank management. Both the servicer and the serviced institution should maintain documentation of these approvals, including details of the circumstances requiring the action. The same person normally should not perform input and output duties. However, in some instances, staff limitations may make one person responsible for several activities, such as—

- preparing batches and blocks or other input for entry to the system or shipment to the servicer;
- operating data entry equipment, including check reader/sorter machines, proof machines, or data-conversion devices;
- preparing rejects and nonreaders for reentry into the system;
- reconciling output to input or balancing the system;
- distributing output to ultimate users; and
- posting the general ledger and balancing computer output to the general ledger.

Rotation of assignments and periodic scheduled absences may improve internal controls by preventing one person from controlling any one job for an extended time period (and by providing cross-training and backup for all personnel). When vacations are scheduled, management may require staff to take uninterrupted vacations that are long enough to allow pending transactions to clear. These practices are most effective if vacations or other types of absences extend over the end of an accounting period or are for two consecutive weeks. Written policies and procedures may require job rotation.

Application manuals usually consist of a user's guide provided by the servicer that is supplemented by procedures written by the user. Manuals normally cover the preparation and control of source documents, certain control practices for moving documents or electronic images to and from the user and servicer, the daily reconciliation of totals to the general ledger, and master-file changes.

Management should implement dual control over automated systems. Personnel should place supervisory holds on customer accounts requiring special attention. For example, dormant accounts, collateral accounts, and accounts with large uncollected funds balances generally have holds that can be removed only by authoriza-

tions from two bank officials. In addition, certain types of transactions (for example, master-file changes) should require authorization from two bank officials by means of special codes or terminal keys. When employees add or remove a hold on an account or when the system completes a transaction requiring supervisory approval, the computer should generate an exception report. Assigned personnel not involved in the transaction should promptly review these reports for unusual or unauthorized activity.

Internal Quality Controls

Generally, there are three basic types of information systems, with many combinations and variations:

- *Inquiry-only system.* This system allows the user to search and review machine-readable records but not to alter them. Controls and security concerns related to this system are few; the major concern is unauthorized access to confidential information.
- *Memo-post system.* More sophisticated than the inquiry-only system, the memo-post system allows the user to create interim records. The servicer performs permanent posting routines using batch-processing systems. Controls for a memo-post system include limiting physical and logical access to the system and restricting certain transactions to supervisory personnel only. Appropriate levels of management should review memo-post reports daily.
- *Online-post system.* This system, sometimes called a real-time system, requires the strictest controls. Online-post systems are vulnerable because all accepted transactions are transferred to machine-readable records. In addition to access controls, system reports should record all activity and exceptions. Appropriate levels of management should review these reports daily.

Internal controls fall into three general categories:

- *Administrative controls.* Administrative controls usually consist of management review of daily operations and output reports. Each application includes basic controls and exception reports that are common to all operations. To be effective, operations personnel must properly use exception reports and controls. This is especially true for controlling dormant

accounts, check kiting, draws against uncollected funds, overdrafts, and the posting of computer-generated income and expense entries.

- *Dollar controls.* Dollar controls ensure processing for all authorized transactions. Operations personnel should establish work and control totals before forwarding data records to the data processor. Those same employees should not complete balancing procedures by reconciling trial balances to input, control sheets, and the general ledger. Report distribution should follow a formal procedure. Personnel should account for all rejects corrected and resubmitted.
- *Condoler controls.* Condoler controls are used when dollar values are not present in the data, as in name and address changes. Controls should be established before forwarding work for processing. Management should also implement procedures designed to ensure that its servicer processes all condoler transactions. For example, personnel should check new-account reports against new-account input forms or written customer-account applications to make sure that data are properly entered. To protect data integrity, management should develop procedures to control master-file and program changes. These procedures should also verify that the servicer is making only authorized changes and ensure that data processing employees do not initiate master-file changes.

Technological Controls

Encryption

Encryption is a process by which mathematical algorithms are used to convert plain text into encrypted strings of meaningless symbols and characters. This helps prevent unauthorized viewing and altering of electronic data during transmission or storage. The industry commonly uses the Data Encryption Standard (DES) for encoding personal identification numbers (PINs) on access cards, storing user passwords, and transferring funds on large-dollar payment networks.

Message-Authentication Code

A message-authentication code (MAC) is a code

designed to protect against unauthorized alteration of electronic data during transmission or storage. This code is used with data encryption to further secure the transmission of large-dollar payments.

User Passwords

User passwords consist of a unique string of characters that a programmer, computer operator, or user must supply before gaining access to the system or data. These are individual access codes that should be specific to the user and known only to the user. Other security features of passwords should, at a minimum, require the users to change them periodically and store them in encrypted files. In addition, the passwords should be composed of a sufficient number of alphanumeric characters to make them difficult to guess. User passwords should not be displayed during the access process and should not be printed on reports.

Security Software

Security software is software designed to restrict access to computer-based data, files, programs, utilities, and system commands. Some systems can control access by user, transaction, and terminal. The software can generate reports that log actual and attempted security violations as well as access to the system.

Restricted Terminals

Limiting certain types of transactions to certain terminals or groups of terminals can help reduce exposure to loss. The offsetting problem is that loss of the ability to use these terminals can stop processing for an entire application. Bank management should therefore evaluate both the exposure and processing risks.

An automatic time-out feature can minimize the exposure risk. Since unauthorized users may target an unattended terminal, this feature automatically signs off the user when there has been no activity for a certain period of time. Using time-of-day restrictions can also limit unauthorized use of terminals during periods when an entire department or section would be unattended.

Restricted Transactions

Restricted transactions are specialized transactions that can be performed only by supervisory or management personnel. Examples include reversing transactions, dollar adjustments to customer accounts, and daily balancing transactions. Management should periodically review user needs and the appropriateness of restricting the performance of these transactions. System-generated reports can be used to review this activity more frequently.

Activity and Exception Reports

Report output will vary, depending on the sophistication of the data communications and applications software. Management should receive activity reports that detail transactions by terminal, operator, and type. More sophisticated software will produce activity and exception reports on other criteria, such as the number of inquiries by terminal, unsuccessful attempts to access the system, unauthorized use of restricted information, and any unusual activities (that is, infrequently used transactions).

Activity reports are used to monitor system use and may not be printed daily. However, management should periodically review and summarize these reports in an effort to ensure that machines are used efficiently. Exception reports should be produced and reviewed daily by designated personnel who have no conflicting responsibilities. A problem with many reporting systems is that the log contains a record of every event, making it cumbersome and more difficult to identify problems.

Controls over Software-Program-Change Requests

Requests for system changes, such as software-program changes, should be documented on a standard change-request form. The form is used to describe the request and document the review and approval process. It should contain the following information:

- date of the change request
- sequential control number
- program or system identification
- reason for the change
- description of the requested change

- person requesting the change
- benefits contemplated from the change
- projected cost
- signed approval authorizing the change including, at a minimum, the user, IT personnel with the proper authority, and an auditor (at least for significant changes)
- name of programmer assigned to make the change
- anticipated completion date
- user and information systems approval of the completed program change
- implementation procedures (steps for getting the program into the production library)
- audit review of change (if deemed necessary)
- documented sign-off

End-User Computing

End-user computing results from the transfer of information-processing capabilities from centralized data centers onto the user's desktop. End-user computing systems may range in size and computing power from laptop notebook computers to standalone personal computers, client server networks, or small systems with sufficient computing power to process all significant applications for a financial institution. Small systems that are entirely supported by a hardware or software vendor are referred to as turnkey systems. Control considerations discussed throughout this subsection generally apply to all end-user computing systems.

In many cases, end-user systems are linked by distributed processing networks. Linking several microcomputers together and passing information between them is called networking. A system configured in this manner is commonly called a local area network (LAN). The ability to decentralize the data processing function is largely a result of the development of powerful microcomputers or PCs. Microcomputers are now powerful enough to process significant applications when used as standalone systems. These microcomputers can also be connected to a host computer and configured to serve as a data entry or display terminal. In this terminal-emulation mode, information can be passed between the host and the PC with the processing occurring at either machine.

When linked by a network, end-user computing offers several advantages to financial institutions, including—

- low cost compared with other platforms,
- efficiency through the sharing of resources,
- ease of expansion for future growth,
- enhanced communication capabilities,
- portability,
- data availability, and
- ease of use.

While end-user computing systems provide several advantages, they also have greater risks to data integrity and data security, including—

- difficulty in controlling access to the system and in controlling access to confidential information that may be stored on individual personal computers and not on the system (such as payroll records, spreadsheets, budgets, and information intended for the board of directors of the financial institution),
- the lack of sophisticated software to ensure security and data integrity,
- insufficient capabilities to establish audit trails,
- inadequate program testing and documentation,
- lack of segregated duties of data entry personnel.

As the trend toward distributed processing continues, financial institutions should have

proper policies, procedures, and reporting to ensure the accurate and timely processing of information. The controls governing access in an end-user computing environment should be no less stringent than those used in a traditional mainframe environment. Strict rules should govern the ability of users to access information. As a general rule, no user should be able to access information that is beyond what is needed to perform the tasks required by his or her job description. In this new environment, management and staff should assume responsibility for the information assets of the organization.

CONTINGENCY PLANNING, RECORD PROTECTION, AND RETENTION

Data communications systems are susceptible to software, hardware, and transmission problems that may make them unusable for extended periods of time. If a financial institution depends on data communication for its daily operations, appropriate back-up provisions are necessary. Back-up is the ability to continue processing applications in the event the communications system fails. Management can provide back-up by various methods, including batch-processing systems, intelligent terminals or PCs operating in an off-line mode, data capture at the controller if transmission lines are lost, redundant data communication lines, and back-up modems.

Regardless of the method used, FFIEC interagency issuances and specific supporting Federal Reserve System policy issuances that address corporate contingency planning require a comprehensive back-up plan with detailed procedures. When using a batch back-up system, operations personnel must convert data to a machine-readable format and transport the data to the servicer. This process may require additional personnel (data-entry operators and messengers) and equipment. An institution's contingency plan should include detailed procedures on how to obtain and use the personnel and equipment. Because on-line systems are updated or improved frequently, a batch back-up may not remain compatible. Institution personnel should perform periodic tests of batch and other back-up capabilities to ensure that protection is available and that employees are familiar with the plan.

Institutions should create computerized back-up copies of the institution's critical records and have alternative methods of processing those records. When IT operations are performed outside the institution, both the servicer and the financial institution should have adequate control over the records. Bank management should determine which records are best protected by the servicer and which are best protected internally. Service contracts should outline the servicer's responsibility for storing bank records. If the servicer does not or will not permit specific reference to record retention in the contract, a general reference may be sufficient. The institution should obtain a copy of the servicer's back-up policy and retention procedures, and bank management should thoroughly understand which records are protected by whom and to what extent.

The bank should also review the servicer's software and hardware back-up arrangements. It should review the service provider's contingency plan and results of routine tests of the contingency plan. The review should determine how often data and software back-ups are made, the location of stored materials, and which materials are stored at that site. Management should also determine the availability of software replacement and vendor support, as well as the amount and location of duplicate software documentation. Software replacement and documentation procedures should be developed for both operating and application systems.

Management should review the servicer's hardware back-up arrangements to determine if (1) the servicer has a contract with a national recovery service and, if so, the amount and type of back-up capacity provided under the contract; (2) the servicer has an alternate data center with sufficient capacity and personnel to provide full service if necessary; or (3) multiple processing sites within the same facility are available for disaster-processing problems and if each site has an alternate power supply. The alternate site should be able to provide continued processing of data and transmission of reports.

Contracts or contingency plans should specify the availability of source documentation in the event of a disaster, including insolvency of the servicer. FFIEC interagency issuances and Federal Reserve System policy statements require financial institutions to evaluate the adequacy of a servicer's contingency plan and to ensure that its own contingency plan is compatible with the servicer's plan.

Since the duplication of records may vary from site to site, most organizations develop schedules for automatic retention of records on a case-by-case basis. The only way to ensure sufficient record protection is to continually review the flow of documents, data, and reports. Some records may be available in both hard-copy and machine-readable formats. In addition to determining the types of back-up records, management should determine whether it is possible to re-create current data from older records. Certain records also have uses apart from their value in reconstructing current data, such as meeting institutional and regulatory reporting requirements. These records usually include month-end, quarter-end, and year-end files.

The location of an external data center is another factor to consider when evaluating retention procedures. If the external data center is located in a building adjacent to the institution, the possibility that a disaster may affect both organizations increases. Such a situation may make off-site storage of back-up materials even more important. If, on the other hand, the serviced institution is located far from the data center, physical shipment of both input and output may become necessary. Management should determine if fast, reliable transportation between the two sites is available.

If a major disaster occurs, an alternate facility may not be available to process duplicated machine-readable media. Management should consider remote record storage that would facilitate the manual processing of records, if necessary. Furthermore, microfilming all items before shipment would protect the institution if any items are lost, misplaced, or destroyed. Optical-disk storage, which involves scanning and storing a document electronically, offers another alternative for storage and retrieval of original data after processing has occurred. The FFIEC's *IS Handbook* and related FFIEC and Federal Reserve System issuances are sources of information about planning for unexpected contingencies.

Processing personnel should regularly copy and store critical institution records in an off-site location that is sufficiently accessible to obtain records in a reasonable time period. These records should include data files, programs, operating systems, and related documentation. This also applies to critical data in hard-copy documents. In addition, an inventory

of the stored information should be maintained along with a defined retention period.

AUDITS

Examiners need to determine the appropriateness of the scope and frequency of audit activities related to information systems and the reliability of internal or third-party audits of servicer-processed work. Furthermore, examiners should review the methods by which the board of directors is apprised of audit findings, recommendations, and corrective actions taken. In reviewing audit activities, examiners should consider the following factors (if applicable):

- the practicality of the financial institution's having an internal IT auditor and, if the institution has an internal IT auditor, the auditor's level of training and experience
- the training and experience of the institution's external auditors
- the audit functions performed by the institution's outside auditors, the servicer, the servicer's outside auditor, and supervisory personnel
- internal IT audit techniques currently being followed

The audit function should review controls and operating procedures that help protect the institution from losses caused by irregularities and willful manipulations of the data processing system. Thus, a regular, comprehensive audit of IT activities is necessary. Additionally, designated personnel at each serviced institution should periodically perform "around-the-computer" audit examinations, such as:

- developing data controls (proof totals, batch totals, document counts, number of accounts, and prenumbered documents) at the institution before submitting data to the servicer and sampling the controls periodically to ensure their accuracy;
- spot-checking reconciliation procedures to ensure that output totals agree with input totals, less any rejects;
- sampling rejected, unpostable, holdover, and suspense items to determine why they cannot be processed and how they were disposed of (to make sure they were properly corrected and re-entered on a timely basis);

- verifying selected master-file information (such as service-charge codes), reviewing exception reports, and cross-checking loan extensions to source documents;
- spot-checking computer calculations, such as the dollar amounts of loan rebates, interest on deposits, late charges, service charges, and past-due loans, to ensure proper calculations;
- tracing transactions to final disposition to ensure audit trails are adequate;
- reviewing source documents to ascertain whether sensitive master-file change requests were given the required supervisory approval;
- assessing the current status of controls by either visiting the servicer or reviewing independent third-party reviews of the servicer;
- reviewing processing procedures and controls; and
- evaluating other audits of the servicer.

In addition, “through-the-computer” audit techniques allow the auditor to use the computer to check data processing steps. Audit software programs are available to test extensions and footings and to prepare verification statements.

Regardless of whether an institution processes data internally or externally, the board of directors must provide an adequate audit program for all automated records. If the institution has no internal IT audit expertise, the nontechnical “around-the-computer” methods will provide minimum coverage, but not necessarily adequate coverage. A comprehensive external IT audit, similar to those discussed in the FFIEC’s *IS Handbook*, should be carried out to supplement nontechnical methods.

INSURANCE

A financial institution should periodically review its insurance coverage to ensure that the amount of coverage is adequate to cover any exposure that may arise from using an external IT provider. To determine what coverage is needed, the institution should review its internal operations, the transmission or transportation of records or data, and the type of processing performed by the servicer. This review should identify risks to data, namely the accountability for data, at both the user and servicer locations and while in transit. Insurance covering physical disasters, such as fires, floods, and explosions, should be sufficient to cover replacement of the

data processing system. Coverage that protects specialized computer and communications equipment may be more desirable than the coverage provided by regular hazard insurance. Expanded coverage protects against water infiltration, mechanical breakdown, electrical disturbances, changes in temperature, and corrosion. The use of an “agreed-amount” endorsement can provide for full recovery of covered loss.

Bank management should also review the servicer’s insurance coverage to determine if the amounts and types are adequate. Servicer coverage should be similar to what the financial institution would normally purchase if it were performing its data processing internally. Servicer-provided coverage should complement and supplement the bank’s coverage.

If a loss is claimed under the user’s coverage, the user need only prove that a loss occurred to make a claim. However, if the loss is claimed under the servicer’s coverage, the institution must prove that a loss occurred and also that the servicer was responsible for the loss.

Examiners should review the serviced institution’s blanket bond coverage, as well as similar coverage provided by the servicer. The coverage period may be stated in terms of a fixed time period. The loss, the discovery, and the reporting of the loss to the insurer must occur during that stated period. Extended discovery periods are generally available at additional cost if an institution does not renew its bond. The dollar amount of the coverage now represents an aggregate for the stated period. Each claim paid, including the loss, court costs, and legal fees, reduces the outstanding amount of coverage, and recoveries do not reinstate previous levels of coverage. Since coverage extends only to locations stated in the policy, the policy must individually list all offices. Additionally, policies no longer cover certain types of documents in transit.

The bank’s board of directors should be involved in determining insurance coverage since each board member will be acknowledging the terms, conditions, fees, riders, and exclusions of the policy. Insurance companies consider any provided information as a warranty of coverage. Any omission of substantive information could result in voided coverage.

The bank or servicer should consider buying additional coverage. Media-reconstruction policies defray costs associated with recovering data contained on the magnetic media. Media-replacement policies replace blank media. Extra-

expense policies reimburse organizations for expenses incurred over and above the normal cost of operations. In addition, servicers often purchase policies covering unforeseen business interruptions and the liabilities associated with errors and omissions. Both servicer and banking organizations may purchase transit insurance that covers the physical shipment of source documents. Additionally, electronic funds transfer system (EFTS) liability coverage is available for those operations that use electronic transmission.

Several factors may influence an institution's decision to purchase insurance coverage or to self-insure: the cost of coverage versus the probability of occurrence of a loss, the cost of coverage versus the size of the loss of each occurrence, and the cost of coverage versus the cost of correcting a situation that could result in a loss. Some institutions engage risk consultants to evaluate these risks and the costs of insuring against them.

SERVICE CONTRACTS

Contract Practices

A poorly written or inadequately reviewed contract can be troublesome for both the serviced financial institution and the servicer. To avoid or minimize contract problems, bank legal counsel who are familiar with the terminology and specific requirements of a data processing contract should review it to protect the institution's interests. Since the contract likely sets the terms for a multiyear understanding between the parties, all items agreed on during negotiations must be included in the final signed contract. Verbal agreements are generally not enforceable, and contracts should include wording such as "no oral representations apply" to protect both parties from future misunderstandings. The contract should also establish baseline performance standards for data processing services and define each party's responsibilities and liabilities, where possible.

Although contracts between financial institutions and external data processing companies are not standardized in a form, they share a number of common elements. For a further discussion of IT contract elements and considerations, see the FFIEC's *IS Handbook*.

Additionally, section 225 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) states, "An [FDIC-] insured depository institution may not enter into a written or oral contract with any person to provide goods, products or services to or for the benefit of such depository institution if the performance of such contract would adversely affect the safety or soundness of the institution." An institution should ascertain during contract negotiations whether the servicer can provide a level of service that meets the needs of the institution over the life of the contract. The institution is also responsible for making sure it accounts for each contract in accordance with GAAP. Regulatory agencies consider contracting for excessive servicing fees and/or failing to properly account for such transactions an unsafe and unsound practice. When entering into service agreements, banks must ensure that the method by which they account for such agreements reflects the substance of the transaction and not merely its form. See FFIEC Supervisory Policy SP-6, "Interagency Statement on EDP Service Contracts."

Risk of Termination

Many financial institutions have become so dependent on outside data processing servicers that any extended interruption or termination of service would severely disrupt normal operations. Termination of services generally occurs according to the terms of the service contract. Banks may also experience an interruption of services that is caused by a physical disaster to the servicer, such as a fire or flood, or by bankruptcy. The serviced institution must prepare differently for each type of termination. The contract should allow either party to terminate the agreement by notifying the other party 90 to 180 days in advance of the termination date, which should give a serviced institution adequate time to locate and contract with another servicer.

Termination caused by physical disaster occurs infrequently, but it may present the institution with a more serious problem than termination by contract. However, if the servicer has complied with basic industry standards and maintains a proper contingency plan, disruption of services to users will ordinarily be minimal. The contingency plan must require the servicer to

maintain current data files and programs at an alternate site and arrange for back-up processing time with another data center. At a minimum, these provisions should allow the servicer to process the most important data applications. Since equipment vendors can often replace damaged machines within a few days, the servicer should be able to resume processing with little delay. The servicer, not the serviced institution, is responsible for the major provisions of its back-up contingency plan. However, the institution must have a plan that complements the servicer's.

Termination caused by bankruptcy of the servicer is potentially the most devastating to a serviced institution. There may not be advance notice of termination or an effective contingency plan (because servicer personnel may not be available). In this situation, the serviced institution is responsible for finding an alternate processing site.

Although user institutions can ordinarily obtain data files from a bankrupt servicer with little trouble, the programs (source code) and documentation required to process those files are normally owned by the servicer and are not available to the user institutions. These programs are often the servicer's only significant assets. Therefore, a creditor of a bankrupt servicer, in an attempt to recover outstanding debts, will seek to attach those assets and further limit their availability to user institutions. The bankruptcy court may provide remedies to the user institutions, but only after an extended length of time.

An escrow agreement is an alternative to giving vendors sole control of the source code. In this agreement, which should either be part of the service contract or a separate document, the financial institution would receive the right to access source programs under certain conditions, such as discontinued product support or the financial insolvency of the vendor. A third party would retain these programs and related documents in escrow. Periodically, the financial institution should determine that the source code maintained in escrow is up-to-date, for example, an independent party should verify the version number of the software. Without an escrow agreement, a serviced institution has two alternatives: (1) pay off the creditor and hire outside specialists to operate the center or (2) convert data files to another servicer. Either alternative is likely to be costly and cause severe operating delays.

Institutions should normally determine the financial viability of its servicer annually. Once the review is complete, management must report the results to the board of directors or a designated committee. At a minimum, management's review should contain a careful analysis of the servicer's annual financial statement. Management may also use other sources of information to determine a servicer's condition, such as investment analyst reports and bond ratings. Reports of independent auditors and examination reports for certain service providers obtainable from appropriate regulatory agencies may contain useful information.

AUTOMATED CLEARINGHOUSE

Automated clearinghouses (ACHs) form a nationwide electronic payments system used by a large number of depository institutions and corporations. ACH rules and regulations are established by the National Automated Clearing House Association (NACHA) and the local ACH associations, and they are referenced in the ACH operating circulars of the Federal Reserve Banks.

ACH is a value-based system that supports both credit and debit transactions. In ACH credit transactions, funds flow from the depository institution originating the transaction to the institutions receiving the transactions. Examples of credit payments include direct deposits of payroll, dividend and interest payments, Social Security payments, and corporate payments to contractors and vendors. In a debit transaction, funds flow from the depository institutions receiving the transaction instructions to the institution originating the transaction. Examples of ACH debit transactions include collection of insurance premiums, mortgage and loan payments, consumer bill payments, and transactions to facilitate corporate cash management. ACH transactions are deposited in batches at Federal Reserve Banks (or private-sector ACH processors) for processing one or two business days before the settlement date. These transactions are processed and delivered to the receiving institutions through the nightly processing cycle for a given day.

ACH transactions continue to grow significantly. Additional uses of the ACH continue to be developed as depository institutions, corpo-

rations, and consumers realize its efficiency and low cost compared with large-dollar payments systems and check payments. One area of growth is the use of debit transactions for the collection of large payments due to the originator, such as the cash concentration of a company's nationwide branch or subsidiary accounts into one central account and other recurring contractual payments.

While several organizations can be involved in processing ACH transactions, the Federal Reserve System is the principal ACH processor. For the Federal Reserve ACH system, depository institutions send ACH transactions to and receive ACH transactions from one of the Federal Reserve processing sites via a communications system linking each location. Access may be by direct computer interface or intelligent terminal connections.

As with any funds-transfer system, the ACH system has inherent risks, including error, credit risk, and fraud. When reviewing ACH activities, examiners should evaluate the following:

- agreements covering delivery and settlement arrangements maintained by the depository institution as an originator or receiver of ACH transactions
- monitoring of the institution's and customer's intraday positions
- balancing procedures of ACH transactions processed
- the credit policy and effectiveness of procedures to control intraday and overnight overdrafts, resulting from extensions of credit to an ACH customer, to cover the value of credit transfers originated (Since ACH transactions may be originated one or two days before the settlement date, the originating institution is exposed to risk from the time it submits ACH credit transfers to the ACH processor to the time its customer funds those transfers.)
- uncollected-funds controls and the related credit policy for deposits created through ACH debit transactions (ACH debits can be returned for insufficient funds in the payor's account or for other reasons, such as a court order.)
- exception reports (that is, large-item and new-account reports)
- control procedures for terminals through which additions, deletions, and other forms of maintenance could be made to customer databases
- the retention of all entries, return entries, and adjustment entries transmitted to and received

from the ACH for a period of six years after the date of transmittal

RETAIL FUNDS-TRANSFER SYSTEMS

Automation has enabled banks to electronically perform many retail banking functions formerly handled manually by tellers, bookkeepers, data-entry clerks, and other banking personnel. Accordingly, the need for physical banking facilities and related staff has been reduced. Electronic funds transfer (EFT) and related banking services have also brought access to and control of accounts closer to the consumer through the use of widely distributed unmanned terminals and merchant facilities. EFT-related risk to a financial institution for individual customer transactions is generally low, since the transactions are usually for relatively small amounts. However, weaknesses in controls that could lead to incorrect or improper use of several accounts could lead to significant losses or class action suits against a financial institution. Examinations of retail EFT facilities should focus on the potential large-scale risks of a given product. Examples of retail EFT systems include automated teller machines, point-of-sale networks, debit and "smart" cards, and home banking.

Automated Teller Machines

An automated teller machine (ATM) is a terminal that is capable of performing many routine banking services for the customer. ATMs handle deposits, transfers between savings and checking accounts, balance inquiries, withdrawals, small short-term loans, and loan payments. ATMs may also handle other transactions, such as cash advances on credit cards, statement printing, and postage-stamp dispensing. ATMs usually operate 24 hours a day and are located not only on bank premises but in other locations, such as shopping malls and businesses. Daily withdrawals are usually, and should be, limited to relatively small amounts (\$200 to \$500). Deposits are processed in the same manner as if they were handled by a teller. ATMs are generally activated through the use of a plastic card encoded with a machine-readable customer identification number and the customer's entry of a

corresponding personal identification number (PIN). Some financial institutions may refer to this identification number as the personal identification code (PIC).

ATMs operate in either off-line or on-line mode. Off-line transactions are those that occur when the customer's account balance is not available for verification. This situation can be the result of telecommunication problems between the financial institution and the ATM network. In addition, an off-line transaction can occur when a customer's account balance is not available because the financial institution is updating its files. Financial institutions usually update their files during low-volume periods. In either case, transactions are usually approved up to the daily withdrawal limit, which is a risk to the bank because a customer can withdraw more than is available in the account. On-line systems are directly connected to a financial institution's computer system and the corresponding customer account information. The computer processes each transaction immediately and provides immediate account-balance verification. With either system, a card is normally captured (kept by the ATM) if misuse is indicated (for example, the card has been reported stolen or too many attempts have been made with an invalid PIN).

Financial institutions are usually members of several ATM networks, which can be regional and national. Through these networks, separate institutions allow each other's customers to use their ATM machines. This is known as an interchange system. To be involved in an interchange system, a financial institution must either be an owner or member of the ATM network.

Fraud, robbery, and malfunction are the major risks of ATMs. The use of plastic cards and PINs are a deterrent, but there is still the risk that an unauthorized individual may obtain them. Customers may even be physically accosted while making withdrawals or deposits at ATM locations. Institutions have decreased this risk by installing surveillance cameras and access-control devices. For example, the ATM card can be used as an access-control device, unlocking the door to a separate ATM enclosure and relocking it after the customer has entered. Fraud may also result from risks associated with the issuance of ATM cards, the capture of cards, and the handling of customer PINs. Appropriate controls are needed to prevent the financial institution's personnel from unauthorized access to unissued cards, PINs, and captured cards.

Point-of-Sale Systems

A point-of-sale (POS) system transaction is defined as an electronic transfer of funds from a customer's checking or savings account to a merchant's account to pay for goods or services. Transactions are initiated from POS terminals located in department stores, supermarkets, gasoline stations, and other retail outlets. In an electronic POS system, a customer pays for purchases using a plastic card (such as an ATM, credit, or debit card). The store clerk enters the payment information into the POS terminal, and the customer verifies the transaction by entering a PIN. This results in a debit to the customer's account and a credit to the merchant's account.

POS transactions may be processed through either single-institution unshared systems or multi-institution shared networks. Participants in a shared system settle daily, on a net transaction basis, between each other. In unshared systems, the merchants and customers have accounts with the same financial institution. Thus, the need to settle between banks is eliminated.

As with other EFT systems, POS transactions are subject to the risk of loss from fraud, mistakes, and system malfunction. POS fraud is caused by stolen cards and PINs, counterfeit cards, and unauthorized direct computer access. The system is also susceptible to errors such as debiting or crediting an account by too much or too little, or entering unauthorized transactions. For the most part, POS systems usually deal with these risks by executing bank-merchant and bank-customer contracts that delineate each party's liabilities and responsibilities. Also, consumers are protected by state and federal statutes limiting their liability if they give notice of a lost, stolen, or mutilated card within a specified time period. Other risks inherent in POS systems are computer malfunction or downtime. Financial institutions offering POS services should provide for back-up of their records through adequate contingency planning. Internal control guidelines for POS systems should address the following:

- confidentiality and security of customer-account information, including protection of PINs
- maintenance of contracts between banks and merchants, customers and banks, and banks and networks
- policies and procedures for credit and check

- authorization, floor limits, overrides, and settlement and balancing
- maintenance of transaction journals to provide an adequate audit trail
- generation and review of daily exception reports with provisions for follow-up of exception items
- provisions for back-up and contingency planning
- physical security surrounding POS terminals
