Internal Controls for Retail EFT Systems

Regardless of the EFT system employed, financial institutions should ensure that adequate internal controls are in place to minimize errors, discourage fraud, and provide an adequate audit trail. Recommended internal-control guidelines for all systems include:

- establishing measures to establish proper customer identification (such as PINs) and maintain their confidentiality
- installing a dependable file-maintenance and retention system to trace transactions
- producing, reviewing, and maintaining exception reports to provide an audit trail

The most critical element of EFT systems is the need for undisputed identification of the customer. Particular attention should be given to the customer-identification systems. The most common control is the issuance of a unique PIN that is used in conjunction with a plastic card or, for noncard systems, an account number. The following PIN control guidelines, as recommended by the American Bankers Association, are encouraged.

Storage:

- PINs should not be stored on other source instruments (for example, plastic cards).
- Unissued PINs should never be stored before they are issued. They should be calculated when issued, and any temporary computer storage areas used in the calculation should be cleared immediately after use.
- PINs should be encrypted on all files and databases.

Delivery:

- PINs should not appear in printed form where

they can be associated with customers' account numbers.

- Bank personnel should not have the capability to retrieve or display customers' PIN numbers.
- All the maintenance to PINs stored in databases should be restricted. Console logs and security reports should be reviewed to determine any attempts to subvert the PIN security system.
- PIN mailers should be processed and delivered with the same security accorded the delivery of bank cards to cardholders. (They should never be mailed to a customer together with the card).

Usage:

- The PIN should be entered only by the cardholder and only in an environment that deters casual observation of entries.
- The PIN should never be transmitted in unencrypted form.
- PIN systems should record the number of unsuccessful PIN entries and should restrict access to a customer's account after a limited number of attempts.
- If a PIN is forgotten, the customer should select a new one rather than have bank personnel retrieve the old one, unless the bank has the ability to generate and mail a hard copy of the PIN directly to the customer without giving bank personnel the ability to view the PIN.

Control and security:

- Systems should be designed, tested, and controlled to preclude retrieval of stored PINs in any form.
- Application programs and other software containing formulas, algorithms, and data used to calculate PINs must be subject to the highest level of access control for security purposes.
- Any data-recording medium, for example, magnetic tape and removable disks, used in the process of assigning, distributing, calculating, or encrypting PINs must be cleared immediately after use.
- Employees with access to PIN information must be subject to security clearance and must be covered by an adequate surety bond.

System design:

- PIN systems should be designed so that PINs can be changed without reissuing cards.
- PINs used on interchange systems should be designed so that they can be used or changed without any modification to other participants' systems.
- Financial institutions electing to use encryption as a security technique for bank card systems are strongly encouraged to consider the data encryption standards established by the National Institute of Standards and Technology.

In addition, institutions should consider controls over other aspects of the process. Control guidelines appropriate for plastic cards include those covering procurement, embossing or encoding, storage, and mailing. Controls over terminal sharing and network switching are also appropriate. Institutions should address backup procedures and practices for retail funds-transfer systems and insurance coverage for these activities.

APPENDIX A—RISK MANAGEMENT OF OUTSOURCED TECHNOLOGY SERVICES

The following guidance was issued by the Federal Financial Institutions Examination Council on November 28, 2000. (See SR-00-17.)

Purpose and Background

This statement focuses on the risk-management process of identifying, measuring, monitoring, and controlling the risks associated with outsourcing technology services.¹ Financial institutions should consider the guidance outlined in this statement and the attached appendix in managing arrangements with their technology service providers.² While this guidance covers a

1. The FFIEC Information Systems Examination Handbook is a reference source that contains further discussion and explanation of a number of concepts addressed in this FFIEC guidance.

2. Technology service providers encompass a broad range of entities including but not limited to affiliated entities, nonaffiliated entities, and alliances of companies providing

broad range of issues that financial institutions should address, each financial institution should apply those elements based on the scope and importance of the outsourced services as well as the risk to the institution from the services.

Financial institutions increasingly rely on services provided by other entities to support an array of technology-related functions. While outsourcing to affiliated or nonaffiliated entities can help financial institutions manage costs, obtain necessary expertise, expand customer product offerings, and improve services, it also introduces risks that financial institutions should address. This guidance covers four elements of a risk-management process: risk assessment, selection of service providers, contract review, and monitoring of service providers.³

Risk Assessment

The board of directors and senior management are responsible for understanding the risks associated with outsourcing arrangements for technology services and ensuring that effective risk-management practices are in place. As part of this responsibility, the board and management should assess how the outsourcing arrangement will support the institution's objectives and strategic plans and how the service provider's relationship will be managed. Without an effective risk-assessment phase, outsourcing technology services may be inconsistent with the institution's strategic plans, too costly, or introduce unforeseen risks.

Outsourcing of information and transaction processing and settlement activities involves risks that are similar to the risks that arise when these functions are performed internally. Risks include threats to security, availability and integrity of systems and resources, confidentiality of information, and regulatory compliance. In addition, the nature of the service provided, such as bill payment, funds transfer, or emerging

products and services. This may include but is not limited to core processing; information and transaction processing and settlement activities that support banking functions such as lending, deposit-taking, funds transfer, fiduciary, or trading activities; Internet-related services; security monitoring; systems development and maintenance; aggregation services; digital certification services; and call centers.

3. The federal banking agencies have authority to regulate and examine services provided to insured depository institutions under 12 USC 1867(c), 12 USC 1786(a), and 12 USC 1464(d)(7).

electronic services, may result in entities performing transactions on behalf of the institution, such as collection or disbursement of funds, that can increase the levels of credit, liquidity, transaction, and reputation risks.⁴

Management should consider additional risk-management controls when services involve the use of the Internet. The broad geographic reach, ease of access, and anonymity of the Internet require close attention to maintaining secure systems; intrusion detection and reporting systems; and customer authentication, verification, and authorization. Institutions should also understand that the potential risks introduced are a function of a system's structure, design, and controls and not necessarily the volume of activity.

An outsourcing risk assessment should consider the following:

- strategic goals, objectives, and business needs of the financial institution
- ability to evaluate and oversee outsourcing relationships
- importance and criticality of the services to the financial institution
- defined requirements for the outsourced activity
- necessary controls and reporting processes
- contractual obligations and requirements for the service provider
- contingency plans, including availability of alternative service providers, costs, and resources required to switch service providers
- ongoing assessment of outsourcing arrangements to evaluate consistency with strategic objectives and service-provider performance
- regulatory requirements and guidance for the business lines affected and technologies used

Due Diligence in Selecting a Service Provider

Once the institution has completed the risk assessment, management should evaluate service providers to determine their ability, both operationally and financially, to meet the institution's needs. Management should convey the institution's needs, objectives, and necessary

controls to the potential service provider. Management also should discuss provisions that the contract should contain. The appendix to this statement contains some specific factors for management to consider in selecting a service provider.

Contract Issues

Contracts between the institution and service provider should take into account business requirements and key risk factors identified during the risk-assessment and due-diligence phases. Contracts should be clearly written and sufficiently detailed to provide assurances for performance, reliability, security, confidentiality, and reporting. Management should consider whether the contract is flexible enough to allow for changes in technology and the financial institution's operations. Appropriate legal counsel should review contracts prior to signing.

Institutions may encounter situations where service providers cannot or will not agree to terms that the institution requests to manage the risk effectively. Under these circumstances, institutions should either not contract with that provider or supplement the service provider's commitments with additional risk-mitigation controls. The appendix to this statement contains some specific considerations for management in contracting with a service provider.

Service-Provider Oversight

Institutions should implement an oversight program to monitor each service provider's controls, condition, and performance. Responsibility for the administration of the service-provider relationship should be assigned to personnel with appropriate expertise to monitor and manage the relationship. The number of personnel, functional responsibilities, and the amount of time devoted to oversight activities will depend, in part, on the scope and complexity of the services outsourced. Institutions should document the administration of the service-provider relationship. Documenting the process is important for contract negotiations, termination issues, and contingency planning. The appendix to this statement contains some specific factors to consider regarding oversight of the service provider.

4. For example, emerging electronic services may include aggregation. Aggregation is a service that gathers online account information from many web sites and presents that information in a consolidated format to the customer.

Summary

The board of directors and management are responsible for ensuring adequate risk-mitigation practices are in place for effective oversight and management of outsourcing relationships. Financial institutions should incorporate an outsourcing risk-management process that includes a risk assessment to identify the institution's needs and requirements; proper due diligence to identify and select a provider; written contracts that clearly outline duties, obligations, and responsibilities of the parties involved; and ongoing oversight of outsourcing technology services.

Appendix—Risk Management of Outsourced Technology Services

Due Diligence in Selecting a Service Provider

Some of the factors that institutions should consider when performing due diligence in selecting a service provider are categorized and listed below. Institutions should review the service provider's due-diligence process for any of its significant supporting agents (i.e., subcontractors, support vendors, and other parties). Depending on the services being outsourced and the level of in-house expertise, institutions should consider whether to hire or consult with qualified independent sources. These sources include consultants, user groups, and trade associations that are familiar with products and services offered by third parties. Ultimately, the depth of due diligence will vary depending on the scope and importance of the outsourced services as well as the risk to the institution from these services.

Technical and industry expertise.

- Assess the service provider's experience and ability to provide the necessary services and supporting technology for current and anticipated needs.
- Identify areas where the institution would have to supplement the service provider's expertise to fully manage risk.
- Evaluate the service provider's use of third parties or partners that would be used to support the outsourced operations.

- Evaluate the experience of the service provider in providing services in the anticipated operating environment.
- Consider whether additional systems, data conversions, and work are necessary.
- Evaluate the service provider's ability to respond to service disruptions.
- Contact references and user groups to learn about the service provider's reputation and performance.
- Evaluate key service-provider personnel that would be assigned to support the institution.
- Perform on-site visits, where necessary, to better understand how the service provider operates and supports its services.

Operations and controls.

- Determine adequacy of the service provider's standards, policies, and procedures relating to internal controls, facilities management (e.g., access requirements, sharing of facilities, etc.), security (e.g., systems, data, equipment, etc.), privacy protections, maintenance of records, business-resumption contingency planning, systems development and maintenance, and employee background checks.
- Determine if the service provider provides sufficient security precautions, including, when appropriate, firewalls, encryption, and customer-identity authentication, to protect institution resources as well as detect and respond to intrusions.
- Review audit reports of the service provider to determine whether the audit scope, internal controls, and security safeguards are adequate.
- Evaluate whether the institution will have complete and timely access to its information maintained by the provider.
- Evaluate the service provider's knowledge of regulations that are relevant to the services they are providing (e.g., Regulation E, privacy and other consumer protection regulations, Bank Secrecy Act, etc.).
- Assess the adequacy of the service provider's insurance coverage including fidelity, fire, liability, data losses from errors and omissions, and protection of documents in transit.

Financial condition.

- Analyze the service provider's most recent audited financial statements and annual report as well as other indicators (e.g., publicly

traded bond ratings), if available.

- Consider factors such as how long the service provider has been in business and the service provider's market share for a given service and how it has fluctuated.
- Consider the significance of the institution's proposed contract on the service provider's financial condition.
- Evaluate technological expenditures. Is the service provider's level of investment in technology consistent with supporting the institution's activities? Does the service provider have the financial resources to invest in and support the required technology?

Contract Issues

Some considerations for contracting with service providers are discussed below. This listing is not all-inclusive, and the institution may need to evaluate other considerations based on its unique circumstances. The level of detail and relative importance of contract provisions varies with the scope and risks of the services outsourced.

Scope of service. The contract should clearly describe the rights and responsibilities of parties to the contract. Considerations include—

- time frames and activities for implementation and assignment of responsibility (implementation provisions should take into consideration other existing systems or interrelated systems to be developed by different service providers (e.g., an Internet banking system being integrated with existing core applications or systems customization));
- services to be performed by the service provider including duties such as software support and maintenance, training of employees, or customer service;
- obligations of the financial institution;
- the contracting parties' rights in modifying existing services performed under the contract; and
- guidelines for adding new or different services and for contract renegotiation.

Performance standards. Institutions should generally include performance standards defining minimum service-level requirements and remedies for failure to meet standards in the contract. For example, common service-level met-

rics include percent system uptime, deadlines for completing batch processing, or number of processing errors. Industry standards for service levels may provide a reference point. The institution should periodically review overall performance standards to ensure consistency with its goals and objectives.

Security and confidentiality. The contract should address the service provider's responsibility for security and confidentiality of the institution's resources (e.g., information, hardware). The agreement should prohibit the service provider and its agents from using or disclosing the institution's information, except as necessary to or consistent with providing the contracted services, to protect against unauthorized use (e.g., disclosure of information to institution competitors). If the service provider receives nonpublic personal information regarding the institution's customers, the institution should notify the service provider to assess the applicability of the privacy regulations. Institutions should require the service provider to fully disclose breaches in security resulting in unauthorized intrusions into the service provider that may materially affect the institution or its customers. The service provider should report to the institution when material intrusions occur, the effect on the institution, and corrective action to respond to the intrusion.

Controls. Consideration should be given to contract provisions addressing control over operations such as—

- internal controls to be maintained by the service provider;
- compliance with applicable regulatory requirements;
- records to be maintained by the service provider;
- access to the records by the institution;
- notification by the service provider to the institution and the institution's approval rights regarding material changes to services, systems, controls, key project personnel allocated to the institution, and new service locations;
- setting and monitoring of parameters relating to any financial functions, such as payments processing and any extensions of credit on behalf of the institution; and
- insurance coverage to be maintained by the service provider.

Audit. The institution should generally include in the contract the types of audit reports the institution is entitled to receive (e.g., financial, internal control, and security reviews). The contract can specify audit frequency, cost to the institution associated with the audits if any, as well as the rights of the institution and its agencies to obtain the results of the audits in a timely manner. The contract may also specify rights to obtain documentation regarding the resolution of audit-disclosed deficiencies and inspect the processing facilities and operating practices of the service provider. Management should consider, based upon the risk-assessment phase, the degree to which independent internal audits completed by service-provider audit staff can be used and the need for external audits and reviews (e.g., SAS 70 type I and II reviews).⁵

For services involving access to open networks, such as Internet-related services, special attention should be paid to security. The institution may wish to include contract terms requiring periodic audits to be performed by an independent party with sufficient expertise. These audits may include penetration testing, intrusion detection, and firewall configuration. The institution should receive sufficiently detailed reports on the findings of these ongoing audits to adequately assess security without compromising the service provider's security. It can be beneficial to both the service provider and the institution to contract for such ongoing tests on a coordinated basis given the number of institutions that may contract with the service provider and the importance of the test results to the institution.

Reports. Contractual terms should discuss the frequency and type of reports the institution will receive (e.g., performance reports, control audits, financial statements, security, and business-resumption testing reports). Guidelines and fees for obtaining custom reports should also be discussed.

Business-resumption and contingency plans. The contract should address the service provider's responsibility for backup and record protection,

including equipment, program and data files, and maintenance of disaster-recovery and contingency plans. Responsibilities should include testing of the plans and providing results to the institution. The institution should consider interdependencies among service providers when determining business-resumption testing requirements. The service provider should provide the institution with operating procedures the service provider and institution are to implement in the event business-resumption contingency plans are implemented. Contracts should include specific provisions for business-recovery time frames that meet the institution's business requirements. The institution should ensure that the contract does not contain any provisions that would excuse the service provider from implementing its contingency plans.

Subcontracting and multiple-service-provider relationships. Some service providers may contract with third parties in providing services to the financial institution. To provide accountability, it may be beneficial for the financial institution to seek an agreement with and designate a primary contracting service provider. The institution may want to consider including a provision specifying that the contracting service provider is responsible for the service provided to the institution regardless of which entity is actually conducting the operations. The institution may also want to consider including notification and approval requirements regarding changes to the service provider's significant subcontractors.

Cost. The contract should fully describe fees and calculations for base services, including any development, conversion, and recurring services, as well as any charges based upon volume of activity and for special requests. Cost and responsibility for purchase and maintenance of hardware and software may also need to be addressed. Any conditions under which the cost structure may be changed should be addressed in detail including limits on any cost increases.

Ownership and license. The contract should address ownership and allowable use by the service provider of the institution's data, equipment/hardware, system documentation, system and application software, and other intellectual property rights. Other intellectual property rights may include the institution's name and logo, its trademark or copyrighted material,

5. AICPA Statement of Auditing Standards 70, "Reports of Processing of Transactions by Service Organizations," known as SAS 70 reports, are one commonly used form of external review. Type I SAS 70 reports review the service provider's policies and procedures. Type II SAS 70 reports provide tests of actual controls against policies and procedures.

domain names, web site designs, and other work products developed by the service provider for the institution. The contract should not contain unnecessary limitations on the return of items owned by the institution. Institutions that purchase software should consider establishing escrow agreements. These escrow agreements may provide for the following: institution access to source programs under certain conditions (e.g., insolvency of the vendor), documentation of programming and systems, and verification of updated source code.

Duration. Institutions should consider the type of technology and current state of the industry when negotiating the appropriate length of the contract and its renewal periods. While there can be benefits to long-term technology contracts, certain technologies may be subject to rapid change and a shorter-term contract may prove beneficial. Similarly, institutions should consider the appropriate length of time required to notify the service provider of the institutions' intent not to renew the contract prior to expiration. Institutions should consider coordinating the expiration dates of contracts for interrelated services (e.g., web site, telecommunications, programming, network support) so that they coincide, where practical. Such coordination can minimize the risk of terminating a contract early and incurring penalties as a result of necessary termination of another related service contract.

Dispute resolution. The institution should consider including in the contract a provision for a dispute-resolution process that attempts to resolve problems in an expeditious manner as well as provide for continuation of services during the dispute-resolution period.

Indemnification. Indemnification provisions generally require the financial institution to hold the service provider harmless from liability for the negligence of the institution and vice versa. These provisions should be reviewed to reduce the likelihood of potential situations in which the institution may be liable for claims arising as a result of the negligence of the service provider.

Limitation of liability. Some service-provider standard contracts may contain clauses limiting the amount of liability that can be incurred by the service provider. If the institution is consid-

ering such a contract, consideration should be given to whether the damage limitation bears an adequate relationship to the amount of loss the financial institution might reasonably experience as a result of the service provider's failure to perform its obligations.

Termination. The extent and flexibility of termination rights sought can vary depending upon the service. Contracts for technologies subject to rapid change, for example, may benefit from greater flexibility in termination rights. Termination rights may be sought for a variety of conditions including change in control (e.g., acquisitions and mergers), convenience, substantial increase in cost, repeated failure to meet service levels, failure to provide critical services, bankruptcy, company closure, and insolvency.

Institution management should consider whether or not the contract permits the institution to terminate the contract in a timely manner and without prohibitive expense (e.g., reasonableness of cost or penalty provisions). The contract should state termination and notification requirements with time frames to allow the orderly conversion to another provider. The contract must provide for return of the institution's data, as well as other institution resources, in a timely manner and in machine-readable format. Any costs associated with transition assistance should be clearly stated.

Assignment. The institution should consider contract provisions that prohibit assignment of the contract to a third party without the institution's consent, including changes to subcontractors.

Oversight of Service Provider

Some of the oversight activities management should consider in administering the service-provider relationship are categorized and listed below. The degree of oversight activities will vary depending upon the nature of the services outsourced. Institutions should consider the extent to which the service provider conducts similar oversight activities for any of its significant supporting agents (i.e., subcontractors, support vendors, and other parties) and the extent to which the institution may need to perform oversight activities on the service provider's significant supporting agents.

Monitor financial condition and operations.

- Evaluate the service provider's financial condition periodically.
- Ensure that the service provider's financial obligations to subcontractors are being met in a timely manner.
- Review audit reports (e.g., SAS 70 reviews, security reviews) as well as regulatory examination reports, if available, and evaluate the adequacy of the service provider's systems and controls including resource availability, security, integrity, and confidentiality.⁶
- Follow up on any deficiencies noted in the audits and reviews of the service provider.
- Periodically review the service provider's policies relating to internal controls, security, systems development and maintenance, and backup and contingency planning to ensure they meet the institution's minimum guidelines, contract requirements, and are consistent with the current market and technological environment.
- Review access control reports for suspicious activity.
- Monitor changes in key service-provider project personnel allocated to the institution.
- Review and monitor the service provider's insurance policies for effective coverage.
- Perform on-site inspections in conjunction with some of the reviews performed above, where practicable and necessary.
- Sponsor coordinated audits and reviews with other client institutions.

Assess quality of service and support.

- Regularly review reports documenting the service provider's performance. Determine if the reports are accurate and allow for a meaningful assessment of the service provider's performance.
- Document and follow up on any problem in service in a timely manner. Assess service-provider plans to enhance service levels.

6. Some services provided to insured depository institutions by service providers are examined by the FFIEC member agencies. Regulatory examination reports, which are only available to clients/customers of the service provider, may contain information regarding a service provider's operations. However, regulatory reports are not a substitute for a financial institution's due diligence in oversight of the service provider.

- Review system-update procedures to ensure appropriate change controls are in effect and ensure authorization is established for significant system changes.
- Evaluate the provider's ability to support and enhance the institution's strategic direction including anticipated business-development goals and objectives, service-delivery requirements, and technology initiatives.
- Determine adequacy of training provided to financial institution employees.
- Review customer complaints on the products and services provided by the service provider.
- Periodically meet with contract parties to discuss performance and operational issues.
- Participate in user groups and other forums.

Monitor contract compliance and revision needs.

- Review invoices to ensure proper charges for services rendered, the appropriateness of rate changes, and new service charges.
- Periodically review the service provider's performance relative to service-level agreements, determine whether other contractual terms and conditions are being met, and whether any revisions to service-level expectations or other terms are needed given changes in the institution's needs and technological developments.
- Maintain documents and records regarding contract compliance, revision, and dispute resolution.

Maintain business-resumption contingency plans.

- Review the service provider's business-resumption contingency plans to ensure that any services considered mission critical for the institution can be restored within an acceptable time frame.
- Review the service provider's program for contingency-plan testing. For many critical services, annual or more frequent tests of the contingency plan are typical.
- Ensure service-provider interdependencies are considered for mission-critical services and applications.

APPENDIX B—INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

Sections II and III of the information security standards are provided below. For more information, see the Interagency Guidelines Establishing Information Security Standards, in Regulation H, section 208, appendix D-2 (12 CFR 208, appendix D-2). The guidelines were previously titled Interagency Guidelines Establishing Standards for Safeguarding Customer Information. The information security standards were amended, effective July 1, 2005, to implement section 216 of the Fair and Accurate Credit Transactions Act of 2003 (the FACT Act). To address the risks associated with identity theft, the amendments generally require financial institutions to develop, implement, and maintain, as part of their existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports. The term *consumer information* is defined in the revised rule.

II. Standards for Safeguarding Customer Information

A. Information Security Program

Each bank is to implement a comprehensive written information security program that includes administrative, technical, and physical safeguards appropriate to the size and complexity of the bank and the nature and scope of its activities. While all parts of the bank are not required to implement a uniform set of policies, all elements of the information security program are to be coordinated. A bank is also to ensure that each of its subsidiaries is subject to a comprehensive information security program. The bank may fulfill this requirement either by including a subsidiary within the scope of the bank's comprehensive information security program or by causing the subsidiary to implement a separate comprehensive information security program in accordance with the standards and procedures in sections II and III that apply to banks.

B. Objectives

A bank's information security program shall be designed to—

1. ensure the security and confidentiality of customer information;
2. protect against any anticipated threats or hazards to the security or integrity of such information;
3. protect against unauthorized access to or use of such information that could result in substantial harm or inconvenience to any customer; and
4. ensure the proper disposal of customer information and consumer information.

III. Development and Implementation of Information Security Program

A. Involve the Board of Directors

The board of directors or an appropriate committee of the board of each bank is to—

1. approve the bank's written information security program; and
2. oversee the development, implementation, and maintenance of the bank's information security program, including assigning specific responsibility for its implementation and reviewing reports from management.

B. Assess Risk

Each bank is to—

1. identify reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems;
2. assess the likelihood and potential damage of these threats, taking into consideration the sensitivity of customer information;
3. assess the sufficiency of policies, procedures, customer information systems, and other arrangements in place to control risks; and
4. ensure the proper disposal of customer information and consumer information.

C. Manage and Control Risk

Each bank is to—

1. Design its information security program to control the identified risks, commensurate with the sensitivity of the information as well as the complexity and scope of the bank's activities. Each bank must consider whether the following security measures are appropriate for the bank and, if so, adopt those measures the bank concludes are appropriate:
 - a. access controls on customer information systems, including controls to authenticate and permit access only to authorized individuals and controls to prevent employees from providing customer information to unauthorized individuals who may seek to obtain this information through fraudulent means
 - b. access restrictions at physical locations containing customer information, such as buildings, computer facilities, and records storage facilities to permit access only to authorized individuals
 - c. encryption of electronic customer information, including while in transit or in storage on networks or systems to which unauthorized individuals may have access
 - d. procedures designed to ensure that customer information system modifications are consistent with the bank's information security program
 - e. dual control procedures, segregation of duties, and employee background checks for employees with responsibilities for or access to customer information
 - f. monitoring systems and procedures to detect actual and attempted attacks on or intrusions into customer information systems
 - g. response programs that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies
 - h. measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures
2. Train staff to implement the bank's information security program.
3. Regularly test the key controls, systems, and

procedures of the information security program. The frequency and nature of such tests should be determined by the bank's risk assessment. Tests should be conducted or reviewed by independent third parties or staff independent of those that develop or maintain the security programs.

4. Develop, implement, and maintain, as part of its information security program, appropriate measures to properly dispose of customer information and consumer information in accordance with each of the requirements in this section III.

D. Oversee Service-Provider Arrangements

Each bank is to—

1. exercise appropriate due diligence in selecting its service providers;
2. require its service providers by contract to implement appropriate measures designed to meet the objectives of the information security standards; and
3. where indicated by the bank's risk assessment, monitor its service providers to confirm that they have satisfied their obligations with regard to the requirements for overseeing provider arrangements. As part of this monitoring, a bank should review audits, summaries of test results, or other equivalent evaluations of its service providers.

E. Adjust the Program

Each bank is to monitor, evaluate, and adjust, as appropriate, the information security program in light of any relevant changes in technology, the sensitivity of its customer information, internal or external threats to information, and the bank's own changing business arrangements, such as mergers and acquisitions, alliances and joint ventures, outsourcing arrangements, and changes to customer information systems.

F. Report to the Board

Each bank is to report to its board or an appropriate committee of the board at least annually. This report should describe the overall

status of the information security program and the bank's compliance with the information security standards. The reports should discuss material matters related to its program, addressing issues such as risk assessment; risk management and control decisions; service-provider arrangements; results of testing; security breaches or violations and management's responses; and

recommendations for changes in the information security program.

G. Implement the Standards

(For the effective dates, see 12 CFR 208, appendix D-2, section III.G.)

Information Technology

Examination Objectives

Effective date October 2008

Section 4060.2

1. To explicitly consider IT when developing risk assessments and supervisory plans.
2. To assess the types and levels of risks associated with information technology.
3. To exercise appropriate judgment in determining the level of review, given the characteristics, size, and business activities of the organization.
4. To develop a broad understanding of the organization's approach, strategy, and structure for IT activities within and across business lines.
5. To assess the adequacy of IT architecture and the ability of the current infrastructure to meet operating objectives, including the effective integration of systems and sources of data.
6. To assess the adequacy of the system of controls to safeguard the integrity of the data processed in critical information systems.
7. To determine if the board has developed, implemented, and tested contingency plans that will ensure the continued operation of the institution's critical information systems.
8. To ensure that operating procedures and controls are commensurate with the potential for and risks associated with security breaches, which may be either physical or electronic, inadvertent or intentional, or internal or external.
9. To determine the scope and adequacy of the IT audit function.
10. To evaluate IT outsourcing risk and outsourcing arrangements involving major lines of business.
11. To determine if the institution is complying with its written information security program and the minimum governing interagency standards on information security; the guidelines on the proper disposal of consumer information; and all applicable laws, rules, and regulations.
12. To find out if the financial institution (the bank and its respective operating subsidiaries) has developed, implemented, and maintained a written Identity Theft Prevention Program (Program) for its new and existing accounts that are covered by the Fair and Accurate Transactions Act of 2003 (FACT Act) and the Federal Reserve Board's rules on Fair Credit Reporting, section 222, Subpart J—Identity Theft Red Flags (12 CFR 222, Subpart J), which implements provisions of the FACT Act.
13. To make a determination of whether the financial institution's Program is
 - a. designed to detect, prevent, and mitigate identity theft in connection with the opening of a new, or an existing, covered account and that the Program includes the detection of relevant Red Flags;¹ and
 - b. appropriate to the size and complexity of the financial institution and the nature and scope of its activities.
14. To ascertain whether the financial institution assesses the validity of change of address notifications that it receives for the credit and debit cards that it has issued to customers.
15. To prepare comments for the report of examination on significant deficiencies and recommended corrective action.
16. To assign a Uniform Rating System for Information Technology (URSIT) rating or determine the impact of IT risks on the CAMELS or risk ratings.
17. To update the workpapers with any information that will facilitate future examinations.

1. Red Flag means a pattern, practice, or specific activity that indicates the possible existence of identity theft.

1. Determine the role and importance of IT to the organization and whether any unique IT characteristics or issues exist. Identify and list or update the major automated banking applications. For those applications processed by outside service providers, indicate the name and location of each service provider.
2. Incorporate an analysis of IT activities into risk assessments, supervisory plans, and scope memoranda, considering the size, activities, and complexity of the organization, as well as the degree of reliance on these systems across particular business lines.
3. Assess the organization's critical IT systems—those that support its major business activities—and the degree of reliance those activities have on IT systems. (See the *FFIEC Information Systems Examination Handbook* for more information on reviewing the IT function.)
4. Determine if the systems are delivering the services necessary for the organization to conduct its business in a safe and sound manner.
5. Determine whether the board of directors and senior management are adequately identifying, measuring, monitoring, and controlling risks associated with IT for the overall organization and its major business activities.
6. Determine if the IT strategy for the significant business activities or the organization is consistent with the organization's mission and business objectives. Determine whether the IT function has effective management processes to execute that strategy.
7. Review the reliability, accuracy, and completeness of information delivered in key business lines.
8. Review the bank's information security program. Assess the adequacy of the organization's policies, procedures, and controls, as well as its compliance with them.
9. Determine the capability of backup systems, as presented in contingency plans, to mitigate business disruption.
10. Ascertain the quality and adequacy of the internal or external IT audit function or any independent application reviews to ensure the integrity, security, and availability of the organization's systems.
11. Complete or update the information technology internal control questionnaire (section 4060.4) for the specific applications identified in step 1 of these procedures, noting any of the following:
 - a. internal control exceptions and noncompliance with written policies, practices, and procedures
 - b. violations of law
 - c. exceptions to IT-servicing contracts
 - d. overall evaluation of services provided to the bank, including any problems experienced with the servicer
12. Complete or update the "Establishing Information Security Standards" portion of the internal control questionnaire. (See section 4060.4.) Examiners should use this information to assess an institution's compliance with the interagency information security standards and the guidelines for the proper disposal of consumer information. Depending on the nature of the institution's operations and the extent of prior supervisory review, all questions may not need to be answered fully. Other examination resources may also be used (for example, the *FFIEC Information Systems Examination Handbook*). Examiners should conduct a review that is a sufficient basis for evaluating the overall written information security program of the institution and its compliance with the interagency guidelines.
13. Verify that the financial institution has determined initially, and periodically thereafter, whether it offers or maintains accounts covered by the Fair and Accurate Transactions Act of 2003 (FACT Act) and section 222, Subpart J—Identity Theft Red Flags of the Board's rules on Fair Credit Reporting (12 CFR 222, Subpart J).
14. Determine if the financial institution has adequately developed and maintains a written Identity Theft Prevention Program (Program) that is designed to detect, prevent, and monitor transactions to mitigate identity theft in connection with the opening of certain new and existing accounts covered by the FACT Act.

15. Evaluate whether the Program includes reasonable policies and procedures to
 - a. identify and detect relevant Red Flags¹ for the financial institution's covered accounts and whether it incorporated those Red Flags into its Program;
 - b. respond appropriately to any detected Red Flags to prevent and mitigate identity theft; and
 - c. ensure that the program is updated periodically to reflect changes in identity theft risks to customers and the safety and soundness of the financial institution.
16. If a required Program has been established by the financial institution, ascertain if it has provided for the Program's continued administration, including
 - a. involving the board of directors, an appropriate committee thereof, or a designated employee at the level of senior management in the continued oversight, development, implementation, and administration of the Program;
 - b. training staff, as necessary, to effectively implement the Program; and
 - c. appropriate and effective oversight of service provider arrangements; and
17. If the financial institution has established and maintains a required Program that applies to its covered accounts, determine if the institution's Program includes the relevant and appropriate guidelines within the rule's appendix J (12 CFR 222, appendix J).
18. Determine whether the institution's controls over outsourcing information- and transaction-processing activities are adequate. Evaluate the adequacy of controls over outsourcing arrangements in the following areas:
 - a. outsourcing risk assessment
 - b. selection of service providers
 - c. contracts
 - d. policies, procedures, and controls
 - e. ongoing monitoring
 - f. information access
 - g. audit
 - h. contingency plan
19. Determine whether the bank has properly notified the Federal Reserve Bank of new outsourced services in accordance with the Bank Service Corporation Act (12 USC 1865).
20. Review any recent IT reports of examination on the institution's service providers performed by the Federal Reserve or other regulatory authorities, and note any deficiencies. Obtain a listing of any deficiencies noted in the latest audit review. Determine that all deficiencies have been properly corrected.
21. For banks with material in-house processing, use the Uniform Rating System for Information Technology (URSIT) rating system to help evaluate the entity's overall risk exposure and risk-management performance. Evaluate the areas identified within each relevant URSIT component to assess the institution's ability to identify, measure, monitor, and control IT risks.
22. Determine the extent of supervisory attention needed to ensure that IT weaknesses are addressed and that associated risk is properly managed. Determine the impact on CAMELS, the operational-risk rating, and any other risk ratings.
23. Prepare comments for the report of examination on any significant deficiencies and recommended corrective action.
24. Update the workpapers with any information that will facilitate future examinations.

¹ Red Flag means a pattern, practice, or specific activity that indicates the possible existence of identity theft.

Information Technology

Internal Control Questionnaire

Effective date October 2008

Section 4060.4

Review the bank's internal controls, policies, practices, and procedures for information technology. The bank's system should be documented completely and concisely and should include, where appropriate, narrative description, flow charts, copies of forms used, and other pertinent information. Items below that are marked with an asterisk require substantiation by observation or testing.

SERVICER SELECTION

1. Before entering into any service arrangement, did management consider—
 - a. alternative servicers and related costs?
 - b. the financial stability of the servicer?
 - c. the control environment at the data center?
 - d. emergency backup provisions?
 - e. the ability of the servicer to handle future processing requirements?
 - f. requirements for termination of service?
 - g. the quality of reports?
 - h. insurance requirements?
2. Is there an annual reevaluation of the servicer's performance that includes—
 - a. its financial condition?
 - b. costs?
 - c. its ability to meet future needs?
 - d. its quality of service?

CONTRACTS

- *1. Is each automated application covered by a written contract?
- *2. Were contracts reviewed by legal counsel?
3. Does each service contract cover the following areas:
 - a. ownership and confidentiality of files and programs?
 - b. liability limits for errors and omissions?
 - c. frequency, content, and format of input and output?
 - d. the fee structure, including—
 - current fees?
 - provisions for changing fees?
 - fees for special requests?
 - e. provisions for backup and record protection?

INSURANCE

- *1. Does the serviced institution's insurance coverage include the following provisions:
 - a. extended blanket bond fidelity coverage to employees of the servicer?
 - b. insurance on documents in transit, including the cash letter?
 - c. if the serviced institution is relying on the servicer or an independent courier for the insurance described above, is adequate evidence of that coverage on file?

OPERATIONAL CONTROLS

- *1. Are duties adequately separated for the following functions:
 - a. input preparation?
 - b. operation of data-entry equipment?
 - c. preparation of rejects and unposted items for reentry?
 - d. reconciliation of output to input?
 - e. output distribution?
 - f. reconciliation of output to general ledger?
 - g. posting general ledger?
2. Are employee duties periodically rotated for control and training purposes?
3. Do supervisors or officers—
 - a. adequately review exception reports?
 - b. approve adjusting entries?

4. Are servicer personnel prohibited from initiating transactions or correcting data?
 5. Are individuals prohibited from initiating or authorizing a transaction and then executing it?
 6. Are employees at the serviced institution required to be absent from their duties (by vacation or job rotation) for two consecutive weeks?
 7. Are master-file changes—
 - a. requested in writing?
 - b. approved by a supervisor?
 - c. verified as correct after processing?
 - *8. Are exception reports prepared for—
 - a. unposted and rejected items?
 - b. supervisory-override transactions?
 - c. master-file changes (before and after)?
 - d. dormant-account activity?
 - *9. Does each user department—
 - a. establish dollar and nondollar control totals before they are sent for processing?
 - b. receive all scheduled output reports even when the reports contain no activity?
 - c. review all output and exception reports?
 - *10. Are current user manuals available for each application, and do employees use them?
 11. Does each user manual cover—
 - a. preparation and control of source documents?
 - b. control, format, and use of output?
 - c. settlement and reconciliation procedures?
 - d. error-correction procedures?
 12. Are users satisfied with the servicer's performance and output reports? (If not, explain.)
 13. Are computer-generated entries subsequently reviewed and approved by appropriate officials?
 - *14. Does the serviced institution copy all source documents, including cash letters, on microfilm before they leave the premises? If so—
 - a. is the microfilm stored in a secure location with limited access?
 - b. is an inventory and usage log maintained?
- b. physical keys?
 - c. passwords?
 - d. other safeguards (explain)?
 2. Are periodic changes made to numbers, keys, or passwords, and are they adequately controlled?
 3. Are identification numbers or passwords suppressed on all printed output and video displays?
 4. Are terminals controlled as to—
 - a. what files can be accessed?
 - b. what transactions can be initiated?
 - c. specific hours of operations?
 5. Do controls over restricted transactions and overrides include—
 - a. supervisory approval?
 - b. periodic management review?
 - *6. Are there exception reports that indicate—
 - a. all transactions made at a terminal?
 - b. all transactions made by an operator?
 - c. restricted transactions?
 - d. correcting and reversing entries?
 - e. dates and times of transactions?
 - f. unsuccessful attempts to gain access to the system or to restricted information?
 - g. unusual activity?
 7. Overall, are there adequate procedures in effect that prevent unauthorized use of the data communication systems?
 8. To back up online systems—
 - a. are offline capabilities available (explain)?
 - b. are the offline capabilities periodically tested?

AUDITING

1. Is there an internal auditor or member of management not directly involved in EDP activities who has been assigned responsibility for the audit function?
2. Does that individual have any specialized audit or EDP training?
3. Are there written internal audit standards and procedures that require—
 - a. review of all automated applications?
 - b. reports to the board of directors?
 - c. audit workpapers?
4. Does the person responsible for the

COMMUNICATION CONTROLS

- *1. Is user access to the data communication network controlled by—
 - a. user number?

- audit function perform the following procedures:
- a. test the balancing procedures of all automated applications, including the disposition of rejected and unposted items?
 - b. periodically sample master-file information to verify it against source documents?
 - c. spot-check computer calculations, such as interest on deposits, loans, securities, loan rebates, service charges, and past-due loans?
 - d. verify output report totals?
 - e. check accuracy of exception reports?
 - f. review master-file changes for accuracy and authorization?
 - g. trace transactions to final disposition to determine the adequacy of audit trails?
 - h. review controls over program-change requests?
 - i. perform customer confirmations?
 - j. other (explain)?
5. Does the serviced institution obtain and review the servicer's internal or external audits or third-party reviews? (If yes, detail exceptions and corrective action.)
 6. Has the serviced institution used an independent auditor to evaluate EDP servicing (if yes, detail exceptions and corrective action)?
 7. Is the overall audit program for serviced applications considered adequate?
3. Does the bank periodically update its information security program to reflect changes in the bank's operations and systems, as well as changes in threats or risks to the bank's customer information?
 4. Does the examination review of the bank's process for assessing risk to its customer information address the following questions:
 - a. Has the bank identified the locations, systems, and methods for storing, processing, transmitting, and disposing of its customer information?
 - b. Has the bank identified reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems, and has the bank assessed the likelihood of these threats and their potential damage to the bank and its customers?
 5. With respect to the bank's risk-management processes for implementing effective measures to protect customer information, does the bank adopt and review appropriate risk-based internal controls and procedures for the following:
 - a. accessing controls on computer systems containing customer information in order to prevent access by unauthorized staff or other individuals?
 - b. preventing employees from providing customer information to unauthorized individuals, including "pretext calling," that is, someone calling a bank and posing as a customer to fraudulently obtain an individual's personal information? (See SR-01-11.)
 - c. providing access restrictions at physical locations containing customer information, such as buildings, computer facilities, and records-storage facilities, in order to permit access to authorized individuals only?
 - d. encrypting electronic customer information, including information that is in transit or in storage on networks or systems, when unauthorized individuals are able to gain access to it?
 - e. ensuring that modifications to customer information systems are consistent with the bank's information security program?

ESTABLISHMENT OF INFORMATION SECURITY STANDARDS

1. Does the bank have a written information security program or policy that complies with the Interagency Guidelines Establishing Information Security Standards, in Regulation H, appendix D-2 (12 CFR 208, appendix D-2)? Has the board of directors or an appropriate designated committee of the board approved the written information security program?
2. Is the written information security program appropriate given the size and complexity of the organization and its operations? Does the program contain the objectives of the program, assign responsibility for implementation, and provide

- f. maintaining dual-control procedures, segregation of duties, and background checks for employees with access to customer information to minimize the risk of internal misuse of customer information?
 - g. monitoring systems and procedures to detect unauthorized access to customer information systems that could compromise the security of customer information?
 - h. maintaining and complying with the minimum requirements for response programs that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems? (These programs include appropriate reports, such as Suspicious Activity Reports by Depository Institutions (SAR-DI), disseminated to regulatory and law enforcement agencies.) See SR-07-2 and the attached June 2007 SAR-DI form, the requirements for suspicious-activity reporting in section 208.62 of the Board's Regulation H (12 CFR 208.62), and the Bank Secrecy Act compliance program in section 208.63 (12 CFR 208.63).
 - i. providing measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures?
 - j. providing measures to ensure the proper disposal of consumer information derived from consumer reports?
6. Have the bank's employees been trained to implement the information security program?
 7. Does the bank regularly test the effectiveness of the key controls, systems, and procedures of its information security program? These tests may include, for example, tests of operational contingency plans, system security audits or "penetration" tests, and tests of critical internal controls over customer information. Are tests conducted and reviewed independently by the bank's designated staff?
 8. Does the bank provide customer information to any service providers, or do any service providers have access to customer information as a result of providing services directly to the bank? If so—
 - a. has the bank conducted appropriate due diligence in selecting its service providers, taking into consideration information security?
 - b. do the bank's contracts with its service providers require implementation of appropriate information security programs and measures?
 - c. where appropriate and based on risk, does the bank monitor its service providers to confirm that they are maintaining appropriate security measures to safeguard the bank's customer information? Does the bank, for example, conduct or review the results of audits, security reviews or tests, or other evaluations?
 9. Does the bank's management report at least annually to the board of directors, or to a designated appropriate board committee, on the overall status of the information security program and the extent of the bank's compliance with the standards and guidelines?

IDENTITY THEFT RED FLAGS

1. Did the bank (financial institution) determine initially, and has it periodically determined, whether it offers or maintains accounts covered by the Fair and Accurate Transactions Act of 2003 (FACT Act) and section 222, Subpart J—Identity Theft Red Flags of the Board's rules on Fair Credit Reporting (12 CFR 222, Subpart J)?
2. Has the financial institution adequately developed and maintained a written Identity Theft Prevention Program (Program) that is designed to detect, prevent, and mitigate identity theft in connection with the opening of new and existing accounts that are covered by the FACT Act?
3. Did the financial institution evaluate whether its Program includes reasonable policies and procedures to
 - a. identify relevant Red Flags¹ for the financial institution's covered accounts and has it incorporated those Red Flags into its Program;

1. Red Flag means a pattern, practice, or specific activity that indicates the possible existence of identity theft.

- b. respond appropriately to prevent and mitigate identity theft detected by any Red Flags; and
 - c. ensure that the Program is updated periodically to reflect changes in identity theft risks to customers and to the safety and soundness of the financial institution?
4. Has the Program included Red Flags from sources such as
- a. incidents that the financial institution has experienced;
 - b. methods of identity theft that the financial institution has identified that reflects changes in identity theft risks; and
 - c. applicable supervisory guidance?
5. Does the Program include relevant Red Flags from the following categories (see supplement A to appendix J):
- a. alerts, notifications, or other warnings received from consumer reporting agencies or service providers, such as a fraud detection services;
 - b. the presentation of suspicious documents;
 - c. the presentation of suspicious personal identifying information, such as a suspicious address change;
 - d. the unusual use of, or other suspicious activity related to, a covered account; and
 - e. notice from customers, victims of identity theft, law enforcement authorities, or other persons regarding possible identity theft in connection with covered accounts held by the financial institution or creditor?
6. If the financial institution has established and maintained a required Program, has the institution's Program included the relevant and appropriate guidelines that are found in the Board's rule's appendix J (12 CFR 222, appendix J)?
7. Were the examples of factors in appendix J's guidelines considered initially, and periodically, to determine the relevancy and appropriateness of the Program's Red Flags, such as
- a. the types of accounts it offers or maintains;
 - b. the methods it provides to open its covered accounts;
 - c. the methods it provides to access its covered accounts;
 - d. its previous experiences with identity theft; and
 - e. changes in the financial institution's business arrangements, including its mergers, acquisitions, and joint ventures, and its alliances and service provider arrangements?
8. Does the Program's policies and procedures address the detection of Red Flags in connection with the financial institution's opening of covered accounts and existing covered accounts such as by
- a. obtaining identifying information about, and verifying the identity of, a person opening a covered account; and
 - b. authenticating customers, monitoring transactions; and verifying the validity of change of address requests?
9. If a required Program has been established by the financial institution, has it provided for the Program's continued administration by
- a. involving the board of directors, an appropriate committee thereof, or a designated employee at the level of senior management in the continued oversight, development, implementation, and administration of the Program?
 - b. training staff, as necessary, to effectively implement the Program?
 - c. providing appropriate and effective oversight of its service provider arrangements?

CONCLUSION

1. Does the foregoing information constitute an adequate basis for evaluating internal control (that is, no significant deficiencies in areas not covered in this questionnaire impair any controls)? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
2. On the basis of a composite evaluation, as evidenced by answers to the foregoing questions, is internal control considered adequate or inadequate?

Electronic and Internet banking products and services have been widely adopted by financial institutions and are now a regular component of the business strategies at most institutions. Electronic and Internet delivery of services can have many far-reaching benefits for financial institutions and their customers. In some cases, however, these activities can have implications for a financial institution's financial condition, risk profile, and operating performance.

EXAMINATION APPROACH

In general, examiners should review electronic and Internet banking activities when these services are newly implemented, particularly in institutions that may not have significant experience or expertise in this area or when an institution is conducting novel activities that may pose a heightened risk. Periodic reviews should be conducted thereafter based on any significant changes to the scope of services or nature of the operations, as indicated by an assessment of risk to the institution.

Clearly, electronic and Internet banking concerns could affect an institution's operational-risk profile. Yet, these activities could also affect other financial and business risks, depending on the specific circumstances. Accordingly, examiners should consider an institution's electronic and Internet banking activities when developing risk assessments and supervisory plans. Although electronic and Internet banking may be assessed within the context of an information technology review, the nontechnical aspects of an electronic banking operation should be reviewed and coordinated closely with other examination areas. Rather than conduct detailed technical reviews, examiners should assess the overall level of risk any electronic and Internet banking activities pose to the institution and the adequacy of its approach to managing these risks.

To determine the scope of supervisory activities, close coordination is needed with information technology specialist examiners and consumer compliance examiners during the risk-assessment and planning phase, as well as during on-site examinations. Given the variability of electronic and Internet banking environments, the level of technical expertise required for a particular examination will differ across

institutions and should be identified during the planning phase of the examination. When the bank has developed the electronic and Internet banking products or services internally or when a direct connection exists between the institution's electronic and Internet banking systems and its core data processing system, consideration should be given to involving an information technology specialist examiner in the on-site review. The determination of the examination scope should be based on factors such as the following:

- implementation of significant new electronic banking products and services since the last examination
- significant changes in the composition or level of customers, earnings, assets, or liabilities generated or affected by the electronic banking activities
- new or significantly modified systems or outsourcing relationships for activities related to electronic banking
- the need for targeted examinations of business lines that rely heavily on the electronic banking systems or activities
- other potential problems or concerns that may have arisen since the last examination or the need to follow up on previous examination or audit issues

Many resources are available to examiners for reviewing electronic and Internet banking activities. In addition to the procedures in this section, further information can be found in section 4060.1, "Information Technology," and in the *Federal Financial Institutions Examination Council (FFIEC) Information Systems Examination Handbook*. Other federal banking agencies have issued examination guidance relating to electronic and Internet banking, information technology, and information security that may be helpful to examiners in reviewing electronic banking activities. Consumer compliance issues are not addressed in this section.¹

1. See the Federal Reserve regulations, FFIEC, and other interagency supervisory guidance. See also the FFIEC's "Guidance on Electronic Financial Services and Consumer Compliance" (July 15, 1998), for further information regarding compliance with consumer laws and regulations.

OVERVIEW OF ELECTRONIC BANKING SERVICES

Types of Services

Electronic banking services (including Internet banking services) are designed to provide banking customers with the capability to conduct banking business remotely through personal computers and other electronic devices. Electronic banking comprises personal computer (PC) banking through traditional proprietary communication channels; retail and corporate Internet banking services; telephone banking; and, potentially, other forms of remote electronic access to banking services.

Both large and small institutions are now offering a variety of Internet-based financial services. Many financial institutions are using the Internet to enhance their service offerings to existing customers. Other organizations may choose to expand their customer base to a wider geographic area by accepting online applications for loan and deposit products. A very small number of banking organizations are focusing on the Internet as their primary delivery channel, whether or not they maintain physical branches.

Current electronic banking products and services typically allow customers to obtain information on bank products and services through the bank's Internet web sites, apply online for new products and services, view loan- and deposit-account balances and transactions, transfer funds between accounts, and perform other banking functions. Most electronic banking services now operate using standard Internet browser software installed on the customer's personal computer and do not require that the customer have any additional software or hardware. While electronic banking services have been oriented toward retail customers, many banking organizations are now offering small-business applications and corporate cash-management services through the Internet. These services typically include payroll, automated clearinghouse (ACH), and wire transfers. Wholesale banking services, which have been conducted electronically for many years, are also beginning to move from proprietary networks and communications channels to the Internet.

Information-only web sites provide the most basic and common form of electronic banking service. Most institutions contract with an Inter-

net service provider (ISP) to provide Internet access and "host," or maintain and operate, the institution's web site. In some cases, the web site is maintained on the institution's own computers (web servers). Even if access to account information is not possible through the web site, institutions may receive e-mail inquiries from customers through their web site.

Transactional Internet banking sites allow customers to obtain online access to their account information and initiate transactions over the Internet. With most Internet banking services, the customer interacts with a stand-alone Internet banking system that has been preloaded with the customer's account balances, transaction history, and other information. Transactions initiated through the Internet banking system are processed by a separate Internet banking application and periodically posted to the institution's general ledger, deposit, and loan accounting systems. Interface or connection with the financial institution's core data processing and accounting systems typically occurs through either (1) a direct connection to the core processing system over a network or (2) a manual download or transfer of transaction data to a diskette or other portable media, which is then uploaded or sent to the core processing system. Most standardized Internet banking software packages now available have been designed with standard interfaces between Internet banking systems and common core-processing systems and software.

Electronic bill-payment services are typically provided to customers as part of most standard electronic banking services. These services generally include capabilities to pay any third party the customer designates, as well as pay companies designated for routine bill payments, such as utilities and credit card issuers. Electronic bill-presentment services, which are much less common, involve the electronic transmission of billing statements to the customer through e-mail or a web site, for subsequent payment through the electronic banking service. Other more innovative Internet retail-payment mechanisms are being developed, but these typically involve very small-dollar transactions.

Telephone banking, a fairly conventional form of electronic banking, is provided by many institutions. Telephone banking services generally allow customers to check account balances and transactions and to pay bills through touch-tone or voice-response systems. A few banking organizations are also beginning to offer con-

sumer products and services through wireless devices, such as cellular telephones, pagers, personal digital assistants, handheld computers, or other devices that can provide wireless access to an institution's services, either directly or through the Internet. Account aggregation is a web-based service offered by some financial institutions that consolidates customer-account information from multiple financial or commercial web sites and presents it on a single web site. Aggregated information may include information from financial and nonfinancial accounts held by the customer. Some institutions have established "portals," web sites that link customers to a variety of third-party sites, and alliances with other companies to provide banking or nonbanking services.

Operations

There are a variety of operational methods for providing electronic banking services. Banking organizations may perform their core data processing internally but outsource the Internet banking activities to a different vendor or service provider. A dedicated workstation at the financial institution is often used to transmit transaction data files between the institution's core processing system and the Internet application; the workstation also allows the financial institution to update parameters and perform other maintenance. Alternatively, the service provider for Internet banking may interface directly with the bank's core-processing service provider, if that function is also outsourced. In addition, many banking organizations now purchase Internet banking services from their primary core-processing service provider, eliminating the need for external data transmissions. Even with this last structure, the institution maintains a local workstation to provide access to customer information or perform other administrative and maintenance functions for the Internet banking system.

Other institutions operate an electronic banking system in their own computer facilities by purchasing an "off-the-shelf" or turnkey electronic banking software application from a software vendor and then installing the software on their own system. Turnkey options vary from a bank's purchase and use of templates or modules, in which the bank chooses from a selection of standard services, to more complex situations

in which the software vendor designs and develops the electronic banking software application to the bank's specifications. Turnkey vendors often provide hardware, software, and ongoing system service and maintenance.

Bill-payment processing is generally conducted through a specialized third-party processor. The payment processor receives payment instructions from the financial institution or the Internet banking service provider, initiates an ACH debit to the account of the customer, and credits the account of the payee. Payments to payees not set up to receive ACH payments, such as individuals and smaller companies, are transmitted by mailing a paper check to the payee.

RISK MANAGEMENT

Board and Management Oversight

Financial institutions commonly implement electronic banking services as a means of delivering existing banking products and services to existing customers. As a result, not all institutions have established a distinct risk-management program for electronic banking. In many cases, policies and procedures for electronic banking activities will be incorporated into existing policies and procedures, such as those governing deposit accounts, payments processing, information security, and lending functions.

Bank management should assess the financial impact of the implementation and ongoing maintenance of electronic banking services. For example, ongoing maintenance and marketing costs of Internet banking operations can be substantial, particularly for smaller banks, depending on the institution's business plan. Bank management should consider the potential impact on the institution's customer base, loan quality and composition, deposit volume, volatility, liquidity sources, and transaction volume, as well as the impact on other relevant factors that may be affected by the adoption of new delivery channels. These areas should be monitored and analyzed on an ongoing basis to ensure that any impact on the institution's financial condition resulting from electronic banking services is appropriately managed and controlled.

In addition, bank management may wish to review periodic reports tracking customer usage, problems such as complaints and downtime,

unreconciled accounts or transactions initiated through the electronic banking system, and system usage relative to capacity. Management should also consider the expertise of internal or external auditors to review electronic banking activities and the inclusion of electronic banking activities within audit plans. Insurance policies may need to be updated or expanded to cover losses due to system security breaches, system downtime, or other risks from electronic banking activities.²

A change in an institution's business strategy to an Internet-only or Internet-focused operation is generally considered a significant change in business plan.³ In addition, certain technology operations, such as providing ISP services to the general public, may not be considered permissible banking activities or may be considered permissible by the institution's chartering authority only within certain limitations.

A financial institution should also consider legal ownership of its Internet address (for example, www.bankname.com), also known as its "domain name." Contracts with third-party vendors may specially address any arrangements to have the third-party vendor register the domain name on behalf of the institution.

Operational and Internal Controls

Web Site Information Maintenance

Because an institution's web site is available on an ongoing basis to the general public, appropriate procedures should be established to ensure the accuracy and appropriateness of its information. Key information changes and updates, such as loan rates, are normally subject to documented authorization and dual verification.

2. See section 4040.1, "Management of Insurable Risks," for further information about fraud and computer-related insurance that may be applicable to electronic banking activities.

3. Regulation H sets forth the requirements for membership of state-chartered banks in the Federal Reserve System and imposes certain conditions of membership on applicant banks. A member bank must "at all times conduct its business and exercise its powers with due regard to safety and soundness" and "may not, without the permission of the Board, cause or permit any change in the general character of its business or in the scope of the corporate powers it exercises at the time of admission to membership" (12 CFR 208.3(d)(1) and(2)).

Establishing procedures and controls to frequently monitor and verify web site information may help prevent any inadvertent or unauthorized modifications or content, which could lead to reputational damage or violations of advertising, disclosure, or other compliance requirements.

In addition, some institutions provide financial-calculator, financial-management, tax-preparation, and other interactive programs to customers. Institutions may provide online resources for customers to research available options associated with savings products, mortgages, investments, insurance, or other products and services. To protect the institution from potential liability or reputational harm, the bank should test or otherwise verify the accuracy and appropriateness of these tools.

Banks should carefully consider how links to third-party Internet web sites are presented. Hyperlinks to other web pages provide customers with convenient access to related or local information, as well as provide a means for targeted cross-marketing through agreements between the institution and other web site operators. However, such linkages may imply an endorsement of third-party products, services, or information that could lead to implicit liability for the institution. As a result, institutions commonly provide disclaimers when such links take the customer to a third-party web site. Institutions should ensure that they clearly understand any potential liabilities arising out of any cross-marketing arrangements or other agreements with third parties. Any links to sites offering nondeposit investment or insurance products must comply with relevant interagency guidelines.⁴ Links to other sites should be verified regularly for their accuracy, functionality, and appropriateness.

Electronic Banking Accounts, Customer Authentication, and Administrative Controls

Many banks use the same account-opening procedures for electronic applications as they do for mailed or in-person applications. Procedures for accepting electronic account applications generally address areas such as—

4. See section 4170.3, "Examination Procedures—Retail Sales of Nondeposit Investment Products," and the consumer protection rules for sales of insurance (65 Fed. Reg. 75,822 (December 4, 2000)).

- the type of funding accepted for initial deposits;
- funds-availability policies for deposits in new accounts;
- the timing of account-number, check, and ATM-card issuance;
- the minimum customer information required to open new accounts;
- single-factor, tiered single-factor, and multi-factor authentication procedures for verification of information provided by the applicant (for example, verifying customer information against credit bureau reports); and
- screening for prior fraudulent account activity, typically using fraud-detection databases.⁵

Authentication procedures. Strong customer-authentication practices are necessary to help institutions detect and reduce fraud, detect and reduce identity theft, and enforce anti-money-laundering measures.⁶ Customer interaction with institutions is migrating from physical recognition and paper-based documentation to remote electronic access and transaction initiation. Significant risks potentially arise when an institution accepts new customers through the Internet or other purely electronic channels because of the absence of the physical cues that bankers traditionally use to identify individuals. The risks of doing business with unauthorized or incorrectly identified individuals in an electronic banking environment could result in financial loss and reputation damage.

5. For information on practices that may help prevent fraudulent account activity, see SR-01-11, "Identity Theft and Pretext Calling."

6. The FFIEC issued the October 12, 2005, "Guidance on Authentication in an Internet Banking Environment," which was adopted by the federal banking and thrift regulatory agencies. As discussed in this section, the guidance addresses the need for risk-based assessments, customer awareness, and enhanced security measures to authenticate customers using Internet-based products and services that process high-risk transactions involving access to customer information or the movement of funds to other parties. Single-factor authentication, as the only control mechanism, is inadequate for high-risk transactions involving access to customer information or the movement of funds to other parties. Financial institutions will be expected to have achieved conformance with the guidance by year-end 2006. (See SR-05-19.) This interagency guidance updates the August 8, 2001, FFIEC guidance, "Authentication in an Electronic Banking Environment." To assist the banking industry and examiners, the Board, the FFIEC, and the other federal banking and thrift agencies issued frequently asked questions (FAQs) on August 15, 2006. (See SR-06-13.) The FAQs are designed to assist the financial institutions and their technology service providers in conforming to the guidance by addressing common questions on the scope, risk assessments, timing, and other issues.

In addition to limiting unauthorized access, effective authentication provides institutions with the appropriate foundation for electronic agreements and transactions. First, effective authentication provides the basis for the validation of parties to the transaction and their agreement to its terms. Second, authentication is a necessary element to establish the *authenticity* of the records evidencing the electronic transaction if there is ever a dispute. Third, authentication is a necessary element for establishing the *integrity* of the records evidencing the electronic transaction. Because state laws vary, management should involve legal counsel in the design and implementation of authentication systems.

The success of a particular authentication method depends on more than the technology. Success also depends on an institution's having appropriate policies, procedures, and controls. An effective authentication method has the following characteristics: customer acceptance, reliable performance, scalability to accommodate growth, and interoperability with existing systems and future plans.

Institutions can use a variety of authentication tools and methodologies to authenticate customers. These tools include the use of passwords and personal identification numbers (PINs), digital certificates using a public key infrastructure (PKI), physical devices such as smart cards or other types of "tokens," database comparisons, and biometric identifiers. The level of risk protection afforded by each of these tools varies and is evolving as technology changes.

Existing authentication methodologies involve three basic "factors":

- something the user *knows* (a password or PIN)
- something the user *possesses* (an ATM card or a smart card)
- something the user *is* (a biometric characteristic, such as a fingerprint or retinal pattern)

Authentication methods that depend on more than one factor typically are more difficult to compromise than single-factor systems. Accordingly, properly designed and implemented multifactor authentication methods are more reliable indicators of authentication and are stronger fraud deterrents. For example, the use of a log-on ID or password is single-factor authentication (something the user knows), whereas a transaction using an ATM typically requires two-factor authentication (something the user

possesses—the card—combined with something the user knows—the PIN). In general, multifactor authentication methods should be used on higher-risk systems. Further, institutions should be sensitive to the fact that proper implementation is key to the reliability and security of any authentication system. For example, a poorly implemented two-factor system may be less secure than a properly implemented single-factor system.

Risk assessment. An effective authentication program should be implemented on an enterprise-wide basis to ensure that controls and authentication tools are adequate among all products, services, and lines of business. Authentication processes should be designed to maximize interoperability and should be consistent with the financial institution's overall strategy for electronic banking and e-commerce customer services. The level of authentication a financial institution uses in a particular application should be appropriate to the level of risk in that application.

The implementation of appropriate authentication methods starts with an assessment of the risk posed by the institution's electronic banking systems. The risk should be evaluated in light of the type of customer (retail or commercial), the institution's transactional capabilities (bill payment, wire transfer, or loan origination), the sensitivity and value of the stored information to both the institution and the customer, the ease of using the authentication method, and the size and volume of transactions. The Federal Reserve expects financial institutions to assess the risks to the institution and its customers and to implement appropriate authentication methods to effectively manage risk.

An enterprise-wide approach to authentication requires development of and adherence to corporate standards and architecture, integration of authentication processes within the overall information security framework, risk assessments within the institution's lines of business that support the selection of authentication tools, and a central authority for oversight and risk monitoring. The authentication process should be consistent and support the financial institution's overall security and risk-management programs.

The method of authentication used in a specific electronic application should be appropriate and "commercially reasonable" in light of the reasonably foreseeable risks in that applica-

tion. Because the standards for implementing a commercially reasonable system may change over time as technology and other procedures develop, financial institutions and service providers should periodically review authentication technology and ensure appropriate changes are implemented.

Single-factor authentication tools, including passwords and PINs, have been widely accepted as commercially reasonable for a variety of retail e-banking activities, including account inquiry, bill payment, and account aggregation. However, financial institutions should assess the adequacy of existing authentication techniques in light of changing or new risks (for example, the increasing ability of hackers to compromise less robust single-factor techniques). Financial institutions are cautioned that single-factor authentication alone may not be commercially reasonable or adequate for high-risk applications and transactions. Instead, multifactor techniques may be necessary. Institutions should recognize that a single-factor system may be "tiered" to enhance security without implementing a two-factor system. A tiered single-factor authentication system would include the use of multiple levels of a single factor (for example, the use of two or more passwords or PINs employed at different points in the authentication process).

Account origination and customer verification. Institutions need to use reliable methods for originating new customer accounts online. Customer-identity verification during account origination is important in reducing the risk of identity theft, fraudulent account applications, and unenforceable account agreements or transactions. In an electronic banking environment, reliance on traditional forms of paper-based authentication is decreased substantially. Accordingly, financial institutions need to use reliable alternative methods. For example, verification of personal information could include the following:

- *Positive verification* to ensure that material information provided by an applicant matches information available from trusted third-party sources. More specifically, an institution can verify a potential customer's identity by comparing the applicant's answers to a series of detailed questions against information in a trusted database (for example, a reliable credit report) to see if the information supplied by

the applicant matches information in the database. As the questions become more specific and detailed, correct answers provide the institution with an increasing level of confidence that the applicants are who they say they are.

- *Logical verification* to ensure that information provided is logically consistent. (For example, do the telephone area code, ZIP code, and street address match?)
- *Negative verification* to ensure that information provided has not previously been associated with fraudulent activity. For example, applicant information can be compared against fraud databases to determine whether any of the information is associated with known incidents of fraudulent behavior. In the case of commercial customers, however, a sole reliance on online electronic database comparison techniques is not adequate since certain documents needed to establish an individual's right to act on a company's behalf (for example, bylaws) are not available from databases. Institutions must still rely on traditional forms of personal identification and document validation combined with electronic verification tools.

Transaction initiation and authentication of established customers. Once an institution has successfully verified a customer's identity during the account-origination process, it should authenticate customers who wish to gain access to the online banking system. Institutions can use a variety of methods to authenticate existing customers. These methods include the use of passwords, PINs, digital certificates and a PKI, physical devices such as tokens, and biometrics.

Minimizing fraud risk. An institution's policies and procedures should address the management of existing customers' accounts to minimize the risk of fraudulent activity. For example, the customer's ability to expand an existing account relationship through the electronic banking system may warrant added controls, such as sending a separate notification to a customer's physical address when online account access is first requested or when PINs, e-mail addresses, or other key parameters are changed.

To mitigate fraud risk, institutions may establish dollar limits on transactions initiated through the electronic banking application, or they may monitor transactions above specified limits, depending on the type of account (for example,

consumer versus corporate). These limits or a similar monitoring system may help detect unusual account activity, which could indicate fraudulent transactions or other suspicious activity.

Funds transfer systems and Internet banking. Any manual interface between the electronic banking system and funds transfer systems, such as capabilities for uploading ACH or Fedwire transactions initiated through the electronic banking system to Fedline terminals, should be subject to system-access controls and appropriate internal controls, such as segregation of duties. Some institutions also permit electronic banking customers to initiate electronic (ACH) debits against accounts held at other institutions; reliable controls to verify that the customer is entitled to draw funds from the particular account are needed if this feature is offered.

Electronic bill-payment services are commonly provided as a component of electronic banking services. The institution should have a direct agreement with bill-payment providers, which may be subcontractors of the provider for the institution's Internet banking services. In this situation, it may be difficult for the institution or its customers to obtain timely and accurate information regarding the status of payment requests. As a result, contracts with service providers that encompass bill-payment services should generally address how payments are made, when payments are debited from a customer account, the treatment of payments when the account has insufficient funds on the settlement date, reconciliation procedures, and problem-resolution procedures.

Even when Internet banking operations are outsourced to a service provider, institutions will generally have access to the electronic banking system through a dedicated desktop computer or workstation. This hardware allows the institution to upload and download transaction information; review transaction logs or audit trails; print daily reports; or, in some cases, reset customer passwords, resolve errors, or respond to customer inquiries. These workstations should be located in secure areas and be subject to normal authorization and access controls and transaction audit trails.

Information Security

Electronic banking activities should be

addressed in an institution's information security program, which should include compliance with the federal banking agencies' information security standards.⁷ Institutions need to pay particular attention to the security of customer information, given the heightened security concerns associated with providing access to customer information over the Internet. An institution's written information security policies and procedures should include electronic banking activities. Institutions should implement prudent controls that limit the risk of unauthorized access to key systems, including password-administration controls, firewalls, encryption of sensitive information while it is in transit or being stored, maintenance of all current updates and security patches to software and operating systems, and controls to prevent insider misuse of information. Sound information security practices include procedures and systems to detect changes to software or files, intrusion-detection systems, and security-vulnerability assessments.

While the technical aspect of information security considerations for electronic banking activities is complex, widely used turnkey software applications for Internet banking generally conform to accepted industry standards for technical security. Detailed assessments of the technical security of specific systems are the responsibility of the institution and its qualified engineers and internal and external auditors. Examiners should focus on the institution's implementation of key security controls for the particular software application.

Any security breaches of an institution's electronic banking service or web site that may lead to potential financial losses or disclosure of sensitive information should be reported to an appropriate management level within the institution. If necessary, the appropriate suspicious-activity report should be filed. Institutions should ensure that their service providers notify them of any computer security breaches in their operations that may affect the institution. Institutions should determine the cause of any such intrusions and develop an appropriate plan to limit any resulting financial losses to the bank and its customers and to prevent recurrence.

7. See section 4060.1 under "Standards for Safeguarding Customer Information" for further details and examination procedures. See also SR-01-25.

Passwords and System-Access Controls

Most institutions use identifiers such as account numbers or ATM card numbers, together with passwords or PINs, to verify the authorization of users accessing the retail electronic banking system. (Wholesale or corporate cash-management systems may use more secure methods, such as smart cards that contain customer credentials, real-time passwords (passwords that can be immediately changed online), or dedicated terminals, to authenticate users.) Prudent password-administration procedures generally require that customer passwords be changed if compromised and that passwords do not automatically default to easily guessed numbers or names. Passwords and PINs are (1) generally encrypted while in transit or storage on insecure networks or computers, (2) suppressed on screen when entered on a keyboard, and (3) suspended after a predetermined number of failed log-in attempts. Institutions should establish clear policies and procedures for retrieving or resetting customer passwords when customers lose or forget their password to minimize the risk that passwords are disclosed to unauthorized individuals.⁸

Firewalls

A firewall is a security control consisting of hardware, software, and other security measures established to protect the bank's internal data and networks, as well as its web sites, from unauthorized external access and use through the Internet. A number of banks and their vendors use various firewall products that meet industry standards to secure their Internet banking services, web sites, and other bank networks. For a firewall to adequately protect a bank's internal networks and systems, it must be properly installed and configured. Firewalls are most effective when all updates and patches to the firewall systems are installed and when the firewall configuration is reassessed after every system change or software update.

Viruses

Computer viruses can pose a threat to information systems and networks that are connected to

8. See SR-05-19 for further information on password-administration practices.

the Internet. In addition to destroying data and possibly causing system failure, viruses can potentially establish a communication link with an external network, allow unauthorized system access, or even initiate unauthorized data transmission. Widely used protection measures include using anti-virus products that are installed and are resident on a computer or network or providing for virus scanning during downloads of information or the execution of any program. Bank employees and electronic banking customers should be educated about the risks posed to systems by viruses and other malicious programs, as well as about the proper procedures for accessing information to help avoid these threats.

Encryption of Communications

Information transmitted over the Internet may be accessible to parties other than the sender and receiver. As a result, most retail electronic commerce services use industry-standard secure sockets layer (SSL) technology to encrypt sensitive transactional information between the customer and the web site to minimize the risk of unauthorized access to this information while it is in transit. Although stronger encryption techniques may be warranted for higher-value corporate or wholesale transactions, SSL is generally considered adequate for retail Internet banking transactions.⁹

In addition, many banks accept communications through standard Internet e-mail; in some cases, account applications containing sensitive customer data may be sent to the bank. These communications are generally not protected by SSL or a similar technology but are open to potential unauthorized access. If the electronic banking system does not provide for encrypted e-mail, the bank should ensure that customers (and customer-service representatives) are alerted not to send confidential information by unencrypted e-mail.

Security Testing and Monitoring

Assessments of information security vulnerability, penetration testing, and monitoring help ensure that appropriate security precautions have been implemented and that system security con-

figurations are appropriate. Some institutions contract with third-party security experts to provide these services. Vulnerability assessments provide an overall analysis of system security and report any system vulnerabilities. Such assessments can detect known security flaws in software and hardware, determine system susceptibility to known threats, and identify vulnerabilities such as settings that are contrary to established security policies.

Penetration testing and vulnerability assessments identify an information system's vulnerability to intrusion. Penetration tests examine system security by mimicking external intrusion attempts to circumvent the security features of a system. However, a penetration test is only a snapshot in time and does not guarantee that the system is secure.

Intrusion detection is an ongoing process that monitors the system for intrusions and unusual activities. Intrusion-detection systems, which can be installed on individual computers and at locations on a network, can be configured to alert appropriate system personnel to potential intrusions at the time they occur. In addition, the detection systems provide ongoing reporting and monitoring of unusual events such as potential intrusions or patterns of misuse.

Contingency Planning

Periodic downtime and outages are common with online services. But when the duration or disruption of these outages is significant, it can lead to reputational risk for the institution. For many institutions, short disruptions of electronic banking services may not have a material effect on their operations or customers, as other delivery channels are available. Nevertheless, electronic banking services should be covered by an institution's business-continuity plans. Institutions should assess their disaster-recovery needs by considering the length of time that electronic banking services could be unavailable to customers or for internal processing, and then design backup capabilities accordingly. In some cases, institutions may need to establish the capability to move processing to a different network or data center, or to move electronic banking services to a backup web site.

Typically, the electronic banking system includes capabilities to generate backup files on tapes, diskettes, or other portable electronic

9. The industry is moving toward a standard of 128-bit encryption for SSL communications.

media containing key transaction and customer data. Web site information should also be subject to periodic backup. Security and internal controls at backup locations should be as sophisticated as those in place at the primary site. If a bank outsources electronic banking operations to a service provider, the institution should have a full understanding of the service provider's contingency and business-recovery commitments.¹⁰

Outsourcing Arrangements

Many institutions outsource electronic banking

10. For additional information on business resumption and contingency planning in relation to outsourcing, see section 4060.1, "Information Technology," and the *FFIEC Information Systems Examination Handbook*.

operations to an affiliate or third-party vendor. In addition to operating the Internet banking software application, service providers may provide services such as web site hosting and development, Internet access, and customer service or call-center maintenance. As with other areas of a bank's operations, examiners should evaluate the adequacy of the institution's oversight of its critical service providers.¹¹

Banking organizations should consider requiring Internet banking service providers to obtain periodic security reviews performed by an independent party. The client institution should receive reports summarizing the findings.

11. See section 4060.1, "Information Technology," and the *FFIEC Information Systems Examination Handbook* for information on risk management for outsourcing arrangements.

Electronic Banking Examination Objectives

Effective date November 2001

Section 4063.2

1. To develop an understanding of the significance of the bank's electronic banking activities within and across business lines.
2. To assess the types and levels of risks associated with the bank's electronic banking activities.
3. To exercise appropriate judgment when determining the level of review, given the characteristics, size, and business activities of the organization.
4. To assess the current and potential impact of electronic banking activities on the institution's financial profile and condition.
5. To assess the adequacy of risk management and oversight of electronic banking activities, including outsourced activities.
6. To determine if the institution is complying with other applicable laws, rules and regulations.
7. To prepare examination report comments on significant deficiencies and recommended corrective action.
8. To determine the impact, if any, of electronic banking risks on the CAMELS rating, information technology rating, and risk-management ratings.
9. To update the workpapers with any information that will facilitate future examinations.

Electronic Banking Examination Procedures

Effective date May 2006

Section 4063.3

1. Identify the bank's current and planned electronic banking activities and review the bank's public Internet web sites. Consider whether the bank provides the following types of services:
 - a. telephone banking
 - b. retail Internet banking services
 - c. corporate or wholesale Internet banking services
 - d. Internet service provider (ISP)
 - e. brokerage services over the Internet
 - f. insurance services over the Internet
 - g. trust services over the Internet
 - h. account aggregation
 - i. electronic bill payment
 - j. other activities (for example, web portals, financial calculators, cross-marketing arrangements and alliances, or unique services)
2. Review prior examination findings and workpapers related to electronic banking, including consumer compliance, information technology, and other examination areas that may be relevant.
3. Determine if material changes have been made to electronic banking products, services, or operations since the last examination and if any significant changes are planned in the near future.
4. Determine the significance of the bank's electronic banking activities. Consider the following areas:
 - a. approximate percentages and numbers of customers (for example, loan and deposit) that regularly use electronic banking products and services
 - b. lending and deposit volumes generated from Internet applications
 - c. the current monthly transaction and dollar volume for electronic banking services
 - d. costs and fees to operate the system and related services or marketing programs
5. Incorporate an analysis of electronic banking activities into risk assessments, supervisory plans, and scope memoranda, considering the size, activities, and complexity of the organization, as well as the significance of the activities across particular business lines.
6. Assess the level of risk and the current or potential impact of electronic banking activities on the organization's earnings, liquidity, asset quality, operational risk, and consumer compliance. Communicate any concerns to examiners reviewing these areas.
7. Determine if the bank operates its web sites, electronic banking systems, or core data processing systems internally and whether any activities are outsourced to a vendor. If outsourced, all activities should be supported by written agreements that have been reviewed by the bank's legal counsel. Identify the location of the following operations:
 - a. design and maintenance of the bank's public web site or home page
 - b. computer or server for the bank's public web site
 - c. development and maintenance of the bank's electronic banking systems
 - d. computer or server for the bank's electronic banking systems
 - e. customer service (for example, a call center) for electronic banking services
 - f. electronic bill-payment processing or other ancillary services
8. If the bank operates the electronic banking system or core data processing system in-house, review the topology (schematic diagram) of the systems and networks, and determine whether there is a direct, online connection between the bank's core processing systems and the electronic banking system.
9. If the bank operates the electronic banking system or core data processing system in-house, review the transaction-processing flows between the electronic banking system and the bank's core processing systems and identify key control points. Determine whether information is exchanged in a real-time, batch (overnight), or hybrid-processing mode.
10. Review any available audits or third-party reviews of vendors or service providers the bank uses, such as SAS 70 reports.¹ Review any Federal Financial Institutions Examination

1. The American Institute of Certified Public Accountants (AICPA) Statement of Auditing Standards (SAS) No. 70 "Reports on the Processing of Transactions by Service Organizations," as amended by SAS No. 78, "Consideration of Internal Control in a Financial Statement Audit: An Amendment to Statement on Auditing Standards No. 55."

tion Council (FFIEC) Shared Application Software Review (SASR) reports or any FFIEC or other supervisory examination reports of service providers that the institution uses.

11. Determine the adequacy of risk management for electronic banking activities (including single-factor and tiered single-factor or multifactor authentication methods for prospective and existing customers), given the level of risk these activities pose to the institution.² Complete or update relevant portions of the electronic banking internal control questionnaire as needed for the specific electronic banking activities identified in the previous steps of these procedures to evaluate the adequacy of—
 - a. policies and procedures governing electronic banking activities,
 - b. internal controls and security for electronic banking activities,
 - c. audit coverage for electronic banking activities,
 - d. monitoring and compliance efforts,
 - e. vendor and outsourcing management, and
 - f. board and management oversight.
12. Perform additional analysis and review, consulting with information technology specialists, consumer compliance specialists, or other subject-matter experts as needed, on areas of potential concern.
13. Determine the impact of any electronic banking activities or internal-control deficiencies on the financial condition of the organization.
14. Determine the extent of supervisory attention needed to ensure that any weaknesses are addressed and that associated risk is adequately managed.
15. Determine the impact of any deficiencies on the CAMELS rating, information technology rating, operational-risk rating, and any other relevant supervisory ratings.
16. Prepare comments for the examination report on any significant deficiencies and recommended corrective action.
17. Update the workpapers with any information that will facilitate future examinations.

2. See SR-05-19, “FFIEC Guidance on Authentication in an Internet Banking Environment.”

Electronic Banking Internal Control Questionnaire

Effective date May 2007

Section 4063.4

Review the bank's internal controls, policies, practices, and procedures for electronic banking activities. Complete those questions necessary to assess whether any potential concerns warrant further review.

POLICIES AND PROCEDURES

1. Are updates and changes to the bank's public web sites—
 - a. made only by authorized staff?
 - b. subject to dual verification?
2. Are web site information and links to other web sites regularly verified and reviewed by the bank for—
 - a. accuracy and functionality?
 - b. potential reputational, compliance, and legal risk?
 - c. appropriate disclaimers?
3. Do operating policies and procedures include—
 - a. procedures for and controls over the opening of new customer accounts submitted through electronic channels in order to verify potential customer identity and financial condition?
 - b. single-factor and tiered single-factor or multifactor procedures for authenticating the identity of prospective and existing customers when administering access to the electronic banking system (for example, customer passwords, personal identification numbers (PINs), or account numbers)?
 - c. requirements for review of or controls over wire transfers or other large transfers initiated through the electronic banking system, to watch for potentially suspicious activity?
 - d. appropriate authorizations for electronic debits initiated against accounts at other institutions, if such transfers are allowed?
 - e. depending on the type of account, dollar limits on transactions over a given time period initiated through the electronic banking service?
 - f. reconciliation and accounting controls over transactions initiated through the electronic banking system, including electronic bill-payment processing?

4. Do written information security policies and procedures address electronic banking products and services?
5. Are business-recovery procedures adequate? Do the procedures address—
 - a. events that could affect the availability of the electronic banking system, such as system outages, natural disasters, or other disruptions?
 - b. planned recovery times that are consistent with how important electronic banking activities are to the institution?
6. Has management established an adequate incident-response plan to handle and report potential system security breaches, web site disruptions, malicious tampering with the web site, or other problems?

AUDIT AND INDEPENDENT REVIEW

1. Do the bank's internal and external audit programs address electronic banking activities and systems?
2. Is the level of audit review commensurate with the risks in electronic banking activities and systems?
3. Do audits address—
 - a. the review and testing of the bank's internal controls relating to electronic banking?
 - b. the review of service-provider performance relative to contract terms, if services are outsourced?
 - c. the review of the service providers' internal or external audits or third-party reviews, if services are outsourced?
4. Is management's response to any audit recommendations timely and appropriate?

INTERNAL CONTROLS AND SECURITY

1. Has the bank or service provider implemented a firewall to protect the bank's web site?
2. Are ongoing monitoring and maintenance arrangements for the firewall in place to ensure that it is properly maintained and configured?

3. If the bank uses a turnkey electronic banking software package or outsources to a service provider—
 - a. are bank staff familiar with key controls detailed by the vendor's security and operating manuals and training materials?
 - b. are workstations that interface with the service provider's system for administrative procedures or for the transfer of files and data kept in a secure location with appropriate password or other access control, dual-verification procedures, and other controls?
4. Does the bank's control of customer access to the electronic banking system include—
 - a. procedures to ensure that only appropriate staff are authorized to access electronic banking systems and data, including access to any workstations connected to a remote system located at a service provider?
 - b. levels of authentication methods that are commensurate with the level of risk in the bank's electronic banking applications?
 - c. the length and composition of passwords and PINs?
 - d. encryption of passwords and PINs in transit and storage?
 - e. the number of unsuccessful log-on attempts before the password is suspended?
 - f. procedures for resetting customer passwords and PINs?
 - g. automatic log-off controls for user inactivity?
5. Have security-vulnerability assessments and penetration tests of electronic banking systems been conducted? Has the bank reviewed the results?
6. Has the bank or its service provider established—
 - a. an intrusion-detection system for electronic banking applications?
 - b. procedures to detect changes in electronic banking files and software?
 - c. measures to protect the electronic banking system from computer viruses?
 - d. procedures for ensuring on an ongoing basis that electronic banking applications, operating systems, and the related security infrastructure incorporate patches and upgrades that are issued to address known security vulnerabilities in these systems?
7. If e-mail is used to communicate with customers, are communications encrypted or does the bank advise customers not to send confidential information through e-mail?

MONITORING AND COMPLIANCE

1. Are adequate summary reports made available to management to allow for monitoring of—
 - a. web site usage?
 - b. transaction volume?
 - c. system-problem logs?
 - d. exceptions?
 - e. unreconciled transactions?
 - f. other customer or operational issues?
2. Has management established adequate procedures for monitoring and addressing customer problems with electronic banking products and services?
3. Does management accurately report its primary public web-site address on its Consolidated Report of Condition and Income?
4. Have required Suspicious Activity Report by Depository Institutions (SAR-DI) forms involving electronic banking, including any computer intrusions, been filed? See SR-07-2 and the attached June 2007 SAR-DI form, the requirements for suspicious-activity reporting in section 208.62 of the Board's Regulation H (12 CFR 208.62), and the Bank Secrecy Act compliance program in section 208.63 (12 CFR 208.63).

VENDORS AND OUTSOURCING

1. Is each significant vendor, service provider, consultant, or contractor relationship that is involved in the development and maintenance of electronic banking services covered by a written, signed contract? Depending on the nature and criticality of the services, do contracts specify—
 - a. minimum service levels and remedies or penalties for nonperformance?
 - b. liability for failed, delayed, or erroneous transactions processed by the service provider and for other transactions in which losses may be incurred (for example, insufficient funds)?
 - c. contingency plans, recovery times in the event of a disruption, and responsibility

- for backup of programs and data?
- d. data ownership, data usage, and compliance with the bank's information security policies?
 - e. bank access to the service provider's financial information and results of audits and security reviews?
 - f. insurance to be maintained by the service provider?
2. Has legal counsel reviewed the contracts to ensure they are legally enforceable and that they reasonably protect the bank from risk?
 3. Has the bank ensured that any service provider responsible for hosting or maintaining the bank's web site has implemented—
 - a. controls to protect the bank's web site from unauthorized alteration and malicious attacks?
 - b. procedures to notify the bank in the event of such incidents?
 - c. regular backup of the bank's web site information?
 4. Depending on the nature and criticality of the services, does the bank conduct initial and periodic due-diligence reviews of service providers, including—
 - a. reviewing the service provider's standards, policies, and procedures relating to internal controls, security, and business contingency to ensure they meet the bank's minimum standards?
 - b. monitoring performance relative to service-level agreements and communicating any deficiencies to the service provider and to bank management?
 - c. reviewing reports provided by the service provider on response times, availability and downtime, exception reports, and capacity reports, and communicating any concerns to bank management and the vendor?
 - d. periodically reviewing the financial condition of the service provider and determining whether backup arrangements are warranted as a result?
 - e. reviewing third-party audits, SAS 70 reports, and regulatory examination reports on the service provider, if available, and following up on any findings with the service provider?
 - f. conducting on-site audits of the service provider, if appropriate based on the level of risk?
 - g. participating in user groups?
 - h. ensuring the bank's staff receives adequate training and documentation from the vendor or service provider?
 5. If the bank operates a turnkey electronic banking software package—
 - a. is software held under an escrow agreement?
 - b. has the bank established procedures to ensure that relevant program files and documentation held under the software escrow agreement are kept current and complete?
 6. If a vendor maintains the bank's electronic banking system, does the bank monitor the on-site or remote access of its systems by the vendor, through activity logs or other measures?

BOARD AND MANAGEMENT OVERSIGHT

1. Does the board or an appropriate committee approve the introduction of new electronic banking products and services on the basis of a written business plan and risk analysis that are commensurate with the proposed planned activity?
2. Has the bank considered—
 - a. whether the service is designed to provide information on existing services to existing customers or to attract new customers?
 - b. whether financial incentives will be offered to attract customers through the electronic banking service? What is the financial impact of such incentives on the bank?
 - c. the potential impact of electronic banking products and services on the composition of the bank's customer base?
 - d. the projected financial impact of the new service, including up-front and operating costs and any impact on fees or other revenue or expenses?
 - e. internal controls appropriate for the new product or service?
 - f. whether adequate management reports are provided and subject to periodic review?
 - g. whether any new nonbanking activities are permissible under applicable state and federal banking laws?
 - h. the extent of outsourcing and responsi-

bilities for managing vendor and service-provider relationships?

3. Has the bank evaluated the adequacy of its insurance coverage to cover operational risks in its electronic banking activities?
4. Has the bank's legal counsel been involved in the development and review of electronic banking agreements (for example, agree-

ments with third-party vendors)? Has the bank's legal counsel also been involved in the development and review of its authentication methods to ensure that the methods provide a foundation to enforce agreements and transactions and to validate the parties involved, consistent with applicable state laws?

Dividends are distributions of earnings to owners.¹ Dividends can influence an investor's willingness to purchase corporate stock since the investor generally expects reasonable investment returns. Although dividends usually are declared and paid in either cash or stock, occasionally they are used to distribute real or personal property. Dividend payments may reduce capital in some banks to the point of supervisory concern. Accordingly, on November 14, 1985, the Federal Reserve Board issued a policy statement on the payment of dividends by state member banks and bank holding companies. (See *Federal Reserve Regulatory Service* at 4-877.) In addition, certain statutory limitations apply to the payment of dividends.

Examiners should also be aware of a bank's parent company cash-flow needs. In addition to the payment of dividends, the parent company may need cash for debt service or to fund its operations. When establishing dividend levels from a bank subsidiary, the parent company should not set a dividend rate that will place undue pressure on the bank's ability to maintain an adequate level of capital.

Declaration of a dividend requires formal action by the board of directors to designate the medium of payment, dividend rate, shareholder record date, and date of payment. Dividends may be declared at the discretion of the board.² Dividends are recorded on the bank's books as a liability (dividends payable) on the date of declaration.

1. Other payments not called dividends may also be distributions of earnings to owners. These distributions or "constructive dividends" may be termed fees, bonuses, or other payments. Constructive dividends are distinct from legitimate fees, bonuses, and other payments, which are reasonable, adequately documented, and for valuable goods and services provided to the bank. Constructive dividends may create a potential tax liability and indicate control issues or insider self-dealing, and they may portend shareholder lawsuits against insiders, board members, and the bank.

2. At a minimum, board of directors minutes approving declaration and payment of a dividend should include three components: (1) the "as of" date to identify shareholders of record to receive the dividend (date of record), (2) an amount or description of the dividend, and (3) identification of the date on which the dividend payment is to take place (date of payment). There may also be additional legal requirements that should be documented, depending on state laws and the nature of the dividend.

SUMMARY OF POLICY STATEMENT ON PAYMENT OF DIVIDENDS

Adequate capital is critical to the health of individual banking organizations and to the safety and stability of the banking system. A major determinant of a financial institution's capital adequacy is earnings strength and whether earnings are retained or paid to shareholders as cash dividends. Dividends are the primary way that banking organizations provide return to shareholders on their investment.

During profitable periods, dividends represent a return of a portion of a banking organization's net earnings to its shareholders. During less profitable periods, dividend rates are often reduced or sometimes eliminated. The payment of cash dividends that are not fully covered by earnings, in effect, represents the return of a portion of an organization's capital at a time when circumstances may indicate instead the need to strengthen capital and concentrate financial resources on resolving the organization's problems.

As a matter of prudent banking, therefore, a bank or bank holding company generally should continue its existing rate of cash dividends on common stock only if—

- the organization's net income available to common shareholders over the past year has been sufficient to fully fund the dividends; and
- the prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition.

Any banking organization whose cash dividends are inconsistent with either of these criteria should seriously consider reducing or eliminating its dividends. Such an action will help conserve the organization's capital base and help it weather a period of adversity.

A banking organization that is experiencing financial problems or that has inadequate capital should not borrow to pay dividends; this would result in increased leverage at the very time the organization needs to reduce its debt or conserve its capital. Similarly, the payment of dividends based solely or largely on gains resulting from unusual or nonrecurring events may be impru-

dent. Unusual or nonrecurring events may include the sale of assets, the effects of accounting changes, the postponement of large expenses to future periods, or negative provisions to the allowance for loan and lease losses.

STATUTORY LIMITATIONS

Three major federal statutory limitations govern the payment of dividends by banks. These limitations, included in sections 1831o, 56, and 60 of title 12 of the United States Code (12 USC 1831o, 56, and 60), apply to cash dividends or property dividends paid with assets other than cash. However, common stock dividends (dividends payable in common stock to all the common shareholders of the bank) may be paid regardless of the statutory limitations since such dividends do not reduce the bank's capital. In addition, the examiner needs to be aware of any state laws governing dividend payments.

Prompt Corrective Action

Section 1831o, also referred to as the prompt-corrective-action (PCA) provision, was adopted in 1991 as part of the Federal Deposit Insurance Corporation Improvement Act. Section 1831o applies to all insured depository institutions, including state member banks, and is implemented through section 208.40 of Regulation H. This regulatory section prohibits the payment of dividends when a bank is deemed to be undercapitalized or when the payment of the dividend would make the bank undercapitalized in accordance with the PCA framework. An organization that is undercapitalized for purposes of PCA must cease paying dividends for as long as it is deemed to be undercapitalized. Once earnings have begun to improve and an adequate capital position has been restored, dividend payments may resume in accordance with federal and state statutory limitations and guidelines.

Sections 56 and 60

Sections 56 and 60 (sections 5204 and 5199 of the Revised Statutes) were first adopted as part of the National Bank Act more than 100 years ago. Although these sections were made applicable to national banks, they also apply to state

member banks under the provisions of section 9 of the Federal Reserve Act.³ These sections are implemented through section 208.5 of Regulation H.

Under section 56, prior regulatory and shareholder approval must be obtained if the dividend would exceed the bank's undivided profits (retained earnings), as reportable in its Reports of Condition and Income (call reports).⁴ In addition, the bank may include amounts contained in its surplus account, if the amounts reflect transfers made in prior periods of undivided profits and if regulatory approval for the transfer back to undivided profits is obtained.

Under section 60, prior regulatory approval to declare a dividend must be obtained if the total of all dividends declared during the calendar year, including the proposed dividend, exceeds the (1) sum of the net income earned during the year-to-date and (2) the retained net income of the prior two calendar years as reported in the bank's call reports. In determining this limitation, any dividends declared on common or preferred stock during the period and any required transfers to surplus or a fund for the retirement of any preferred stock must be deducted from net earnings to determine the net income and retained net income.⁵

The statutory limitations are tied to the declaration date of the dividend because, at that time, shareholders expect the dividends will be paid, a liability is recorded, and the bank's capital is reduced. If the bank's board of directors wishes to declare a dividend between call report dates, the earnings or losses incurred since the last call report date should be considered in the calculation. Thus, if a bank's dividend-paying capacity might be limited under sections 56 or 60, the bank should ensure it has

3. State-chartered banks that are not members of the Federal Reserve System (state nonmember banks) are not subject to sections 56 and 60. However, they may be subject to similar dividend restrictions under state law.

4. Although the language of section 56 could imply that a dividend cannot be declared in excess of the limit even if regulatory approval were obtained, a "return of capital" to shareholders is allowed under section 59 if the bank obtains prior regulatory approval and the approval of at least two-thirds of each class of shareholders.

5. In rare circumstances when the surplus of a state member bank is less than what applicable state law requires the bank to maintain relative to its capital stock account, the bank may be required to transfer amounts from its undivided profits account to surplus. This may arise, for example, because some states require surplus to equal or exceed 100 percent of the capital stock account. Such required transfers would reduce the section 60 calculation.

sufficient capacity to declare the dividend by maintaining sufficient documentation to substantiate its earnings or losses on an accrual basis for the period since the last call report date.

REQUEST FOR REGULATORY APPROVAL

When regulatory approval is required for dividend payments under section 56 or 60, the request should be submitted to the appropriate Federal Reserve Bank. In section 265.11(e)(4) of the Rules Regarding Delegation of Authority, the Reserve Banks have been delegated authority to permit a state member bank to declare

dividends in excess of section 60 limits. Before approving the request, the Reserve Bank should consider if the proposed dividend is consistent with the bank's capital needs, asset quality, strength of management, and overall financial condition.

If applicable, examiners should verify that prior approval was obtained from the Federal Reserve Bank, and, if required, at least two-thirds of each class of stockholders before the dividend was paid. Violations of law or nonconformance with the Federal Reserve Board's policy statement should be discussed with bank management and noted in the examination report.

Dividends

Examination Objectives

Effective date May 1996

Section 4070.2

1. To determine if the policies, practices, procedures, and internal controls regarding dividends are adequate and whether they are being followed.
2. To determine if bank directors, officers, and employees are operating in compliance with the established guidelines.
3. To evaluate the propriety and consistency of the bank's present and planned dividend policy in light of existing conditions and future plans.
4. To determine that the scope of the audit function is adequate.
5. To determine if any dividends declared exceed the section 1831o limitation, and, if so, to inform the enforcement section of the Federal Reserve Bank.
6. To determine if any dividends declared exceed the section 56 and 60 limitations, and, if so, whether the respective required approvals from the Federal Reserve Bank and shareholders were obtained.
7. To determine whether the dividend payments comply with the Board's policy statement concerning dividend payments of banks and bank holding companies.
8. To determine compliance with other applicable laws and regulations.
9. To initiate corrective action when policies, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Dividends

Examination Procedures

Effective date November 2001

Section 4070.3

1. If selected for use, complete or update the internal control questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures, and internal controls. Also obtain a listing of any deficiencies noted in the latest internal or external auditor reports from the examiner who is assigned to internal control. Determine if appropriate corrective action has been taken.
4. a. If dividends were declared since the last examination, complete the dividend-limitations worksheets to determine whether the bank was in compliance with the following sections of the U.S. Revised Statutes, as they are interpreted by section 208.5 of Regulation H:
 - section 5199 (12 USC 60), which establishes a restriction based on the current and prior two years' retained net income, as adjusted for required transfers to surplus or transfers to a fund for the retirement of any preferred stock. Table 1 on the next page may be used for the calculation.
 - section 5204 (12 USC 56), which establishes a restriction on dividends based on the bank's retained earnings (undivided profits), as adjusted for any surplus transferred, with prior regulatory approval, as needed, back to undivided profits and the excess, if any, of statutory bad debts over the allowance for loan and lease losses (ALLL).¹
- b. For the calculations in table 1, determine whether the dividend exceeded the section 56 or 60 limits and, if so, whether the dividend received prior approval. Dividends declared in excess of the section 56 limitation must receive prior Federal Reserve approval and approval by at least two-thirds of the shares of each class of stock outstanding, pursuant to 12 USC 59. Dividends declared in excess of the section 60 limitation must receive prior Federal Reserve approval.
5. Review the examination findings with the examiner-in-charge in preparation for discussion with appropriate management.
6. Prepare examination-report comments on the bank's dividend practices, including any deficiencies noted.
7. Update the workpapers with the current dividend-limitations worksheets, as well as any information that will facilitate future examinations.

1. Although section 56 seems to require that a bank deduct its statutory bad debts from its undivided profits, this adjustment is not generally necessary. Under generally accepted accounting principles, banks are required to reserve for bad debts in the ALLL, which reduces the bank's undivided profits. Banks are thus required to deduct only the excess of statutory bad debts of the bank's ALLL, and such excess rarely occurs. Statutory bad debts represent matured obligations due a bank on which the interest is past due and unpaid for six months or more, unless the debts are well secured and in the process of collection. The second part of table 1 illustrates the section 56 dividend-limitation calculation.

Table 1—Dividend-Limitation Computations

References to schedules in this table are to the schedules in the Consolidated Reports of Condition and Income (bank call reports).

<i>Section 60 Computation</i>					<i>Section 56 Computation</i>	
					<i>Year</i>

after adjustments	—	—	—	— ²		

1. Any excess may be attributed to the prior two years by first applying the excess to the earlier year, and then the immediately preceding year, net of any previous-year adjustments. See section 208.5 of Regulation H for further guidance.

2. This is the section 60 limitation.

Dividends

Internal Control Questionnaire

Effective date September 1992

Section 4070.4

Review the bank's internal controls, policies, practices and procedures for paying dividends. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

GENERAL

1. Does the bank employ the services of an independent dividend paying agent?
- *2. Has the board of directors passed a resolution designating those officers who are authorized to sign dividend checks?
- *3. Are unused dividend checks under dual control?
- *4. Does the bank's system require separation of duties regarding custody, authorization,

preparation, signing and distribution of dividend checks?

- *5. Are dividend checks reconciled in detail before mailing?
- *6. Is control maintained over the use of serially numbered dividend checks to ensure that they are issued sequentially?

CONCLUSION

1. Does the foregoing information provide an adequate basis for evaluating internal control? If significant deficiencies in areas not included in this questionnaire impair controls, indicate additional examination procedures deemed necessary.
2. Based on a composite evaluation, as evidenced by answers to the foregoing questions, is internal control considered adequate?

Employee benefit trusts are specialized trusts most commonly established to provide retirement benefits to employees. However, they may also be established for employee stock ownership or thrift purposes, or to provide medical, accident, and disability benefits. There are qualified and unqualified plans. Retirement plans are qualified under section 401 of the Internal Revenue Code (IRC), and employee benefit trusts are tax exempt under section 501(a) of the IRC. The major types of qualified plans are profit sharing, money purchase, stock bonus, employee stock ownership plans (ESOPs), 401(k) plans, and defined benefit pension plans.

Since 1974, state jurisdiction of employee benefit trusts and their administration has been largely preempted by a comprehensive scheme of federal laws and regulations under the Employee Retirement Income Security Act of 1974 (ERISA). ERISA is divided into four titles: Title I, "Protection of Employee Benefit Rights," includes the fiduciary responsibility provisions (in part 4) that are interpreted and enforced by the U.S. Department of Labor (DOL). Title II, "Amendments to the Internal Revenue Code Relating to Retirement Plans," is similar to Title I, but the Internal Revenue Service (IRS) is responsible for its enforcement. Title III, "Jurisdiction, Administration, Enforcement," grants jurisdiction and powers for administration to various governmental units. Title IV, "Plan Termination Insurance," establishes the Pension Benefit Guaranty Corporation (PBGC). The PBGC ensures that defined benefit plans have sufficient resources to provide minimum levels of benefits to participants. In addition to the PBGC, the primary agencies that have promulgated necessary regulations and interpretations pursuant to ERISA are the DOL and IRS. However, state and federal banking agencies also have a recognized role under this statute.

Numerous laws affecting employee benefit plans have been enacted since the adoption of ERISA; however, the most sweeping changes were imposed by the Tax Reform Act of 1986. These changes include (1) imposing numerous excise taxes on employers and employees for failure to meet new plan contribution and distribution rules, (2) lowering the maximum amount of contributions and benefits allowed under qualified defined contribution and defined benefit plans, (3) lowering the amount an individual can contribute to a 401(k) plan, and (4) provid-

ing new nondiscrimination rules covering plan contributions and distributions. Virtually all qualified plans had to be amended to comply with this law.

A specific statutory provision of ERISA mandates the exchange of information among federal agencies. Accordingly, the federal banking agencies have entered into an agreement with the DOL whereby a banking agency noting any possible ERISA violations that meet certain specific criteria will refer the matter to the DOL.

ERISA imposes very complex requirements on banks acting as trustees or in other fiduciary capacities for employee benefit trusts. Severe penalties can result from violations of statutory obligations. With respect to a bank's own employees' retirement plan, the bank (or "plan sponsor"), regardless of whether it is named trustee, is still a "party-in-interest" pursuant to the statute. Therefore, unless a transaction qualifies for narrowly defined statutory exemptions (or unless it is the subject of a specific "individual" exemption granted by the DOL), any transaction involving the purchase or sale of an asset of the plan from or to the bank, any affiliate, officer, or employee could constitute a prohibited transaction under ERISA.

The current and projected costs of employee benefit plans should be analyzed for their impact on the expenses and overall financial condition of the bank. Excessive pension or profit-sharing benefits, large expense accounts, employment contracts, or bonuses for officers or directors (especially if they are also large shareholders) could prove detrimental and even lead to civil liability for the bank or its board.

Depending on the type of plan and the allocations of its fiduciary duties, certain reporting, disclosure, and plan design requirements are imposed on the plan sponsor and/or its designated supervising committee. Therefore, a bank should have appropriate expertise, policies, and procedures to properly administer the type of employee benefit accounts established for its employees.

If an examiner, as part of any examination assignment, detects possible prohibited transactions, self-dealing, or other questionable activities involving the bank's employee benefit plan, an appropriate investigation should be undertaken. Substantial conversions of existing defined benefit plans or plan assets into holdings of bank or affiliate stock, under certain circumstances,

could involve ERISA violations. An examiner should refer a complicated question arising out of any of these situations to the examiner-in-charge for resolution or submission to the Reserve Bank.

Part I of the following examination procedures (section 4080.3) should be completed for every commercial bank examination; part II should also be completed if the employee bene-

fit plan is not trusted by the bank or by an affiliate bank subject to supervision by a federal banking agency. Parts I and II may be completed by a trust specialist, if available. When a bank trust department is named as trustee, the examiner should determine whether compliance with ERISA was reviewed during the previous trust examination. If not, then part II should be completed.

Employee Benefit Trusts

Examination Objectives

Effective date May 1996

Section 4080.2

1. To determine if the policies, practices, procedures, internal controls, and available expertise regarding employee benefit trusts are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the impact of employee benefit plans and related benefits on the financial condition of the bank.
4. To determine compliance with laws, regulations, and instrument provisions.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws, regulations, or the governing instruments have been noted.

Employee Benefit Trusts

Examination Procedures

Effective date December 1985

Section 4080.3

PART I

1. If selected for implementation, complete or update the Employee Benefit Trusts section of the Internal Controls Questionnaire.
2. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control," and determine if appropriate corrections have been made.
3. Determine the approximate number, size and types of employee benefit plans held for the benefit of the bank's officers and employees.
4. Obtain plan instruments or amendments thereto (if any) and summarize key features for the work papers. As appropriate, add or update the following information:
 - a. Date of adoption of new plan or amendment and brief summary of the plan or amendment.
 - b. Parties or committees named trustee and (if different) person(s) responsible for making investment decisions.
 - c. Individuals, committees or outside parties named as responsible for plan administration.
 - d. Basic investment/funding characteristics (e.g., "non-contributory profit-sharing, up to 100% in own BHC stock;" "contributory defined benefit pension plan, purchasing diversified securities," etc.).
 - e. Latest Form 5500 (IRS) filed for plan (may be omitted if plan administrator is an affiliate bank or bank holding company).

Example: First Bank established a non-contributory profit sharing trust in 1975 for all officers and employees. Latest amendment, as of December 31, 19XX, made technical alterations to the vesting and forfeiture provisions. The most recent available valuation of the trust's assets, dated June 30, 19XX, indicated total assets of \$22,093,000 (market value). Assets were comprised of U.S. government securities

(42%), listed stocks (53%) and cash equivalents. Bank of _____, as trustee, has sole investment responsibility.

5. If a plan is a defined benefit pension plan, ascertain the actuarially-determined amount of unfunded pension liability, if any, and the bank's arrangements for amortization. (Note: Unfunded pension liability represents a contingent liability per instructions for the Report of Condition.)
6. Determine if the current and projected costs of the employee benefit plan(s) is reasonable in light of the bank's financial condition.

Complete part II of these procedures, if applicable, then continue to step 7, below. Part II is to be completed when a plan for the bank's employees is administered by the bank or a bank committee and is not trustee by the bank itself or an affiliate bank subject to supervision by a federal banking agency.

7. Determine whether any instances of possible violations of ERISA have been noted, and that as to each such instance, full information has been developed for current workpapers to support a referral to DOL pursuant to SR-81-697/TR-81-46.

Note: While the final decision on whether or not to make a referral to the DOL is to be made by the Board's staff after receipt of the report of examination, complete information should always be obtained regarding possible ERISA violations in the event the decision is made to refer the matter. If gathering certain of the information would impose an undue burden upon the resources of the examiners or the bank, Board's staff (Trust Activities Program) should be consulted. Where a significant prohibited transaction such as self dealing has taken place, the bank should be clearly informed that it is expected to undertake all such corrective and/or remedial actions as are necessary under the circumstances. One measure would be for the bank to apply to the DOL for a retroactive exemption under ERISA section 408(a).

8. Reach a conclusion concerning:
 - a. The adequacy of policies, practices and

- procedures relating to employee benefit trusts.
- b. The manner in which bank officers are operating in conformance with established policy.
 - c. The accuracy and completeness of any schedules obtained.
 - d. Internal control deficiencies or exceptions.
 - e. The quality of departmental management.
 - f. Other matters of significance.
9. Prepare in appropriate report format, and discuss with appropriate officer(s):
 - a. Violations of laws and regulations.
 - b. Recommended corrective action when policies, practices or procedures are deficient.
 10. Update the workpapers with any information that will facilitate future examinations.
- PART II**
1. Review plan asset listings, valuations, or printouts obtained for any instances of possible prohibited transactions (ERISA sections 406(a) and (b)). The listings should include holdings of:
 - a. Loans.
 - b. Leases.
 - c. Real Estate.
 - d. Employer stock or other securities or obligations.
 - e. Own bank time deposits.
 - f. Other assets which might constitute, or result from, prohibited transactions.
 2. Review transaction(s)/holding(s) in the previous step for conformity to:
 - a. ERISA provisions regarding employer securities or real estate (sections 407(a), (b) and (c)) and related regulations.
 - b. Statutory exemptions of ERISA (section 408(b)).
 - c. "Exclusive benefit," prudence and diversification requirements of ERISA (sections 404(a) and (b)).

Employee Benefit Trusts

Internal Control Questionnaire

Effective date December 1985

Section 4080.4

Review the bank's internal controls, policies, practices and procedures for employee benefit accounts. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Part I should be completed as part of every examination; both parts I and II should be completed whenever the plan, administered by the bank or a bank committee, is *not* trustee by the bank itself or by an affiliate bank subject to supervision by a federal banking agency.

PART I

1. Are new employee benefit plans, significant amendments thereto, and related costs and features approved by the bank's board of directors?
- *2. Does the institution obtain and maintain on file the following minimum documentation:
 - a. The plan and the corporate resolution adopting it?
 - b. IRS "determination" or "opinion" letter substantiating the tax-exempt status of the plan?
 - c. The trust agreement and the corporate resolution appointing the trustee(s), if applicable? (On occasion, fully insured plans may have no named trustee.)
 - d. Amendments to the plan or trust documents?
3. If the bank or a committee of its officers and employees acts as plan administrator for any plan(s), does it have internal procedures and/or has it arranged by contract for external administrative expertise sufficient to assure compliance with reporting, disclosure and other administrative requirements of ERISA and related regulations?
4. Have the bank, its officers, directors or employees, or any affiliate(s) entered into any transactions to buy or sell assets to the bank's employee benefit plan(s)?
5. Do plan investments conform to instrument investment provisions?

PART II

1. When exercising fiduciary responsibility in

the purchase or retention of employer securities or employer real estate, does the bank have procedures to assure conformity with ERISA section 407 and related provisions?

Note: The requirements of ERISA and the associated DOL regulation with respect to "employer securities and employer real estate" include:

- a. A plan may not acquire or hold any but "qualifying employer securities and employer real estate."
 - b. A defined benefit plan may hold no more than 10 percent of the fair market value of its assets in qualifying employer securities and/or qualifying employer real property, except as provided by ERISA sections 407(a)(3) or 414(c)(1) and (2), and adopted regulations.
 - c. Any dispositions of such property from a plan to a party-in-interest shall conform to ERISA sections 414(c)(3) and (5) and adopted regulations, but certain acquisitions and sales may be made pursuant to the section 408(a) exemption.
 - d. The plan instrument, for an eligible individual account plan which is to hold in excess of 10 percent of the fair market value of its assets in qualifying employer securities or real property, shall provide explicitly the extent to which such plan may hold such assets. [ERISA sections 407(b)(1) and (d)(3)]
2. Does the bank have procedures to ensure conformance to the following statutory exemptions (and associated regulations) from the prohibited transactions provisions of ERISA:
 - a. Loans made by the plan to parties-in-interest who are participants or beneficiaries? [ERISA section 408(b)(1)]
 - b. Investment in deposits which bear a reasonable rate of interest of a bank which is a fiduciary of the plan? [ERISA section 408(b)(4)]

Note: Other statutory exemptions which may on occasion be applicable are:

 - c. Arrangements for office space or legal, accounting or other necessary services? [ERISA section 408(b)(2)]
 - d. Loans to employee stock ownership trusts? [ERISA section 408(b)(3)]

- e. Transactions between a plan and a collective trust fund maintained by a party-in-interest which is a bank or trust company? [section 408(b)(8)]
 - f. Providing of any ancillary service by a bank or trust company which is a fiduciary of the plan? [ERISA section 408(b)(6)]
3. If exercising or sharing fiduciary responsibility, does the bank have procedures designed:
- a. To ensure that duties are executed for the exclusive benefit of plan participants and beneficiaries, in accordance with the “prudent man” standard? [ERISA sections 404(a)(1)(A) and (B)]
 - b. To ensure that investments are diversified, unless it is clearly prudent not to do so or otherwise excepted by other provisions of ERISA? [ERISA section 404(a)(1)(C)]

Interest-rate risk (IRR) is the exposure of an institution's financial condition to adverse movements in interest rates. Accepting this risk is a normal part of banking and can be an important source of profitability and shareholder value. However, excessive levels of IRR can pose a significant threat to an institution's earnings and capital base. Accordingly, effective risk management that maintains IRR at prudent levels is essential to the safety and soundness of banking institutions.

Evaluating an institution's exposure to changes in interest rates is an important element of any full-scope examination and, for some institutions, may be the sole topic for specialized or targeted examinations. Such an evaluation includes assessing both the adequacy of the management process used to control IRR and the quantitative level of exposure. When assessing the IRR management process, examiners should ensure that appropriate policies, procedures, management information systems, and internal controls are in place to maintain IRR at prudent levels with consistency and continuity. Evaluating the quantitative level of IRR exposure requires examiners to assess the existing and potential future effects of changes in interest rates on an institution's financial condition, including its capital adequacy, earnings, liquidity, and, where appropriate, asset quality. To ensure that these assessments are both effective and efficient, examiner resources must be appropriately targeted at those elements of IRR that pose the greatest threat to the financial condition of an institution. This targeting requires an examination process built on a well-focused assessment of IRR exposure before the on-site engagement, a clearly defined examination scope, and a comprehensive program for following up on examination findings and ongoing monitoring. This section provides examiner guidance for assessing both the adequacy of an institution's IRR management process and the quantitative level of its IRR exposure. The section begins with a description of the sources and effects of IRR, followed by a discussion of sound practices for managing IRR. The section then outlines examination considerations in assessing the quantitative level of IRR exposure. Finally, the section discusses key elements of the examination process used to assess IRR, including the role and importance of a preexamination risk assessment, proper scoping of the

examination, and the testing and verification of both the management process and internal measures of the level of IRR exposure.¹

SOURCES AND EFFECTS OF IRR

Sources of IRR

As financial intermediaries, banks encounter IRR in several ways. The primary and most discussed source of IRR is differences in the timing of the repricing of bank assets, liabilities, and off-balance-sheet (OBS) instruments. Repricing mismatches are fundamental to the business of banking and generally occur from either borrowing short-term to fund longer-term assets or borrowing long-term to fund shorter-term assets. Such mismatches can expose an institution to adverse changes in both the overall level of interest rates (parallel shifts in the yield curve) and the relative level of rates across the yield curve (nonparallel shifts in the yield curve).

Another important source of IRR, commonly referred to as "basis risk," is the imperfect correlation in the adjustment of the rates earned and paid on different instruments with otherwise similar repricing characteristics (for example, a three-month Treasury bill versus a three-month LIBOR). When interest rates change, these differences can change the cash flows and earnings spread between assets, liabilities, and OBS instruments of similar maturities or repricing frequencies.

An additional and increasingly important source of IRR is the options in many bank asset, liability, and OBS portfolios. An option pro-

1. This section incorporates and builds on the principles and guidance provided in SR-96-13, "Joint Policy Statement on Interest Rate Risk." It also incorporates, where appropriate, fundamental risk-management principles and supervisory policies and approaches identified in SR-93-69, "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations"; SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies"; SR-96-14, "Risk-Focused Examinations and Inspections"; and SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations."

vides the holder with the right, but not the obligation, to buy, sell, or in some manner alter the cash flow of an instrument or financial contract. Options may be distinct instruments, such as exchange-traded and over-the-counter contracts, or they may be embedded within the contractual terms of other instruments. Examples of instruments with embedded options include bonds and notes with call or put provisions (e.g., callable U.S. agency notes), loans that give borrowers the right to prepay balances without penalty (e.g., residential mortgage loans), and various types of nonmaturity deposit instruments that give depositors the right to withdraw funds at any time without penalty (e.g., core deposits). If not adequately managed, the asymmetrical payoff characteristics of options can pose significant risk to the banking institutions that sell them. Generally, the options, both explicit and embedded, held by bank customers are exercised to the advantage of the holder, not the bank. Moreover, an increasing array of options can involve highly complex contract terms that may substantially magnify the effect of changing reference values on the value of the option and, thus, magnify the asymmetry of option payoffs.

Effects of IRR

Repricing mismatches, basis risk, options, and other aspects of a bank's holdings and activities can expose an institution's earnings and value to adverse changes in market interest rates. The effect of interest rates on accrual or *reported earnings* is the most common focal point. In assessing the effects of changing rates on earnings, most banks focus primarily on their net interest income—the difference between total interest income and total interest expense. However, as banks have expanded into new activities to generate new types of fee-based and other non-interest income, a focus on overall net income is becoming more appropriate. The non-interest income arising from many activities, such as loan servicing and various asset-securitization programs, can be highly sensitive to changes in market interest rates. As non-interest income becomes an increasingly important source of bank earnings, both bank management and supervisors need to take a broader view of the potential effects of changes in market interest rates on bank earnings.

Market interest rates also affect the *value* of a bank's assets, liabilities, and OBS instruments and, thus, have a direct effect on the value of an institution's equity capital. The effect of rates on the *economic value* of an institution's holdings and equity capital is a particularly important consideration for shareholders, management, and supervisors alike. The economic value of an instrument is an assessment of the present value of its expected net future cash flows, discounted to reflect market rates.² By extension, an institution's economic value of equity (EVE) can be viewed as the present value of the expected cash flows on assets minus the present value of the expected cash flows on liabilities plus the net present value of the expected cash flows on OBS instruments. Economic values, which may differ from reported book values due to GAAP accounting conventions, can provide a number of useful insights into the current and potential future financial condition of an institution. Economic values reflect one view of the ongoing worth of the institution and can often provide a basis for assessing past management decisions in light of current circumstances. Moreover, economic values can offer comprehensive insights into the potential future direction of earnings performance since changes in the economic value of an institution's equity reflect changes in the present value of the bank's future earnings arising from its current holdings.

Generally, commercial banking institutions have adequately managed their IRR exposures and few have failed solely as a result of adverse interest-rate movements. Nevertheless, changes in interest rates can have negative effects on bank profitability and must be carefully managed, especially given the rapid pace of financial innovation and the heightened level of competition among all types of financial institutions.

SOUND IRR MANAGEMENT PRACTICES

As is the case in managing other types of risk,

2. For some instruments, economic values may be the same as fair value—especially when prices from active markets are available. The fair value of an instrument is generally considered to be the amount at which the instrument could be exchanged in a current transaction between willing parties other than in a forced or liquidation sale. Even then, the economic values of instruments and firms may differ from fair values due to unique insights on the intrinsic value of instruments derived on a going-concern basis.

sound IRR management involves effective board and senior management oversight and a comprehensive risk-management process that includes the following elements:

- effective policies and procedures designed to control the nature and amount of IRR, including clearly defined IRR limits and lines of responsibility and authority
- appropriate risk-measurement, monitoring, and reporting systems
- systematic internal controls that include the internal or external review and/or audit of key elements of the risk-management process

The formality and sophistication used in managing IRR depends on the size and sophistication of the institution, the nature and complexity of its holdings and activities, and the overall level of its IRR. Adequate IRR management practices can vary considerably. For example, a small institution with noncomplex activities and holdings, a relatively short-term balance-sheet structure presenting a low IRR profile, and senior managers and directors who are actively involved in the details of day-to-day operations may be able to rely on relatively simple and informal IRR management systems.

More complex institutions and those with higher interest-rate risk exposures or holdings of complex instruments may require more elaborate and formal IRR management systems to address their broader and typically more complex range of financial activities, as well as provide senior managers and directors with the information they need to monitor and direct day-to-day activities. The more complex interest-rate risk management processes often employed at these institutions may require more formal internal controls, such as internal and external audits, to ensure the integrity of the information senior officials use to oversee compliance with policies and limits.

Individuals involved in the risk-management process should be sufficiently independent of business lines to ensure adequate separation of duties and avoid potential conflicts of interest. The degree of autonomy these individuals have may be a function of the size and complexity of the institution. In smaller and less complex institutions with limited resources, it may not be possible to completely remove individuals with business-line responsibilities from the risk-management process. In these cases, focus should be directed towards ensuring that risk-

management functions are conducted effectively and objectively. Larger, more complex institutions may have separate and independent risk-management units.

Board and Senior Management Oversight

Effective oversight by a bank's board of directors and senior management is critical to a sound IRR management process. The board and senior management should be aware of their responsibilities related to IRR management, understand the nature and level of interest-rate risk taken by the bank, and ensure that the formality and sophistication of the risk-management process is appropriate for the overall level of risk.

Board of Directors

The board of directors has the ultimate responsibility for the level of IRR taken by the institution. The board should approve business strategies and significant policies that govern or influence the institution's interest-rate risk. It should articulate overall IRR objectives and should ensure the provision of clear guidance on the level of acceptable IRR.³ The board should also approve policies and procedures that identify lines of authority and responsibility for managing IRR exposures.

Directors should understand the nature of the risks to their institution and ensure that management is identifying, measuring, monitoring, and controlling these risks. Accordingly, the board should monitor the performance and IRR profile of the institution and periodically review information that is timely and sufficiently detailed to allow directors to understand and assess the IRR facing the institution's key portfolios and the institution as a whole. The frequency of these reviews depends on the sophistication of the institution, the complexity of its holdings, and the materiality of changes in its holdings between reviews. Institutions holding significant positions in complex instruments or with significant changes in the composition of holdings would be expected to have more frequent reviews. In addition, the board should periodically review

3. For example, objectives for IRR could be set in terms of enhancement to income, liquidity, and value, while IRR limits could be expressed as acceptable levels of volatility in these same areas.

significant IRR management policies and procedures, as well as overall business strategies that affect the institution's IRR exposure.

The board of directors should encourage discussions between its members and senior management, as well as between senior management and others in the institution, regarding the institution's IRR exposures and management process. Board members need not have detailed technical knowledge of complex financial instruments, legal issues, or sophisticated risk-management techniques. However, they are responsible for ensuring that the institution has personnel available who have the necessary technical skills and that senior management fully understands the risks incurred by the institution and is sufficiently controlling them.

A bank's board of directors may meet its responsibilities in a variety of ways, including the identification of selected board members to become directly involved in risk-management activities by participating on board committees or by otherwise gaining a sufficient understanding and awareness of the institution's risk profile through periodic briefings and management reports. Information provided to board members should be presented in a format that members can readily understand and that will assist them in making informed policy decisions about acceptable levels of risk, the nature of risks in current and proposed new activities, and the adequacy of the institution's risk-management process. In short, regardless of the structure of the organization and the composition of its board of directors or delegated board committees, board members must ensure that the institution has the necessary technical skills and management expertise to conduct its activities prudently and consistently within the policies and intent of the board.

Senior Management

Senior management is responsible for ensuring that the institution has adequate policies and procedures for managing IRR on both a long-range and day-to-day basis and that it maintains clear lines of authority and responsibility for managing and controlling this risk. Management should develop and implement policies and procedures that translate the board's goals, objectives, and risk limits into operating standards that are well understood by bank personnel and that are consistent with the board's

intent. Management is also responsible for maintaining (1) adequate systems and standards for measuring risk, (2) standards for valuing positions and measuring performance, (3) a comprehensive IRR reporting and monitoring process, and (4) effective internal controls and review processes.

IRR reports to senior management should provide aggregate information as well as sufficient supporting detail so that management can assess the sensitivity of the institution to changes in market conditions and other important risk factors. Senior management should also periodically review the organization's IRR management policies and procedures to ensure that they remain appropriate and sound. Senior management should also encourage and participate in discussions with members of the board and—when appropriate to the size and complexity of the institution—with risk-management staff regarding risk-measurement, reporting, and management procedures.

Management should ensure that analysis and risk-management activities related to IRR are conducted by competent staff whose technical knowledge and experience is consistent with the nature and scope of the institution's activities. The staff should have enough knowledgeable people to serve as backup to key personnel.

Policies, Procedures, and Limits

Institutions should have clear policies and procedures for limiting and controlling IRR. These policies and procedures should (1) delineate lines of responsibility and accountability over IRR management decisions, (2) clearly define authorized instruments and permissible hedging and position taking strategies, (3) identify the frequency and method for measuring and monitoring IRR, and (4) specify quantitative limits that define the acceptable level of risk for the institution. In addition, management should define the specific procedures and approvals necessary for exceptions to policies, limits, and authorizations. All IRR risk policies should be reviewed periodically and revised as needed.

Clear Lines of Authority

Whether through formal written policies or clear operating procedures, management should define

the structure of managerial responsibilities and oversight, including lines of authority and responsibility in the following areas:

- developing and implementing strategies and tactics used in managing IRR
- establishing and maintaining an IRR measurement and monitoring system
- identifying potential IRR and related issues arising from the potential use of new products
- developing IRR management policies, procedures and limits, and authorizing exceptions to policies and limits

Individuals and committees responsible for making decisions about interest-rate risk management should be clearly identified. Many medium-sized and large banks and banks with concentrations in complex instruments delegate responsibility for IRR management to a committee of senior managers, sometimes called an asset/liability committee (ALCO). In such institutions, policies should clearly identify ALCO membership, the committee's duties and responsibilities, the extent of its decision-making authority, and the form and frequency of its periodic reports to senior management and the board of directors. An ALCO should have sufficiently broad participation across major banking functions (for example, lending, investment, deposit, funding) to ensure that its decisions can be executed effectively throughout the institution. In many large institutions, the ALCO delegates day-to-day responsibilities for IRR management to an independent risk-management department or function.

Regardless of the level of organization and formality used to manage IRR, individuals involved in the risk-management process (including separate risk-management units, if present) should be sufficiently independent of the business lines to ensure adequate separation of duties and avoid potential conflicts of interest. Also, personnel charged with measuring and monitoring IRR should have a well-founded understanding of all aspects of the institution's IRR profile. Compensation policies for these individuals should be adequate enough to attract and retain personnel who are well qualified to assess the risks of the institution's activities.

Authorized Activities

Institutions should clearly identify the types of

financial instruments that are permissible for managing IRR, either specifically or by their characteristics. As appropriate to its size and complexity, the institution should delineate procedures for acquiring specific instruments, managing individual portfolios, and controlling the institution's aggregate IRR exposure. Major hedging or risk-management initiatives should be approved by the board or its appropriate delegated committee before being implemented.

Before introducing new products, hedging, or position-taking initiatives, management should also ensure that adequate operational procedures and risk-control systems are in place. Proposals to undertake such new instruments or activities should contain these features:

- a description of the relevant product or activity
- an identification of the resources required to establish sound and effective IRR management of the product or activity
- an analysis of the risk of loss from the proposed activities in relation to the institution's overall financial condition and capital levels
- the procedures to be used to measure, monitor, and control the risks of the proposed product or activity

Limits

The goal of IRR management is to maintain an institution's interest-rate risk exposure within self-imposed parameters over a range of possible changes in interest rates. A system of IRR limits and risk-taking guidelines provides the means for achieving that goal. Such a system should set boundaries for the institution's level of IRR and, where appropriate, provide the capability to allocate these limits to individual portfolios or activities. Limit systems should also ensure that limit violations receive prompt management attention.

Aggregate IRR limits clearly articulating the amount of IRR acceptable to the firm should be approved by the board of directors and reevaluated periodically. Limits should be appropriate to the size, complexity, and financial condition of the organization. Depending on the nature of an institution's holdings and its general sophistication, limits can also be identified for individual business units, portfolios, instrument

types, or specific instruments.⁴ The level of detail of risk limits should reflect the characteristics of the institution's holdings, including the various sources of IRR to which the institution is exposed. Limits applied to portfolio categories and individual instruments should be consistent with and complementary to consolidated limits.

IRR limits should be consistent with the institution's overall approach to measuring and managing IRR and should address the potential impact of changes in market interest rates on both reported earnings and the institution's economic value of equity (EVE). From an earnings perspective, institutions should explore limits on net income as well as net interest income to fully assess the contribution of non-interest income to the IRR exposure of the institution. Limits addressing the effect of changing interest rates on economic value may range from those focusing on the potential volatility of the value of the institution's major holdings to a comprehensive estimate of the exposure of the institution's EVE.

The limits for addressing the effect of rates on an institution's profitability and EVE should be appropriate for the size and complexity of its underlying positions. Relatively simple limits identifying maximum maturity/repricing gaps, acceptable maturity profiles, or the extent of volatile holdings may be adequate for institutions engaged in traditional banking activities and with few holdings of long-term instruments, options, instruments with embedded options, or other instruments whose value may be substantially affected by changes in market rates. For more complex institutions, quantitative limits on acceptable changes in its estimated earnings and EVE under specified scenarios may be more appropriate. Banks that have significant intermediate- and long-term mismatches or complex option positions should, at a minimum, have economic value-oriented limits that quantify and constrain the potential changes in economic value or bank capital that could arise from those positions.

Limits on the IRR exposure of earnings should be broadly consistent with those used to control the exposure of a bank's economic value. IRR limits on earnings variability prima-

rily address the near-term recognition of the effects of changing interest rates on the institution's financial condition. IRR limits on economic value reflect efforts to control the effect of changes in market rates on the present value of the entire future earnings stream arising from the institution's current holdings.

IRR limits and risk tolerances may be keyed to specific scenarios of market-interest-rate movements, such as an increase or decrease of a particular magnitude. The rate movements used in developing these limits should represent meaningful stress situations, taking into account historic rate volatility and the time required for management to address exposures. Moreover, stress scenarios should take account of the range of the institution's IRR characteristics, including mismatch, basis, and option risks. Simple scenarios using parallel shifts in interest rates may be insufficient to identify these risks.

Increasingly, large, complex institutions are using advanced statistical techniques to measure IRR across a probability distribution of potential interest-rate movements and express limits in terms of statistical confidence intervals. If properly used, these techniques can be particularly useful in measuring and managing options positions.

Risk-Measurement and -Monitoring Systems

An effective process of measuring, monitoring, and reporting exposures is essential for adequately managing IRR. The sophistication and complexity of this process should be appropriate to the size, complexity, nature, and mix of an institution's business lines and its IRR characteristics.

IRR Measurement

Well-managed banks have IRR measurement systems that measure the effect of rate changes on both earnings and economic value. The latter is particularly important for institutions with significant holdings of intermediate and long-term instruments or instruments with embedded options because their market values can be particularly sensitive to changes in market interest rates. Institutions with significant non-interest income that is sensitive to changes in

4. Section 2020, "Acquisition and Management of Non-trading Securities and Derivative Products," discusses issues in setting price volatility limits in the acquisition of securities and derivatives.

interest rates should focus special attention on net income as well as net interest income. Since the value of instruments with intermediate and long maturities and embedded options is especially sensitive to interest-rate changes, banks with significant holdings of these instruments should be able to assess the potential longer-term impact of changes in interest rates on the value of these positions—the overall potential performance of the bank.

IRR measurement systems should (1) assess all material IRR associated with an institution's assets, liabilities, and OBS positions; (2) use generally accepted financial concepts and risk-measurement techniques; and (3) have well-documented assumptions and parameters. Material sources of IRR include the mismatch, basis, and option risk exposures of the institution. In many cases, the interest-rate characteristics of a bank's largest holdings will dominate its aggregate risk profile. While all of a bank's holdings should receive appropriate treatment, measurement systems should rigorously evaluate the major holdings and instruments whose values are especially sensitive to rate changes. Instruments with significant embedded or explicit option characteristics should receive special attention.

IRR measurement systems should use generally accepted financial measurement techniques and conventions to estimate the bank's exposure. Examiners should evaluate these systems in the context of the level of sophistication and complexity of the institution's holdings and activities. A number of accepted techniques are available for measuring the IRR exposure of both earnings and economic value. Their complexity ranges from simple calculations and static simulations using current holdings to highly sophisticated dynamic modeling techniques that reflect potential future business and business decisions. Basic IRR measurement techniques begin with a maturity/repricing schedule, which distributes assets, liabilities, and OBS holdings into time bands according to their final maturity (if fixed-rate) or time remaining to their next repricing (if floating). The choice of time bands may vary from bank to bank. Those assets and liabilities lacking contractual repricing intervals or maturities are assigned to repricing time bands according to the judgment and analysis of the institution.

Simple maturity/repricing schedules can be used to generate rough indicators of the IRR sensitivity of both earnings and economic values

to changing interest rates. To evaluate earnings exposures, liabilities arrayed in each time band can be subtracted from the assets arrayed in the same time band to yield a dollar amount of maturity/repricing mismatch or gap in each time band. The sign and magnitude of the gaps in various time bands can be used to assess potential earnings volatility arising from changes in market interest rates.

A maturity/repricing schedule can also be used to evaluate the effects of changing rates on an institution's economic value. At the most basic level, mismatches or gaps in long-dated time bands can provide insights into the potential vulnerability of the economic value of relatively noncomplex institutions. Such long-term gap calculations along with simple maturity distributions of holdings may be sufficient for relatively noncomplex institutions. On a slightly more advanced, yet still simplistic, level, estimates of the change in an institution's economic value can be calculated by applying economic-value sensitivity weights to the asset and liability positions slotted in the time bands of a maturity/repricing schedule. The weights can be constructed to represent estimates of the change in value of the instruments maturing or repricing in that time band given a specified interest-rate scenario. When these weights are applied to the institution's assets, liabilities, and OBS positions and subsequently netted, the result can provide a rough approximation of the change in the institution's EVE under the assumed scenario. These measurement techniques can prove especially useful for institutions with small holdings of complex instruments.⁵ Further refinements to simple risk weighting techniques can be achieved by incorporating the risk of options, the potential for basis risk, and non-parallel shifts in the yield curve using customized risk weights applied to the specific instruments or instrument types arrayed in the maturity repricing schedule.

Larger institutions and those with complex risk profiles that entail meaningful basis or option risks may find it difficult to monitor IRR adequately using simple maturity/repricing analyses. Generally, they will need to employ more

5. James V. Houpt and James A. Embersit, "A Method for Evaluating Interest Rate Risk in Commercial Banks," *Federal Reserve Bulletin*, vol. 77 (August 1991), 625-37 and David M. Wright and James V. Houpt, "An Analysis of Commercial Bank Exposure to Interest Rate Risk," *Federal Reserve Bulletin*, vol. 82 (February 1996), 115-128.

sophisticated simulation techniques. For assessing the exposure of earnings, simulations estimating cash flows and resulting earnings streams over a specific period are conducted based on existing holdings and assumed interest-rate scenarios. When these cash flows are simulated over the entire expected lives of the institution's holdings and discounted back to their present values, an estimate of the change in EVE can be calculated.

Static cash-flow simulations of current holdings can be made more dynamic by incorporating more detailed assumptions about the future course of interest rates and the expected changes in a bank's business activity over a specified time horizon. Combining assumptions on future activities and reinvestment strategies with information about current holdings, these simulations can project expected cash flows and estimate dynamic earnings and EVE outcomes. These more sophisticated techniques, such as option-adjusted pricing analysis and Monte Carlo simulation, allow for dynamic interaction of payment streams and interest rates to better capture the effect of embedded or explicit options.

The IRR measurement techniques and associated models should be sufficiently robust to adequately measure the risk profile of the institution's holdings. Depending on the size and sophistication of the institution and its activities, as well as the nature of its holdings, the IRR measurement system should have the capability to adequately reflect (1) uncertain principal amortization and prepayments; (2) caps and floors on loans and securities, where material; (3) the characteristics of both basic and complex OBS instruments held by the institution; and (4) changing spread relationships necessary to capture basis risk. Moreover, IRR models should provide clear reports that identify major assumptions and allow management to evaluate the reasonableness of and internal consistency among key assumptions.

Data Integrity and Assumptions

The usefulness of IRR measures depends on the integrity of the data on current holdings, validity of the underlying assumptions, and IRR scenarios used to model IRR exposures. Techniques involving sophisticated simulations should be used carefully so that they do not become "black boxes," producing numbers that appear to be precise, but that may be less accurate when

their specific assumptions and parameters are revealed.

The integrity of data on current positions is an important component of the risk-measurement process. Institutions should ensure that current positions are delineated at an appropriate level of aggregation (for example, by instrument type, coupon rate, or repricing characteristic) to ensure that risk measures capture all meaningful types and sources of IRR, including those arising from explicit or embedded options. Management should also ensure that all material positions are represented in IRR measures, that the data used are accurate and meaningful, and that the data adequately reflect all relevant repricing and maturity characteristics. When applicable, data should include information on the contractual coupon rates and cash flows of associated instruments and contracts. Manual adjustments to underlying data should be well documented.

Senior management and risk managers should recognize the key assumptions used in IRR measurement, as well as reevaluate and approve them periodically. Assumptions should also be documented clearly and, ideally, the effect of alternative assumptions should be presented so that their significance can be fully understood. Assumptions used in assessing the interest-rate sensitivity of complex instruments, such as those with embedded options, and instruments with uncertain maturities, such as core deposits, should be subject to rigorous documentation and review, as appropriate to the size and sophistication of the institution. Assumptions about customer behavior and new business should take proper account of historical patterns and be consistent with the interest-rate scenarios used.

Nonmaturity Deposits

An institution's IRR measurement system should consider the sensitivity of nonmaturity deposits, including demand deposits, NOW accounts, savings deposits, and money market deposit accounts. Nonmaturity deposits represent a large portion of the industry's funding base, and a variety of techniques are used to analyze their IRR characteristics. The use of these techniques should be appropriate to the size, sophistication, and complexity of the institution.

In general, treatment of nonmaturity deposits should consider the historical behavior of the institution's deposits; general conditions in the institution's markets, including the degree of

competition it faces; and anticipated pricing behavior under the scenario investigated. Assumptions should be supported to the fullest extent practicable. Treatment of nonmaturity deposits within the measurement system may, of course, change from time to time based on market and economic conditions. Such changes should be well founded and documented. Treatments used in constructing earnings simulation assessments should be conceptually and empirically consistent with those used in developing EVE assessments of IRR.

IRR Scenarios

IRR exposure estimates, whether linked to earnings or economic value, use some form of forecasts or scenarios of possible changes in market interest rates. Bank management should ensure that IRR is measured over a probable range of potential interest-rate changes, including meaningful stress situations. The scenarios used should be large enough to expose all of the meaningful sources of IRR associated with an institution's holdings. In developing appropriate scenarios, bank management should consider the current level and term structure of rates and possible changes to that environment, given the historical and expected future volatility of market rates. At a minimum, scenarios should include an instantaneous plus or minus 200 basis point parallel shift in market rates.⁶ Institutions

6. Analysis of quarterly and annual data on changes of the Constant Maturities Treasury Securities (CMT) over the period of January 1, 1974, to December 31, 1994, suggests that a 200 basis point parallel shift in the yield curve represents a plausible stress scenario for assessing IRR. The following data illustrate that over the past 17 years, quarterly changes in yields on CMTs exceeded 193 bp for the three-month CMT and 137 bp for the 30-year CMT 1 percent of the time. Data on annual yield changes illustrate that yield changes on CMTs exceeded 194 bp 5 percent of the time and exceeded 151 bp 10 percent of the time.

Changes in Yields of Constant Maturities Treasury Securities

	Quarterly changes		Annual changes	
	99% confidence level	95% confidence level	90% confidence level	
	Basis Point Change			
3-mo. CMT	193 bp	274 bp	212 bp	
1-yr. CMT	191 bp	271 bp	210 bp	
2-yr. CMT	180 bp	255 bp	198 bp	
3-yr. CMT	175 bp	248 bp	192 bp	
5-yr. CMT	166 bp	235 bp	182 bp	
7-yr. CMT	161 bp	228 bp	177 bp	
10-yr. CMT	152 bp	216 bp	167 bp	
30-yr. CMT	137 bp	194 bp	151 bp	

should also consider the use of multiple scenarios, including the potential effects of changes in the relationships among interest rates (option risk and basis risk) as well as changes in the general level of interest rates and changes in the shape of the yield curve.

The risk-measurement system should support a meaningful evaluation of the effect of stressful market conditions on the institution. Stress-testing should be designed to provide information on the kinds of conditions under which the institution's strategies or positions would be most vulnerable; thus, testing may be tailored to the risk characteristics of the institution. Possible stress scenarios might include abrupt changes in the term structure of interest rates, relationships among key market rates (basis risk), liquidity of key financial markets, or volatility of market rates. In addition, stress scenarios should include conditions under which key business assumptions and parameters break down. The stress-testing of assumptions used for illiquid instruments and instruments with uncertain contractual maturities, such as core deposits, is particularly critical to achieving an understanding of the institution's risk profile. Therefore, stress scenarios may not only include extremes of observed market conditions but also plausible worst-case scenarios.

Management and the board of directors should periodically review the results of stress tests and the appropriateness of key underlying assumptions. Stress-testing should be supported by appropriate contingency plans.

IRR Monitoring and Reporting

An accurate, informative, and timely management information system is essential for managing IRR exposure, both to inform management and support compliance with board policy. Reporting of risk measures should be regular and clearly compare current exposure with policy limits. In addition, past forecasts or risk estimates should be compared with actual results as one tool to identify any potential shortcomings in modeling techniques.

A bank's senior management and its board or a board committee should receive reports on the bank's IRR profile at least quarterly. More frequent reporting may be appropriate depending on the bank's level of risk and its potential for significant change. While the types of reports prepared for the board and for various levels of

management will vary based on the institution's IRR profile, they should, at a minimum, allow senior management and the board or committee to—

- evaluate the level of and trends in the bank's aggregate IRR exposure;
- demonstrate and verify compliance with all policies and limits;
- evaluate the sensitivity and reasonableness of key assumptions;
- assess the results and future implications of major hedging or position-taking initiatives that have been taken or are being actively considered;
- understand the implications of various stress scenarios, including those involving break-downs of key assumptions and parameters;
- review IRR policies, procedures, and the adequacy of the IRR measurement systems; and
- determine whether the bank holds sufficient capital for the level of risk being taken.

Comprehensive Internal Controls

An institution's IRR management process should be an extension of its overall structure of internal controls. Properly structured, a system of internal controls should promote effective and efficient operations; reliable financial and regulatory reporting; and compliance with relevant laws, regulations, and institutional policies. In determining whether internal controls meet these objectives, examiners should consider the general control environment of the organization; the process for identifying, analyzing, and managing IRR; the adequacy of management information systems; and adherence to control activities such as approvals, confirmations, and reconciliations.

An important element of an institution's internal controls for IRR is management's comprehensive evaluation and review of the various components of the IRR management process. Although procedures for establishing limits and adhering to them may vary among institutions, periodic reviews should be conducted to determine whether the organization enforces its IRR policies and procedures. Positions that exceed established limits should receive the prompt attention of appropriate management and should be resolved according to the process described

in approved policies. Periodic reviews of the IRR management process should also be conducted in light of significant changes in the nature of instruments acquired, risk-measurement methodologies, limits, and internal controls that have occurred since the last review.

Reviews of the accuracy and performance of the IRR measurement system should also be conducted and include assessments of the assumptions, parameters, and methodologies used in the institution's IRR measurement system. During a review, examiners should seek to understand, test, and document the current measurement process; evaluate the system's accuracy; and recommend solutions to any identified weaknesses. The results of this review, along with any recommendations for improvement, should be reported to the board and acted upon in a timely manner. Institutions with complex risk exposure are encouraged to have their measurement systems reviewed by external auditors or other knowledgeable outside parties to ensure their adequacy and integrity. Since measurement systems may incorporate one or more subsidiary systems or processes, institutions should ensure that multiple component systems are well integrated and consistent in all critical aspects.

The frequency and extent to which an institution should reevaluate its risk-measurement methodologies and models depends, in part, on the specific IRR exposures created by their holdings and activities, the pace and nature of changes in market interest rates, and the extent to which there are new developments in measuring and managing IRR. At a minimum, institutions should review their underlying IRR measurement methodologies and IRR management process annually, and more frequently as market conditions dictate. In many cases, internal evaluations may be supplemented by reviews of external auditors or other qualified outside parties, such as consultants with expertise in IRR management.

Rating the Adequacy of IRR Management

Examiners should incorporate their assessment of the adequacy of IRR management into their overall rating of risk management, which is subsequently factored into the management component of an institution's CAMELS rating. Rat-

ings of IRR management can follow the general framework used to rate overall risk management:

- A rating of 1 or strong would indicate that management effectively identifies and controls the IRR posed by the institution's activities, including those from new products.
- A rating of 2 or satisfactory would indicate that the institution's management of IRR is largely effective, but lacking in some modest degree. It reflects a responsiveness and ability to cope successfully with existing and foreseeable exposures that may arise in carrying out the institution's business plan. While the institution may have some minor risk-management weaknesses, these problems have been recognized and are being addressed. Generally, risks are being controlled in a manner that does not require additional or more than normal supervisory attention.
- A rating of 3 or fair signifies IRR management practices that are lacking in some important ways and, therefore, are a cause for more than normal supervisory attention. One or more of the four elements of sound IRR management are considered fair and have precluded the institution from fully addressing a significant risk to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control adequately all significant risks to the institution.
- A rating of 4 or marginal represents marginal IRR management practices that generally fail to identify, monitor, and control significant risk exposures in many material respects. Generally, such a situation reflects a lack of adequate guidance and supervision by management and the board. One or more of the four elements of sound risk management are considered marginal and require immediate and concerted corrective action by the board and management.
- A rating of 5 or unsatisfactory indicates a critical absence of effective risk-management practices to identify, monitor, or control significant risk exposures. One or more of the four elements of sound risk management is considered wholly deficient, and management and the board have not demonstrated the capability to address deficiencies. Deficiencies in the institution's risk-management procedures and internal controls require immediate and close supervisory attention.

QUANTITATIVE LEVEL OF IRR EXPOSURE

Evaluating the quantitative level of IRR involves assessing the effects of both past and potential future changes in interest rates on an institution's financial condition, including the effects on its earnings, capital adequacy, liquidity, and, in some cases, asset quality. This assessment involves a broad analysis of an institution's business mix, balance-sheet composition, OBS holdings, and holdings of interest rate-sensitive instruments. Characteristics of the institution's material holdings should also be investigated to determine (and quantify) how changes in interest rates might affect its performance. The rigor of this evaluation process should reflect the size, sophistication, and nature of the institution's holdings.

Assessment of the Composition of Holdings

An overall evaluation of an institution's holdings and its business mix is an important first step in evaluating the quantitative level of IRR exposure. The evaluation should focus on identifying (1) major on- and off-balance-sheet positions, (2) concentrations in interest-sensitive instruments, (3) the existence of highly volatile instruments, and (4) significant sources of non-interest income that may be sensitive to changes in interest rates. Identifying major holdings of particular types or classes of assets, liabilities, or off-balance-sheet instruments is particularly pertinent since the interest rate-sensitivity characteristics of an institution's largest positions or activities will tend to dominate its IRR profile. The composition of assets should be assessed to determine the types of instruments held and the relative proportion of holdings they represent, both with respect to total assets and within appropriate instrument portfolios. Examiners should note any specialization or concentration in particular types of investment securities or lending activities and identify the interest-rate characteristics of the instruments or activities. The assessment should also incorporate an evaluation of funding strategies and the composition of deposits, including core deposits. Trends and changes in the composition of assets, liabilities, and off-balance-sheet holdings should be fully assessed—especially

when the institution is experiencing significant growth.

Examiners should identify the interest sensitivity of an institution's major holdings. For many instruments, the stated final maturity, coupon interest payment, and repricing frequency are the primary determinants of their interest-rate sensitivity. In general, the shorter the repricing frequency, or maturity for fixed-rate instruments, the greater the impact of a change in rates on the *earnings* of the asset, liability, or OBS instrument employed will be because the cash flows derived, either through repricing or reinvestment, will more quickly reflect market rates. Conversely, the longer the repricing frequency, or maturity for fixed-rate instruments, the more sensitive the *value* of the instrument will be to changes in market interest rates. Accordingly, basic maturity/repricing distributions and gap schedules are important first screens in identifying the interest sensitivity of major holdings from both an earnings and value standpoint.

Efforts should also be made to identify instruments whose value is highly sensitive to rate changes. Even if they do not represent a major position, the rate sensitivity of these holdings may be large enough to have a material effect on the institution's aggregate exposure. Highly interest rate-sensitive instruments generally have fixed-rate coupons with long maturities, significant embedded options, or some elements of both. Identifying explicit options and instruments with embedded options is particularly important. Because of their asymmetrical cash flows under varying scenarios, these holdings may exhibit significantly volatile price and earnings behavior in changing-rate environments. The interest-rate sensitivity of exchange-traded options is usually readily identified due to the standardization of exchange contracts. On the other hand, the interest-rate sensitivity of over-the-counter derivative instruments and the option provisions embedded in other financial instruments, such as the right to prepay a loan without penalty, may be less readily identifiable. Instruments tied to residential mortgages, such as mortgage pass-through securities, collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), and various mortgage-derivative products, generally entail some form of embedded optionality. Certain types of CMOs and REMICs constitute high-risk mortgage-derivative products and should be clearly identified. U.S. agency and

municipal securities, as well as traditional forms of lending and borrowing arrangements, can often incorporate options into their structures. U.S. agency structured notes and municipal securities with long-dated call provisions are just two examples. Many commercial loans also make use of caps or floors. Over-the-counter OBS instruments, such as swaps, caps, floors, and collars, can involve highly complex structures and, thus, can be quite volatile in the face of changing interest rates.

An evaluation of an institution's funding sources relative to the profile of its assets is fundamental to the assessment of IRR. Reliance on volatile or complex funding structures can significantly increase IRR when asset structures are fixed-rate or long-term in nature. Conversely, long-term liabilities financing shorter-term assets can also increase IRR. The role of nonmaturity or core deposits in an institution's funding base is particularly pertinent to any assessment of IRR. Depending on their composition and the underlying client base, core deposits can provide significant opportunities for institutions to administer and manage the interest rates paid on this funding source. Thus, high levels of stable core deposit funding may provide an institution with significant control over its IRR profile. Examiners should assess the characteristics of an institution's nonmaturity deposit base, including the types of accounts offered, the underlying customer base, and important trends that may influence the rate sensitivity of this funding source.

In general, examiners should evaluate trends and attempt to identify any structural changes in the interest-rate risk profile of an institution's holdings, such as shifts of asset holdings into longer-term instruments or instruments that may have embedded options, changes in funding strategies and core deposit balances, and the use of off-balance-sheet instruments. Significant changes in the composition of an institution's holdings may reduce the usefulness of historical performance as an indicator of future performance.

Examiners should also identify and assess material sources of interest-sensitive fee income. Loan-servicing income, especially when related to residential mortgages, can be an important and highly volatile element in an institution's earnings profile. Servicing income is linked to the size of the servicing portfolio and, thus, can be greatly affected by the rate of prepayment on mortgages in the servicing portfolio. Revenues

arising from securitization of other types of loans, including credit card receivables, can also be very sensitive to changes in interest rates.

An analysis of both on- and off-balance-sheet holdings should also consider potential basis risk, that is, whether instruments with adjustable-rate characteristics that reprice in a similar time period will reprice differently than assumed. Consideration of basis risk is particularly pertinent when offsetting positions reprice in the same time period. Typical examples include assets that reprice with three-month Treasury bills paired against liabilities repricing with three-month LIBOR or prime-based assets paired against other short-term funding sources. Analyzing the repricing characteristics of major adjustable-rate positions should help to identify such situations.

Exposure of Earnings to IRR

When evaluating the potential effects of changing rates on an institution's earnings, examiners should assess the key determinants of the net interest margin, the effect that fluctuations in net interest margins can have on overall net income, and the rate sensitivity of non-interest income and expense. Analyzing the historical behavior of the net interest margin, including the yields on major assets, liabilities, and off-balance-sheet positions that make up that margin, can provide useful insights into the relative stability of an institution's earnings. For example, a review of the historical composition of assets and the yields earned on those assets clearly identifies an institution's business mix and revenue-generating strategies and reveals important insights into the potential vulnerabilities of these revenues to changes in rates. Similarly, an assessment of the rates paid on various types of deposits over time can help identify the institution's funding strategies, how the institution competes for deposits, and the potential vulnerability of its funding base to rate changes.

Understanding the effect of potential fluctuations in net interest income on overall operating performance is also important. High overhead structures at some banks may require high net interest margins to generate even moderate levels of income. Accordingly, relatively high net interest margins may not necessarily imply a higher tolerance to changes in interest rates.

Examiners should fully consider the potential effects of fluctuating net interest margins when analyzing the exposure of net income to changes in interest rates.

Additionally, examiners should assess the contribution of non-interest income to net income, including its interest-rate sensitivity and how it affects the IRR of the institution. Significant sources of rate-insensitive non-interest income provide stability to net income and can mitigate the effect of fluctuations in net interest margins.

A historical review of changes in an institution's earnings—both net income and net interest income—in relation to changes in market rates is an important step in assessing the rate sensitivity of its earnings. When appropriate, this review should assess the institution's performance during prior periods of volatile rates.

Important tools used to gauge the potential volatility in future earnings include basic maturity and repricing gap calculations and income simulations. Short-term repricing gaps between assets and liabilities in intervals of one year or less can provide useful insights on the exposure of earnings. These can be used to develop rough approximations of the effect of changes in market rates on an institution's profitability. Examiners can develop rough gap estimates using available call report information, as well as the bank's own internally generated gap or other earnings exposure calculations if risk-management and -measurement systems are deemed adequate. When available, a bank's own earnings-simulation model provides a particularly valuable source of information: a formal estimate of future earnings (a "baseline") and an evaluation of how earnings would change under different rate scenarios. Together with historical earnings patterns, an institution's estimate of the IRR sensitivity of its earnings derived from simulation models is an important indication of the exposure of its near-term earnings stability.

As detailed in the preceding subsection, sound risk-management practices require IRR to be measured over a probable range of potential interest-rate changes. At a minimum, an instantaneous shift in the yield curve of plus or minus 200 basis points should be used to assess the potential impact of rate changes on an institution's earnings.

Examiners should evaluate the exposure of earnings to changes in interest rates relative to the institution's overall level of earnings and the potential length of time such exposure might

persist. For example, simulation estimates of a small, temporary decline in earnings, while likely an issue for shareholders and directors, may be less of a supervisory concern if the institution has a sound earnings and capital base. On the other hand, exposures that could offset earnings for a significant period (as some thrifts experienced during the 1980s) and even deplete capital would be a great concern to both management and supervisors. Exposures measured by gap or simulation analysis under the minimum 200 basis point scenario that would result in a significant decline in net interest margins or net income should prompt further investigation of the adequacy and stability of earnings and the adequacy of the institution's risk-management process. Specifically, in institutions exhibiting significant earnings exposures, examiners should emphasize the results of the institution's stress tests to determine the extent to which more significant and stressful rate moves might magnify the erosion in earnings identified in the more modest rate scenario. In addition, examiners should emphasize the need for management to understand the magnitude and nature of the institution's IRR and the adequacy of its limits.

While an erosion in net interest margins or net income of more than 25 percent under a 200 basis point scenario should warrant considerable examiner attention, examiners should take into account the absolute level of an institution's earnings both before and after the estimated IRR shock. For example, a 33 percent decline in earnings for a bank with a strong return on assets (ROA) of 1.50 percent would still leave the bank with an ROA of 1.00 percent. In contrast, the same percentage decline in earnings for a bank with a fair ROA of 0.75 percent results in a marginal ROA of 0.50 percent.

Examiners should ensure that their evaluation of the IRR exposure of earnings is incorporated into the rating of earnings under the CAMELS rating system. Institutions receiving an earnings rating of 1 or 2 would typically have minimal exposure to changing interest rates. Conversely, significant exposure of earnings to changes in rates may, in itself, provide a sufficient basis for a lower rating.

Exposure of Capital and Economic Value

As set forth in the capital adequacy guidelines

for state member banks, the risk-based capital ratio focuses principally on broad categories of credit risk and does not incorporate other factors, including overall interest-rate exposure and management's ability to monitor and control financial and operating risks. Therefore, the guidelines point out that in addition to evaluating capital ratios, an overall assessment of capital adequacy must take account of ". . . a bank's exposure to declines in economic value of its capital due to changes in interest rates. For this reason, the final supervisory judgement on a bank's capital adequacy may differ significantly from conclusions that might be drawn solely from the level of its risk-based capital ratio."

Banking organizations with low proportions of assets maturing or repricing beyond five years, relatively few assets with volatile market values (such as high-risk CMOs and structured notes or certain off-balance-sheet derivatives), and large and stable sources of nonmaturity deposits are unlikely to face significant economic value exposure. Consequently, an evaluation of their economic value exposure may be limited to reviewing available internal reports showing the asset/liability composition of the institution or the results of internal-gap, earnings-simulation, or economic-value simulation models to confirm that conclusion.

Institutions with fairly significant holdings of longer maturing or repricing assets, concentrations in value-sensitive on- and off-balance-sheet instruments, or a weak base of nonmaturity deposits warrant more formal and quantitative evaluations of economic-value exposures. This includes reviewing the results of the bank's own internal reports for measuring changes in economic value, which should address the adequacy of the institution's risk-management process, reliability of risk-measurement assumptions, integrity of the data, and comprehensiveness of any modeling procedures.

For institutions that appear to have a potentially significant level of IRR and that lack a reliable internal economic-value model, examiners should consider alternative means for quantifying economic-value exposure, such as internal-gap measures or off-site monitoring or surveillance screens that rely on call report data to estimate economic-value exposure. For example, the institution's gap schedules might be used to derive a duration gap by applying duration-based risk weights to the bank's aggregate positions. In estimating changes in economic value using alternative means, the relative

crudeness of these techniques and lack of detailed data (such as the absence of coupon or off-balance-sheet data) should be taken into account when drawing conclusions about the institution's exposure and capital adequacy.

An evaluation of an institution's capital adequacy should also consider the extent to which past interest-rate moves may have reduced the economic value of capital through the accumulation of net unrealized losses on financial instruments. To the extent that past rate moves have reduced the economic or market value of a bank's claims more than they have reduced the value of its obligations, the institution's economic value of capital is less than its stated book value.

To evaluate the embedded net loss or gain in an institution's financial structure, fair-value data on the securities portfolio can be used as the starting point; this information should be readily available from the call report or bank internal reports. Other major asset categories that might contain material embedded gains or losses include any assets maturing or repricing in more than five years, such as residential, multifamily, or commercial mortgage loans. By comparing a portfolio's weighted average coupon with current market yields, examiners may get an indication of the magnitude of any potential unrealized gains or losses. For companies with hedging strategies that use derivatives, the current positive or negative market value of these positions should be obtained, if available. For banks with material holdings of originated or purchased mortgage-servicing rights, capitalized amounts should be evaluated to ascertain that they are recorded at the lower of cost or fair value and that management has appropriately written down any values that are impaired pursuant to generally accepted accounting rules.

The presence of significant depreciation in securities, loans, or other assets does not necessarily indicate significant embedded net losses; depreciation may be offset by a decline in the market value of a bank's liabilities. For example, stable, low-cost nonmaturity deposits typically become more profitable to banks as rates rise, and they can add significantly to the bank's financial strength. Similarly, below-market-rate deposits, other borrowings, and subordinated debt may also offset unrealized asset losses caused by past rate hikes.

For banks with substantial depreciation in their securities portfolios, low levels of nonmaturity deposits and retail time deposits, or high

levels of IRR exposure, unrealized losses can have important implications for the supervisory assessment of capital adequacy. If stressful conditions require the liquidation or restructuring of the securities portfolio, economic losses could be realized and, thereby, reduce the institution's regulatory capitalization. Therefore, for higher-risk institutions, an evaluation of capital adequacy should consider the potential after-tax effect of the liquidation of available-for-sale and held-to-maturity accounts. Estimates of the effect of securities losses on regulatory capital ratio may be obtained from surveillance screens that use call report data or the bank's internal reports.

Examiners should also consider the potential effect of declines and fluctuations in earnings on an institution's capital adequacy. Using the results of internal model simulations or gap reports, examiners should determine whether capital-impairing losses might result from changes in market interest rates. In cases where potential rate changes are estimated to cause declines in margins that actually result in losses, examiners should assess the effect on capital over a two- or three-year earnings horizon.

When rating capital adequacy in the context of IRR exposure, examiners should consider the effect of changes in market interest rates on the economic value of equity, level of embedded losses in the bank's financial structure, and impact of potential rate changes on the institution's earnings. The IRR of institutions that show material declines in earnings or economic value of capital from a 200 basis point shift should be evaluated fully, especially if that decline would lower an institution's pro forma prompt-corrective-action category. For example, a well-capitalized institution with a 5.5 percent leverage ratio and an estimated change in economic value arising from an appropriate stress scenario amounting to 2.0 percent of assets would have an adjusted leverage ratio of 3.5 percent, causing a pro forma two-tier decline in its prompt-corrective-action category to the undercapitalized category. After considering the level of embedded losses in the balance sheet, the stability of the institution's funding base, its exposure to near-term losses, and the quality of its risk-management process, the examiner may need to give the institution's capital adequacy a relatively low rating. In general, sufficiently adverse effects of market-rate shocks or weak management and control procedures can provide a basis for lowering a bank's rating of capital adequacy. Moreover,

even less severe exposures could contribute to a lower rating if combined with exposures from asset concentrations, weak operating controls, or other areas of concern.

Examination Process for Evaluating IRR

As the primary market risk most banks face, IRR should usually receive consideration in full-scope exams. It may also be the topic of targeted examinations. To meet examination objectives efficiently and effectively while remaining sensitive to potential burdens imposed on institutions, the examination of IRR should follow a structured, *risk-focused approach*. Key elements of a risk-focused approach to the examination process for IRR include (1) off-site monitoring and risk assessment of an institution's IRR profile and (2) appropriate planning and scoping of the on-site examination to ensure that it is as efficient and productive as possible. A fundamental tenet of this approach is that supervisory resources are targeted at functions, activities, and holdings that pose the most risk to the safety and soundness of an institution. Accordingly, institutions with low levels of IRR would be expected to receive relatively less supervisory attention than those with more severe IRR exposures.

Many banks have become especially skilled in managing and limiting the exposure of their earnings to changes in interest rates. Accordingly, for most banks and especially for smaller institutions with less complex holdings, the IRR element of the examination may be relatively simple and straightforward. On the other hand, some banks consider IRR an intended consequence of their business strategies and choose to take and manage that risk explicitly—often with complex financial instruments. These banks, along with banks that have a wide array of activities or complex holdings, generally should receive greater supervisory attention.

Off-Site Risk Assessment

Off-site monitoring and analysis involves developing a preliminary view or “risk assessment” before initiating an on-site examination. Both the level of IRR exposure and quality of IRR management should be assessed to the

fullest extent possible during the off-site phase of the examination process. The following information can be helpful in this assessment:

- organizational charts and policies identifying authorities and responsibilities for managing IRR
- IRR policies, procedures, and limits
- ALCO committee minutes and reports (from six to twelve months before the examination)
- board of director reports on IRR exposures
- audit reports (both internal and external)
- position reports, including those for investment securities and off-balance-sheet instruments
- other available bank-internal-risk reports, including those detailing key assumptions
- reports outlining key characteristics of concentrations and material holdings of interest-sensitive instruments
- documentation for inputs, assumptions, and methodologies used in measuring risk
- Federal Reserve surveillance reports and supervisory screens

Quantitative IRR exposure can be assessed off-site by conducting as much of the analysis summarized in this subsection as is practicable. This includes assessments of the bank's overall balance-sheet composition and holdings of interest-sensitive instruments. An assessment of the exposure of earnings can be accomplished using supervisory screens, examiner-constructed measures, and internal bank measures obtained from management reports received before the on-site engagement. Similar assessments can be made on the exposure of capital or economic value.

An off-site review of the quality of the risk-management process can significantly improve the efficiency of the on-site engagement. The key to assessing the quality of management is an organized discovery process aimed at determining whether appropriate policies, procedures, limits, reporting systems, and internal controls are in place. This discovery process should, in particular, ascertain whether all the elements of a sound IRR management policy are applied consistently to material concentrations of interest-sensitive instruments. The results and reports of prior examinations provide important information about the adequacy of risk management.

Examination Scope

The off-site risk assessment is an informed hypothesis of both the adequacy of IRR management and the magnitude of the institution's exposure. The scope of the on-site examination of IRR should be designed to confirm or reject that hypothesis and should target specific areas of interest or concern. In this way, examination procedures are tailored to the activities and risk profile of the institution and use flexible and targeted work-documentation programs for the on-site examination. Confirmation of hypotheses on the adequacy of the IRR management process is especially important. In general, if IRR management is identified as adequate, examiners can rely more heavily on the bank's internal IRR measures for assessing quantitative exposures.

The examination scope for assessing IRR should be commensurate with the complexity of the institution and consistent with the off-site risk assessment. For example, only baseline examination procedures would be used for institutions whose off-site risk assessment indicates that they have adequate IRR management processes and low levels of quantitative exposure. Such institutions would include those with noncomplex balance-sheet structures that meet the following criteria:

- Asset structures are principally short-term. Long-term assets constitute less than 25 percent of total assets and the combination of long-term assets and 30 percent of intermediate-term assets constitute less than 30 percent of assets. Long-term assets are considered those that have maturity or repricing intervals greater than five years, and intermediate-term assets are defined as those that have maturity or repricing intervals between one and five years.
- High-risk mortgage securities are less than 5 percent of total assets.
- Structured notes are less than 5 percent of total assets.
- There are no off-balance-sheet positions.
- The capital base is strong, and the institution has a history of stable earnings.

For these and other institutions identified as potentially low risk, the scope of the on-site examination would consist of only those examination procedures necessary to confirm the risk-assessment hypothesis. The adequacy of IRR

management could be confirmed through a basic review of the appropriateness of policies, internal reports, and controls and the institution's adherence to them. The integrity and reliability of the information used to assess the quantitative level of risk could be confirmed through limited sampling and testing. In general, if the risk assessment is confirmed by basic examination procedures, the examiner may conclude the IRR examination process.

Institutions assessed to have high levels of IRR exposure and strong IRR management may require more extensive examination scopes to confirm the risk assessment. These procedures may entail more analysis of the institution's IRR measurement system and the IRR characteristics of major holdings. Where high quantitative levels of exposure are found, examiners should focus special attention on the sources of this risk and on significant concentrations of interest-sensitive instruments. Institutions assessed to have high exposure and weak risk-management systems would require an extensive work-documentation program. Internal measures should be used cautiously, if at all.

Regardless of the size or complexity of an institution, care must be taken during the on-site phase of the examination to ensure confirmation of the risk assessment and identification of issues that may have escaped off-site analysis. Accordingly, the examination scope should be adjusted as on-site findings dictate.

Assessing CAMELS Ratings

For most institutions, interest-rate risk is their primary market-risk exposure. Accordingly, the CAMELS market-risk sensitivity or "S" rating for these institutions should be based on assessments of the adequacy of IRR management practices and the quantitative level of IRR exposure.⁷ In particular, CAMELS "S" ratings dealing primarily with IRR should be based on, but not limited to, an assessment of the following evaluation factors:

- the sensitivity of the financial institution's earnings or the economic value of its capital to adverse changes in interest rates

7. Section A.5020.1, "Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System," provides guidance on the market-risk sensitivity component of the CAMELS rating system.

- the ability of management to identify, measure, monitor, and control exposure to interest-rate risk given the institution's size, complexity, and risk profile
- the nature and complexity of interest-rate risk exposure arising from nontrading positions
- where appropriate, the nature and complexity of market-risk exposure arising from trading and foreign operations

“S” ratings based primarily on IRR should conform with the following framework:

- 1 A rating of 1 indicates that interest-rate risk sensitivity is well controlled and that there is minimal potential that the earnings performance or capital position will be adversely affected. Risk-management practices are strong for the size, sophistication, and market risk accepted by the institution. The level of earnings and capital provide substantial support for the degree of interest-rate risk taken by the institution.
- 2 A rating of 2 indicates that interest-rate risk sensitivity is adequately controlled and that there is only moderate potential that the earnings performance or capital position will be adversely affected. Risk-management practices are satisfactory for the size, sophistication, and interest-rate risk accepted by the institution. The level of earnings and capital provide adequate support for the degree of interest-rate risk taken by the institution.
- 3 A rating of 3 indicates that control of interest-rate risk sensitivity needs improvement or that there is significant potential that the earnings performance or capital position will be adversely affected. Risk-management practices need to be improved given the size, sophistication, and level of risk accepted by the institution. The level of earnings and capital may not adequately support the degree of interest-rate risk taken by the institution.
- 4 A rating of 4 indicates that control of interest-rate risk sensitivity is unacceptable or that there is high potential that the earnings performance or capital position will be adversely affected. Risk-management practices are deficient for the size, sophistication, and level of risk accepted by the institution. The level of earnings and capital provide inadequate support for the degree of interest-rate risk taken by the institution.
- 5 A rating of 5 indicates that control of interest-rate risk sensitivity is unacceptable or that the level of risk taken by the institution is an imminent threat to its viability. Risk-management practices are wholly inadequate for the size, sophistication, and level of interest-rate risk accepted by the institution.

The adequacy of an institution's IRR management is a leading indicator of its potential IRR exposure. Therefore, assessment of IRR management practices should be the basis for the overall assessment of an institution's IRR. Unsafe exposures and management weaknesses should be fully reflected in “S” ratings. Unsafe exposures and unsound management practices that are not resolved during the on-site examination should be addressed through subsequent follow-up actions by the examiner and other supervisory personnel.

Interest-Rate Risk Management

Examination Objectives

Effective date November 1996

Section 4090.2

1. To evaluate the policies regarding interest-rate risk established by the board of directors and/or senior management, including the limits established for the bank's interest-rate risk profile.
2. To determine if the bank's interest-rate risk profile is within those limits.
3. To evaluate the management of the bank's interest-rate risk, including the adequacy of the methods and assumptions used to measure interest-rate risk.
4. To determine if internal management reporting systems provide the information necessary for informed interest-rate management decisions and for monitoring the results of those decisions.
5. To initiate corrective action when interest-rate management policies, practices, and/or procedures are deficient in controlling and monitoring interest-rate risk.

Interest-Rate-Risk Management Examination Procedures

Effective date October 2008

Section 4090.3

1. Determine if interest-rate risk is managed at the bank level or on a holding company basis.
2. Review the bank's written policies for reasonableness. At a minimum, they should cover—
 - a. definition and measurement of acceptable risks, including acceptable levels of interest-rate exposure;
 - b. net interest margin goals;
 - c. sources and uses of funds;
 - d. off-balance-sheet activities that affect interest-rate exposure;
 - e. responsibilities within the bank for interest-rate-risk management decisions; and
 - f. reporting mechanisms.
3. Evaluate the internal controls or the internal audit function. Determine whether internal mechanisms are adequate to ensure compliance with established limits on interest-rate risk. If they are determined to be inadequate, complete or update the Internal Control Questionnaire. The examiner should prepare a brief description of the bank's interest-rate-risk policies and practices as well as identify areas in need of improvement.
4. Review the UBPR, interim financial reports, and internal management reports, paying particular attention to—
 - a. on- and off-balance-sheet mix and trends;
 - b. the methodology used by the bank to measure interest-rate risk; and
 - c. the stability of interest margins under varying economic conditions or simulations (causes of significant fluctuations should be identified).
5. Evaluate the bank's exposure to interest-rate risk by:
 - a. Obtaining and reviewing any reports regularly prepared by management for controlling and monitoring interest-rate risk.
 - b. Requesting the appropriate information for determining the level of interest-rate risk present in the bank's assets, liabilities, and off-balance-sheet activities, if management does not, at a minimum, regularly prepare rate-sensitivity reports (the circumstances facing the bank and the existing interest-rate environment should govern the degree of analysis).
6. Evaluate the quality of interest-rate-risk management. The bank's procedures and controls should be in compliance with the minimum guidelines set forth in SR-96-13. See Section 4090.1 and SR-99-18. The evaluation should include, but is not limited to, the following:
 - a. Assess whether the methods and assumptions used to measure interest-rate risk are adequate relative to the size of the bank and the complexity of its balance sheet.
 - b. Assess management's knowledge of interest-rate risk in relation to the size and complexity of the bank's balance sheet. In particular, assess their understanding of the methods used by the bank to measure the risk.
 - c. Determine whether the level of risk is within the limits set.
 - d. Assess the bank's ability to adjust its interest-rate position.
 - e. Determine if the reporting process provides clear and reliable information on a timely basis (at least quarterly).
 - f. Determine if new products or hedging instruments are adequately analyzed before purchase.
7. Determine the adequacy of the net interest margin based on an analysis of the components of the margin (i.e., interest expense and interest income). If the margin or any component is unusually high or low, determine—
 - a. if goals have been established for net interest earnings;
 - b. management's success in meeting established goals;
 - c. the effect of the bank's interest-rate-risk position on meeting established goals;

- d. the effect of the bank's pricing policies on meeting established goals; and
 - e. the effect of the bank's credit-risk appetite on the margin.
8. Review the interest-rate-risk management section of the last report of examination. Determine if there were concerns in this area and if corrective action was required.
9. Write in appropriate report format and discuss with management general remarks on—
- a. the quality of the bank's planning to control and manage interest-rate risk;
- b. the level of the bank's interest-rate exposure and an assessment of the associated degree of risk;
 - c. the quality of the related administrative controls and internal management reporting systems; and
 - d. the effect of interest-rate-risk management decisions on earnings and capital.
10. Update the workpapers with any information that will facilitate future examinations.

Interest Rate Risk Management Internal Control Questionnaire

Effective date May 1993

Section 4090.4

Discuss with senior management the bank's policies and practices with regard to the following:

1. Has the board of directors, consistent with its duties and responsibilities, adopted an interest rate risk management policy that includes:
 - a. A formal mechanism to coordinate interest rate sensitivity decisions?
 - b. Clear lines of responsibility and authority for decisions affecting interest rate sensitivity?
 - c. Guidelines for the level of interest rate risk, including that associated with off-balance-sheet products, if any?
 - d. Outside limits for the imbalance between balance-sheet and off-balance-sheet positions and for the potential exposure of earnings or equity to changes in interest rates?
2. Have internal management reports been prepared that provide an adequate basis for

making interest rate management decisions and for monitoring the results of those decisions? Specifically:

- a. Are reports prepared on the bank's rate sensitivity using an appropriate measurement method?
 - b. Is historical information on asset yields, cost of funds, and net interest margins readily available?
 - c. Are interest margin variations, both from the prior reporting period and from the budget, regularly monitored?
 - d. Is sufficient information available to permit an analysis of the cause of interest margin variations?
3. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

Litigation and Other Legal Matters; Examination-Related Subsequent Events

Effective date May 1996

Section 4100.1

LITIGATION AND OTHER LEGAL MATTERS

Events or conditions arising from litigation,¹ claims, and assessments are matters within the direct knowledge and, often, control of bank management. Accordingly, management is the primary source of information about these matters.² Examiners ordinarily do not possess legal skills and therefore cannot make legal judgments on such information. The examiner should request that bank management send a letter of inquiry to those attorneys with whom it has consulted on litigation, claims, and assessments. The letter of inquiry is the examiner's primary means of corroborating information furnished by management.

When requesting these inquiries, the examiner should consider the scope of counsel's involvement with the bank. Banks frequently engage a number of law firms, so the examiner should have the bank direct requests to both general counsel and counsel whose service is limited to particular matters. Ordinarily, inquiries should be made of all outside counsel.

In certain instances, however, the examiner may be reasonably certain that some of the bank's counsels are handling only routine matters that ultimately won't have a significant effect on the bank's financial condition. In these cases, the examiner-in-charge may decide not to send letters of inquiry to those counsels.

Requests for corroboration from legal counsel should ask for information about litigation, impending litigation, claims, and contingent liabilities. For the purposes of these requests, the terms impending litigation and contingent liabilities have the following meanings:

1. Legal or litigation risk is the risk that contracts are not legally enforceable or documented properly. Legal risks should be limited and managed through policies developed by the institution's legal counsel. At a minimum, guidelines and processes should be in place to ensure the enforceability of counterparty agreements.

2. In limited circumstances, a bank director who is not an officer of the bank may have direct knowledge and control of legal information, usually when the director's primary occupation is as an attorney. Management in these rare instances may have limited knowledge and control of legal information.

- *Impending litigation.* Litigation threatened against the bank by a third party but not formally commenced.
- *Contingent liabilities.* Matters other than litigation or claims, which available information indicates have at least a reasonable possibility of impairing assets or increasing liabilities. Contingent liabilities should include unasserted claims or assessments.

A letter of inquiry should ask for a response both as of the examination date and as of the date of counsel's response. That date of response should be as close to the completion of the examination as practicable, yet should allow sufficient time for evaluation of responses and follow-up of nonreplies. In some cases, the examiner may wish to obtain an interim response (in addition to a final response) so that a timely preliminary evaluation of material legal matters may be made. Letters of inquiry should be mailed early enough to allow them to circulate within the law firm because several attorneys may be considering legal matters for the bank. Before completing the examination, the examiner should request that appropriate bank officials contact counsel who have not responded to the initial letter of inquiry.

The examiner should not assume that bank management or counsel will keep him or her informed of developments subsequent to the date of counsel's response. Accordingly, if there is reason to believe that there may be subsequent developments, the examiner should contact bank management again before submitting the report of examination. If bank management is uncooperative or regarded as incapable of supervising matters concerning litigation, or if other sensitivities mandate circumvention of bank management, then the examiner should bring the matter to the attention of Federal Reserve Bank management for further communications with the bank's management and counsel, which could include direct contact with bank counsel.

EXAMINATION-RELATED SUBSEQUENT EVENTS

As a practical matter, the examination, and therefore the report of examination, is as of a

stated date. However, events or transactions sometimes occur, subsequent to the date of examination, but before the date the report of examination is submitted to the Reserve Bank, that may have a significant effect on the soundness of a bank. Such events and transactions are referred to as “subsequent events” and may be of two types.

One type includes those events or transactions that provide additional evidence about conditions that existed at the examination date. Examples of this type are the bankruptcy of a significant borrower or the resolution of outstanding litigation.

The second type includes those events that provide evidence about conditions that did not

exist at the date of examination, but that arose subsequently. An example of that type of event would be new litigation arising subsequent to the examination date but before submission of the examination report or a merger agreement signed subsequent to the examination date.

All information that becomes available before the submission of the report of examination should be used by the examiner in his or her evaluations of the bank. Accordingly, all events or transactions that either significantly affect or have the potential to significantly affect the soundness of the bank should be reflected in the report of examination, regardless of whether they occurred before or subsequent to the examination date.

Litigation and Other Legal Matters; Examination-Related Subsequent Events

Examination Objectives

Effective date May 1996

Section 4100.2

1. To determine whether any events or transactions have occurred subsequent to the examination date that have had or may have a significant impact on the present or future soundness of the bank or on the conclusions expressed in the report of examination.
2. To determine the effect of legal counsel's evaluation of litigation, impending litigation, claims, and contingent liabilities on the examiner's overall conclusion regarding the soundness of the bank.

Litigation and Other Legal Matters, Examination-Related Subsequent Events

Examination Procedures

Effective date March 1984

Section 4100.3

1. Obtain from the bank officer responsible for legal matters a listing of impending or threatened litigation. For each item, the following information should be included:
 - a. nature of the litigation
 - b. progress of case to date
 - c. how management is responding or intends to respond to the litigation
 - d. an evaluation of the likelihood of an unfavorable outcome and an estimate, if one can be made, of the amount or range of potential loss
2. Obtain from the bank officer responsible for legal matters a listing of unasserted claims or assessments management considers will probably be asserted and which, if asserted, would have at least a reasonable possibility of an unfavorable outcome. For each item, the following information should be included:
 - a. nature of the matter
 - b. how management intends to respond if the claim is asserted
 - c. possible exposure if the claim is asserted
3. Obtain from management a listing of attorneys and legal firms to whom litigation and related matters have been referred. Also, obtain a listing of any litigation noted in the newest review done by internal or external auditors from the examiner assigned internal control, and determine that corrections have been accomplished.
4. Review bills supporting major charges to the general ledger expenses account(s) for legal services as a test of the completeness of the list supplied by the bank.
5. Request that management incorporate information obtained in above steps in a letter to the bank's legal counsel for corroboration.
6. Evaluate management's listing of litigation, unasserted claims and assessments, and counsel's replies for the effect on the financial condition of the bank, giving appropriate consideration to any insurance coverage.
7. Obtain and review copies of any subsequent interim financial statements. Examples of such statements are—
 - a. published reports sent to shareholders or others
 - b. reports submitted to the board of directors by internal auditors, external auditors, or management
 - c. statements of condition
 - d. income statements
 - Inquire as to whether interim statements obtained were prepared on the same basis as that used for the statements as of the examination date. If not, request proper adjustments to the interim statements.
 - Compare the interim financial statements, especially income statements, with similar statements for the corresponding period in the prior year and to budgets, profit plans, etc., for the current period, if such are available.
 - Obtain from management satisfactory explanations for any unusual items or significant fluctuations noted.
8. Make inquiries of and hold discussions with officers and other executives who have responsibility for the following matters:
 - a. changes in credit lines or transactions with officers, directors, controlling shareholders, affiliated bank holding companies, affiliates of an affiliated holding company, or their interests
 - b. changes in significant accounting policies
 - c. changes in senior officers
 - d. any event or combination of events which have had or could have a material adverse effect on the bank's financial condition, including liquidity, or results of operation, such as the default of a bond issue in which the bank has substantial holdings or the filing of bankruptcy by a major borrower
 - e. commencement or discontinuance of services not requiring prior approval
 - f. execution of significant contracts, such as for employment, leases, pension, or other fringe benefit programs
 - g. significant new contingent liabilities or commitments other than those referred to above
 - h. significant changes in assets which may not be evident from the review of subsequent interim financial statements, such as a shift in the amount of loans or

- investments in special categories, or unusual adjustments made in or after the subsequent interim financial statements reviewed in connection with step 7 above
9. Distribute information obtained in step 8 to the appropriate examiners.
 10. Read minutes of all meetings of stockholders, directors, and appropriate committees (investment, loans, etc.).
 - a. Ascertain from officials of the bank whether minutes of all such meetings subsequent to the examination date are set forth in the minute book.
 - b. As to meetings for which minutes have not been prepared at the date of the review, inquire directly of persons present at the meetings and, preferably, of the person charged with the responsibility of preparing the minutes, concerning matters dealt with at such meetings.
 11. If specific violations of law or areas of weakness have been reported to management earlier in the examination, determine the extent to which management has proceeded toward corrective action.
 12. Make additional inquiries or perform such procedures as considered necessary and appropriate to dispose of questions that arose in the course of the preceding procedures, inquiries, and discussions.
 13. If, as a result of performing the above procedures, information is obtained that has a significant impact on the evaluation of the soundness of the bank, extend the appropriate examination procedures so that sufficient evidence is reviewed and documented in the workpapers to support the conclusions reached.
 14. Prepare comments for the examination report on any events or transaction noted which may have a material effect on the soundness of the bank.
 15. Update the workpapers with any information that will facilitate future examinations.

Contingent Claims from Off-Balance-Sheet Credit Activities

Section 4110.1

Effective date November 1995

INTRODUCTION

Off-balance-sheet credit activities have been one of the fastest growing areas of banking activity. Although these activities may not be reflected on the balance sheet, they must be thoroughly reviewed because they can expose the bank to contingent liabilities. Contingent liabilities are financial obligations of a bank that are dependent on future events or actions of another party.

The purpose of this section is to provide a concise reference for contingent liabilities that arise from off-balance-sheet credit activities (for example, loan commitments and letters of credit). This section will also include some discussion of other contingent liabilities, which arise from asset sales and other off-balance-sheet activities. Activities such as trusts, securities clearance, securities brokerage, and corporate management advisory services involve significant operational and fiduciary risks and require specialized examination procedures. Consult section 6010, "Other Types of Examinations," in this manual for further information about these activities.

Derivatives are also not covered in this section. The acquisition and management of derivatives for the bank's own account are covered in detail in sections 2020 and 4090, "Acquisition and Management of Nontrading Securities and Derivative Instruments" and "Interest-Rate Risk Management" of this manual. The *Trading Activities Manual* provides more specific guidance for the examination of banks that are involved in derivatives trading and customer accommodation activities.

Risks associated with contingent liabilities may ultimately result in charges against capital. As a result, full-scope examinations will include an analysis of these risks. Each of the major components of the examination—capital, asset quality, management, liquidity, and earnings—incorporates an assessment of the risks associated with off-balance-sheet credit activities. While it is impossible to enumerate all of the types and characteristics of contingent liabilities here, some of the more common ones are discussed in this section. In all cases, the examiner's overall objectives are to assess the potential impact of these contingent liabilities on the financial condition of the bank, to ascertain the likelihood that such contingencies may ultimately result in losses to the bank, to ensure that management has appropriate systems to identify

and control contingent liabilities, and to ensure compliance with all applicable laws, regulations, and statements of regulatory policy.

OFF-BALANCE-SHEET LENDING ACTIVITIES

In reviewing individual credit lines, all of a customer's borrowing arrangements with the bank (for example, direct loans, letters of credit, and loan commitments) should be considered. The factors analyzed in evaluating a direct loan (financial performance, ability and willingness to pay, collateral protection, and future prospects) are applicable to the review of off-balance-sheet lending arrangements. When analyzing these activities, however, examiners should evaluate the probability of draws under the bank's off-balance-sheet lending arrangements with its customers and should evaluate whether the allowance for loan and lease losses adequately reflects the associated risks. Consideration should also be given to compliance with laws and regulations. Refer to section 2040, "Loan Portfolio Management," of this manual for further details.

Loan Commitments

A formal loan commitment is a written agreement signed by the borrower and the lender that details the terms and conditions under which a loan, up to a specified amount, will be made. Unlike a standby letter of credit, which commits the bank to satisfying its customer's obligation to a third party, a loan commitment involves only the bank and its customer. The commitment will have an expiration date and, in exchange for agreeing to make the accommodation, the bank often requires the customer to pay a fee and/or maintain a stipulated compensating balance.

Some commitments, such as a working capital line, revolving credit facility, or a term loan facility, are expected to be used. Other commitments, such as back-up lines of credit for commercial paper issuance, involve usage that is not anticipated unless the customer is unable to retire or roll over the issue at maturity.

Lines of Credit

A line of credit expresses to the customer, usually by letter, a bank's willingness to lend up to a certain amount over a specified timeframe. These lines of credit are disclosed to the customer and are referred to as "advised" or "confirmed" lines. In contrast, "guidance" lines (also referred to as internal guidance lines) are not disclosed to the customer. "Guidance" lines of credit are formally approved like any other loans or commitments and are established to aid the loan officer who is servicing an account act quickly to an unexpected request for funds. Many lines of credit may be cancelled if the customer's financial condition deteriorates; others are simply subject to cancellation at the option of the issuer, such as "guidance" lines and other nonbinding agreements. Lines of credit usually require periodic or annual borrowing cleanups. Not adhering to cleanup provisions is a well-defined weakness.

Disagreements may arise as to what constitutes a legally binding commitment. A bank's own descriptive terminology alone may not always be the best guideline. For example, a credit arrangement could be referred to as a revocable line of credit but, at the same time, it may be a legally binding commitment to lend—especially if consideration has been given by the customer for the bank's promise to lend and if the terms of the agreement between the parties result in a contract. Therefore, management of the bank should properly distinguish its legally binding loan commitments from its revocable loan commitments. Proper documentation will help ensure that the bank's position is defensible if legal action becomes necessary to cancel a loan commitment.

Some lending agreements contain a "material adverse change" (MAC) clause, which is intended to allow the bank to terminate the commitment or line of credit if the customer's financial condition deteriorates. This clause may apply to the continuing financial condition of guarantors. The extent to which MAC clauses are enforceable depends on several factors, including whether a legally binding relationship remains despite specific financial covenants that are violated. Some documents make only a vague reference to a borrower's responsibility for maintaining a satisfactory financial condition. Although the enforceability of MAC clauses may be subject to some uncertainty, such clauses

may provide the bank with leverage in negotiations with the customer over such issues as requests for additional collateral and/or personal guarantees.

A bank cannot always routinely determine whether funding of a commitment or line of credit will be required; therefore, the examiner must always subject the line of credit to careful analysis. A MAC clause could allow the bank to refuse funding to a financially troubled borrower; a default in other contract covenants could cause the termination of the commitment or line of credit. Some banks might strictly enforce the terms of a credit arrangement and refuse funding if any of the covenants are broken. Other banks take a more accommodating approach and will continue to make advances unless the customer files for bankruptcy. In the final analysis, the procedures normally followed by the bank in honoring or terminating a contingent lending agreement are important in the examiner's overall evaluation of the credit risk.

Risk Management for Loan Commitments and Lines of Credit

The primary risk inherent in any future extension of credit is that the condition of the borrower may change between the issuing of the commitment and its funding. However, commitments may also entail liquidity and interest-rate risk.

Examiners should evaluate anticipated drawdowns of an issuing bank's loan commitments and lines of credit relative to the bank's anticipated funding sources. A draw under lines of credit may be in the form of a letter of credit issued on the borrower's behalf. Such letters of credit share the same collateral as the line of credit, and the issuance of the letter of credit uses availability under the line. At each examination, the draws that are anticipated for unused commitments and advised lines of credit should be estimated. If the amount of unfunded commitments is large relative to the bank's liquidity position, further analysis is suggested to determine whether borrowed funds will have to be used and, if so, the amount and sources of such funds. Concerns and comments should be noted on the Liquidity/Funds Management page in the report of examination. Also, loan commitments are to be reported on the commitments and contingencies schedule in the report of exami-

nation. For further information, refer to sections 4020, 4090, and 6000, “Asset/Liability Management,” “Interest-Rate Risk Management,” and “Instructions for the Report of Examination,” in this manual.

LETTERS OF CREDIT

A letter of credit substitutes the credit capacity of a financial institution for that of an individual or a corporation. The concept of substituting one obligor’s financial standing for another party’s financial standing has been used in financing the international shipment of merchandise for centuries (imports and exports). Today, letters of credit are also used in a wide variety of other commercial financing transactions, such as guaranteeing obligations involving the private placement of securities and ensuring payment in the event of nonperformance of an obligated party. In addition, letters of credit are used to secure the guarantees of principals in real estate development loans. For additional information on letters of credit, see section 7080, “International—Letters of Credit,” in this manual.

Elements of a Letter of Credit

A letter of credit should contain the following elements:

- a conspicuous statement that the document is a letter of credit
- a specified expiration date or a definite term and an amount
- an obligation of the issuer to pay that is solely dependent on the presentation of conforming documents as specified in the letter of credit and not on the factual performance or nonperformance by the parties to the underlying transaction
- an unqualified obligation of the account party to reimburse the issuer for payments made under the letter of credit

A letter of credit involves at least three parties and is three separate and distinct contracts:

- a contract between the account party and the beneficiary under which the account party has an obligation of payment or performance

- a contract between the account party and the issuer of the letter of credit (The issuer is the party obligated to pay when the terms of the letter of credit are satisfied. The account party agrees to reimburse the issuer for any payments made.)
- a contract between the issuer and the beneficiary, whereby the issuer agrees to pay the beneficiary in compliance with the terms and conditions of the letter

Policies and Procedures

Maintaining adequate written policies and procedures and monitoring letters of credit activities are part of the fiduciary and oversight responsibilities of the board of directors. Generally, policies and procedures governing the institution’s issuance of letters of credit are contained in a section of the loan policy manual.

The letter of credit policy should thoroughly explain the institution’s procedures in issuing both commercial letters of credit and standby letters of credit. The policy should outline desirable and undesirable issuances, designate persons authorized to issue letters of credit and their corresponding loan authority, and define the recordkeeping and documentation requirements including the need to establish separate files for each issuance.

If several lending departments issue letters of credit, the policy should explicitly assign responsibility for file maintenance and recordkeeping. A separate file containing an exact copy of each outstanding letter of credit and all the supporting documentation that the underwriter used in deciding to issue the letter should be included in the file. This documentation should be the same as the financial documentation used for originating any other form of credit, which includes current financial statements, current income statements, purpose of the letter of credit, collateral-security documentation, proof-of-lien position, borrowing authorization, all correspondence, and officers’ memoranda.

Documentation

In addition, the file must contain the documentation associated with any disbursements or payments made. For a commercial letter of credit, these documents may include—

- the draft (sometimes called the bill of exchange), which is the demand for payment;
- the commercial invoice, a document describing the goods being shipped (prepared by the seller and signed by the buyer);
- the bill of lading, which documents that shipment of the goods has taken place and gives the issuer an interest in the goods in the event the account party defaults;
- customs documentation that verifies that all required duties have been paid;
- the insurance certificate, which provides evidence that the seller has procured insurance;
- the consular documents, which state that the shipment of goods satisfies the import/export regulations; and
- the certificates of origin and inspection, which state that the goods originated in a specified country to guard against the substitution of second-quality merchandise.

The documents associated with standby letters of credit are far less complicated than those for commercial letters of credit. Often no document is necessary to support the beneficiary's draw upon a standby letter of credit. This is what is referred to as a clean standby letter of credit and should be discouraged due to the possible legal expense of defending any action taken in honoring or dishonoring a draw without specific documentary requirements. At a minimum, standby letters of credit should require a beneficiary's certificate asserting that the account party has not performed according to the contract or has defaulted on the obligation, as well as a copy of the contract between the account party and beneficiary.

Accounting Issues

Since letters of credit represent a contingent liability to the issuing institution, they must be disclosed in the financial statements in accordance with generally accepted accounting principles (GAAP). The Financial Accounting Standards Board has stipulated in its Statement of Financial Accounting Standard No. 5 that the nature and the amount of a standby letter of credit must be disclosed in the institution's financial statement. Commercial letters of credit and standby letters of credit should be accounted for on the balance sheet as liabilities if it is probable that the bank will disburse funds, and if

the amount of the funding is determinable. Most standby letters of credit will not be recorded as a liability. However, their existence will be disclosed in the footnotes to the financial statements.

Benefits of Letters of Credit

Both the customer and the financial institution can benefit from letters of credit. Through the use of a letter of credit, a customer can often obtain a less expensive source of funds than would be possible through direct financing from the institution. For example, the customer may be able to take advantage of a seller's credit terms with the backing of a letter of credit to substantiate the customer's credit capacity. The institution receives a fee for providing the service. In addition, the institution hopes to build a better working relationship with its customers, who may generate or refer other profitable business.

Revocable or Irrevocable

Letters of credit can be issued as either revocable or irrevocable. The revocable letter of credit is rarely used because it may be amended or canceled by the issuer without the consent of the other parties. Most letters of credit are issued as irrevocable with a stipulation that no changes may be made to the original terms without the full consent of all parties.

Risks in Issuing Letters of Credit

A financial institution must be aware of the credit risks that are associated with letters of credit and must issue letters of credit only when its resources are adequate. Although letters of credit are not originally made as loans, they may lead to loans if the account party cannot meet its obligations. Therefore, the institution must implement the same prudent underwriting guidelines for letters of credit as for other extensions of commercial credit. Refer to section 2080, "Commercial Loans," in this manual for further details.

The importance of adequate documentation cannot be overemphasized. Commercial letters of credit are part of a continuous flow of

transactions evolving from letters of credit to sight drafts to acceptances. Repayment may depend on the eventual sale of the goods involved; however, the goods may not provide any collateral protection. Thus, proper handling and accuracy of the required documents are of primary concern. Letters of credit are frequently issued via tested telex, which verifies the authenticity of the sender (usually another bank). No institution should honor a letter of credit presented by a beneficiary without first confirming its authenticity.

Commercial letters of credit involving imports must be considered unsecured until the goods have passed customs, the security documents specified in the letter of credit have been presented, and the goods have been verified and controlled.

Letters of credit are subject to the risk of fraud perpetrated by customers, beneficiaries, or insiders of the issuing institution. Moreover, standby letters of credit can be used by officers or directors as a vehicle for obtaining credit at another institution. It is important to note that Regulation O requirements apply to standby letters of credit.

Consequently, letters of credit should be issued under the same strict internal controls as any other extension of credit. Such controls include a requirement of dual or multilevel authorizations and the segregation of the issuing, record-keeping, acceptance, and payment functions.

Risks in Honoring Letters of Credit

The honoring of another institution's letter of credit or acceptance requires strict verification procedures as well as dual authorization by the honoring financial institution. Reasons for strict procedures and authorizations are numerous. The issuer may be unable or unwilling to honor a letter of credit or standby letter of credit, claiming that the document is fraudulent or a forgery or that the signer was unauthorized. Before honoring any other institution's letter of credit, a bank should confirm in writing that the letter of credit is valid and will be honored under specified conditions. Agreements with issuers for accepting letters of credit issued by tested telex should provide specific conditions under which they will be honored.

To minimize risks of loss, compliance with the conditions outlined within the letter of credit

must be strict—not merely substantial. Testing of LOCs should involve two or more persons through dual authorization or segregation of duties to prevent fraud by employees in this process.

Uniform Commercial Code

Both the issuer and the beneficiary of letters of credit are obligated to conform to a uniform set of rules governed by article 5 of the Uniform Commercial Code (UCC). These rules are referenced in the Uniform Customs and Practice for Documentary Credits (UCP). The UCC is a set of articles governing commercial transactions adopted by various states, whereas the UCP encompasses all of the international guidelines for trading goods and services. Local laws and customs vary and must be followed under advice of counsel.

TYPES OF LETTERS OF CREDIT

There are two major types of letters of credit: the commercial letter of credit, also referred to as a trade letter of credit, and the standby letter of credit. Banks have significantly increased their issuances of letters of credit, particularly standby letters. A contributing factor to this significant increase is that by issuing letters of credit, an institution can increase its earnings without disbursing funds and increasing total assets. The institution charges a fee for the risk of default or nonperformance by the customer, thereby increasing the bank's return on average assets. It is important for examiners to be concerned with the elements of risk that are present in the institution's practices regarding the issuance of letters of credit. Examiners should then assess the institution's system of controls that can mitigate the risks (including staff experience, proper documentation, and the quality of underwriting). The standards for issuing letters of credit should be no less stringent than the standards for making a loan. Likewise, the letter-of-credit portfolio requires a review as thorough as the lending review. A default or nonperformance by the account party of a letter of credit will have the same impact as a default on a loan.

Commercial Letters of Credit

The commercial letter of credit (LOC) is commonly used as a means of financing the sale of goods between a buyer and seller. Generally, a seller will contract with a buyer on an open-account basis, whereby the seller ships the goods to the buyer and submits an invoice. To avoid the risk of nonpayment, the seller may require the buyer to provide a commercial letter of credit. To satisfy the requirement, the buyer applies for a letter of credit at a financial institution. If approved, the letter of credit would contain specified terms and conditions in favor of the seller (beneficiary), and the buyer (account party) would agree to reimburse the financial institution for payments drawn against the letter. The commercial letter of credit can be used to finance one shipment or multiple shipments of goods. Once documents that provide evidence that the goods have been shipped in accordance with the terms of the letter of credit are received, the seller can draw against the issued letter of credit through a documentary draft or a documentary demand for payment. The institution honors the draft, and the buyer incurs an obligation to reimburse the institution.

Letters of credit can be secured by cash deposits, a lien on the shipped goods or other inventory, accounts receivable, or other forms of collateral. Commercial letters of credit “sold for cash” (that is, secured by cash deposits) pose very little risk to a bank as long as the bank, before making payment on the draft, ensures that the beneficiary provides the proper documents. If credit is extended to pay for the goods, the subsequent loan presents the same credit risks associated with any other similar loan.

Standby Letters of Credit

The standby letter of credit (SBLOC) is an irrevocable commitment on the part of the issuing institution to make payment to a designated beneficiary if the institution’s customer, the account party, defaults on an obligation. The SBLOC differs from the commercial letter of credit because it is not dependent on the movement of goods. While the commercial letter of credit eliminates the beneficiary’s risk of nonpayment under the contract of sale, the SBLOC eliminates the financial risks resulting from nonperformance under a contract. The SBLOC,

in effect, enhances the credit standing of the bank’s customer.

SBLOCs may be financially oriented (financial SBLOCs), whereby an account party agrees to make payment to the beneficiary, or SBLOCs may be service-oriented (performance SBLOCs), whereby the financial institution guarantees to make payment if its customer fails to perform a nonfinancial contractual obligation.

Financial SBLOCs

Financial SBLOCs are often used to back direct financial obligations such as commercial paper, tax-exempt securities, or the margin requirements of exchanges. For example, if the bank’s customer issues commercial paper supported by an SBLOC, and the bank’s customer is unable to repay the commercial paper at maturity, the holder of the commercial paper may request the bank to make payment. Upon receipt of the request, the bank would repay the holders of the commercial paper and account for the payment as a loan to the customer under the letter of credit. Because of this irrevocable commitment, the bank has, in effect, directly substituted its credit for that of its customer upon the issuance of the SBLOC; consequently, the SBLOC has become a credit enhancement for the customer.

Performance SBLOCs

Performance SBLOCs are generally transaction-specific commitments that the issuer will make payment if the bank’s customer fails to perform a nonfinancial contractual obligation, such as to ship a product or provide a service. Performance SBLOCs are often used to guarantee bid or performance bonds. Through a performance SBLOC, the bank provides a guaranty of funds to complete a project if the account party does not perform under the contract. In contrast to the financial SBLOC, the bank’s irrevocable commitment provides liquidity to the obligor and not directly to a third-party beneficiary.

Unlike a commercial letter of credit, a demand for payment against an SBLOC is generally an indication that something is wrong. The non-performance or default that triggers payment under the SBLOC often signals the financial weakness of the customer, whereas payment under a commercial letter of credit suggests that

the account party is conducting its business as usual. Standby letters of credit can be either unsecured or secured by a deposit or other form of collateral.

Uses

The uses of standby letters of credit are practically unlimited. The more common areas of use include the following.

Financing Real Estate Development. A mortgagee will condition its loan commitment upon a cash contribution to a project by the developers. Although the lender insists that the developers have some equity in the project, the developer may not have funds available as they are tied up in other projects. The parties often use the letter of credit to satisfy the requirement for equity without the need for a cash deposit.

Fulfilling Municipal Regulations. Most municipalities require some form of a performance bond to ensure that infrastructure improvements, such as buildings, roads, and utility services, are completed. Because the bonding companies generally required a letter of credit as collateral for their bond, developers began offering the SBLOC to the municipality as a substitute. The SBLOC is probably more common than the performance bond. The SBLOC provides the municipality the guaranty of funds to complete necessary improvements if the developer does not perform as required.

Securing Notes. A lender will sometimes ask its obligor to secure the balance of a promissory note with an SBLOC issued by another bank.

Ensuring Performance. The standby letter of credit is similar to a performance bond. Often the seller of goods will have the borrower obtain a commercial letter of credit to ensure payment; simultaneously, the buyer will have the seller obtain a standby letter of credit to ensure that the goods are delivered when agreed and in acceptable condition.

Guaranteeing Securities. The standby letter of credit guarantees obligations involving the private placement of securities, such as revenue and development bonds. If an SBLOC secures against default, such paper will generally have a

higher rating and bear a lower rate of interest. An SBLOC could also be used as a credit enhancer for packaging retail loans for public sale. The use of an SBLOC in this situation typically carries minimal overall risk because the packaging institution normally sets aside a contingent reserve for losses. However, if the reserve is inadequate, the SBLOC should be reviewed for possible classification.

SBLOCs Issued as Surety for Revenue Bonds

SBLOCs may be issued in conjunction with the development of a property that is financed with tax-free or general revenue bonds. In these transactions, a municipal agency—typically, a local housing authority or regional development authority—sells bonds to investors in order to finance the development of a specific project. Once the bonds are issued, the proceeds are placed with a trustee and then loaned at less than market rates to the developer of the project. The below-market-rate loan that is granted to the developer enables the municipal agency to encourage development without expending tax dollars. The municipal agency has no liability; the bond investors only have recourse against the specific project. If the bonds are exempt from federal taxation, they will generally carry a below-market interest rate. If the bonds are not tax free—and some municipal bonds are not tax free—they will carry a market rate of interest.

Because the bonds are secured only by the project, an SBLOC is typically obtained by the beneficiary (in this example, the municipal agency) from a financial institution to provide additional security to the bondholders. The SBLOC is usually for an amount greater than the face amount of the bonds, so the bondholders' accrued interest between interest payment dates is usually secured. The bank generally secures its SBLOC with a lien that is subordinate to the authority's or trustees' lien against the property and the personal guarantees of the principal. Underwriting standards and credit analysis for SBLOCs should mirror those employed for direct loans.

The trustee receives periodic payments from the developer and then pays the bondholders their periodic interest payments and also pays the financial institution its letter-of-credit fee. In the event of a default by the developer, the trustee will draw upon the SBLOC to repay the

bondholders. If such a default occurs, the issuing financial institution assumes the role of the lender for the project.

The structure of the transaction requires the bank issuing the SBLOC to assume virtually all of the risk. Because the purpose of these bonds is to encourage development, financially marginal projects, which would not be feasible under conventional financing, are often financed in this manner. The primary underwriting consideration is the ability of the securing property to service the debt. The debt-service-coverage calculations should include both the tax-free rate, if applicable, obtained through the revenue bonds and market interest rates. The operations of the securing property should also be monitored on an ongoing basis. If new construction is involved, the progress should be monitored and any cost overruns should be identified and addressed.

Renewal of SBLOCs

Although most SBLOCs contain periodic renewal features, the examiner must be aware that the bank cannot relieve itself from liability simply by choosing not to renew the SBLOC. Virtually all of the bond issues require a notice of non-renewal before the expiration of the SBLOC. If such notice is received by the trustee, the trustee normally considers the notice an event of default and draws against the existing SBLOC. The bank should protect itself, therefore, by continuously monitoring both the project and the status of the bonds. Documentation should be maintained in the bank's file to substantiate the property's occupancy, its cashflow position, and the status of the bonds. In addition to the current status of interest payments, any requirements for a sinking fund that are contained in the bond indenture should also be monitored.

Some letters of credit are automatically renewable unless the issuing bank gives the beneficiary prior notice (usually 30 days). These letters of credit represent some additional risk because of the notification requirement placed on the bank. As noted above, proper monitoring and timely follow-up are imperative to minimize risk.

Without the benefit of a substantial guarantor or equity in the collateral, these SBLOCs present more than normal risk of loss. If the SBLOC is converted into an extension of credit, the loan will likely be classified substandard or worse.

Protection against loss may be provided by a long-term lease from a major tenant of an industrial property or a lease from a housing authority with a governmental funding commitment or guaranty.

Classification of SBLOCs

It may be appropriate to adversely classify an SBLOC if draws under the SBLOC are probable and a well-defined credit weakness exists. For example, deterioration of the financial standing of the account party could jeopardize performance under the letter of credit and result in the requirement of payment to the beneficiary. Such a payment would result in a loan to the account party and could result in a collection problem, especially if the SBLOC was unsecured. If payment is probable and the account party does not have the ability to repay the institution, an adverse classification is warranted. FASB 5 requires that if a loss contingency is probable and can be reasonably estimated, a charge to income must be accrued. Refer to section 2060, "Classification of Credits," in this manual for procedures on SBLOC classification.

BANKER'S ACCEPTANCES

When the beneficiary presents a draft to the issuer in compliance with the terms of a commercial letter of credit, the method of honoring the draft is acceptance. The issuer will stamp the word "accepted" across the face of the draft, which makes the instrument negotiable. Thus, the institution upon which the draft is drawn converts what was originally an order to pay into an unconditional promise to pay. Depending on the terms specified in the letter of credit, payment of the draft can vary from sight to 180 days. There is a ready market for these instruments, because payment must be made at maturity by the accepting institution, whether or not it is reimbursed by its customer. These acceptances are readily negotiable, and a beneficiary may sell accepted time drafts to other financial institutions at a discount. Acceptances are governed by article 3 of the UCC, and any rights the parties have under acceptance are subject to the rules of that article. For further discussion of banker's acceptances, see section 7060, "International—Banker's Accep-

tances,” and the Instructions for the Preparation of the Report of Condition and Income.

Participations in Banker’s Acceptances

The following discussion refers to the roles of accepting and endorsing banks in banker’s acceptances. It does not apply to banks purchasing other banks’ acceptances for investment purposes. Banker’s acceptances may represent either a direct or contingent liability of the bank. If the acceptance is created by the bank, it constitutes a direct liability that must be paid on a specified future date. The acceptance is also an on-balance-sheet, recognized liability. If a bank participates in the funding risk of an acceptance created by another bank, the liability is contingent and the item is carried off-balance-sheet. The financial strength and repayment ability of the accepting bank should be considered in analyzing the amount of risk associated with these contingent liabilities.

Participations in acceptances conveyed to others by the accepting bank include transactions that provide for the other party to the participation to pay the amount of its participated share to the accepting bank at the maturity of the acceptance, whether or not the account party defaults. Participations in acceptances acquired by the nonaccepting bank include transactions that provide for the nonaccepting bank to pay the amount of its participated share to the accepting bank at the maturity of the acceptance, whether or not the account party defaults.

Call Report Treatment

For regulatory reporting purposes, the existence of such participations is not to be recorded on the balance sheet. Rather, both the accepting bank conveying the participation to others and the bank acquiring the participation from the accepting bank must report the amounts of such participations in the appropriate item in Schedule RC-L, Commitments and Contingencies. (The amount of participations in acceptances reported in Schedule RC-L by a member bank may differ from the amount of such participations that enter into the calculation of the bank’s acceptances to be counted toward its acceptance limit imposed by section 13 of the Federal

Reserve Act (12 USC 372). These differences are mainly attributable to participations in ineligible acceptances, to participations with “uncovered” institutions, and to participations that do not conform to the minimum requirements set forth in 12 CFR 250.163.)

NOTE-ISSUANCE AND REVOLVING UNDERWRITING CREDIT FACILITIES

The first note-issuance facility (NIF) was introduced in 1981. A NIF is a medium-term (five- to seven-year) arrangement under which a borrower can issue short-term paper. The paper is issued on a revolving basis, with maturities ranging from as low as seven days to up to one year. Underwriters are committed either to purchasing any unsold notes or to providing standby credit. Bank borrowing usually involves commercial paper consisting of short-term certificates of deposit and, for nonbank borrowers, generally promissory notes (Euronotes). Although NIF is the most common term used for this type of arrangement, other terms include the revolving underwriting facility (RUF) and the standby note-issuance facility (SNIF).

Another type of facility, a RUF, was introduced in 1982. A RUF is a medium-term revolving commitment to guarantee the overseas sale of short-term negotiable promissory notes (usually a fixed-spread over LIBOR) issued by the borrower at or below a predetermined interest rate. RUFs separate the roles of the medium-term risk-taker from the funding institutions (the short-term investors). RUFs and NIFs allow access to capital sources at interest rates considerably below conventional financing rates. The savings in interest cost are derived because the borrower obtains the lower interest costs prevailing in the short-term markets, while still retaining the security of longer term financing commitments. The notes issued under RUFs are attractive for institutional investors since they permit greater diversification of risk than the certificates of deposit of only one bank. Underwriters favor them because their commitments do not appear on the statement of financial condition. RUFs are usually structured for periods of four to seven years.

A RUF differs from a NIF in that it separates the functions of underwriting and distribution. With a RUF, the lead bank (manager or arranger)

acts as the only placing agent. The arranger retains total control over the placing of the notes.

NIFs and RUFs are discussed further in the *Bank Holding Company Supervision Manual*.

GUARANTEES ISSUED

State member banks and foreign branches of U.S. banks are allowed to issue guarantees or sureties under certain circumstances. Such guarantees are to be reported as contingent liabilities in Schedule RC-L. Refer to section 7090, “International—Guarantees Issued,” of this manual and to the call report instructions for further information.

ASSET SALES

The term “asset sales,” in the following context, encompasses the range of activities from the sale of whole loans to the sale of securities representing interests in pools of loans. Asset-sales programs entail establishing both a portfolio of assets that are structured to be easily salable and a distribution network to sell the assets. Most large banks have expended great effort in developing structures and standard procedures to streamline asset-sale transactions and continue to do so.

Asset sales, if done properly, can have a legitimate role in a bank’s overall asset and liability management, and can contribute to the efficient functioning of the financial system. In addition, these activities can assist a bank in diversifying its risks and improving its liquidity.

The benefits of a qualifying sale transaction are numerous. In particular, the sale of a loan reduces capital requirements. The treatment also enhances net income, assuming that the loan was sold for a profit.

Banks’ involvement in commercial loan sales and in public issuance of mortgage and asset-backed securities has grown tremendously over the last decade. Banks are important both as buyers and sellers of whole loans, loan participations, and asset-backed securities. Banks also play important roles in servicing consumer receivables and mortgages backing securities and in providing credit enhancement to originators of primarily asset-backed securities.

Both whole loans and portions of loans are sold. Banks sell portions of loans through participation arrangements and syndication agreements.

Participations

A loan participation is a sharing or selling of ownership interests in a loan between two or more financial institutions. Normally, a lead bank originates the loan and sells ownership interests to one or more participating banks at the time the loan is closed. The lead bank (originating bank) normally retains a partial interest in the loan, holds all loan documentation in its own name, services the loan, and deals directly with the customer for the benefit of all participants. Properly structured, loan participations allow selling banks to accommodate large loan requests that would otherwise exceed lending limits, to diversify risk, and to improve liquidity by obtaining additional loanable funds. Participating banks are able to compensate for low local demand for loans or invest in large loans without their servicing burdens and origination costs. If not appropriately structured and documented, however, a loan participation can present unwarranted risks to both the seller and purchaser of the loan. Examiners should determine the nature and adequacy of the participation arrangement and should analyze the credit quality of the loan. For further information on participations, refer to section 2040, “Loan Portfolio Management,” in this manual.

Syndication

A syndication is an arrangement in which two or more banks lend directly to the same borrower pursuant to one loan agreement. Each bank in the syndicate is a party to the loan agreement and receives a note from the borrower evidencing the borrower’s debt to that bank. Each participant in the syndicate, including the lead bank, records its own share of the participated loan. Consequently, the recourse issues and contingent liabilities encountered in a loan participation involving syndication are not normally an issue. However, many banks involved in syndicated transactions will sell some of their allotment of the facility through subparticipations. These subparticipations should

be reviewed in the same manner as any other participation arrangement.

Asset Securitization

Banks have long been involved with asset-backed securities, both as investors in these securities and as sellers of assets within the context of the securitization process. In recent years, banks have increased their participation in the long-established market for those securities that are backed by residential mortgage loans. They have also expanded their securitizing activities to other types of assets, including credit card receivables, automobile loans, boat loans, commercial real estate loans, student loans, nonperforming loans, and lease receivables. See section 4030, "Asset Securitization," for a detailed discussion of the securitization process.

Risks

Assets sold without recourse are generally not a contingent liability, and the bank should reflect on its books only that portion of the assets it has retained. In some instances, however, participations must be repurchased to facilitate ultimate collection. For example, a bank may sell the portion of a loan that is guaranteed by the Small Business Administration (SBA) and retain the unguaranteed portion and the responsibility for servicing the loan. In the event of a default, the holder of the guaranteed portion has the option to request the originating bank to repurchase its portion before presenting the loan to the SBA for ultimate disposition and collection. In addition, some banks may repurchase assets and absorb any loss even when no legal responsibility exists. It is necessary to determine management's practice in order to evaluate the degree of risk involved. If management routinely repurchases assets that were sold without recourse, a contingency liability should be recognized. The amount of the liability should be based on historical data.

Contingent liabilities may also result if the bank, as the seller of a loan without recourse, does not comply with provisions of the agreement. Noncompliance may result from a number of factors, including failure on the part of the

selling institution to receive collateral and/or security agreements, obtain required guarantees, or notify the purchasing party of default or adverse financial performance by the borrower. The purchaser of a loan may also assert claims that the financial information, which the purchaser relied on when acquiring the loan, was inaccurate, misleading, or fraudulent and that the selling bank was aware of the deficiencies. Therefore, a certain degree of risk may in fact be evident in assets allegedly sold without recourse. Examiners need to be mindful of this possibility and its possible financial consequences on the bank under examination.

Banks also face credit, liquidity, and interest-rate risk in the period in which they accumulate the assets for sale. Especially in mortgage banking activities, the need to carefully monitor interest-rate risk in the "pipeline" represents one of the significant risks of the business. Sellers of participations also face counterparty risk similar to that of a funding desk, because the loan-sales operation depends on the ongoing willingness of purchasers to roll over existing participations and to buy new ones. In addition, many banks sell loans in the secondary market but retain the responsibility for servicing the loans.

Accounting Issues

For regulatory reporting purposes, some transactions involving the "sale" of assets must be reported as financing transactions (that is, as borrowings secured by the assets "sold"), and others must be reported as sales of the assets involved. The treatment required for any particular transfer of assets depends on whether the "seller" retains risk in connection with the transfer of the assets. In general, to report the transfer of assets as a sale, the selling institution must retain no risk of loss or obligation for payment of principal or interest.

All recourse arrangements should be documented in writing. If a loan is sold with recourse back to the seller, the selling bank has, in effect, retained the full credit risk of the loan, and its lending limit to the borrower is not reduced by the amount sold. Loans sold with recourse are to be treated as borrowings of the selling bank from the purchasing bank. Examiners should consider asset sales subject to formal or informal repurchase agreements (or understandings)

to be sales “with recourse” regardless of other wording in the agreement to the contrary.

In determining the true recourse nature of an asset sale, examiners must determine the extent to which the credit risk has been transferred from the seller to the purchaser. In general, if the risk of loss or obligation for payments of principal or interest is retained by, or may ultimately fall back upon, the seller or lead bank, the transaction must be reported by the seller as a borrowing from the purchaser and by the purchaser as a loan to the seller. Complete details on the treatment of asset sales for purposes of the report of condition and income are found in the glossary of the Instructions for the Preparation of the Report of Condition and Income under the entry “sales of assets.”

OTHER OFF-BALANCE-SHEET ACTIVITIES AND CONTINGENT LIABILITIES

Banks often provide a large number of customer services, which normally do not result in transactions subject to entry on the general ledger. These customer services include safekeeping, the rental of safe deposit boxes, the purchase and sale of investments for customers, the sale of traveler’s checks, the sale of U.S. Savings Bonds, collection services, federal funds sold as agent, operating leases, and correspondent bank services. It is the bank’s responsibility to ensure that collateral and other nonledger items are properly recorded and protected by effective custodial controls. Proper insurance must also be obtained to protect against claims arising

from mishandling, negligence, mysterious disappearance, or other unforeseen occurrences. Failure to take these protective steps may lead to contingent liabilities. In addition, pending litigation in which the bank is a defendant could expose the bank to substantial risk of loss. Refer to section 4000, “Other Examination Areas,” in this manual for further information.

Banks often enter into operating leases as lessees of buildings and equipment. The arrangements should be governed by a written lease. For a material lease, the examiner must determine whether the lease is truly an operating lease or if it is a capitalized lease pursuant to FASB 13. Capitalized leases and associated obligations must be recorded on the books of the bank in accordance with FASB 13 and the instructions for the preparation of the Report of Condition and Income. Refer to the instructions for the call report and to section 2190, “Bank Premises and Equipment,” in this manual for further information about capitalized leases.

While operating leases do not affect the bank’s capital ratios, the costs of an operating lease may have a material effect upon the earnings of the bank. Moreover, operating leases may involve other responsibilities for the bank, and the bank’s failure to perform these responsibilities may ultimately result in litigation and loss to the bank. The examiner must be cognizant of the requirements imposed on the bank by its leasing arrangements.

Some banks purchase federal funds from smaller correspondent banks as agent. This off-balance-sheet activity is more fully discussed in section 2030, “Bank Dealer Activities,” in this manual.

Contingent Claims from Off-Balance-Sheet Credit Activities

Examination Objectives

Effective date November 1995

Section 4110.2

1. To determine if policies, practices, procedures, and internal controls regarding contingent claims from off-balance-sheet credit activities are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To evaluate the off-balance-sheet credit activities for credit quality and collectibility.
4. To determine the scope and adequacy of the audit function.
5. To determine compliance with applicable laws and
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

INTRODUCTION

To meet competitive pressures, banks provide a large number of customer services that normally do not result in assets and liabilities subject to entry on the general ledger, but that may involve significant risk. These customer services include fiduciary accounts, investment management, customer safekeeping, rental of safe deposit box facilities, purchase and sale of investments for customers, sale of traveler's checks, and collection department services. The bank is responsible for properly maintaining and safeguarding all consigned items. Banks accomplish the necessary control and review of consigned and collection items through non-ledger control or memorandum accounts. Automated systems, such as a Securities Movements Accounting and Control system (SMAC), can provide proper control for fiduciary, customer safekeeping, custodial, and investment management accounts.

CUSTOMER SAFEKEEPING

Custodial and Investment Management Accounts

Banks may act as custodians for customers' investments such as stocks, bonds, or gold. Custodial responsibilities may involve simple physical storage of the investments, as well as recording sales, purchases, dividends, and interest.¹ On the other hand, responsibilities may be expanded to include actually managing the account. This type of account management includes advising customers when to sell or buy certain investments, as well as meeting their recording requirements. In addition, the bank may lend securities from custodial accounts if authorized by the customer. This transaction allows the bank, as custodian, to charge a fee for lending the securities, thereby reducing its net custody costs. Also, both the bank and the

custodial account benefit from interest earned on the transaction. This type of transaction should be governed by a policy that clearly specifies quality and maturity parameters. Additionally, to prevent defaults, borrowers should be subject to minimum credit standards, ongoing financial monitoring, and aggregate borrowing limits. Banks may also indemnify customer accounts against losses from a borrower or collateral default. Such indemnification creates a contingent financial risk to the institution.

Before providing such management and/or lending services, the bank should seek the advice of legal counsel about applicable state and federal laws concerning that type of bank-customer relationship. In addition, the use of signed agreements or contracts that clearly define the services to be performed by the bank is a vitally important first step in limiting the bank's potential liability and risk. The bank must also ensure that a proper control environment, including joint custody and access procedures, is established and maintained in support of custodial and management activities. Clearly, the largest and most active companies take on an increased level of risk. For companies that are aggressively pursuing custodial services or other nontraditional lines of business, the examiner should consider an expanded scope of review for these activities.

Safe Deposit Boxes

When banks maintain safe deposit box facilities, the bank and the customer enter into a contract whereby the bank receives a fee for renting safe deposit boxes. The bank assumes the responsibility of exercising reasonable care and precaution against loss of the box's contents. When a loss does occur, unless the bank can demonstrate it has maintained the required standard of care, it could be held liable for the loss. The required standard of care is defined as that which would be taken by a reasonably prudent and careful person engaged in the same business. Two different keys are required to open the box, and the customer and the bank each have one. Careful verification of a customer's identification is critical to meeting an appropriate standard of care. The customer is not required to disclose the contents of the box to the bank and

1. Collection of interest and dividend income cannot be facilitated by the bank where the securities held are still in the customer's name, unless the paying agent is advised to change the dividend/interest address. Typically, when securities remain in the registered name of the holder, the holder continues to receive the dividend/interest payments. If the securities are re-registered into the name of the bank (or its nominee), then dividends and interest are received by the bank for the credit of the custodial customer.

upon court order the bank may gain access to the box without the presence of the customer.

Safekeeping

In addition to items held as collateral for loans, banks occasionally hold customers' valuables for short periods of time. The bank may or may not charge a fee for the service. Although it is a convenience for bank customers, many banks attempt to discourage the practice by emphasizing the benefits of a safe deposit box. When it is not possible or practical to discourage a customer, the same procedures that are employed in handling collateral must be followed. Items to be stored should be inventoried by two persons and maintained under dual control in the bank's vault. A multicopy, prenumbered, safekeeping receipt should be prepared with a detailed description of the items accepted and it should be signed by the customer. Sealed packages with contents unknown to the bank should never be accepted for safekeeping.

COLLECTION ITEMS

The collection department is one of the most diversified areas in the bank. It engages in receiving, collecting, and liquidating items which generally require special handling and for which credit normally is given only after final payment is received. The bank acts as agent for its customers or correspondents and receives a fee for that service. Even though general ledger accounts rarely are used in the collection process, the importance and value of customer assets under bank control demand the use of accounting procedures adequate to provide a step-by-step historical summary of each item processed. An audit trail must be developed to substantiate the proper handling of all items and to reduce the bank's potential liability.

CONSIGNED ITEMS

The most common items held on consignment by banks are unissued traveler's checks and gold. Traveler's checks have gained widespread popularity because of the possibility that cus-

tomers can obtain a refund if the checks are lost or stolen. Traveler's checks are issued for a fee or commission shared by the consignor and the issuing bank. Generally, a working supply of the checks is maintained at the teller line or selling station and a reserve supply is maintained under dual control in the bank's vault.

Under paragraph 7 of section 5136 of the Revised Statutes, national banks may exercise their powers "by buying and selling exchange, coin and bullion." This statute is applied to state member banks under section 9, paragraph 20, of the Federal Reserve Act. Consequently, banks may deal only in gold or silver that qualifies as coin or bullion. The term "coin" means coins minted by a government or exact restrikes, minted at a later date by, or under the authority of, the issuing government. The restrictions contained in the Glass-Steagall Act, which prohibit investment in or underwriting of securities, also are applicable to securities of companies involved with gold.

Rarely does a bank receive sufficient revenues from the above transactions to cover the cost of handling them. However, banks must offer a full range of services to be competitive and attract customers. The bank assumes the responsibility and related contingent liability to properly maintain the assets of others and to properly record all transactions involved with the consigned items.

INTERNAL CONTROL CONSIDERATIONS

It is essential that bank policy provides for proper internal controls, operating procedures, and safeguards. In all cases, control totals must be generated and the function balanced periodically by someone not associated with the function. Proper insurance protection must also be obtained to protect against claims arising from mishandling, negligence, mysterious disappearance, or other unforeseen occurrences. If an employee should, by fraud or negligence, permit unauthorized removal of items held for safekeeping or issue traveler's checks improperly, the bank may be held liable for losses. Therefore, banks should maintain adequate bonding for contingent liabilities and the examiner should review applicable insurance policies.

Other Non-Ledger Control Accounts

Examination Objectives

Effective date May 1996

Section 4120.2

1. To determine if the policies, practices, procedures, and internal controls regarding custodial activities, consigned items, and other non-ledger control accounts are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To determine compliance with laws and regulations.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations have been noted.

Other Non-Ledger Control Accounts

Examination Procedures

Effective date March 1984

Section 4120.3

1. If selected for implementation, complete or update the Consigned Items and Other Non-Ledger Control Accounts section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned "Internal Control" and determine if appropriate corrections have been made.
4. Obtain a listing of consigned items and other non-ledger control accounts from the bank.
5. Scan any existing control accounts for any significant fluctuations and determine the cause of fluctuations.
6. Compare bank control records to remittance records for unissued U.S. savings bonds and food stamps.
7. Determine compliance with laws and regulations pertaining to non-ledger control accounts by determining, through observation and discussion with management, that there exist no violation of the prohibition against a bank participating in lotteries (section 9A of the Federal Reserve Act (12 USC 25A)).
8. Prepare in appropriate report form, and discuss with appropriate officer(s):
 - a. Violations of laws and regulations.
 - b. Recommended corrective action when policies, practices or procedures are deficient.
9. Update the workpapers with any information that will facilitate future examinations.

Other Non-Ledger Control Accounts

Internal Control Questionnaire

Effective date March 1984

Section 4120.4

Review the bank's internal controls, policies, practices and procedures for consigned items and other non-ledger items. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

SAFE DEPOSIT BOXES

1. Has counsel reviewed and approved the lease contract in use which covers the rental, use and termination of safe deposit boxes?
- *2. Is a signed lease contract on file for each safe deposit box in use?
3. Are receipts for keys to the safe deposit box obtained?
4. Are officers or employees of the bank prohibited from acting as a deputy or having the right of access to safe deposit boxes except their own or one rented in the name of a member of their family?
5. Is the guard key to safe deposit boxes maintained under absolute bank control?
6. Does the bank refuse to hold, for renters, any safe deposit box keys?
7. Is each admittance slip signed in the presence of the safe deposit clerk and the time and date of entry noted?
8. Are admittance slips filed numerically?
9. Are vault records noted for joint tenancies and co-rental contracts requiring the presence of two or more persons at each access?
10. Are the safe deposit boxes locked closed when permitting access and the renter's key removed and returned to the customer?
11. Is the safe deposit clerk prohibited from assisting the customer in looking through the contents of a box?
12. Does the safe deposit clerk witness the relocking of the box?
13. Are all coupon booths examined by an attendant after being used but before being assigned to another renter, to be sure the

- previous person did not leave behind anything of value?
14. Has a standard fee schedule for this service been adopted?
 15. Are all collections of rental income recorded when received?
 16. Are all safe deposit boxes where lessee is delinquent in rent, flagged or otherwise marked so that access will be withheld until rent is paid?
 17. Is there a file maintained of all attachments, notices of bankruptcy, letters of guardianship and letters testamentary served on the bank?
 18. Is an acknowledgment of receipt of all property, and a release of liability signed upon termination of occupancy?
 19. Are locks changed when boxes are surrendered, whether or not keys are lost?
 20. Is drilling of boxes witnessed by two individuals?
 21. Are the contents of drilled boxes inventoried, packaged, and placed under dual control?
 - *22. Are all extra locks and keys maintained under dual control?

Conclusion

23. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
24. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

ITEMS IN SAFEKEEPING

- *25. Are such items segregated from bank-owned assets and maintained under dual control?
26. Is there a set charge or schedule of charges for this service?

27. Do bank policies prohibit holding items in safekeeping free of charge?
28. Are duplicate receipts issued to customers for items deposited in safekeeping?
29. Are the receipts prenumbered?
- *30. Is a safekeeping register maintained to show details of all items for each customer?
- *31. Is a record maintained of all entries to custodial boxes or vaults?
32. Does the bank refuse to accept sealed packages when the contents are unknown?
33. If the bank has accepted sealed packages for safekeeping, the contents of which are not described, has the approval of the bank's counsel been obtained?
34. When safekeeping items are released, are receipts obtained from the customer?
42. Are all orders for the purchase and sale of investments properly authorized in the account contract or signed by customers?
43. For coupon securities held by the bank:
 - a. Is a tickler file or other similar system used to ensure prompt coupon redemption on accounts where the bank has been authorized to perform that service?
 - b. Are procedures in effect to prevent clipping of coupons where bank is not so authorized?
 - c. Have procedures been adopted to insure prompt customer credit when coupon proceeds or other payments are received?
- *44. Are all investment items handled in this area maintained under dual control?

45. Have procedures been established for withdrawal and transmittal of items to customers?
- *46. Does an officer review and approve all withdrawals prior to the transaction?
47. Has a standard fee schedule for this service been adopted?

Conclusion

35. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
36. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Conclusion

48. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
49. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

CUSTODIAN ACCOUNTS

(Omit this section if the bank's trust department handles such accounts).

- *37. Does the bank have written contracts on hand for each account that clearly define the functions to be performed by the bank?
38. Has bank counsel reviewed and approved the type and content of the contracts being used?
39. Does the bank give customers duplicate receipts with detailed descriptions, including dates of coupons attached, if applicable, for all items accepted?
40. Are those receipts prenumbered?
41. Do bank procedures prohibit its holding any investments not covered by a sale or purchase order in this department?

COLLECTION ITEMS

50. Is access to the collection area controlled (if so, indicate how)?
- *51. Are permanent registers kept for incoming and outgoing collection items?
52. Are all collections indexed in the collection register?
53. Do such registers furnish a complete history of the origin and final disposition of each collection item?

54. Are receipts issued to customers for all items received for collection?
55. Are serial numbers or prenumbered forms assigned to each collection item and all related papers?
- *56. Are all incoming tracers and inquiries handled by an officer or employee not connected with the processing of collection items?
57. Is a record kept to show the various collection items which have been paid and credited as a part of the day's business?
58. Is an itemized daily summary made of all collection fees, showing collection numbers and amounts?
59. Are employees handling collection items periodically rotated, without advance notification, to other banking duties?
- *60. Is the employee handling collection items required to make settlement with the customer on the same business day that payment of the item is received?
61. Does the bank have an established policy of not allowing the customer credit until final payment is received?
- *62. Have procedures been established, including supervision by an officer, for sending tracers and inquiries on unpaid collection items in the hands of correspondents?
63. In the event of nonpayment of a collection item, is the customer notified and the item promptly returned?
- *64. Are the files of notes entered for collection clearly and distinctly segregated from bank-owned loans and discounts?
- *65. Are collection notes above maintained under memorandum control and is the control balanced regularly?
66. Are collection files locked when the employee handling such items is absent?
67. Are vault storage facilities provided for collection items carried over to the next day's business?
- *68. Does the collection teller turn over all cash to the paying teller at the close of business each day and start each day with a standard change fund?
69. Has a standard fee schedule for this service been adopted?
70. Is the fee schedule always followed?
71. Is a permanent record maintained for registered mailed?

Conclusion

72. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
73. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

CONSIGNED ITEMS

- *74. Is the reserve stock of consigned items maintained under dual control?
75. Are working supplies kept to a reasonable minimum, i.e., two or three days' supply, and adequately protected during banking hours?
- *76. Is a memorandum control maintained of consigned items?
77. Are separate accounts with the consignor maintained at each issuing location (branch), if applicable?
- *78. Is the working supply put in the vault at night and over weekends or holidays or is it otherwise protected?
79. Are remittances for sales made on a regularly scheduled basis, if not daily?

Conclusion

80. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
81. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

Payment System Risk and Electronic Funds Transfer Activities

Section 4125.1

Effective date November 2004

Modern economies require an efficient system for transferring funds between financial institutions and between financial institutions and their customers. Banks and other depository institutions use payment systems both to transfer funds related to their own operations—for example, when engaging in federal-funds transactions—and to transfer funds on behalf of their customers. Depository institutions and the Federal Reserve together provide the basic infrastructure for the nation’s payment system.

Commercial banks maintain accounts with each other and with the Federal Reserve Banks; through these accounts, the payments of the general public are recorded and ultimately settled. The demand for electronic funds transfer (EFT) services has increased with improved data communication and computer technology. Community banks that previously executed EFT transactions through a correspondent can now initiate their own same-day settlement transactions nationwide. The need for same-day settlement transactions has precipitated financial institutions’ increased reliance on EFT systems. Financial institutions commonly use their EFT operations to make and receive payments, buy and sell securities, and transmit payment instructions to correspondent banks worldwide. In the United States, most of the dollar value of all funds transfers is concentrated in two electronic payment systems: Fedwire, which is a Federal Reserve service, and the Clearing House Interbank Payments System (CHIPS), which is a private-sector multilateral settlement system owned and operated by CHIPCo LLC, a subsidiary of the New York Clearing House Association.

Final settlement occurs when payment obligations between payment-system participants are extinguished with unconditional and irrevocable funds. For transactions settled in physical currency, payment and settlement finality occur simultaneously. On occasion, settlement finality may not occur on the same day a payment is made. Without immediate settlement finality, the recipient of a payment faces the uncertainty of not receiving the value of funds that has been promised. The exposure to this uncertainty is generally referred to as *payment system risk* (PSR).

Payment system risk refers to the risk of financial loss to the participants in and operators of payment systems due to a variety of exposures, such as counterparty or customer default,

operational problems, fraud, or legal uncertainty about the finality of settled payments. A major source of payment system risk arises when participants in or the operator of a payment system extends unsecured, intraday credit to facilitate the smooth and efficient flow of payments. For example, the aggregate value of intraday credit extended by the Federal Reserve, in the form of daylight overdrafts in institutions’ Federal Reserve accounts, is substantial and creates significant credit exposure for the Federal Reserve Banks.

A daylight overdraft occurs whenever an institution has a negative account balance during the business day. Such a credit exposure can occur in an account that an institution maintains with a Federal Reserve Bank or with a private-sector financial institution. At a Reserve Bank, a daylight overdraft occurs when an institution has insufficient funds in its Federal Reserve account to cover Fedwire funds transfers, incoming book-entry securities transfers, or other payment activity processed by the Reserve Bank, such as automated clearinghouse or check-clearing transactions. Similarly, banks are exposed to credit risk when they permit their customers to incur daylight overdrafts in their accounts. More specific information about the types of risks involved under the rubric of payment systems risk is discussed later in this section.

When developing an institution’s overview, performing annual and quarterly risk assessments, and conducting the institution’s examination, examiners should review an institution’s payment system risk and EFT practices. Supervisory and examination guidance and procedures should be followed to determine the risk assessment, matrix, supervisory plan, and scope of an examination. This guidance should also be used when conducting the examination. An overall initial analysis of an institution’s payment system risk practices can provide examiners with quick insight on the adequacy of its current internal controls and risk-management practices, and on whether the institution’s payment activity creates intraday exposures that may pose significant risk if not managed properly.

In general, examiners should review the frequency, magnitude, and trend of daylight overdrafts in an institution’s Federal Reserve account, as well as any breaches of its net debit cap.

Examiners should analyze the reasons for the daylight overdrafts and cap breaches; the nature of the transactions causing the overdrafts (for example, correspondent check clearings or funds transfers); whether the number of customers, correspondents, and respondents is concentrated among only a few entities; whether there is a clear pattern of transactions; and the types of activities involved. In addition, examiners should review and determine the adequacy of the board-of-directors resolution authorizing the institution's net debit cap and use of Federal Reserve intraday credit (as required by the PSR policy). The examiners' most important goal is to ensure that banks have and use appropriate risk-management policies and procedures that effectively monitor and control their exposure to payment system risk.

TYPES OF PAYMENT SYSTEMS

An understanding of the mechanics of the various payment systems is necessary to evaluate the operational procedures depository institutions use to control payment-processing risks for their own or their customers' accounts.

EFT Systems

Fedwire

The Fedwire funds-transfer system is a real-time gross settlement system in which depository institutions initiate funds transfers that are immediate, final, and irrevocable when processed. Depository institutions that maintain a reserve or clearing account with a Federal Reserve Bank may use Fedwire to send payments to or receive payments from other account holders directly. Depository institutions use Fedwire to handle large-value, time-critical payments, such as payments for the settlement of interbank purchases and sales of federal funds; the purchase, sale, and financing of securities transactions; the disbursement or repayment of loans; and the settlement of real estate transactions.

In the Fedwire funds-transfer system, only the originating financial institution can remove funds from its Federal Reserve account. Originators provide payment instructions to the Federal Reserve either online or offline. Online

participants send instructions through a main-frame or PC connection to Fedwire, and no manual processing by the Federal Reserve Banks is necessary. Offline participants give instructions to the Reserve Banks by telephone. Once the telephone request is authenticated, the Reserve Bank enters the transfer instruction into the Fedwire system for execution. The manual processing required for offline requests makes them more costly; thus, they are suitable only for institutions that have small, infrequent transfers. (For further information, see www.federalreserve.gov/paymentsystems/fedwire/.)

CHIPS

The Clearing House Interbank Payments System (CHIPS) is a large-value funds-transfer system for U.S. dollar payments between domestic or foreign banks that have offices located in the United States. CHIPS is a real-time final settlement system that continuously matches, nets, and settles queued payment orders.

All CHIPS payment orders are settled against positive balances, simultaneously offset by incoming payment orders, or some combination of both. To facilitate this process, CHIPCo maintains an account on the books of the Federal Reserve Bank of New York. Each CHIPS participant has a pre-established opening-position requirement, which, once funded by a Fedwire funds transfer, is used to settle payment orders throughout the day.

During the operating day, participants submit payment orders to a centralized queue maintained by CHIPS. Payment orders that do not pass certain settlement conditions are held in the central queue until an opportunity for settlement occurs or until the end-of-day settlement process. The sending and receiving participants are not obligated to settle these queued payment orders.

Each afternoon, each participant with a closing-position requirement must transfer, through Fedwire, its requirement to the CHIPS account at the Federal Reserve Bank of New York.¹ These requirements, when delivered, are credited to participants' balances. After completion of this process, CHIPS will transfer to those participants who have any balances remaining,

1. Although CHIPS no longer makes distinctions between settling and nonsettling participants, CHIPS participants can use nostro banks to make transfers on their behalf.

that is, participants in an overall net positive position for the day, the full amount of those positions. (For further information, see the CHIPS rules at www.chips.org.)

Manual Systems

Not all financial institutions employ an EFT system. Some banks execute such a small number of EFT transactions that the cost of a computer-based system such as Fedwire is prohibitive. Instead, these banks will continue to execute EFTs by a telephone call to a correspondent bank. Executing EFT transactions in this way is an acceptable practice as long as the bank has adequate internal control procedures.

Message Systems

The message systems employed by financial institutions, corporations, or other organizations to originate payment orders—either for their own benefit or for payment to a third party—are indispensable components of funds-transfer activities. Unlike payment systems, which transmit actual debit and credit entries, message systems process administrative messages and instructions to move funds. The actual movement of the funds is then accomplished by initiating the actual entries to debit the originating customer's account and to credit the beneficiary's account at one or more financial institutions. If the beneficiary's account or the beneficiary bank's account is also with the originator's bank, the transaction is normally handled internally through *book entry*. If the beneficiary-related accounts are outside the originating customer's bank, the transfer may be completed by use of a payment system such as Fedwire or CHIPS. The means of arranging payment orders ranges from manual methods (for example, memos, letters, telephone calls, fax messages, or standing instructions) to electronic methods using telecommunications networks. These networks may include those operated by the private sector, such as SWIFT or Telex, or other networks operated internally by particular financial institutions.

Even though the transfers initiated through systems such as SWIFT and Telex do not result in the immediate transfer of funds from the issuing bank, they do result in the issuing bank's

having an immediate liability, which is payable to the disbursing bank. Therefore, the internal operating controls of these systems should be as stringent as the ones implemented for systems such as Fedwire and CHIPS.

SWIFT

Society for Worldwide Interbank Financial Telecommunications (SWIFT) is a nonprofit cooperative of member banks that serves as a worldwide interbank telecommunications network. Based in Brussels, Belgium, SWIFT is the primary system employed by financial institutions worldwide to transmit either domestic or international payment instructions. (For further information, see www.swift.com.)

TELEX

Several private telecommunications companies offer worldwide or interconnected services that provide a printed permanent record of each message transmitted. Telex is the primary message system for institutions that do not have access to SWIFT. The Telex systems do not include built-in security features. Telex users exchange security codes, and senders sequentially number messages sent to another institution.

Automated Clearinghouse and Check Transactions

The automated clearinghouse (ACH) is an electronic payment delivery system most often used to process low-dollar repetitive retail payments. The system is used primarily for preauthorized recurring payments such as payroll, corporate payments to vendors, Social Security payments, insurance premium payments, and utility payments. First introduced in the early 1970s as a more efficient alternative to checks, ACH has evolved into a nationwide mechanism that processes electronically originated credit and debit transfers for any participating institution nationwide. An alternative to paper checks, the ACH handles billions of payments annually.

Financial institutions are encouraged to obtain a copy of the ACH rules of the National Automated Clearing House Association (NACHA): A

Complete Guide to Rules and Regulations Governing the ACH Network. The ACH rules provide detailed information on the rule changes, their operational impact, and whether any software changes are required. The rulebook is designed to help financial institutions comply with the current NACHA rules, which are applicable to all ACH participants and include a system of national fines. (For further information, see www.nacha.org.)

The Federal Reserve ACH is governed by Operating Circular #4, "Automated Clearing House Items." Other important federal legislation concerning the ACH can be found in Regulation E (primarily regarding consumer rights in electronic funds transfers) and Regulation CC (regulations concerning the availability of funds). (For further information, see www.frbservices.org.)

There are two types of ACH transactions: ACH credits and ACH debits. A file containing mortgage payments or insurance premiums could be an example of an ACH debit file. In this transaction, funds flow from the receiver to the originator of the transaction. ACH debit transactions are very similar to check transactions. Both receivers of ACH debit files and payers of checks have the right to return transactions for various reasons, such as insufficient funds in the account or a closed account. The major risk facing institutions that originate ACH debit transactions and collect checks for customers is return-item risk. Return-item risk extends from the day funds are made available to the customer until the individual return items are received.

ACH credit transactions are similar to Fedwire funds transfers in that funds flow from the originator of the transaction to the receiver. A company payroll would be an example of an ACH credit transaction: the bank originating payments on behalf of a customer (the employer in this instance) has a binding commitment to make the payments to the ACH processor when the bank deposits its files with the ACH processor. Since the ACH is a value-dated mechanism, that is, transactions may be originated one or two days before the specified settlement day, the bank is exposed to temporal credit risk that may extend from one to three business days, depending on when the customer (the employer) funds the payments it originates. If the customer fails to fund the payments on the settlement day, the potential loss faced by the originating bank is equal to the total value of payments deposited with the processor from the time the payments

are deposited until the customer funds these payments.

BOOK-ENTRY SYSTEMS

Fedwire Book-Entry Securities Transfers

The Fedwire book-entry securities system is known as the National Book-Entry System (NBES). It consists of a safekeeping function and a transfer and settlement function. The safekeeping function involves the electronic storage of securities records in custody accounts. The transfer and settlement function involves the transfer of securities between parties.

Transfers of Fedwire book-entry securities are initiated in the same manner as Fedwire funds transfers. Depository institutions that maintain a reserve account with a Federal Reserve Bank can use the NBES to hold and transfer U.S. Treasury and U.S. government agency securities (including mortgage-backed securities), as well as securities issued by certain international organizations such as the World Bank. These securities are held and transferred in electronic (book-entry) form; the U.S. Treasury and international organizations no longer issue physical securities, nor do most federal agencies.

Securities transfers can be made free of payment or against a designated payment. Nonetheless, most securities transfers involve the delivery of securities and the simultaneous exchange of payment for the securities, a transaction called delivery-versus-payment. The transfer of securities ownership and related funds (if any) is final at the time of transfer. Access to the securities service is limited to depository institutions and a few other organizations, such as federal agencies, state government treasurers' offices (which are designated by the Department of the Treasury to hold securities accounts), and limited-purpose trust companies that are members of the Federal Reserve System. Nonbank brokers and dealers typically hold and transfer their securities through depository institutions that are Fedwire participants and that provide specialized government securities clearing services. (For more information, see www.federalreserve.gov/paymentsystems/fedwire/.)

Transfer-Size Limit on Book-Entry Securities

Secondary-market book-entry securities transfers on Fedwire are limited to a transfer size of \$50 million par value. This limit is intended to encourage partial deliveries of large trades in order to reduce position building by dealers, a major cause of book-entry securities overdrafts before the introduction of the transfer-size limit and daylight-overdraft fees. This limitation does not apply to—

- original-issue deliveries of book-entry securities from a Reserve Bank to an institution, or
- transactions sent to or by a Reserve Bank in its capacity as fiscal agent of the United States, government agencies, or international organizations.

Thus, requests to strip or reconstitute Treasury securities or to convert bearer or registered securities to or from book-entry form are exempt from this limitation. Also exempt are pledges of securities to a Reserve Bank as principal (for example, discount window collateral) or as agent (for example, Treasury Tax and Loan collateral).

Private Book-Entry Systems

In addition to U.S. Treasury and government-agency securities, major categories of financial instruments commonly traded in the United States include corporate equities and bonds, municipal (state and local) government securities, money market instruments, and derivatives such as swaps and exchange-traded options and futures. These instruments are generally traded through recognized exchanges or over-the-counter dealer markets. The mechanisms for clearance and settlement vary by type of instrument and generally involve specialized financial intermediaries, such as clearing corporations and depositories. Clearing corporations provide trade comparison and multilateral netting of trade obligations. Depositories, in contrast, hold physical securities and provide book-entry transfer and settlement services for their members.

The vast majority of corporate equity and bond trades are cleared through the National Securities Clearing Corporation (NSCC). Most corporate securities, as well as municipal government bonds, are held at the Depository Trust

Company (DTC) in New York. Settlement of securities cleared through the NSCC is effected by book-entry transfers at the DTC. The DTC and the NSCC are owned by the Depository Trust and Clearing Corporation, an industry-owned holding company. (For more information, see www.dtcc.com.)

U.S. Treasury, federal-agency, and mortgage-backed securities are generally traded in over-the-counter markets. The Fixed Income Clearing Corporation (FICC) compares and nets its members' trades in most U.S. Treasury and federal-agency securities. The FICC relies on the Fedwire book-entry securities-transfer system, discussed above, to effect final delivery of securities to its participants. The FICC is owned by the DTCC. (For more information see www.ficc.com.)

The FICC also provides automated post-trade comparison, netting, risk-management, and pool-notification services to the mortgage-backed securities market. The FICC provides its specialized services to major market participants active in various Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (Freddie Mac or FHLMC), and Federal National Mortgage Association (Fannie Mae or FNMA) mortgage-backed securities programs. The net settlement obligations of FICC participants are settled through the Fedwire book-entry securities system.

PAYMENT SYSTEMS RISK POLICY OVERVIEW

The Federal Reserve's Policy on Payments System Risk (the PSR policy) addresses risks that payment systems present to the Federal Reserve Banks, the banking system, and other sectors of the economy. Section II of the PSR policy focuses on institutions'² use of Federal Reserve intraday credit.³ An integral component of the PSR policy is a program to control the use of Federal Reserve intraday credit, commonly

2. The PSR policy uses the term *institutions*, which refers to depository institutions, U.S. branches and agencies of foreign banking organizations, Edge and agreement corporations, bankers' banks, limited-purpose trust companies, government-sponsored enterprises, and international organizations, unless the context indicates a different meaning.

3. Section I of the PSR policy addresses private-sector systems and other policies. The full text of the PSR policy is available at www.federalreserve.gov/paymentsystems/psr/.

referred to as *daylight credit* or *daylight overdrafts*. Individual Reserve Banks are responsible for administering the Board's PSR policy and ensuring compliance by institutions. A primary objective of examiners when evaluating payment system risk is to ensure that banks using Federal Reserve payment services comply with the Board's PSR policy.

PSR Policy Objectives

Like institutions that offer payment services to customers, Federal Reserve Banks may be exposed to risk of loss when they process payments for institutions that hold accounts with them. The Federal Reserve guarantees payment on Fedwire funds and book-entry securities transfers, net settlement service (NSS) entries,⁴ and ACH credit originations made by account holders. If an institution was to fail after sending a transaction that placed its account in an overdraft position, the Federal Reserve would be obligated to cover the payment and bear any resulting losses. Risk is present even when an institution overdraws its account at a Reserve Bank for only a few minutes during the day.

Similar types of risk are generated when customers of private financial institutions and participants in some private-sector payment arrangements incur daylight overdrafts. In addition, daylight credit may be a source of systemic risk in the payment system. *Systemic risk* refers to the potential that the failure of one participant in a payment system, or in the financial markets generally, to meet its required obligations will cause other participants or financial institutions to be unable to meet their settlement obligations when due.

The PSR policy establishes limits on the maximum amount of Federal Reserve daylight credit exposure that an institution may use during a single day or over a two-week period. These limits are sufficiently flexible to reflect the overall financial condition and operational capacity of each institution using Federal Reserve payment services. The policy also permits Reserve Banks to protect themselves from the risk of loss by unilaterally reducing net debit caps; imposing collateralization or clearing-balance requirements; rejecting or delaying cer-

tain transactions during the day until the institution has collected balances in its Federal Reserve account; or, in extreme cases, taking the institution offline or prohibiting it from using Fedwire.

Daylight-Overdraft Capacity

Under the Federal Reserve's PSR policy, each institution that maintains an account at a Federal Reserve Bank is assigned or may establish a net debit cap, as outlined below. The net debit cap limits the amount of intraday Federal Reserve credit that the institution may use during a given interval. The policy allows financially healthy institutions that have regular access to the discount window to incur daylight overdrafts in their Federal Reserve accounts up to their individual net debit caps. In addition, the policy allows certain institutions to pledge collateral to the Federal Reserve in order to access additional daylight-overdraft capacity above their net debit caps. In these instances, the institution can incur daylight overdrafts up to the value of its net debit cap plus any Reserve Bank-approved collateralized credit.

NET DEBIT CAPS

An institution's net debit cap refers to the maximum dollar amount of uncollateralized daylight overdrafts that the institution may incur in its Federal Reserve account. An institution's cap category and its capital measure determine the dollar amount of its net debit cap.⁵ An institution's net debit cap is calculated as its cap multiple, as listed in table 1, times its capital measure:

$$\text{net debit cap} = \text{cap multiple} \times \text{capital measure}$$

Because a net debit cap is a function of an institution's capital measure, the dollar amount

4. The Federal Reserve's NSS provides settlement services to various clearinghouses.

5. The capital measure used in calculating an institution's net debit cap depends on its home-country supervisor and chartering authority. For institutions chartered in the United States, net debit caps are multiples of "qualifying" or similar capital measures, that is, those capital instruments that can be used to satisfy risk-based capital standards, as set forth in the capital adequacy guidelines of the federal financial institution regulatory agencies.

Table 1—Net debit cap multiples

<i>Cap categories</i>	<i>Net debit cap multiples</i>	
	<i>Single-day</i>	<i>Two-week average</i>
High	2.25	1.50
Above average	1.875	1.125
Average	1.125	0.75
De minimis	0.40	0.40
Exempt-from-filing*	\$10 million or 0.20	\$10 million or 0.20
Zero	0	0

* The net debit cap for the exempt-from-filing category is equal to the lesser of \$10 million or 0.20 multiplied by the institution's capital measure.

of the cap will vary over time as the institution's capital measure changes. An institution's cap category, however, is normally fixed over a one-year period. Cap categories and their associated cap levels, set as multiples of capital, are listed in table 1.

An institution is expected to avoid incurring daylight overdrafts whose daily maximum level, averaged over a two-week period, would exceed its two-week average cap, and, on any day, would exceed its single-day cap. The two-week average cap provides flexibility, recognizing that fluctuations in payments can occur from day to day. The purpose of the single-day cap is to limit excessive daylight overdrafts on any day and to ensure that institutions develop internal controls that focus on the exposures each day, as well as over time. Institutions in the zero, exempt-from-filing, and de minimis cap categories have one cap that applies to both the single-day peak overdraft and the average overdraft for a two-week period.

The Board's policy on net debit caps is based on a specific set of guidelines and some degree of examiner oversight. Under the Board's policy, a Reserve Bank may limit or prohibit an institution's use of Federal Reserve intraday credit if (1) the institution's use of daylight credit is deemed by the institution's supervisor to be unsafe or unsound, (2) the institution does not qualify for a positive net debit cap (see section II.C.2., "Cap Categories," of the PSR policy), or (3) the institution poses excessive risk to a Reserve Bank by incurring chronic overdrafts in excess of what the Reserve Bank determines is prudent.

Cap Categories

The PSR policy defines six cap categories: high, above average, average, de minimis, exempt-from-filing, and zero. The high, above-average, and average cap categories are referred to as "self-assessed" caps.

Self-Assessed

To establish a net debit cap category of high, above average, or average, an institution must perform a self-assessment of its creditworthiness, intraday funds management and control, customer credit policies and controls, and operating controls and contingency procedures. The assessment of creditworthiness is based on the institution's supervisory rating and prompt-corrective-action designation. An institution may perform a full assessment of its creditworthiness in certain limited circumstances, for example, if its condition has changed significantly since the last examination, or if it possesses additional substantive information on its financial condition. An institution performing a self-assessment must also evaluate its intraday funds-management procedures and its procedures for evaluating the financial condition of and establishing intraday credit limits for its customers. Finally, the institution must evaluate its operating controls and contingency procedures to determine if they are sufficient to prevent losses due to fraud or system failures.

An examiner's review of an institution's assessment is an important part of determining

the institution's compliance with the PSR policy. An examiner is responsible for ensuring that the institution has applied the guidelines appropriately and diligently, that the underlying analysis and methodology were reasonable, and that the resulting self-assessment was generally consistent with examination findings. The following discussion is a simplified explanation of the self-assessment factors. A more detailed explanation of the self-assessment process is provided in the *Guide to the Federal Reserve's Payments System Risk Policy*. (The guide is available on the Internet at www.federalreserve.gov/paymentsystems/psr/.)

Creditworthiness. Of the four self-assessment factors, creditworthiness is the most influential in determining an overall net debit cap for a given institution. The creditworthiness factor is principally determined by a combination of the institution's capital adequacy and most recent supervisory rating. In the self-assessment, an institution's creditworthiness is assigned one of the following ratings: excellent, very good, adequate, or below standard. An excellent or a very good rating indicates that an institution demonstrates a sustained level of financial performance above its peer-group norm. As a general matter, fundamentally sound institutions that experience only modest weaknesses receive a rating of very good.

Most institutions will use the creditworthiness matrix to determine this component's rating. If an institution's creditworthiness rating is adequate or better, it then proceeds to rate the other three factors in the self-assessment process. The institution's assessment of the other three factors determines whether its composite rating will be lower than or equal to that determined by the creditworthiness factor. If the overall creditworthiness is either adequate or below standard, then the institution does not qualify for a positive daylight-overdraft cap. In certain limited circumstances, an institution may conduct a full analysis of this component. The matrix and information regarding the full analysis are available in the *Guide to the Federal Reserve's Payment System Risk Policy*.

Intraday funds management and control. The purpose of analyzing intraday funds management and control is to assess an institution's ability to fund its daily settlement obligations across all payment systems in which it participates. The analysis requires a review of funds

management, credit, operations personnel, and payment activity over a period of time.

To obtain an accurate understanding of funds movements, an institution must fully understand its daily use of intraday credit as well as its use of intraday credit on average over two-week periods. The analysis covers a sufficient period of time so that an institution can determine its peak demand for intraday credit and establish its average use of such credit. The more volatile an institution's payments activity, the longer the interval that is selected for analysis. The analysis incorporates all operational areas with access to payment systems. In addition to large-dollar funds and book-entry securities-transfer activity, the review should address check clearing, ACH, currency operations, and other payment activity that results in relatively large-value settlement obligations. Thus, the analysis should not be limited to online payment systems or to payment systems to which the institution has online access. Additionally, institutions with direct access to Fedwire or to other payment systems in more than one Federal Reserve District must combine all of these access points into a single integrated analysis.

In performing the analysis, the institution considers both liquidity demands and the potential credit risks associated with participation in each payment system. The institution's capacity to settle its obligations in both routine and nonroutine circumstances must be carefully assessed. In many cases, a complete assessment of an institution's ability to control its intraday obligations extends beyond its ability to control its use of Federal Reserve intraday credit within the constraints of its net debit cap. Rather, the assessment extends to the institution's ability to control its position across all payment systems to a level that permits it to fund its obligations regularly. This type of assurance requires an institution to fully understand the nature of its obligations and to establish systems that permit it to monitor daily activity and respond to unusual circumstances.

Customer credit policies and controls. The assessment of an institution's customer credit policies and controls requires two distinct analyses:

- an analysis of the institution's policies and procedures for assessing the creditworthiness of its customers, counterparties, and correspondents

- an analysis of the institution's ability to monitor the positions of individual customers and to control the amount of intraday and interday credit extended to each customer

The analyses require the involvement of both credit and operations personnel, and both analyses should focus on the creditworthiness of all customers, including corporate and other institutions that are active users of payment services. In addition, the creditworthiness of correspondents and all counterparties on privately operated clearing and settlement systems must be assessed.

Operating controls and contingency procedures.

The purpose of the analysis of operating controls and contingency procedures is to assess the integrity and the reliability of an institution's payment operations to ensure that they are not a source of operating risk. The integrity of operations is of particular concern because operational errors and fraud can increase the cost of payment services and undermine public confidence in the payments mechanism. Similar results can occur if payment systems are unreliable and if parties making and receiving payments do not have confidence that timely payments will be made.

Overall assessment rating. Once the four self-assessment components are analyzed and an overall rating is determined, the institution's self-assessment and recommended cap category must be reviewed and approved by the institution's board of directors at least once each 12-month period. A cap determination may be reviewed and approved by the board of directors of a holding company parent of an institution, provided that (1) the self-assessment is performed by each entity incurring daylight overdrafts, (2) the entity's cap is based on the measure of the entity's own capital, and (3) each entity maintains for its primary supervisor's review its own file with supporting documents for its self-assessment and a record of the parent's board-of-directors review. The directors' approval must be communicated to the Reserve Bank by submission of a board-of-directors resolution. The Reserve Bank then reviews the cap resolution for appropriateness, in conjunction with the institution's primary regulator. If the Reserve Bank determines that the cap resolution is not appropriate, the institution is informed that it must re-evaluate its

self-assessment and submit another resolution. A resolution to establish a different cap category may be submitted by the institution, or it may be required by the Reserve Bank before the annual renewal date, if circumstances warrant such a change.

De Minimis

Institutions that qualify for a de minimis net debit cap incur relatively small daylight overdrafts and thus pose little risk to the Federal Reserve. To ease the burden of performing a self-assessment for these institutions, the PSR policy allows institutions that meet reasonable safety-and-soundness standards to incur daylight overdrafts of up to 40 percent of their capital measure if the institution submits a board-of-directors resolution.

An institution with a de minimis cap must submit to its Reserve Bank at least once in each 12-month period a copy of its board-of-directors resolution (or a resolution by its holding company's board) approving the institution's use of daylight credit up to the de minimis level. If an institution with a de minimis cap exceeds its cap during a two-week reserve-maintenance period, its Reserve Bank will decide whether the de minimis cap should be maintained or whether the institution will be required to perform a self-assessment for a higher cap.

Exempt-from-Filing

The majority of institutions that hold Federal Reserve accounts have an exempt-from-filing net debit cap. Granted at the discretion of the Reserve Bank, the exempt-from-filing cap category permits institutions that only rarely incur daylight overdrafts in their Federal Reserve accounts to incur daylight overdrafts that exceed the lesser of \$10 million or 20 percent of their capital measure. If a Reserve Bank determines that an institution is eligible for exempt-from-filing status, it will assign this cap category without requiring any additional documentation. The Reserve Banks will review the status of an exempt institution that incurs overdrafts in its Federal Reserve account in excess of \$10 million or 20 percent of its capital measure on more than two days in any two consecutive two-week reserve-maintenance periods. The Reserve Bank will decide if the exemption should be maintained or if the institution will be required to file for a higher cap.

Zero

Some financially healthy institutions that could obtain positive net debit caps choose to have zero caps. Often these institutions have very conservative internal policies regarding the use of Federal Reserve daylight credit, or they simply do not want to incur daylight overdrafts and any associated daylight-overdraft fees. If an institution that has adopted a zero cap incurs a daylight overdraft, the Reserve Bank counsels the institution and may monitor the institution's activity in real time and reject or delay certain transactions that would cause an overdraft. If the institution qualifies for a positive cap, the Reserve Bank may suggest that the institution adopt an exempt-from-filing cap or file for a higher cap, if the institution believes that it will continue to incur daylight overdrafts. In addition, a Reserve Bank may assign an institution a zero net debit cap. Institutions that may pose special risks to the Reserve Banks, such as those institutions without regular access to the discount window, those incurring daylight overdrafts in violation of this policy, or those in weak financial condition, are generally assigned a zero cap. Chartered institutions may also be assigned a zero net debit cap.

Collateralized Capacity

While net debit caps provide sufficient liquidity to most institutions, some institutions experience liquidity pressures. Consequently, certain institutions with self-assessed net debit caps may pledge collateral to their administrative Reserve Bank (ARB) to secure daylight-overdraft capacity in excess of their net debit caps, subject to Reserve Bank approval. This policy is intended to provide extra liquidity through the pledge of collateral to the few institutions that might otherwise be constrained from participating in risk-reducing payment system initiatives. Institutions that request daylight-overdraft capacity beyond the net debit cap must have already explored other alternatives to address their increased liquidity needs.⁶ An institution that wishes to expand its daylight-overdraft capacity by pledging collateral should

consult with its ARB.⁷ The ARB will work with an institution that requests additional daylight-overdraft capacity to decide on the appropriate maximum daylight-overdraft capacity level. In considering the institution's request, the Reserve Bank will evaluate the institution's rationale for requesting additional daylight-overdraft capacity as well as its financial and supervisory information. The financial and supervisory information considered may include, but is not limited to, capital and liquidity ratios, the composition of balance-sheet assets, CAMELS or other supervisory ratings and assessments, and SOSA rankings (for U.S. branches and agencies of foreign banks). Institutions are also expected to submit the following information when requesting collateralized capacity:

- the amount of maximum daylight-overdraft capacity requested
- written justification for requesting additional daylight-overdraft capacity
- written approval from the institution's board of directors or, in the case of U.S. branches and agencies of foreign banks, written approval from the bank's most senior officer responsible for formulating policy at the foreign bank's U.S. head office
- a principal contact at the institution

When deciding whether an institution is eligible for collateralized capacity, the ARB will consider the institution's reasons for applying for additional collateralized capacity; the information related to the institution's condition; and other information, as applicable. If the ARB approves the request for a maximum daylight-overdraft capacity level, the institution must submit a board-of-directors resolution for the maximum daylight-overdraft capacity level at least once in each 12-month period, indicating its board-of-directors approval of that level. An institution's maximum daylight-overdraft capacity is defined as follows:

$$\begin{aligned} \text{maximum daylight-overdraft capacity} = \\ \text{single-day net debit cap} + \\ \text{collateralized capacity}^8 \end{aligned}$$

6. Some potential alternatives available to a depository institution to address increased intraday credit needs include (1) shifting funding patterns, (2) delaying the origination of funds transfers, or (3) transferring some payments-processing business to a correspondent bank.

7. The ARB is responsible for the administration of Federal Reserve credit, reserves, and risk-management policies for a given institution or other legal entity.

8. Collateralized capacity, on any given day, equals the amount of collateral pledged to the Reserve Bank, not to exceed the difference between the institution's maximum

Institutions with exempt-from-filing and de minimis net debit caps may not obtain additional daylight-overdraft capacity by pledging collateral. These institutions must first obtain a self-assessed net debit cap. Institutions with zero net debit caps also may not obtain additional daylight-overdraft capacity by pledging collateral. If an institution has adopted a zero cap voluntarily, but qualifies for a positive cap, it may not obtain additional daylight-overdraft capacity by pledging collateral without first obtaining a self-assessed net debit cap to obtain additional daylight-overdraft capacity. Institutions that have been assigned a zero net debit cap by their ARB are not eligible to apply for additional daylight-overdraft capacity.

ROLE OF DIRECTORS

The directors of an institution establish and implement policies to ensure that its management follows safe and sound operating practices, complies with applicable banking laws, and prudently manages financial risks. Given these responsibilities, the directors play a vital role in the Federal Reserve's efforts to reduce risks within the payment system. As part of the PSR policy, the Federal Reserve requests that directors, at a minimum, undertake the following responsibilities:

- Understand the institution's practices and controls for the risks it assumes when processing large-dollar transactions for both its own account and the accounts of its customers or respondents.
- Establish prudent limits on the daylight overdrafts that the institution incurs in its Federal Reserve account and on its privately operated clearing and settlement systems.
- Periodically review the frequency and dollar levels of daylight overdrafts to ensure that the institution operates within the guidelines established by its board of directors. Directors should be aware that, under the Federal Reserve's PSR policy, repeated policy violations could lead to reductions in the institution's daylight-overdraft capacity, or to the imposition of restrictions on its Federal Reserve account activity, either of which could affect the institution's operations.

daylight-overdraft capacity level and its single-day net debit cap.

Each institution that performs a self-assessment for a net debit cap should establish daylight-overdraft policies and controls after considering its creditworthiness, intraday funds management and control, customer credit policies and controls, and operating controls and contingency procedures.

The directors may appoint a committee of directors to focus on the institution's participation in payment systems and its use of daylight credit. Furthermore, a higher-level board of the same corporate family may conduct a self-assessment review, if necessary, and approve a resolution. The board of directors should be aware that delegating the review process to a committee or higher-level board does not absolve the directors from the responsibilities stated in the Federal Reserve's PSR policy. The directors cannot delegate this responsibility to an outside consultant or third-party service provider.

For resolutions on collateralized capacity, the board of directors must understand the use and purposes of the pledged collateral under the PSR policy. The directors must understand the reasons that the institution is applying for additional daylight-overdraft capacity, the amount of the collateralized capacity, and the total amount of the net debit cap plus Reserve Bank-approved collateralized credit.

The Federal Reserve recognizes that directors of foreign banks do not necessarily serve in the same capacity as directors of banks in the United States. Therefore, individuals who are responsible for formulating policy at the foreign bank's head office may substitute for directors in performing the responsibilities specified in the PSR policy.

Resolutions

A board-of-directors resolution is required to establish a cap in the de minimis or self-assessed cap categories (high, above average, or average). In addition, a separate resolution is required for self-assessed institutions that wish to obtain collateralized capacity above their net debit caps. These resolutions must follow a prescribed format. Specifically, resolutions must include (1) the official name of the institution, (2) the city and state in which the institution is located, (3) the date the board acted, (4) the cap category adopted, (5) the appropriate official signature, (6) the ABA routing number of the institution,

and (7) the corporate seal. For a board resolution approving the results of a self-assessment, the resolution must identify the ratings assigned to each of the four components of the assessment as well as the overall rating used to determine the actual net debit cap. In addition, the institution should indicate if it did not use the creditworthiness-matrix approach in determining its creditworthiness rating.

An institution's primary supervisor may review resolutions, and any information and materials the institution's directors used to fulfill their responsibilities under the PSR policy must be made available to the bank supervisor's examiners. Supporting documentation used in determining an appropriate cap category must be maintained at the institution. At a minimum, the following items must be maintained in the institution's "cap resolution file":

- an executed copy of the resolution adopting the net debit cap and/or collateralized capacity
- worksheets and supporting analysis used in its self-assessment of its own cap category
- for institutions with self-assessed caps, copies of management's self-assessment of creditworthiness, intraday funds management and control, customer credit policies and controls, and operating controls and contingency procedures
- minutes and other documentation that serve as a formal record of any directors' discussions on the self-assessment and/or request for collateralized capacity
- status reports the board of directors received on the institution's compliance with both the resolutions adopted by the directors and the PSR policy
- other materials that provide insight into the directors' involvement in carrying out their responsibilities under the PSR policy, including special studies or presentations made to the directors
- for the collateralized-capacity resolution, the amount and type of collateral pledged and the amount of maximum daylight-overdraft capacity
- for the supplemental securities-in-transit collateralized-capacity resolution, the amount of pledged securities in transit and the amount of other collateral pledged, if applicable⁹

9. Institutions with self-assessed net debit caps that receive Reserve Bank approval to support a limit on maximum daylight-overdraft capacity with securities in transit must

The board-of-directors resolution for de minimis and self-assessed institutions and for collateralized-capacity resolutions is valid for one year after the Reserve Bank approves the net debit cap or the amount of maximum daylight-overdraft capacity. An institution with a de minimis cap must renew its cap resolution annually by submitting a new resolution to its Reserve Bank. An institution with a self-assessed cap must perform a new self-assessment annually and submit an updated cap resolution to its Reserve Bank. An institution that has a self-assessed cap and has obtained additional collateralized capacity above its net debit cap must submit a board-of-directors resolution to its Reserve Bank annually. Procedures for submitting these resolutions are the same as those for establishing the initial cap; however, an institution may submit a resolution for a different cap category or a different amount of collateralized capacity, if appropriate. The Reserve Bank, in conjunction with an institution's primary supervisor, will review the appropriateness of each resolution.

Because the self-assessment process may, in some cases, require considerable time to complete and approve, institutions should be aware of the expiration date of their cap resolutions well in advance. If a new cap resolution is not received by the expiration date, an institution may be assigned a zero cap, which would generally preclude the institution from using any Federal Reserve daylight credit.

Confidentiality

The Federal Reserve considers institutions' daylight-overdraft caps; cap categories; and collateralized capacity, if applicable, to be confidential information and will only share this information with an institution's primary supervisor. Institutions are also expected to treat cap and collateralized-capacity information as confidential. Cap and collateralized-capacity information should not be shared with outside parties or mentioned in any public documents.

submit a board-of-directors resolution at least once in each 12-month period. The resolution requires the institution's board of directors to acknowledge that (1) securities in transit will be used to collateralize daylight-overdraft capacity in a manner consistent with the reasons and purposes submitted to the institution's administrative Reserve Bank and (2) the value of the securities in transit pledged to the Reserve Bank will fluctuate during the day and over time.

DAYLIGHT-OVERDRAFT MONITORING AND CONTROL

All institutions that maintain Federal Reserve accounts are expected to monitor their account balances on an intraday basis. Institutions should be fully aware of payments they are making from their accounts each day and how those payments are funded. Institutions are encouraged to use their own systems and procedures, as well as the Federal Reserve's systems, to monitor their Federal Reserve account balance and payment activity.

Daylight-Overdraft Measurement

To determine whether a daylight overdraft has occurred in an institution's account, the Federal Reserve uses a set of transaction-posting rules that define explicitly the time of day that debits and credits for transactions processed by a Reserve Bank will post to the account. All Fedwire funds transfers, book-entry securities transfers, and NSS transactions are posted to an institution's account as they occur throughout the day. Other transactions, including ACH and check transactions, are posted to institutions' accounts according to a defined schedule.¹⁰ These posting rules should help institutions control their use of intraday credit because they allow institutions to monitor the time that each transaction is credited or debited to their account. Note that these posting times affect the calculation of the account balance for daylight-overdraft-monitoring and pricing purposes but do not affect the finality or revocability of the entry to the account. An important feature of the posting rules is a choice of posting times for check credits.

10. On September 22, 2004, the Board revised its PSR policy (effective July 20, 2006) concerning interest and redemption payments on securities issued by government-sponsored enterprises (GSEs) and certain international organizations. Currently, Reserve Banks process and post these payments to institutions' Federal Reserve accounts by 9:15 a.m. eastern time, the same posting time as for U.S. Treasury securities' interest and redemption payments, even if the issuer has not fully funded its payments. The revised policy requires Reserve Banks to release these interest and redemption payments as directed by the issuer, provided the issuer's Federal Reserve account contains sufficient funds to cover them. Each issuer will be required to fund its interest and redemption payments by 4 p.m. eastern time for the payments to be processed that day.

Monitoring Daylight Overdrafts

To monitor an institution's overdraft activity and its compliance with the PSR policy and to calculate daylight-overdraft charges, the Federal Reserve uses the Daylight-Overdraft Reporting and Pricing System (DORPS). DORPS captures all debits and credits resulting from an institution's payment activity and calculates end-of-minute account balances using the daylight-overdraft posting rules. As measured by DORPS, an institution's account balance is calculated at the end of each minute, based on its opening balance and all payment transactions posted to the institution's account up until that moment. The daylight-overdraft measurement period begins with the current official opening time of Fedwire and continues until the official closing time. Although DORPS records positive as well as negative account balances, positive balances do not offset negative balances for purposes of determining compliance with net debit caps or for calculating daylight-overdraft fees. In cases of unscheduled extensions of Fedwire hours, the final closing account balance is recorded as if it was the balance at the standard closing time, and balances between the scheduled and actual closing times are not recorded. DORPS generates various reports at the end of each two-week reserve-maintenance period. These reports provide useful information for monitoring daylight overdrafts, such as peak daily overdrafts for the period; overdrafts in excess of net debit cap; end-of-minute account balances for a particular day; and related ratios, such as the peak daily overdraft relative to net debit cap.

Monitoring PSR Policy Compliance

Reserve Banks generally monitor institutions' compliance with the PSR policy over each two-week reserve-maintenance period. In most cases, a policy violation occurs when an institution's account balance for a particular day shows one or more negative end-of-minute account balances in excess of its single-day net debit cap or when an institution's average peak daily overdraft over a reserve-maintenance period exceeds its two-week average cap.¹¹ The

11. An institution's average peak daily overdraft is calculated by adding the largest overdraft incurred for each day during a reserve-maintenance period and dividing that sum by the number of business days in the period.

exceptions to this general rule are discussed below.

Institutions in the exempt-from-filing cap category are normally allowed two cap breaches in two consecutive two-week reserve-maintenance periods without violating the PSR policy. For institutions in the de minimis or self-assessed cap categories or for institutions that have been approved for maximum daylight-overdraft capacity, each cap breach is considered a policy violation. A Reserve Bank may waive a violation if it determines that the overdraft resulted from circumstances beyond the institution's control.

An institution with a self-assessed cap that has been approved for maximum daylight-overdraft capacity should avoid incurring daylight overdrafts that, on average over a two-week period, exceed its two-week-average limit, and that, on any day, exceed its single-day limit. The two-week-average limit is equal to the two-week average cap plus the amount of applicable Reserve Bank-approved collateral, averaged over a two-week reserve-maintenance period. The single-day limit is equal to an institution's net debit cap plus the amount of applicable Reserve Bank-approved collateral.

For daylight-overdraft purposes, accounts of U.S. branches and agencies of foreign banks and accounts involved in merger-transitions are monitored on a consolidated basis; that is, a single account balance is derived by adding together the end-of-minute balances of each account. The accounts of affiliated institutions are monitored separately if they are separate legal entities. In addition, for institutions with accounts in more than one Federal Reserve District, an ARB is designated. The ARB coordinates the Federal Reserve's daylight-overdraft monitoring for the consolidated accounts or institutions.

Consequences of Violations

A PSR policy violation may initiate a series of Reserve Bank actions aimed at deterring an institution's excessive use of Federal Reserve intraday credit. These actions depend on the institution's history of daylight overdrafts and its financial condition. Initially, the Reserve Bank may assess the causes of the overdrafts and review account-management practices. In addition, the Reserve Bank may require an institution to submit documentation specifying

the actions it will take to address the overdraft problems. If policy violations continue, the Reserve Bank may take additional actions. For example, if a financially healthy institution in the zero, exempt-from-filing, or de minimis cap category continues to breach its cap, the Reserve Bank may recommend that the institution file a cap resolution or perform a self-assessment to obtain a higher net debit cap.

If an institution continues to violate the PSR policy, and if counseling and other Reserve Bank actions have been ineffective, the Reserve Bank may assign the institution a zero cap. In addition, the Reserve Bank may impose other account controls that it deems prudent, such as requiring increased clearing balances; rejecting Fedwire funds transfers, ACH credit originations, or NSS activity in excess of the account balance; or requiring the institution to fund certain transactions in advance. Reserve Banks also keep institutions' primary regulators apprised of any recurring overdraft problems.

Real-Time Monitoring

The Account Balance Monitoring System (ABMS) is the system Reserve Banks use to monitor in real time the payment activity of institutions that potentially expose the Federal Reserve and other payment-system participants to excessive risk exposure. ABMS is both an information source and an account-monitoring and control tool. It allows institutions to obtain intraday balance information for purposes of managing their use of daylight credit and avoiding overnight overdrafts. All institutions that have an electronic connection to the Federal Reserve's Fedwire funds-transfer service, such as a FedLine® terminal or a computer interface connection, are able to review their intraday Federal Reserve account position in ABMS. While ABMS is not a substitute for an institution's own internal tracking and monitoring systems, it does provide real-time account information based on Fedwire funds and securities transfers and NSS transactions. Additionally, ABMS captures debits and credits resulting from other payment activity as those transactions are processed in the Reserve Bank's accounting system. ABMS also provides authorized Federal Reserve Bank personnel with a mechanism to monitor and control account activity for selected institutions.

ABMS has the capability to reject or intercept funds transfers from an institution's account. This capability is called *real-time monitoring*. The Federal Reserve Banks use real-time monitoring to prevent selected institutions from transferring funds from their accounts if there are insufficient funds to cover the payments. Institutions are generally notified before a Reserve Bank begins monitoring their account in real time.

If an institution's account is monitored in the "reject" mode in ABMS, any outgoing Fedwire funds transfer, NSS transaction, or ACH credit origination that would cause an overdraft above a specified threshold, such as the institution's net debit cap plus any Reserve Bank-approved collateral pledged, would be immediately rejected back to the sending institution. The institution could then initiate the transfer again when sufficient funds became available in its account. If an institution's account is monitored in the "intercept" mode, sometimes referred to as the "pend" mode, outgoing funds transfers, NSS transactions, or ACH credit originations that would cause an overdraft in excess of the threshold will not be processed but will be held. These intercepted transactions will either be released by the Reserve Bank once funds are available in the institution's account or rejected back to the institution. Reserve Banks will normally be in direct contact with an institution in the event any of its funds transfers are intercepted.

Institutions can view Federal Reserve accounting information on the web through FedLine. The Account Management Information (AMI) application provides real-time access to intraday account-balance and daylight-overdraft balance information, detailed transaction information, and a variety of reports and inquiry services. Institutions can obtain information on accessing ABMS and AMI from any Federal Reserve Bank.

SPECIAL TYPES OF INSTITUTIONS

U.S. Branches and Agencies of Foreign Banks

Under the PSR policy, U.S. branches and agencies of foreign banks are typically treated the

same as domestic institutions. However, several unique considerations affect the way in which the policy is applied to U.S. branches and agencies of foreign banks. In general, net debit caps for foreign banking organizations (FBOs) are calculated in the same manner as they are for domestic banks, that is, by applying cap multiples for one of the six cap categories to a capital measure. For U.S. branches and agencies of foreign banks, net debit caps on daylight overdrafts in Federal Reserve accounts are calculated by applying the cap multiples for each cap category to the FBO's U.S. capital equivalency measure. U.S. capital equivalency is equal to the following:

- 35 percent of capital for FBOs that are financial holding companies (FHCs)
- 25 percent of capital for FBOs that are not FHCs and have a strength-of-support assessment (SOSA) ranking of 1¹²
- 10 percent of capital for FBOs that are not FHCs and are ranked a SOSA 2
- 5 percent of "net due to related institutions" for FBOs that are not FHCs and are ranked a SOSA 3

U.S. branches and agencies of foreign banks that (1) wish to establish a non-zero net debit cap, (2) are an FHC, or (3) are ranked a SOSA 1 or 2 are required to file the Annual Daylight Overdraft Capital Report for U.S. Branches and Agencies of Foreign Banks (FR 2225). Granting a net debit cap or any extension of intraday credit to an institution is at the discretion of the Reserve Bank. If a Reserve Bank grants a net debit cap or extends intraday credit to a financially healthy FBO ranked a SOSA 3, the Reserve Bank may require such credit to be fully collateralized, given the heightened supervisory concerns associated with these FBOs.

As it does with U.S. institutions, the ARB must have the ability to assess regularly the financial condition of a foreign bank in order to

12. The SOSA ranking is composed of four factors: the FBO's financial condition and prospects, the system of supervision in the FBO's home country, the record of the home country's government in support of the banking system or other sources of support for the FBO, and transfer-risk concerns. Transfer risk relates to the FBO's ability to access and transmit U.S. dollars, which is an essential factor in determining whether an FBO can support its U.S. operations. The SOSA ranking is based on a scale of 1 through 3, with 1 representing the lowest level of supervisory concern.

grant the institution a daylight-overdraft cap other than zero. The ARB will generally require information regarding tier 1 and total risk-based capital ratios for the consolidated foreign bank. Accordingly, U.S. branches and agencies of foreign banks seeking a positive daylight-overdraft cap (exempt, de minimis, or self-assessment cap categories) should provide the ARB with capital ratios at the time the cap is established and annually thereafter. U.S. branches and agencies of foreign banks that are based in countries that do not adhere to the Basel Capital Accord should provide information comparable to the accord format. Workpapers for capital ratios need to be maintained at a designated U.S. branch or agency and are subject to review by the institution's primary supervisor. The Federal Reserve considers capital information provided to the ARB in connection with an institution's daylight-overdraft cap to be confidential.

Allocation of Caps

The Federal Reserve monitors the daylight overdrafts of U.S. branches and agencies of foreign banks on a consolidated basis; that is, each foreign-bank family, consisting of all of the U.S. branches and agencies of a particular foreign bank, has a single daylight-overdraft cap. Intraday account balances of all the U.S. branches and agencies in a foreign-bank family are added together for purposes of monitoring against its daylight-overdraft cap, in the same way that the account balances of institutions with accounts in more than one Federal Reserve District are added together.

For purposes of real-time monitoring, however, a foreign bank that has offices in more than one District may choose to allocate a portion of its net debit cap to branches or agencies in Districts other than that of the ARB. Unless a foreign-bank family instructs otherwise, the Federal Reserve will assign the dollar value of the family's single-day daylight-overdraft cap to the branch or agency located in the District of the ARB. The foreign-bank family may indicate to the ARB the dollar amount of cap to be allocated to offices in other Districts. Any dollar amount of the cap that is not allocated to offices in other Districts will be assigned to the branch or agency in the District of the ARB. A foreign bank may revise its cap allocation from time to time by communicating the revision to its ARB, but such revisions should be infrequent.

Nonbank Banks and Industrial Banks

Institutions subject to the Competitive Equality Banking Act of 1987 (CEBA), such as nonbank banks or certain industrial banks, may not incur daylight overdrafts on behalf of affiliates, except in three circumstances. First, the prohibition does not extend to overdrafts that are a result of inadvertent computer or accounting errors beyond the control of both the nonbank bank or industrial bank and its affiliate. Second, nonbank banks are permitted to incur overdrafts on behalf of affiliates that are primary U.S. government securities dealers, provided such overdrafts are fully collateralized. Third, overdrafts incurred in connection with an activity that is financial in nature are also permitted. A nonbank bank or industrial bank loses its exemption from the definition of bank under the Bank Holding Company Act if it permits or incurs prohibited overdrafts. In enforcing these restrictions, the Federal Reserve uses a separate formula for calculating intraday Federal Reserve account positions for these institutions.

Institutions with Federal Reserve Accounts and No Access to the Federal Reserve Discount Window

Under the PSR policy, institutions that have Federal Reserve accounts but lack regular access to the discount window are not eligible for a positive daylight-overdraft cap. Institutions that do not have regular access to the discount window include Edge and agreement corporations, bankers' banks that are not subject to reserve requirements, limited-purpose trust companies, government-sponsored enterprises (GSEs), and certain international organizations. Institutions that have been assigned a zero cap by their Reserve Banks are also subject to special considerations under the PSR policy because of the risks they pose. All of these institutions are strongly discouraged from incurring any daylight overdrafts. If any such institutions were to incur an overdraft, however, the Reserve Bank would require it to pledge collateral sufficient to cover the peak amount of the overdraft for an appropriate period.

In addition to the pledge of collateral, certain institutions discussed below are subject to a penalty fee on any daylight overdrafts incurred in their Federal Reserve accounts. The penalty

fee is intended to provide a strong incentive for these institutions to avoid incurring any daylight overdrafts in their Federal Reserve accounts. The penalty fee assessed is equal to the annual rate applicable to the daylight overdrafts of other institutions (36 basis points) plus 100 basis points multiplied by the fraction of a 24-hour day during which Fedwire is scheduled to operate (currently 21.5 divided by 24). The daily overdraft penalty fee is calculated by dividing the annual penalty rate by 360. The daylight-overdraft penalty rate applies to the institution's average daily daylight overdraft in its Federal Reserve account. Institutions that are subject to the daylight-overdraft penalty fee are subject to a minimum penalty fee of \$25 on any daylight overdrafts incurred in their Federal Reserve accounts.

Edge Act and Agreement Corporations

Edge Act and agreement corporations¹³ do not have regular access to the discount window and should refrain from incurring daylight overdrafts in their reserve or clearing accounts. If any daylight overdrafts occur, the Edge Act or agreement corporation will be required to pledge collateral to cover them. Like foreign banks, Edge Act and agreement corporations that have branches in more than one Federal Reserve District are monitored on a consolidated basis.

Bankers' Banks

Bankers' banks,¹⁴ including corporate credit unions, are exempt from reserve requirements and do not have regular access to the discount window. Bankers' banks may voluntarily waive their exemption from reserve requirements, thus

gaining access to the discount window. These bankers' banks would then be free to establish caps and would be subject to the PSR policy in the same manner as other institutions. Bankers' banks that have not waived their exemption from reserve requirements should refrain from incurring overdrafts and must pledge collateral to cover any daylight overdrafts that they incur.

Limited-Purpose Trust Companies

The Federal Reserve Act (FRA) permits the Board to grant Federal Reserve membership to limited-purpose trust companies,¹⁵ subject to conditions the Board may prescribe pursuant to the FRA. Limited-purpose trust companies that maintain Federal Reserve accounts should refrain from incurring overdrafts and must pledge collateral to cover any daylight overdrafts that they incur.

Government-Sponsored Enterprises and Certain International Organizations

In accordance with federal statutes, the Federal Reserve Banks act as fiscal agents for certain government-sponsored enterprises (GSEs) and international organizations.¹⁶ These institutions generally have Federal Reserve accounts and issue securities over the Fedwire Securities Service. The securities of these institutions are *not* obligations of, or fully guaranteed as to principal and interest by, the United States. Furthermore, these institutions are not subject to reserve requirements and do not have regular access to

15. For the purposes of the PSR policy, a limited-purpose trust company is a trust company that, because of limitations on its activities, does not meet the definition of "depository institution" in section 19(b)(1)(A) of the Federal Reserve Act (12 USC 461(b)(1)(A)).

16. The GSEs include Fannie Mae, the Federal Home Loan Mortgage Corporation (Freddie Mac), entities of the Federal Home Loan Bank System (FHLBS), the Farm Credit System, the Federal Agricultural Mortgage Corporation (Farmer Mac), the Student Loan Marketing Association (Sallie Mae), the Financing Corporation, and the Resolution Funding Corporation. The international organizations include the World Bank, the Inter-American Development Bank, the Asian Development Bank, and the African Development Bank. When Sallie Mae completes its statutorily required privatization, the Reserve Banks will no longer act as fiscal agents for new issues of Sallie Mae securities, and the new Sallie Mae will not be considered a GSE.

13. These institutions are organized under section 25A of the Federal Reserve Act (12 USC 611–631) or have an agreement or undertaking with the Board of Governors under section 25 of the Federal Reserve Act (12 USC 601–604a).

14. For the purposes of the PSR policy, a bankers' bank is a financial institution that is not required to maintain reserves under the Federal Reserve's Regulation D (12 CFR 204) because it is organized solely to do business with other financial institutions, is owned primarily by the financial institutions with which it does business, and does not do business with the general public and is not an institution as defined in the Federal Reserve's Regulation A (12 CFR 201.2(a)).

the discount window. Effective July 20, 2006, GSEs and certain international organizations should refrain from incurring daylight overdrafts and must post collateral to cover any daylight overdrafts they do incur. In addition to posting collateral, these institutions will be subject to the same daylight-overdraft penalty rate as other institutions that do not have regular access to the discount window.

Problem Institutions

For institutions that are in weak financial condition, the Reserve Banks will impose a zero cap. The Reserve Bank will also monitor a problem institution's activity in real time and reject or delay certain transactions that would create an overdraft. Problem institutions should refrain from incurring daylight overdrafts and must post collateral to cover any daylight overdrafts they do incur.

EFT MANAGEMENT

Economic and financial considerations have led financial institutions and their customers to recognize the need to manage cash resources more efficiently. The PSR policy calls on private networks and institutions to reduce their own credit and operational risks. It also depends on the role of the Federal Reserve and other financial institution regulators in examining, monitoring, and counseling institutions. To ensure that banking institutions are following prudent banking practices in their funds-transfer activities, examinations should focus equally on the evaluation of both credit and operational risks.

The bank should establish guidelines for types of allowable transfers. Procedures should be in effect to prevent transfers drawn against uncollected funds. Thus, banks should not transfer funds against simple ledger balances unless preauthorized credit lines have been established for that account.

Errors and omissions, as well as the fraudulent alteration of the amount of a transfer or of the account number to which funds are to be deposited, could result in losses to the bank. Losses may include total loss of the transferred funds, loss of availability of funds, interest charges, and administrative expenses associated

with the recovery of the funds or correction of the problem.

Management is responsible for assessing the inherent risks in the EFT system, establishing policies and controls to protect the institution against unreasonable exposures, and monitoring the effectiveness of safeguards. Regulatory agencies will ensure that each financial institution has evaluated its own risks realistically and has adequate accounting records and internal controls to keep exposures within reasonable, established limits.

The risks associated with any computerized EFT system can be reduced if management implements the controls that are available on the system. For example, the authority to enter, verify, and send transfers can be segregated, and the dollar amount of transactions can be limited. Effective risk management requires that management establish and maintain—

- reasonable credit limits (payments in excess of these limits that involve significant credit risk must be properly approved by appropriate lending authorities),
- adequate recordkeeping to determine the extent of any intraday overdrafts and potential overnight overdrafts before releasing payments, and
- proper monitoring of respondents' accounts when the institution sets the positions of others. Responsibility for this function should be assigned to an appropriate supervisory level of management that will ensure the use of adequate internal controls.

Authentication or Verification Methods

The same due care that financial institutions use when executing EFT transactions must be used when accepting EFT requests from customers. Management must implement security procedures for ensuring that the transfer requests are authentic. As stated in Uniform Commercial Code (UCC) section 4A-201, "Authorized and Verified Payment Orders," security procedures may require the use of algorithms or other codes, identifying words, or numbers; encryption; callback procedures; or similar security devices. An explanation of authorized and verified payment orders is detailed in UCC section 4A-202.

Signature Verification

One method to verify the authenticity of a customer's EFT request is to verify the customer's signature. Unfortunately, this procedure cannot be performed when the customer requests the transaction by telephone. Some financial institutions have implemented policies whereby the customer completes and signs a transfer request, and then faxes the request to the bank. However, this is not a safe EFT procedure because, although the bank can verify the signature on the faxed request, it cannot be certain that the transfer request is legitimate. Any document that is transmitted electronically can be altered (for example, by changing the amount or account number). The alteration can occur before the document is digitalized (that is, before being fed into the fax machine) or after. In most instances, these alterations cannot be detected by the receiving entity. If there is any question about a document's authenticity, the transaction should be reconfirmed through other sources.

Personal Identification Numbers

One way for financial institutions to authenticate transfers initiated over the telephone is through the use of personal identification numbers (PINs) issued to each customer. When a customer requests a transfer, his or her identity is verified by comparing the supplied PIN with the customer's PIN-request form that is on file. At a minimum, the following safeguards should be implemented for these types of transfers:

- All nonretail customers should be requested to sign an agreement whereby the bank is held harmless in the event of an unauthorized transfer if the bank follows routine authentication procedures. The customer is responsible for informing the bank about changes in who is authorized to execute EFTs. These procedures should minimize the risk to the bank if someone is able to execute a fraudulent transaction. (These procedures are described in detail in UCC section 4A-202.)
- All transactions over a specific dollar amount should be re-verified by a callback routine. The bank should require that the person being called for re-verification is someone other than the person who initially requested the transaction.
- Whenever new PINs are issued, they should

be mailed in sealed, confidential envelopes (preferably computer-generated) by someone who does not have the ability to execute wire transfers.

- The number of bank employees who have access to PINs should be very limited.

Tape Recording

The tape recording of EFT requests made over the telephone is another internal control practice. When possible, verifying and recording the incoming telephone number (that is, using a caller-ID system) is also a good practice. The laws addressing telephone recording vary by state. Some states require that the caller be informed that the conversation is being recorded; others do not have this requirement. Regardless of the state's law, the bank should inform callers that, for their protection, conversations are being recorded. Moreover, banks should have in place a policy for retaining the taped telephone records and should retain them for a specified period of time, at least until the statements from the Federal Reserve or correspondent banks have been received and reconciled.

Statements of Activity

Some larger banks have implemented a procedure whereby customers are electronically sent a summary statement at the end of each day. The statement lists the transfers executed and received on their behalf. The statement can be sent through a fax machine, a personal computer, or a remote printer. This procedure quickly identifies any transfers the customer did not authorize.

Test Keys

EFT requests can be authenticated using *test keys*. A test key is a calculated number that is derived from a series of codes that are contained in a test-key book. The codes in a test-key book represent such variables as the current date, hour of the day, receiving institution, receiving account number, and amount of the transfer. The value derived from these variables equals the test key. The financial institution or corporate customer initiating the transfer will give its EFT information, along with the test-key value. The receiving bank will recalculate the test key and,

if the two test keys equal the same amount, the EFT request is considered authenticated. Test-key code books should be properly secured to prevent unauthorized access or fraudulent use. The use of test keys has declined in recent years as more and more institutions implement PC-based EFT systems.

Blanket Bond

Although computer-related employee misappropriations are normally covered, financial institution blanket bond policies generally exclude certain types of EFT activities from standard coverage. Separate coverage for EFT systems is available and should be suggested to management, particularly if a significant risk exposure exists. A bank's fidelity bond insurance could be declared null and void by the carrier if a fraudulent transfer were to occur and the loss was directly attributable to weak internal controls. (See section 4040.1, "Management of Insurable Risks.")

SUPERVISORY RISK EVALUATION

Bank management is responsible for assessing the inherent risks in the EFT system (or systems) it uses. Management should establish policies and controls to protect the institution against unreasonable exposures, as well as monitor the effectiveness of the established safeguards.

Examiner Responsibilities

Examiners are responsible for ensuring that financial institutions have assessed and evaluated their risks realistically and have adopted internal controls that are adequate to keep those risks within acceptable limits. The types of risks involved in EFT systems, as well as payment systems generally, are discussed below.

Credit Risk

Credit risk is the risk that a counterparty will not settle an obligation for full value when due, nor at any time subsequently. Any time an institu-

tion extends credit to a customer or permits a customer to use provisional funds to make a payment, the institution is exposed to the risk that the customer will not be able to meet its payment obligation. If the customer is unable or unwilling to repay the credit extension, the institution could incur a financial loss. Similarly, an institution that receives a payment in provisional funds has a credit exposure to the sender until such time as the payment is settled with finality, that is, until the payment becomes unconditional and irrevocable. If an institution permits a customer to withdraw or make a payment with provisional funds received, then the institution incurs credit exposure to both the sender of the provisional funds and the customer. Those credit exposures are not extinguished until the provisional funds received are settled with finality. With respect to payment systems risk, overall credit risk consists of (1) direct-credit risk to the Federal Reserve, that is, a borrowing institution may be unable to cover its intraday overdraft arising from a transfer of funds or receipt of book-entry securities, thus causing a Federal Reserve Bank to incur a loss; (2) private direct-credit risk, or the possibility of loss to institutions extending credit; and (3) systemic risk, which is the possibility of loss to multiple creditors when borrowing institutions fail to cover their obligations to creditor institutions. Variants of credit risk include sender risk, receiver risk, and return-item risk.

Systemic risk. Stated more clearly, systemic risk occurs when one participant in a payment system, or in the financial markets generally, fails to repay its required obligation when due, and this failure prevents other private or market participants or financial institutions from meeting their settlement obligations when due. Systemic risk may result from extraneous events, actions, or reasons that are independent of the institution, or from developments in the payment system. Changes in the capital markets, domestic political or government announcements or actions, unplanned events, or sovereign actions of other countries are examples of events that may cause systemic risk.

Sender risk. Sender risk is the risk that results if a depository institution uses an extension of credit to make an irrevocable payment on behalf of a customer. This credit can be a loan or an extension of payment against uncollected or provisional funds or against insufficient balances.

Receiver risk. Receiver risk arises when an institution accepts funds from a sender who may be a customer, another institution, or the payment system. As the receiver of funds, the institution relies on the sender's ability to settle its obligations. The risk exists while payments are revocable within the system and remains until final settlement.

Return-item risk. The major risk in originating ACH debit transactions and collecting checks for customers is return-item risk. Return-item risk extends from the day funds are made available to customers until the individual items can no longer legally be returned. The receiver of ACH debit transactions, or the payer of checks, has the right to return transactions for various reasons, including insufficient funds in its customer's account. To minimize its exposure, an institution should perform credit assessments of all customers that originate large dollar volumes of ACH debit transactions, and for all customers for which the institution collects large volumes of checks. Such assessments ensure that if ACH or check items are returned after the customer has been granted use of the funds, the customer will be able to return the funds to the institution.

Liquidity Risk

Liquidity risk (or settlement risk) is the risk that a counterparty will not settle an obligation for full value when due, even though the counterparty may later settle the obligation. Liquidity risk may result from unexpected market or operational disruptions or from catastrophic or unplanned events. It may also result from sovereign actions; therefore, sovereign risk can give rise to liquidity risk.

Sovereign risk refers to the financial capacity of governments to generate foreign-currency revenues to repay their obligations. This capacity is generally limited because government assets are predominantly the discounted value of future taxes denominated in the local currency. Governments have direct access to foreign-currency revenues only when the economy is dominated by a public sector that derives most of its revenues from exports (for example, oil or gold). Sovereign risk is not limited to the country's federal government debt. It also includes debt contracted by all public and publicly guaranteed entities (such as provincial,

state, or local governments and all other debt with a government's guarantee).

Actions taken by nondomestic governments can affect the payments of certain participants in a payment system, and these actions can be detrimental to other participants in the system. Sovereign risk can include the imposition of exchange-control regulations on a bank participating in international foreign-exchange activities. While the bank itself may be both willing and able to settle its position, government intervention may prevent it from doing so. The risk can be controlled by regularly monitoring the payment-system laws of other countries and by taking specific alternative actions to lessen the risk. Alertness to a bank's sovereign-risk exposure to its counterparties located in other nations, and to possible alternative actions, can considerably lessen this risk.

Legal Risk

Any transaction occurring in a payment system is subject to the interpretation of courts in different countries and legal systems. This issue is normally addressed by adopting "governing-law" provisions in the rules of the systems themselves. These provisions provide for all disputes between members to be settled under the laws of a specific jurisdiction. However, if a local court refuses to recognize the jurisdiction of a foreign court, the rules may be of limited use. This risk is difficult to address because there is no binding system of international commercial law for electronic payments. Banks should seek a legal opinion regarding the enforceability of transactions settled through a particular system.

Operational Risk

Operational risk may arise from—

- a system failure caused by a breakdown in the hardware or software supporting the system, possibly resulting from design defects, insufficient system capacity to handle transaction volumes, or a mechanical breakdown, including telecommunications;
- a system disruption if the system is unavailable to process transactions, possibly due to system failure, destruction of the facility (from natural disasters, fires, or terrorism), or opera-

tional shutdown (from employee actions, a business failure, or government action); or

- the system being compromised as a result of fraud, malicious damage to data, or error.

Whatever the source, the loss of availability of a payment system can adversely affect major participants, their correspondents, markets, and interdependent payment mechanisms.

Banks should control operational risk through a sound system of internal controls, including physical security, data security, systems testing, segregation of duties, backup systems, and contingency planning. In addition, a comprehensive audit program is essential to assess the risks, adequacy of controls, and compliance with bank policies.

Risk-Control Issues

Bank management should consider and develop risk-management policies and procedures to address the variety of credit, liquidity, operational, and other risks that can arise in the normal course of conducting its payment business—regardless of the clearing and settlement method of the particular payment systems in which the bank participates. EFT systems differ widely in form, function, scale, and scope of activities. Consequently, the specific risk-management measures an institution employs for a particular EFT system will differ depending on the inherent risks in the system. As a general matter, an institution should adopt risk-management controls commensurate with the nature and magnitude of risks involved in a particular EFT system.

In addition to assessing the adequacy of an institution's risk-management procedures for measuring, monitoring, and controlling its risks from participating in a payment system (or systems) and from providing payment services to its customers, examiners should consider the following internal control guidelines when they

review policies and procedures covering EFT activities:

- Job descriptions for personnel responsible for a bank's EFT activities should be well defined, providing for the logical flow of work and adequate segregation of duties.
- No single person in an EFT operation should be responsible for all phases of the transaction (that is, for data input, verification, and transmission or posting).
- All funds transfers should be reconciled at the end of each business day. The daily balancing process should include a reconciliation of both the number and dollar amount of messages transmitted.
- All adjustments required in the processing of a transfer request should be approved by a bank's supervisory personnel, with the reasons for the adjustment documented. Transfer requests "as of" a past or future date should require the supervisor's approval with well-defined reasons for those requests.
- Only authorized persons should have access to EFT equipment.

Considerable documentation is necessary to maintain adequate accounting records and auditing control. Many banks maintain transfer-request logs, assign sequence numbers to incoming and outgoing messages, and keep an unbroken electronic copy of all EFT messages. At the end of each business day, employees who are independent of the transfer function should compare request forms with the actual transfers to ensure that all EFT documents are accounted for. When reviewing the adequacy of internal controls, examiners should review the funds-transfer operations to determine that recordkeeping systems are accurate and reliable, all transactions are handled promptly and efficiently, duties are separated appropriately, audit coverage is adequate, and management recognizes the risks associated with these activities.

Payment System Risk and Electronic Funds Transfer Activities Examination Objectives

Effective date May 2002

Section 4125.2

1. To determine if the bank's electronic funds transfer (EFT) objectives, policies, practices, procedures, and internal controls are adequate to control its exposure to acceptable limits of payment systems risk.
2. To determine if bank officers and other wire-transfer personnel are operating in conformance with established guidelines.
3. To determine the scope and adequacy of the audit function for the risks associated with payment and wire-transfer systems.
4. To ascertain whether senior management is informed of the current status, nature, and magnitude of risks associated with the bank's EFT operations, as well as any changes to these risks.
5. To assess the bank's ability to monitor its payment-systems position, as well as to limit its credit and other risk exposures in the system and from its customers or correspondents.
6. To determine that the board of directors has reviewed and approved the institution's use of Federal Reserve intraday credit, self-assessment (if applicable), and net debit cap, and to determine if the institution is complying with the Federal Reserve Policy Statement on Payments System Risk.
7. If the bank has a self-assessed net debit cap, to review the bank's self-assessment file and determine if the underlying analyses and methodologies are reasonable, adequate, and consistent with the institution's supervisory overview, risk assessments, and risk matrix.
8. To evaluate the quality of the bank's operational controls and determine the extent of compliance with applicable laws and regulations.
9. To initiate corrective action when objectives, policies, procedures, or internal controls are deficient or when violations of law or regulations exist.

Payment System Risk and Electronic Funds Transfer Activities Examination Procedures

Effective date November 2004

Section 4125.3

1. Review and determine the bank's compliance with the electronic funds transfer (EFT) risk-assessment standards of the examination module, recognizing the associated risks for each. Answer the pertinent questions that refer to EFT in the internal control questionnaire.
2. Review and evaluate the work of internal or external auditors and of the compliance officer as it relates to the risks associated with payment systems and EFT activities. Determine if payment system risk is reviewed and whether the independence, scope, coverage, and frequency of internal or external reviews are adequate.
3. Based on an evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
4. Test for compliance with policies, practices, procedures, and internal controls. Determine whether the management information systems and reports for the institution's payment systems and funds-transfer activities provide timely and accurate data that are sufficient for personnel to make informed and accurate decisions. From the examiner assigned to review "Internal Control," obtain a listing of any deficiencies noted in the latest review conducted by internal or external auditors. Determine if bank management has taken the appropriate corrective actions for the deficiencies.
5. Obtain or construct an organizational chart and flow chart for the EFT area, and determine the job responsibilities and flow of work through that department.
6. Review the bank's standard form of agreement or other written agreements with its customers, correspondent banks, and vendors. Determine whether those agreements are current and clearly define the liabilities and responsibilities, including responsibilities during emergencies, of all parties. Agreements with the Federal Reserve Bank should refer specifically to the operating circular (or circulars) on the electronic funds transfers pursuant to subpart B of Regulation J (12 CFR 210.25 et seq.).
7. Review the bank's board of directors and senior management policies and procedures for payment-systems and EFT activities, including third-party transactions. Perform tests to determine the existence, reasonableness, and adequacy of these policies and procedures. Determine whether the policies and procedures have been disseminated to the employees who are actively responsible for and involved in performing payment-systems and EFT activities. Ascertain whether there is an active employee-training program that ensures employees have the knowledge necessary to comply with the bank's policies and procedures for payment-systems and EFT activities.
8. For transactions involving the Federal Reserve Bank, other private funds-transfer systems, and other due from bank accounts, confer with the examiner who is assigned "Due from Banks," and determine the propriety of any outstanding funds-transfer items.
9. Coordinate the review of the credit exposures arising from payment-systems and EFT activities with the examiners' review of loan programs or loan portfolios. Determine whether credit personnel make and adequately document, independent of account and operations officers, periodic credit reviews of funds-transfer customers.
10. Determine where suspense items or adjustment accounts are posted and accounted for, as well as who is responsible for reviewing, resolving, and clearing out suspense items.
 - a. Scan accounts for unusual or old items or abnormal fluctuations.
 - b. Reconcile accounts to departmental control totals and to the general ledger.
 - c. Review management reports on suspense items and unusual activity.
11. Review the income and expense accounts related to EFT operations. Determine the frequency of entries caused by late or inaccurate execution of transfer requests.
12. Observe the space and personnel allocated to the EFT area, and note the location of communications terminals. Determine whether existing conditions are adequate to provide appropriate physical security.
13. Discuss the following items with the appropriate officer (or officers), and prepare summaries in the appropriate section of the

examination report:

- a. internal control exceptions, as well as deficiencies in or noncompliance with written policies, practices, and procedures
 - b. uncorrected audit deficiencies
 - c. violations of laws and regulations
 - d. terminology, operating arrangements, accounting procedures, and time limitations of EFT operations
 - e. the operating efficiency and physical security of the bank's EFT operation
 - f. the adequacy of controls over settlement- and credit-risk exposure
 - g. recommended corrective action when policies, practices, or procedures are deficient
14. Update the examination workpapers to include the bank examination activities and procedures performed and any information gathered to support the completed work, including any information that will facilitate future examinations.

RISK MANAGEMENT OF INTRADAY CREDIT EXPOSURES

1. If the bank is a CHIPS or other clearing-agency participant, determine the bank's basis for accepting customers for CHIPS-payments activity. If the examined institution is a funding participant on CHIPS, determine the criteria for accepting a non-funding participant as a respondent. Determine that the criteria are reviewed periodically.
2. Determine if appropriate intraday credit limits are imposed and monitored for those customers and counterparties with which the bank has intraday credit exposures.
3. Determine if the bank monitors and controls any intraday credit exposures to affiliates.¹

1. An insured depository institution must establish and maintain policies and procedures reasonably designed to manage the credit exposure arising from its intraday extensions of credit to affiliates in a safe and sound manner. The policies and procedures must at a minimum provide for the monitoring and control of the credit exposure arising from the institution's intraday extensions of credit to each affiliate and

4. Determine whether the institution periodically reviews its ability to fund its closing-position requirement on private multilateral settlement systems, such as CHIPS.

FEDERAL RESERVE INTRADAY CREDIT

1. Determine that the board of directors has reviewed and approved the institution's use of Federal Reserve intraday credit.
2. If the institution incurs daylight overdrafts in its Federal Reserve account, determine that the institution has selected an appropriate net debit cap.
3. If the institution has selected a de minimis or a self-assessed net debit cap, determine that the board-of-directors resolution follows the prescribed format and contains all of the required elements.
4. If the institution has selected a self-assessed net debit cap, review the contents of the self-assessment file to determine that the institution has applied the guidelines appropriately and diligently, that the underlying analysis and method were reasonable, and that the resulting self-assessment is generally consistent with the examination findings. Inform the appropriate Reserve Bank of any concerns about the institution's net-debit-cap level, self-assessment, or use of Federal Reserve intraday credit.
5. Review the institution's cap resolution file and ascertain that it includes (1) a copy of the board-of-directors resolution, (2) worksheets and supporting analysis used in its self-assessment of its own cap category, (3) copies of senior-management reports to the board of directors of the institution or its parent (as appropriate) regarding that self-assessment, and (4) copies of the minutes of the discussion at the appropriate board-of-directors meeting concerning the institution's adoption of a cap category.

all affiliates in the aggregate, and must ensure that the institution's intraday extensions of credit to affiliates comply with section 23B of the Federal Reserve Act. (See 12 CFR 250.248.)

Payment System Risk and Electronic Funds Transfer Activities Internal Control Questionnaire

Effective date May 2002

Section 4125.4

For the preliminary review and assessment, review the bank's internal controls, policies, practices, and procedures for payment systems risk and electronic funds transfer (EFT) activities. The following procedures should be used:

1. Review previous examination reports, earlier workpapers, and correspondence exchanged with the institution to get an overview of previously identified EFT concerns.
2. Review the most recent audits and internal reviews to identify the scope and noted deficiencies.
3. Review management's actions to correct examination and audit deficiencies.
4. Discuss with management recent or planned changes in EFT activities.
5. Review management reports to determine the nature and volume of current activity.
6. Review the minutes of management committees that oversee EFT activity to determine their content and follow-up on material matters.

The bank's payment and EFT systems should be further reviewed and documented completely and concisely. Where appropriate, the preliminary review and assessment should include narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

During the examination, the review of operations and internal controls of all institutions involved in funds-transfer or EFT activities should use the following procedures. Items below that are marked with an asterisk (*) require substantiation by observation or testing.

ORGANIZATION

1. Is there a current organization plan detailing the structure of the funds-transfer function?
2. Is senior management responsible for administering the operations of the funds-transfer function?
3. Does management maintain a current list of bank personnel who are authorized to initiate EFT requests?
4. Are there regular management reviews of

staff compliance with the credit and personnel procedures, operating instructions, and internal controls?

5. Are activity and quality-control reports received and reviewed by management?
6. Are major new system designs and newly available hardware for the payment and EFT systems brought to the attention of and reviewed by management?

SUPERVISION BY DIRECTORS AND SENIOR MANAGEMENT

1. Are the directors and senior management kept informed about the nature and volume of transactions and the magnitude of the risks involved in the funds-transfer activity?
2. Has the board of directors or senior management reviewed and approved any limits on the risks in the funds-transfer activities? If so, when were the limits last reviewed?
3. Is senior management or the board of directors advised of any customers with—
 - a. large intraday and overnight overdrafts? If so, are other extensions of credit to the same customers combined to show the total credit exposures?
 - b. large drawings against uncollected funds?
4. Are management's responses to audit exceptions and recommendations adequate and timely?
5. Is there adequate insurance coverage for EFT risks? Does senior management conduct adequate reviews of insurance coverage and insurance riders for EFT operations and the overall EFT environment?

CREDIT MANAGEMENT, EVALUATION, AND APPROVAL

1. Under the bank's established board-of-directors policies and procedures, is senior management or the credit committee (or credit officers) required to review at pre-determined frequencies—

- a. the volume of transactions, the credit-worthiness of customers, and the risks involved in the funds-transfer activity?
 - b. credit and other exposures as they relate to safe and sound banking practices?
 - c. staff capabilities and the adequacy of equipment relative to current and expected volume?
2. Are procedures in place to prohibit transfers of funds against accounts that do not have collected balances or preauthorized credit availability?
 3. Have counterparty and customer credit limits been established for all payment system risk exposures, including those relating to Fedwire, CHIPS, ACH, foreign exchange, and other types of payments? Do credit limits take into account intraday and overnight overdrafts?
 - a. Are groups of affiliated customers included in such limits?
 - b. Are limits set according to a clear and consistent methodology for credit-risk assessment?
 - c. How often are the limits reviewed and updated?
 - d. Does senior management monitor and review the customer limits? How frequently?
 4. Are other types of credit facilities considered when establishing intraday-overdraft limits for the same customer?
 5. Is an intraday-posting record kept for each customer, showing opening collected and uncollected balances, transfers in, transfers out, and the collected balances at the time payments are released?
 6. If payments exceed the established limits, are steps taken in a timely manner to obtain covering funds?
 7. Are there fully documented, periodic credit reviews of funds-transfer customers?
 8. Are credit reviews conducted by competent credit personnel who are independent of account and operations officers?
 9. Does the institution make payments in anticipation of receiving covering funds? If so, are such payments approved by officers who have the appropriate credit authority?
 10. Are intraday exposures limited to amounts that are expected to be received the same day?
 11. Do the limits on intraday and overnight overdrafts appear to be reasonable in view of the institution's capital position and the creditworthiness of the respective customers?
 12. Does a staff supervisor approve payments in excess of established limits, following verification that the covering funds are in transit to the bank?
 13. Before releasing payments, are payments against uncollected funds and intraday overdrafts in excess of established limits referred to a person with appropriate credit authority for approval, and is the reason for the overdraft determined?

PERSONNEL

1. Has the bank taken steps to ensure that screening procedures are applied to personnel that are hired for sensitive positions in the EFT departments?
2. Does the bank prohibit new or temporary employees from working in sensitive areas of the payment-systems and EFT operation?
3. Are statements of indebtedness required from employees who work in sensitive positions of the payment-systems and EFT function?
4. Does supervisory staff give special attention to employees newly assigned to work in the EFT functions?
5. Are employees subject to unannounced rotation of responsibilities, regardless of the size of the institution?
6. Are relatives of employees in the payment-systems and EFT function precluded from working in the same institution's book-keeping or data processing departments?
7. Does the bank's policy require that employees take a minimum number of consecutive days as part of their annual vacation? Is this policy being enforced?
8. If employees have given notice of resignation or received termination notices, does management reassign them away from sensitive areas of the payment-systems and EFT function?
9. Are personnel informed of the current trends in transfer activities, including necessary internal controls, as part of a regular training program?

SIGNATURE CARDS

1. Does the bank maintain a current list or card file of authorized signers for customers who use the bank's funds-transfer services?
2. Are customer signature cards maintained under dual control or otherwise protected?
3. Do customer signature cards limit the number of authorized persons and the amount of funds that an individual is authorized to transfer?
4. Do bank personnel compare the signature on an original mail request with the authorized signature on file?

TEST KEYS

1. Do telephone requests and EFT transactions use test codes, and are the codes verified by a person other than the person receiving the request?
2. Are test codes restricted to authorized personnel?
- *3. Are the files containing test-key formulas maintained under dual control or otherwise protected?
4. Are only authorized personnel permitted in the test-key area or allowed access to computers, teletapes, or terminals?
5. Does the bank maintain an up-to-date test-key file?
6. Does management maintain a list of those authorized persons who have access to test-key files?
7. Are all messages and transfer requests that require testing authenticated by the use of a test key?
- *8. Are test codes verified by someone other than the person receiving the initial transfer request?
9. Are callback or other authentication procedures performed on all transfers that do not have a test key or signature card on file?
10. Do mail transfer requests include a test word as an authentication procedure?
11. Does the bank's test-key formula incorporate a sequence number resulting from an agreement between the bank and the customer?

12. Does the bank have procedures in operation for the issuance and cancellation of test keys?
- *13. Is the responsibility for issuing and canceling test keys assigned to someone who is not responsible for testing the authenticity of transfer requests?
14. Are test codes maintained in a secure environment when they are not in use?
15. Is the testing area physically separated from other operations?

TELEPHONE TRANSFER REQUESTS

1. Has the bank established guidelines for what information should be obtained from a person making a funds-transfer request by telephone?
2. Does the above information include a test-word authentication code?
3. Does the bank use a callback procedure that includes a test-code authentication to verify telephone transfer requests?
4. Does the bank limit callbacks to transactions over a certain dollar amount?
5. Does the bank maintain a current list of persons who are authorized to initiate telephone funds transfers and messages?
- *6. Does the bank have procedures in place to prohibit persons who receive telephone transfer requests from transmitting those requests?
7. Does the bank use devices that record all incoming and outgoing transfer requests?
8. Are prenumbered or sequentially numbered (at a central location after initiation) transfer-request forms used?
9. Is the log or record of transfer requests reviewed daily by supervisory personnel?
10. Do the records of transfer requests contain—
 - a. a sequence number?
 - b. an amount transferred?
 - c. the person, firm, or bank making the request (also the specific transferor)?
 - d. the date?
 - e. the test-code authentication?
 - f. paying instructions?
 - g. authorizing signatures for certain types and dollar-amount transfers?

EFT REQUESTS

- *1. Do different employees perform the functions of receipt, testing, and transmission of funds-transfer requests?
2. Do incoming and outgoing messages record the time, or are they sequentially numbered for control?
3. Do incoming and outgoing messages include a test word as a means of message authentication?
4. Is an unbroken copy of all messages kept throughout the business day?
5. Is the above copy reviewed and controlled by someone not connected with operations in the EFT area?

AGREEMENTS

1. With respect to EFT and payment-systems transfer operations between the bank and its hardware and software vendors, maintenance companies, customers, correspondent banks, the Federal Reserve, and other providers, are the agreements in effect and current? (The agreements with the appropriate Federal Reserve Bank should refer to the operating circulars regarding the transfer of funds pursuant to subpart B of Regulation J.)
2. Do the written agreements state the responsibilities of each party involved in the agreement?
3. Do the agreements state the vendors' liabilities for their employees' actions?

OPERATING AND PROCESSING PROCEDURES

1. Do written procedures exist for the EFT functions, and are they updated for employees in the incoming, preparation, data entry, balance-verification, transmission, accounting, reconciling, and security areas? Do these procedures include—
 - a. control over test words, signature lists, and opening and closing messages?
 - b. computer-terminal security and password controls?
 - c. access to the funds-transfer and EFT areas and user files?
 - d. origination, modification, deletion, or

rejection of order transactions or messages?

- e. verification of the sequence numbers of orders?
 - f. accounting for all transfer requests and message traffic at the end of the day?
 - g. bank supervisory review of all adjustments, reversals, and the reasons therefor, as well as open items?
 - h. planning for contingencies?
2. Are all incoming and outgoing payment orders and message requests in the EFT and funds-transfer area—
 - a. time-recorded or sequentially numbered for control?
 - b. logged?
 - c. reviewed for test verification?
 - d. reviewed for signature authenticity?
 - e. reviewed to verify that the person who initiated the funds-transfer request was authorized to do so?
 - f. authorized or reviewed by bank supervisory personnel?
 3. Does the EFT department of the bank prepare a daily reconciliation of funds-transfer activity by dollar amount and number of messages?
 4. Are all rejects or exceptions reviewed by someone who is not involved in the receipt, preparation, or transmittal of funds?
 5. If the institution accepts transfer requests after the close of business or accepts transfer requests with a future value date, are they properly controlled and processed?
 6. Are Federal Reserve Bank statements reviewed and reconciled daily with the bank's internal funds-transfer log to determine if there are "open" funds-transfer items and the reasons for the outstanding items?
 7. Does an officer review corrections, overrides, open items, reversals, and other adjustments?
 8. Does a person other than the receipt clerk review message requests and payment orders for—
 - a. the propriety of the transactions?
 - b. future dates, especially those for multiple transactions?
 9. When reasonably feasible, does a supervisor check all transactions before the release of funds to a customer or before initiating a payment message over the EFT system?

10. At the end of a day, are all message requests and payment orders accounted for in an end-of-the-day proof to ensure that all requests have been processed?
 11. Are internally rejected customer transfer requests and message requests controlled, and are they sequentially numbered for accountability?
 12. Does an officer review and approve as-of adjustments, open items, reversals, and other adjustments?
 13. Are key fields re-verified before transmission, and are messages released by someone other than the individual who originally entered the message?
 14. Does the work flow in a one-way direction to provide adequate internal controls?
 15. Are audit trails maintained from receipt through posting to a customer's account?
 16. Are EFT activities adequately documented, and is there an adequate and active records-retention program?
8. If the above detail of receipts is not received, do the institution's customers inform it of the total amount to be received for the day?
 9. Is the information in items 7 and 8 maintained and followed for exceptions?
 10. Is an intraday-posting record kept for each customer, showing opening collected and uncollected balances, transfers in, transfers out, and the collected balance at the time payments are released?
 11. Are significant CHIPS or Fedwire customer payments and receipts communicated to a monitoring unit promptly during the day to provide adequate information on each customer's overall exposure?
 12. Does the accounting system for demand deposits give an accurate collected-funds position?
 13. Have limits been established within which a designated person may authorize release of payments after reviewing the customer's activity? Does the institution maintain a record of approvals of these releases?
 14. When an overnight overdraft occurs, is a determination made as to whether a fail caused the overdraft? If so, is this determination properly documented? Are follow-up actions to obtain the covering funds in a timely manner adequate?
 15. Does the institution have a record of payments it failed to make?
 16. Is the above record reviewed to evaluate the efficiency of the department?
 17. Is corrective action initiated when appropriate?
 18. Are investigations and follow-ups for failed payments conducted by personnel who are independent of the operating unit?
 19. Are customer advices issued in a timely manner? Do credit advices sent to customers clearly indicate that credits to their accounts that are received through CHIPS are conditional upon final settlement?
 20. For the settling institutions on CHIPS, are the net debit positions of the nonsettling participants relayed to appropriate personnel as soon as the positions become known?
 21. Are designated supervisory staff responsible for verifying that respondents' net debit positions are covered the same day?
 22. Are the follow-up procedures adequate to facilitate the receipt of funds?

ACCOUNTING, RECORDKEEPING, AND CONTROLS

1. Are Federal Reserve Bank, correspondent bank, and clearinghouse statements used for funds transfers reconciled daily in another area of the bank (for example, accounting or correspondent banking or by a person who is separate from any money-transfer operations) to ensure that they agree with the funds-transfer records?
2. Are all prenumbered forms, including cancellations, accounted for in the daily reconciliation, and do they include the account number and account title?
3. Is the daily reconciliation of funds-transfer and message-request activity reviewed by supervisory personnel?
- *4. Is the balancing of daily activity conducted separately from the receiving, processing, and sending functions?
5. Does the EFT department verify that work sent to other bank departments agrees with its totals?
6. Are general-ledger entries, adjustments, automated transactions, or other supporting documents initialed by authorized persons?
7. Does the institution receive cables or other written communications from its customers that indicate amounts to be paid and received and the source of covering funds?

23. Are open-statement items, suspense accounts, receivables, or payables and interoffice accounts related to EFT activity controlled outside of the funds-transfer operations?
24. Do the following controls exist?
 - a. Management prepares periodic reports on open-statement items, suspense items, and interoffice accounts.
 - b. Reports include agings of open items, the status of significant items, and the resolution of prior significant items.
25. Do general-ledger tickets or other supporting documents include the initials of the originator and designated supervisory personnel?
26. Is senior management required to decide whether to refuse to cover a net debit settlement position of a respondent?
27. Has the institution devised and maintained an adequate system of internal accounting controls, as required by the Foreign Corrupt Practices Act?

AUDIT

1. Does management or the audit department undertake a periodic review to ensure that work is being performed in accordance with policy and guidelines established by the board of directors and senior management?
2. Is the audit department promptly informed when a change is made in systems or the method of operation?
3. Does the audit or independent-review program provide sufficient coverage relative to the magnitude (volume) and nature of EFT activities? Are independent reviews conducted, and do they address all areas of EFT business, including—
 - a. payment-order origination (funds-transfer requests);
 - b. message testing;
 - c. credit evaluation;
 - d. customer agreements;
 - e. payment processing and accounting;
 - f. personnel policies;
 - g. physical and data security;
 - h. contingency plans;
 - i. credit evaluation and approval;
 - j. incoming funds transfers;
 - k. bank secrecy and foreign assets control,

if applicable; and

- l. Federal Reserve payment system risk program and policy issues.

PHYSICAL SECURITY

1. Is access to the EFT area restricted to authorized personnel who have proper bank identification? In limited circumstances when visitors are necessary (such as for repairs of equipment), are they restricted, properly identified, required to sign in, and accompanied by authorized personnel at all times?
2. Is written authorization given to those employees who remain in the EFT area after normal working hours? Who gives such authority? Are security guards informed?
3. Are bank terminal operators or others in EFT operations denied access to computer areas or programs?
4. Do procedures prohibit computer personnel from gaining access to bank terminals or test-key information?
5. Does EFT equipment have physical or software locks to prohibit access by unauthorized personnel at all times?
6. Are terminals and other hardware in the EFT area shut down after normal working hours? Are they regulated by automatic time-out controls or time-of-day controls?
7. Are passwords suppressed when they are entered in terminals?
8. Are operator passwords frequently changed? If so, how often?
9. Is supervisory approval required to access terminals at other than authorized times?
10. Are passwords restricted to different levels of access, such as data files and transactions that can be initiated?
11. Are employees prohibited from taking access keys for sensitive equipment or software test keys out of the EFT area?

CONTINGENCY PLANS

1. Has management properly planned for contingencies, and has it developed a reasonable contingency plan and safeguards that are commensurate with the volume of EFT activity?

2. Does the bank maintain backup communications systems, and is supervisory approval required for their use?
3. Are procedures in place for sending and receiving transfers if the bank is forced to operate at a different site?
4. Are backup systems and equipment periodically tested by bank personnel?
5. Are there adequate procedures to ensure that data is recovered by the opening of the next business day's processing?
6. Have written contingency plans been developed and regularly tested in case of partial or complete failure of the bank's systems or of communication lines between the bank and the New York Clearing House, the Federal Reserve Bank, data centers, critical customers, or servicer companies?
7. Are contingency plans reviewed regularly and tested at least annually?
8. Has management distributed contingency plans to all personnel and stored appropriate copies off-site or in a central database?
9. If the bank processes a large volume of payments, does it maintain a backup facility that provides real-time recovery in case of a disaster or other disruption of the primary data center?
10. Are procedures in place for backup, off-site storage of critical information and for inventory control on hardware and software?
11. Do procedures exist to prevent the inadvertent release of test data into the production environment?
12. Are primary and backup telecommunication lines performance-tested frequently by authorized supervisory personnel?

For guidance and listed procedures on Fedline, EFT, and information technology standards, see chapters 18 and 19 of the *FFIEC Information Systems Examination Handbook*.

CONCLUSION

1. Is the foregoing information an adequate basis for evaluating internal control; that is, there are no significant internal-auditing procedures, accounting controls, administrative controls, or other deficiencies or circumstances in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
2. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).
3. If intraday credit is granted to any affiliates, has the bank established policies and procedures to monitor and control such exposures and ensure compliance with section 23B of the Federal Reserve Act, as required by Regulation H? (See 12 CFR 250.248.)
4. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (good, medium, or bad).
5. Will the credit risk resulting from funds transfers have an adverse impact on overall asset quality?
6. Does the allowance for loan and lease losses adequately include significant adverse credit risk that is derived from EFT activities?
7. Will the weaknesses identified from the review of payment systems risk and EFT activity have a negative impact on overall liquidity, earnings, or capital?

The role of bank regulators in supervising private-banking activities is (1) to evaluate management's ability to measure and control the risks associated with such activities and (2) to determine if the proper internal control and audit infrastructures are in place to support effective compliance with relevant laws and regulations. In this regard, the supervisors may determine that certain risks have not been identified or adequately managed by the institution, a potentially unsafe and unsound banking practice.

Private-banking functions may be performed in a specific department of a commercial bank, an Edge corporation or its foreign subsidiaries, a nonbank subsidiary, a branch or agency of a foreign banking organization, or multiple areas of an institution. Private banking may also be the sole business of an institution. Regardless of how an institution is organized or where it is located, the results of the private-banking review should be reflected in the entity's overall supervisory assessment.¹ (See SR-97-19.)

This section provides examiners with guidance for reviewing private-banking activities at all types and sizes of financial institutions. It is intended to supplement, not replace, existing guidance on the examination of private-banking activities and to broaden the examiner's review of general risk-management policies and practices governing private-banking activities. In addition to providing an overview of private banking, the general types of customers, and the various products and services typically provided, the "Functional Review" subsection describes the critical functions that constitute a private-banking operation and identifies certain safe and sound banking practices. These critical functions are supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance. Included in the risk-management portion is a discussion of the basic "customer-due-diligence" (CDD) principle that is the foundation for the safe and sound operation of a private-banking business. The "Preparation for Examination" subsection assists in defining the examination scope and provides a

list of core requests to be made in the first-day letter. Additional examination guidance can be found in this manual, the Federal Financial Institutions Examination Council's (FFIEC) *Bank Secrecy Act/Anti-Money Laundering (BSA/AML) Examination Manual* (see SR-07-15), the Federal Reserve System's *Trading and Capital-Markets Activities Manual*, and the FFIEC *Information Technology Examination Handbook*.

In reviewing specific functional and product-examination procedures (as found in the private-banking activities module that is part of the framework for risk-focused supervision of large complex institutions), all aspects of the private-banking review should be coordinated with the rest of the examination to eliminate unnecessary duplication of effort. Furthermore, this section has introduced the review of trust activities and fiduciary services, critical components of most private-banking operations, as part of the overall private-banking review. Although the product nature of these activities differs from that of products generated by other banking activities, such as lending and deposit taking, the functional components of private banking (supervision and organization, risk management, operational controls and management information systems, audit, compliance, and financial condition/business profile) should be reviewed across product lines.

Private banking offers the personal and discrete delivery of a wide variety of financial services and products to an affluent market, primarily to high net worth individuals and their corporate interests. A private-banking operation typically offers its customers an all-inclusive money-management relationship, including investment portfolio management, financial-planning advice, offshore facilities, custodial services, funds transfer, lending services, overdraft privileges, hold mail, letter-of-credit financing, and bill-paying services. As the affluent market grows, both in the United States and globally, competition to serve it is becoming more intense. Consequently, the private-banking marketplace includes banks, nonbanks, and other types of banking organizations and financial institutions. Private-banking products, services, technologies, and distribution channels are still evolving. A range of private-banking products and services may be offered to customers throughout an institution's global network of affiliated entities—including branches, subsidi-

1. Throughout this section, the word *bank* will be used to describe all types of financial institutions, and the term *board of directors* will be interchangeable with *senior management* of branches and agencies of foreign banks.

aries, and representative offices—in many different regions of the world, including offshore secrecy jurisdictions.

Typically, private-banking customers are high net worth individuals or institutional investors who have minimum investible assets of \$1 million or more. Institutions often differentiate domestic from international private banking, and they may further segregate the international function on the basis of the geographic location of their international client base. International private-banking clients may be wealthy individuals who live in politically unstable nations and are seeking a safe haven for their capital. Therefore, obtaining detailed background information and documentation about the international client may be more difficult than it is for the domestic customer. Private-banking accounts may, for example, be opened in the name of an individual, a commercial business, a law firm, an investment adviser, a trust, a personal investment company (PIC), or an offshore mutual fund.

In 2001, the USA Patriot Act (the Patriot Act) established new and enhanced measures to prevent, detect, and prosecute money laundering and terrorist financing. In general, these measures were enacted through amendments to the Bank Secrecy Act (BSA). The measures directly affecting banking organizations are implemented primarily through regulations issued by the U.S. Department of the Treasury (31 CFR 103).² Section 326 of the Patriot Act (see the BSA at 31 USC 5318(l)) requires financial institutions (such as banks, savings associations, and credit unions) to have customer identification programs that include measures to—

- require that certain information be obtained at account opening (for individuals, the information would generally include their name, address, tax identification number, and date of birth);
- verify the identity of new account holders within a reasonable time period;
- ensure that a banking organization has a

reasonable belief that it knows each customer's identity;

- maintain records of the information used to verify a person's identity; and
- compare the names of new customers against government lists of known or suspected terrorists or terrorist organizations.

A customer identification program is an important component of a financial institution's overall anti-money-laundering and BSA compliance program.

SR-04-13 disseminated the interagency BSA examination procedures that should be used to evaluate banking organizations' compliance with the regulation. The examination's scope can be tailored to the reliability of the banking organization's compliance-management system and to the level of risk that the organization assumes. Relevant interagency guidance (in a frequently-asked-question format) has been issued to address the customer identification program rules. (See SR-05-9.)

Private-banking accounts are usually generated on a referral basis. Every client of a private-banking operation is assigned a salesperson or marketer, commonly known as a relationship manager (RM), as the primary point of contact with the institution. The RM is generally charged with understanding and anticipating the needs of his or her wealthy clients and then recommending services and products for them. The number of accounts an RM handles varies, depending on the portfolio size or net worth of the particular accounts. RMs strive to provide a high level of support, service, and investment opportunities to their clients and tend to maintain strong, long-term client relationships. Frequently, RMs take accounts with them to other private-banking institutions if they change employment. Historically, initial and ongoing due diligence of private-banking clients is not always well documented in the institution's files because of RM turnover and confidentiality concerns.

Clients may choose to delegate a great deal of authority and discretion over their financial affairs to RMs. Given the close relationship between clients and their account officers, an integral part of the examination process is assessing the adequacy of managerial oversight of the nature and volume of transactions conducted within the private-banking department or with other departments of the financial institution, as well as determining the adequacy and

2. For banking organizations, the regulation implementing the requirements of section 326 of the Patriot Act was jointly issued by the U.S. Department of the Treasury, through the Financial Crimes Enforcement Network (FinCEN), and the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

integrity of the RM's procedures. Policy guidelines and management supervision should provide parameters for evaluating the appropriateness of all products, especially those involving market risk. Moreover, because of the discretion given to RMs, management should develop effective procedures to review the activity of client accounts in order to protect the client from any unauthorized activity. In addition, ongoing monitoring of account activity should be conducted to detect activity that is inconsistent with the client profile (for example, frequent or sizable unexplained transfers flowing through the account).

Finally, as clients develop a return-on-assets (ROA) outlook to enhance their returns, the use of leveraging and arbitrage is becoming more evident in the private-banking business. Examiners should be alert to the totality of the client relationship product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

Products and Services

Personal Investment Companies, Offshore Trusts, and Token-Name Accounts

Private-banking services almost always involve a high level of confidentiality for clients and their account information. Consequently, it is not unusual for private bankers to help their clients achieve their financial-planning, estate-planning, and confidentiality goals through offshore vehicles such as personal investment companies (PICs), trusts, or more-exotic arrangements, such as hedge fund partnerships. While these vehicles may be used for legitimate reasons, without careful scrutiny, they may camouflage illegal activities. Private bankers should be committed to using sound judgment and enforcing prudent banking practices, especially when they are assisting clients in establishing offshore vehicles or token-name accounts.

Through their global network of affiliated entities, private banks often form PICs for their clients. These "shell" companies, which are incorporated in offshore secrecy jurisdictions such as the Cayman Islands, Channel Islands, Bahamas, British Virgin Islands, and Netherlands Antilles, are formed to hold the customer's assets as well as offer confidentiality by opening accounts in the PIC's name. The "beneficial

owners" of the shell corporations are typically foreign nationals. The banking institution should know and be able to document that it knows the beneficial owners of such corporations and that it has performed the appropriate due diligence to support these efforts. Emphasis should be placed on verifying the source or origin of the customer's wealth. Similarly, offshore trusts established in these jurisdictions should identify grantors of the trusts and sources of the grantors' wealth. *Anonymous relationships or relationships in which the RM does not know and document the beneficial owner should not be permitted.*

PICs are typically passive personal investment vehicles. However, foreign nationals have established PICs as operating accounts for business entities they control in their home countries. Accordingly, financial institutions should use extra care when dealing with beneficial owners of PICs and associated trusts; these vehicles can be used to conceal illegal activities.

Deposit Taking

A client's private-banking relationship frequently begins with a deposit account and then expands into other products. In fact, many institutions require private-banking customers to establish a deposit account before maintaining any other accounts. Deposit accounts serve as conduits for a client's money flows. To distinguish private-banking accounts from retail accounts, institutions usually require significantly higher minimum account balances and assess higher fees. The private-banking function or institution should have account-opening procedures and documentation requirements that must be fulfilled before a deposit account can be opened. (These standards are described in detail in the "Functional Review" subsection.)

Most private banks offer a broad spectrum of deposit products, including multicurrency deposit accounts that are used by clients who engage in foreign-exchange, securities, and derivatives transactions. The client's transaction activity, such as wire transfers, check writing, and cash deposits and withdrawals, is conducted through deposit accounts (including current accounts). It is very important that the transaction activity into and out of these deposit accounts (including internal transfers between affiliated deposit accounts) be closely monitored for suspicious transactions that are inconsistent with the client's profile of usual transactions. Suspicious

transactions could warrant the filing of a Suspicious Activity Report for Depository Institutions (SAR-DI) form. A bank holding company or any nonbank subsidiary thereof, or a foreign bank that is subject to the Bank Holding Company Act (or any nonbank subsidiary of such a foreign bank operating in the United States), is required to file a SAR-DI form in accordance with the provision of section 208.62 of the Federal Reserve Board's Regulation H (12 CFR 208.62) when suspicious transactions or activities are initially discovered and warrant or require reporting. See the reporting requirements discussed in SR-07-2 and the attached June 2007 SAR-DI form and instructions as well as the expanded procedures for private banking in the FFIEC's *BSA/AML Examination Manual*.

On March 15, 2006, the Board approved a revision to Regulation K (effective April 19, 2006) that incorporates by reference into sections 211.5 and 211.24 of Regulation K section 208.63 of Regulation H. The incorporation results in the requirement that Edge and agreement corporations and other foreign banking organizations (that is, Federal Reserve supervised U.S. branches, agencies, and representative offices of foreign banks) must establish and maintain procedures reasonably designed to ensure and monitor compliance with the Bank Secrecy Act and related regulations. Each of these banking organizations' compliance programs must include, at a minimum (1) a system of internal controls to ensure ongoing compliance, (2) independent testing of compliance by the institution's personnel or by an outside party, (3) the designation of an individual or individuals responsible for coordinating and monitoring day-to-day compliance, and (4) training for appropriate personnel. (See SR-06-7.)

Investment Management

In private banking, investment management usually consists of two types of accounts: (1) discretionary accounts in which portfolio managers make the investment decisions on the basis of recommendations from the bank's investment research resources and (2) nondiscretionary (investment advisory) accounts in which clients make their own investment decisions when conducting trades. For nondiscretionary clients, the banks typically offer investment recommendations subject to the client's written approval. Discretionary accounts consist of a mixture of

instruments bearing varying degrees of market, credit, and liquidity risk that should be appropriate to the client's investment objectives and risk appetite. Both account types are governed under separate agreements between the client and the institution.

Unlike depository accounts, securities and other instruments held in the client's investment accounts are not reflected on the balance sheet of the institution because they belong to the client. These managed assets are usually accounted for on a separate ledger that is segregated according to the customer who owns the assets. For regulatory reporting, domestic trust departments and foreign trust departments of U.S. banks are required to report trust assets annually using FFIEC Form 001 (Annual Report of Trust Assets) and FFIEC Form 006 (Annual Report of International Fiduciary Activities). On the other hand, the fiduciary activities of foreign banking organizations operating in the United States currently are not reported on any FFIEC regulatory report.

Credit

Private-banking clients may request extensions of credit on either a secured or an unsecured basis. Loans backed by cash collateral or managed assets held by the private-banking function are quite common, especially in international private banking. Private-banking clients may pledge a wide range of their assets, including cash, mortgages, marketable securities, land, or buildings, to securitize their loans. Management should demonstrate an understanding of the purpose of the credit, the source of repayment, the loan tenor, and the collateral used in the financing. When lending to individuals with high net worths, whether on a secured or an unsecured basis, the creditworthiness determination is bolstered by a thorough and well-structured customer-due-diligence process. If that process is not thorough, collateral derived from illicit activities may be subject to government forfeiture.

Borrowing mechanisms are sometimes established to afford nonresident-alien customers the ability to keep financial assets in the United States and to use such assets (via collateralized borrowing arrangements) to provide operating capital for businesses they own and operate in their home countries. Such arrangements enable these customers to keep the existence of the

financial assets secret from their home-country authorities and others, while they continue to use the funds (via collateralized borrowings) to fund the businesses at home.

Private bankers need to maintain in the United States adequate CDD information on such nonresident-alien customers and their primary business interests. A well-documented CDD file may include information on the customer from “who’s who” and similar services, Internet research, foreign tax returns and financial statement, checks conducted by the Office of Foreign Assets Control (OFAC), and written and appropriately documented Call Reports prepared by the RM.

While these lending mechanisms may be used for legitimate reasons, management needs to determine whether the arrangements are being used primarily to obfuscate the beneficial ownership of collateral assets, making it difficult for the customer’s home-country government to identify who owns the assets. If so, management needs to further determine whether the practice varies from both the appropriate standards of international cooperation for transparency issues and with prudent banking practices, and if so, whether the institution is exposed to elevated legal risk.

Payable-Through Accounts

Another product that may be available in private-banking operations is payable-through accounts (PTAs). PTAs are transaction deposit accounts through which U.S. banking entities (“payable-through banks”) extend check-writing privileges to the customers of a foreign bank. The foreign bank (“master account holder”) opens a master checking account with the U.S. bank and uses this account to provide its customers with access to the U.S. banking system. The master account is divided into “subaccounts,” each in the name of one of the foreign bank’s customers. The foreign bank extends signature authority on its master account to its own customers, who may not be known to the U.S. bank. Consequently, the U.S. bank may have customers who have not been subject to the same account-opening requirements imposed on its U.S. account holders. These subaccount customers are able to write checks and make deposits at the U.S. banking entity. The number of subaccounts permitted under this arrangement may be virtually unlimited.

U.S. banking entities engage in PTAs primarily because they attract dollar deposits from the domestic market of their foreign correspondents without changing the primary bank-customer relationship; PTAs also provide substantial fee income. Generally, PTAs at U.S. banking entities have the following characteristics: they are carried on the U.S. banking entity’s books as a correspondent bank account, their transaction volume is high, checks passing through the account contain wording similar to “payable through XYZ bank,” and the signatures appearing on checks are not those of authorized officers of the foreign bank. See the expanded examination procedures for PTAs in the FFIEC’s *BSA/AML Examination Manual*.

Personal Trust and Estates

In trust and estate accounts, an institution offers management services for a client’s assets. When dealing with trusts under will, or “testamentary trusts,” the institution may receive an estate appointment (executor) and a trustee appointment if the will provided for the trust from the probate. These accounts are fully funded at origination with no opportunity for an outside party to add to the account, and all activities are subject to review by the probate or surrogates’ court. On the other hand, with living trusts, or “grantor trusts,” the customer (grantor) may continually add to and, in some instances, has control over the corpus of the account. Trusts and estates require experienced attorneys, money managers, and generally well-rounded professionals to set up and maintain the accounts. In certain cases, bankers may need to manage a customer’s closely held business or sole proprietorship. In the case of offshore trust facilities, recent changes in U.S. law have imposed additional obligations on those banks that function as trustees or corporate management for offshore trusts and PICs.

A critical element in offering personal trust and estate services is the fiduciary responsibility of the institutions to their customers. This responsibility requires that institutions always act in the best interest of the clients pursuant to the trust documentation, perhaps even to the detriment of the bank. In these accounts, the bank is the fiduciary and the trust officer serves as a representative of the institution. Fiduciaries are held to higher standards of conduct than other bankers. Proper administration of trusts

and estates includes strict controls over assets, prudent investment and management of assets, and meticulous recordkeeping. See the expanded examination procedures for trust and asset-management services in the FFIEC's *BSA/AML Examination Manual*.

Custody Services

Custodial services offered to private-banking customers include securities safekeeping, receipt and disbursement of dividends and interest, recordkeeping, and accounting. Custody relationships can be established in many ways, including by referrals from other departments in the bank or from outside investment advisers. The customer or a designated financial adviser retains full control of the investment management of the property subject to the custodianship. Sales and purchases of assets are made by instruction from the customer, and cash disbursements are prearranged or as instructed. Custody accounts involve no investment supervision and no discretion. However, the custodian may be responsible for certain losses if it fails to act properly according to the custody agreement. Therefore, procedures for proper administration should be established and reviewed.

An escrow account is a form of custody account in which the institution agrees to hold cash or securities as a middleman, or a third party. The customer, for example, an attorney or a travel agency, gives the institution funds to hold until the ultimate receiver of the funds "performs" in accordance with the written escrow agreement, at which time the institution releases the funds to the designated party.

Funds Transfer

Funds transfer, another service offered by private-banking functions, may involve the transfer of funds between third parties as part of bill-paying and investment services on the basis of customer instructions. The adequacy of controls over funds-transfer instructions that are initiated electronically or telephonically, such as by facsimile machine, telex, telegram, and telephone, is extremely important. Funds-transfer requests are quickly processed and, as required by law, funds-transfer personnel may have limited knowledge of the customers or the purpose of the transactions. Therefore, strong controls

and adequate supervision over this area are critical.

Hold Mail, No Mail, and Electronic-Mail Only

Hold-mail, no-mail, or electronic-mail-only accounts are often provided to private-banking customers who elect to have bank statements and other documents maintained at the institution rather than mailed to their residence. Agreements for hold-mail accounts should be in place, and the agreements should indicate that it was the customer's choice to have the statements retained at the bank and that the customer will pick up his or her mail at least annually. Variations of hold-mail services include delivery of mail to a prearranged location (such as another branch of the bank) by special courier or the bank's pouch system.

Bill-Paying Services

Bill-paying services are often provided to private-banking customers for a fee. If this service is provided, an agreement between the bank and the customer should exist. Typically, a customer may request that the bank debit a deposit account for credit card bills, utilities, rent, mortgage payments, or other monthly consumer charges. In addition, the increased use of the Internet has given rise to the "electronic-mail-only" account, whereby customers elect to have statements, notices, etc., sent to them only by e-mail.

FUNCTIONAL REVIEW

When discussing the functional aspects of a private-banking operation, *functional* refers to managerial processes and procedures, such as reporting lines, quality of supervision (including involvement of the board of directors), information flows, policies and procedures, risk-management policies and methodologies, segregation of duties, management information systems, operational controls (including BSA/AML monitoring), and audit coverage. The examiner should be able to draw sound conclusions about the quality and culture of management and stated private-banking policies after

reviewing the functional areas described below. Specifically, the institution's risk-identification process and risk appetite should be carefully defined and assessed. Additionally, the effectiveness of the overall control environment maintained by management should be evaluated by an internal or external audit. The effectiveness of the following functional areas is critical to any private-banking operation, regardless of its size or product offerings.

Supervision and Organization

As part of the examiner's appraisal of an organization, the quality of supervision of private-banking activities is evaluated. The appraisal of management covers the full range of functions and activities related to the operation of the private bank. The discharge of responsibilities by bank directors should be effected through an organizational plan that accommodates the volume and business services handled, local business practices and the bank's competition, and the growth and development of the institution's private-banking business. Organizational planning is the joint responsibility of senior bank and private-bank management, should be integrated with the long-range plan for the institution, and should be consistent with any enterprise-wide-risk-management program.

Both the directors and management have important roles in formulating policies and establishing programs for private-banking products, operations, internal controls, and audits. However, management alone must implement policies and programs within the organizational framework instituted by the board of directors.

Risk Management

Sound risk-management processes and strong internal controls are critical to safe and sound banking generally and to private-banking activities in particular. Management's role in ensuring the integrity of these processes has become increasingly important as new products and technologies are introduced. Similarly, the client-selection, documentation, approval, and account-monitoring processes should adhere to sound and well-identified practices.

The quality of risk-management practices and internal controls is given significant weight in

the evaluation of management and the overall condition of private-banking operations. A bank's failure to establish and maintain a risk-management framework that effectively identifies, measures, monitors, and controls the risks associated with products and services should be considered unsafe and unsound conduct. Furthermore, well-defined management practices should indicate the types of clients that the institution will and will not accept and should establish multiple and segregated levels of authorization for accepting new clients. Institutions that follow sound practices will be better positioned to design and deliver products and services that match their clients' legitimate needs, while reducing the likelihood that unsuitable clients might enter their client account base. Deficiencies noted in this area are weighted in context of the relative risk they pose to the institution and are appropriately reflected in the appraisal of management.

The private-banking function is exposed to a number of risks, including reputational, fiduciary, legal, credit, operational, and market. A brief description of some of the different types of risks follows:

- *Reputational risk* is the potential that negative publicity regarding an institution's business practices and clients, whether true or not, could cause a decline in the customer base, costly litigation, or revenue reductions.
- *Fiduciary risk* refers to the risk of loss due to the institution's failure to exercise loyalty; safeguard assets; and, for trusts, to use assets productively and according to the appropriate standard of care. This risk generally exists in an institution to the extent that it exercises discretion in managing assets on behalf of a customer.
- *Legal risk* arises from the potential of unenforceable contracts, client lawsuits, or adverse judgments to disrupt or otherwise negatively affect the operations or condition of a banking organization. One key dimension of legal risk is supervisory action that could result in costly fines or other punitive measures being levied against an institution for compliance breakdowns.
- *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
- *Operational risk* arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud,

or unforeseen catastrophes will result in unexpected losses.

Although effective management of all of the above risks is critical for an institution, certain aspects of reputational, legal, and fiduciary risks are often unique to a private-banking function. In this regard, the following customer-due-diligence policies and practices are essential in the management of reputational and legal risks in the private-banking functions. (In addition, sound fiduciary practices and conflicts-of-interest issues that a private-banking operation may face in acting as fiduciary are described in the subsection on fiduciary standards.)

Customer-Due-Diligence Policy and Procedures

Sound customer-due-diligence (CDD) policies and procedures are essential to minimize the risks inherent in private banking. The policies and procedures should clearly describe the target client base in terms such as “minimum investable net worth” and “types of products sought,” as well as specifically indicate the type of clientele the institution will or will not accept. Policies and procedures should be designed to ensure that effective due diligence is performed on all potential clients, that client files are bolstered with additional CDD information on an ongoing basis, and that activity in client accounts is monitored for transactions that are inconsistent with the client profile and may constitute unlawful activities, such as money laundering. The client’s identity, background, and the nature of his or her transactions should be documented and approved by the back office before opening an account or accepting client monies. Certain high-risk clients like foreign politicians or money exchange houses should have additional documentation to mitigate their higher risk.

Money laundering is associated with a broad range of illicit activities: the ultimate intention is to disguise the money’s true source—from the initial placement of illegally derived cash proceeds to the layers of financial transactions that disguise the audit trail—and make the funds appear legitimate. Under U.S. money-laundering statutes, a bank employee can be held personally liable if he or she is deemed to engage in “willful blindness.” This condition occurs when the employee fails to make reasonable inquiries

to satisfy suspicions about client account activities.

Since the key element of an effective CDD policy is a comprehensive knowledge of the client, the bank’s policies and procedures should clearly reflect the controls needed to ensure the policy is fully implemented. CDD policies should clearly delineate the accountability and authority for opening accounts and for determining if effective CDD practices have been performed on each client. In addition, policies should delineate documentation standards and accountability for gathering client information from referrals among departments or areas within the institution as well as from accounts brought to the institution by new RMs.

In carrying out prudent CDD practices on potential private-banking customers, management should document efforts to obtain and corroborate critical background information. Private-banking employees abroad often have local contacts who can assist in corroborating information received from the customer. The information listed below should be corroborated by a reliable, independent source, when possible:

- The customer’s current address and telephone number for his or her primary residence, which should be corroborated at regular intervals, can be verified through a variety of methods, such as—
 - visiting the residence, office, factory, or farm (with the RM recording the results of the visit or conversations in a memorandum);
 - checking the information against the telephone directory; the client’s residence, as indicated on his or her national ID card; a mortgage or bank statement or utility or property tax bill; or the electoral or tax rolls;
 - obtaining a reference from the client’s government or known employer or from another bank;
 - checking with a credit bureau or professional corroboration organization; or
 - any other method verified by the RM.
- Sufficient business information about the customer should be gathered so that the RM understands the profile of the customer’s commercial transactions. This information should include a description of the nature of the customer’s business operations or means of generating income, primary trade or business

areas, and major clients and their geographic locations, as well as the primary business address and telephone number. These items can be obtained through a combination of any of the following sources:

- a visit to the office, factory, or farm
 - a reliable third party who has a business relationship with the customer
 - financial statements
 - Dun and Bradstreet reports
 - newspaper or magazine articles
 - LexisNexis reports on the customer or customer's business
 - "Who's Who" reports from the home country
 - private investigations
- Although it is often not possible to get proof of a client's wealth, an RM can use his or her good judgment to derive a reasonable estimate of the individual's net worth.
 - As part of the ongoing CDD process, the RM should document in memos or "call reports" the substance of discussions that take place during frequent visits with the client. Additional information about a client's wealth, business, or other interests provides insight into potential marketing opportunities for the RM and the bank, and updates and strengthens the CDD profile.

As a rule, most private banks make it a policy not to accept walk-in clients. If an exception is made, procedures for the necessary documentation and approvals supporting the exception should be in place. Similarly, other exceptions to policy and procedures should readily identify the specific exception and the required due-diligence and approval process for overriding existing procedures.

In most instances, all CDD information and documentation should be maintained and available for examination and inspection at the location where the account is located or where the financial services are rendered. If the bank maintains centralized customer files in locations other than where the account is located or the financial services are rendered, complete customer information, identification, and documentation must be made available at the location where the account is located or where the financial services are rendered within 48 hours of a Federal Reserve examiner's request. Off-site storage of CDD information will be allowed only if the bank has adopted, as part of its customer-due-diligence program, specific proce-

dures designed to ensure that (1) the accounts are subject to ongoing Office of Foreign Assets Control screening that is equivalent to the screening afforded other accounts, (2) the accounts are subject to the same degree of review for suspicious activity, and (3) the bank demonstrates that the appropriate review of the information and documentation is being performed by personnel at the offshore location.

CDD procedures should be no different when the institution deals with a financial adviser or other type of intermediary acting on behalf of a client. To perform its CDD responsibilities when dealing with a financial adviser, the institution should identify the beneficial owner of the account (usually the intermediary's client, but in rare cases, it is the intermediary itself) and perform its CDD analysis with respect to that beneficial owner. The imposition of an intermediary between the institution and counterparty should not lessen the institution's CDD responsibilities.

The purpose of all private-banking relationships should also be readily identified. Incoming customer funds may be used for various purposes, such as establishing deposit accounts, funding investments, or establishing trusts. The bank's CDD procedures should allow for the collection of sufficient information to develop a transaction or client profile for each customer, which will be used in analyzing client transactions. Internal systems should be developed for monitoring and identifying transactions that may be inconsistent with the transaction or client profile for a customer and which may thus constitute suspicious activity.

Suspicious Activity Reports by Depository Institutions. The proper and timely filing of Suspicious Activity Reports by Depository Institutions (SAR-DI) forms is an important component of a bank's CDD program. Since 1996, the federal financial institution supervisory agencies and the Department of the Treasury's Financial Crimes Enforcement Network (FinCEN) have required banking organizations to report known or suspected violations of law as well as suspicious transactions on a suspicious activity report or SAR-DI form. See the Board's SAR-DI form regulation (Regulation H, section 208.62 (12 CFR 208.62)).³ Law enforcement agencies use

3. The Board's SAR-DI form rules apply to state member banks, bank holding companies and their nonbank subsidiaries that do not report on a different SAR form (for example,

the information reported on the form to initiate investigations, and Federal Reserve staff use the SAR-DI form information in their examination and oversight of supervised institutions.

A member bank is required to file a SAR-DI form with the appropriate federal law enforcement agencies and the Department of the Treasury. A SAR-DI form must be prepared in accordance with the form's instructions. (See SR-07-2 and the attached June 2007 SAR-DI form and instructions.) The completed SAR-DI form is to be sent to FinCEN when an institution detects—

- insider abuse involving any amount,
- violations aggregating \$5,000 or more in which a suspect can be identified,
- violations aggregating \$25,000 or more regardless of a potential suspect, or
- transactions aggregating \$5,000 or more that involve potential money laundering or violations of the Bank Secrecy Act.

When a SAR-DI form is filed, the management of a member bank must promptly notify its board of directors or a committee thereof.

A SAR-DI form must be filed within 30 calendar days after the date of initial detection of the facts that may constitute a basis for filing a SAR-DI form. If no suspect was identified on the date of detection of the incident requiring the filing, a member bank may delay filing a SAR-DI form for an additional 30 calendar days in order to identify the suspect. Reporting may not be delayed more than 60 calendar days after the date of initial detection of a reportable transaction. In situations involving violations requiring immediate attention, such as when a reportable violation is ongoing, the financial institution is required to immediately notify an appropriate law enforcement authority in addition to its timely filing of a SAR-DI form.

A bank's internal systems for capturing suspicious activities should provide essential information about the nature and volume of activities passing through customer accounts. Any information suggesting that suspicious activity has occurred should be pursued, and, if an explanation is not forthcoming, the matter should be reported to the bank's management. Examiners should ensure that the bank's approach to

SAR-DI forms is proactive and that well-established procedures cover the SAR-DI form process. Accountability should exist within the organization for the analysis and follow-up of internally identified suspicious activity; this analysis should conclude with a decision on the appropriateness of filing a SAR-DI form. See SR-07-2 and the attached SAR-DI form and instructions. See also the core procedures concerning suspicious-activity-reporting requirements in the FFIEC *BSA/AML Examination Manual*.

Credit-Underwriting Standards

The underwriting standards for private-banking loans to high net worth individuals should be consistent with prudent lending standards. The same credit policies and procedures that are applicable to any other type of lending arrangement should extend to these loans. At a minimum, sound policies and procedures should address the following: all approved credit products and services offered by the institution, lending limits, acceptable forms of collateral, geographic and other limitations, conditions under which credit is granted, repayment terms, maximum tenor, loan authority, collections and charge-offs, and prohibition against capitalization of interest.

An extension of credit based solely on collateral, even if the collateral is cash, does not ensure repayment. While the collateral enhances the bank's position, it should not substitute for regular credit analyses and prudent lending practices. If collateral is derived from illegal activities, it is subject to forfeiture through the seizure of assets by a government agency. The bank should perform its due diligence by adequately and reasonably ascertaining and documenting that the funds of its private-banking customers were derived from legitimate means. Banks should also verify that the use of the loan proceeds is for legitimate purposes.

In addition, bank policies should explicitly describe the terms under which "margin loans," loans collateralized by securities, are made and should ensure that they conform to applicable regulations. Management should review and approve daily MIS reports. The risk of market deterioration in the value of the underlying collateral may subject the lender to loss if the collateral must be liquidated to repay the loan. In the event of a "margin call," any shortage

broker-dealers), Edge and agreement corporations, and the U.S. branches and agencies of foreign banks supervised by the Federal Reserve.

should be paid for promptly by the customer from other sources pursuant to the terms of the margin agreement.

In addition, policies should address the acceptance of collateral held at another location, such as an affiliated entity, but pledged to the private-banking function. Under these circumstances, management of the private-banking function should, at a minimum, receive frequent reports detailing the collateral type and current valuation. In addition, management of the private-banking function should be informed of any changes or substitutions in collateral.

Fiduciary Standards

Fiduciary risk is managed through the maintenance of an effective and accountable committee structure; retention of technically proficient staff; and development of effective policies, procedures, and controls. In managing its fiduciary risk, the bank must ensure that it carries out the following fiduciary duties:

- *Duty of loyalty.* Trustees are obligated to make all decisions based exclusively on the best interests of trust customers. Except as permitted by law, trustees cannot place themselves in a position in which their interests might conflict with those of the trust beneficiaries.
- *Avoidance of conflicts of interest.* Conflicts of interest arise in any transaction in which the fiduciary simultaneously represents the interests of multiple parties (including its own interests) that may be adverse to one another. Institutions should have detailed policies and procedures regarding potential conflicts of interest. All potential conflicts identified should be brought to the attention of management and the trust committee, with appropriate action taken. Conflicts of interest may arise throughout an institution. Care should be taken by fiduciary business lines, in particular, to manage conflicts of interest between fiduciary business lines and other business lines (including other fiduciary business lines). Consequently, management throughout the institution should receive training in these matters. For more information on the supervision of fiduciary activities, see section 4200.0 in this manual and section 3120.0 of the *Bank Holding Company Supervision Manual*.
- *Duty to prudently manage discretionary trust*

and agency assets. Since 1994, the majority of states have adopted laws concerning the prudent investor rule (PIR) with respect to the investment of funds in a fiduciary capacity. PIR is a standard of review that imposes an obligation to prudently manage the portfolio as a whole, focusing on the process of portfolio management, rather than on the outcome of individual investment decisions. Although this rule only governs trusts, the standard is traditionally applied to all accounts for which the institution is managing funds.

Operational Controls

To minimize any operational risks associated with private-banking activities, management is responsible for establishing an effective internal control infrastructure and reliable management information systems. Critical operational controls over any private-banking activity include the establishment of written policies and procedures, segregation of duties, and comprehensive management reporting. Throughout this section, specific guidelines and examination procedures for assessing internal controls over different private-banking activities are provided. Listed below are some of those guidelines that cover specific private-banking services.

Segregation of Duties

Banking organizations should have guidelines on the segregation of employees' duties in order to prevent the unauthorized waiver of documentation requirements, poorly documented referrals, and overlooked suspicious activities. Independent oversight by the back office helps to ensure compliance with account-opening procedures and CDD documentation. Control-conscious institutions may use independent units, such as compliance, risk management, or senior management to fill this function in lieu of the back office. The audit and compliance functions of the private-banking entity should be similarly independent so that they can operate autonomously from line management.

Inactive and Dormant Accounts

Management should be aware that banking laws

in most states prohibit banks from offering services that allow deposit accounts to be inactive for prolonged periods of time (generally, 12 or more months with no externally generated account-balance activity). These regulations are based on the presumption that inactive and dormant accounts may be subject to manipulation and abuse by insiders. Policies and procedures should delineate when inactivity occurs and when inactive accounts should be converted to dormant status. Effective controls over dormant accounts should include a specified time between the last customer-originated activity and its classification as dormant, the segregation of signature cards for dormant accounts, dual control of records, and the blocking of the account so that entries cannot be posted to the account without review by more than one member of senior management.

Pass-Through Accounts and Omnibus Accounts

Pass-through accounts (PTAs) extend checking-account privileges to the customers of a foreign bank; several risks are involved in providing these accounts. In particular, if the U.S. banking entity does not exercise the same due diligence and customer vetting for PTAs as it does for domestic account relationships, the use of PTAs may facilitate unsafe and unsound banking practices or illegal activities, including money laundering. Additionally, if accounts at U.S. banking entities are used for illegal purposes, the entities could be exposed to reputational risk and risk of financial loss as a result of asset seizures and forfeitures brought by law enforcement authorities. As stated in SR-95-10, it is recommended that U.S. banking entities terminate a payable-through arrangement with a foreign bank in situations in which (1) adequate information about the ultimate users of PTAs cannot be obtained, (2) the foreign bank cannot be relied on to identify and monitor the transactions of its own customers, or (3) the U.S. banking entity is unable to ensure that its payable-through accounts are not being used for money laundering or other illicit purposes.

Omnibus, or general clearing, accounts may also exist in the private-banking system. They may be used to accommodate client funds before an account opening to expedite a new relationship, or they may fund products such as mutual funds in which client deposit accounts

may not be required. However, these accounts could circumvent an audit trail of client transactions. Examiners should carefully review a bank's use of such accounts and the adequacy of its controls on their appropriate use. Generally, client monies should flow through client deposit accounts, which should function as the sole conduit and paper trail for client transactions.

Hold-Mail, No Mail, and E-mail-Only Controls

Controls over hold-mail, no-mail, and e-mail-only accounts are critical because the clients have relinquished their ability to detect unauthorized transactions in their accounts in a timely manner. Accounts with high volume or significant losses warrant further inquiry. Hold-mail, no-mail, and e-mail-only account operations should ensure that client accounts are subject to dual control and are reviewed by an independent party.

Funds Transfer—Tracking Transaction Flows

One way that institutions can improve their customer knowledge is by tracking the transaction flows into and out of customer accounts and payable-through subaccounts. Tracking should include funds-transfer activities. Policies and procedures to detect unusual or suspicious activities should identify the types of activities that would prompt staff to investigate the customer's activities and should provide guidance on the appropriate action required for suspicious activity. The following is a checklist to guide bank personnel in identifying some potential abuses:

- indications of frequent overrides of established approval authority or other internal controls
- intentional circumvention of approval authority by splitting transactions
- wire transfers to and from known secrecy jurisdictions
- frequent or large wire transfers for persons who have no account relationship with the bank, or funds being transferred into and out of an omnibus or general clearing account instead of the client's deposit account

- wire transfers involving cash amounts in excess of \$10,000
- inadequate control of password access
- customer complaints or frequent error conditions

Custody—Detection of Free Riding

Custody departments should monitor account activity to detect instances of *free-riding*, the practice of offering the purchase of securities without sufficient capital and then using the proceeds of the sale of the same securities to cover the initial purchase. Free-riding poses significant risk to the institution and typically occurs without the bank's prior knowledge. Free-riding also violates margin rules (Regulations T, U, and X) governing the extension of credit in connection with securities transactions. (See SR-93-13.)

Management Information Systems

Management information systems (MIS) should accumulate, interpret, and communicate information on (1) the private-banking assets under management, (2) profitability, (3) business and transaction activities, and (4) inherent risks. The form and content of MIS for private-banking activities will be a function of the size and complexity of the private-banking organization. Accurate, informative, and timely reports that perform the following functions may be prepared and reviewed by RMs and senior management:

- aggregate the assets under management according to customer, product or service, geographic area, and business unit
- attribute revenue according to customer and product type
- identify customer accounts that are related to or affiliated with one another through common ownership or common control
- identify and aggregate customer accounts by source of referral
- identify beneficial ownership of trust, PIC, and similar accounts

To monitor and report transaction activity and to detect suspicious transactions, management reports may be developed to—

- monitor a specific transaction criterion, such as a minimum dollar amount or volume or activity level;
- monitor a certain type of transaction, such as one with a particular pattern;
- monitor individual customer accounts for variations from established transaction and activity profiles based on what is usual or expected for that customer; and
- monitor specific transactions for BSA and SAR-DI form compliance.

In addition, reports prepared for private-banking customers should be accurate, timely, and informative. Regular reports and statements prepared for private-banking customers should adequately and accurately describe the application of their funds and should detail all transactions and activity that pertain to the customers' accounts.

Furthermore, MIS and technology play a role in building new and more direct channels of information between the institution and its private-banking customers. Active and sophisticated customers are increasing their demand for data relevant to their investment needs, which is fostering the creation of online information services. Online information can satisfy customers' desire for convenience, real-time access to information, and a seamless delivery of information.

Audit

An effective audit function is vital to ensuring the strength of a private bank's internal controls. As a matter of practice, internal and external auditors should be independently verifying and confirming that the framework of internal controls is being maintained and operated in a manner that adequately addresses the risks associated with the activities of the organization. Critical elements of an effective internal audit function are the strong qualifications and expertise of the internal audit staff and a sound risk-assessment process for determining the scope and frequency of specific audits. The audit process should be risk-focused and should ultimately determine the risk rating of business lines and client CDD procedures. Compliance with CDD policies and procedures and the detailed testing of files for CDD documentation are also key elements of the audit function.

Finally, examiners should review and evaluate management's responsiveness to criticisms by the audit function.

Compliance

The responsibility for ensuring effective compliance with relevant laws and regulations may vary among different forms of institutions, depending on their size, complexity, and availability of resources. Some institutions may have a distinct compliance department with the centralized role of ensuring compliance institution-wide, including private-banking activities. This arrangement is strongly preferable to a situation in which an institution delegates compliance to specific functions, which may result in the management of private-banking operations being responsible for its own internal review. Compliance has a critical role in monitoring private-banking activities; the function should be independent of line management. In addition to ensuring compliance with various laws and regulations such as the Bank Secrecy Act and those promulgated by the Office of Foreign Assets Control, compliance may perform its own internal investigations and due diligence on employees, customers, and third parties with whom the bank has contracted in a consulting or referral capacity and whose behavior, activities, and transactions appear to be unusual or suspicious. Institutions may also find it beneficial for compliance to review and authorize account-opening documentation and CDD adequacy for new accounts. The role of compliance is a control function, but it should not be a substitute for regular and frequent internal audit coverage of the private-banking function. Following is a description of certain regulations that may be monitored by the compliance function.

Office of Foreign Assets Control

The Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals. Sanctions are imposed against targeted foreign countries, terrorists, international narcotics traffickers, and those engaged in activities related to the proliferation of weapons of mass destruction. OFAC acts under presidential war-

time and national emergency powers, as well as under authority granted by specific legislation, to impose controls on transactions and freeze foreign assets under U.S. jurisdiction. Many of the sanctions are based on United Nations and other international mandates, are multilateral in scope, and involve close cooperation with allied governments. Under the International Emergency Economic Powers Act, the President can impose sanctions, such as trade embargoes, the freezing of assets, and import surcharges, on certain foreign countries and the "specially designated nationals" of those countries.

A "specially designated national" is a person or entity who acts on behalf of one of the countries under economic sanction by the United States. Dealing with such nationals is prohibited. Moreover, their assets or accounts in the United States are frozen. In certain cases, the Treasury Department can issue a license to a designated national. This license can then be presented by the customer to the institution, allowing the institution to debit his or her account. The license can be either general or specific.

OFAC screening may be difficult when transactions are conducted through PICs, token names, numbered accounts, or other vehicles that shield true identities. Management must ensure that accounts maintained in a name other than that of the beneficial owner are subject to the same level of filtering for OFAC specially designated nationals and blocked foreign countries as other accounts. That is, the OFAC screening process must include the account's beneficial ownership as well as the official account name.

Any violation of regulations implementing designated national sanctions subjects the violator to criminal prosecution, including up to 12 years in prison and \$1 million in corporate fines and \$250,000 in individual fines, per incident. Any funds frozen because of OFAC orders should be placed in a blocked account. Release of those funds cannot occur without a license from the Treasury Department.

Bank Secrecy Act

Guidelines for compliance with the Bank Secrecy Act (BSA) can be found in the FFIEC *BSA/AML Examination Manual*. See also SR-07-2 and its attachments, SR-04-13, SR-01-29

(the customer identification program requirements), and the question-and-answer format interpretations (SR-05-9) of the U.S. Department of Treasury's regulation (31 CFR 103) for banking organizations, which is based on section 326 of the Patriot Act. In addition, the procedures for conducting BSA examinations of foreign offices of U.S. banks are detailed in the FFIEC Bank Secrecy Act/Anti-Money Laundering Examination Manual. The SAR-DI form filing requirements for nonbank subsidiaries of bank holding companies and state member banks are also set forth in SR-02-24.

PREPARATION FOR EXAMINATION

The following subsections provide examiners with guidance on preparing for the on-site examination of private-banking operations, including determination of the examination scope and drafting of the first-day-letter questionnaire that is provided to the institution.

Preexamination Review

To prepare the examiners for their assignments and to determine the appropriate staffing and scope of the examination, the following guidelines should be followed during the preexamination planning process:

- Review the prior report of examination and workpapers for the exam scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior examination. The prior examination report and examination plan should also provide insight to key contacts at the institution and to the time frame of the prior private-banking review.
- Obtain relevant correspondence sent since the prior examination, such as management's response to the report of examination, any applications submitted to the Federal Reserve, and any supervisory action.
- Research press releases and published news stories about the institution and its private-banking activities.
- Review internal and external audit reports and any internal risk assessments performed by

the institution on its private-banking activities. Such reports should include an assessment of the internal controls and risk profile of the private-banking function.

- Contact the institution's management to ascertain what changes have occurred since the last exam or are planned in the near future. For example, examiners should determine if there have been changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered. If there is no mention of private banking in the prior examination report, management should be asked at this time if they have commenced or plan to commence any private-banking activities.
- Follow the core examination procedures in the FFIEC *BSA/AML Examination Manual* in order to establish the base scope for the examination of private-banking activities. Review and follow the expanded procedures for private banking and any other expanded procedures that are deemed necessary.

Examination Staffing and Scope

Once the exam scope has been established and before beginning the new examination, the examiner-in-charge and key administrators of the examination team should meet to discuss the private-banking examination scope, the assignments of the functional areas of private banking, and the supplemental reviews of specific private-banking products and services. If the bank's business lines and services overlap and if its customer base and personnel are shared throughout the organization, examiners may be forced to go beyond a rudimentary review of private-banking operations. They will probably need to focus on the policies, practices, and risks within the different divisions of a particular institution and throughout the institution's global network of affiliated entities.

Reflection of Organizational Structure

The review of private-banking activities should be conducted on the basis of the financial institution's organizational structure. These structures may vary considerably, depending on the size and sophistication of the institution, its country of origin and the other geographic

markets in which it competes, and the objectives and strategies of its management and board of directors. To the extent possible, examiners should understand the level of consolidated private-banking activities an institution conducts in the United States and abroad. This broad view is needed to maintain the “big picture” impact of private banking for a particular institution.

Risk-Focused Approach

Examiners reviewing the private-banking operations should implement the risk-focused examination approach. The exam scope and degree of testing of private-banking practices should reflect the degree of risk assumed, prior exam findings on the implementation of policies and procedures, the effectiveness of controls, and an assessment of the adequacy of the internal audit and compliance functions. If initial inquiries into the institution’s internal audit and other assessment practices raise doubts about the internal system’s effectiveness, expanded analysis and review are required—and examiners should perform more transaction testing. Examiners will usually need to follow the core examination procedures in the FFIEC *BSA/AML Examination Manual* as well as the expanded procedures for private banking. Other expanded procedures should be followed if circumstances dictate.

First-Day Letter

As part of the examination preparation, examiners should customize the first-day-letter (FDL) questionnaire to reflect the structure and type of private-banking activities of the institution and the scope of the exam. The following is a list of requests regarding private banking that examiners should consider including in the FDL. Responses to these items should be reviewed in conjunction with responses to the BSA, fiduciary, audit, and internal control inquiries:

- organizational chart for the private bank on both a functional and legal-entity basis
- business or strategic plan
- income and expense statements for the prior fiscal year and current year to date, with

projections for the remainder of the current and the next fiscal year, and income by product division and marketing region

- balance-sheet and total assets under management (list the most active and profitable accounts by type, customer domicile, and responsible account officer)
- most recent audits for private-banking activities
- copies of audit committee minutes
- copy of the CDD and SAR-DI form policies and procedures
- list of all new business initiatives introduced last year and this year, relevant new-product-approval documentation that addresses the evaluation of the unique characteristics and risk associated with the new activity or product, and an assessment of the risk-management oversight and control infrastructures in place to manage the risks
- list of all accounts in which an intermediary is acting on behalf of clients of the private bank, for example, as financial advisers or money managers
- explanation of the methodology for following up on outstanding account documentation and a sample report
- description of the method for aggregating client holdings and activities across business units throughout the organization
- explanation of how related accounts, such as common control and family link, are identified
- name of a contact person for information on compensation, training, and recruiting programs for relationship managers
- list of all personal investment company accounts
- list of reports that senior management receives regularly on private-banking activities
- description and sample of the management information reports that monitor account activity
- description of how senior management monitors compliance with global policies for worldwide operations, particularly for offices operating in secrecy jurisdictions
- appropriate additional items from the core and expanded procedures for private banking, as set forth in the FFIEC *BSA/AML Examination Manual*, as well as any other items from the expanded procedures that are needed to gauge the adequacy of the BSA/AML program for private-banking activities.

Private-Banking Activities

Examination Objectives

Effective date May 2006

Section 4128.2

1. To determine if the policies, practices, procedures, and internal controls regarding private-banking activities are adequate for the risks involved.
2. To determine if the bank's officers and employees are operating in conformance with established guidelines for conducting private-banking activities.
3. To assess the financial condition and income-generation results of the private-banking activities.
4. To determine the scope and adequacy of the audit function for private-banking activities.
5. To determine compliance with applicable laws and regulations for private banking.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations are found.

Private-Banking Activities

Examination Procedures

Effective date May 2007

Section 4128.3

As appropriate, the examiner-in-charge should supplement the following procedures with the examination procedures for private banking set forth in the FFIEC's *BSA/AML Examination Manual*. See that manual's core examination procedures for the BSA/AML compliance program and the expanded examination procedures for private banking.

PRIVATE-BANKING PREEXAMINATION PROCEDURES

1. As the examiner-in-charge, conduct a meeting with the lead members of the private-banking examination team and discuss—
 - a. the private-banking examination scope (The examination may need to extend beyond a rudimentary review of private-banking operations if the bank's business lines and services overlap and if its customer base and personnel are shared throughout the organization. Examiners will probably need to focus on the policies, practices, and risks within the different divisions of the bank and, if applicable, throughout the bank's domestic or foreign-affiliated entities.);
 - b. examiner assignments for the functional areas of private banking; and
 - c. the supplemental reviews of specific private-banking products and services.
2. Review the prior report of examination and the previous examination's workpapers; description of the examination scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior examination. The prior examination report and examination plan should also provide information and insight on key contacts at the bank and on the time frame of the prior private-banking review.
3. Review relevant correspondence exchanged since the prior examination, such as management's response to the report of examination, any applications submitted to the Federal Reserve, and any supervisory actions.
4. Research press releases and published news stories about the bank and its private-banking activities.

5. Review internal and external audit reports and any internal risk assessments performed by the bank's internal or external auditors on its private-banking activities. Review information on any assessments of the internal controls and risk profile of the private-banking function.
6. Contact management at the bank to ascertain what changes in private-banking services have occurred since the last examination or if there are any planned in the near future.
 - a. Determine if the previous examination or examination report(s) mention private banking; if not, ask management if they have commenced or plan to commence any private-banking activities within any part of the bank's organization.
 - b. Determine if there have been any changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered.
 - c. During the entire examination of private-banking activities, be alert to the totality of the client relationship, product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

FULL-EXAMINATION PHASE

1. After reviewing the private-banking functional areas, draw sound conclusions about the quality and culture of management and stated private-banking policies.
2. Evaluate the adequacy of risk-management policies and practices governing private-banking activities.
3. Assess the organization of the private-banking function and evaluate the quality of management's supervision of private-banking activities. An appraisal of management covers the—
 - a. full range of functions (i.e., supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance) and activities related to

- the operation of the private-banking activities and
- b. discharge of responsibilities by the bank's directors through a long-range organizational plan that accommodates the volume and business services handled, local business practices and the bank's competition, and the growth and development of the bank's private-banking business.
4. Determine if management has effective procedures for conducting ongoing reviews of client-account activity to detect, and protect the client from, any unauthorized activity and any account activity that is inconsistent with the client's profile (for example, frequent or sizable unexplained transfers flowing through the account).
 5. Determine if the bank has initiated private-banking account-opening procedures and documentation requirements that must be satisfied before an account can be opened. Determine if the bank maintains internal controls over these procedures and requirements.
 6. Determine if the bank requires its subsidiary entities and affiliates to maintain and adhere to well-structured customer-due-diligence (CCD) procedures.
 7. Determine if the bank has proper controls and procedures to ensure its proper administration of trust and estates, including strict controls over assets, prudent investment and management of assets, and meticulous recordkeeping. Review previous trust examination reports and consult with the designated Federal Reserve System trust examiners.
 8. Ascertain whether the bank adequately supervises its custody services. The bank should ensure that it, and its nonbank entities, have established and currently maintain procedures for the proper administration of custody services, including the regular review of the services on a preset schedule.
 9. Determine whether the bank's nonbank subsidiaries and affiliates are required to, and actually maintain, strong controls and supervision over funds transfers.
 10. Ascertain if the bank's management and staff are required to perform due diligence, that is, to verify and document that the funds of its private-banking customers were derived through legitimate means, and when extending credit, to verify that the use of loan proceeds was legitimate.
 11. Review the bank's use of deposit accounts.
 - a. Assess the adequacy of the bank's controls and whether they are appropriately used.
 - b. Determine if client monies flow through client deposit accounts and whether the accounts function as the sole conduit and paper trail for client transactions.
 12. Determine and ensure that the bank's approach to Suspicious Activity Reports by Depository Institutions (SAR-DI) forms is proactive and that it has well-established procedures covering the SAR-DI form process. Establish whether there is accountability within the organization for the analysis and follow-up of internally identified suspicious activity (this analysis includes a sound decision on whether the bank needs to file, or is required by regulation to file, a SAR-DI) form.

INTRODUCTION

The Securities Act of 1933 requires that adequate and reliable information be made available about securities originally offered for sale to the public. The act requires registration of any sale with the Securities and Exchange Commission (SEC) unless it is specifically exempted. Section 4(2) of the act exempts “transactions by an issuer not involving any public offering.” That exemption created a type of business in the securities industry known as “private placements.”

Securities placed privately have certain advantages and disadvantages for both investor and issuer. Through negotiation, both parties may tailor the offering to meet their needs. The issuer saves securities registration costs and obtains alternative financing. The investor makes an investment for a specified length of time at a stated rate of return. Both investor and issuer complete the transaction without being subject to regulatory and public scrutiny.

The major disadvantage of private placements to the investor is the general lack of a secondary market. Thus, the investor may be unable to liquidate the holding until maturity. Additionally, the investor must rely on her or his own expertise when deciding on a purchase. Unlike registered securities, private placements are not reviewed by the SEC. A disadvantage to the issuer is the limitation on the amount of capital that may be raised since the number of investors is usually small. Moreover, advisory fees may be high relative to the size of the issue.

The matching of issuers with investors is usually done by an individual or firm acting as either an agent or an advisor. In the agent relationship, the firm has authority to commit the issuer. An advisor has no such power. Regardless of whether the firm is agent or advisor, it must act prudently and disclose all pertinent information to the investor. Furthermore, the firm must avoid possible conflicts of interest. Agents, usually investment bankers, participate in negotiations between the issuer and investor, and their fee is dependent on their involvement. Agreements between the firm and all other parties should specifically state whom the firm represents as agent.

In 1974, the SEC classified what constitutes an offering exempted from its registration requirements through the issuance of Rule 146.

An offering may be a private placement, under that rule, if the following minimum criteria are met:

- The securities are purchased by no more than 35 persons. A person purchasing at least \$150,000 of an offering need not be counted in the number of purchasers.
- There is no general advertising and no oral or written solicitation of persons other than eligible offerees.
- The securities are offered and sold only to those persons who the issuer believes are (1) sufficiently experienced to evaluate the merits and risks of the investment or (2) able to bear the risk of the investment. Before the sale, purchasers should have the services of an experienced representative.
- Each offeree either has access to or is furnished with the type of information that would be supplied in a registration statement.
- The issuer takes certain specified steps to ensure that the securities are not resold by the purchasers, except according to the rules governing resales.

When all requirements of Rule 146 are met, an offering may still be subject to registration if it is part of a plan to evade SEC registration provisions. The restrictions placed on commercial banks for the private placement of commercial paper are discussed in “Bank Dealer Activities,” section 2030.

PRIVATE-PLACEMENT ACTIVITIES BY BANKS

A commercial bank’s board of directors assumes additional responsibilities when private-placement services are offered. Private-placement activities, like any other banking function, should be subject to adequate safeguards and policy considerations. When drafting a policy, the board of directors should ensure that self-dealing practices or conflict-of-interest charges cannot develop. Procedures should be developed to monitor private-placement activity whenever such services are provided by the bank or a subsidiary. Moreover, procedures should be in effect to detect any transactions that could have an adverse effect on the bank’s other functions, such as loan or trust department activities.

A bank acting as advisor or agent assumes the risk of a potential conflict-of-interest charge whenever the proceeds from the placement are used to reduce a criticized loan at the bank. Furthermore, the bank must exercise due diligence to disclose relevant information, especially if the issuer is borrowing from the bank and is experiencing financial difficulty. Although the bank may not commit funds in a private-placement transaction, the potential for financial loss or damage to its reputation does exist if

the bank does not prudently deal with all parties to the transaction by disclosing all relevant facts.

The examiner should evaluate the bank's involvement and expertise in private-placement activities by reviewing policies, practices, and procedures. The examiner should also check for compliance with applicable laws and regulations and determine if any significant loss exposure or risk could result from the bank's involvement in private placement.

Private Placements

Examination Objectives

Effective date May 1996

Section 4130.2

1. To determine if policies, practices, procedures, and internal controls for private placements are adequate and prudent.
2. To determine if bank officers and employees are operating in conformance with established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To evaluate the overall effectiveness and quality of bank management in advising and completing private placements.
5. To initiate corrective action when policies, practices, procedures, or internal controls are deficient.

Private Placements Examination Procedures

Effective date March 1984

Section 4130.3

1. If selected for implementation, complete or update the Private Placements section of the Internal Control Questionnaire.
2. Based upon the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors and determine if corrections have been accomplished.
4. Request the following information from appropriate personnel:
 - a. A list of all private placements advised by the bank since the last examination to include:
 - Name of issuer.
 - Name of investor(s), including banks.
 - Fee and how it was determined.
 - Amount, rate, maturity of issue.
 - b. A list of any funds managed by the bank or its trust department, subsidiaries or affiliates that have been used to purchase private placements advised by the bank or an affiliate.
 - c. A letter from bank counsel regarding legality of the bank's involvement in private placement activities.
 - d. A list of the person(s) performing private placement advisory services and their previous experience.
 - e. A list of investors that the bank normally deals with in placing private offerings and their stated investment requirements.
 - f. A copy of the bank's standard form agreements used in private placement transactions.
 - g. A list of any borrowers whose loans were partially or fully repaid from the sale of private placements advised by the bank since the last examination.
- h. A list of participations purchased or sold in loans used to fund private placements advised by the bank.
5. Review pertinent information received in performing step 4 and compare it to the list of criticized assets from the previous examination.
6. Forward list of placements to the examiner assigned loan portfolio management and request that he or she determine if any loans were made to fund the investment in the private placement.
7. Review opinions of legal counsel regarding private placements and determine if there are any material deficiencies.
8. Determine if former banking relationships exist for both issuer and investor and determine if fees charged for loans or paid on deposits are within normal bank policy.
9. Review files related to a representative sample of all placement transactions and determine if the bank evaluates both the issuer and investor in a private placement transaction, including the suitability of the investment to the stated investment requirements of the investor.
10. Confer with examiner assigned "Duties and Responsibilities of Directors" and determine if potential conflicts of interest exist between bank-advised placements and interests of directors and principal officers.
11. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:
 - a. Deficiencies in policies, practices and internal controls.
 - b. Any hazardous or potentially hazardous placement activities.
 - c. Recommended corrective action.
12. Update the workpapers with any information that will facilitate future examinations.

Private Placements

Internal Control Questionnaire

Effective date March 1984

Section 4130.4

Review the bank's internal controls, policies, practices and procedures for private placement activities. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

POLICIES

1. Does the bank, bank subsidiary(s) or affiliate(s) provide private placement advisory services?
2. Has the board of directors adopted written policies for private placement activities that:
 - a. Define objectives?
 - b. Provide guidelines for fee determinations based on:
 - Size of transaction?
 - Anticipated degree of difficulty or time involved?
 - Payment of negotiated fees at various stages of the transaction?and not solely on:
 - Deposits on balances or the profitability of the client's other banking relationships?
 - Successful completion of the transaction?
 - c. Require that bank officers act in an advisory rather than agent capacity in all negotiations?
(An advisor will advise and assist a client, an agent has the authority to commit a client.)
 - d. Recognize possible conflicts of interest and establish appropriate procedures regarding:
 - The purchase of bank-advised private

- placements with funds managed by the bank or an advisory affiliate?
 - Loans to investors to purchase private placements?
 - Use of proceeds of an advised placement to repay the issuer's debts to the bank?
 - Dealings with unsophisticated or non-institutional investors who have other business relationships with the bank?
- e. Require legal review of each placement prior to completion?
 - f. Direct officers to obtain certified financial statements from the seller?
 - g. Require distribution of certified financial statements to interested investors?
 - h. Require officers to request a written statement of investment objectives or requirements from interested investors?
 - i. Provide for a supervisory management review to determine if a placement is suitable for the investor?

CONCLUSION

3. Is the foregoing information considered adequate as the basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly and indicate any additional examination procedures deemed necessary.
4. Based on a composite evaluation as evidenced by answers to the foregoing questions, the degree of control by main office management is considered (adequate/inadequate).

INTRODUCTION

Congress developed a new regulatory framework in 1991 to address the problems associated with troubled depository institutions with the intent of minimizing the long-term cost to the deposit insurance fund. This legislation led to the enactment of the prompt-corrective-action statute, which is contained in the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) and added section 38 to the Federal Deposit Insurance Act (the FDI Act), as amended (12 USC 1831*o*).

Section 38 requires regulators to administer timely corrective action to banks when their capital position declines or is deemed to have declined below certain threshold levels as a result of an unsafe or unsound condition or practice. The prompt-corrective-action (PCA) framework specifies mandatory actions that regulators must take, as well as discretionary actions they must consider taking.

In order to implement PCA as it applies to state member banks, the Federal Reserve added subpart D to its Regulation H (12 CFR 208.40 to 208.45). The Federal Reserve also revised its Rules of Practice for Hearings (12 CFR 263) to establish procedures for the issuance of notices, directives, and other actions authorized under section 38 of the FDI Act and Regulation H.

PCA utilizes capital ratios to trigger specific actions that are designed to restore a bank to financial health. One of the primary sources of these ratios is the Consolidated Reports of Condition and Income (Call Report), which gives added importance to the review of a bank's records for accuracy during an examination. Under the PCA statute a bank is assigned to one of five capital categories: (1) well capitalized, (2) adequately capitalized, (3) undercapitalized, (4) significantly undercapitalized, and (5) critically undercapitalized. The law provides for increasingly stringent corrective provisions as a bank is placed in progressively lower capital categories.

PCA CATEGORIES

PCA uses the total risk-based capital, tier 1 risk-based capital, leverage, and tangible equity ratios for assigning state member banks to the

five capital categories.¹ These ratios are defined in the Federal Reserve's Capital Adequacy Guidelines for State Member Banks, appendix A (Risk-Based Measure) and appendix B (Tier 1 Leverage Measure) (12 CFR 208). Determining a bank's PCA category is based upon capital ratios derived from the following: (1) the filing of a quarterly Call Report, (2) receipt of a Federal Reserve or state examination report, (3) information obtained in the application process, or (4) other reports filed by the bank under banking or securities laws.

In general, a bank is deemed to be notified of its PCA category based upon the time of its submission or receipt of—

- the Call Report, as of the date the Call Report is required to be filed,
- the Federal Reserve or state examination report, as of the third day following the date of the transmittal letter accompanying the examination report, and
- other information upon the bank's receipt of written notice by the Board that its capital category has changed.

Notifying a bank of its PCA category is important since any bank falling in the undercapitalized or lower categories is subject to certain mandatory provisions, and may be subject to certain discretionary provisions, immediately upon notification that it is undercapitalized, significantly undercapitalized, or critically undercapitalized. These mandatory and discretionary provisions are described in detail later.

Each PCA category is described below. See the table at the end of this section for a summary of framework definitions. A bank is—

- *well capitalized* if the bank has a total risk-based capital ratio of 10.0 percent or greater, a tier 1 risk-based capital ratio of 6.0 percent or

1. The total risk-based capital ratio is defined as the ratio of qualifying total capital to risk-weighted assets; the tier 1 capital ratio is the ratio of tier 1 capital to risk-weighted assets; and the tier 1 leverage ratio is the ratio of tier 1 capital to total average consolidated assets (the Federal Reserve may use period-end total consolidated total assets whenever necessary, on a case-by-case basis). The tangible equity ratio is defined as core capital elements plus cumulative perpetual preferred stock, net of all intangible assets except those amounts of mortgage servicing assets allowable in tier 1 capital. See section 3020.1 for more detailed information on the capital calculations and requirements.

greater, and a leverage ratio of 5.0 percent or greater, and the bank is not subject to an order, written agreement, capital directive, or prompt-corrective-action directive to meet and maintain a specific capital level for any capital measure.

- *adequately capitalized* if the bank has a total risk-based capital ratio of 8.0 percent or greater, a tier 1 risk-based capital ratio of 4.0 percent or greater, and a leverage ratio of 4.0 percent or greater (or a leverage ratio of 3.0 percent or greater if the bank is rated composite 1 under the CAMELS rating system in its most recent report of examination), and the bank is not experiencing or anticipating significant growth and does not meet the definition of a “well-capitalized” bank.
- *undercapitalized* if the bank has a total risk-based capital ratio that is less than 8.0 percent, a tier 1 risk-based capital ratio that is less than 4.0 percent, or a leverage ratio that is less than 4.0 percent (or a leverage ratio that is less than 3.0 percent if the bank is rated composite 1 under the CAMELS rating system in its most recent report of examination) and the bank is not experiencing or anticipating significant growth.
- *significantly undercapitalized* if the bank has a total risk-based capital ratio that is less than 6.0 percent, a tier 1 risk-based capital ratio that is less than 3.0 percent, or a leverage ratio that is less than 3.0 percent.
- *critically undercapitalized* if the bank has a ratio of tangible equity to total assets that is equal to or less than 2.0 percent.

On July 13, 1998, the Board approved technical amendments to its prompt-corrective-action rules (effective October 1, 1998). The definition of “total assets,” as used in section 208.41(i), was revised to provide the Federal Reserve with the option of using period-end rather than average total assets for state member banks. Another change was to add “Sensitivity to market risk” as the “S” in the CAMEL[S] bank rating system component. See 1998 *Fed. Reg.* 37,634 (volume 63, no. 133).

EXAMINATION CONSIDERATIONS

If it is determined that a bank is undercapitalized, significantly undercapitalized, or critically undercapitalized, examiners should discuss the

PCA provisions with management during the examination. Additionally, examiners should caution banks when their capital ratios approach those found in the undercapitalized category to ensure that proposed dividend or management fee payments do not cause the bank to violate the statute. Any PCA-related comments should be noted on the “Examination Comments and Conclusions” page of the examination report and in the “Summary to Directors of Examination Findings” report. The comments should be limited to the mandatory provisions of the statute, reflect the immediacy of these provisions, and clearly indicate that the receipt of the report of examination serves as notification that the bank is subject to PCA provisions.

Capital Adequacy Page

In the report of examination, the PCA capital ratios appear on the “Capital Adequacy” page and are generally calculated using the bank’s most recent Call Report. In situations where the impact of examination findings (for example, loan-loss-reserve adjustments or other losses) cause the bank to fall into a lower PCA category, the narrative portion of this page should explicitly state the adjusted PCA ratios and reconcile the adjustments that were made.

RECLASSIFICATION

A bank’s PCA category is normally defined by its capital ratios indicated in the preceding definitions. The finding of an unsafe or unsound *condition or practice*, however, may lead to a bank’s reclassification to the next lower category than it would otherwise qualify for based solely on its capital ratios. In these circumstances, the Federal Reserve may—

- reclassify a well-capitalized bank to the adequately capitalized category.
- require an adequately capitalized bank to comply with one or more supervisory actions specified by PCA as though it is an undercapitalized bank.
- impose on an undercapitalized bank one or more supervisory actions authorized for a significantly undercapitalized bank.

While the latter two actions do not strictly represent reclassifications from one category to

another, they are nonetheless collectively referred to as “reclassifications” for PCA purposes.

Thus, section 38 does not automatically subject a bank that has been reclassified to the next lower capital category to the mandatory restrictions of the lower category. These mandatory restrictions can only be imposed through the use of a directive, and only those mandatory and discretionary provisions deemed appropriate by the Federal Reserve will be imposed. *A bank can only be reclassified to the next lower capital category and cannot be classified as critically undercapitalized on any basis other than its tangible equity ratio.*

The reclassification of a bank for PCA purposes may affect the bank’s ability to accept brokered deposits. If a well- or adequately capitalized bank is reclassified, the bank must obtain an FDIC waiver to accept brokered deposits, regardless of its actual capital level. (Section 3000.1 contains a detailed discussion on the capital requirements relating to brokered deposit activities.)

An “unsafe or unsound condition” is not defined in the PCA statute and assessment thereof is left to the discretion of the Federal Reserve. Banks determined to be in an unsafe or unsound condition based on the results of the most recent report of examination or Call Report will be reclassified. On the other hand, an “unsafe or unsound practice” is defined as a less-than-satisfactory rating for any of the AMELS (Asset quality, Management, Earnings, Liquidity or Sensitivity to market risk) components in the bank’s most recent examination report that have not been corrected since the examination. In particular, a bank should be considered for reclassification if the imposition of the available PCA provisions would assist the return of the bank to a safe or sound condition or institute safe or sound practices.

The Federal Reserve recognizes that certain banks that are candidates for reclassification may have taken favorable actions that are consistent with the purposes of PCA. In these cases, reclassification may not be warranted—

- if the bank has raised or can demonstrate current efforts to raise enough capital to become and remain well capitalized for the foreseeable future and
- if the bank has attempted to be in substantial compliance with all provisions of any outstanding informal or formal enforcement action, if management is addressing existing

problems and is considered satisfactory, and if the bank’s condition is stable and shows signs of improvement.

In those instances where reclassification is determined to be appropriate, the Federal Reserve will provide the bank with a written notice specifying its intention to reclassify the bank, along with an explanation of the reasons for the downgrade. The date of the reclassification and the required PCA provisions can be made effective either at a specified future date or, under certain circumstances, immediately, at the discretion of the Federal Reserve. A bank is entitled to an appeal, including an informal hearing, challenging a reclassification following the receipt of a written notice. The appeal and hearing procedures are set out in subpart H of part 263 of the Board’s Rules of Practice for Hearings in section 263.203 (12 CFR 263.203).

PCA PROVISIONS

Provisions Applicable to All Banks

While well-capitalized and adequately capitalized banks are generally not subject to any restrictions, they are subject to *two provisions that are applicable to all banks*:

- A bank may not pay dividends or make any other capital distributions that would leave it undercapitalized.²
- A bank may not pay a management fee to a controlling person if, after paying the fee, the bank would be undercapitalized. Management fees subject to this restriction include those relating to supervisory, executive, managerial, or policymaking functions, other than compensation to an individual in the individual’s capacity as an officer or employee of the bank. This does not include fees relating to non-managerial services provided by the control-

2. The statute (section 38 (d)(1)(B)) requires that the Federal Reserve consult with the FDIC before approving a capital distribution under this section. Section 38 also contains a limited exception to the restrictions on capital distributions for certain types of stock redemptions that (1) the Federal Reserve has approved, (2) are made in connection with an equivalent issue of additional shares or obligations, and (3) will improve the bank’s financial condition. The Federal Reserve may also impose restrictions on capital distributions on any company that controls a significantly undercapitalized bank.

ling person, such as data processing, trust activities, mortgage services, audit and accounting, property management, or similar services.

Restrictions on Advertising

The Federal Reserve prohibits a bank from advertising its PCA category. A bank may not describe itself in an advertisement or in promotional material as falling within the well-capitalized category, nor may the bank advertise that the Federal Reserve has determined it to be well capitalized. However, a bank is not restricted from advertising its capital levels or financial condition.

Provisions Applicable to Undercapitalized Banks

A bank categorized as undercapitalized is subject to several *mandatory* provisions that become effective upon notification of the bank. Under the mandatory provisions, an undercapitalized bank—

- must cease paying dividends.
- is prohibited from paying management fees to a controlling person (see the previous subsection for exceptions).
- is subject to increased monitoring by the Federal Reserve and periodic review of the bank's efforts to restore its capital.
- must file and implement a capital restoration plan generally within 45 days. Undercapitalized banks that fail to submit or implement a capital restoration plan are also subject to the provisions applicable to significantly undercapitalized banks.
- may acquire interest in a company, open any new branch offices, or engage in a new line of business only if the following three requirements are met:
 - the Federal Reserve has accepted its capital restoration plan,
 - any increase in total assets is consistent with the capital restoration plan, and
 - the bank's ratio of tangible equity to assets increases during the calendar quarter at a rate sufficient to enable the bank to become adequately capitalized within a reasonable time.
- may not make any acquisition, acquire any

company or depository institution, establish new branches, or engage in any new line of business unless the Federal Reserve determines that such action is consistent with its capital plan or the FDIC determines that such action will further the purposes of PCA.

In addition to the mandatory provisions, a number of *discretionary* provisions may be imposed on an undercapitalized bank. These include—

- requiring one or more of the following:
 - That the bank sell enough additional capital or debt to ensure that it would be adequately capitalized after the sale.
 - That the aforementioned additional capital be voting shares.
 - That the bank accept an offer to be acquired by another institution or company, or that any company that controls the bank be required to divest itself of the bank.
- restricting transactions between the bank and its affiliates.
- restricting the interest rates paid on deposits collected by the bank to the prevailing rates paid on comparable amounts in the region where the bank is located.
- restricting the bank's asset growth or requiring the bank to reduce its total assets.
- requiring the bank or any of its subsidiaries to terminate, reduce, or alter any activity determined by the Federal Reserve to pose excessive risk to the bank.
- ordering a new election of the board of directors, dismissing certain senior executive officers, or hiring new officers.
- prohibiting the acceptance, renewal, and rollover of deposits from correspondent depository institutions.
- prohibiting any bank holding company that controls the bank from making any capital distribution, including but not limited to dividend payment, without the prior approval of the Federal Reserve.
- requiring the bank to divest or liquidate any subsidiary that is in danger of becoming insolvent and that poses a significant risk to the bank, or is likely to cause significant dissipation of its assets or earnings.
- requiring any company that controls the bank to divest or liquidate any affiliate of the bank (other than another insured depository institution) if the Federal Reserve determines that the affiliate is in danger of becoming insolvent

and poses a significant risk to the bank, or is likely to cause significant dissipation of the bank's assets or earnings.

- requiring the bank to take any other action that would more effectively carry out the purpose of PCA than the above actions.

Provisions Applicable to Significantly Undercapitalized Banks

The mandatory restrictions applicable to undercapitalized banks also apply to banks that are significantly undercapitalized. In addition, a significantly undercapitalized bank is restricted in paying bonuses or raises to senior executive officers of the bank unless it receives prior written approval from the Federal Reserve. If a bank fails to submit an acceptable capital restoration plan, however, no such bonuses or raises may be paid until an acceptable plan has been submitted.

The Federal Reserve, as directed by the PCA statute, must take the following actions unless it is determined that these actions would not further the purpose of PCA:

- Require one or more of the following:
 - That the bank sell enough additional capital or debt to ensure that it would be adequately capitalized after the sale.
 - That the aforementioned additional capital be voting shares.
 - That the bank accept an offer to be acquired by another institution or company, or that any company that controls the bank be required to divest itself of the bank.
- Restrict the bank's transactions with affiliates.
- Restrict the interest rates paid on deposits collected by the bank to the prevailing rates paid on comparable amounts in the region where the bank is located.

In addition to these mandatory provisions, one or more of the discretionary provisions for undercapitalized banks must be imposed on a significantly undercapitalized bank. Moreover, other measures (including the provisions for critically undercapitalized banks) may be required if the Federal Reserve determines that such actions will advance the purposes of PCA.

Provisions Applicable to Critically Undercapitalized Banks

A critically undercapitalized bank must be placed in conservatorship (with the concurrence of the FDIC) or receivership within 90 days, unless the Federal Reserve and the FDIC concur that other action would better achieve the purposes of PCA. The decision to defer placing a critically undercapitalized bank in conservatorship or receivership must be reviewed every 90 days, and an explanation must be provided about why deferring this decision would better achieve the purposes of the statute (preventing losses to the bank insurance fund).

A bank must be placed in receivership if it continues to be critically undercapitalized on average³ during the fourth calendar quarter following the period that it initially became critically undercapitalized, unless the Federal Reserve, with the FDIC's concurrence, determines that—

- the bank has a positive net worth.
- the bank has been in substantial compliance with its capital restoration plan since the date of the plan's approval.
- the bank is profitable or has a sustainable upward trend in earnings.
- the bank has reduced its ratio of nonperforming loans to total loans.
- the Chairman of the Federal Reserve and the chairperson of the FDIC both certify that the bank is viable and not expected to fail.

Critically undercapitalized banks are also prohibited, beginning 60 days after becoming critically undercapitalized, from making any payment of principal or interest on subordinated debt issued by the bank without the prior approval of the FDIC. Unpaid interest, however, may continue to accrue on subordinated debt under the terms of the debt instrument. The FDIC is also required, at a minimum, to prohibit a critically undercapitalized bank from doing any of the following without the prior written approval of the FDIC—

- entering into any material transaction not in the usual course of business. Such activities

3. This is determined by adding the sum of the total tangible equity ratio at the close of business on each day during this quarter and dividing that sum by the number of business days in that quarter.

include any investment, expansion, acquisition, sale of assets, or other similar action where the bank would have to notify the Federal Reserve.

- extending credit for any highly leveraged transaction.
- amending the bank's charter or bylaws, except to the extent necessary to carry out any other requirement of any law, regulation, or order.
- making any material change in accounting methods.
- engaging in any covered transaction under section 23A(b) of the Federal Reserve Act.
- paying excessive compensation or bonuses.
- paying interest on new or renewed liabilities that would increase the bank's weighted average cost of funds to a level significantly exceeding the prevailing rates of interest paid on insured deposits in the bank's normal market area.

Capital Restoration Plans

A bank that is undercapitalized, significantly undercapitalized, or critically undercapitalized must submit a capital restoration plan to the Federal Reserve. The plan should aim to restore the bank's capital to at least the minimum capital levels required for adequately capitalized banks. This plan must be submitted in writing and specify—

- the steps the bank will take to become adequately capitalized.
- the levels of capital the bank expects to attain each year that the plan is in effect.
- how the bank will comply with the restrictions and requirements imposed on it under section 38.
- the types and levels of activities in which the bank will engage.
- any other information required by the Federal Reserve.

A capital restoration plan *cannot be accepted unless* the plan—

- contains the information required in the preceding five points.
- is based on realistic assumptions and is likely to succeed in restoring the bank's capital.
- would not appreciably increase the risk (including credit risk, interest-rate risk, and

other types of risk) to which the bank is exposed.

- contains a guarantee from each company that controls the bank, specifying that the bank will comply with the plan until it has been adequately capitalized on average during each of four consecutive calendar quarters, and each company has provided appropriate assurances of performance. (See the subsequent subsection, Capital Restoration Plan Guarantee, for additional information.)

Submission and Review of Capital Plans

The Federal Reserve has established rules regarding a uniform schedule for the filing and review of capital restoration plans. These rules require a bank to submit a capital restoration plan within 45 days after the bank has received notice, or has been deemed to have been notified, that it is undercapitalized, significantly undercapitalized, or critically undercapitalized. The Federal Reserve may change this period in individual cases, provided it notifies the bank that a different schedule has been adopted. PCA also requires the Federal Reserve to—

- review each capital restoration plan within 60 days of submission of the plan unless it extends the review time.
- provide written notice to the bank about whether it has approved or rejected the capital plan.
- provide a copy of each acceptable capital restoration plan, and amendments thereto, to the FDIC within 45 days of accepting the plan.

There are two cases where a capital restoration plan may not be required:

- When a bank has capital ratios consistent with those corresponding to the adequately capitalized category but, due to unsafe or unsound conditions or practices, has been reclassified to the undercapitalized category. (If the Federal Reserve requires a plan solely due to such a reclassification, the plan should specify the steps the bank will take to correct the unsafe or unsound condition or practice.)
- When a bank's capital category changes, but the bank is already operating under a capital restoration plan accepted by the Federal Reserve.

The Federal Reserve will examine the circumstances of each of the above cases to determine whether a revised plan must be submitted.

Capital Restoration Plan Guarantee

The Federal Reserve cannot approve a capital restoration plan unless each company that controls the bank has guaranteed the bank's compliance with the plan and has provided reasonable assurances of performance. The Federal Reserve will consider on a case-by-case basis the appropriate type of guarantee for multi-tier holding companies, or parent holding companies that are shell companies or that have limited resources. A guarantee that is backed by a contractual pledge of resources from a parent company may satisfy the requirements of section 38, particularly in situations involving the ownership of an insured bank by a foreign holding company through a wholly owned domestic shell holding. In other situations, a third-party guarantee made by a party with adequate financial resources may be satisfactory.

PCA also contains several provisions that clarify the capital restoration plan guarantee:

- **Limitation on liability.** The aggregate amount of liability under the guarantee for all companies that control a specific bank is limited to the lesser of (1) an amount equal to 5 percent of the bank's total assets, or (2) the amount necessary to restore the relevant capital ratios of the bank to the level required for the bank to be categorized as adequately capitalized.
- **Limitation on duration.** The guarantee and limit on liability expires after the Federal Reserve notifies the bank that it has remained adequately capitalized for each of the previous four consecutive calendar quarters.
- **Collection of guarantee.** Each company that controls a given bank is jointly and severally liable for the guarantee.
- **Failure to provide a guarantee.** A bank will be treated as if it had not submitted an acceptable capital restoration plan if its capital plan does not contain the required guarantee.
- **Failure to perform under a guarantee.** A bank will be treated as if it failed to implement the capital restoration plan if any company that controls the bank fails to perform its guarantee.

Failure to Submit an Acceptable Capital Plan

An undercapitalized bank that fails to submit or implement, in any material respect, an acceptable capital restoration plan within the required period is subject to the same provisions applicable to a bank that is significantly undercapitalized. If a bank's capital restoration plan is rejected, the bank is required to submit a new capital plan within the time period specified by the Federal Reserve. During the period following notice of the rejection, and before Federal Reserve approval of a new or revised capital plan, the bank is treated in the same manner as a significantly undercapitalized bank.

ISSUANCE OF PCA DIRECTIVES

The Federal Reserve must provide a state member bank, or company controlling a state member bank (company), a written notice of proposed action under section 38 (referred to as a directive), unless the circumstances of a particular case indicate that immediate action is necessary to serve the purpose of PCA. These directives are issued for reasons such as reclassifying a bank and implementing discretionary provisions, the latter of which includes the dismissal of directors or senior executive officers.

A notice of intent to issue a directive should include—

- a statement of the bank's capital measures and levels.
- a description of the restrictions, prohibitions, or affirmative actions that the Federal Reserve proposes to impose or require.
- the proposed date when such restrictions or prohibitions would be effective or the proposed date for completion of such affirmative actions.
- the date by which the bank or company subject to the directive may file with the Federal Reserve a written response to the notice.

When a directive becomes effective at a future date, the Federal Reserve must provide the bank or company an opportunity to appeal the directive before taking final action. This requires the bank to submit information relevant to the decision within the time period set by the Federal Reserve, which must be at least 14 cal-

endar days from the date of the notice, unless the Federal Reserve determines that a shorter period is appropriate in light of the financial condition of the bank or other relevant circumstances.

In the case of a directive that is immediately effective upon notification of the bank, the Federal Reserve's rules provide an opportunity for the bank or company to seek an expedited modification or rescission of the directive. A bank or company that appeals a directive effective immediately is required to file a written appeal within 14 days of receiving the notice, and the Board of Governors will consider the appeal within 60 days of receiving it. During the period that the appeal is under review the directive remains in effect, unless the effectiveness of the directive is delayed by the Federal Reserve.

Dismissal of Directors or Senior Executive Officers

The Federal Reserve's rules establish a special procedure permitting an opportunity for senior executive officers and directors dismissed from a state member bank as a result of a PCA directive to petition for reinstatement. A director or senior executive officer who is required to be

dismissed in compliance with a Federal Reserve directive may have the dismissal reviewed by filing, within 10 days, a petition for reinstatement with the Federal Reserve. The petitioner will also be given the opportunity to submit written materials in support of the petition and to appear at an informal hearing before representatives of the Federal Reserve. The date for the hearing and for the ultimate decision follows the same timeframe as that indicated for the appeals process in the preceding paragraph.

Enforcement of Directives

PCA directives may be enforced in the federal courts, and may cause any bank, company, or bank-affiliated party that violates the directive to be subject to civil money penalties or other enforcement actions. The failure of a bank to implement a capital restoration plan, or the failure of a company having control of a state member bank to fulfill a guarantee that the company has given in connection with a capital plan accepted by the Federal Reserve, could subject the bank or company or any of their bank-affiliated parties to a civil money penalty assessment.

TABLE—SUMMARY OF SPECIFICATIONS OF CAPITAL CATEGORIES FOR PROMPT CORRECTIVE ACTION

<i>Capital category</i>	<i>Total risk-based ratio</i>	<i>Tier 1 risk-based ratio</i>	<i>Leverage ratio</i>	<i>Additional criteria</i>
Well capitalized	10% or above; plus	6% or above; plus	5% or above; plus	is not subject to a capital directive to meet a specific level for any capital measure
Adequately capitalized	8% or above; plus	4% or above; plus	4% or above; ¹ plus	does not meet the definition of well capitalized
Under-capitalized	under 8%; or	under 4%; or	under 4% ²	
Significantly under-capitalized	under 6%; or	under 3%; or	under 3%	
Critically under-capitalized	not applicable	not applicable	not applicable	can only be assigned to this category if the ratio of tangible equity to total assets is equal to or less than 2% ³

1. Three percent or above for banks rated composite 1 in their most recent report of examination and that are not experiencing or anticipating significant growth.

2. Under 3 percent for banks rated composite 1 in their most recent report of examination and that are not experiencing or anticipating significant growth.

3. Tangible equity is defined as core capital elements plus cumulative perpetual preferred stock, net of all intangible assets except those amounts of mortgage-servicing assets allowable into tier 1 capital.

Prompt Corrective Action

Examination Objectives

Effective date November 1994

Section 4133.2

1. To determine if prompt-corrective-action (PCA) provisions are necessary.
2. To determine if the policies, practices, and procedures are in place to ensure compliance with PCA mandatory and discretionary provisions.
3. To ensure that undercapitalized, significantly undercapitalized, and critically undercapitalized banks have effective capital restoration plans that comply with PCA.

Prompt Corrective Action

Examination Procedures

Effective date November 2006

Section 4133.3

1. During on-site examinations, validate the state member bank's capital levels, risk-weighted assets, and capital ratios in compliance with primary capital provisions of section 38 of the Federal Deposit Insurance Act (FDI Act) and the Federal Reserve's respective capital adequacy rules. (See section 3020.1 and 12 CFR 208, appendices A, B, and E.) Verify that the bank's—
 - a. capital instruments are appropriate for inclusion in tier 1 or tier 2 capital.
 - b. assets were properly risk weighted and that the appropriate credit equivalent measure (for example, the credit-conversion factors, credit-rating factors, etc.) were assigned for the bank's off-balance-sheet assets or transactions.
2. When a state member bank is considered undercapitalized, significantly undercapitalized, or critically undercapitalized, discuss with the bank's management the prompt corrective action restrictions under Section 38 of the FDI Act and the Board's Regulation H (12 CFR 208, subpart D)
3. When a state member bank is operating with an amount of consolidated capital that is near the undercapitalized levels, caution the board of directors and senior management about their ensuring that any proposed dividend or management fee payments do not cause the bank to violate section 38 of the FDI Act.
4. When the impact of the bank's examination findings (for example, loan-loss-reserve adjustments or other losses) will cause the bank to fall into a lower prompt-corrective-action category, explicitly state in the narrative portion of the Capital examination report page the adjusted prompt-corrective-action capital ratios with a clear account of the adjustments that were made to the quarter-end or period-end ratios.
5. Include in the "Comments and Conclusions" report page of the state member bank examination report and the Director's Summary any comments regarding the applicability of section 38 and Regulation H pertaining to prompt corrective action. With regard to prompt corrective action, limit the comments to the mandatory restrictions of the statute and the immediacy of those provisions. State that the receipt of the state member bank examination report serves as notification that the bank is subject to prompt corrective action.

The Board's long-standing policy on real estate appraisals emphasizes the importance of sound appraisal policies and procedures in a bank's real estate lending activity. In December 1987, the Board and the other banking regulatory agencies jointly adopted guidelines for real estate appraisal policies and review procedures. With the passage of title XI (12 USC 3331) of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), the Board as well as the other federal financial regulatory agencies adopted regulations in August 1990 on the performance and use of appraisals by federally regulated financial institutions. The Board and the other agencies amended the regulations on June 7, 1994. (See SR-94-35.) In September 1992, the Board issued revised guidelines for real estate appraisal and evaluation programs, which were reissued on October 27, 1994. (See SR-94-55.) The Board's real estate lending and appraisal standards are found in Regulation H, subpart E, 12 CFR 208.50–51. The standards primarily focus on the responsibilities of the bank's board of directors for developing and issuing lending policies. The Board and the other federal banking and thrift regulatory agencies jointly issued on October 27, 2003, the statement on Independent Appraisal and Evaluation Functions. (See SR-03-18. See also SR-95-16, SR-95-27, and SR-99-26.)

The intent of title XI and the Board's regulation is to protect federal financial and public policy interests in real estate-related financial transactions that require the services of an appraiser in connection with federally related transactions. The statute also requires that real estate appraisals be in writing and be performed in accordance with uniform standards and by individuals with demonstrated competency whose professional conduct is subject to effective supervision. In this regard, each state may establish a program for certifying and licensing real estate appraisers who are qualified to perform appraisals in connection with federally related transactions. Additionally, title XI designated the Appraisal Qualifications Board and the Appraisal Standards Board of the Appraisal Foundation, a nonprofit appraisal industry group, as the authority for establishing qualifications criteria for appraiser certification and standards for the performance of an appraisal. However, the statute left to the states the authority to establish qualification standards for licensing. The statute

established the Appraisal Subcommittee of the Federal Financial Institutions Examination Council (FFIEC). It was designated to monitor the requirements established to meet the intent of title XI. If the Appraisal Subcommittee issues a finding that the policies, practices, or procedures of a state are inconsistent with title XI, the services of licensed or certified appraisers from that state may not be used in connection with federally related transactions.

Effective Date

The Board's appraisal regulation¹ (Regulation H, 12 CFR 208) requires that appraisals performed in connection with federally related transactions after the effective date of August 9, 1990, comply with the regulation. Appraisals for real estate-related financial transactions entered into before this date do not have to comply with the regulation. However, the bank would have had to adhere to the Board's supervisory guidelines, issued in 1987, for such real estate appraisals as well as to safe and sound banking practices. Transactions are deemed to have been entered into and a loan is deemed to have been originated if there was a binding commitment to perform before the effective date. The requirement to use a state-certified or -licensed appraiser was effective December 31, 1992. States had the flexibility to adopt an earlier implementation date for their requirements that an appraiser be certified or licensed to perform an appraisal within the state. Financial institutions doing business in a state that had an earlier effective date for mandatory use of a certified or licensed appraiser than the federally mandated effective date would have had to abide by the state law.

BANK APPRAISAL AND EVALUATION POLICY

An institution's board of directors is responsible for adopting policies and procedures that establish effective real estate appraisal and evaluation

1. Subpart E of Regulation H prescribes standards for real estate lending to be used by member banks in adopting internal real estate lending policies. The standards applicable to appraisals rendered in connection with federally related transactions entered into by member banks are set forth in 12 CFR 225, subpart G (Regulation Y).

programs. Analyzing real estate collateral at a loan's inception and over its life requires a sufficient understanding of appraisals and evaluations in order to fully assess credit risk. While the appraisal plays an important role in the loan-approval process, the bank should not unduly rely on the value of collateral in lieu of an adequate assessment of the borrower's repayment ability. However, when a credit becomes troubled, the primary source of repayment often shifts from the borrower's capacity to repay to the value of the collateral. For these reasons, it is important that banks have sound appraisal policies and procedures.

Appraisal and Evaluation Program

An institution's appraisal and evaluation program should be tailored to the institution's size, location, and the nature of its real estate market and attendant real estate-related activity. The program should establish prudent standards and procedures that ensure written appraisals or evaluations are obtained and analyzed for real estate-related financial transactions before the bank makes its final credit decision.

The bank's appraisal and evaluation program should also establish the manner in which the institution selects, evaluates, and monitors individuals who perform real estate appraisals or evaluations. The key elements of the institution's program should ensure that individuals are fairly considered for the assignment, possess the requisite expertise to satisfactorily complete the assignment, hold the proper state certification or license, if applicable, and are capable of rendering a high-quality written appraisal or evaluation.

Compliance Procedures

To ensure the bank is complying with the regulation and supervisory guidelines, the bank should have established regulatory compliance procedures for all appraisals and evaluations. The compliance review may be part of a loan officer's overall credit analysis and may take the form of a narrative or a checklist. The individual who prepared the appraisal or evaluation should take corrective action for noted deficiencies. Unreliable appraisals or evaluations should be replaced before the final credit decision.

Additionally, a bank should have comprehensive analytical procedures that focus on certain types of loans, such as large-dollar credits, loans secured by complex or specialized properties, nonresidential construction loans, or out-of-area real estate. These comprehensive analytical procedures should be designed to verify the appropriateness of the methods and approaches used and to assess the reasonableness of the analysis, opinions, and conclusions. The bank should maintain formal documentation or evidence of the review. An individual performing the review, either an employee of the bank or an outside consultant, should have real estate-related training or experience and be independent of the transaction. The individual may not change the appraisal's or evaluation's estimate of value as a result of the review unless that person is appropriately licensed or certified and performs the review in accordance with the review procedures in Standard 3 of the Uniform Standards of Professional Appraisal Practice (USPAP).

FEDERALLY RELATED FINANCIAL TRANSACTIONS

A federally related transaction is defined in the statute (12 USC 3350(4)) as a real estate-related financial transaction that (1) a federal financial institutions regulatory agency or any regulated institution engages in or contracts for and (2) requires the services of an appraiser. The statute defines a real estate-related financial transaction as any transaction involving the sale, lease, purchase, investment in or exchange of real property, including interests in property, or the financing thereof; the refinancing of real property or interests in real property; or the use of real property or interests in property as security for a loan or investment, including mortgage-backed securities. (See 12 USC 3350(5).)

The Board recognizes that not all real estate-related financial transactions require the services of an appraiser. In this regard, the Board has determined that certain categories of real estate-related financial transactions do not require the services of a certified or licensed appraiser and as such are not considered federally related transactions. However, for certain transactions that do not require a certified or licensed appraisal, an evaluation of the underlying col-

lateral is required under the Board's supervisory guidelines.

Transaction Value

The transaction value is defined as the amount of the loan or extension of credit under consideration. For a pool of loans or a mortgage-backed security, the transaction value is the amount of each individual loan. In determining transaction value, the senior and junior debt are considered separate transactions under the appraisal rule. However, a series of related transactions will be considered as one transaction if it appears that an institution is attempting to avoid the appraisal requirement by structuring the transactions below the appraisal threshold.

Transactions Not Requiring the Services of a Licensed or Certified Appraiser

An appraisal performed by a state-certified or -licensed appraiser is required for all real estate-related financial transactions except those in which—

- the transaction value is \$250,000 or less;
- a lien on real estate has been taken as collateral in an abundance of caution;
- the transaction is not secured by real estate;
- a lien on real estate has been taken for purposes other than the real estate's value;
- the transaction is a business loan that has a transaction value of \$1 million or less and is not dependent on the sale of, or rental income derived from, real estate as the primary source of repayment;
- a lease of real estate is entered into, unless the lease is the economic equivalent of a purchase or sale of the leased real estate;
- the transaction involves an existing extension of credit at the lending institution, provided that there has been no obvious and material change in market conditions or physical aspects of the property that threatens the adequacy of the institution's real estate collateral protection after the transaction, even with the advancement of new monies, or there is no advancement of new monies, other than funds necessary to cover reasonable closing costs;
- the transaction involves the purchase, sale, investment in, exchange of, or extension of credit secured by a loan or interest in a loan, pooled loans, or interests in real property, including mortgage-backed securities, and each loan or interest in a loan, pooled loan, or real property interest met the Board's regulatory requirements for appraisals at the time of origination;
- the transaction is wholly or partially insured or guaranteed by a U.S. government agency or U.S. government-sponsored agency;
- the transaction either qualifies for sale to a U.S. government agency or U.S. government-sponsored agency, or involves a residential real estate transaction in which the appraisal conforms to the Federal National Mortgage Association or Federal Home Loan Mortgage Corporation appraisal standards applicable to that category of real estate;
- the regulated institution is acting in a fiduciary capacity and is not required to obtain an appraisal under other law; or
- the Board determines that the services of an appraiser are not necessary to protect federal financial and public policy interests in real estate-related financial transactions or to protect the safety and soundness of the institution.

For transactions that do not require title XI appraisals because they are below the appraisal threshold or because they qualify for the \$1 million or less business-loan exemption or the existing extension-of-credit exemption, the Board still requires an appropriate evaluation of the real property collateral that is consistent with safe and sound banking practices.

The Board reserves the right to require a bank to obtain an appraisal on an exempt transaction whenever it is necessary to address safety-and-soundness concerns. Whether a bank will be required to obtain an appraisal for a particular transaction or an entire group of credits will depend on the condition of the bank. For example, if a bank is in troubled condition that is attributable to underwriting problems in its real estate loan portfolio, the Board may require the bank to obtain an appraisal for all *new* transactions below the threshold. However, regardless of a bank's condition, an examiner may require a bank to obtain an appraisal for a particular real estate-related transaction to address safety-and-soundness concerns.

Obtaining an Appraisal

The bank or its agent is responsible for engaging the appraiser and obtaining the appraisal in sufficient time to be analyzed before the bank arrives at its final credit or other decision. (See the discussion below under the “Selection of an Appraiser” heading.) A bank may not accept an appraisal prepared for a potential borrower as the appraisal for a federally related transaction. However, a bank may use an appraisal prepared by an appraiser engaged directly by another regulated or nonregulated financial services institution as long as the bank has established procedures for reviewing appraisals, the review indicates that the appraisal meets the regulation, and the review is documented in writing.

For a multiphased development or construction loan, the appraisal of an earlier phase cannot be used for a new phase due to the change in risk to the bank. However, if the original appraisal was prepared for all phases of the project, the bank may use the project appraisal if the appraisal’s value for the new phase is still valid at the time the bank extends the additional credit.

APPRAISAL REQUIREMENTS

The objective of an appraisal is to communicate the appraiser’s reasoning and conclusions in a logical manner so that the reader is led to the appraiser’s opinion of market value. The contents of appraisals should conform to the standards of the Board’s appraisal regulation and the current Uniform Standards of Professional Appraisal Practice (USPAP), promulgated by the Appraisal Standards Board (ASB) of the Appraisal Foundation. The actual form, length, and content of appraisal reports may vary, depending on the type of property being appraised and the nature of the assignment. Standard forms completed in compliance with the rule and USPAP are also acceptable. A bank is responsible for obtaining an appraisal that is appropriate for the particular federally related transaction. The appraisal must consider the risk and complexity of the transaction. The level of detail should be sufficient to understand the appraiser’s analysis and opinion of the property’s market value. In accordance with USPAP, appraisers are responsible for establishing the scope of work to perform in rendering an opinion of the property’s market value and have

available three different reporting options. The appraiser’s scope of work should be consistent with the valuation methodology employed for similar property types, market conditions, and transactions.

Interagency Statement on the 2006 USPAP

The federal banking and thrift agencies² issued an interagency statement, The 2006 Revisions to Uniform Standards of Professional Appraisal Practice, on June 22, 2006. (See SR-06-9.) The statement provides an overview of the USPAP revisions and the ramifications of the revisions to regulated institutions’ compliance with the agencies’ appraisal regulations.

The ASB revised the USPAP in 2006, effective July 1, 2006, and incorporated certain prominent revisions,³ including a new Scope of Work Rule. It also deleted the Departure Rule and its associated terminology (such as “binding” and “specific” requirements and “complete” and “limited” appraisals). The Scope of Work Rule clarifies the standards for the type and extent of research and analysis performed by the appraiser in an appraisal assignment. The ASB noted that the appraisal process was not changed and that there is a greater emphasis on the appraiser’s process of problem identification and the development of an appropriate scope of work.

Under the USPAP’s Scope of Work Rule, an appraiser must determine an appropriate scope of work that should be performed to produce “credible assignment results.” According to the USPAP Advisory Opinion 29, credible assignment results depend on the scope of work meeting or exceeding both (1) the expectations of parties who are regularly intended users for similar assignments and (2) what an appraiser’s peers’ actions would be in performing the same or a similar assignment. Further, the appraisal report must contain sufficient disclosure to allow intended users to understand the scope of work performed. (Appraisers may continue to label

2. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

3. The 2006 USPAP and other ASB documents are available on the Appraisal Foundation web site at www.appraisalfoundation.org/s_appraisal/sec.asp?CID=3&DID=3.

appraisal reports as self-contained, summary, or restricted use.)

A bank may use an engagement letter in ordering an appraisal to facilitate communications with the appraiser and to document the expectations of each party to the appraisal assignment. To determine an appraisal's acceptability, a bank should review the report to assess the adequacy of the appraiser's scope of work given the intended use of the appraisal. In accordance with the Board's appraisal regulation, a bank must determine that the appraisal report contains sufficient information and analysis to support the credit decision.

Appraisal Standards

The statute prescribes the minimum standard for appraisals performed in connection with federally related transactions as those standards set forth in USPAP as well as any other appropriate standards that the Board deems necessary. At a minimum, the Board's appraisal regulation requires that an appraisal—

- conform to generally accepted appraisal standards as evidenced by USPAP, unless principles of safe and sound banking require compliance with stricter standards;
- be written and contain sufficient information and analysis to support the bank's decision to engage in the transaction;
- analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms, and tract developments with unsold units;
- be based upon the definition of market value as set forth in the regulation; and
- be performed by state-licensed or -certified appraisers in accordance with the requirements in the regulation.

From the appraiser's perspective, these regulatory appraisal requirements are "supplemental standards" to USPAP. If an appraiser knowingly fails to comply with supplemental standards, the appraiser is in violation of the USPAP Ethics Rule. When ordering appraisals, a bank should convey to an appraiser that these supplemental standards remain applicable.

Prior to July 1, 2006, the Board's appraisal regulation permitted banks to use appraisals prepared in accordance with the former USPAP

Departure Provision. The Departure Provision permitted limited exceptions to "specific guidelines" in USPAP. Under the former Departure Provision, the appraisal amendment would be considered a complete or limited appraisal. In a complete appraisal assignment, an appraiser must meet all USPAP standards and guidelines in estimating market value. In a limited appraisal assignment, the appraiser elects to depart from certain specific guidelines by invoking the Departure Provision.

Appraisal Reports

The appraisal report usually includes a disclosure of sales history and an opinion as to the highest value and best use of the property. After preparing a report, appraisers must certify that—

- statements of fact are true and correct;
- limiting conditions have been disclosed;
- they have no interest (present or future) in the transaction or property;
- compensation is not contingent on rendering a specified value;
- they have complied with USPAP;
- an inspection of the property was or was not performed; and
- assistance was or was not received in the preparation of the appraisal.

There are three different report formats that can be used to report the results of an appraisal assignment: a self-contained report, a summary report, and a restricted report. Since USPAP requires all appraisal reports to encompass all aspects of the assignment, differences among these reports relate to the degree of detail presented. The self-contained appraisal report provides the most detail; the summary appraisal report condenses the information; and the restricted appraisal report contains a minimal presentation of information with the supporting details maintained in the appraiser's work files.

The restricted report is not appropriate for a significant number of federally related transactions because the minimal amount of information limits the usefulness of the document for underwriting, compliance, and other decision-making purposes. However, it might be appropriate to use this type of appraisal report when providing ongoing collateral monitoring of a bank's real estate transactions and under other

circumstances when a bank's program requires an evaluation.

- market data or direct comparable sales approach
- capitalization of income approach

Appraisal Content

The appraisal must reflect a market value of the real estate. The regulation defines market value as the most probable price that a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus.

Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from the seller to the buyer under conditions whereby—

- buyer and seller are typically motivated;
- both parties are well informed or well advised, and acting in what they consider their own best interests;
- a reasonable time is allowed for exposure in the open market;
- payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
- the price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

To properly underwrite a construction loan, a bank may need to know a prospective value of a property in addition to the market value as of the date of the appraisal. A prospective value is based upon events yet to occur, such as completion of construction or renovation, reaching stabilized occupancy, or some other event yet to be determined. Thus, more than one value may be reported in an appraisal as long as all values are clearly described and reflect the projected dates when future events could occur.

APPRAISAL VALUATION APPROACHES

The appraiser typically utilizes three market-value approaches to analyze the value of property:

- cost approach

All three approaches have particular merits depending upon the type of real estate being appraised. For single-family residential property, the cost and comparable sales approaches are most frequently used since the common use of the property is the personal residence of the owner. However, if a single-family residential property is intended to be used as a rental property, the appraiser would have to consider the income approach as well. For special-use commercial properties, the appraiser may have difficulty obtaining sales data on comparable properties and may have to base the value estimate on the cost and capitalization of income approaches.

If an approach is not used in the appraisal, the appraiser should disclose the reason the approach was not used and whether this affects the value estimate.

Cost Approach

In the cost approach to value estimation, the appraiser obtains a preliminary indication of value by adding the estimated depreciated reproduction cost of the improvements to the estimated land value. This approach is based on the assumption that the reproduction cost is the upper limit of value and that a newly constructed building would have functional and mechanical advantages over an existing building. The appraiser would evaluate any functional depreciation (disadvantages or deficiencies) of the existing building in relation to a new structure.

The cost approach consists of four basic steps: (1) estimate the value of the land as though vacant, (2) estimate the current cost of reproducing the existing improvements, (3) estimate depreciation and deduct from the reproduction cost estimate, and (4) add the estimate of land value and the depreciated reproduction cost of improvements to determine the value estimate.

Market Data or Direct Comparable Sales Approach

The essence of the market data or direct com-

parable sales approach is to determine the price at which similar properties have recently sold on the local market. Through an appropriate adjustment for differences in the subject property and the selected comparable properties, the appraiser estimates the market value of the subject property based on the sales price of the comparable properties. The process used in determining the degree of comparability of two or more properties involves judgment about their similarity with respect to age, location, condition, construction, layout, and equipment. The sales price or list price of those properties deemed most comparable tend to set the range for the value of the subject property.

Capitalization of Income Approach

The income approach estimates the project's expected income over time converted to an estimate of its present value. The income approach is typically used to determine the market value of income-producing properties such as office buildings, apartment complexes, hotels, and shopping centers. In the income approach, the appraiser can use several different capitalization or discounted cash-flow techniques to arrive at a market value. These techniques include the band-of-investments method, mortgage-equity method, annuity method, and land-residual technique. Which technique is used depends on whether there is project financing, whether there are long-term leases with fixed-level payments, and whether the value is being rendered for a component of the project such as land or buildings.

The accuracy of the income-approach method depends on the appraiser's skill in estimating the anticipated future net income of the property and in selecting the appropriate capitalization rate and discounted cash flow. The following data are assembled and analyzed to determine potential net income and value:

- Rent schedules and the percentage of occupancy for the subject property and for comparable properties for the current year and several preceding years. This provides gross rental data and shows the trend of rentals and occupancy, which are then analyzed by the appraiser to estimate the gross income the property should produce.

- Expense data such as taxes, insurance, and operating costs being paid from revenues derived from the subject property and by comparable properties. Historical trends in these expense items are also determined.
- A timeframe for achieving stabilized, or normal, occupancy and rent levels (also referred to as a holding period).

Basically, the income approach converts all expected future net operating income into present-value terms. When market conditions are stable and no unusual patterns of future rents and occupancy rates are expected, the direct capitalization method is used to value income properties. This method calculates the value of a property by dividing an estimate of its stabilized annual income by a factor called a cap rate. Stabilized income is generally defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions. The cap rate—usually defined for each property type in a market area—is viewed by some analysts as the required rate of return stated as a percent of current income.

The use of this technique assumes that the use of either the stabilized income or the cap rate accurately captures all relevant characteristics of the property relating to its risk and income potential. If the same risk factors, required rate of return, financing arrangements, and income projections are used, explicit discounting and direct capitalization should yield the same results.

For special-use properties, new projects, or troubled properties, the discounted cash flow (net present value) method is the more typical approach to analyzing a property's value. In this method, a timeframe for achieving a stabilized, or normal, occupancy and rent level is projected. Each year's net operating income during that period is discounted to arrive at the present value of expected future cash flows. The property's anticipated sales value at the end of the period until stabilization (its terminal or reversion value) is then estimated. The reversion value represents the capitalization of all future income streams of the property after the projected occupancy level is achieved. The terminal or reversion value is then discounted to its present value and added to the discounted income stream to arrive at the total present market value of the property.

Most importantly, the analysis should be based on the ability of the project to generate income over time based upon reasonable and supportable assumptions. Additionally, the discount rate should reflect reasonable expectations about the rate of return that investors require under normal, orderly, and sustainable market conditions. For further discussion, see the “Real Estate Loans” section.

Value Correlation

The three value estimates—cost, market, and income—must be evaluated by the appraiser and correlated into a final value estimate based on the appraiser’s judgment. Correlation does not imply averaging the value estimates obtained by using the three different approaches. Where these value estimates are relatively close together, correlating them and setting the final market value estimate presents no special problem. It is in situations where widely divergent values are obtained by using the three appraisal approaches that the examiner must exercise judgment in analyzing the results and determining the estimate of market value.

Other Definitions of Value

While the Board’s appraisal regulation requires that the appraisal contain the market value of the real estate collateral, there are other definitions of value that are encountered in appraising and evaluating real estate transactions. These include the following.

Fair Value. This is an accounting term that is generally defined as the amount in cash or cash-equivalent value of other consideration that a real estate parcel would yield in a current sale between a willing buyer and a willing seller (the selling price), that is, other than in a forced or liquidation sale.⁴ According to accounting literature, fair value is generally used in valuing assets in nonmonetary transactions, troubled debt restructuring, quasi-reorganizations, and business combinations accounted for by the purchase method. An accountant generally

defines fair value as market value; however, depending on the circumstances, these values may not be the same for a particular property.

Investment Value. This is based on the data and assumptions that meet the criteria and objectives of a particular investor for a specific property or project. The investor’s criteria and objectives are often substantially different from participants’ criteria and objectives in a broader market. Thus, investment value can be significantly higher than market value in certain circumstances and should not be used in credit analysis decisions.

Liquidation Value. This assumes that there is little or no current demand for the property but the property needs to be disposed of quickly, resulting in the owner sacrificing potential property appreciation for an immediate sale.

Going-Concern Value. This is based on the value of a business entity rather than the value of just the real estate. The valuation is based on the existing operations of the business that has a proven operating record, with the assumption that the business will continue to operate.

Assessed Value. This represents the value on which a taxing authority bases its assessment. The assessed value and market value may differ considerably due to tax assessment laws, timing of reassessments, and tax exemptions allowed on properties or portions of a property.

Net Realizable Value (NRV). This is recognized under generally accepted accounting principles as “the estimated selling price in the ordinary course of business less estimated costs of completion (to the stage of completion assumed in determining the selling price), holding, and disposal.”⁵ The NRV is generally used to evaluate the carrying amount of assets being held for disposition and properties representing collateral. While the market value or future selling price are generally used as the basis for the NRV calculation, the NRV also reflects the current owner’s costs to complete the project and to hold and dispose of the property. For this reason, the NRV will generally be less than the market value.

EVALUATION REQUIREMENTS

The Board's appraisal regulation allows banks to use evaluations for real estate-related financial transactions that do not require title XI appraisals for certain exempt transactions. Exempt transactions include—

- transactions below the \$250,000 threshold,
- transactions qualifying for the exemption for the business loans of \$1 million or less where income from real estate is not the primary source of repayment, and
- subsequent transactions resulting from an existing extension of credit (for example, renewals and refinancings).

An evaluation should provide a general estimate of the value of the real estate and need not meet the detailed requirements of a title XI appraisal.⁶ An evaluation must provide appropriate information to enable the bank to make a prudent decision regarding the transaction. Moreover, a bank is not precluded from obtaining an appraisal that conforms to the regulation for any exempt transaction.

At a minimum, an evaluation should—

- describe the real estate collateral, including its condition and current use,
- describe the source(s) of information used in the analysis,
- describe the analysis and supporting information, and
- provide an estimate of the real estate's market value, with any limiting conditions.

Form and Content of Evaluations

Since a bank must tailor evaluations to provide appropriate information for different types of transactions, the content and form of evaluations will vary for different transactions. The documentation for evaluations should fully support the estimate of value and include sufficient information to understand the analysis and assumptions. There is no requirement that the evaluation be based on a particular form or valuation approach, but the analysis should be

applicable to the type of property and fully explain the value rendered.

Prudent practices require that as the bank's exposure in a real estate-related financial transaction increases, a more detailed evaluation should be performed. An evaluation for a transaction that needs a more detailed analysis should fully describe the property and discuss its use, especially for nonresidential property.

An evaluation for a transaction that requires a less-detailed analysis may be based upon information such as comparable property sales information from sales data services (for example, the multiple listing service) or current tax-assessed value in appropriate situations.⁷ An evaluation may also be based on the bank's own real estate loan portfolio experience and value estimates prepared for recent loans on comparable properties where appraisals meeting the requirements of the regulation were obtained. Regardless of the method, the bank must document its analysis and findings in the loan file.

An evaluation must be in writing, signed, dated, and include the preparer's name and address. The evaluation should include a presentation of the calculations, supporting assumptions for the estimate of value, and, if utilized, a discussion of comparable property sales.

USEFUL LIFE OF APPRAISALS OR EVALUATIONS

Since a bank may wish to use an existing appraisal or evaluation for a subsequent loan or investment, the bank's appraisal and evaluation program should include criteria to determine the validity of an existing appraisal or evaluation. When deciding if an appraisal or evaluation may be used for a subsequent transaction, a bank should determine if there has been any material change to the underlying assumptions that would affect the original estimate of value.

The useful life of an appraisal or evaluation will vary depending upon the circumstances affecting the property and the marketplace. Examples of factors that could cause material changes to reported values include the passage

6. An appraisal means the kind of specialized opinion as to the value of real estate, containing certain formal elements recognized by appraisal industry practices and standards.

7. Because assessed values for tax purposes may be a specified fraction of market value as determined by the tax assessor, tax-assessed values should be adjusted to a market-value equivalent. In cases where the assessed value does not have a reliable correlation to current value, the use of assessed value would be inappropriate as the basis for an evaluation.

of time; the volatility of the local market; the availability of financing; the inventory of competing properties; new improvements to, or lack of maintenance of, the subject or competing, surrounding properties; change in zoning; or environmental contamination.

The bank should document its information sources and analyses used to determine if an existing appraisal or evaluation remains valid and if the bank will be using the appraisal or evaluation in a subsequent transaction.

REAPPRAISALS OR REEVALUATIONS

Real estate formerly pledged as collateral to secure an extension of credit that has been acquired by a bank through foreclosure proceedings, or that has been deeded to the bank in lieu of foreclosure proceedings, qualifies for the appraisal exemption for existing extensions of credit. In these circumstances, although a bank is *not* required to obtain an appraisal, it is required to obtain an evaluation, generally before entering into the transaction. In the interest of protecting the value of its collateral, however, a bank may initiate foreclosure action and obtain the evaluation in a reasonable period of time after taking title to the property.

The bank should develop criteria for obtaining reappraisals or reevaluations as part of a program of prudent portfolio review and monitoring techniques—even when additional financing is not being contemplated. Examples of such types of situations include large credit exposures and out-of-area loans.

The decision to reappraise or reevaluate the real estate collateral for a subsequent transaction should be guided by the appraisal exemption for renewals, refinancings, and other subsequent transactions. Loan workouts, debt restructurings, loan assumptions, and similar transactions involving the addition or substitution of borrowers may qualify for the exemption for renewals, refinancings, and other subsequent transactions. Use of this exemption depends upon the condition and quality of the loan, the soundness of the underlying collateral, and the validity of the existing appraisal or evaluation.

A bank may renew or refinance a loan based on a valid appraisal or evaluation if the planned future use of the property is consistent with the use identified in the appraisal or evaluation. However, if the property has reportedly appre-

ciated because of a planned change in use, such as rezoning, an appraisal would be required for a federally related transaction unless another exemption applied, such as the amount financed is below the appraisal threshold.

While the Board's appraisal regulation generally allows appropriate evaluations of real estate collateral in lieu of an appraisal for loan renewals and refinancings, in certain situations an appraisal is required. If new funds are advanced over reasonable closing costs, a bank would be expected to obtain a new appraisal for the renewal of an existing transaction when there is a material change in market conditions that threatens the bank's real estate collateral protection.

For loan workouts involving the modification of the terms and conditions of an existing extension of credit, including the acceptance of new or additional real estate collateral, that facilitates the orderly collection of the credit or reduces the bank's risk of loss, a reappraisal or reevaluation may be prudent, even if it is obtained after the modification occurs. In a troubled-loan situation, a reappraisal would not be required when a bank advances funds to protect its interest in a property, such as to repair damaged property, because these funds should be used to restore the damaged property to its original condition.

QUALIFICATIONS CRITERIA FOR APPRAISERS AND INDIVIDUALS PERFORMING EVALUATIONS

The accuracy of an appraisal or evaluation depends on the competence and integrity of the individual performing the appraisal or evaluation, as well as the individual's expertise at developing and interpreting pertinent data for the subject property. The individual should have adequate training, experience, and knowledge of the local real estate market to make sound judgments about the value of a particular property. The level of training, experience, and knowledge should be commensurate with the type and complexity of the property to be valued. Additionally, the individual should be independent of the credit decision, have no interest in the property being valued, and have no affiliations or associations with the potential borrower. Absent absolute lines of independence, a bank must be able to demonstrate that

it has prudent safeguards in place to isolate its collateral-evaluation process from influence or interference from the loan-production process.

Appraiser Qualifications

Under title XI (12 USC 1331), two classifications of appraisers were identified to be used in federally related transactions: state-certified appraiser and state-licensed appraiser. For a certified appraiser, the statute contemplated that the states would adopt similar standards for certification based on the qualification criteria of the Appraiser Qualifications Board of the Appraisal Foundation. These standards set forth minimum educational, testing, experience, and continuing education requirements. For a licensed appraiser, the states have some latitude in establishing qualification standards provided that the criteria are adequate to protect federal financial and public policy interest.

The Appraisal Subcommittee of the FFIEC is responsible for monitoring the states for compliance with the statute. The Board also has the authority to impose additional certification and licensing requirements to those standards adopted by a given state.

Selection of an Appraiser

An independent appraisal is one in which the appraiser is not participating in the administration of the credit or in the approval of the transaction and has no interest, financial or otherwise, in the property. In certain instances involving small banks, officers and directors who perform appraisals must take appropriate steps to ensure independence from the transaction under consideration.

In selecting an appraiser for an appraisal assignment, a bank is expected to consider whether the individual holds the proper state certification or license and has the appropriate experience and educational background to complete the assignment. Financial institutions may not exclude a qualified appraiser from consideration for an appraisal assignment solely because the appraiser lacks membership in a particular appraisal organization or does not hold a particular designation from an appraisal association, organization, or society.

In that regard, banks are expected to treat all appraisers fairly and equitably in determining whether the institution will use the services of a particular appraiser. Generally, banks have established procedures for selecting appraisers and maintaining an approved appraiser list. The practice of preapproving appraisers for ongoing appraisal work and maintaining an approved appraiser list is acceptable so long as all appraisers are required to follow the same approval process. However, a bank that requires appraisers who are not members of a particular appraisal organization to formally apply, pay an application fee, and submit samples of previous appraisal reports for review—but does not have identical requirements for appraisers who are members of certain appraisal organizations—would be viewed as having a discriminatory selection process.

Appraisals Performed by Certified or Licensed Appraisers

A bank is required to use a certified appraiser for—

- all federally related transactions over \$1 million,
- nonresidential federally related transactions more than \$250,000, and
- complex residential federally related transactions more than \$250,000.⁸

A bank may use either a state-certified or a state-licensed appraiser for noncomplex residential federally related transactions that are under \$1 million.

Other Appraiser Designations

Some states have adopted other appraiser designations that may cause confusion about whether a particular appraiser holds the appropriate designation for a given appraisal assignment. Additionally, some states use designations such as “certified residential” appraiser and “certified general” appraiser, which leads to further confusion. Other states have no speci-

⁸ Complex one- to four-family residential property appraisal means that the property to be appraised, the form of ownership, or market conditions are atypical.

fied license designation but use the term “certified residential,” based on the standards for licensing. For this reason, the bank needs to understand the qualifications criteria set forth by the state appraiser regulatory body and whether these standards are the equivalent to the federal designations as accepted by the Appraisal Subcommittee.

Currently, the Appraisal Subcommittee has recognized four state appraiser designations: certified general, certified residential, licensed, and transitional licensed. For the certified residential appraiser, the minimum qualification standards are those established by the Appraiser Qualifications Board for “certified residential real estate appraiser.” Under the Board’s regulation, a certified residential appraiser would be permitted to appraise real estate in connection with a federally related transaction designated for a “certified” appraiser so long as the individual is competent for the particular appraisal assignment.

The Appraisal Subcommittee and the Board have also expressed their willingness to recognize a transitional license, which would allow a state to issue a license to an appraiser provided that the individual has passed an examination and has satisfied either the education or experience requirement. A transitional-licensed appraiser is permitted to appraise real estate collateral in connection with a federally related transaction as if licensed. The transitional-licensed appraiser is expected to complete his or her education or experience requirement within a set time frame or the license expires. The recognition of a transitional license was believed to be necessary to ease the initial problems and inefficiencies resulting from the establishment of a new regulatory program. The Appraisal Subcommittee has advised the states that the use of the transitional license should be phased out over time once the appraiser regulatory program is fully established. As a result, use of the transitional license and the applicable time frame will vary from state to state.

Qualifications of Individuals Who May Perform Evaluations

Evaluations may be performed by a competent person who has experience in real estate-related

activities, which includes but is not limited to appraisals, real estate lending experience, real estate consulting, and real estate sales. A bank may also augment in-house expertise by hiring an outside consultant familiar with a certain market or a particular type of real estate. The bank’s evaluation procedures should have established standards for selecting qualified individuals to perform evaluations and for confirming their qualifications and independence to perform an evaluation for a particular transaction. An individual performing an evaluation need not be licensed or certified. However, if a bank desires, it may use state-licensed or -certified appraisers to prepare evaluations.

SUPERVISORY POLICY

A bank’s appraisal and evaluation policies and procedures are reviewed as part of the examination of an institution’s overall real estate-related activities. This includes a review of the procedures for selecting an individual for a particular appraisal or evaluation assignment and confirming that the individual is qualified, independent, and, if applicable, licensed or certified to undertake the assignment. If an institution maintains a list of qualified real estate appraisers who are acceptable for the bank’s use, the examiner should ascertain whether the board of directors or senior management has reviewed and approved the list.

If a bank is in troubled condition that is attributable to underwriting problems in its real estate loan portfolio, the Board may require the bank to obtain appraisals for all *new* real estate-related financial transactions below the threshold that are not subject to another exemption. The Reserve Bank will determine if a particular bank will have to obtain appraisals below the threshold.

When analyzing individual credits, examiners look at appraisals or evaluations to determine if the methods, assumptions, findings, and conclusions are reasonable and in compliance with the Board’s rule, policies, and supervisory guidelines. Examiners should not challenge underlying assumptions, including discount rates and capitalization rates used in appraisals, that differs slightly from norms that would generally be associated with the property under review. Additionally, an examiner is not bound to accept the results of the appraisal or evaluation, regardless of whether a new appraisal or evaluation was

requested during the examination. If an examiner concludes that an appraisal or evaluation is deficient for any reason, that fact will be taken into account in reaching a judgment on the quality of the credit.

When the examiner can establish that the underlying facts or assumptions are inappropriate and can support alternative assumptions, the examiner may adjust the estimated value of the property for credit-analysis purposes. It is important to emphasize that an examiner's overall analysis and classification of a credit may be based on other credit or underwriting standards, even if the loan is secured by real property whose value is supported by an appraisal or evaluation. (See sections 2060.1, "Classification of Credits," and 2090.1, "Real Estate Loans," for further discussion of the examiner's assessment of value for loan classification.)

Significant failures to meet standards and procedures as outlined above will be criticized and corrective action will be required. Furthermore, inadequate appraisal and evaluation procedures may be considered an unsafe and unsound banking practice if the failure to accurately reflect the value of assets on a timely basis misrepresents the bank's financial condition. In this situation, formal corrective measures will be pursued as appropriate.

The appraisal regulation and guidelines require that banks use the services of qualified, independent certified or licensed appraisers to perform appraisals. Furthermore, a bank that knowingly uses the services of an individual who is not properly certified or licensed to perform an appraisal in connection with a federally related transaction is in violation of applicable law. Any action of a state-certified or -licensed appraiser that is contrary to the Board's appraisal regulation or applicable law should be reported by the examiner to the Federal Reserve Bank for referral to the appropriate state appraiser regulatory agency for investigation.

INDEPENDENT APPRAISAL AND EVALUATION FUNCTIONS

On October 27, 2003, the federal bank and thrift agencies⁹ (the agencies) jointly issued the state-

9. The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the Office

ment Independent Appraisal and Evaluation Functions. The statement addresses concerns about the independence of the collateral-valuation process that were identified during examinations. This statement applies to all real estate-related financial transactions originated or purchased by a regulated institution for its own portfolio or as assets held for sale. It further clarifies and should be reviewed in conjunction with the agencies' appraisal and real estate lending regulations¹⁰ and the Interagency Appraisal and Evaluation Guidelines (the guidelines).¹¹

An institution's board of directors is responsible for reviewing and adopting policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program (the program) for all of its lending functions. The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units. Concerns about the independence of real estate appraisals and evaluations include the risk that appraisals by biased or compromised appraisers may undermine the integrity of credit-underwriting processes. More broadly, an institution's lending functions should not have undue influence that might compromise the program's independence.

Selecting Individuals to Perform Appraisals or Evaluations

The guidelines establish minimum standards for an effective program, including standards for selecting individuals who may perform appraisals or evaluations. Among other considerations, the selection criteria must provide for the independence of the individual performing the appraisal or evaluation. That is, the individual has neither a direct nor indirect interest, finan-

of Thrift Supervision (OTS), and the National Credit Union Administration (NCUA).

10. OCC: 12 CFR 34, subparts C and D; FRB: 12 CFR 208, subpart E and appendix C, and 12 CFR 225, subpart G; FDIC: 12 CFR 323 and 12 CFR 365; OTS: 12 CFR 564, 12 CFR 560.100, and 12 CFR 560.101; and NCUA: 12 CFR 722.5.

11. The interagency guidelines may be found in SR-94-55 for the FRB, the OCC's *Comptroller's Handbook for Commercial Real Estate and Construction Lending*; FIL-74-94 for the FDIC; and Thrift Bulletin 55a for the OTS. NCUA was not a party to the guidelines; however, the NCUA applies the content to credit unions, when applicable.

cial or otherwise, in the property or transaction. Institutions also need to ensure that the individual selected is competent to perform the assignment. Consideration should be given to the individual's qualifications, experience, and educational background. Selection occurs when, based on an oral or written agreement, the individual accepts the assignment to appraise or evaluate a particular property. Moreover, appraisal or evaluation preparatory work should not commence until the institution finalizes the selection process.

The appraisal regulations address appraiser independence and require that an institution, or its agent, directly engage the appraiser. The only exception to this requirement is that an institution may use an appraisal prepared for another financial services institution, provided that the institution determines that the appraisal conforms to the agencies' appraisal regulations and is otherwise acceptable. Independence is compromised when an institution uses an appraiser who is recommended by the borrower or allows the borrower to select the appraiser from the institution's list of approved appraisers.

Institutions may not use an appraisal prepared by an individual who was selected or engaged by a borrower. An institution's use of a borrower-ordered appraisal violates the agencies' appraisal regulations. Likewise, institutions may not use "readdressed appraisals"—appraisal reports that are altered by the appraiser to replace any references to the original client with the institution's name. Altering an appraisal report in a manner that conceals the original client or intended users of the appraisal is misleading and violates the agencies' appraisal regulations and the Uniform Standards of Professional Appraisal Practice (USPAP).

It is also important to ensure that the program is safeguarded from internal influence and interference from an institution's loan-production staff. Individuals independent of the loan-production area should oversee the selection of appraisers and individuals providing evaluation services. The agencies recognize that it may not be possible or practical for small institutions to separate the collateral-valuation and loan-production processes. To ensure independence, loan officials, officers, or directors with the responsibility for ordering appraisals and evaluations should not have sole approval authority for granting the loan request.

When selecting and engaging appraisers, an institution needs to identify the assignment and

order the appropriate appraisal or evaluation, as discussed in the guidelines. To foster control and accountability, institutions are encouraged to use written engagement letters when ordering appraisals, especially for large, complex, or out-of-area commercial real estate properties. An institution should include a copy of the written engagement letter in the permanent loan file. An appraiser may also incorporate an engagement letter in the appraisal report. The engagement letter confirms that the assignment was made in a manner that complies with the institution's procedures and the appraisal regulations and guidelines.

Appraisal and Evaluation Compliance Reviews

An institution's appraisal and evaluation program must maintain effective internal controls that promote compliance with program standards and the appraisal regulations and guidelines. Internal controls should, among other criteria, confirm that appraisals and evaluations are reviewed by qualified and adequately trained individuals who are not involved in the loan-production processes. The institution's standards for and the depth of such reviews should reflect the risk of the transaction and the process through which the appraisal or evaluation is obtained. An institution should establish more in-depth review procedures for appraisals of large, complex, or out-of-area commercial real estate credits and for those appraisals and evaluations that are ordered by agents of the institution, such as loan brokers or another financial services institution.

Even in small institutions when absolute lines of independence cannot be achieved, effective internal controls should be implemented to ensure that no single person has sole authority to render credit decisions involving loans on which they ordered or reviewed the appraisal or evaluation. Further, lending officials, officers, or directors should abstain from any vote or approval involving loans for which they performed the appraisal or evaluation.

Supervisory Approach

Examiners will review an institution's standards of independence, taking into consideration the size of the institution and the nature and

complexity of its real estate–related activities. Examiners will consider whether policies and procedures are comprehensive and applied uniformly to all units engaging in federally related transactions.

If an institution suspects that a licensed or certified appraiser is violating applicable laws or USPAP, or is otherwise engaging in other unethical or unprofessional conduct, the institution should refer the matter directly to the appropriate state appraiser regulatory authorities. Examiners finding evidence of unethical or unprofessional conduct, including improperly prepared appraisals or evaluations and read-dressed appraisals, should forward their findings and their recommendations to their supervisory office for appropriate disposition and referral to the state appraiser regulatory authority, as necessary. Institutions and institution-affiliated parties, including lenders, staff, and fee appraisers, are reminded that they could be subject to enforcement actions, which include removal/prohibition orders, cease-and-desist orders, and civil money penalties, for violations of the agencies' appraisal and real estate lending regulations.

Interagency Responses to Questions on the Agencies' Appraisal Regulations and on the Interagency Statement on Independent Appraisal and Evaluation Functions

On March 22, 2005, the Federal Reserve and the other federal financial institutions regulatory agencies issued interpretive responses (in a question-and-answer format) to questions raised by federally regulated financial institutions about the agencies' real estate appraisal regulations. The topics include—

- selecting an appraiser,
- ordering an appraisal,
- accepting a transferred appraisal,
- reviewing appraisals, and
- evaluation and other appraisal topics.

The interpretive responses address common questions on the requirements of the appraisal regulations and the October 2003 interagency statement, Independent Appraisal and Evaluation Functions (the interagency statement).¹² (See SR-05-5 and its attachment.)

On September 8, 2005, the Federal Reserve and other federal financial institutions regulatory agencies jointly issued additional interpretive responses (also in a question-and-answer format) to assist regulated institutions in complying with the agencies' appraisal regulations and real estate lending requirements when financing residential construction in a tract development.¹³ (See SR-05-14 and its attachment.) The topics include the—

- definition of residential tract development, including clarification of a residential unit and pre-sold unit;
- appraisal requirements for residential tract development, raw land, residential lots, and condominium buildings;
- clarification of loan amount and collateral value for purposes of calculating the loan-to-value ratio for residential tract development loans;
- acceptable use of an appraisal of a model home;
- underwriting characteristics of a revolving line of credit in which a borrowing base sets the availability of funds to the borrower; and
- appraisal requirements for transactions financing the construction of single-family homes in a residential tract development.

Refer to these interpretive documents when questions arise about the appraisal regulations, the interagency statement, and appraisals involving residential tract lending.

12. See also the Board's appraisal regulations (12 CFR 208 subpart E and 12 CFR 225 subpart G) and related guidance, including SR-94-55 and SR-03-18.

13. See the Interagency Appraisal and Evaluation Guidelines (SR-94-55) and the real estate lending standards regulation and guidelines, 12 CFR 208 subpart E and appendix C.

Real Estate Appraisals and Evaluations

Examination Objectives

Effective date November 2006

Section 4140.2

1. To determine whether policies, practices, procedures, and internal controls regarding real estate appraisals and evaluations for real estate–related financial transactions are adequate.
2. To determine whether bank officers and employees are operating in conformance with the board of director’s appraisal policies.
3. To determine that appraisals performed in connection with federally related transactions comply with the minimum standards of the Board’s regulation and the Uniform Standards of Professional Appraisal Practice.
4. To determine that appraisers used in connection with federally related transactions are certified or licensed as appropriate.
5. To determine that appraisers are competent to render appraisals in federally related transactions, and are independent of the transaction, or other lending, investment, or collection functions as appropriate.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations or noncompliance with provisions of supervisory guidelines have been noted.

Real Estate Appraisals and Evaluations

Examination Procedures

Effective date November 2006

Section 4140.3

1. On the basis of the evaluation of internal controls and the work performed by internal or external auditors, determine the scope of the examination.
2. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Obtain a listing of any deficiencies noted in the latest review performed by internal or external auditors and determine if appropriate corrections have been made.
 - a. Provide copies of the bank's appraisal and evaluation policies and procedures to examiners assigned to functional areas in which real estate-related transactions may require the services of an appraiser or evaluator.
 - b. When individual real estate-related transactions such as loan or other real estate owned (OREO) transactions are examined, appraisals and evaluations should be reviewed for compliance with the Board's appraisal regulation, the interagency appraisal guidelines, and the bank's appraisal and evaluation programs.
 - c. When real estate-related transactions are examined on a portfolio basis, the appraisal and evaluation processes for the activity should be examined. Examiners should determine whether these processes ensure that appraisals and evaluations comply with the Board's appraisal regulation, the interagency appraisal guidelines, and the bank's appraisal and evaluation programs.
3. Review the appraisal and evaluation program and determine the following:
 - a. The board of directors has adopted policies and procedures that—
 - establish and maintain an effective, independent appraisal and evaluation program for all of the institution's lending functions;
 - are sufficiently comprehensive; and
 - are applied uniformly to all units engaged in federally related transactions.
 - b. The programs include appraisal and evaluation critique procedures.
 - c. The appraisal and evaluation programs establish the selective criteria the bank uses to select, evaluate, monitor, and ensure the independence of the individuals who perform or critique real estate appraisals and evaluations.
4. Evaluate the bank's appraisal and evaluation program with respect to the following:
 - a. the adequacy of written appraisals and evaluations
 - b. the manner in which bank officers are operating in conformance with established policy
 - c. internal control deficiencies or exceptions, including lack of independence of the collateral-appraisal and -evaluation process from the loan-production function
 - d. the integrity of the appraisal and evaluation process, including appraisal and evaluation compliance procedures
 - e. the integrity of individual appraisals and evaluations, including the adequacy, reasonableness, and appropriateness of the methods, assumptions, and techniques used and whether the appraisals and evaluations comply with the Board's appraisal regulation and interagency real estate appraisal and evaluation guidelines

- f. the eligibility of the bank to assign a 50 percent risk weight to certain one- to four-family residential mortgage loans for risk-based capital purposes (See section 3020.1, “Assessment of Capital Adequacy.”)
 - g. recommended corrective action when policies, practices, or procedures are found to be deficient
 - h. the degree of violations, if any, of the Board’s appraisal regulation and the extent of noncompliance with the interagency appraisal guidelines, if noted
 - i. other matters of significance:
 - misrepresentation of data, such as the omission of information on favorable financing, seller concessions, sales history, feasibility, zoning, easements, or deed restrictions
 - inadequate techniques of analysis, that is, failure to use the cost, comparable-sales, or income approach in an appraisal when the approach is appropriate for the type of property
 - use of dissimilar comparables in the comparable-sales approach to valuation, for example, the age, size, quality, or location of the comparable is significantly different from the subject property, making reconciliation of value difficult
- underestimation of factors such as construction cost, construction period, lease-up period, and rent concessions
 - use of best-case assumptions for the income approach to valuation without performing a sensitivity analysis on the factors that would identify the lender’s downside risk
 - overly optimistic assumptions such as a high absorption rate in an overbuilt market
 - the nonreconciliation of demographic factors (such as existing housing inventory, projected completions, and expected market share to the value rendered) and the discussion of demographic factors as background information
5. Report any instances of questionable conduct by appraisers, along with the supporting documentation, to the Reserve Bank for possible referral to the appropriate state appraisal authorities.
 6. Update workpapers with any information that will facilitate future examinations.

Real Estate Appraisals and Evaluations

Internal Control Questionnaire

Effective date November 2006

Section 4140.4

Review the bank's internal controls, policies, practices, and procedures for real estate appraisals and evaluations. The bank's system should be accurately and fully documented and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written appraisal and evaluation policies that define the following:
 - a. bank management's responsibility for selecting, evaluating, monitoring, and ensuring the independence of the individual who is performing the appraisal or evaluation?
 - b. the basis for selecting staff appraisers and engaging fee appraisers for a particular appraisal assignment and for ensuring that the individual is independent of the transaction; possesses the requisite qualifications, expertise, and educational background; and has the required state certification or license if applicable?
 - c. procedures for when to obtain appraisals and evaluations?
 - d. procedures for when to obtain an independent reappraisal or reevaluation, including the frequency and scope?
 - e. appraisal and evaluation compliance procedures to determine that appraisals and evaluations are reviewed by qualified and adequately trained individuals who are not involved in the loan-production process and that the appraisals comply with the Board's regulation, policies, and guidelines?
 - f. appraisal and evaluation review procedures to ensure that the bank's appraisals and evaluations are consistent with the standards of the Uniform Standards of Professional Appraisal Practice (USPAP) and the Board's regulation and guidelines?
 - g. internal controls to prevent officers, loan officers, or directors who order or review

appraisals and evaluations from having the sole authority for approving the requested loans?

2. Does the board of directors annually review its appraisal, evaluation, and review policies and procedures to ensure that the appraisal and evaluation policies and procedures meet the needs of the bank's real estate lending activity?

APPRAISALS

- *1. Are appraisals in writing, dated, and signed?
- *2. Does the appraisal meet the minimum standards of the Board's regulation and USPAP, including the appraisal's purpose, market value, effective date, and marketing period and the sales history of the subject property? Does the appraisal—
 - a. reflect a valuation using the cost, income, and comparable-sales approaches?
 - b. evaluate and correlate the three approaches into a final value estimate based on the appraiser's judgment?
 - c. explain why an approach is inappropriate and not used in the appraisal?
 - d. fully support the assumptions and the value rendered through adequate documentation?
- *3. Are appraisals received before the bank makes its final credit or other credit decision (for example, is the date the loan committee approved the credit later than the date of the appraisal)?
- *4. If the bank is depending on an appraisal obtained for another federally regulated financial institution as support for its transaction, does the bank have appraisal review procedures to ensure that the appraisal meets the standards of the appraisal regulation? (These types of transactions would include loan participations and mortgage-backed securities.)
- *5. If an appraisal for one transaction is used for a subsequent transaction, does the bank sufficiently document its determination that the appraiser is independent, the appraisal complies with the appraisal regulations, and the appraisal is still valid?

APPRAISERS

1. Are appraisers fairly considered for assignments regardless of their membership or lack of membership in a particular appraisal organization?
2. Before they accept an assignment, do appraisers have the requisite qualifications, education, and experience to complete the appraisal?
3. The following items apply for large, complex, or out-of-area commercial real estate properties:
 - a. Are written engagement letters used when ordering appraisals, and are copies of the letters retained?
 - b. Are more in-depth review procedures used for appraisals and evaluations ordered by agents of the bank?
4. Are appraisers independent of the transaction?
 - a. Are staff appraisers independent of the lending, investment, and collection functions and not involved, except as an appraiser, in the federally related transaction? Has a determination been made that they have no direct or indirect interest, financial or otherwise, in the property?
 - b. Are fee appraisers engaged directly by the bank or its agent? Has a determination been made that they have no direct or indirect interest, financial or otherwise, in the property or transaction?
 - c. Are any appraisers recommended or selected by the borrower (applicant)?
5. If staff appraisers are used, does the bank periodically have independent appraisers make test appraisals to check the bank's knowledge of trends, values, and markets?
6. If fee appraisers are used by the bank, does the bank investigate their qualifications, experience, education, background, and reputations?
7. Is the status of an appraiser's state certification or license verified with the state appraiser regulatory authority to ensure that the appraiser is in good standing?

8. Are fee appraisers paid the same fee whether or not the loan is granted?
9. If the transaction is outside the local geographic market of the bank, does the bank engage an appraiser who has knowledge of the market where the real estate collateral is located?

EVALUATIONS

1. Are the individuals performing evaluations independent of the transaction?
- *2. Are the evaluations required to be in writing, dated, and signed?
- *3. Does the bank require sufficient information and documentation to support the estimate of value and the evaluator's analysis?
- *4. If an evaluation obtained for one transaction is used for a subsequent transaction, does the bank sufficiently document its determination that the evaluation is still valid?
- *5. Are evaluations received before the bank enters into a commitment?
- *6. If the bank is depending on an evaluation obtained for another federally regulated financial institution as support for its transaction, does the bank have evaluation review procedures to ensure that the evaluation meets the Board's regulation and guidance?

EVALUATORS

1. Are individuals who perform evaluations competent to complete the assignment?
2. Are evaluations prepared by individuals who are independent of the transaction?

REAPPRAISALS AND REEVALUATIONS

1. Does the bank follow a formal reappraisal and reevaluation program?
2. Does the bank sufficiently document and follow its criteria for obtaining reappraisals or reevaluations?

The Federal Reserve System relies on the timely and accurate filing of regulatory reports by domestic and foreign financial institutions. Data collected from regulatory reports facilitate early identification of problems that can threaten the safety and soundness of reporting institutions; ensure timely implementation of the prompt-corrective-action provisions required by law; and serve other legitimate supervisory purposes. Certain regulatory report information is used for public disclosure so investors, depositors, and creditors can better assess the financial condition of the reporting banks. Information that comes primarily from the Consolidated Reports of Condition and Income (Call Reports) is used to prepare the Uniform Bank Performance Report (UBPR), which employs ratio analyses to detect unusual or significant changes in a bank's financial condition as of the reporting dates. The UBPR is also used to detect changing patterns of behavior in the entire banking system; consequently, any inaccurate data in the regulatory reports may result in ratios that conceal deteriorating trends in the bank or the industry.

Generally, all regulatory reports of financial condition and income that domestic and foreign banking organizations file with the Federal Reserve are required by statute or regulation. The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) amended various banking statutes to enhance the Federal Reserve's authority to assess civil money penalties against state member banks, bank holding companies, and foreign institutions that file "late," "false," or "misleading" regulatory reports. The civil money penalties also can be assessed against individuals who cause or participate in such filings.

The Federal Reserve has identified a late regulatory report as an official copy of a report that is not received by the Reserve Bank or its designated electronic collection agent in a timely manner. Each bank must file its Call Report in one of the following two ways:

- The institution may complete its reports in paper form and arrange with a software vendor or another party to convert its paper reports into the electronic format that can be processed by the CDR. The software vendor or other party then must electronically submit the data file containing the bank's Call Report to the CDR.
 - The institution may complete its reports in paper form and arrange with a software vendor or another party to convert its paper reports into the electronic format that can be processed by the CDR. The software vendor or other party then must electronically submit the data file containing the bank's Call Report to the CDR.
- The filing of a Call Report in paper form directly with the FDIC or with the appropriate Federal Reserve Bank is not an acceptable method of submission.
- Reserve Banks will monitor the filing of all regulatory reports to ensure that they are filed, as required, on a timely basis and that they are accurate and not misleading. The Federal Reserve System's Committee on Current Series Reporting, which consists of staff from the statistics functions at each of the Reserve Banks and at the Board, will play an active role in this process. (See SR-04-15.) Many reporting errors can be screened through validity edit checks. Also, Reserve Banks have additional monitoring procedures that they use to confirm the timely submission of reports and to confirm that the reports are accurate and not misleading. On a case-by-case basis, the Reserve Banks will continue to determine if and when a financial institution or other banking organization is a chronic late, inaccurate, or false reporter; in these cases, the Banks will determine what supervisory action, if any, to recommend for a noncompliant reporter.
- The filing of a false report generally involves the submission of mathematically incorrect data, such as addition errors or transpositions, or the submission of a regulatory report without its appropriate schedules. Conversely, the filing of a misleading report involves some degree of negligent behavior on the part of the filer that results in the submission of inaccurate information to the Federal Reserve.

REVIEW AND REILING OF REGULATORY REPORTS

Review of regulatory reports involves determining whether the management of the member bank has submitted all required reports to the Federal Reserve in a timely and accurate man-

ner. The examiner assigned to a specific area of examination is responsible for reviewing the reports relating to that area and for verifying that they are accurate and meet statutory and regulatory requirements. If the examiner finds a material difference in the reports, management should be instructed to refile corrected copies, if appropriate.

Examiners should discuss on the “Examination Conclusions and Comments” and “Matters Requiring Board Attention” pages of the examination report material errors or the filing of chronically late reports. (See section 6000.1.) They should also discuss with Reserve Bank staff any regulatory report filing that is considered misleading, such a report could lead to the issuance of criminal referrals against the involved individuals. In addition, management should be reminded that civil money penalties or other enforcement proceedings could occur as a result of chronically late or false regulatory report filing.

Banks should maintain effective manual or automated internal systems and procedures to ensure that reporting meets the appropriate regulatory requirements. Banks should develop clear, concise, and orderly workpapers to support the compilation of data. Preparation of proper workpapers provides not only a logical tie between report data and the bank’s financial records but also facilitates accurate reporting and verification. Ideally, as part of an effective internal control program, bank management should implement a procedure to verify the compilation of the data. At a minimum, an independent person or department should verify the data that have been compiled for inclusion in the report.

A bank’s internal control and audit programs for regulatory reports should be sufficient to ensure that all required reports are submitted on time and are accurate. The specific internal controls a bank employs to meet those objectives depend largely on the volume of reports, the scope of a bank’s operations, and the complexity of its accounting system.

COMMONLY REQUIRED REGULATORY REPORTS

This section describes the regulatory reports most commonly required either to be submitted by the member bank to the Federal Reserve Bank or the Board, or to be maintained by

the member bank for review during an examination.

Consolidated Reports of Condition and Income

Under 12 USC 324 and the Board’s Regulation H, all state member banks are required to file Consolidated Reports of Condition and Income (Call Reports) as of the last day of each calendar quarter. The specific reporting requirements, including the reporting form to be used (for example, FFIEC 031 or FFIEC 041), depend on the asset size of the bank and whether it has a foreign office. Details of the appropriate reporting guidelines, along with the specific reporting form to be filed, are found in the instructions for preparation of Reports of Condition and Income. The reporting forms and instructions can be found on the FFIEC’s website: www.ffiec.gov.

The bank should submit completed Call Reports to the CDR no later than 30 calendar days after the report date. Any bank with more than one foreign office, other than a shell branch or international banking facility, must submit data to the CDR no later than 35 days after the report date. State member banks are *not* required to publish their Reports of Condition or Income, according to federal statute. However, a state member bank may be required to publish its Report of Condition under state law.

The Report of Condition provides consolidated, detailed financial information on assets, liabilities, capital, and off-balance-sheet activity, which permits a uniform analysis and comparison of the reporting bank’s data to that of other insured banks. The report also aggregates certain figures on loans to executive officers, directors, principal shareholders, and their related interests. The Report of Income provides information such as consolidated earnings, changes in capital accounts and the allowance for loan and lease losses, and charge-offs and recoveries.

The examiner should carefully review both reports to ensure that all pertinent data have been reported and are properly categorized in accordance with the instructions. To understand a particular bank’s Call Report, the examiner must understand the bank’s accounting methods as well as the information located in, and the relationships between, the bank’s general books and subsidiary ledgers. This understanding can be obtained only by a careful review of the

workpapers used in the preparation of these reports and their supplementary schedules.

REPORTS REQUIRED BY THE MONETARY CONTROL ACT OF 1980 AND THE INTERNATIONAL BANKING ACT OF 1978

The Federal Reserve has established a basic deposits-reporting framework for administering Regulation D, Reserve Requirements of Depository Institutions, and for constructing, analyzing, and controlling the monetary and reserves aggregates. The framework consists of four categories of deposit reporting. Every institution is placed into one of these four categories for deposit reporting purposes.¹ In general, the larger the institution, the more detailed or more frequent the institution will have to report.

The first two reporting categories, characterized as “detailed reporting,” apply to those institutions that are not exempt from reserve requirements (“non-exempt” institutions). The last two reporting categories, characterized as “reduced reporting,” apply to institutions that are exempt from reserve requirements (“exempt” institutions). The reserve-requirement “exemption amount” is the amount of total reservable liabilities at each depository institution that is subject to a zero-percent reserve requirement. The exemption amount is used to make the distinction between detailed deposit reporting and reduced reporting.

- Institutions with net transaction accounts equal to or less than the exemption amount over prescribed periods are exempt from reserve requirements and are subject to reduced reporting (categories 3 and 4).
- Institutions with net transaction accounts greater than the exemption amount over prescribed periods are *not* exempt from reserve requirements and are subject to detailed reporting (categories 1 and 2).

Both measures are indexed annually; see Regulation D for the appropriate exemption and cutoff amounts.

The exemption amount and the deposit cutoff for any one calendar year are used by the

1. Depository institutions that are required to maintain reserves are defined in section 204.1(c) of Regulation D (12 CFR 204.1(c)).

Federal Reserve to determine deposit-reporting panels in July, effective for September of that year, which continues to September of the following year. All deposit reports are mandatory.

Reporting Categories

“Non-exempt” institutions subject to detailed reporting file the Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900). Institutions file the report either weekly or quarterly, generally depending on the level of an institution’s deposits. The report is used in the calculation of reserve requirements.

“Exempt” institutions subject to “reduced reporting” file either the Annual Report of Deposits and Reservable Liabilities (FR 2910a) or no report at all, depending on their deposit levels.

Report forms and instructions can be found on the Federal Reserve Board’s website.

Category One

Depository institutions (other than banking Edge and agreement corporations and U.S. branches and agencies of foreign banks) with net transaction accounts greater than the exemption amount and with a sum of total transaction accounts, savings deposits, and small time deposits greater than or equal to the nonexempt deposit cutoff, or with a sum of total transaction accounts, savings deposits, and small time deposits greater than or equal to the reduced reporting limit, regardless of the amount of net transaction accounts, will be required to submit the FR 2900 weekly.

Banking Edge and agreement corporations and U.S. branches and agencies of foreign banks, regardless of size, must also submit the FR 2900 weekly. They are not eligible for reporting categories 2 through 4 below.

The weekly reporting period for the FR 2900 covers the seven-day period beginning on Tuesday and ending the following Monday.

Category Two

Depository institutions with net transaction accounts greater than the exemption amount and with a sum of total transaction accounts, savings deposits, and small time deposits less than the

nonexempt deposit cutoff are required to submit the FR 2900 once each quarter, in March, June, September, and December.

The quarterly reporting period for the FR 2900 covers the seven-day period beginning on the third Tuesday of the report month and ending the following Monday.

Category Three

Depository institutions with net transaction accounts less than or equal to the exemption amount and with total deposits greater than the exemption amount but with total transaction accounts, savings deposits, and small time deposits below the reduced reporting limit are required to submit the FR 2910a. This report is filed as of June 30 each year.

Category Four

Depository institutions whose net transaction accounts and total deposits are less than or equal to the exemption amount are not required to submit any Federal Reserve deposit report as long as data on the level of an institution's deposits are readily available on a condition report.

Institutions for which deposit data are not readily available on a condition report will be required to submit the FR 2910a report to determine the appropriate reporting category.

See page IV-4 and IV-5 of the Federal Reserve's *Reserve Maintenance Manual* at <http://www.frb services.org/files/regulations/pdf/rmm.pdf>.

Annual Panel Determinations

Each year the Federal Reserve reviews the institutions in the four reporting categories, and reassignments of institutions ("panel shifts") are determined each July and become effective in September. The panel shifts reflect movements in each individual depository institution's total deposits or total reservable liabilities across the prevailing boundaries (the exemption amount and the deposit cutoff) that separate the reporting categories. Documentation is available on the Federal Reserve's procedures (including the reports, data items, and reporting periods) for

measuring an institution's total reservable liabilities and total deposits against the prevailing cutoffs for the annual panel determinations. Two special types of panel shifts are described below.

- *Voluntary shifts.* In July, the Federal Reserve informs each institution of its particular reporting requirement effective for September of that year to September of the following year. Any depository institution assigned to one particular category may elect instead to report deposits (and, if appropriate, to maintain reserves) in accordance with a higher-level category. (For example, an institution assigned to the FR 2900 quarterly reporting category may elect instead to report the FR 2900 weekly.) However, any such voluntary shifts may take place only once a year during the normal September panel shifts. Voluntary shifts to a lower-level category are not permitted.
- *Fast-growing institutions.* The Federal Reserve may require a depository institution that is experiencing above-normal growth to report on a more detailed or frequent basis before the September panel shifts.

For more detailed information, see the Federal Reserve's "Reserve Maintenance Manual."

REPORTS REQUIRED UNDER REGULATION H AND THE SECURITIES EXCHANGE ACT OF 1934

Section 12(i) of the Securities Exchange Act of 1934 (the 1934 act), as amended by the Sarbanes-Oxley Act of 2002, vests the Board with the authority to administer and enforce certain provisions of the 1934 act and the Sarbanes-Oxley Act with respect to state member banks that have a class of securities registered under section 12(b) or 12(g) of the 1934 act (registered state member banks). In particular, the Board is charged with enforcing sections 12, 13, 14(a), 14(c), 14(d), 14(f), and 16 of the 1934 act and sections 301, 302, 303, 304, 306(a), 401(b), 404, 406, and 407 of the Sarbanes-Oxley Act² with respect to registered state member banks. Sec-

2. See 15 USC 78j-1, 78l-78n, 78p, 7241-7244(a), 7261(b), 7262, 7264, and 7265.

tion 208.36(a) of Regulation H, which implements these provisions, generally requires registered state member banks to comply with any rules, regulations, and reporting forms adopted by the Securities and Exchange Commission (SEC) under the above-listed sections of the 1934 act and the Sarbanes-Oxley Act. (See 12 CFR 208.36(a), as amended by 68 *Fed. Reg.* 4096 (January 28, 2003).) Registered state member banks, however, generally must file any forms or reports required by these rules with the Board, rather than the SEC.

If a state member bank has a class of securities registered under section 12 of the 1934 act and, thus, is a registered state member bank, the examiner should consult with the bank's management to ensure that the reports required by Regulation H are properly filed with the Board. Listed below are a few of the most common forms and reports that must be filed with the Board by a registered state member bank pursuant to Regulation H. This list, however, is not exclusive and examiners should consult Board staff or Regulation H, the 1934 act, the Sarbanes-Oxley Act, and the SEC's implementing rules if questions arise concerning the filing of reports by a registered state member bank. See the list of reporting forms and the individual reporting forms and instructions on the SEC's website: www.sec.gov.

Section 12 of the 1934 Act

Form 8-A is for the registration of certain classes of securities pursuant to sections 12(b) or 12(g) of the 1934 act for, among other things, listing on national securities exchanges. Form F-10 is the general reporting form for registration of securities pursuant to the 1933 act and sections 12(b) or 12(g) of the 1934 act for classes of securities of issuers for which no other reporting form is prescribed.

Section 13 of the 1934 Act

Form 8-K must be filed within 4 business days after the occurrence of the earliest of one or more specified events that are required to be reported and that affect the bank or its operations, such as changes in control of registrant or an acquisition or disposition of a significant amount of assets. See the "Information to be

Included in the Report" within the report instructions. Form 10-Q is for quarterly and transition reports and must be filed within 40 days for large accelerated filers; accelerated filers; or for others, 45 days after the end of each of the first three fiscal quarters. Form 10-K is for annual and transition reports that must be filed within 60 to 90 calendar days after the end of the registrant's fiscal year.

Section 16 of the 1934 Act

Section 16 requires the directors, officers, and principal shareholders of public companies to file reports concerning the purchase and sale of the company's equity securities. Form 3 collects the insider's initial beneficial ownership of registered companies, including banks. Form 4 collects changes in the insider's beneficial ownership. Form 5 is an annual statement of changes in beneficial ownership of securities.

Sarbanes-Oxley Act

The Sarbanes-Oxley Act³ (the act) and the SEC's implementing rules require the principal executive officer and principal financial officer of public companies to file certain certifications with the company's annual 10-K report and quarterly 10-Q reports. The certifications must, among other things, state that the officer has reviewed the report, indicate that the report (to the officer's knowledge) does not contain any material misstatements or omissions, and contain certain representations concerning the company's internal controls.

The act requires the annual 10-K report of public companies to include a statement of management's responsibility for maintaining adequate internal-control structures and procedures for financial reporting and to contain an assessment of the effectiveness of these controls and procedures.⁴ The company's external auditor must attest to, and report on, management's assessment. These reports and attestations are similar to the internal-control reports and attestations required by section 36 of the Federal Deposit Insurance Act (12 USC 1831m) for insured depository institutions with total assets of \$500 million or more.

3. See 15 USC 7241 (section 302 of the act).

4. See 15 USC 7262 (section 404 of the act).

The act⁵ and the SEC's rules also require public companies to disclose in their periodic reports whether the company has adopted a code of ethics for its senior financial officers and whether the company's audit committee includes a "financial expert." If the company has not adopted a code of ethics or does not have a financial expert on its audit committee, the company must explain the reasons why not.

REPORTING AND INQUIRY REQUIREMENTS FOR LOST AND STOLEN SECURITIES

Every national securities exchange member, registered securities association member, broker, dealer, municipal securities dealer, government securities broker or dealer, registered transfer agent, and registered clearing agency and its participants, as well as every member bank of the Federal Reserve System and every bank whose deposits are insured by the Federal Deposit Insurance Corporation (reporting institutions), must register with the SEC's designee, the Securities Information Center, Inc. (SIC). All lost, missing, stolen, or counterfeit securities must be reported to the SIC. Except in certain limited circumstances, each insured bank is responsible for contacting the SIC to determine if the securities coming into its possession, whether by pledge, transfer, or some other manner, have been previously reported as missing, lost, stolen, or counterfeit.

All functions within a bank that handle or process securities are subject to the *reporting* requirements. Only the transfer-agent function is exempt from the *inquiry* requirements. Accordingly, all bank departments likely to be affected, including the trust, investment, transfer-agent, custody, or dealer departments, and the lending operations as relating to collateral loans, should be familiar with the requirements set out in 17 CFR 240.17f-1. Securities exempt from the reporting requirements are—

- registered U.S. Treasury securities of the U.S. government and federal agencies thereof,
- securities that have not been assigned CUSIP numbers, and
- bond coupons

- global securities
- uncertified securities, and
- any securities issue for which there is neither a record nor beneficial owners that can obtain negotiable securities certificates.

Securities exempt from the inquiry requirements are—

- securities received directly from the issuer or its agent at issuance,
- securities received from another reporting institution or from a Federal Reserve Bank or Branch,
- securities received from a customer of the reporting institution in the name of the customer or nominee, and
- securities that are a part of a transaction of \$10,000 or less (aggregate face value for bonds or market value for stocks).

Lost, Missing, Stolen, or Counterfeit Securities

Form X-17F-1A must be filed with the SIC within one business day after the discovery of—

- a theft or loss of any security when there is a substantial indication of criminal activity,
- a security that has been lost or missing for two business days when criminal actions are not suspected, and
- a security that is counterfeit.

The reporting form must be filed within two business days of notification of nonreceipt when delivery of securities sent by the bank—

- is made by mail or draft and payment is not received within 10 business days, and confirmation of nondelivery has been made by the receiving institution; and
- is in person and no receipt is maintained by the bank.

If securities sent by the bank, either in person or through a clearing agency, are lost in transit and the certificate numbers of the securities can be determined, the bank (delivering institution) must report the certificate numbers of the securities within two business days after notice of non-receipt or as soon as the certificate numbers of the securities can be ascertained.

5. See 15 USC 7264–7265 (sections 406 and 407 of the act).

When a shipment of retired securities certificates is in transit between any unaffiliated transfer agents, banks, brokers, dealers, or other reporting institutions, and the delivering institution fails to receive notice of receipt or non-receipt of the certificates, the delivering institution is required to act to determine the facts. When the certificates are not recovered by the delivering institution, the delivering institution must report the certificates as lost, stolen, or missing within a reasonable time period, but in any event within twenty business days from the date of shipment. The delivery of lost or missing securities to the bank must be reported within one business day after discovery and notification of certificate numbers. Securities that are considered lost or missing as a result of count or verifications must be reported no later than 10 business days after discovery or as soon as certificate numbers can be ascertained.

Copies of all reports required to be filed under 17 CFR 240.17f-1 must also be submitted to the registered transfer agent for the issue being reported and, if criminal activities are suspected, to the Federal Bureau of Investigation. Copies of filed or received Forms X-17F-1A must be maintained in an easily accessible place for three years.

TRANSFER-AGENT ACTIVITIES

If a bank acts as a transfer agent for its own stock, the stock of its holding company, or any other equity security, it may have to register with the Board as a transfer agent pursuant to the requirements of Regulation H (section 208.31). State member bank transfer agents must comply with the SEC's rules prescribing operational and reporting requirements, which the SEC adopted pursuant to section 17A(2) of the 1934 act (15 USC 78q-1). For member banks, see 17 CFR 240.17Ac2 (1-2) and 240.17Ad-1-240.17Ad-16). (See section 208.31(b) of Regulation H.) Any entity performing transfer agent functions for a security is required to register if the security is registered on a national securities exchange and if the issuer has total assets of \$10 million and a class of equity security held on record by 500 or more persons. The registrations are public filings and are *not* confidential.

The interagency Transfer Agent Registration and Amendment Form, Form TA-1, is used by member banks and other entities to register

before becoming, and then to act as, a transfer agent. They also use the reporting form to amend registration information as necessary. The information collected includes the company name, all business addresses, and information about the registrant's proposed activities as a transfer agent.

The Federal Reserve uses the information to act upon registration applications and to aid in performing supervisory duties. The Federal Reserve forwards copies of the completed registration forms to the Securities and Exchange Commission, which maintains registration data to aid in its statutory mandate to develop rules and standards applicable to all registered transfer agents.

Municipal Securities Dealer Activities

A state member bank, subsidiary, department, or division thereof that is a municipal securities dealer must register and file amendments with both the SEC and the Federal Reserve Board as a municipal securities dealer by filing the SEC's Form MSD, pursuant to Section 15 B(a) of the Securities Exchange Act of 1934 and the SEC's rule 15Ba2-1. A discussion of the bank's responsibilities as a municipal securities dealer, filing requirements, and other information, including examination procedures, are discussed in section 2030.1. A notice of withdrawal from registration as a municipal securities dealer pursuant to section 15B(c) must be filed with the SEC and the Board on the SEC's Form MSDW when the municipal securities dealer is a bank, or a separately identifiable department or division of a bank.

Government Securities Broker and Dealer Activities

If a state member bank, a foreign bank, a state branch or an agency of a foreign bank, or a commercial lending company owned or controlled by a foreign bank acts as a government securities broker or dealer, it may have to file notice with the Board as a government securities broker or dealer by filing FR G-FIN, pursuant to section 15C(a)(1)(B) of the Securities and Exchange Act of 1934. This notice collects the institution's identifying information and the names and titles of its managers of government

securities activities; the notice requires the institution to state whether any person associated with the respondent's government securities activities has been involved in disciplinary proceedings related to securities sales. When such a financial institution intends to cease engaging in broker or dealer activities, it must notify its regulator by using the Notice by Financial Institutions of Termination of Activities as a Government Securities Broker or Government Securities Dealer (FR G-FINW). A discussion of the bank's responsibilities as a government securities broker or dealer, filing requirements, and other information, including examination procedures, are discussed in SR-87-37, as amended. See also SR-94-5, 93-40, 90-1, and 88-26. The Board has also developed a Summary Report of Government Securities Broker/Dealer Activities (GSB-D report).

INTERNATIONAL ACTIVITIES

A bank must file certain reports if it is conducting or intends to conduct international activities through either foreign branches or Edge Act or agreement corporations. Listed below is a brief description of each of these reports.

FFIEC 009—Country Exposure Report

FFIEC 009 is filed quarterly by all U.S. banks and bank holding companies that meet certain ownership criteria and that, on a fully consolidated basis, have total outstanding claims of \$30 million or more (or equivalent) on foreign residents of the U.S. Information is collected on the distribution by country of these foreign claims on foreigners held by U.S. banks and bank holding companies.

FFIEC 009a—Country Exposure Information Report

FFIEC 009a is a quarterly supplement to the Country Exposure Report (FFIEC 009) that provides specific information about the reporting institution's exposures in particular countries of U.S. banking institutions. Part A must be filed when exposure to a single country exceeds

1 percent of the banking institution's total assets or 20 percent of that institution's capital, whichever is less. Part B provides a list of countries where exposures were between 0.75 percent and 1 percent of the respondent's assets or between 15 percent and 20 percent of capital.

FFIEC 030/FFIEC 030S—Foreign Branch Report of Condition/Abbreviated Foreign Branch Report of Condition

These reports collect information on the structure and geographic distribution of foreign branch assets, liabilities, derivatives, and off-balance-sheet data of foreign branches of insured U.S.-chartered commercial banks. For purposes of this report, branches in Puerto Rico and other U.S. territories and possessions are considered foreign branches. Participation in the completion and submittal of the reports is mandatory.

The FFIEC 030 is filed quarterly for significant branches, with either \$2 billion or commitments to purchase foreign currencies and U.S. dollar exchange of at least \$5 billion. It is filed annually for other branches with total assets in excess of \$250 million. The Federal Reserve uses the data to plan examinations and to analyze the foreign operations of domestic banks. Growth trends can be measured by bank, by country, and by bank within country. Aggregate data are a useful source of information on bank activities.

The FFIEC 030S collects financial data items for smaller, less-complex branches. It is filed annually, as of December 31, for foreign branches that do not meet the criteria to file the FFIEC 030 but have total assets of \$50 million or more (but less than or equal to \$250 million).

FR 2064—Recordkeeping Requirements

Effective September 1, 2001, the FR 2064 reporting form was replaced with a recordkeeping requirement and certain structure information was moved to the FR Y-10, Report of Changes in Organizational Structure. Internationally active U.S. banking organizations are still expected to maintain adequate internal records to allow examiners to review compliance with the investment provisions of Regulation K, under

the recordkeeping requirements of FR 2064 (no form is associated with this recordkeeping requirement). For each investment made under subpart A of Regulation K, records should be maintained on the type of investment (for example, equity (voting shares, nonvoting shares, partnerships, interests conferring ownership rights, participating loans)), binding commitments, capital contributions, and subordinated debt), the amount of the investment, the percentage ownership, activities conducted by the company and the legal authority for such activities, and whether the investment was made under general-consent, prior-notice, or specific-consent authority. For those investments made under general-consent authority, information also must be maintained that demonstrates compliance with the various limits set out in sections 211.8 and 211.10 of Regulation K.

Information maintained by the banking organization should be made available to examination staff during the course of on-site examinations and pursuant to other supervisory requests. The recordkeeping must be adequate to permit examiners to determine compliance. Examiners are expected to review a sample of these investments to determine the accuracy of the organization's records and to determine compliance with the regulation. (See SR-02-2.)

FR 2314/FR 2314S—Financial Statements of Foreign Subsidiaries of U.S. Banking Organizations

The FR 2314 is reported quarterly or annually, as of the last calendar day of the quarter, based on certain threshold criteria. The FR 2314 collects selected financial information for direct or indirect foreign subsidiaries of U.S. state member banks, Edge and agreement corporations, and bank holding companies. The FR 2314 consists of a balance sheet and income statement; information on changes in equity capital, changes in the allowance for loan and lease losses, off-balance-sheet items, and loans; and a memoranda section. The FR 2314S should be filed annually as of December 31 and collects four financial data items for smaller, less complex subsidiaries.

FR 2502q—Quarterly Report of Assets and Liabilities of Large Foreign Offices of U.S. Banks

The FR 2502q report is to be submitted by U.S. head offices of bank holding companies, commercial banks, and Edge and agreement corporations that file for their major foreign branches and large banking subsidiaries. It provides a geographic breakdown of each office's assets and liabilities. Branches of a U.S. bank with \$500 million or more in total assets and foreign banking subsidiaries with \$2 billion or more in total assets, or \$10 million in deposit liabilities, are required to file this report quarterly.

FR 2886b—Consolidated Report of Condition and Income for Edge Act and Agreement Corporations

FR 2886b covers the operations of the reporting corporation, including any international banking facilities of the reporter. Corporations engaged in banking must submit the data at least quarterly.

FR 2915—Report of Foreign Currency Deposits

FR 2915 collects seven-day averages of the amounts outstanding of foreign currency-denominated deposits held at U.S. offices of the depository institution, converted to U.S. dollars and included in the Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900). The report is collected with the reporting week that begins the third Tuesday of March, June, September, and December.

FR Y-10—Report of Changes in Organizational Structure

The Y-10 is used to report, among other things, information on worldwide organizational structure of bank holding companies (BHCs), member banks, Edge and agreement corporations, and the U.S. operations of foreign banking organizations (FBOs)⁶. The reporting form

6. An FBO with U.S. operations that is not or ceases to be a "qualifying foreign banking organization" (QFBO) within the meaning of Regulation K, and is not otherwise treated as

includes detailed information on the structure of top-tier BHCs organized under U.S. or foreign law that are not FBOs, regardless of financial holding company (FHC) status; FBOs (both qualifying and nonqualifying) whether or not a BHC; state member banks not controlled by a BHC or FBO; Edge and agreement corporations not controlled by a BHC, FBO, or member bank; and nationally chartered banks not controlled by a BHC or FBO, but only with respect to their foreign investments. Within 30 calendar days of the event, banking organizations are required to report changes in investments as well as new activities (both foreign and domestic) on the FR Y-10 report. The reporting form includes the structure information on changes in FBOs (formerly the FR Y-10F) and the change in status of foreign branch of U.S. banking organizations (formerly the FR 2058).

The Board has placed greater importance on monitoring the level of international investments to ensure compliance with relevant banking laws and regulations, and to ensure that banking organizations do not expose themselves to undue risk. Examiners and other Federal Reserve System staff have a continuing need to monitor compliance with the Federal Reserve Act and sections 211.8–211.10 of the revised Regulation K.

Investments of less than 25 percent of the voting shares of a foreign nonbanking company are reported on the FR Y-10.⁷ However, using the FR Y-6 (Annual Report of Bank Holding Companies) and the FR Y-7 report (Annual Report of Foreign Banking Organizations), banking organizations are required to report annually all investments, including those between 5 percent and 25 percent of voting shares.⁸ The FR Y-6, FR Y-7, and the FR Y-10 collect information on structure and geographical information relating to foreign investments for ongoing monitoring.

a QFBO under Regulation K, should consult with Federal Reserve staff regarding the scope of its reporting obligations. In general, an FBO that is not or is not treated as a QFBO is subject to the nonbanking restrictions of the BHC Act with respect to its worldwide operations and, thus, would have to report on the FR Y-10 changes to its worldwide organizational structure.

7. Regulation K authorizes portfolio investments in less than 20 percent of the shares of a foreign company regardless of the activities engaged in by that company. Portfolio investments within the general-consent limits are required to be reported annually on the FR Y-6.

8. Investments representing less than 5 percent ownership are not required to be reported.

Examiners are expected to review investment amounts and activities during the examination process. The portion of an examination dealing with Regulation K compliance should focus on confirming investments made pursuant to the general-consent provisions to meet the restrictions on investment amount and activities in sections 211.8–211.10 of Regulation K. Investments made under the general-consent provisions of Regulation K can be sizable, and thus can pose significant risk to the banking organization. Examiners should keep in mind that the Board has the authority to rescind an organization's general-consent investment privileges for various reasons, including safety-and-soundness concerns and noncompliance with the existing requirements of Regulation K. (See SR-02-2.)

Treasury International Capital Forms

The following reports are collected to gather information on international capital movements by U.S. banks and their Edge Act and agreement corporations, other depository institutions, international banking facilities, and bank holding companies.

- BC: Report of U.S. Dollar Claims of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers, and Dealers on Foreigners
- BL-1: Report of U.S. Dollar Liabilities of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers, and Dealers to Foreign-Residents
- BL-2: Report of Customers' U.S. Dollar Liabilities to Foreigners
- BQ-1: Report of Customers' U.S. Dollar Claims on Foreigners
- BQ-2: Part 1. Report of Foreign Currency Liabilities and Claims of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers and Dealers, and of Their Domestic Customers vis-à-vis Foreigners
- BQ-2: Part 2. Report of Customers' Foreign Currency Liabilities to Foreigners
- BQ-3: Report of Maturities of Selected Liabilities of Depository Institutions, Bank Holding Companies/Financial Holding Companies, Brokers, and Dealers to Foreigners

- D: Report of Holdings of, and Transactions in, Financial Derivatives Contracts
- S: Purchases and Sales of Long-Term Securities by Foreign-Residents
- SHC/SHCA: Report of U.S. Ownership of Foreign Securities, Including Selected Money Market Instruments
- SHL/SHLA: Foreign-Residents' Holdings of U.S. Securities, Including Selected Money Market Instruments

Consolidated Foreign Currency Reports of Major Market Participants

The Treasury Foreign Currency (TFC) Report of

major market participants collects data on the foreign exchange contracts and actively manages positions of major nonbank market participants. This report is collected and processed by the Federal Reserve System, acting as fiscal agent for the Department of the Treasury. These data are designed to assess and monitor the foreign exchange developments in the spot, forward, futures, and options markets on an individual and aggregate basis. The TFC series is comprised of three reports: (1) the Weekly Consolidated Foreign Currency Report of Major Market Participants (TFC-1), (2) the Monthly Consolidated Foreign Currency Report of Major Market Participants (TFC-2), and (3) the Quarterly Consolidated Foreign Currency Report (TFC-3).

Review of Regulatory Reports

Examination Objectives

Effective date May 1996

Section 4150.2

1. To determine that required reports are being filed on time.
2. To determine that the contents of reports are accurate.
3. To effect corrective action when official reporting, practices, policies, or procedures are deficient.

Review of Regulatory Reports Examination Procedures

Effective date May 1993

Section 4150.3

1. Complete or update the Internal Control Questionnaire, if selected for implementation.
2. Determine the bank's historical record of submitting timely and accurate reports by reviewing workpapers and the Regulatory Reports Monitoring Program.
3. Instruct those examiners assigned specific departments that generate regulatory reports to:
 - a. Determine from department records what regulatory reports should have been filed because of the passage of time or the occurrence of an event.
 - b. Obtain copies of all regulatory reports filed by the department since the previous examination.
 - c. Check the reports obtained in the preceding step and the date of filing against statutory and regulatory requirements.
 - d. Instruct the bank to prepare and submit any delinquent reports.
 - e. For the most recent filing of those reports submitted on a periodic basis and all other reports submitted since the last examination, perform the following:
 - Reconcile the line items shown on the reports to the bank's general ledger, subsidiary ledgers, or daily statements.
 - Obtain the bank's workpapers applicable to each line item and reconcile individual items to the reports.
 - Determine whether other examining personnel uncovered any misstatement of assets, liabilities, income, or expense during their examination of the various departments.
 - Determine that the reports are prepared in accordance with Federal Reserve and/or other applicable instructions.
 - f. On the basis of the work performed in the preceding step, perform either of the following, as appropriate:
 - If the reports are found to be substantially correct, limit the review of the remaining periodic reports filed since the last examination to the reconciliation of financial statement account categories to general ledger control accounts.
 - If the reports are found to be substantially incorrect, extend the procedures outlined in step 3.e to the remaining periodic reports filed since the last examination for those areas where items were found to be substantially incorrect.
4. Review compliance with the missing, lost, counterfeit, or stolen securities requirements of 17 CFR 240.17f-1 by:
 - a. Discussing with appropriate officers and personnel the procedures in effect regarding the filing of Form X-17F-1A (Missing, Lost, Stolen, or Counterfeit Securities Report).
 - b. Discussing with the appropriate persons the procedures in effect regarding compliance with the inquiry requirements.
 - c. Substantiating Internal Control questions 6 through 15, as appropriate.
5. Prepare comments in appropriate report form and discuss with management:
 - a. Violations of law or regulations.
 - b. Inaccurate reports, and, if applicable, the need for amended reports. If amended reports are considered appropriate, consult with Reserve Bank supervisory personnel before requesting the bank to refile the report(s).
 - c. Material differences in the annual report of the state member bank whose securities are subject to registration pursuant to the Securities Exchange Act of 1934. (State law governs the furnishing of annual reports to stockholders for banks with less than 500 shareholders.)
 - d. Recommended corrective action when policies, practices, or procedures are deficient or when reports have been filed incorrectly, late, or not at all.

The comments must include, if applicable, the name(s) and the "as of" date(s) of amended report(s); and the date of filing, amount of, and explanation of any material difference existing in either the numerical items or narrative statements in the annual report.
6. Update the workpapers with any information that will facilitate future examinations.

Review of Regulatory Reports Internal Control Questionnaire

Effective date May 1993

Section 4150.4

Review the bank's internal controls, policies, practices, and procedures for regulatory reports. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

1. Do requests for all regulatory reports come to one individual or department?
2. Does that individual or department have the authority to request that required information be prepared by the applicable banking department?
3. To ensure that all regulatory reports are submitted on a timely basis and are accurate, determine the following:
 - a. If completion of the report requires information from several departments:
 - Is a written memorandum sent to the various departments requesting the information?
 - Is the memorandum addressed to a department head?
 - Does the memorandum have a due date?
 - Are procedures in effect to send second requests if the memorandum is not returned by its original due date?
 - Does completion of the memorandum require two signatures, that of the person gathering the information and that of the person's superior who is held responsible for its accuracy?
 - b. If completion of the report requires information from one department, is there separation of duties to ensure that the raw data to complete the report is compiled by one person and verified by another person, prior to submission?
4. After the report is prepared, but prior to its submission, is it checked by:
 - a. The supervisor of the department preparing the report, who takes personal responsibility for its accuracy and submission on a timely basis?
 - b. Bank personnel who have no part in the report's preparation?
5. Do report workpapers leave a clear audit trail from the raw data to the finished report and are they readily available for inspection?

Review the bank's system for compliance with the reporting and inquiry requirements of the lost and stolen securities provisions of 17 CFR 240.17f-1.
6. Has the bank registered as a direct or indirect inquirer with the Securities Information Center, Inc.?
7. Are reports submitted within one business day of discovery when:
 - a. Theft or loss of a security is believed to have occurred through criminal activity?
 - b. A security has been missing or lost for two business days, except in certain cases?
 - c. A security is counterfeit?
8. Are reports submitted by the bank, as a delivering institution, within two business days of notification of nonreceipt when:
 - a. Delivery is in person and no receipt is maintained by the bank?
 - b. Delivery of securities is made by mail or via draft, and payment is not received within 10 business days and confirmation of nondelivery has been made by the receiving institution?
 - c. Securities are lost in transit and the certificate number(s) can be determined?
9. Are reports submitted by the bank, as a receiving institution, within one business day of discovery and notification of the certificate number(s) when:
 - a. Securities are delivered through a clearing agency and the delivering institution has supplied the certificate numbers within the required two business days after request?
 - b. Securities are delivered over the window and the delivering institution has a receipt and supplies the certificate number(s) within the required two business days after request?
10. Are securities that are considered to be lost or missing as a result of counts or verifications reported no later than ten business days after discovery or as soon after as the certificate number(s) can be ascertained?
11. Are copies of those reports submitted to the registered transfer agent for the issue and, in

the case of suspected criminal activity, the Federal Bureau of Investigation?

12. Are all recoveries of securities reported within one business day of recovery or finding? (Note: Only the institution that initially reported the security as missing can make a recovery report.)
13. Are inquiries made when the bank takes in any security that is not:
 - a. Received directly from the issuer or issuing agent at issuance?
 - b. Received from another reporting institution or Federal Reserve bank in its capacity as fiscal agent?
 - c. Received from a bank customer and is registered in the name of the customer or its nominee?
14. Are all reports made on Form X-17F-1A or facsimile?

15. Are copies of Form X-17F-1A and subsequent confirmations and other information received maintained for three years in an easily accessible location?

CONCLUSION

16. Does the foregoing information provide an adequate basis for evaluating internal controls in that deficiencies in areas not covered by this questionnaire do not significantly impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
17. Are internal controls adequate based on a composite evaluation, as evidenced by answers to the foregoing questions?

Sale of Uninsured Nondeposit Debt Obligations on Bank Premises

Effective date May 1996

Section 4160.1

INTRODUCTION

State member banks have, at times, engaged in issuing nondeposit debt securities on their own behalf or assisted in the sale of these instruments (for example, commercial paper or other short-term or long-term debt securities, such as thrift notes and subordinated debentures) on behalf of their parent bank holding companies or other affiliates. It is important to ensure that these securities are not issued, marketed, or sold in a manner that could give the purchaser the impression that the obligations are federally insured deposits. Consequently, state member banks and their subsidiaries that have issued or plan to issue nondeposit debt securities should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank.

PROCEDURES

This policy is not intended to prevent banks from selling their uninsured debt instruments in a manner that is consistent with sound and prudent banking practices. These instruments generally may be sold to investors in various ways away from the retail deposit-taking and general lobby areas of the bank. In this regard, personnel not regularly involved in deposit-taking activities or in opening new deposit accounts may make prospective investors in the community aware of uninsured debt obligations outside of the retail deposit-taking and general lobby areas. Also, these instruments may generally be sold by an employee or officer segregated from the retail deposit-taking and general lobby areas of the bank, even if the employee or officer occasionally accepts deposits or opens an account (but not as a part of his or her regular duties), so long as the arrangement is not structured in a way that misleads the purchaser or is otherwise contrary to supervisory guidelines.

Further, state member banks involved in this activity should establish procedures to ensure

that potential purchasers understand that the debt security is not federally insured or guaranteed. Specifically, the debt security should boldly state on its face that it is not insured by the Federal Deposit Insurance Corporation. In addition, this information should be verbally stated to the purchaser, and, in cases where purchasers do not take physical possession of the obligation, the purchaser should be provided with printed advice that conveys this information.

SUPERVISORY GUIDANCE

As noted, a state member bank may also become involved in the sale of uninsured debt obligations of its parent bank holding company or a nonbank affiliate. It is a longstanding policy of the Federal Reserve that debt obligations of a bank holding company or a nonbank affiliate not be issued, marketed, or sold in a way that conveys the misimpression or misunderstanding that these instruments are either (1) federally insured deposits or (2) obligations of or guaranteed by the subsidiary bank. The purchase of these holding company obligations by retail depositors of the subsidiary bank can, in the event of default, result in losses to individuals who believed that they had acquired federally insured or guaranteed instruments. In addition to the problems created for these individuals, this situation could impair public confidence in the bank and lead to unexpected withdrawals or liquidity pressures.

If a state member bank intends to market or sell or to allow its parent holding company or a nonbank affiliate to market or sell uninsured nondeposit debt obligations on bank premises, the bank should establish internal controls to ensure that the promotion, sale, and subsequent customer relationship resulting from the sale of these debt obligations is separated from the retail deposit-taking functions of the bank. For further information on commercial paper, see section 2030, "Bank Dealer Activities."

Sale of Uninsured Nondeposit Debt Obligations on Bank Premises

Examination Objectives

Effective date May 1996

Section 4160.2

1. To determine if uninsured nondeposit debt obligations of the state member bank or an affiliate are sold on bank premises.
2. To determine if the policies, practices, procedures, and internal controls for the sale of uninsured nondeposit debt instruments are adequate.
3. To ensure that the marketing and sale of uninsured nondeposit debt instruments are not conducted in a manner that conveys the impression or suggestion that they are federally insured deposits. Additionally, holding company or affiliate instruments should not convey the impression or suggestion that they are obligations of or guaranteed by the state member bank.
4. To ensure that the marketing and sale of uninsured nondeposit debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function.
5. To initiate corrective action if policies, practices, or procedures related to the sale of uninsured nondeposit debt instruments are deficient.

Sale of Uninsured Nondeposit Debt Obligations on Bank Premises

Examination Procedures

Effective date September 1992

Section 4160.3

1. Verify that the bank does not sell uninsured nondeposit debt instruments at teller windows or other areas where retail deposits are routinely accepted, including general lobby areas surrounding teller windows and personal banking desks.
2. Assess the adequacy of disclosures and the separation of the marketing and sale of uninsured nondeposit debt obligations from the retail deposit-taking function by assuring that:
 - a. the debt instrument, advertising, and all related documents disclose prominently in bold print that the debt instrument is not insured by the Federal Deposit Insurance Corporation (bank holding company debt instruments should also state that the instrument is not an obligation of, or guaranteed by, the bank);
 - b. advertisements that promote uninsured debt obligations of the bank (or an affiliate) do not also promote insured deposits of the bank in a way that could lead to confusion;
 - c. the obligor of the uninsured debt instrument is prominently disclosed and names or logos of the bank are not used on holding company or nonbank affiliate instruments in a way that might suggest the insured bank is the obligor;
- d. adequate verbal disclosures are made during telemarketing contacts and at the time of sale (a review of employee instructions or a telemarketing script, or appropriate questions directed to an employee handling this function, could assist an examiner in assessing the adequacy of verbal disclosure);
- e. retail deposit-taking employees of the insured depository institution are not engaged in the promotion or sale of uninsured nondeposit debt instruments;
- f. information on uninsured nondeposit debt instruments is not contained in the retail deposit statements of customers or in the immediate retail deposit-taking area; and
- g. account information on holdings of uninsured nondeposit debt instruments is not included on insured deposit statements.
3. Encourage the bank to obtain a signed statement from the customer indicating that the customer understands that the uninsured debt instrument is not a deposit and is not FDIC insured.

Retail Sales of Nondeposit Investment Products

Effective date April 2008

Section 4170.1

Depository institutions have become increasingly involved in selling uninsured nondeposit investment products, such as mutual funds or annuities, on their premises to retail customers. In response to this development, an interagency statement on retail sales of nondeposit investment products (interagency statement) was issued on February 15, 1994, to enhance customer protection and lessen possible customer confusion that these products are insured deposits.¹ The interagency statement applies to all insured banks and thrifts, including state member banks and the U.S. branches and agencies of foreign banks.

The guidelines contained in the interagency statement apply to retail recommendations or sales of nondeposit investment products made by—

- employees of a depository institution,
- employees of an affiliated or unaffiliated third party occurring on the premises of the banking organization (including telephone sales, investment recommendations by employees, and sales or recommendations initiated by mail from its premises), and
- sales resulting from a referral of retail customers by the institution to a third party when the depository institution receives a benefit for the referral.

Retail sales include (but are not limited to) sales to individuals by depository-institution personnel or third-party personnel conducted in or adjacent to a depository institution's lobby area. The sales of government and municipal securities made in a depository institution's dealer department located away from the lobby area are not subject to the interagency statement. In addition, the interagency statement generally does not apply to fiduciary accounts administered by a depository institution. However, for fiduciary accounts where the customer directs investments, such as self-directed individual retirement accounts, the disclosures prescribed by the interagency statement (see the "Disclo-

ures and Advertising" subsection below) should be provided. Furthermore, the interagency statement applies to affiliated broker-dealers when the sales occur on the premises of the depository institution. The interagency statement also applies to sales activities of an affiliated broker-dealer resulting from a referral of retail customers by the depository institution.

The Rules of Fair Practice of the Financial Industry Regulatory Authority govern sales of securities by its member broker-dealers. In addition, the federal securities laws prohibit materially misleading or inaccurate representations in connection with the offer or sale of securities and require that sales of registered securities be accompanied by a prospectus that complies with SEC disclosure requirements.

Examiners should determine whether the institution has adequate policies and procedures to govern the conduct of the sales activities on bank premises and, in particular, whether sales of nondeposit investment products are distinguished from the deposit-taking activities of the bank through disclosure and physical means that are designed to prevent customer confusion.

Although the interagency statement does not apply to sales of nondeposit investment products to nonretail customers, such as fiduciary customers, examiners should also apply the examination procedures prescribed in SR-94-34 ("Examination Procedures for Retail Sales of Nondeposit Investment Products," May 26, 1994) when retail customers are directed to the institution's trust department, where they may purchase nondeposit investment products by simply completing a customer agreement.

PROGRAM MANAGEMENT

Banks must adopt policies and procedures governing nondeposit investment product retail sales programs. These policies and procedures should be in place before the commencement of the retail sale of nondeposit investment products on bank premises.

The bank's board of directors is responsible for ensuring that retail sales of nondeposit investment products comply with the interagency statement and with all applicable state and federal laws and regulations. Therefore, the

1. The interagency statement was issued to Federal Reserve Banks under cover of a supervisory letter, SR-94-11 ("Interagency Statement on Retail Sales of Nondeposit Investment Products," February 17, 1994). Additional guidance is provided in SR-95-46 ("Interpretation of Interagency Statement on Retail Sales of Nondeposit Investment Products," September 14, 1995).

board, or a designated committee of the board, should adopt written policies that address the risks and management of these sales programs. Policies and procedures should reflect the size, complexity, and volume of the institution's activities or, when applicable, the institution's arrangements with any third parties selling these products on bank premises. The bank's policies and procedures should be reviewed periodically by the board of directors, or its designated committee, to ensure that they are consistent with the institution's current practices, applicable laws, regulations, and guidelines.

A bank's policies and procedures for nondeposit investment products should, at a minimum, address (1) disclosure and advertising, (2) the physical separation of investment sales from deposit-taking activities, (3) compliance and audit requirements, (4) suitability concerns, and (5) other sales practices and related risks. In addition, policies and procedures should address the following areas.

Types of Products Sold

When evaluating nondeposit investment products, management should consider what products best meet the needs of the bank's customers. Policies should outline the criteria and procedures that will be used to select and periodically review nondeposit investment products that are recommended or sold on the bank's premises. Institutions should periodically review the products offered to ensure that they meet their customers' needs.

Use of Identical or Similar Names

Because of the possibility of customer confusion, a nondeposit investment product must not have a name that is identical to the name of the bank or its affiliates. However, a bank may sell a nondeposit investment product with a similar name as long as the sales program addresses the even greater risk that customers may regard the product as an insured deposit or other obligation of the bank. Moreover, the bank should review the issuer's disclosure documents for compliance with SEC requirements, which call for a thorough explanation of the relationship between the bank and the mutual fund.

The Federal Reserve applies a stricter rule to investment adviser activities under Regulation Y (12 CFR 225.125) when a bank holding company (as opposed to a bank) or nonbank subsidiary acts as an investment advisor to a mutual fund. In this case, the fund may not have a name that is identical to, similar to, or a variation of the name of the bank holding company.

Permissible Use of Customer Information

Banks should adopt policies and procedures on the use of confidential customer information for any purpose in connection with the sale of nondeposit investment products. The industry guidelines permit institutions to share with third parties only limited customer information, such as the name, address, telephone number, and types of products owned. The guidelines do not permit the sharing of more confidential information, such as specific or aggregate dollar amounts of investments or net worth, without the customer's prior acknowledgment and written consent.

Arrangements with Third Parties

A majority of all nondeposit investment products sold on bank premises are sold by representatives of third parties. Under these arrangements, the third party has access to the institution's customers, and the bank is able to make nondeposit investment products available to interested customers without having to commit the resources and personnel necessary to sell the products directly. Third parties include wholly owned subsidiaries of a bank, bank-affiliated broker-dealers (section 20 companies² or discount brokerage firms), unaffiliated broker-dealers, insurance companies, or other companies in the business of distributing nondeposit investment products on a retail basis.

Bank management should conduct a comprehensive review of an unaffiliated third party before entering into any arrangement. The review should include an assessment of the third party's

2. A nonbank subsidiary of a bank holding company that has been authorized to underwrite and deal in certain debt and equity securities that cannot be underwritten or dealt in by member banks directly.

financial status, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including its compliance with the interagency statement.

Banks should enter into written agreements with any affiliated and unaffiliated third parties that sell nondeposit investment products on bank premises. These agreements should be approved by the bank's board of directors or its designated committee. Agreements should outline the duties and responsibilities of each party; describe third-party activities permitted on the institution's premises; address the sharing or use of confidential customer information for investment sales activities; and define the terms for use of the bank's office space, equipment, and personnel. If an arrangement includes dual employees (bank employees also utilized by a third party), the agreement must provide for written employment contracts that specify the duties of these employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the interagency statement. The agreement should authorize the institution to monitor the third party's compliance with its agreement, as well as authorize the bank and Federal Reserve examination staff to have access to third-party records considered necessary to evaluate this compliance. These records should include examination results, sales practice reviews, and related correspondence provided to the third party by securities regulatory authorities. Finally, the agreement should provide for indemnification of the institution by an unaffiliated third party for the conduct of its employees in connection with its sales activities. Notwithstanding the provisions of a third-party agreement, bank management should monitor the conduct of nondeposit investment product sales programs to ensure that sales of the products are distinct from other bank activities and are not conducted in a manner that could confuse customers about the lack of insurance coverage for these investments.

Contingency Planning

Nondeposit investment products are subject to price fluctuations caused by changes in interest rates and stock market valuations. In the event

of a sudden, sharp drop in the market value of nondeposit investment products, institutions may experience a heavy volume of customer inquiries, complaints, and redemptions. Therefore, management should develop contingency plans to address these situations. A major element of any contingency plan should be to provide customers with access to information about their investments. Other factors to consider in contingency planning include public relations and the ability of operations staff to handle increased volumes of transactions.

DISCLOSURES AND ADVERTISING

Content, Form, and Timing of Disclosures

Nondeposit investment product sales programs should ensure that customers are clearly and fully informed of the nature and risks associated with these products. In addition, nondeposit investment products must be clearly differentiated from insured deposits. The interagency statement identifies the following minimum disclosures that must be made to customers when providing investment advice, making investment recommendations, or effecting nondeposit investment product transactions:

- They are not insured by the FDIC.
- They are not deposits or other obligations of the institution and are not guaranteed by the institution.
- They are subject to investment risks, including the possible loss of the principal invested.

There are limited situations in which the disclosure guidelines need not apply or where a shorter logo format may be used in lieu of the longer written disclosures.

The interagency statement disclosures do not need to be provided in the following situations:

- radio broadcasts of 30 seconds or less;
- electronic signs,³ and
- signs, such as banners and posters, when they are used only as location indicators.

3. "Electronic signs" may include billboard-type signs that are electronic, time-and-temperature signs, and ticker-tape signs. Electronic signs would not include such media as television, on-line services, or ATMs.

Additionally, third-party vendors not affiliated with the depository institution need not make the interagency statement disclosures on non-deposit investment product confirmations and in account statements that may incidentally, with a valid business purpose, contain the name of the depository institution.

Shorter, logo-format disclosures may be used in visual media, such as television broadcasts, ATM screens, billboards, signs, posters, and written advertisements and promotional materials, such as brochures. The text of an acceptable logo-format disclosure would include the following statements:

- Not FDIC-Insured.
- No Bank Guarantee.
- May Lose Value.

Disclosure is the most important way of ensuring that the differences between non-deposit investment products and insured deposits are understood by retail customers. Accordingly, it is critical that the minimum disclosures be presented clearly and concisely in both oral and written communications. In this regard, the minimum disclosures should be provided—

- orally during any sales presentations (including telemarketing contacts) or when investment advice is given,
- orally and in writing before or at the time an investment account to purchase these products is opened, and
- in all advertisements and other promotional materials (discussed further below).

The minimum disclosures may be made on a customer account agreement or on a separate disclosure form. The disclosures must be conspicuous (highlighted through bolding, boxes, and/or a larger typeface). Disclosures contained directly on a customer account agreement should be located on the front of the agreement or adjacent to the customer signature block.

Banks are to obtain a written acknowledgment—on the customer account agreement or on a separate form—from a customer confirming that he or she has received and understands the minimum disclosures. For nondeposit investment product accounts established before the issuance of the interagency statement, banks should obtain a disclosure acknowledgment from the customer at the time of the customer's next purchase transaction. If an institution solicits

customers by telephone or mail, it should ensure that the customers receive the written disclosures and an acknowledgment to be signed and returned to the institution.

Customer account statements, including combined statements for linked accounts and trade confirmations that are provided by the bank or an affiliate, should contain the minimum disclosures if they display the name or logo of the bank or its affiliate. Statements that provide account information about insured deposits and nondeposit investment products should clearly segregate the information about nondeposit investment products from the information about deposits to avoid customer confusion.

Advertising

The interagency statement provides that advertisements in all media forms that identify specific investment products must conspicuously include the minimum disclosures and must not suggest or convey any inaccurate or misleading impressions about the nature of a nondeposit investment product. Promotional material that contains information about both FDIC-insured products and nondeposit investment products should clearly segregate the information about the two product types. When promotional sales materials related to nondeposit investment products are displayed in the bank's retail areas, they should be grouped separately from material related to insured bank products.

Telemarketing scripts should be reviewed to determine whether bank personnel are inquiring about customer investment objectives, offering investment advice, or identifying particular investment products or types of products. In these cases, the scripts must contain the minimum disclosures, and bank personnel relying on the scripts must be formally authorized to sell nondeposit investment products by their employers. Further, these personnel must have training that is the substantive equivalent of that required for personnel qualified to sell securities as registered representatives (see the "Training" subsection below).

Additional Disclosures

A bank should apprise customers of certain material relationships. For example, a customer

should be informed by sales personnel orally and in writing before the sale about any advisory relationship existing between the bank (or an affiliate) and a mutual fund whose shares are being sold by the institution. Similarly, fees, penalties, or surrender charges associated with a nondeposit investment product should be disclosed by sales personnel orally and in writing before or at the time the customer purchases the product. The SEC requires written disclosure of this information in the investment product's prospectus.

If sales activities include any written or oral representations concerning insurance coverage by any entity other than the FDIC (for example, SIPC insurance of broker-dealer accounts, a state insurance fund, or a private insurance company), then clear and accurate explanations of the coverage must also be provided to customers at that time to minimize possible confusion with FDIC insurance. These disclosures should not suggest that other forms of insurance are the substantive equivalent to FDIC deposit insurance.

SETTING AND CIRCUMSTANCES

Physical Separation from Deposit Activities

Selling or recommending nondeposit investment products on bank premises may give the impression that the products are FDIC-insured or are obligations of the bank. To minimize customer confusion with deposit products, nondeposit investment product sales activities should be conducted in a location that is physically distinct from the areas where retail deposits are taken. Bank employees located at teller windows may not provide investment advice, recommend investment products, or accept orders (even unsolicited orders) for nondeposit investment products.

To decide whether nondeposit investment product sales activities are sufficiently separate from deposit activities, the particular circumstances of each bank need to be evaluated. FDIC insurance signs and insured deposit-related promotional material should be removed from the investment product sales area and replaced with appropriate signs indicating that the area is used for the sale of investment products. Signs referring to specific investments should prominently contain the minimum disclosures. In the limited

situation where physical constraints prevent nondeposit investment product sales activities from being conducted in a distinct and separate area, the institution has a heightened responsibility to ensure that appropriate measures are taken to minimize customer confusion.

In the case of banks that are affiliated with section 20 companies that sell retail investment products directly to bank customers, the requirement for separation of deposit-taking facilities from the securities operations of the section 20 company is absolute under the relevant firewall conditions imposed on these companies by the Board. Accordingly, retail sales activities conducted by a section 20 company must be in a separate office which, at a minimum, is set off from deposit-taking activities by partitions and identified by signs with the name of the section 20 company. Further, section 20 company employees may not be dual employees of the bank. Business cards for designated sales personnel should clearly indicate that they sell nondeposit investment products or, if applicable, are employed by a broker-dealer.

The interagency statement was intended generally to cover sales made to retail customers in the bank lobby. However, some institutions may have an arrangement whereby retail customers purchase nondeposit investment products at a location of the institution that is generally confined to institutional services (for example, corporate money desk). In these cases, the bank should still ensure that retail customers receive the minimum disclosures to minimize any possible customer confusion with nondeposit investment products and insured deposits.

Hybrid Instruments and Accounts

When an institution offers accounts that link traditional bank deposits with nondeposit investment products, such as a cash-management account,⁴ the accounts should be opened in the investment sales area by trained personnel. In light of the hybrid characteristics of these products, the opportunity for customer confusion is amplified, and the institution should take special care during the account-opening process to ensure that a customer is accurately informed that

4. A hybrid account may incorporate deposit and brokerage services, credit/debit card features, and automated sweep arrangements.

- funds deposited into a sweep account will only be FDIC-insured until they are swept into a nondeposit investment product account and
- customer account statements may disclose balances for both insured and nondeposit product accounts.

DESIGNATION, TRAINING, AND SUPERVISION OF PERSONNEL

Hiring and Training of Sales Personnel

Banks hiring sales personnel for nondeposit investment product programs should investigate the backgrounds of prospective employees. When a candidate for employment has previous investment industry experience, the bank should check whether the individual has been the subject of any disciplinary actions by securities, state, or other regulators.

Unregistered bank sales personnel should receive training that is the substantive equivalent of that provided to personnel qualified to sell securities as registered representatives. Training should cover the areas of product knowledge, trading practices, regulatory requirements and restrictions, and customer-protection issues. In addition, training programs should cover the bank's policies and procedures for sales of nondeposit investment products and should be conducted continually to ensure that staff are familiar with new products and compliance issues.

For those bank employees whose sales activities are limited to mutual funds or variable annuities, the equivalent training is that ordinarily needed to pass NASD's series 6 limited representative examination, which typically involves approximately 30 to 60 hours of preparation, including about 20 hours of classroom training. Bank employees who are authorized to sell additional investment products and securities should receive training that is appropriate to pass the NYSE's series 7 general securities representative examination, which typically involves 160 to 250 hours of study, including at least 40 hours of classroom training.

The training of third-party or dual employees is the responsibility of the third party. When entering into an agreement with a third party, bank management should be satisfied that the third party is able to train third-party and dual

employees with respect to compliance with the minimum disclosures and other requirements of the interagency statement. Copies of third-party training and compliance materials should be obtained and reviewed by the bank to monitor the third party's performance regarding its training obligations.

Training of Bank Personnel Who Make Referrals

Bank employees, such as tellers and platform personnel, who are not authorized to provide investment advice, make investment recommendations, or sell nondeposit investment products, but who may refer customers to authorized nondeposit investment products sales personnel, should receive training about the strict limitations on their activities. In general, bank personnel who are not authorized to sell nondeposit investment products are not permitted to discuss general or specific investment products, prequalify prospective customers as to financial status and investment history and objectives, open new accounts, or take orders on a solicited or unsolicited basis. These personnel may contact customers for the purposes of—

- determining whether the customer wishes to receive investment information
- inquiring whether the customer wishes to discuss investments with an authorized sales representative, and
- arranging appointments to meet with authorized bank sales personnel or third-party broker-dealer registered sales personnel.

The minimum disclosure guidelines do not apply to referrals made by personnel not authorized to sell nondeposit investment products if the referral does not provide investment advice, identify specific investment products, or make investment recommendations.

Supervision of Personnel

Bank policies and procedures should designate, by title or name, the individuals responsible for supervising nondeposit investment product sales activities, as well as the referral activities of bank employees not authorized to sell these products. Personnel responsible for managing

the sales programs for these products should have supervisory experience and training equivalent to that required of a general securities principal, as required by the NASD for broker-dealers. Supervisory personnel should be responsible for the bank's compliance with policies and procedures on nondeposit investment products, applicable laws and regulations, and the interagency statement. When sales of these products are conducted by a third party, supervisory personnel should be responsible for monitoring compliance with the agreement between the bank and the third party, as well as compliance with the interagency statement, particularly the guideline calling for nondeposit investment product sales to be separate and distinct from the deposit activities of the bank.

SUITABILITY AND SALES PRACTICES

Suitability of Recommendations

Suitability refers to the matching of customer financial means and investment objectives with a suitable product. If customers are placed into unsuitable investments, the resulting loss of consumer confidence could have detrimental effects on the bank's reputation. Many first-time investors may not fully understand the risks associated with nondeposit investment products and may assume that the bank is responsible for the preservation of the principal of their investment.

Banks that sell nondeposit investment products directly to customers should develop detailed policies and procedures addressing the suitability of investment recommendations and related recordkeeping requirements. Sales personnel that recommend nondeposit investment products to customers should have reasonable grounds for believing that the recommended products are suitable for the particular customer on the basis of information he or she has provided. A reasonable effort must be made to obtain, record, and update information concerning the customer's financial profile (for example, tax status, other investments, income), investment objectives, and other information necessary to make recommendations.

In determining whether sales personnel are meeting their suitability responsibilities, examiners should review the practices for conformance with the bank's policies and procedures.

The examiner's review should include a sample of customer files to determine the extent of customer information collected, recorded, and updated (for subsequent purchases) and should determine whether investment recommendations appear unsuitable in light of this information.

Nondeposit investment product sales programs conducted by third-party broker-dealers are subject to the NASD's suitability and other sales practice rules. To avoid duplicating NASD examination efforts, examiners should rely on the NASD's most recent sales practice review of the third party, when available. If an NASD review has not been completed within the last two years, Reserve Banks should consult with Board staff to determine an appropriate examination scope for suitability compliance before proceeding further.

Sales Practices and Customer Complaints

Banks should have policies and procedures that address undesirable practices by sales personnel, such as practices to generate additional commission income for the employee by churning or switching accounts from one product to another. Banks should have policies and procedures for handling customer complaints related to nondeposit investment products. The process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. The merits and circumstances of each complaint (including all documentation relating to the transaction) should be considered when determining the proper form of resolution. Reasonable timeframes should be established for addressing complaints.

COMPENSATION

Incentive compensation programs specifically related to the sale of nondeposit investment products may include sales commissions, limited fees for referring prospective customers to an authorized sales representative, and nonmonetary compensation (prizes, awards, and gifts). Compensation that is paid by unaffiliated third parties (for example, mutual fund distributors) to bank staff must be approved in writing by

bank management, be consistent with the bank's written internal code of conduct for the acceptance of remuneration from third parties, and be consistent with the proscriptions of the Bank Bribery Act (18 USC 215) and the banking agencies' implementing guidelines to that act. (See SR-87-36, "Bank Bribery Act Guidelines," October 30, 1987.) Compensation policies should establish appropriate limits on the extent of compensation that may be paid to banking organization staff by unaffiliated third parties.

Incentive compensation programs must not be structured in such a way that they result in unsuitable investment recommendations or sales to customers. In addition, if sales personnel sell both deposit and nondeposit products, similar financial incentives should be in place for sales of both types of products. A compensation program that offers significantly higher remuneration for selling a specific product (such as a proprietary mutual fund) may be inappropriate if it results in unsuitable recommendations to customers. A compensation program that is intended to provide remuneration for a group of bank employees (such as a branch or department) is permissible as long as the program is based on the group's overall performance in meeting bank objectives for a broad variety of bank services and products and not on the volume of sales of nondeposit investment products.

Individual bank employees, such as tellers, may receive a one-time nominal fee of a fixed-dollar amount for referring customers to authorized sales personnel to discuss nondeposit investment products. However, the payment of the fee should not depend on whether the referral results in a transaction. Nonmonetary compensation to bank employees for referrals should be similarly structured. Auditors and compliance personnel should not participate in incentive compensation programs that are directly related to the results of nondeposit investment product sales programs.

COMPLIANCE

Banks must develop and maintain written policies and procedures that effectively monitor and assess compliance with the interagency statement and other applicable laws and regulations and that ensure appropriate follow-up to correct identified deficiencies. Compliance programs

should be independent of sales activities with respect to scheduling, compensation, and performance evaluations. Compliance findings should periodically be reported to the bank's board of directors or a designated committee of the board as part of the institution's ongoing oversight of nondeposit investment product activities. Compliance personnel should have appropriate training and experience with nondeposit investment product sales programs, applicable laws and regulations, and the interagency statement.

Banks should institute compliance programs for nondeposit investment products that are similar to those of securities broker-dealers. This includes a review of new accounts and a periodic review of transactions in existing accounts to identify any potentially abusive practices, such as unsuitable recommendations, churning, or switching. Compliance personnel should also oversee the prompt resolution of customer complaints and review complaint logs for questionable sales practices. Management-information-system reports on early redemptions and sales patterns for specific sales representatives and products should also be used by compliance personnel to identify any potentially abusive practices. In addition, the referral activities of bank personnel should be reviewed to ensure that they conform to the guidelines in the interagency statement.

When nondeposit investment products are sold by third parties on bank premises, the bank's compliance program should provide for oversight of the third party's compliance with its agreement with the bank, including its conformance to the disclosure and separate-facilities guidelines of the interagency statement. The results of this oversight should be reported to the board of directors or a designated committee of the board. Management should obtain the third party's commitment to promptly correct identified problems. Proper follow-up by the bank's compliance personnel should verify the third party's corrective actions.

AUDITS

Audit personnel should be responsible for assessing the effectiveness of the institution's compliance function and overall management of the nondeposit investment product sales program. The scope and frequency of audit reviews of nondeposit investment product activities will depend on the complexity and sales volume of a

sales program and on whether there are any indications of potential or actual problems. Audits should cover all of the issues discussed in the interagency statement. Internal audit staff should be familiar with nondeposit investment products and receive ongoing training. Findings should be reported to the board of directors or to

a designated committee of the board, and proper follow-up should be performed. Audit activities with respect to third parties should include a review of their compliance function and the effectiveness of the bank's oversight of the third party's activities.

Retail Sales of Nondeposit Investment Products

Examination Objectives

Effective date May 1996

Section 4170.2

1. To determine that the banking organization has taken appropriate measures to ensure that retail customers clearly understand the differences between insured deposits and non-deposit investment products and that they receive the minimum disclosures both orally during sales presentations (including telemarketing) and in writing.
2. To assess the adequacy of the institution's policies and procedures, sales practices, and oversight by management and the board of directors to ensure an operating environment that fosters customer protection in all facets of the sales program.
3. To ensure that the sales program is conducted in a safe and sound manner that is in compliance with the interagency statement, Federal Reserve guidelines, regulations, and applicable laws.
4. To assess the effectiveness of the institution's compliance and audit programs for non-deposit investment product operations.
5. To obtain commitments for corrective action when policies, procedures, practices, or management oversight is deficient or when the institution has failed to comply with the interagency statement or applicable laws and regulations.

Retail Sales of Nondeposit Investment Products

Examination Procedures

Effective date September 1992

Section 4170.3

1. Verify through the minutes of the board of directors that the directors have approved the sale of uninsured annuities, reviewed, and approved the choice of an underwriter in the past year.
 2. Determine if the bank adequately evaluates the underwriter's financial condition at least annually and regularly reviews the credit ratings assigned to the underwriter by at least two independent agencies evaluating annuity underwriters. (Banks engaged in the sale of annuities are expected to sell only products of financially secure underwriters and to make current ratings of the underwriter available to an investor when purchasing an uninsured annuity.)
 3. Verify that the bank does not sell uninsured annuities at teller windows or other areas where retail deposits are routinely accepted.
 4. Assess the adequacy of disclosures and the separation of the marketing and sale of uninsured annuities from the retail deposit-taking function by ensuring that—
 - a. the contract, advertising, and all related documents disclose prominently in bold print that the annuities are not deposits or obligations of an insured depository institution and are not insured by the Federal Deposit Insurance Corporation;
 - b. advertisements do not contain words, such as "deposit," "CD," etc., that could lead an investor to believe an annuity is an insured deposit instrument;
 - c. the obligor of the annuity contract is prominently disclosed and names or logos of the insured bank are not used in a way that might suggest the insured bank is the obligor;
 - d. adequate verbal disclosures are made during telemarketing contacts and at the time of sale;
 - e. retail deposit-taking employees of the insured depository institution are not engaged in the promotion or sale of uninsured annuities;
 - f. information on uninsured annuities is not contained in retail deposit statements of customers (either as advertising on deposit statements or as "junk mail" stuffers included with deposit statements) or in the immediate retail deposit-taking area;
 - g. account information on annuities owned by customers is not included on insured deposit statements; and
 - h. officer or employee remuneration associated with selling annuities is limited to reasonable levels in relation to the individual's salary. (As a guideline in reviewing remuneration, see the Board's policy statement on disposition of credit life insurance, as discussed in the Consumer Credit, Examination Procedures, section of this manual.)
5. If the bank allows a third-party entity to market annuities on depository-institution premises, assess the adequacy of disclosures and the separation of the marketing and sale of uninsured annuities from the retail deposit-taking function by determining that—
 - a. the bank has ensured that the third-party company is properly registered or licensed to conduct this activity,
 - b. bank personnel are not involved in sales activities conducted by the third party,
 - c. desks or offices used to market or sell annuities are separate and distinctly identified as being used by an outside party, and
 - d. bank personnel do not normally use desks or offices used by a third party for annuities sales.
 6. Encourage the bank to obtain a signed statement from the customer indicating that the customer understands that the annuity is not a deposit or any other obligation of the bank, that the bank is only acting as an agent for the insurance company (underwriter), and that the annuity is not FDIC-insured.

INTERAGENCY POLICY ON BANKS AND THRIFTS PROVIDING FINANCIAL SUPPORT TO FUNDS ADVISED BY THE BANKING ORGANIZATION OR ITS AFFILIATES

On January 5, 2004, the federal banking agencies¹ (the agencies) issued an interagency policy statement to alert banking organizations, including their boards of directors and senior management, of the safety-and-soundness implications of, and the legal impediments to, a bank providing financial support to investment funds² advised by the bank, its subsidiaries, or affiliates (affiliated investment funds). A banking organization's investment advisory services can pose material risks to the bank's liquidity, earnings, capital, and reputation and can harm investors, if the associated risks are not effectively controlled. (See SR-04-1.)

Banks are under no statutory requirement to provide financial support to the funds they advise; however, circumstances may motivate banks to do so for reasons of reputation risk and liability mitigation. This type of support by banking organizations to funds they advise has included credit extensions, cash infusions, asset purchases, and the acquisition of fund shares. In very limited circumstances, certain arrangements between banks and the funds they advise have been expressly determined to be legally permissible and safe and sound when properly conducted and managed. However, the agencies are concerned about other occasions when emergency liquidity needs may prompt banks to support their advised funds in ways that raise prudential and legal concerns. Federal laws and regulations place significant restrictions on transactions between banks and their advised funds. In particular, sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W (12 CFR 223) place quantitative limits and

collateral and market-terms requirements on many transactions between a bank and certain of its advised funds.

Interagency Policy

To avoid engaging in unsafe and unsound banking practices, banks should adopt appropriate policies and procedures governing routine or emergency transactions with bank-advised investment funds. Such policies and procedures should be designed to ensure that the bank will *not* (1) inappropriately place its resources and reputation at risk for the benefit of the funds' investors and creditors; (2) violate the limits and requirements contained in sections 23A and 23B of the Federal Reserve Act and Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or (3) create an expectation that the bank will prop up the advised fund. Further, the agencies expect banking organizations to maintain appropriate controls over investment advisory activities that include:

- Establishing alternative sources of emergency support from the parent holding company, nonbank affiliates, or external third parties prior to seeking support from the bank.
- Instituting effective policies and procedures for identifying potential circumstances triggering the need for financial support and the process for obtaining such support. In the limited instances that the bank provides financial support, the bank's procedures should include an oversight process that requires formal approval from the bank's board of directors, or an appropriate board-designated committee, independent of the investment advisory function. The bank's audit committee also should review the transaction to ensure that appropriate policies and procedures were followed.
- Implementing an effective risk-management system for controlling and monitoring risks posed to the bank by the organization's investment advisory activities. Risk controls should include establishing appropriate risk limits, liquidity planning, performance measurement systems, stress testing, compliance reviews, and management reporting to mitigate the need for significant bank support.

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS).

2. Bank-advised investment funds include mutual funds, alternative strategy funds, collective investment funds, and other funds where the bank, its subsidiaries, or affiliates is the investment adviser and receives a fee for its investment advice.

- Implementing policies and procedures that ensure that the bank is in compliance with existing disclosure and advertising requirements to clearly differentiate the investments in advised funds from obligations of the bank or insured deposits.
- Ensuring proper regulatory reporting of contingent liabilities arising out of its investment advisory activities in the banking organization's published financial statements in accordance with FAS 5, and fiduciary settlements, surcharges, and other losses arising out of its investment advisory activities in accordance with the instructions for completing call report Schedule RC-T (Fiduciary and Related Services).

Notification of a Banking Organization's Primary Federal Regulator

Because of the potential risks posed by the provision of financial support to advised funds, bank management should notify and consult with its appropriate federal banking agency prior to (or immediately after, in the event of an emergency) the bank providing material financial support to its advised funds. The appropriate federal banking agency will closely scrutinize the circumstances surrounding the transaction and will address situations that raise supervisory concerns.

Investment-Funds Support

Examination Objectives

Effective date May 2004

Section 4180.2

1. To determine if the bank provides support to an advised fund and, if so, the type of support that is being provided.
2. If the bank is providing support to an advised fund, to ascertain whether the type of support raises prudential (safety-and-soundness) or legal concerns, such as noncompliance with sections 23A and 23B of the Federal Reserve Act, and with Regulation W.
3. To determine whether the bank has adopted appropriate policies and procedures governing routine or emergency transactions with funds that it advises.
4. To find out if the bank has established appropriate controls over investment advisory activities.
5. If a bank has provided material financial support to an advised fund, to determine if the bank notified its primary federal regulator before engaging in the activity.

Investment-Funds Support

Examination Procedures

Effective date May 2004

Section 4180.3

1. Determine if the bank has inappropriately placed its resources at risk for the benefit of an affiliated investment fund's investors and creditors.
2. Ascertain whether the bank's advisory services to investment funds pose material risks to the bank's liquidity, earnings, and capital.
3. Determine if the bank provides support to an investment fund and if that support violates the limits and requirements of sections 23A and 23B of the Federal Reserve Act, and Regulation W; other applicable legal requirements; or any special supervisory condition imposed by the bank's primary federal supervisory agency.
4. Find out if the bank has given any form of assurances or expectations that it will provide financial or other support to an advised fund.
5. Ascertain whether the bank has established appropriate controls over investment advisory activities, such as:
 - a. Establishing alternative sources of emergency support that can be made available to an advised fund from the parent holding company, nonbank affiliates, or external third parties before the fund seeks financial support from the bank.
 - b. Instituting effective policies and procedures to—
 - identify potential circumstances that would trigger the need for financial support by an affiliated fund, and establish the process for obtaining that support;
 - ensure that the bank is in compliance with existing disclosure and advertising requirements that clearly differentiate the investments in advised funds from the bank's other obligations or federally insured deposits; and
 - avoid unsafe and unsound banking practices by initiating procedures that govern routine or emergency transactions with bank-advised investment funds.
6. Determine if the bank notified and consulted with the appropriate supervising Federal Reserve Bank before (or, in an emergency, immediately after) providing financial support to an affiliated investment fund.
 - c. Implementing an effective risk-management system for controlling and monitoring risks posed to the bank by its investment advisory activities.
 - d. Ensuring the bank's proper reporting, in its financial statements, of contingent liabilities that arise out of its investment advisory activities (in accordance with FAS 5 and the bank call report instructions for completing Schedule RC-T for fiduciary activities).

Investment-Funds Support Internal Control Questionnaire

Effective date May 2004

Section 4180.4

Review the bank's internal controls, policies, practices, and procedures concerning investment funds that it advises. When performing that task, conduct examination reviews and procedures to answer the following questions:

1. Has the bank—
 - a. inappropriately placed its financial resources or reputation at risk for the benefit of affiliated investment funds' investors and creditors?
 - b. violated the limits and requirements in sections 23A and 23B of the Federal Reserve Act and in Regulation W, with regard to its transactions with advised investment funds?
 - c. created any expectation that the bank will prop up an advised fund?
2. Do the bank's advisory services pose material risks to its liquidity, earnings, and capital?
3. Does the bank encourage its advised investment funds to establish alternative sources of financial support so that the funds can avoid seeking support from the bank itself?
4. Has the bank provided support to the funds it advises, such as with extensions of credit, cash infusions, asset purchases, acquisition of fund shares, or any other type of financial support?
5. Has the bank implemented and maintained an effective risk-management system for controlling and monitoring the risks posed to the bank by its investment advisory activities?
6. Did the bank's board of directors adopt appropriate policies and procedures to avoid engaging in unsafe and unsound banking practices with respect to routine or emergency transactions with bank-advised investment funds?
7. Has the bank's management properly reported contingencies arising out of its investment advisory activities, in accordance with FAS 5, and also any fiduciary settlements, surcharges, and other losses arising out of its investment advisory activities, in accordance with the instructions of the bank call report schedule RC-T (Fiduciary and Related Services)?
8. Has the bank's management notified and consulted with its appropriate supervising Federal Reserve Bank before (or, in an emergency, immediately after) providing material financial support to advised funds?

Fiduciary activities and other related services generally include traditional trust services, such as personal trust, corporate trust, and transfer-agent services and employee benefit account products and services, as well as custody and securities-lending services, clearing and settlement, private banking, asset management, and investment advisory activities. (See SR-01-5.)

Pursuant to 12 USC 24 (seventh), 92a, and 93a, the Office of the Comptroller of the Currency (OCC) has established standards (the OCC rules for fiduciary activities of national banks). These rules are typically considered the industry standard for fiduciary activities of all financial institutions operating in the United States. (See 12 CFR 9.) When considering whether a state member bank has adhered to industry standards for fiduciary activities, Federal Reserve System (FRS) examiners can refer to the guidance set forth in the OCC rules and FRS and OCC examination manuals, as well as the examination materials issued by other U.S. financial institution regulatory agencies. With respect to a state member bank subsidiary, the appropriate bank, thrift, or functional regulator has the primary supervisory responsibility for evaluating risks, hedging, and risk management at the legal-entity level for the entity that the regulator supervises. (See SR-00-13.) Examiners should seek to use the examination findings of the functional regulator.

A risk-focused fiduciary examination concentrates on understanding and evaluating risk and assessing the internal controls the state member bank has employed to manage risk. The program encompasses continuous monitoring; targeted reviews of fiduciary activities; preparation of supervisory risk profiles and assessments; and the development of supervisory plans, which are integrated into the preplanning of an examination. Conclusions are used to develop an overall safety-and-soundness evaluation of the state member bank's fiduciary activities. (See SR-96-10.)

The Federal Reserve System's fiduciary-examination program reviews and assesses the risk-management practices and related aspects of a state member bank's fiduciary activities. This approach results in (1) the use of a more diversified examiner population, including those with capital-markets, information systems, and safety-and-soundness experience; (2) an emphasis on assessing the individual organization's

unique risk profile; and (3) reviews of risk identification, measurement, monitoring, and control. Examiners should use the state member bank's control disciplines (internal audit, risk management, and compliance program) whenever possible.

Examiners have access to a broad variety of FRS supervisory information and analytical support tools to evaluate the fiduciary activities of financial institutions. The Uniform Bank Performance Report (UBPR) can assist examiners in evaluating a state member bank's fiduciary business lines or activities relative to its peers. (See the UBPR, pages Trust 1 and Trust 1A.) Beginning with the December 2002 release, "Section II: Technical Information" of the *UBPR User's Guide* (available online at www.ffiec.gov/ubprguide.htm) discusses the availability of the Total Fiduciary Assets within a fiduciary group number (peer group). (See page II-3.) "Total Fiduciary Assets" are the totals of managed and nonmanaged fiduciary assets for FDIC-insured commercial and savings banks, as reported on Schedule RC-T of the call report.

COMPLEX FIDUCIARY ORGANIZATIONS

SR-01-5 explains that complex fiduciary organizations are those banking organizations that conduct significant or complex fiduciary activities. This includes large complex banking organizations (LCBOs), other large or regional institutions for which fiduciary activities represent a significant portion of their business, and clearing agencies registered with the Securities and Exchange Commission (SEC) for which the Federal Reserve is the primary supervisor. The fiduciary-examination frequency should be determined on the basis of the impact that fiduciary activities have on the organization's risk profile. At a minimum, all material fiduciary business lines should be subject to examination over a two-year period or examination cycle as part of the continuous supervision process, with higher-risk areas generally reviewed annually.

Composite Uniform Interagency Trust Rating System (UITRS) ratings and transfer-agent ratings reflecting the overall condition of the fiduciary function at each institution, and any component ratings considered relevant, should be

assigned or updated in a timely manner on the basis of the results of examinations, targeted reviews, or other assessments of fiduciary activities. UITRS ratings do not need to be assigned for each targeted business-line review. However, at a minimum, composite UITRS and transfer-agent ratings should be updated annually, and any material findings related to these areas should be included in the annual summary supervisory report. Any significant concerns should be reflected in the safety-and-soundness examination ratings. Fiduciary risks and fiduciary-risk management assessments should also be reflected in the relevant risk-assessment and risk-management ratings for the banking organization, as necessary.

OTHER INSTITUTIONS OFFERING FIDUCIARY AND TRANSFER-AGENT SERVICES

The frequency of fiduciary and transfer-agent examinations for other institutions, generally smaller state-chartered Federal Reserve member banks and trust companies with noncomplex operations, should be determined on the basis of the significance of their fiduciary and transfer-agent activities and an assessment of the level of risk the activities present to the institution. This scheduling guidance also applies to initial examinations of new institutions and to those institutions subject to Federal Reserve supervision as a result of a charter conversion.

At a minimum, fiduciary activities should be reviewed no less frequently than during every other routine safety-and-soundness examination. Examinations governed by alternating examination programs with state banking authorities may continue to be performed in accordance with those arrangements or as necessary to incorporate the provisions of SR-01-5. Examinations of fiduciary activities at noncomplex limited-purpose trust companies and other fiduciary institutions subject to supervision by the Federal Reserve that do not receive routine safety-and-soundness examinations should be conducted no less frequently than every two years.

Composite UITRS and transfer-agent examination ratings reflecting the overall condition of the function, and any component ratings considered relevant, should be assigned or updated at the completion of the examination or assess-

ment. Material examination findings should be integrated into the overall examination report for the institution, which should clearly indicate the significance of any findings to the safety and soundness of the institution and the impact of the findings on any relevant risk assessments and risk-management ratings.

ORGANIZATIONS WITH SUPERVISORY CONCERNS

Organizations whose fiduciary activities have raised supervisory concerns should be subject to an additional level of supervisory attention on the basis of the severity of those supervisory concerns. Generally, this would include those organizations with a composite UITRS rating of 3, 4, or 5; a transfer-agent rating of B or C; or significant deficiencies in one or more component-rating categories. In the case of an institution assigned a UITRS rating of 4 or 5 or a transfer-agent rating of C, supervisory action should be initiated promptly and continued until the problems or deficiencies have been appropriately addressed.

Under the Securities and Exchange Act of 1934, the Federal Reserve continues to be responsible for examining transfer agents and clearing agencies for which it is the primary supervisor, including reviewing compliance with SEC rules. Any material violations of transfer-agent or clearing-agency rules must be reported promptly to Board staff to facilitate coordination with the SEC.

RISK PROFILE OF FIDUCIARY ACTIVITIES

Regular supervisory assessments of the risk of fiduciary activities, as outlined in SR-01-5, support the supervisory process. Risk profiles for LCBOs are updated quarterly in accordance with the provisions of SR-99-15. These risk profiles should include explicit consideration of the risks of fiduciary activities. For other complex fiduciary organizations, risk profiles reflecting fiduciary activities should be prepared and updated as needed, but no less frequently than annually. For these organizations, supervisory plans should detail the fiduciary specialist's recommended examination coverage of fiduciary activities. For banking organizations

supervised by the Federal Reserve that have smaller, noncomplex fiduciary operations, formal risk profiles may not be necessary. However, fiduciary-risk information should normally be updated at each examination or inspection and incorporated into supervisory plans.

Risk profiles should include an assessment of the inherent risk in the organization's fiduciary activities, as well as a consideration of the effectiveness of its risk management. Risk assessments would normally include the following factors:

- the size and number of fiduciary accounts and assets administered
- the nature and complexity of fiduciary products and services offered
- significant changes to management or staffing for fiduciary services
- significant changes to data processing systems supporting fiduciary services
- new affiliations, partnerships, or outsourcing arrangements
- changes in strategic direction affecting fiduciary services or exposure to emerging risks
- significant litigation, settlements, or charge-offs
- the length of time since the last on-site examination in which fiduciary activities were reviewed, and the scope of that examination
- the significance of prior examination findings
- the effectiveness of the organization's control environment, including its audit function, and the adequacy of its risk-management practices relative to the nature and scope of its business

RISK FOCUS

As explained in SR-96-10, for a complex institution, fiduciary examiners will direct their attention to assessing the organization's func-

tions and its ability to identify, measure, monitor, and control fiduciary, market, credit, and operational risks. Examiners should assess risks that result from the fiduciary's investment-management, investment advisory, mutual funds, global custody, and securities-lending and processing activities. Any other activities that are subject to adverse movements in market rates or prices, or to operating problems associated with processing a large volume of securities, should also be assessed. These fiduciary activities could result in material losses to trust customers and, in turn, expose the institution to financial losses and litigation if not conducted in a manner consistent with the fiduciary's duty of loyalty and the investor's stated objectives.

A review of internal controls and policies and procedures is an integral part of the examination program. Facets of a fiduciary examination include management competence and accountability, management's review of risks associated with the introduction of new products and services, and management's overall risk awareness.

The emphasis on risk assessment and control parallels the guidelines and procedures pertaining to state member bank examinations and bank holding company inspections, as described in SR-95-51, and recognizes the efforts of many progressive institutions in establishing fiduciary-risk assessment and control initiatives of their own. When rating the quality of risk management of fiduciary activities, examiners should place primary consideration on findings relating to the following elements of a sound risk-management system: (1) active board and senior management oversight; (2) adequate policies, procedures, and limits; (3) adequate risk-measurement, -monitoring, and management information systems; and (4) comprehensive internal controls. Each of these elements is described further below, along with a list of considerations relevant to assessing the adequacy of each element.

Active Board and Management Oversight

Given that a board of directors has ultimate responsibility for all of the activities of its institution, the board should approve overall fiduciary business strategies and policies, including those related to identifying, measuring, monitoring, and controlling fiduciary risks. A board

of directors must understand the nature of the risks that are significant to the organization, and it should ensure that management is taking the steps necessary to manage these risks.

Senior management has the responsibility for implementing approved strategies in a way that will limit fiduciary risks and ensure compliance with laws and regulations. Senior management should, therefore, be fully involved in the fiduciary activities of their institution and have sufficient knowledge of all fiduciary business lines to ensure that necessary policies, controls, and risk-monitoring systems are in place and that accountability and lines of authority are clearly defined. In assessing the quality of fiduciary oversight by boards of directors and senior management, examiners should consider whether these conditions exist:

- The board and senior management have a clear understanding and working knowledge of the types of fiduciary activities the institution performs and of the risks inherent in them. They have approved appropriate policies, procedures, recordkeeping systems, and reporting systems to support the fiduciary activities and to help measure and monitor risks. They have established procedures to stay informed about changes in fiduciary activities and the associated risks.
- Management at all levels adequately supervises the daily activities of officers and employees to ensure that the lines of fiduciary business are managed and staffed by persons whose knowledge, experience, and expertise are consistent with the nature and scope of the organization's fiduciary activities.
- Before offering new services or introducing new products, management identifies the fiduciary risks associated with them and ensures that internal controls are in place to manage the service or product and its accompanying risk.

Adequate Policies, Procedures, and Limits

An institution's directors and senior management should establish fiduciary and fiduciary-risk management policies and procedures commensurate with the types of activities the institution conducts. The policies and procedures should provide enough detailed guidance

to ensure that all material areas of fiduciary activity and risk are addressed. They should also be modified when necessary to respond to changes in the organization's activities. A smaller, less complex institution that has effective management and that is heavily involved in daily operations generally would be expected to have more basic policies addressing the significant areas of its activities and setting forth a limited but appropriate set of requirements and procedures. In a larger institution, where senior management must rely on a widely dispersed staff to implement strategies in a wide range of complex situations, far more detailed policies and related procedures would be expected. In assessing the adequacy of an institution's fiduciary and fiduciary-risk management policies and procedures, examiners should consider whether these conditions exist:

- The institution's policies and procedures adequately address the fiduciary activities performed and are consistent with management's experience level and with the institution's stated goals and objectives.
- The institution's policies and procedures provide for adequate identification, measurement, monitoring, and control of the risks posed by its fiduciary activities.
- Policies clearly establish accountability and set forth lines of authority.
- Policies provide for review of new fiduciary services and activities to ensure that they are suitable and consistent with fiduciary-customer objectives, and to ensure that the systems necessary to identify, measure, monitor, and control risks associated with new services and activities are in place before the activity is initiated.

Adequate Risk-Monitoring and Management Information Systems

Risk monitoring requires institutions to identify and measure all areas of material fiduciary risk continuously. Risk-monitoring activities must be supported by management information systems that provide senior management with timely reports on financial condition, operating performance, marketing efforts, new products and services, pending or threatened litigation, and risk exposure arising from fiduciary activities. The information system also must provide regu-

lar and more detailed reports for managers engaged in the daily management of the institution's activities.

The sophistication of risk-monitoring and control information systems should be commensurate with the complexity of the institution's fiduciary operations. Less complex institutions may require only a limited number of management reports to support risk-monitoring activities. Larger, more complex institutions, however, would be expected to have much more comprehensive reporting and monitoring systems. These systems would allow for more frequent reporting and closer monitoring of complex activities. In assessing the adequacy of an institution's measurement and monitoring of fiduciary risk, examiners should consider whether these conditions exist:

- The institution's fiduciary-risk monitoring practices and reports encompass all of its business lines and activities, and they are structured to monitor exposures consistent with established goals, limits, and objectives.
- Key assumptions, data sources, and procedures used in identifying, measuring, and monitoring fiduciary risk are appropriate for the activities the institution performs and are adequately documented and continuously tested for reliability.
- Reports to management are accurate and timely and contain sufficient information for policy and decision makers to identify any adverse trends and any potential or real problems. The reports must be adequate for management to evaluate the level of fiduciary risk faced by the institution.

Adequate Internal Controls

A comprehensive internal-control structure is critical to the safe and sound functioning of an institution and its fiduciary-risk management system. Establishing and maintaining a system of internal controls that sets forth official lines of authority and an appropriate segregation of duties is one of management's most important responsibilities.

A well-structured system of internal controls promotes effective fiduciary operations and reliable reporting; safeguards assets; and helps to ensure compliance with laws, regulations, and institutional policies. Controls should be periodically tested by an independent party (prefer-

ably the auditor or at least an individual not involved in the process being reviewed) who reports directly to either the institution's board of directors or one of its designated committees. Given the importance of appropriate internal controls to organizations of all sizes and risk profiles, the results of these reviews should be adequately documented, as should management's responses to them. In evaluating the adequacy of an institution's internal controls as they relate to fiduciary activities, examiners should consider whether these conditions exist:

- The system of internal controls is appropriate to the type and level of fiduciary activities.
- The institution's organizational structure establishes clear lines of authority and responsibility.
- Reporting lines are sufficiently independent of the control areas and from the business lines, and there is adequate separation of duties throughout the institution.
- Financial, operational, and regulatory reports are reliable, accurate, and timely.
- Adequate procedures exist for ensuring compliance with laws and regulations.
- Internal-audit or other control-review practices provide for independence and objectivity.
- Internal controls and information systems are adequately tested and reviewed, with findings documented and weaknesses given appropriate and timely attention.
- The board of directors or the audit committee reviews the effectiveness of internal audits and other control-review activities regularly.

The fiduciary-risk assessment and control categories and tools listed above are not all-inclusive. They are guidelines for the fiduciary examiner and fiduciary-activities management to use in their risk-assessment and -control efforts. The examination of fiduciary activities may require some modification, depending on how the activities are organized and the complexity of the products and services offered.

INVESTMENT OF FIDUCIARY ASSETS IN MUTUAL FUNDS AND POTENTIAL CONFLICTS OF INTEREST

Banks and trust institutions encounter various direct or indirect financial incentives to place

trust assets with particular mutual funds. These incentives include fees for using nonaffiliated fund families as well as incentives for using an institution's proprietary mutual funds. The primary supervisory concern is that an institution may fail to act in the best interest of its beneficiaries if it stands to benefit independently from a particular investment. As a result, an institution may be exposed to an increased risk of legal action by account beneficiaries, and it could potentially violate laws or regulations. The Federal Reserve Board issued SR-99-7 to help institutions minimize these risks and ensure that their activities meet fiduciary standards.

Institutions should ensure that they perform and document an appropriate level of due diligence before entering into any compensation arrangements with mutual fund providers or before placing fiduciary assets in their own proprietary mutual funds. SR-99-7 discusses the type of measures that should be included in this process, including a reasoned legal opinion addressing the activity, appropriate policies and procedures, and documented analysis and ongoing review of investment decisions. For issues pertaining to retail sales of nondeposit investment products and matters relating to compensation, see section 4170.1.

Types of Financial Incentives

Financial incentives for placing trust assets with particular mutual funds range from payments structured as reimbursements for services or for transferring business to an unaffiliated fund family, to financial benefits that arise from using mutual funds that are managed by the institution or an affiliate. In some cases, such as service fees for administrative and recordkeeping functions performed by the trust institution, the permissibility of such payments may be specifically addressed under state law. However, guidance under applicable law may be less clear for other financial incentives. In all cases, decisions to place fiduciary assets in particular investments must be consistent with the underlying trust documents and must be undertaken in the best interest of the trust beneficiary.

Certain mutual fund providers offer compensation in the form of "service" fees to institutions that invest fiduciary assets in particular mutual funds. These fees, referred to variously as shareholder, subaccounting, or administrative-

service fees, are structured as payments to reimburse the institution for performing standard recordkeeping and accounting functions for the institution's fiduciary accounts, such as maintaining shareholder subaccounts and records, transmitting mutual fund communications as necessary, and arranging mutual fund transactions. These fees are typically based on a percentage or basis-point amount of the dollar value of assets invested or on transaction volume.

Nearly every state legislature modified its laws in the 1990s to allow explicitly the acceptance of such service fees by fiduciaries under certain conditions. These conditions often include compliance with standards of prudence, quality, and appropriateness for the account, and a determination of the "reasonableness" of the fees received by the institution. The Office of the Comptroller of the Currency (OCC) also adopted these general standards for national banks.¹ However, the Employee Retirement Income Security Act of 1974 (ERISA) generally prohibits fee arrangements between fiduciaries and third parties, such as mutual fund providers, with limited exceptions.² ERISA requirements supersede state laws and guidelines put forth by the bank regulatory agencies.

Although there has been no comprehensive review of the extent to which mutual fund providers are offering the types of incentive payments cited above, the practice is not uncommon. In addition to these service fees, another form of compensation reportedly offered by some mutual fund providers is a lump-sum payment based on assets transferred into a mutual fund.

Similar conflict-of-interest concerns are raised by the investment of fiduciary-account assets in mutual funds for which the institution or an affiliate acts as investment adviser (referred to as "proprietary" funds). In this case, the institution receives a financial benefit from management fees generated by the mutual fund investments.³

1. In general, national banks may make these investments and receive such fees if the practice is authorized by applicable law and if the investment is prudent and appropriate for fiduciary accounts and consistent with fiduciary requirements established by state law. These requirements include a "reasonableness" test for any fees received by the institution. (OCC Interpretive Letter No. 704, February 1996.)

2. ERISA section 406(b)(3), Department of Labor, Pension Welfare and Benefits Administration Advisory Opinion 97-15A and Advisory Opinion 97-16A.

3. A Board interpretation of Federal Reserve Regulation Y addresses the investment of fiduciary-account assets in mutual

Due-Diligence Measures

Although many state laws explicitly authorize certain fee arrangements in conjunction with the investment of trust assets in mutual funds, institutions nonetheless face heightened legal and compliance risks from activities in which a conflict of interest exists, particularly if proper fiduciary standards are not observed and documented. Section 23B of the Federal Reserve Act (FRA) requires, before a member bank purchases shares issued by an affiliate, including investment-fund shares, that the board of directors approve the purchase based on a determination that the purchase is a sound investment for the bank, irrespective that an affiliate is the principal underwriter.⁴ Even for investments in which the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, institutions should ensure that they perform and document an appropriate level of due diligence before entering into any fee arrangements similar to those described above or before placing fiduciary assets in proprietary mutual funds. According to SR-99-7, the following measures should be included in this process:

- *A reasoned legal opinion.* The institution should obtain a reasoned opinion of counsel that addresses the conflict of interest inherent in the receipt of fees or other forms of compensation from mutual fund providers in connection with the investment of fiduciary assets. The opinion should address the permissibility of the investment and compensation under applicable state or federal laws, the trust instrument, or court order, as well as any applicable disclosure requirements or "reasonableness" standard for fees set forth in the law.
- *Establishment of policies and procedures.* The institution should establish written policies and procedures governing the acceptance of fees or other compensation from mutual fund providers, as well as the use of proprietary mutual funds. The policies must be reviewed and approved by the institution's board of directors or its designated committee. Policies

funds for which the trustee bank's holding company acts as investment adviser. In general, such investments are prohibited unless specifically authorized by the trust instrument, court order, or state law. See *Federal Reserve Regulatory Service* 4-177.

4. 12 USC 371c-1(b)(2).

and procedures should, at a minimum, address the following issues: (1) designation of decision-making authority; (2) analysis and documentation of investment decisions; (3) compliance with applicable laws, regulations, and sound fiduciary principles, including any disclosure requirements or reasonableness standards for fees; and (4) staff training and methods for monitoring compliance with policies and procedures by internal or external audit staff.

- *Analysis and documentation of investment decisions.* Where an institution receives fees or other compensation in connection with fiduciary-account investments over which it has investment discretion or where such investments are made in the institution's proprietary mutual funds, the institution should fully document its analysis supporting the investment decision. This analysis should be performed on a regular, ongoing basis and would typically include factors such as historical performance comparisons to similar mutual funds, management fees and expense ratios, and ratings by recognized mutual-fund rating services. The institution should also document its assessment that the investment is, and continues to be, appropriate for the individual account, in the best interest of account beneficiaries, and in compliance with section 23B of the FRA and with provisions of the "prudent-investor" or "prudent-man rules," as appropriate.

UNIFORM INTERAGENCY TRUST RATING SYSTEM

In December 1998, the Federal Reserve Board issued implementing guidelines for the Uniform Interagency Trust Rating System (UITRS).⁵ The revised UITRS was made effective for examinations commencing on or after January 1, 1999.⁶ Federal Reserve examiners should assign UITRS ratings in conformance with the definitions adopted by the Federal Financial Institutions Examination Council (FFIEC), as augmented by the guidance below.

A full composite UITRS rating is *required* to

5. The UITRS was developed by the Federal Financial Institutions Examination Council. SR-98-37 mandated the use of UITRS for Federal Reserve examinations of fiduciary activities.

6. See 63 *Fed. Reg.* 54704 (October 13, 1998).

be assigned as a result of all trust examinations, except for targeted examinations, where component ratings need only be assigned for those areas included within the examination's scope. In those cases, component ratings should be assigned as the targeted examinations are completed. When an institution's trust activities are examined as a series of limited reviews over a period of time, the full UITRS rating should be assigned when the examination is considered complete, or at least as often as required under SR-01-05.

Additional Considerations for Specific UITRS Components

Management

The revised UITRS puts greater emphasis on assessing the quality of an institution's risk management, consistent with guidance previously provided to Federal Reserve examiners in SR-96-10. Examiners should continue to include in risk profiles and risk-management assessments the key risks outlined in SR-95-51, including reputation risk, operational risk, legal risk, credit risk, market risk, and liquidity risk. Whether all of these risks or a subset of them is relevant to the assessment of risk management, and thus to the management rating, depends on the scope of the particular institution's fiduciary activities. The other four UITRS rating components may also include consideration of the institution's ability to manage some or all of these risks.

Earnings

Examiners must *evaluate* earnings for all institutions that exercise fiduciary powers. In addition, an earnings *rating* must be assigned for institutions that, at the time of the examination, have total fiduciary assets of more than \$100 million and for all nondeposit trust companies. For all other institutions, examiners are not required to assign a rating and should only do so in cases where fiduciary activities are significant and the earnings rating would be meaningful to the overall rating. In these cases, examiners should use the standard earnings-rating definition, rather than the alternate-rating definitions provided in the UITRS. For examinations where no earnings

rating is assigned, a rating of 0 should be given for the earnings component, and this component should be excluded from consideration in the composite rating.

Earnings ratings of 3 or worse should be reserved for institutions whose earnings performance indicates a supervisory problem requiring corrective action, which, if left unaddressed, may pose a risk to the institution. Federal Reserve examiners may, therefore, assign an earnings rating of 2 for an institution that has experienced losses in its fiduciary activities, provided that (1) management has determined that there are benefits to the overall institution or its community from offering fiduciary services, (2) losses from fiduciary activities are stable and consistent with management expectations, and (3) such losses do not have a significant adverse effect on the profitability of the institution as a whole.

Asset Management

As noted in the UITRS, the asset-management component may not be applicable for some institutions because their activities do not involve the management of discretionary assets. A rating for asset management may, therefore, be omitted for examinations of institutions whose operations are limited to activities such as directed-agency relationships, securities clearing, nonfiduciary custody relationships, or transfer-agent or registrar activities. However, this component rating should be assigned for an institution that provides investment advice, even though it does not have discretion over the account assets. Where an asset-management rating is not assigned for a particular examination, a rating of 0 should be given, and this component should be excluded from consideration in the composite rating.

Examination Reports

SR-96-26 requires that the UITRS rating be disclosed to the institution in the summary section of each examination report. In addition, the individual numerical component ratings, which should also be disclosed in the open section of the report, may be included in the summary section. If the component ratings are included in the summary section, the ratings should also be included in the open-section

pages of the report in which trust findings are presented. If the Reserve Bank prefers not to disclose the examiner's evaluation of the component ratings to the institution, this information may be included in the confidential section of the report. Regardless of where in the report it appears, the evaluation must include sufficient detail to justify the rating assigned.

UITRS Description

Under the UITRS, the fiduciary activities of financial institutions are assigned a composite rating based on an evaluation and rating of five essential components of an institution's fiduciary activities. Composite and component ratings are assigned based on a 1-to-5 numerical scale. A 1 is the highest rating and indicates the strongest performance and risk-management practices and the least degree of supervisory concern. A 5 is the lowest rating and indicates the weakest performance and risk-management practices and, therefore, the highest degree of supervisory concern. The evaluation of the composite and components considers the size and sophistication, the nature and complexity, and the risk profile of the institution's fiduciary activities.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors that make up a particular component and on its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, the assignment of a composite rating may incorporate any factor that bears significantly on the overall administration of the financial institution's fiduciary activities. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

Management's ability to respond to changing circumstances and address the risks that may arise from changing business conditions, or from the initiation of new fiduciary activities or products, is an important factor in evaluating an institution's overall fiduciary-risk profile and the level of supervisory attention warranted. For this reason, the management component is given

special consideration when assigning a composite rating.

The ability of management to identify, measure, monitor, and control the risks of its fiduciary operations is also taken into account when assigning each component rating. It is recognized, however, that appropriate management practices may vary considerably among financial institutions, depending on the size, complexity, and risk profiles of their fiduciary activities. For less complex institutions engaged solely in traditional fiduciary activities and whose directors and senior managers are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. On the other hand, at more complex institutions, detailed and formal management systems and controls are needed to address a broader range of activities and to provide senior managers and directors with the information they need to supervise day-to-day activities.

All institutions are expected to properly manage their risks. For less complex institutions engaging in less risky activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

Composite Ratings

Composite ratings are based on a careful evaluation of how an institution conducts its fiduciary activities. The review encompasses the capability of management, the soundness of policies and practices, the quality of service rendered to the public, and the effect of fiduciary activities on the soundness of the institution. The composite ratings are defined as follows.

Composite 1

Administration of fiduciary activities is sound in every respect. Generally, all components are rated 1 or 2. Any weaknesses are minor and can be handled in a routine manner by management. The institution is in substantial compliance with fiduciary laws and regulations. Risk-management practices are strong relative to the size, complexity, and risk profile of the institution's fiduciary activities. Fiduciary activities are conducted in

accordance with sound fiduciary principles and give no cause for supervisory concern.

Composite 2

Administration of fiduciary activities is fundamentally sound. Generally, no component rating should be more severe than 3. Only moderate weaknesses are present and are well within management's capabilities and willingness to correct. Fiduciary activities are conducted in substantial compliance with laws and regulations. Overall risk-management practices are satisfactory relative to the institution's size, complexity, and risk profile. There are no material supervisory concerns and, as a result, the supervisory response is informal and limited.

Composite 3

Administration of fiduciary activities exhibits some degree of supervisory concern in one or more of the component areas. A combination of weaknesses exists that may range from moderate to severe; however, the magnitude of the deficiencies generally does not cause a component to be rated more severely than 4. Management may lack the ability or willingness to effectively address weaknesses within appropriate time frames. Additionally, fiduciary activities may reveal some significant noncompliance with laws and regulations. Risk-management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. Although problems of relative significance may exist, they are not of such importance as to pose a threat to the trust beneficiaries generally or to the soundness of the institution. The institution's fiduciary activities require more-than-normal supervision and may include formal or informal enforcement actions.

Composite 4

Fiduciary activities generally exhibit unsafe and unsound practices or conditions, resulting in unsatisfactory performance. The problems range from severe to critically deficient and may be centered around inexperienced or inattentive management, weak or dangerous operating practices, or an accumulation of unsatisfactory features of lesser importance. The weaknesses and

problems are not being satisfactorily addressed or resolved by the board of directors and management. There may be significant noncompliance with laws and regulations. Risk-management practices are generally unacceptable relative to the size, complexity, and risk profile of fiduciary activities. These problems pose a threat to the account beneficiaries generally and, if left unchecked, could evolve into conditions that could cause significant losses to the institution and ultimately undermine public confidence in the institution. Close supervisory attention is required, which means, in most cases, formal enforcement action is necessary to address the problems.

Composite 5

Fiduciary activities are conducted in an extremely unsafe and unsound manner. Administration of fiduciary activities is critically deficient in numerous major respects, with problems resulting from incompetent or neglectful administration, flagrant or repeated disregard for laws and regulations, or a willful departure from sound fiduciary principles and practices. The volume and severity of problems are beyond management's ability or willingness to control or correct. Such conditions evidence a flagrant disregard for the interests of the beneficiaries and may pose a serious threat to the soundness of the institution. Continuous close supervisory attention is warranted and may include termination of the institution's fiduciary activities.

Component Ratings

The five key components used to assess an institution's fiduciary activities are (1) the capability of management; (2) the adequacy of operations, controls, and audits; (3) the quality and level of earnings; (4) compliance with governing instruments, applicable law (including self-dealing and conflicts-of-interest laws and regulations), and sound fiduciary principles; and (5) the management of fiduciary assets. Each of the component-rating descriptions is divided into three sections: a narrative description of the component, a list of the principal factors used to evaluate that component, and a description of each numerical rating for that component. Some of the evaluation factors are

repeated under one or more of the other components to reinforce the interrelationship among components.

Management

The management rating reflects the capability of the board of directors and management, in their respective roles, to identify, measure, monitor, and control the risks of an institution's fiduciary activities. The rating also reflects the ability of the board of directors and management to ensure that the institution's fiduciary activities are conducted in a safe and sound manner and in compliance with applicable laws and regulations. Directors should provide clear guidance regarding acceptable risk-exposure levels and ensure that appropriate policies, procedures, and practices are established and followed. Senior fiduciary management is responsible for developing and implementing policies, procedures, and practices that translate the board's objectives and risk limits into prudent operating standards.

Depending on the nature and scope of an institution's fiduciary activities, management practices may need to address some or all of the following risks: reputation, operating or transaction, strategic, compliance, legal, credit, market, liquidity, and other risks. Sound management practices are demonstrated by active oversight by the board of directors and management; competent personnel; adequate policies, processes, and controls that consider the size and complexity of the institution's fiduciary activities; and effective risk-monitoring and management information systems. This rating should reflect the board's and management's ability as it applies to all aspects of fiduciary activities in which the institution is involved.

The management rating is based on an assessment of the capability and performance of management and the board of directors, including, but not limited to, the following evaluation factors:

- the level and quality of oversight and support of fiduciary activities by the board of directors and management, including committee structure and adequate documentation of committee actions
- the ability of the board of directors and management, in their respective roles, to plan for and respond to risks that may arise from

- changing business conditions or the introduction of new activities or products
- the adequacy of and conformance with appropriate internal policies, practices, and controls addressing the operations and risks of significant fiduciary activities
 - the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems appropriate for the institution's size, complexity, and fiduciary-risk profile
 - the overall level of compliance with laws, regulations, and sound fiduciary principles
 - responsiveness to recommendations from auditors and regulatory authorities
 - strategic planning for fiduciary products and services
 - the level of experience and competence of fiduciary management and staff, including issues relating to turnover and succession planning
 - the adequacy of insurance coverage
 - the availability of competent legal counsel
 - the extent and nature of pending litigation associated with fiduciary activities, and its potential impact on earnings, capital, and the institution's reputation
 - the process for identifying and responding to fiduciary-customer complaints.

Ratings of management. A rating of 1 indicates strong performance by management and the board of directors and strong risk-management practices relative to the size, complexity, and risk profile of the institution's fiduciary activities. All significant risks are consistently and effectively identified, measured, monitored, and controlled. Management and the board are proactive and have demonstrated the ability to promptly and successfully address existing and potential problems and risks.

A rating of 2 indicates satisfactory management and board performance and risk-management practices relative to the size, complexity, and risk profile of the institution's fiduciary activities. Moderate weaknesses may exist, but are not material to the sound administration of fiduciary activities and are being addressed. In general, significant risks and problems are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates management and board performance that needs improvement or risk-management practices that are less than satisfactory given the nature of the institution's fiduciary activities. The capabilities of management

or the board of directors may be insufficient for the size, complexity, and risk profile of the institution's fiduciary activities. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

A rating of 4 indicates deficient management and board performance or risk-management practices that are inadequate considering the size, complexity, and risk profile of the institution's fiduciary activities. The level of problems and risk exposure is excessive. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action by the board and management to protect the assets of account beneficiaries and to prevent erosion of public confidence in the institution. Replacing or strengthening management or the board may be necessary.

A rating of 5 indicates critically deficient management and board performance or risk-management practices. Management and the board of directors have not demonstrated the ability to correct problems and implement appropriate risk-management practices. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the continued viability of the institution or its administration of fiduciary activities, and they pose a threat to the safety of the assets of account beneficiaries. Replacing or strengthening management or the board of directors is necessary.

Operations, Internal Controls, and Auditing

The operations, internal controls, and auditing rating reflects the adequacy of the institution's fiduciary operating systems and internal controls in relation to the volume and character of business conducted. Audit coverage must ensure the integrity of the financial records, the sufficiency of internal controls, and the adequacy of the compliance process.

Fiduciary operating systems, internal controls, and the audit function subject an institution primarily to transaction and compliance risk. Other risks, including reputation, strategic, and financial risk, also may be present. The ability of management to identify, measure, monitor, and control these risks is reflected in this rating.

The operations, internal controls, and auditing rating is based on, but not limited to, an assess-

ment of the following evaluation factors:

- operations and internal controls, including the adequacy of—
 - staff, facilities, and operating systems;
 - records, accounting, and data processing systems (including controls over systems access and such accounting procedures as aging, investigation, and disposition of items in suspense accounts);
 - trading functions and securities-lending activities;
 - vault controls and securities movement;
 - segregation of duties;
 - controls over disbursements (checks or electronic) and unissued securities;
 - controls over income-processing activities; and
 - reconciliation processes (depository, cash, vault, subcustodians, suspense accounts, etc.)
- disaster or business-recovery programs—
 - hold-mail procedures and controls over returned mail, and
 - investigation and proper escheatment of funds in dormant accounts
- auditing, including—
 - the independence, frequency, quality, and scope of the internal and external fiduciary-audit function relative to the volume, character, and risk profile of the institution's fiduciary activities;
 - the volume or severity of internal-control and audit exceptions and the extent to which these issues are tracked and resolved; and
 - the experience and competence of the audit staff.

Ratings of operations, internal controls, and auditing. A rating of 1 indicates that operations, internal controls, and auditing are strong in relation to the volume and character of the institution's fiduciary activities. All significant risks are consistently and effectively identified, measured, monitored, and controlled.

A rating of 2 indicates that operations, internal controls, and auditing are satisfactory in relation to the volume and character of the institution's fiduciary activities. Moderate weaknesses may exist, but are not material. Significant risks, in general, are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates that operations, internal controls, or auditing need improvement in

relation to the volume and character of the institution's fiduciary activities. One or more of these areas are less than satisfactory. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

A rating of 4 indicates deficient operations, internal controls, or audits. One or more of these areas are inadequate or the level of problems and risk exposure is excessive in relation to the volume and character of the institution's fiduciary activities. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action. Institutions with this level of deficiencies may make little provision for audits, or they may evidence weak or potentially dangerous operating practices in combination with infrequent or inadequate audits.

A rating of 5 indicates critically deficient operations, internal controls, or audits. Operating practices, with or without audits, pose a serious threat to the safety of assets of fiduciary accounts. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the ability of the institution to continue engaging in fiduciary activities.

Earnings

The earnings rating reflects the profitability of an institution's fiduciary activities and their effect on the financial condition of the institution. The use and adequacy of budgets and earnings projections by functions, product lines, and clients are reviewed and evaluated. Risk exposure that may lead to negative earnings is also evaluated.

An evaluation of earnings is required for all institutions with fiduciary activities. An assignment of an earnings rating, however, is required only for institutions that, at the time of the examination, have total trust assets of more than \$100 million or that are a nondeposit trust company.

The evaluation of earnings is based on, but not limited to, an assessment of the following factors:

- the profitability of fiduciary activities in relation to the size and scope of those activities and to the overall business of the institution
- the overall importance to the institution of offering fiduciary services to its customers and local community

- the effectiveness of the institution's procedures for monitoring fiduciary-activity income and expense relative to the size and scope of these activities and their relative importance to the institution, including the frequency and scope of profitability reviews and planning by the institution's board of directors or a committee thereof

For those institutions for which a rating of earnings is mandatory, additional factors should include the following:

- the level and consistency of profitability, or the lack thereof, generated by the institution's fiduciary activities in relation to the volume and character of the institution's business
- dependence on nonrecurring fees and commissions, such as fees for court accounts
- the effects of charge-offs or compromise actions
- unusual features regarding the composition of business and fee schedules
- accounting practices that contain practices such as (1) unusual methods of allocating direct and indirect expenses and overhead, or (2) unusual methods of allocating fiduciary income and expense where two or more fiduciary institutions within the same holding company family share fiduciary services or processing functions
- the extent of management's use of budgets, projections, and other cost-analysis procedures
- methods used for directors' approval of financial budgets or projections
- management's attitude toward growth and new-business development
- new-business development efforts, including types of business solicited, market potential, advertising, competition, relationships with local organizations, and an evaluation by management of the risk potential inherent in new business areas

Ratings of earnings. A rating of 1 indicates strong earnings. The institution consistently earns a rate of return on its fiduciary activities that is commensurate with the risk of those activities. This rating would normally be supported by a history of consistent profitability over time and a judgment that future earnings prospects are favorable. In addition, management techniques for evaluating and monitoring earnings performance are fully adequate, and there is appropriate oversight by the institution's board of direc-

tors or a committee thereof. Management makes effective use of budgets and cost-analysis procedures. Methods used for reporting earnings information to the board of directors, or a committee thereof, are comprehensive.

A rating of 2 indicates satisfactory earnings. Although the earnings record may exhibit some weaknesses, earnings performance does not pose a risk to the overall institution nor to its ability to meet its fiduciary obligations. Generally, fiduciary earnings meet management targets and appear to be at least sustainable. Management processes for evaluating and monitoring earnings are generally sufficient in relationship to the size and risk of fiduciary activities that exist, and any deficiencies can be addressed in the normal course of business. A rating of 2 may also be assigned to institutions with a history of profitable operations if there are indications that management is engaging in activities with which it is not familiar or where there may be inordinately high levels of risk present that have not been adequately evaluated. Alternatively, an institution with otherwise strong earnings performance may also be assigned a 2 rating if there are significant deficiencies in its methods used to monitor and evaluate earnings.

A rating of 3 indicates less-than-satisfactory earnings. Earnings are not commensurate with the risk associated with the fiduciary activities undertaken. Earnings may be erratic or exhibit downward trends, and future prospects are unfavorable. This rating may also be assigned if management processes for evaluating and monitoring earnings exhibit serious deficiencies, provided the deficiencies identified do not pose an immediate danger to either the overall financial condition of the institution or its ability to meet its fiduciary obligations.

A rating of 4 indicates earnings that are seriously deficient. Fiduciary activities have a significant adverse effect on the overall income of the institution and its ability to generate adequate capital to support the continued operation of its fiduciary activities. The institution is characterized by fiduciary earnings performance that is poor historically or that faces the prospect of significant losses in the future. Management processes for monitoring and evaluating earnings may be poor. The board of directors has not adopted appropriate measures to address significant deficiencies.

A rating of 5 indicates critically deficient earnings. In general, an institution with this

rating is experiencing losses from fiduciary activities that have a significant negative impact on the overall institution, representing a distinct threat to its viability through the erosion of its capital. The board of directors has not implemented effective actions to address the situation.

Alternate rating of earnings. The UITRS alternate rating of earnings is *not* for use by Federal Reserve System examiners, per the December 1998 Federal Reserve UITRS implementing guidelines. For institutions where the assignment of an earnings rating is not required by the UITRS, an FFIEC federal supervisory agency has the option to assign an earnings rating using an alternate set of ratings. The alternate ratings are provided here so examiners will be able to interpret earnings ratings assigned by other banking supervisors that have adopted the alternate-rating system for earnings. Under the alternate-ratings scheme, alternate ratings are assigned based on the level of implementation of four minimum standards by the board of directors and management:

- *Standard No. 1.* The institution has reasonable methods for measuring income and expense commensurate with the volume and nature of the fiduciary services offered.
- *Standard No. 2.* The level of profitability is reported to the board of directors, or a committee thereof, at least annually.
- *Standard No. 3.* The board of directors periodically determines that the continued offering of fiduciary services provides an essential service to the institution's customers or to the local community.
- *Standard No. 4.* The board of directors, or a committee thereof, reviews the justification for the institution to continue to offer fiduciary services, even if the institution does not earn sufficient income to cover the expenses of providing those services.

Ratings to be applied for the alternate rating of earnings. A rating of 1 may be assigned where an institution has implemented all four minimum standards. If fiduciary earnings are lacking, management views this as a cost of doing business as a full-service institution and believes that the negative effects of not offering fiduciary services are more significant than the expense of administering those services.

A rating of 2 may be assigned where an institution has implemented, at a minimum,

three of the four standards. This rating may be assigned if the institution is not generating positive earnings or where formal earnings information may not be available.

A rating of 3 may be assigned if the institution has implemented at least two of the four standards. Although management may have attempted to identify and quantify other revenue to be earned by offering fiduciary services, it has decided that these services should be offered as a service to customers, even if they cannot be operated profitably.

A rating of 4 may be assigned if the institution has implemented only one of the four standards. Management has undertaken little or no effort to identify or quantify the collateral advantages, if any, to the institution from offering fiduciary services.

A rating of 5 may be assigned if the institution has implemented none of the standards.

Compliance

The compliance rating reflects an institution's overall compliance with applicable laws, regulations, accepted standards of fiduciary conduct, governing account instruments, duties associated with account administration, and internally established policies and procedures. This component specifically incorporates an assessment of a fiduciary's duty of undivided loyalty and compliance with applicable laws, regulations, and accepted standards of fiduciary conduct related to self-dealing and other conflicts of interest.

The compliance component includes reviewing and evaluating the adequacy and soundness of adopted policies, procedures, and practices generally and as they relate to specific transactions and accounts. It also includes reviewing policies, procedures, and practices to evaluate the sensitivity of management and the board of directors to refrain from self-dealing, minimize potential conflicts of interest, and resolve actual conflict situations in favor of the fiduciary-account beneficiaries.

Risks associated with account administration are potentially unlimited because each account is a separate contractual relationship that contains specific obligations. Risks associated with account administration include failure to comply with applicable laws, regulations, or terms of the governing instrument; inadequate account-administration practices; and inexperienced man-

agement or inadequately trained staff. Risks associated with a fiduciary's duty of undivided loyalty generally stem from engaging in self-dealing or other conflict-of-interest transactions. An institution may be exposed to compliance, strategic, financial, and reputation risk related to account-administration and conflicts-of-interest activities. The ability of management to identify, measure, monitor, and control these risks is reflected in this rating. Policies, procedures, and practices pertaining to account administration and conflicts of interest are evaluated in light of the size and character of an institution's fiduciary business.

The compliance rating is based on, but not limited to, an assessment of the following evaluation factors:

- compliance with applicable federal and state statutes and regulations, including, but not limited to, federal and state fiduciary laws, the Employee Retirement Income Security Act of 1974, federal and state securities laws, state investment standards, state principal and income acts, and state probate codes
- compliance with the terms of governing instruments
- the adequacy of overall policies, practices, and procedures governing compliance, considering the size, complexity, and risk profile of the institution's fiduciary activities
- the adequacy of policies and procedures addressing account administration
- the adequacy of policies and procedures addressing conflicts of interest, including those designed to prevent the improper use of "material inside information"
- the effectiveness of systems and controls in place to identify actual and potential conflicts of interest
- the adequacy of securities-trading policies and practices relating to the allocation of brokerage business; the payment of services with "soft dollars"; and the combining, crossing, and timing of trades
- the extent and permissibility of transactions with related parties, including, but not limited to, the volume of related commercial and fiduciary relationships and holdings of corporations in which directors, officers, or employees of the institution may be interested
- the decision-making process used to accept, review, and terminate accounts
- the decision-making process related to account-administration duties, including cash

balances, overdrafts, and discretionary distributions

Ratings of compliance. A rating of 1 indicates strong compliance policies, procedures, and practices. Policies and procedures covering conflicts of interest and account administration are appropriate in relation to the size and complexity of the institution's fiduciary activities. Accounts are administered in accordance with governing instruments, applicable laws and regulations, sound fiduciary principles, and internal policies and procedures. Any violations are isolated, technical in nature, and easily correctable. All significant risks are consistently and effectively identified, measured, monitored, and controlled.

A rating of 2 indicates fundamentally sound compliance policies, procedures, and practices in relation to the size and complexity of the institution's fiduciary activities. Account administration may be flawed by moderate weaknesses in policies, procedures or practices. Management's practices indicate a determination to minimize the instances of conflicts of interest. Fiduciary activities are conducted in substantial compliance with laws and regulations, and any violations are generally technical in nature. Management corrects violations in a timely manner and without loss to fiduciary accounts. Significant risks are effectively identified, measured, monitored, and controlled.

A rating of 3 indicates compliance practices that are less than satisfactory in relation to the size and complexity of the institution's fiduciary activities. Policies, procedures, and controls have not proven effective and require strengthening. Fiduciary activities may be in substantial non-compliance with laws, regulations, or governing instruments, but losses are no worse than minimal. Although management may have the ability to achieve compliance, the number of violations that exist, or the failure to correct prior violations, is an indication that management has not devoted sufficient time and attention to its compliance responsibilities. Risk-management practices generally need improvement.

A rating of 4 indicates an institution with deficient compliance practices in relation to the size and complexity of its fiduciary activities. Account administration is notably deficient. The institution makes little or no effort to minimize potential conflicts or refrain from self-dealing, and it is confronted with a considerable number of potential or actual conflicts. Numerous substantive and technical violations of laws and

regulations exist, and many may remain uncorrected from previous examinations. Management has not exerted sufficient effort to effect compliance and may lack the ability to effectively administer fiduciary activities. The level of compliance problems is significant and, if left unchecked, may subject the institution to monetary losses or reputation risk. Risks are inadequately identified, measured, monitored, and controlled.

A rating of 5 indicates critically deficient compliance practices. Account administration is critically deficient or incompetent, and there is a flagrant disregard for the terms of the governing instruments and interests of account beneficiaries. The institution frequently engages in transactions that compromise its fundamental duty of undivided loyalty to account beneficiaries. There are flagrant or repeated violations of laws and regulations and significant departures from sound fiduciary principles. Management is unwilling or unable to operate within the scope of laws and regulations or within the terms of governing instruments, and efforts to obtain voluntary compliance have been unsuccessful. The severity of noncompliance presents an imminent monetary threat to account beneficiaries and creates significant legal and financial exposure to the institution. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the ability of management to continue engaging in fiduciary activities.

Asset Management

The asset-management rating reflects the risks associated with managing the assets (including cash) of others. Prudent portfolio management is based on an assessment of the needs and objectives of each account or portfolio. An evaluation of asset management should consider the adequacy of processes related to the investment of all discretionary accounts and portfolios, including collective investment funds, proprietary mutual funds, and investment advisory arrangements.

The institution's asset-management activities subject it to reputation, compliance, and strategic risks. In addition, each individual account or portfolio managed by the institution is subject to financial risks such as market, credit, liquidity, and interest-rate risk, as well as transaction and compliance risk. The ability of management to

identify, measure, monitor, and control these risks is reflected in this rating.

The asset-management rating is based on, but not limited to, an assessment of the following evaluation factors:

- the adequacy of overall policies, practices, and procedures governing asset management, considering the size, complexity, and risk profile of the institution's fiduciary activities
- the decision-making processes used for selection, retention, and preservation of discretionary assets, including adequacy of documentation, committee review and approval, and a system to review and approve exceptions
- the use of quantitative tools to measure the various financial risks in investment accounts and portfolios
- the existence of policies and procedures addressing the use of derivatives or other complex investment products
- the adequacy of procedures related to the purchase or retention of miscellaneous assets, including real estate, notes, closely held companies, limited partnerships, mineral interests, insurance, and other unique assets
- the extent and adequacy of periodic reviews of investment performance, taking into consideration the needs and objectives of each account or portfolio
- the monitoring of changes in the composition of fiduciary assets for trends and related risk exposure
- the quality of investment research used in the decision-making process and documentation of the research
- the due-diligence process for evaluating investment advice received from vendors or brokers (including approved or focus lists of securities)
- the due-diligence process for reviewing and approving brokers or counterparties used by the institution

This rating may not be applicable for some institutions because their operations do not include activities involving the management of any discretionary assets. Functions of this type would include, but not necessarily be limited to, directed-agency relationships, securities clearing, nonfiduciary custody relationships, and transfer-agent and registrar activities. In institutions of this type, the rating for asset management may be omitted by the examiner in accordance with the examining agency's implementing

guidelines. However, this component should be assigned when the institution provides investment advice, even though it does not have discretion over the account assets. An example of this type of activity would be where the institution selects or recommends the menu of mutual funds offered to participant-directed 401(k) plans.

Ratings of asset management. A rating of 1 indicates strong asset-management practices. Identified weaknesses are minor in nature. Risk exposure is modest in relation to management's abilities and the size and complexity of the assets managed.

A rating of 2 indicates satisfactory asset-management practices. Moderate weaknesses are present and are well within management's ability and willingness to correct. Risk exposure is commensurate with management's abilities and the size and complexity of the assets managed. Supervisory response is limited.

A rating of 3 indicates that asset-management

practices are less than satisfactory in relation to the size and complexity of the assets managed. Weaknesses may range from moderate to severe; however, they are not of such significance as to generally pose a threat to the interests of account beneficiaries. Asset-management and risk-management practices generally need to be improved. An elevated level of supervision is normally required.

A rating of 4 indicates deficient asset-management practices in relation to the size and complexity of the assets managed. The levels of risk are significant and inadequately controlled. The problems pose a threat to account beneficiaries generally and, if left unchecked, may subject the institution to losses and could undermine the reputation of the institution.

A rating of 5 represents critically deficient asset-management practices and a flagrant disregard of fiduciary duties. These practices jeopardize the interests of account beneficiaries, subject the institution to losses, and may pose a threat to the soundness of the institution.

INTRODUCTION

Directors are placed in a position of trust by the bank's shareholders, and both statutes and common law place responsibility for the affairs of a bank firmly and squarely on the board of directors. The board of directors of a bank should delegate the day-to-day routine of conducting the bank's business to its officers and employees, but the board cannot delegate its responsibility for the consequences of unsound or imprudent policies and practices, whether they involve lending, investing, protecting against internal fraud, or any other banking activity. The board of directors is responsible to the bank's depositors, other creditors, and shareholders for safeguarding their interests through the lawful, informed, efficient, and able administration of the institution. In the exercise of their duties, directors are governed by federal and state banking, securities, and antitrust statutes, as well as by common law, which imposes a liability on directors of all corporations. Directors who fail to discharge their duties completely or who are negligent in protecting the interests of depositors or shareholders may be subject to removal from office, criminal prosecution, civil money penalties imposed by bank regulators, and civil liability. Title IX of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 and the Comprehensive Thrift and Bank Fraud Prosecution and Taxpayer Recovery Act of 1990 greatly enhanced the enforcement powers of the federal bank regulatory agencies, including the Federal Reserve Board. Section 5040 of this manual, "Formal Corrective Actions," describes those enforcement powers in greater detail.

DIRECTOR SELECTION

The affairs of each state member bank are overseen by its board of directors. The initial directors are elected by the shareholders at a meeting held before the bank is authorized to commence business. Thereafter, they are elected at meetings held at least annually on a day specified in the bank's bylaws. The directors hold office for a stated tenure, generally ranging from one to three years, or until their successors

are elected and have qualified. No state member bank is to have less than five or more than 25 directors as specified in section 31 of the Banking Act of 1933. Various laws govern the election, number, qualifications, oath, liability, and removal of directors and officers, as well as the disclosure requirements for their outside business interests. Other laws pertain to certain restrictions, prohibitions, and penalties for securities dealers serving as directors, officers, or employees; director interlocks; purchases of assets from, or sales to, directors; commissions and gifts for procuring loans; embezzlement; abstraction; willful misapplication; false entries; political contributions; and other matters. The examiner must be familiar with these laws and the related regulations and interpretations.

DIRECTOR INDEPENDENCE

Directors must exercise their independent judgment when managing the bank's affairs. A responsible board will not merely rubber-stamp management's recommendations, but will review them carefully before deciding whether they are in the bank's best interests. A board that is excessively influenced by management, a single director, or a shareholder, or any combination thereof, may not be fulfilling its responsibilities to depositors, other creditors, and shareholders. Diversification of the board of directors is important and can be accomplished by including directors with no ownership or family-ownership interest in the bank and who are not employed by the bank.

A bank's board of directors may include one or more advisory directors. Advisory directors generally do not vote but may provide additional information or advice to the voting directors. An advisory director who functions in that capacity is generally not subject to the same regulatory requirements as voting members and has less liability for the board's actions. However, if an advisory director exercises a degree of influence or control over the board or the bank that is not commensurate with that status, it is appropriate for examiners to subject that individual to the same standards as voting directors. Such a person might also be subject to the same liability standards as a voting director.

DIRECTORS' RESPONSIBILITIES

Directors play a critical role in overseeing the affairs of the bank. Directors should understand that if they neglect to carry out their fiduciary duties and responsibilities, they may be financially liable if the bank fails or experiences loss. An examiner sometimes has to remind bank directors of the extent of their duties and responsibilities. Unless bank directors realize the importance of their positions and act accordingly, they are failing to discharge their obligations to the shareholders, depositors, other creditors, and the community.

Selection of Competent Executive Officers

One of the board's most important duties is to select and appoint executive officers who are qualified to administer the bank's affairs effectively and soundly. The board is also responsible for removing officers who do not meet reasonable standards of honesty, competency, executive ability, and efficiency. The responsibility for selecting executive officers also entails retaining them and ensuring that competent successors can be promoted or hired to fill unanticipated voids. The board is responsible for evaluating the performance of the chief executive officer and approving the CEO's compensation. In many banks, the board also approves compensation for other executive officers.

A state member bank that has been chartered or undergone a change of control within the last two years, that is not in compliance with the minimum capital adequacy guidelines or regulations of the Board, or that is in an otherwise troubled condition must provide 30 days' written notice to its regulating Reserve Bank before it can add a director, promote an internal staff member to senior executive officer, or employ a new senior executive officer.

Effective Supervision of Bank Affairs

The type and degree of supervision required of a bank's board of directors to ensure a bank is soundly managed involve reasonable business judgment and competence and sufficient time to become informed about the bank's affairs. Directors ultimately are responsible for the

soundness of the bank. If negligence is involved, a director may be personally liable. The responsibility of directors to supervise the bank's affairs may not be delegated to the active executive officers or anyone else. Directors may delegate to executive officers certain authority, but not the primary responsibility of ensuring that the bank is operated in a sound and legal manner.

Adoption and Adherence to Sound Policies and Objectives

The directors' role is to provide a clear framework of objectives and policies within which the chief executive officer can operate and administer the bank's affairs. This framework is often accomplished through the use of strategic plans and budgets. The strategic plan would discuss long-term, and in some cases, short-term goals and objectives as well as how progress toward their achievement will be measured. The objectives and policies should cover all areas of the bank's operations. The board of directors is responsible for establishing the policies that govern and guide the day-to-day operations of the bank, so they should review and approve them from time to time. These policies are primarily intended to ensure that the risks undertaken by the banks are prudent and are being properly managed. This means that the board of directors must, as a group, have a fundamental understanding of the various types of risks associated with different aspects of the banking business, for example, credit risk, foreign-exchange risk, or interest-rate risk, and define the types of risks the bank will undertake. Some of the more important areas in which policies and objectives must be established include investments, loans, asset and liability management, profit planning and budgeting, capital planning, and personnel. Directors are also responsible for adopting policies and procedures required by law or regulation, such as real estate lending policies, a security program, an inter-bank liabilities policy, and a Bank Secrecy Act program. The examination of these policies is covered in other sections of this manual.

Avoidance of Self-Serving Practices

A bank's directors bear a greater than normal responsibility for upholding safe and sound

practices in dealing with transactions involving other members of the directorate and their related interests. Directors' decisions must preclude the possibility of partiality or favored treatment. Unwarranted loans to a bank's directors or their interests can be a serious safety-and-soundness concern for the bank. Directors who become financially dependent on their bank normally lose their usefulness as directors. Other self-serving practices the examiner should watch for are—

- gratuities paid to directors to obtain their approval of financing arrangements or the use of particular services,
- the use of bank funds by directors, officers, or shareholders to obtain loans or transact other business (Directors should be especially critical of correspondent bank balances when officers, directors, or shareholders are borrowing from the depository bank. The Department of Justice's position is that certain interbank deposits connected with a loan to officers, directors, or shareholders of the depositing bank might constitute a misapplication of funds in violation of 18 USC 656), and
- transactions involving conflicts of interest (When board decisions involve a potential conflict of interest, the director with the potential conflict should fully disclose the nature of the conflict and abstain from voting on the matter. The abstention should be recorded in the minutes. The examiner should also be aware that ethical conflicts of interest can arise when a director or director-related firm performs professional services for the bank. For example, a director who is also the bank's legal counsel may not, in some situations, be able to advise or represent the bank objectively.).

Awareness of the Bank's Financial Condition and Management Policies

Management Information Systems

A management information system (MIS) provides the information, often originated from an institution's mainframe and microcomputers, necessary to manage an organization effectively. MIS should have clearly defined guidelines, policies, practices, standards, and procedures for the organization. These should be incorporated

in the development, maintenance, and use of MIS throughout the institution.

MIS is used by all levels of bank staff to monitor various aspects of bank operations, up to and including its overall risk-management process. Therefore, MIS should be supportive of the institution's longer term strategic goals and objectives. At the other extreme, these everyday financial accounting systems also are used to ensure that basic control is maintained over financial recordkeeping activities. Since numerous decisions are based on MIS reports, appropriate control procedures must be set up to ensure that information is correct and relevant.

Audits

In May 1993, pursuant to requirements of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), the FDIC issued rules and guidelines that require all banks with total assets in excess of \$500 million to have annual audits by an independent public accountant. Copies of these audit reports are to be sent to the FDIC and the appropriate Federal Reserve Bank. Furthermore, the Federal Reserve encourages banks with assets of \$500 million or less to provide for annual audits by independent public accountants.

The board or a committee designated by the board should review the audit reports with the bank's management and the independent public accountants. The review should include—

- the scope of services required by the audit, significant accounting policies, and audit conclusions regarding significant accounting estimates;
- the adequacy of internal controls, and actions necessary to ensure the resolution of any problems or deficiencies; and
- the institution's compliance with applicable laws and regulations.

Many states have laws requiring directors' examinations of the bank. When the directors lack adequate knowledge of examination techniques and procedures, they are encouraged to employ a qualified accountant or other specialist to conduct all or part of this examination. The examining committee or the entire board should play an active role. Directors should obtain a clear understanding of the scope of the procedures to be employed, and the final report of the

directors' examination should be reviewed by the board of directors.

Further guidance on the use of audit reports and the reliance placed upon the work of external and internal auditors in the examination process can be found in the "Internal and External Audit Section" of this manual.

Maintenance of Reasonable Capitalization

A board of directors has the responsibility for maintaining its bank on a sufficiently capitalized basis. Capital planning and capital adequacy are discussed in the manual section "Assessment of Capital Adequacy," and the examiner should be familiar with this information.

Compliance with Banking Laws and Regulations

Directors must carefully observe that banking laws are not violated; they may be personally liable for losses arising out of illegal actions. In addition, civil money penalties can be assessed for unsafe and unsound actions that do not necessarily involve a violation of a banking law.

Guarantee of a Beneficial Influence on the Community's Economy

One reason for approving a newly chartered bank for Federal Reserve membership is to meet a specific community need. Directors, therefore, have a continuing responsibility to provide those banking services which meet the legitimate credit and other needs of the community being served. Directors should be certain that the bank attempts to satisfy all legitimate credit needs of the community.

BOARD MEETINGS

The board should conduct its business in meetings held as required by the bank's bylaws or state law. Regular meetings of the board should review statements showing the bank's financial condition and earnings; the investment portfolio; and loan activity, including past-due and

nonaccrual loans, charged-off or recovered loans, large new loans, and loans to insiders. Directors should also review and approve all policies annually, and review and approve all insurance policies as they are obtained or renewed. They should also review audit and examination reports and initiate action to correct any deficiencies noted, review correspondence with regulatory agencies, review pending litigation, and keep informed of any major prospective undertakings, such as mergers, acquisitions, or new branches or construction.

Minutes of Board Meetings

The board should ensure that an accurate, adequate record of its actions is maintained. Such a record is usually kept in the form of minutes of the board meetings. The minutes should document the board's review of all regular items mentioned above as well as the review and discussion of all significant items that are not part of the regular meeting. Additionally, at a minimum, the minutes should record the attendance or absence of each director at each meeting, detail the establishment and composition of any committees, and note the abstention of any director from any vote. Examiners should review the minutes of board meetings, as well as a sample package prepared for a board meeting, to determine that directors are receiving adequate information to make informed, sound decisions. Meetings conducted by telephone, if allowable under state law, should be documented as thoroughly as regular meetings.

BOARD COMMITTEES

Many boards elect to delegate some of their workload to committees. The extent and nature of the bank's activities and the relative expertise of each board member play key roles in the board's determination of which committees to establish, who sits on them, and how much authority they have. Thus, there is no ideal committee structure. However, committees frequently found in state member banks include the following:

- *Executive Committee*—may be empowered to act when the full board is unable to meet, for

example, between regular meetings. An executive committee is usually found in large institutions, where it relieves the full board of the burden of reviewing the details of financial statements and operational activities.

- *Audit Committee*—typically monitors compliance with bank policies and procedures, and reviews internal and external audit reports and bank examination reports. Because it is responsible for ensuring compliance, accuracy, and integrity throughout the organization, the audit committee should consist only of outside directors. The audit committee may supervise the bank's internal auditor and his or her staff directly by hiring personnel, evaluating their performance, and setting their compensation.
- *Loan Committee*—may be established to monitor underwriting standards and loan quality, and to ensure that lending policies and procedures are adequate. In most banks with loan committees, all new loans are reviewed by the loan committee either before or after funding, with the threshold for prior approval being the amount of either the loan or the aggregate debt to the borrower. The loan committee may also be responsible for the loan review function and for maintaining an adequate reserve for loan losses.
- *Investment or Asset-Liability Management Committee*—monitors the bank's investment policies, procedures, and holdings portfolio to ensure that goals for diversification, credit quality, profitability, liquidity, community investment, pledging requirements, and regulatory compliance are met. In some banks whose complexity warrants it, asset-liability management committees have been established to replace or supplement investment committees. An asset-liability management committee monitors the bank's balance sheet and external forces, notably interest rates, to help coordinate asset acquisition and funding sources.
- *Other Committees*—depending on the nature and complexity of the bank's business, the board may establish other committees to monitor such areas as trust, branching, new facilities construction, personnel/human resources, electronic data processing, and consumer compliance.

Minutes of all major actions taken by committees that play a significant role in managing the bank should be kept and meet the same

minimum standards used for minutes of meetings of the full board.

COMPLIANCE WITH FORMAL AND INFORMAL ADMINISTRATIVE ACTIONS

Bank directors must ensure that management corrects deficiencies found in the bank. Instructions to do so may come from the Federal Reserve as a formal or informal administrative action, depending on the severity of the problem.

Formal actions, which include cease-and-desist orders and written agreements, are normally exercised when banks have serious problems. For less serious problems, the Federal Reserve issues informal actions such as a "memorandum of understanding." Informal actions are an agreement between the Reserve Bank and the bank that sets forth the required corrective actions. The Reserve Banks are generally responsible for monitoring compliance with both types of administrative actions. To assist in that process, the Reserve Bank normally receives and evaluates periodic progress reports from the bank. In addition, information is provided by the examiner who checks the bank's compliance with the action. The Reserve Banks may initiate additional supervisory action against the bank or individuals associated with it when compliance is insufficient. Or, if the bank's compliance with the action is satisfactory, the Reserve Banks may recommend modifying or terminating the enforcement action.

Examiners should briefly discuss compliance with any enforcement actions on the Examination Conclusions and Comments page and direct the board of directors' attention to the Compliance with Enforcement Actions page of the examination report. The type and date of the action or resolutions and parties to the action should be listed. In addition, the examiner should generally list each provision requiring action by the bank and provide a comment addressing compliance with that provision. The examiner should comment on how the bank accomplished compliance or the problems that have prevented compliance. While certain information might be better discussed in the confidential section of the report, it is appropriate to make all salient negative comments on the Compliance with Enforcement Actions page to ensure that the

directors are made aware of any deficiencies and/or exceptions that may exist.

The Reserve Bank may recommend termination or modification of a formal administrative action whenever it determines that such restraints have satisfactorily served their purpose and should be removed or modified. In these cases, the Reserve Bank will send a memorandum with the appropriate explanation to the Board's Division of Banking Supervision and Regulation (BS&R) for review and evaluation. BS&R and the Board's Legal Division, when appropriate, will prepare the documents necessary to terminate or modify the existing administrative action.

DEPOSITORY INSTITUTION MANAGEMENT INTERLOCKS ACT

Under the Depository Institution Management Interlocks Act (Interlocks Act) as implemented by Regulation L, interlocking relationships of management officials of various nonaffiliated depository institutions are prohibited, depending on the asset size and geographical proximity of the organizations. The enforcement of the interlock provisions of the Interlocks Act encompasses full cease-and-desist powers.

The intent of the Interlocks Act is to foster competition among various depository institutions by prohibiting interlocking relationships of management officials. The prohibitions, how-

ever, do not generally apply to the following organizations and their subsidiaries:

- a depository institution that does not do business in the United States except as an incident to its activities outside the United States;
- an Edge or agreement corporation;
- a depository organization in formal liquidation or a similar type situation;
- a credit union being served by a management official of another credit union;
- a state-chartered savings and loan guaranty corporation; or
- a Federal Home Loan Bank or other bank organized solely for the purpose of serving depository institutions or solely for the purpose of providing securities clearing services and related services related to other depository institutions.

In addition, five other exceptions are permitted, with Federal Reserve Board approval, based on the public benefit that is derived from the interlocking relationship and on the competitive nature of the institutions involved. These exceptions are for—

- institutions located in low-income areas or controlled or managed by members of a minority group or by women,
- newly chartered institutions,
- institutions facing conditions endangering safety and soundness,
- institutions sponsoring a credit union, and
- institutions affected by loss of management officials due to changes in circumstances.

Duties and Responsibilities of Directors

Examination Objectives

Effective date November 1995

Section 5000.2

1. To determine whether the board of directors fully understands its duties and responsibilities.
2. To determine if the board of directors is discharging its responsibilities in an appropriate manner.
3. To determine whether the board of directors has developed adequate objectives and policies.
4. To determine the existence of any conflicts of interest or self-dealing.
5. To determine compliance with laws and regulations.

Duties and Responsibilities of Directors

Examination Procedures

Effective date November 2003

Section 5000.3

1. Update the following and review for possible violations of law—
 - a. A list of directors to include—
 - home address (If the director was appointed or elected since the previous examination, state the number of years residing at present address.),
 - date of birth,
 - years as a director of the bank,
 - approximate net worth,
 - occupation,
 - citizenship,
 - common stock ownership (beneficial, direct, and indirect), and
 - bonuses, fees, etc.
 - b. A list of embezzlements, defalcations, misappropriations, mysterious disappearances, or thefts that have occurred since the last examination. That list should be signed by the chief executive officer or the auditor.
 - c. A list of management officials (as defined in the Depository Institution Management Interlocks Act) of the bank, its holding company, and holding company affiliates who are management officials of other depository institutions.
 - d. A list of the indebtedness of directors, executives officers, and principal shareholders to the bank examined and any other bank, along with a statement of the terms and conditions of each extension of credit.
2. Obtain or update a listing of all areas of the bank's operations that are administered under the provisions of written objectives and policies that have been developed by or with the approval of the board. Inform the examiners assigned to review those departments that a policy has been developed or an update has occurred.
3. Analyze the listing obtained in step 2, and note any area of banking activity for which policies should be developed.
4. Determine that the board has accepted its responsibility to effectively supervise the affairs of the bank and to be informed of the bank's condition by performing the following:
 - a. Obtain a complete set of the latest reports furnished to directors at the last meeting, and list the areas of operation covered by the reports.
 - b. Distribute copies of the reports to the examiners in other areas, and request that they determine if reports furnished to the board are prepared accurately, contain sufficient detail to allow the directors to make an intelligent decision, and are submitted on a timely basis.
 - c. Prepare a list of areas not reporting or of reports the board does not receive that are considered necessary to maintain adequate supervision. As guidelines, consider the following reports:
 - A monthly statement of condition or balance sheet and a monthly statement of income. Those statements should be in reasonable detail and should be compared with the prior month, with the same month of a prior year, and with the budget. The directors should receive explanations for all large variances.
 - Monthly statements of changes in all capital and reserve accounts. Such statements should explain any changes.
 - Investment reports that group the securities by classifications; that reflect the book value, fair market value, and yield; and that include a summary of purchases and sales.
 - Loan reports that list significant past-due loans, trends in delinquencies, rate reductions, non-income-producing loans, and large new loans granted since the last report.
 - Audit and examination reports. Deficiencies in these reports should produce a prompt and efficient response from the board. The reports reviewed and actions taken should be reflected in minutes of the board of directors meetings.
 - A full report of all new executive-officer borrowing at any bank.
 - A monthly listing of type and amount of borrowing by the bank.
 - An annual presentation of bank insurance coverage.
 - All correspondence addressed to the board of directors from the Federal

- Reserve and any other source.
- A monthly analysis of the bank's liquidity position.
 - An annual projection of the bank's capital needs.
 - A listing of any new litigation and a status report on existing litigation and potential exposure.
 - A thorough report on any major bank endeavor that each bank director is expected to make a decision on, including branch applications and major building plans.
- d. Determine the mechanism used to assign responsibility for correcting deficiencies noted in regulatory reports, internal audit reports, external audit reports, or any other reports to the board, and determine the board's system of determining compliance with such recommendations.
 - e. Determine how directors perform a director's examination, the frequency of such examinations, and what part the directors take in the process.
 - f. Review the bank's method of ensuring continued or resumed operations in the event of a disaster. Complete the emergency preparedness measures questionnaire for inclusion in the workpapers.
 - g. Review correspondence between the Federal Reserve and the bank to determine that it has been properly reported.
5. Determine evidence of conflicts of interest and self-dealing by—
 - a. obtaining and summarizing information on the business interests of directors, executive officers, and principal shareholders;
 - b. comparing that information to develop a list of directors who have business interests in common;
 - c. analyzing the interests of directors to determine if the board consists of a variety of individuals;
 - d. obtaining from the examiner assigned to assessment of capital adequacy a list of shareholders who own or control, either directly or indirectly, 5 percent or more of any class of voting security;
 - e. distributing a list of the insiders (directors, officers, and shareholders whose ownership of voting securities in the institution is more than 10 percent) and their related interests to the appropriate examining personnel to ascertain the extent of loans to or transactions with insiders and their interests (Those examiners should be alert for any relationships with insiders' interests that are not included on the list.);
 - f. requesting that the appropriate examiners determine if any transactions with insiders are on terms more favorable than those offered to other customers (If so, determine whether the board has approved such transactions.);
 - g. determining that directors have reviewed their correspondent bank accounts in relation to possible conflicts of interest arising from directors', officers', or shareholders' borrowing from depository banks; and
 - h. correlating all information on insider transactions, and preparing appropriate report comments.
 6. Obtain the minutes of the meetings of the board of directors, the charter, the bylaws, and the minutes of shareholders meetings.
 - a. Review and summarize the bylaws and charter of the organization, including any specific provisions on the requirements of directors. The resulting material should become a permanent part of the workpapers and should be updated at subsequent examinations.
 - b. Read and summarize the minutes of all meetings of the board since the last examination, making certain to—
 - list any actions taken in contravention of the bylaws;
 - record major actions taken by the board that are not a part of a normal monthly meeting;
 - record any resolution or discussion covering the development of or entrance into a new area, such as a geographic area, customer service, asset category, or liability category;
 - record the creation of any special committee and the area with which it is designed to deal;
 - determine that actions taken by standing committees are reviewed and ratified by the full board;
 - if the minutes specify any transactions with directors or their interests, determine that the abstention of any interested director from voting on the mat-

- ters is noted;
- if the minutes do not mention any director-related transactions that have been uncovered during the examination, inquire if the interested director did refrain from voting.
- c. Read and summarize the minutes of the board's annual organization meeting and—
- list standing committees and their members,
 - have examiners who are examining areas that have standing-committee supervision read and summarize the minutes of those committees, and
 - prepare a list of major areas of operation that are not monitored by specific committees.
- d. Read and summarize the minutes of any stockholders meetings. The summary should include a list of directors elected at the annual meeting, the number of shares present and voted, individuals acting as proxies, and specific action approved by shareholders.
- e. Ascertain during the review of shareholders meeting minutes that (1) shareholders' approval has been received; (2) the bank's charter has been amended, if necessary; and (3) compliance with appropriate state or federal statutes has been met for the following:
- any establishment of or change of a branch location
 - any issuance of preferred stock
 - any increase in capital stock, either through sale or a stock dividend
 - any reduction in capital stock (and ascertain whether the resultant capital is not below what is required by the capital adequacy guidelines)
 - any stock split
 - any bank pension plan established since the preceding examination
 - any bank involvement in a conversion, merger, or consolidation
 - all other matters subject to vote
- f. Determine the date of the annual shareholders meeting and if it was in compliance with the bylaws.
- g. Review the charter and/or bylaws for quorum requirements of shareholder meetings. Ascertain that, at any meeting, the quorum requirements were satisfied according to recorded requirements or by
- having more than one-half of the eligible shareholders represented.
- h. Review any stock option or stock purchase plan adopted since the preceding examination, and review such action for compliance with the various conditions involving charter and shareholder approval.
- i. Determine if any candidate was nominated for director, other than the slate nominated by bank management, and review for compliance with the appropriate state statute.
7. Determine that the directors have accepted their responsibility for selecting competent officers by—
- a. determining that the board or a committee thereof reviews, at least annually, the chief executive officer's performance in attaining or progressing toward attaining specific objectives or goals set by the board,
 - b. determining if a policy statement on personnel exists, and ascertaining what provisions the board has made for successor management,
 - c. determining if any management contracts exist and, if one does, obtaining a copy, summarizing the pertinent points, and determining the reasonableness of terms,
 - d. determining by inquiry how the remuneration of executive officers is set and who makes decisions concerning executive salaries, and
 - e. listing any titled individual who, by action of the board, is specifically excluded from being an executive officer.
8. Determine compliance with laws and regulations by—
- a. reviewing workpapers of other examination areas or discussing compliance with other examiners to determine any violations of laws or regulations concerning directors that were disclosed in these examination areas,
 - b. reviewing the nature and extent of violations discovered at prior examinations to determine if similar violations have occurred at this examination, and
 - c. correlating information obtained from the minutes of board meetings to the reports of officer borrowings that have been prepared at and forwarded from other banks to determine that all such

- borrowings have been reported to the board.
9. Determine compliance with the Foreign Corrupt Practices Act (15 USC 78dd-1 and -2) by—
 - a. reviewing the bank’s policy prohibiting improper or illegal payments, bribes, kickbacks, etc., to any foreign government official or other person or organization covered by the law;
 - b. determining how that policy has been communicated to officers, employees, or agents of the bank;
 - c. reviewing any investigation or study done by, or on behalf of, the board of directors on the bank’s policies and operations concerning the advance of funds in possible violation of the act;
 - d. reviewing the work done by the examiner assigned to internal control to determine whether internal or external auditors have established routines to discover improper or illegal payments;
 - e. analyzing the general level of internal control to determine whether there is sufficient protection against the inaccurate recording of improper or illegal payments on the bank’s books;
 - f. requesting that examiners working in other areas of the bank be alert for any transactions that might violate the provisions of the act;
 - g. compiling any information discovered throughout the examination on possible violations; and
 - h. performing procedures on suspected criminal violations as outlined in section 5020.3, “Overall Conclusions Regarding Condition of the Bank: Examination Procedures.”
 10. Answer the following questions. (This questionnaire is intended to be a quick review for determining that all laws and regulations pertaining to directors have been complied with. Questions should be answered “no” and sub-questions should be answered “yes.” Any deviation from this pattern indicates a violation or potential violation. Situations that are not judged to be violations require comments stating the basis for that judgment.)
 - a. Is the number of directors less than 5 or greater than 25 (section 31, Banking Act of June 16, 1933)?
 - b. Have any directors failed to qualify by reason of insufficient stock ownership (12 USC 72)?
 - c. Are any directors noncitizens of the United States (12 USC 72)? If so, has the citizenship requirement been waived?
 - d. Do more than one-third of the directors fail to reside in the state, territory, or district in which the bank is located, or within 100 miles of the bank’s head office (12 USC 72)?
 - e. Did more than one-third of the directors fail to reside in the state, territory or district in which the bank is located, or within 100 miles of the bank’s head office, for one year before election (12 USC 72)?
 - f. Are any transactions with directors or their related interests on more favorable terms than those offered to other customers (Regulation O (12 CFR 215))?
 - g. Do the deposit accounts of directors receive greater interest than those of other customers (section 22(e), Federal Reserve Act (12 USC 376))?
 - h. Have any provisions of a cease-and-desist agreement or order been violated (Rules of Practice for Hearings (12 CFR 263))?
 - i. Has any director, officer, or employee been convicted of a crime involving a breach of trust or act of dishonesty (section 8(g) of the Federal Deposit Insurance Act (12 USC 1829))? If so, has the FDIC approved his or her membership on the board or employment?
 - j. Have any tie-ins of services been authorized by the board (Regulation Y (12 CFR 225.7))?
 - k. Were any loans to bank examiners disclosed (Criminal Code—18 USC 212 and 213)?
 - l. Has the bank made any political contributions (Federal Election Campaign Act (12 USC 441b))?
 - m. Have any employees been found to have misappropriated funds, made false entries, or otherwise defrauded the bank (18 USC 656)?
 - n. Has an officer of the bank failed to make appropriate written reports when an embezzlement, misapplication, or similar transaction occurred (SR-579)?
 - o. Have any extortionate extensions of credit been discovered (18 USC 892–894)?
 - p. Have any checks been certified against

- uncollected funds (18 USC 1004)?
- q. Have unauthorized obligations of the bank been issued (18 USC 1005 and 1006)?
 - r. Has there been a change in control (Regulation Y (12 CFR 225.41–225.43))? If so, was the Federal Reserve notified and was the application approved?
 - s. Have any purchase-money loans been made that are secured by 25 percent or more of the stock of another secured bank (Regulation Y (12 CFR 225.41))? If so, have the appropriate authorities been notified?
 - t. Has the bank failed to maintain records of directors, executive officers, and principal shareholders and their related interests (Regulation O (12 CFR 215.8))?
 - u. Are management officials of the bank, or its holding company or holding company affiliates, also management officials of an unaffiliated depository institution or depository holding company (Regulation L (12 CFR 212))? If so—
 - was such relationship established prior to November 10, 1978, and previously permitted by section 8, Clayton Anti-Trust Act (15 USC 19)?
 - was prior approval of the Federal Reserve obtained for a relationship that was developed since November 10, 1978?
 - does the interlocking relationship meet the criteria of one of the exceptions permitted by Regulation L (12 CFR 212)?
 - is the management relationship with an institution whose—
 - principal offices or branches, excluding electronic terminals, are located in a different RMSA from the bank’s or its holding company’s offices or branches (does not apply if either institution has assets of less than \$20 million) (12 CFR 212.3(b))?
 - principal offices or branches, excluding electronic terminals, are located in another city, town, or village not contiguous or adjacent and 10 miles or more apart?
 - if the bank or its holding company has assets exceeding \$2.5 billion, does the interlocking management relationship exist with a nonaffiliated depository institution holding company with assets of \$1.5 billion or less?
 - v. Have any loans to executive officers been uncovered that were not reported to the board (Regulation O (12 CFR 215) and 12 USC 503)?
 - w. Has a majority of the board failed to preapprove extensions of credit to any of the bank’s executive officers, directors, or principal shareholders and their related interests when the total loans to the individual exceed the amount prescribed in Regulation O?
 - x. Has the bank notified executive officers and principal shareholders of their reporting requirements (Regulation O (12 CFR 215))?
11. Determine compliance with administrative actions by—
 - a. reviewing provisions of the document and
 - b. reviewing bank records and performing necessary procedures to isolate noncompliance.
 12. Evaluate the bank’s compliance with formal or informal administrative actions and prepare comments for page one of the examination report (SR-02-17 and SR-92-21). (See also section 5040.1.)
 13. Determine compliance with conditions imposed in the approvals of corporate filings for—
 - a. branches and relocation applications, including—
 - capital plans or capital injections,
 - fixed-asset limitations, and
 - CRA plans;
 - b. subordinated debt, operating subsidiaries, and interim bank applications, including—
 - capital plans and
 - prior review and appropriate clearance of disclosures.
 14. On the basis of the information obtained by performing the foregoing procedures, or any other procedures deemed appropriate, evaluate the adequacy and effectiveness of the board of directors. The evaluation should include, but is not limited to—
 - a. the frequency and effectiveness of meetings;
 - b. the effectiveness of board committees;
 - c. the directors’ role in establishing policy;
 - d. the adequacy of the policies and major inconsistencies therein;

- e. the quality of reports for directors, noting any deficiencies in information flows from operating management;
 - f. violations of laws and regulations;
 - g. whether any one person or group appears to control or dominate the board (if so, comment on any adverse effects on operating policies, procedures, or the overall financial condition of the bank); and
 - h. the board's responsiveness to recommendations from the auditors and supervisory authorities.
15. Update the workpapers with any information that will facilitate future examinations.

The purpose of this section is to guide the examiner in evaluating bank management. Although the directorate is an integral part of the overall management of a bank, the management appraisal examination program is concerned primarily with the active officers. A review of the quality of director guidance and supervision is covered in "Duties and Responsibilities of Directors."

It is the responsibility of directors to employ a competent chief executive officer. Thereafter, senior management normally assumes the responsibility to employ, maintain and educate a qualified staff. Since a direct relationship exists between the overall condition of a bank and the quality of management, the first priority in evaluating the condition of the bank is to make an accurate appraisal of the competency of the management team.

Management is responsible, not only for the operations of the bank and the quality of its assets on a day-to-day basis, but also for planning for the future. Senior management should be evaluated on its plans for maintaining or improving the condition of the bank in the future as well as on the bank's present condition. The depth of planning and a general forward looking attitude of executive officers should be considered when projecting future management impact. This should include an evaluation of management's efforts to provide for succession of senior bank officials.

The projection of future management impact involves an appraisal of the quality and quantity of senior and middle management. This assessment of course must be relative to the size and community circumstances of the bank. Examiners must not restrict their appraisals to the past and present. The past and present certainly are significant, requiring an in-depth analysis of financial condition, earnings and capital adequacy, both on an absolute basis and as a trend, but, the determination of what the management will do for the bank in the future is most significant. The System's goal is to prevent problems from developing rather than waiting for future examinations to identify deteriorating conditions.

Bank management receives strong pressure from customers, stockholders and competitors. Customers demand more for their money, in the form of both interest and services, and stockholders demand higher returns on their invest-

ments, both in dividends and increased market value of their stock. No bank is completely free from the pressure of competition and, for most institutions, this is one of the strongest forces felt. In the midst of those pressures, the clear mandate to bank management is to "perform." Performance is measured in terms of long-run profitability, liquidity and solvency. It is almost impossible for a bank to achieve those long-range goals unless careful planning and coordination bring efficiency to its activities. Management must recognize the bank's position in the market and make plans which will achieve the objectives set for the institution by the directors. It must be constantly alert to the need for continually upgrading and expanding services and facilities to support and encourage the bank's growth.

Both the directors and senior management have important roles in a bank's program of internal control and internal audit. Although directors have overall audit responsibility and should require that the auditor report directly to them, senior management normally is charged with the duty of maintaining a strong system of internal control.

The entire examination procedure, as outlined throughout this manual, is designed to provide a clear picture of both the present and anticipated future condition of the bank under examination. As a result, the reports and workpapers generated by the examination process will serve as a major tool for examiners in their evaluation of management. Examination procedures for various balance sheet accounts and departmental areas are designed to effect a comprehensive evaluation of internal control and internal and/or external audit, and will provide the examiner with insight into the degree of compliance with the bank's own written policies in such areas. Similarly, the examination procedures in "Loan Portfolio Management," "Investment Securities," "Funds Management," "Assessment of Capital Adequacy," and "Analytical Review and Income and Expense" are designed to lead to a detailed analysis of written objectives, policies and procedures in those management areas.

The examiner must take a practical approach to evaluating these features depending on the bank's characteristics. The examiner can have greater confidence in the continuity of top and middle management when it is known that the

bank has an inflow of new personnel at various levels and that training procedures and advancement policies will keep the organization viable and dynamic.

The examiner must be concerned with salary levels within the bank and must review information collected during the examination about the bank's employee benefits program. Salaries paid and benefits provided should be compared with those offered by an appropriate peer group, and inquiry should be made to determine the relationship between the bank's payroll structure and that offered by competitors for the same caliber personnel.

The examiner must judge the appropriateness of asset distribution in view of the bank's sources of funds. The examiner must evaluate the adequacy of the bank's capital position and expectations in view of asset quality and plans for growth and expansion. The overall management evaluation should be made by the examiner-in-charge, because he or she is in the best position to identify weaknesses and inconsistencies in policies. Although examiners-in-charge will rely heavily upon the information received from assisting examining personnel in various areas under review, it is their task to assemble all of such information into a composite picture of the quality of management.

Senior management is responsible for the quality of all bank personnel and for planning its own replacement. A bank's recruiting, training, and personnel development activities are vital to the development and continuity of a quality

staff. The examiner must evaluate those areas to determine the quality of overall management. Some features of good personnel management are:

- An organizational structure.
- Detailed position descriptions.
- Carefully planned recruiting.
- Appropriate training.
- Performance review.
- Salary administration.
- Provision for communication.

The examiner should identify and interpret trends that can reveal flaws in policy either as written or as practiced. The examiner should question the quality of management in any area in which he or she finds serious shortcomings or makes significant criticisms.

The examiner should be alert for situations in which top management dominates the board or where top management acts solely at the direction of either the board or a dominant influence on the board. Although it is extremely important for the directors to assume their appropriate role in setting objectives and formulating policy consistent with their responsibilities to the depositors, shareholders and regulators, dialogue with top management must occur. In banks where both directors and senior management recognize and assume their appropriate duties and responsibilities, areas for conflict are greatly reduced.

Management Assessment

Examination Objectives

Effective date March 1984

Section 5010.2

1. To determine the consistency of written objectives, policies, and procedures in the various asset, liability, and operational areas.
2. To determine that policies are being adhered to throughout the system.
3. To determine that management plans adequately for future conditions and developments.
4. To evaluate the adequacy of the bank's personnel practices as they relate to management continuity.
5. To evaluate management experience and depth.
6. To determine that management has established systems which facilitate efficient operation and communication.
7. To evaluate the propriety and soundness of management decisions.
8. To project the impact of management on the future condition of the bank.

Management Assessment Examination Procedures

Effective date March 1984

Section 5010.3

In the following procedural steps examiners should attempt to utilize already developed material from internal or external audit sources. Also, the examining resources and circumstances of the bank must be weighed in perspective to set the depth of scope for this area.

1. Obtain the following, if available:
 - a. Organization chart.
 - b. Management plan.
 - c. Administrative and personal manuals.
 - d. Marketing plan.
 - e. Resumes for all executive officers and department or division heads which have not been obtained in previous examinations.
 - f. A list of the salary of and other compensation paid to each executive officer.
 - g. A list of the salary ranges for other officers of the bank broken down by position.
 - h. A description of other employee benefits.
2. Become familiar with the quality of key personnel by:
 - a. Updating management briefs for all executive officers and department or division heads.
 - b. Distributing the updated management briefs to appropriate examining personnel and requesting that they be returned upon completion.
3. Review administrative manuals and:
 - a. Extract any policy statements contained therein.
 - b. Extract any general information considered relevant in appraising management.
 - c. Analyze the manual(s), in general, as useful management tools.
4. Review management plan and extract information concerning:
 - a. Areas of bank where increased or decreased officer staffing is planned.
 - b. Number of officers to be added or removed.
 - c. Qualification requirements for planned additional officers.
5. Establish the hierarchy of the organization by determining the functional responsibility levels of various officers and whether lines of authority are drawn in accordance with the organization chart.
6. Review the bank's marketing plan for specific programs being planned and general applicability to the institution.
7. Review the bank's schedule of salaries and make comparisons with similar information from an appropriate peer group. If deemed appropriate, compare salaries paid and benefits received in the bank to those of other institutions with which it competes directly. Determine whether the bank is paying salaries or bonuses to inactive officers or directors and, if so, determine that such payments have been disclosed to shareholders.
8. Determine whether any executive incentive compensation plans (performance bonuses) have been established and, if so;
 - a. Review specific provisions of the plans and determine the beneficiaries.
 - b. Review controls established to prevent the beneficiary(s) of the plan from understating noncash expenses (accrual expense accounts, provision for possible loan losses, etc.) or overstating noncash income (accrual income accounts).
9. Review the bank's activities with regard to developing personnel for senior management succession. At a minimum, this review should include:
 - a. An assessment of the quality of lower levels of management and the potential for advancement.
 - b. An assessment of the bank's officer hiring policies to determine that it is appropriate to meet the bank's current and future needs.
10. Obtain and analyze daily or other periodic reports submitted to executive management with the view of determining the usefulness of the reports in monitoring the condition and operation of the bank.
11. As the evaluation of the various areas of examination interest are being completed, discuss with assisting personnel:
 - a. Any of their observations indicative of the general morale level.
 - b. The technical proficiency of officers in their area.
 - c. The level of direct impact that officers have on the condition of their areas.
12. Review the section on "Analytical Review

- and Income and Expense” and extract any information related to financial planning that is considered relevant to evaluating management. Also consider the quality, depth and applicability of financial planning.
13. In conjunction with reviewing the work papers and comments generated during the examination:
 - a. Familiarize yourself with the bank’s written objectives and policies.
 - b. Analyze those policies and determine any inconsistencies in management areas.
 - c. Review any internal control and policy exceptions and any other criticisms made in connection with the examination of all areas of the bank.
 - d. Determine the extent to which improper implementation is negating the effect of written policies and procedures.
 - e. Review the appropriateness of asset distribution in view of the bank’s sources of funds.
 - f. Review the evaluation of the bank’s capital position and expectations in view of asset quality and plans for growth and expansion.
 14. In cases where previously obtained information is incomplete or where no records could be reviewed, interview appropriate management in order to judge quality and depth. The interview should be conducted in such a manner as to generate necessary information for determining:
 - a. Sources of information used to keep current.
 - b. Strengths and weaknesses of lower level personnel.
 - c. Succession of management and replacement of key personnel.
 - d. General management plan.
 - e. Methods of control utilized.
 - f. Workload factors and efficiency of personnel.
 - g. Frequency of staff meetings and how the communications system works.
 - h. Management projections for the institution over the next year.
 - i. Any major new proposal being considered or changes in asset mix or services.
 - j. The nature and degree of working relationship with directors.
 - k. The existence of any time-consuming outside activities of executive management.
 15. By reviewing the results of the preceding steps and performing any other procedures deemed appropriate, answer the following questions (normally these questions will serve as a summary of information obtained, thus compiling factual data to support your objective comments on management):
 - a. Have overall management objectives been set?
 - b. Does the bank forecast manpower requirements?
 - c. Are qualified people advanced from within?
 - d. Are supervisory personnel involved in the selection of new employees and given the right of acceptance or rejection?
 - e. Is management training given to those persons likely to assume higher level positions?
 - f. Are salaries competitive?
 - g. Are employee benefit programs competitive?
 16. Prepare comments on the quality of management supervision. The comments should, at a minimum, discuss the following:
 - a. General and technical ability.
 - b. Effectiveness.
 - c. Experience.
 - d. Any inconsistencies in written objectives, policies and procedures.
 - e. Any serious or widespread lack of proper implementation of written procedures.
 - f. An evaluation of the bank’s salary structure.
 - g. The promptness with which management addresses problems.
 - h. The extent to which executive management delegates and demands accountability.
 - i. Any evidence that executive management is more concerned with the operation of a functional area than with overall supervision of the bank.
 - j. The potential for upward movement of existing management personnel.
 - k. Management’s commitment to effecting corrective action in problem areas.
 - l. Unsafe or unsound management.
 - m. Any situation which might require close monitoring or removal of management.
 17. For banks that are subsidiaries of bank holding companies (BHCs), review the relative degree of centralized control by parent or the lead bank, and evaluate:

- a. The general level of management's dependence on central BHC staff.
- b. Independence on final credit decisions.
- c. Independence on investment decisions.
- d. Independence on operational practices or service fee arrangements.

While examiners may expect that economies of scale or optimization of tax, investment, or credit considerations on a consolidated basis may be beneficial to the entire

organization, examiners must be alert to the danger of such considerations becoming overly burdensome or unfair to the subsidiary bank being examined. (Reference Federal Reserve Policy Statement on Inter-corporate Income Tax Accounting Transactions of Bank Holding Companies and State Member Banks.)

18. Update the workpapers with any information that will facilitate future examinations.

Management Assessment

Internal Control Questionnaire

Effective date March 1984

Section 5010.4

1. Does the bank have an organizational chart?
2. If not, have lines of authority and reporting responsibility been formally established?
3. Does the bank have a full-time personnel manager?
4. Does the bank utilize written personnel manuals?
5. Does the bank utilize a system of written job descriptions, including descriptions for supervisory personnel?
6. Does the bank actively recruit personnel?
7. Does the bank perform background investigations of new employees?
8. Does the bank have a formal training program?
9. Does the bank utilize other than on-the-job training?
10. Does the bank utilize a graded salary scale?
11. Does the bank consider competition in preparing a salary range? If so, in what manner?
12. Does the top management at least annually review lower management?
13. Does the bank prepare or utilize a long-range forecast of economic conditions germane to its trade area?
14. Does top management consult with directors for their opinion of future condition?
15. Does the bank either employ an economist or utilize the services of an outside economic advisor?
16. Does senior management propose to the directors areas for policy decision?
17. Does the bank have a management succession plan?
18. Does the bank employ a marketing manager and/or outside marketing consultant?
19. Does senior management receive:
 - a. A brief statement of condition daily?
 - b. A daily liquidity report?
 - c. A listing of assets subject to quality limitations at least monthly?
 - d. An earnings statement on a comparative basis at least monthly?
20. Does the bank's auditing function audit the officer's adherence to general policy?
21. Are staff meetings held on a regular basis?
22. Are minutes kept for staff meetings?
23. Does the bank use a system of progress reports on specific projects?
24. Does the bank have a tax department or a tax consultant?

Overall Conclusions Regarding Condition of the Bank

Section 5020.1

Effective date April 2008

The examiner is encouraged to use objective criteria in evaluating various areas of the bank. However, there will always be a need for subjective judgment in an examination. Formulating an overall conclusion regarding the present and future condition of the bank requires the use of both objective criteria and subjective judgment. As experience is essential in evaluating information in areas requiring subjective judgment, the procedures in this section should be performed by the examiner-in-charge. In performing these procedures, the examiner's primary concerns are—

- to make the ultimate determination as to—
 - the solvency of the bank and its ability to meet maturing and unusual demands in the ordinary course of business,
 - adherence to safe and sound banking practice,
 - adherence to the law, and
 - the continued viability of the institution, and
- to communicate the results of the examination to the Federal Reserve System and the directors of the bank.

The evaluation of the overall condition of the bank is based on conditions found throughout the institution. Considerations include internal control and policy exceptions, violations of law and regulations, quality of management, adequacy of earnings and capital, quantities of criticized assets, and other identified deficiencies or irregularities. An evaluation of the future condition of the bank is based on the analysis of—

- management's plans as expressed by operating plans, the capital plan, and other projections,
- factors such as competition and economic conditions, and
- the overall present condition of the bank.

The primary information for evaluating the present condition of a bank is the findings and conclusions of the assisting personnel. The examiner-in-charge should weigh the importance and significance of all criticisms, exceptions, and deficiencies in attempting to discover any unfavorable trends or situations. Through review of the examination process, insight can be gained into such central issues as—

- present asset quality;
- current liquidity position;
- present capital adequacy;
- quality and performance of management;
- earnings performance, both past and present; and
- sources and applications of funds.

The examiner-in-charge usually will include remarks regarding those areas in the examination report. Although procedural areas of this manual deal specifically with each of those key items, the examiner-in-charge should use information from all phases of the examination. For example, when reviewing the bank's present capital position, the examiner-in-charge may use knowledge of the bank's asset and management quality to modify the conclusions of assisting personnel. The important point is that the examiner-in-charge is in the best position to assess all information provided by the examination process.

Factors affecting the future condition of the bank can generally be categorized as internal or external. The examiner's review of current condition flows naturally into an evaluation of internal factors affecting the institution's future prospects and condition. Among the items providing insight into future conditions are—

- earnings trends,
- successor-management plans,
- the budget or profit plan,
- the capital plan, and
- any other internally generated projections or forecasts.

Many banks will not have formal written plans or projections. In such cases, the examiner-in-charge must obtain from senior management or the board of directors information on their plans for matters such as—

- growth and expansion,
- capital,
- changes in the size and mix of assets, and
- changes in sources of funding.

In addition, examiners should remind senior management that any change in the general character of a bank's business or the scope of the corporate powers it exercises requires the prior approval of the Board under Regulation H.

The examiner should recommend that banks

that do not have formal plans or projections take advantage of any externally available tools to aid them in formulating these plans. In today's competitive market, strategic planning is a necessity for almost all banks, but especially for banks that are losing their market share or in which inefficiencies are depressing profitability.

If banks prepare budgets or profit plans, insight can be gained into the accuracy of balance-sheet and earnings projections by comparing actual and projected account balances. It also is beneficial to compare original projections with current projections to determine that adjustments are made on a timely basis. When four- or five-year projections are made, banks often formulate several forecasts based on different sets of assumptions. In such a situation, the examiner should attempt to determine the bank's most likely future course.

The examiner should attempt to gain access to any official material or internal workpapers that document or illustrate the bank's rationale in planning its future. The goal is to review the institution's decision-making process.

Banks are turning increasingly to off-balance-sheet activities to deliver services, effect payments, generate income, and hedge interest-rate risks. Banks have introduced a wide variety of new products and services to complement their more traditional activities. Although these new activities are useful and profitable, they contain an element of risk. Many of these new activities involve a contingent liability or other risk that is not reflected on the bank's balance sheet and, indeed, may not even be fully recognized by the bank. The examiner should be aware of how the bank manages and controls its off-balance-sheet risks. Examples of off-balance-sheet activities include—

- guarantee contracts, retained or contingent interests, and variable interests,
- commitments and innovative applications for standby letters of credit, and
- a wide variety of financial instruments and investment-security activities (including futures and forwards, warrants, puts, and calls).

Risk can be distinguished primarily as credit risk, liquidity, market (price, interest rate, foreign exchange), reputational, and legal risk, or risk resulting from internal control deficiencies. Examiners must be aware of the nature and extent of off-balance-sheet risks. The risks that

affect capital, liquidity, and compliance with laws should be evaluated for their potential effect on the safety and soundness of the bank.

In judging such controversial areas as capital adequacy and liquidity, the examiner should remember that, under ideal circumstances, management should be the expert on the bank's capitalization and liquidity position. Judgments on such matters should be generated internally, based on insight only management can possess. It is management that should know the bank's competitive situation, the economics of the service area, and the anticipated impact of those and other factors on its plans for growth and expansion. It is also management that has the greatest interest in the success of the bank. Accordingly, management and the directorate should choose a level of capitalization and liquidity consistent with their perception of the bank's situation rather than reacting to competitors or relying on pressures from regulators. However, specific judgments by the examiner are required, particularly in situations where a capital or liquidity position has fallen below what examiners consider to be acceptable norms. Objective justification for lower levels of capital or liquidity must be obtained and analyzed.

To properly evaluate the future prospects of a bank, the examiner must review external factors affecting the institution. Significant among those factors are the characteristics of a bank's area. Area refers to the bank's primary service area, which is defined as that area from which the bank receives approximately 75 percent of its deposits. Demographics of the area generally are available, and every bank should accumulate such information to aid in analyzing its current operations and planning for future operations. The absence of such information in an up-to-date form should be considered a deficiency. Included under examination procedures for this section is a listing of minimum information required to ascertain the demographics of a service area. The examiner-in-charge should make sure that information is compiled and should analyze it to determine whether management expectations appear justifiable in the circumstances.

In dealing with competitive factors, the examiner should review or compute the share of market for the bank under examination. Continuing records in that area establish an analyzable trend. Consideration also should be given to changes in the bank's statutory and regulatory environment, such as—

- changes in branching laws,
- changes in tax structure, and
- changes in laws affecting competition with other financial institutions.

Once the examiner has reached specific conclusions about the present condition and future prospects of the bank, or has noted serious deficiencies or detrimental trends, his or her conclusions and suggestions should be communicated to bank senior management, the board of directors, and the Federal Reserve Bank on a timely basis. In formulating discussion and written comments, the examiner should avoid the appearance of second-guessing management. Therefore, conclusions, judgments, and recommendations should be based on objective information generated throughout the entire examination process.

Before preparing examination report comments regarding the overall condition of the bank, the examiner-in-charge should consider the reporting objective. Once it is determined that problems exist in a bank, the underlying causes must be identified. Those underlying causes as well as specific problems or deficiencies should be covered in the comments. For example, if deficiencies in written lending objectives or policies or noncompliance with sound policies has resulted in the acquisition of sub-quality assets, the examiner's comments must address both cause and effect. The total of criticized assets should be cited as evidence of the underlying problem, and appropriate remedies, such as changing objectives or policies, should be suggested.

Examiners should remember that their ability to reach accurate conclusions regarding the overall present condition and future prospects of the bank and their skill in communicating the conclusions to management orally and in reports will, to a great extent, determine the effectiveness of the entire examination process.

The examiner's conclusions regarding the overall condition of the bank are summarized in a composite rating assigned in accordance with guidelines provided under the Uniform Interagency Bank Rating System (CAMELS). The composite rating represents an overall appraisal of six key assessment areas (components) covered under the CAMELS rating system: Capital, Asset quality, Management, Earnings, Liquidity, and Sensitivity to market risk. The summary, or composite, rating, as well as each of the assessment areas, is delineated on a numerical scale of

one to five, one being the highest or best possible score. Thus, a bank with a composite rating of one requires the lowest level of supervisory attention, while a five-rated bank has the most critically deficient level of performance and therefore requires the highest degree of supervisory attention. When appraising the six key assessment areas and assigning a composite rating, the examiner weighs and evaluates all relevant factors. In general, these factors include the adequacy of the capital base, net worth, and reserves for supporting present operations and future growth plans; the quality of loans, investments, and other assets; the ability to generate earnings to maintain public confidence, cover losses, and provide adequate security and return to depositors; the ability to manage liquidity and funding (in particular, during periods of increased financial stress); the ability to meet the community's legitimate needs for financial services and cover all maturing deposit obligations; and the ability of management to properly administer all aspects of the financial business and plan for future needs and changing circumstances. The assessment of management and administration includes the quality of internal controls, operating procedures, and all lending, investment and operating policies; compliance with relevant laws and regulations; and the involvement of the directors, shareholders, and officials.

Although the composite rating is based loosely on the average of the six component scores, the examiner's judgment can and should play a major role in its determination. Thus, the examiner must assess the severity, particularly the potential impact, of individual weaknesses on the present and future viability of the bank. Significant problems will provide sufficient basis for deviating from the numerical-average approach to assigning the composite rating. However, whenever deviation from the numerical standards for the composite rating is necessary to accurately reflect the overall condition of the bank, the examiner must provide a full explanation of the reasons for such deviation. See the appendix (section A.5020.1) for a complete discussion of the uniform rating system and considerations to be taken into account when using it to evaluate the condition of a bank.

SUBSIDIARIES OF BANK HOLDING COMPANIES

The composite rating of an individual subsidiary

bank should be based on the condition of that single entity. The quality of management and the financial condition of the consolidated organization will be useful in assessing the prospects and understanding the operations of the bank being examined. However, banks with weaknesses requiring corrective action should be identified as such. Then, appropriate supervisory focus can also be made at the consolidated level. Also, banks should be identified by type on an individual basis rather than by applying the consolidated organization's characteristic to each bank. For example, the capital and condition of a community bank should be judged by community bank standards, not by multinational or regional standards, even if the bank is owned by such an organization. This approach recognizes that two consolidated organizations of similar size may be composed of entirely different types of banks. Proper evaluation of each bank component should lead a bank holding company examiner to the most appropriate conclusion on the condition of the consolidated entity.

CONFIDENTIALITY OF THE SUPERVISORY RATING AND OTHER NONPUBLIC SUPERVISORY INFORMATION

A February 28, 2005, interagency advisory reminds banking organizations of the statutory prohibitions on the disclosure of supervisory ratings and other confidential supervisory information to third parties. The agencies¹ learned that some insurers had requested or required banks and savings associations (financial institutions) to disclose their CAMELS rating during the underwriting process when those institutions had sought directors' and officers' liability (D&O) coverage.² The agencies responded by issuing the advisory specifically to remind all banking organizations that, except in very limited circumstances, they are prohibited by law from disclosing their CAMELS rating and other

nonpublic confidential supervisory information to insurers as well as other nonrelated third parties without permission from their appropriate federal banking agency. (See SR-07-19, SR-05-4, SR-96-26, and SR-88-37.)

Federal banking regulations provide that the report of examination, which contains the CAMELS rating, is nonpublic information and is the property of the agency issuing the report.³ These regulations specifically provide that, except in very limited circumstances, banks and other financial institutions may not disclose a report of examination or any portion of the report, nor make any representations concerning the report or the report's findings, without the prior written permission of the appropriate federal banking agency.⁴ The circumstances for release of nonpublic supervisory information may include disclosure to a parent holding company, a director, an officer, an attorney, an auditor, or another specified third party, as indicated in the regulations of the appropriate federal banking agency.⁵ Any person who discloses or uses nonpublic information except as expressly permitted by one of the appropriate federal banking agencies or as provided by the agency's regulations may be subject to the criminal penalties provided in 18 USC 641.

The legal prohibition on the release of nonpublic supervisory information applies to all financial institutions supervised by the agencies, including bank and thrift holding companies, Edge corporations, and the U.S. branches or agencies of foreign banking organizations, which receive confidential supervisory ratings, including the RFI/C(D) rating, ROCA rating, CORE rating, and CAMEO rating.⁶ As with the

3. For the Federal Reserve, see 12 CFR 261.2(c)(1), 261.20(g), and 261.22(e).

4. See 12 CFR 261.22.

5. See 12 USC 326 and 12 CFR 261.20(b) (exceptions).

6. RFI/C(D), ROCA, and CAMEO ratings are assigned by the FRB as a result of an examination or inspection. As of January 1, 2005, the FRB adopted a new rating system, RFI/C(D) ratings, for bank holding companies that replaces the former BOPEC rating system. RFI/C(D) ratings components are Risk management, Financial condition, potential Impact of the parent and nondepository subsidiaries on the subsidiary depository institutions, Composite, and Depository institution. For noncomplex bank holding companies with assets of \$1 billion or less, only risk-management and composite ratings are assigned. ROCA ratings are assigned to the U.S. branches, agencies, and commercial lending companies of foreign banking organizations. The ROCA rating components are Risk management, Operational controls, Compliance, and Asset quality. CORE ratings are assigned to complex holding company enterprises. The CORE rating components are Capital, Organizational structure, Relation-

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OCC).

2. As part of the examination process, a confidential supervisory rating, called a CAMELS rating, is assigned to each depository institution regulated by the agencies. See the appendix section A.5020.1 for a complete description of the Uniform Financial Institutions Rating System or CAMELS rating system.

CAMELS rating, these ratings are transmitted to the regulated institutions in reports of inspection or examination, which are the property of the agencies.

Financial institutions that receive requests for confidential supervisory ratings should refer all requesters to the following publicly available information in lieu of disclosing any confidential regulatory information, including the CAMELS rating. (See the National Information Center, on the Federal Financial Institutions Examination Council (FFIEC) website, www.ffiec.gov/.)

- for banks, an institution's quarterly reports of condition (Call Reports) (see 12 USC 1817)
- for holding companies or foreign banks with U.S. operations, an institution's quarterly and annual FR Y or H-(b)11 reports (see 12 USC 1844, 3106, 3108, 601–604a, and 611–631)
- for national banks, the annual disclosure statement (see 12 CFR 18.3)
- for banks, the institution's Uniform Bank Performance Report (UBPR), which is available to all interested parties at the website www.ffiec.gov and is designed for summary and in-depth analysis of banks; for savings associations, the Uniform Thrift Performance Report (UTPR), available from the OTS upon request
- an institution's publicly available filings, if any, filed with the appropriate federal banking agency (15 USC 78(l)(i)) or with the U.S. Securities and Exchange Commission
- any reports or ratings on the institution compiled by private companies that track the performance of financial institutions⁷
- any reports or ratings issued by private rating services on public debt issued by an institution
- any publicly available cease-and-desist order or enforcement proceeding against an institution⁸

ship, and Earnings. CAMEO ratings are assigned to Edge corporations and the overseas branches and subsidiaries of U.S. banks. The CAMEO ratings components are Capital, Asset quality, Management, Earnings, and Operations and internal controls.

7. For bank rating services, see the guidance at www.fdic.gov/bank/individual/bank/index.html.

8. Information on enforcement actions taken by the Federal Reserve may be found at www.federalreserve.gov/boarddocs/enforcement/search.cfm. Information on enforcement actions taken by other federal agencies, such as the Securities and Exchange Commission, the Financial Crimes Enforcement Network, and the Department of Justice, as well as foreign authorities, may also be publicly available.

- any reports or other sources of information on institution performance or internal matters created by the institution that does not contain information prohibited from release by law or regulation

The National Association of Insurance Commissioners (NAIC) was advised by the agencies that some insurers were inappropriately requesting or requiring disclosure of CAMELS ratings as a part of the underwriting process. The agencies requested NAIC's assistance in notifying insurance companies that this practice should be discontinued because of the confidential nature of the CAMELS rating.

FORMAL AND INFORMAL SUPERVISORY ACTIONS

As a general rule, supervisory action should be considered when other more routine measures, such as formal discussions with a bank's principals or directors and normal follow-up procedures, have failed to resolve supervisory concerns. The Uniform Interagency Bank Rating System clearly identifies the more serious problem banks and distinguishes them from banks whose weaknesses or deficiencies are such as to warrant a lower degree of supervisory concern.

For example, the application of prompt and effective remedial action may keep the condition of a composite 3 bank from deteriorating and the bank from becoming a problem institution. To ensure problem areas receive adequate attention, all weaknesses should be clearly defined and corrective measures should be properly structured. This objective may best be achieved through the execution of a memorandum of understanding between the bank's board of directors and Reserve Bank officials. A memorandum of understanding is not a formal written agreement as prescribed in the Financial Institutions Supervisory Act of 1966 (as amended); it is a good faith understanding between the bank's directorate and the Reserve Bank concerning the principal problems and the bank's proposed remedies.

Banks rated composite 4 or 5 are clearly problem institutions that require close and constant supervisory attention. Unless specific circumstances argue strongly to the contrary, such banks will be presumed to warrant formal super-

visory action, that is, a written agreement or cease-and-desist order, as provided for in the Financial Institutions Supervisory Act of 1966. In addition, the Board of Governors is authorized to suspend and remove offending officers and directors of banks for certain violations and activities.

Although the decision to pursue formal or informal supervisory actions belongs to the Board of Governors or the Reserve Bank, the initial consideration and determination of whether action is necessary usually results from the examination process. Accurate and complete report comments that carefully delineate both the bank's weaknesses and deficiencies, as well as management's existing or planned corrective measures, will allow the Reserve Bank to make the most informed decision concerning appropriate supervisory action.

CIVIL MONEY PENALTIES

Under provisions of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (P.L. 95-630), the Board of Governors is authorized to assess civil money penalties for violation of the terms of a final cease-and-desist order and violations of—

- sections 19, 22, and 23A of the Federal Reserve Act (respectively, reserve requirements and interest-rate limitations; limitations on loans by insured banks to their executive officers, directors, and principal shareholders; and limits on loans by insured banks to their affiliates);
- the prohibitions of title VIII of FIRA against preferential lending to bank executive officers, directors, and principal shareholders based on a correspondent-account relationship; and
- a willful violation of the change in Bank Control Act of 1978 (12 USC 1817(j)).

In determining the appropriateness of initiating a civil money penalty assessment proceeding, the Board has identified a number of relevant factors (see *Federal Reserve Regulatory Service*, 3-1605). In assessing a civil money penalty, the Board is required to consider the size of the financial resources and good faith of the respondent, the gravity of the violation, the history of previous violations, and such other matters as justice may require.

Examiners are responsible for the initial analyses on potential civil money penalties. Civil money penalties should be proposed for serious violations and for violations which, because of their frequency or recurring nature, show a general disregard for the law. After the examiner has reviewed the facts and decided to recommend a civil money penalty, he or she should contact the Reserve Bank for advice on proper documentation and any other assistance.

SUSPICIOUS-ACTIVITY-REPORTING PROCEDURES

On April 2, 1985, the federal financial institutions supervisory agencies and the U.S. Department of Justice signed an agreement that requires the agencies to work toward improving the federal government's response to white-collar crime in federally regulated financial institutions. The primary goal of the agreement is to ensure full cooperation in the sharing of relevant information among the agencies—subject to existing legal restrictions—so that all available information may be used in criminal, civil, and administrative proceedings. In keeping with that goal, in 1985 the Federal Reserve, along with the other federal financial institutions regulatory agencies, issued procedures to be used by banks and other financial institutions operating in the United States to report known or suspected criminal activities to the appropriate law enforcement authorities and bank supervisors. Since 1996, the federal financial institutions supervisory agencies and the Department of the Treasury's Financial Crimes Enforcement Network (FinCEN) have required banking organizations to report known or suspected violations of law as well as suspicious transactions on a Suspicious Activity Report by Depository Institutions (SAR-DI). Law enforcement agencies use the information reported on the SAR-DI form to initiate investigations, and Federal Reserve staff use the information in their examination and oversight of supervised institutions.

Suspicious Activity Report by Depository Institutions

Filing

A member bank must file a SAR-DI form with

the appropriate federal law enforcement agencies and the Department of the Treasury. (See section 208.62 of the Board's Regulation H.)⁹ Member banks must prepare a SAR-DI form in accordance with the form's instructions (see SR-07-2 and the attached June 2007 SAR-DI form and instructions); the completed SAR-DI form is to be sent to the U.S. Treasury Department. A SAR-DI report form must be filed when an institution detects—

- insider abuse involving any amount,
- violations aggregating \$5,000 or more in which a suspect can be identified,
- violations aggregating \$25,000 or more regardless of a potential suspect, or
- transactions aggregating \$5,000 or more that involve potential money laundering or violations of the Bank Secrecy Act.

The management of a member bank must promptly notify its board of directors, or a committee thereof, of any SAR-DI form filed.

Time for Reporting

A member bank is required to file a SAR-DI form within 30 calendar days after the date of initial detection of the facts that may constitute a basis for filing a SAR-DI form. If no suspect was identified on the date of detection of the incident requiring the filing, a member bank may delay filing a SAR-DI form for an additional 30 calendar days in order to identify the suspect. Reporting may not be delayed more than 60 calendar days after the date of initial detection of a reportable transaction. For violations requiring immediate attention, such as when a reportable violation is ongoing, the financial institution is required to immediately notify an appropriate law enforcement authority and the Board by telephone, in addition to filing a timely SAR-DI form.

Retention of Records

A member bank must retain a copy of any

9. The Board's SAR-DI form rules apply to state member banks, bank holding companies and their nonbank subsidiaries that do not report on a different SAR-DI form (for example, broker-dealers), Edge and agreement corporations, and the U.S. branches and agencies of foreign banks supervised by the Federal Reserve.

SAR-DI form filed, as well as the original or business-record equivalent of any supporting documentation, for a period of five years from the date of the filing of the SAR-DI form. Supporting documentation is to be identified and maintained by the bank, and it will be deemed to have been filed with the SAR-DI form. All supporting documentation must be made available to appropriate law enforcement agencies on request.

Referral of Criminal Matters and the Monitoring of SAR-DI Forms

The Enforcement Section of the Division of Banking Supervision and Regulation has primary responsibility for the referral of criminal matters for the Federal Reserve System to the appropriate authorities. The Anti-Money-Laundering Policy and Compliance Section of the division develops, implements, and monitors the System's suspicious-activity-reporting examination procedures. SR-letters have been distributed within the Federal Reserve System. Letters relevant to the reporting of suspicious activities include SR-07-2, SR-01-29, and SR-03-17. Any inquiry relating to suspicious-activity reporting should refer to the applicable SR-letter.

Interagency Guidance on Sharing Suspicious Activity Reports with Head Offices and Controlling Companies

On January 20, 2006, the federal banking agencies¹⁰ issued for banking organizations the Interagency Guidance on Sharing Suspicious Activity Reports with Head Offices and Controlling Companies. The guidance confirms that (1) a U.S. branch or agency of a foreign bank may disclose a SAR-DI form to its head office outside the United States and (2) a U.S. bank or savings association may disclose a SAR-DI form to controlling companies,¹¹ whether

10. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision, along with the Department of Treasury's Financial Crimes Enforcement Network.

11. A controlling company is defined as (1) a bank holding company, as defined in section 2 of the Bank Holding

domestic or foreign. The guidance notes that banking organizations must maintain appropriate arrangements for the protection of confidentiality of SAR-DI forms.¹²

The guidance does not address whether a banking organization may share a SAR-DI form with an affiliate other than a controlling company or head office, whether located inside the United States or abroad. Until further guidance on this topic is issued, banking organizations should not share SAR-DI forms with such affiliates.

Examination Objectives

The examiner should determine if an institution has established internal procedures to ensure the prompt and accurate submission of all reports of suspected criminal activity to the appropriate authorities. The institution's procedures must comply with the requirements for suspicious-activity reporting in section 208.62 of the Board's Regulation H (12 CFR 208.62) and with the Bank Secrecy Act compliance program (12 CFR 208.63).

Examination Procedures

The examiner should—

- determine whether the institution has a policy of reporting suspected criminal activity,
- determine how the policy has been communicated to officers and employees, and
- determine whether a person or department in the bank has been designated as being responsible for the filing of SAR-DI forms.

Company Act, or (2) a savings and loan holding company, as defined in section 10(a) of the Home Owners' Loan Act. For purposes of the guidance, a controlling company also includes a company having the power, directly or indirectly, to (1) direct the management or policies of an industrial loan company or a parent company or (2) vote 25 percent of any class of voting shares of an industrial loan company or a parent company.

12. FinCEN concurrently issued similar guidance for securities broker-dealers, futures commission merchants, and introducing brokers in commodities. (See SR-06-1 and its attachments.)

Reporting of Suspected Criminal Violations

During the course of an examination, if an examiner (1) uncovers a situation that is known or suspected to involve a criminal violation of any section of the United States Code or state law and (2) finds that no referral, or an inadequate referral, has been made by the bank, he or she should report the situation immediately to the appropriate Reserve Bank. If the situation warrants, a telephone call should be made to the examiner-in-charge (EIC) or the central point of contact (CPC), as applicable.

The examiner should follow up the call with the submission of a detailed report. The EIC or the CPC should promptly convey the information to the appropriate enforcement officer at the Reserve Bank, who will expeditiously notify and consult with the Enforcement Section in the Board's Division of Banking Supervision and Regulation. The examiner's report to the EIC or the CPC should be in the form of a memorandum that fully apprises the Reserve Bank of the situation. All of the information reported in the SAR-DI form, as well as information held by the institution to support the SAR-DI form, should be included in the memorandum. Copies of pertinent exhibits or material should be attached to the memorandum.

The examiner's report should be confined to clear-cut statements of fact and must not contain opinions as to the probability of indictment, conviction, or related matters. In all reports and workpapers, the examiner should be as specific as possible. For example, rather than using phrases such as "it is reported" or "the bank indicates," the examiner should identify who reported the matter and how it occurred. On each transaction reported, copies of all documentation should be obtained and placed in a separate file detailing who handled the transaction in the bank. The reporting of the matter within the bank should be chronologically referenced throughout the documentation. The copies of documentation should be initialed and dated by the examiner in case the original is destroyed. The documentation is extremely important to proving a particular transaction.

The examiner's initial notification of suspected criminal violations to the Reserve Bank and the transmittal of data should be accomplished without informing bank personnel. Only the Reserve Bank or a designated representative

should inform bank personnel or its board of directors of a suspected criminal violation that had not been reported by the bank or that had been inadequately reported by bank personnel.

After reviewing the information submitted by the examiner, the Reserve Bank will decide whether the facts support the examiner's contention that a possible unreported violation of the criminal statutes exists. If the Reserve Bank, after consulting with the Board's Enforcement Section, discovers that in a particular instance a bank failed to report the suspected criminal

violation using the SAR-DI form or that the bank made an inadequate referral and, upon request, still fails to file a report, the Reserve Bank's staff must then complete a SAR-DI form. Appropriate comments relating to a bank's failure, if any, to file all necessary SAR-DI forms promptly and accurately must be made in the report of examination of the bank. Repeated or serious problems in this area should be directed through the Reserve Bank to the Enforcement Section of the Division of Banking Supervision and Regulation.

Overall Conclusions Regarding Condition of the Bank

Examination Objectives

Effective date March 1984

Section 5020.2

1. To reach conclusions regarding the present condition of the bank.
2. To reach conclusions regarding the future prospects of the bank.
3. To determine the bank's ability to meet demands in the ordinary course of business or reasonably unusual circumstances.
4. To determine the bank's adherence to safe and sound banking practices.
5. To formulate recommended action, when appropriate, based on those conclusions.
6. To communicate conclusions and recommendations both orally and in the examination report.

Overall Conclusions Regarding Condition of the Bank Examination Procedures

Effective date May 1988

Section 5020.3

Inasmuch as the following procedures are largely dependent on information generated from all phases of the examination, the examiner-in-charge should complete this program during the final stages of the examination. The completion of this program generally can be best accomplished during the review of the workpapers.

1. Analyze any available information concerning the characteristics of the area in which the bank operates to determine the existence of any unusual situations, any significant trends, the potential impact on the bank of any expected changes or any other significant information which could be detrimental to the bank. The bank should be consulted for sources of information which might include the most recent census data or data generated by organizations, such as the Chamber of Commerce. In analyzing the bank's trade area:
 - a. Consider density, income levels, general age group of the residents. Determine if there are significant changes in any of the above factors.
 - b. Determine the predominant living accommodations in the area (owner occupied vs. rental), price/rent levels and availability of residential units. Determine whether there are any major residential construction projects, re-zoning or conversions of single to multiple units which will have a significant effect on the bank.
 - c. Consider the types of industry and the number of firms in the area with emphasis on determining concentrations or seasonality. Investigate any major labor contract expirations, competitive factors or other significant factors which could have a negative effect on the community.
 - d. Consider the types of major products, available markets and present and projected prices for the products.
 - e. Consider any expected changes in street facilities which will significantly affect bank's accessibility/convenience. Determine the availability of public transportation.
 - f. Review the number and types of institutions that provide similar financial services in the community. Consider the aggressiveness, hours of business and additional services offered by competitor institutions.
- g. Determine the effect of government employment or dependence on government contracts on the community.
- h. Consider the condition of the national economy with particular attention to the rate of inflation, national vs. local unemployment, current interest rates and government fiscal and monetary policy. Specific problems, peculiar to a particular area should be investigated more thoroughly.
2. Review comments and conclusions contained in the workpapers which were generated throughout the examination and perform the following:
 - a. Compile all criticisms, exceptions and deficiencies.
 - b. Determine the existence of contradictory conclusions.
 - c. Consider the relative significance of criticisms, exceptions, deficiencies and conclusions and segregate important criticisms for the final review with management and for incorporation into the report of examination.
3. Based on procedures performed and conclusions contained in the workpapers, answer the following specific questions. These questions are intended as guidelines to the examiner-in-charge in formulating overall conclusions regarding the condition of the bank and should be augmented by the examiner's knowledge of the bank. "Yes" answers, in many instances, evidence the existence of a "leading" indicator of deterioration of bank soundness. For any question with a "yes" answer, specify any mitigating circumstances in the comments column. Sub-question answers are for information purposes.
 - a. *Asset Quality*
 - Is there an increasing ratio of criticized assets to total capital?
 - If so, is it indicative of adverse economic conditions, poor credit

judgment, or other factors (specify)?

- Has there been a material increase in the quantity of non-earning assets?
- Is there any abnormally increasing trend of past-due loans and/or interest earned but not collected?
 - If so, is it indicative of general economic conditions in the bank's trade area
 - Is the trend indicative of a weakening of collection policies and procedures, a slackening of credit standards, the bank's failure to recognize an asset which should be in a non-earning category, or is it caused by some other factor?
- Has a trend developed wherein the bank assumes increased risk without receiving increased rewards?
- Do the portfolios exhibit high concentrations in specific industries?
 - If so, do the concentrations represent a significant actual or contingent problem?
- Has the overall quality of assets deteriorated since the last examination?
 - If so, is the deterioration recognized by management and the board of directors? Can the deterioration be attributed to factors beyond the control of management or the board of directors, such as a change in the general economic conditions of the bank's service area?
 - If deterioration results from internal factors, such as lowering of credit standards or poor credit judgment, have steps been taken by management to effectively reverse negative trends?

b. *Quality of Management*

- Has the executive management changed since the last examination?
 - If so, is the change detrimental to the bank?
- Has there been any change in the general banking philosophy of executive management?
 - If so, is that detrimental to the bank?
- Do key bank officers have educational and/or experience levels below that considered minimal in the circumstances?
- Is there any tendency toward over reliance on essentially untrained and unskilled clerical staffs?
- Is there a large disparity between the compensation level of the chief executive officer and other members of executive management?
 - If so, is that disparity an objective indication of disproportional domination of the bank's affairs?
- Has the bank instituted any systems which directly reward managers for increasing bank income from assets or services subject to their control?
 - If so, has the bank failed to institute necessary control and audit procedures to prevent abuses?
- Has the bank failed to institute any programs which would give officers a vested interest in remaining with the bank?
 - If so, would the institution of such a program offer a workable solution to an actual or potential officer turnover problem?
- Is the bank's strategic and operational planning inadequate?
- Is the board of directors unresponsive to internal or external suggestions for improvement in the bank?
- Are the following conditions present?
 - Infrequent meetings of board of directors.
 - Infrequent meetings of committees of the board.
 - Infrequent management committee meetings.
 - A directorate which is split into distinct voting groups.
 - If so, are directors viewed as failing to perform their functions adequately?
- Is the quality of management deemed inadequate to conduct the affairs of the bank in a reasonable and safe manner?
- Are training programs and compensation increments deemed inadequate to attract and retain a staff capable of providing management succession?

c. *Earnings*

- Are earnings static or moving downward as a percentage of total resources?
- Is there a trend of decreasing income before security gains and losses as a percentage of total revenues?
 - If so, is such a trend expected to continue?
 - If so, has management determined causes for any deterioration and taken action to reverse the negative trend?
- Has the ratio of operating expenses to operating revenues been increasing?
- Are earnings trends consistent?
- Has a decreasing spread between interest earned and interest paid developed?
- Are the bank's earnings significantly vulnerable to changes in interest rate levels?
 - If so, what are management's plans and prospects for altering the vulnerability?
- Are there any significant structural changes in the balance sheet which may impact earnings?
- Has the bank experienced increasing actual loan losses and/or loan loss provisions?
- Is there any evidence that sources of interest and other revenues have changed since that last examination?
 - If so, is that attributed to an unsound emphasis for increased earnings?
- Are earnings deemed inadequate to provide increased capitalization commensurate with the bank's growth?

d. *Capital*

- Has the bank been unable to maintain a normal growth rate for capital?
- Do the ratios of loans to capital, deposits to capital or total assets to capital exhibit a trend to abnormal increases?
- Is capital deemed inadequate to support the present volume of business, including the volume of off-balance-sheet activities, in view of the amount

of criticized assets, the competency of management, etc.?

e. *Liquidity*

- Is there a trend toward decreasing bank liquidity?
- Has the bank been forced to increase abnormally dependence on borrowed funds to support existing assets?
- Does the bank depend excessively on purchased funds?
- Is there a trend toward investing interest sensitive liabilities in non-interest sensitive assets?
- Do the present quantity and maturity of non-interest sensitive assets represent a dangerous or potentially dangerous situation?

f. *Off-Balance-Sheet Risk*

Loans Sold or Serviced

- Is the bank involved as the lead or agent in loan participations, syndications, or servicing activities to the extent that management expertise is inadequate, or to the extent that the volume exceeds the level which management can capably handle?
- Does the bank's record of pending or threatened litigation indicate any instances where the bank, as lead or agent in a loan participation or syndication, has willfully misrepresented the credit to the other participants, or otherwise acted with gross negligence in handling the credit?
 - If so, is there any indication that the participants intend to hold the bank liable for any loss incurred on the credit?
- Did the examination reveal a practice of improper origination and packaging of loans sold or serviced which could cause:
 - The bank being compelled to repurchase the package, or
 - In the case of government guaranteed loans, the complete or partial dishonor of the guaranty?

- Has the bank previously repurchased participations when a loss was incurred, although it was not legally required to do so?

Letters of Credit

- Is there a trend toward increasing the issuance of standby letters of credit or other similar credit instruments?
 - If so, has the bank failed to consider the full impact of funding a significant percentage of those instruments?
- Are letters of credit excluded from the bank's internal loan review program?
- Does the internal evaluation of letters of credit include consideration of country and currency risk as well as credit risk?
- Is there a declining trend in the credit quality of letters of credit?
- Are standby letters of credit issued for purposes not covered in the bank's lending policy, or for which management does not have the expertise to handle?
- If not authorized in the bank's lending policy, were proper approvals obtained prior to issuance?

Wire Transfer Department

- Do internal control deficiencies in the wire transfer department pose a threat for large potential losses through fraud or error?
- Are there internal control deficiencies in the receiving and conveying of messages for other parties which may expose the bank to litigation for improper handling of the messages?

Data Processing Department

- Are internal controls inadequate in the bank's data processing area?
 - Are control deficiencies such that the accuracy and/or timeliness of data is questionable?
 - Are deficiencies such that the bank, in performing data processing services for others, could be liable for

- misplacement or other improper handling of source data?
- Are the bank's computer hardware and software systems inadequate to support the present and anticipated level of operations?
 - Are deficiencies such that hardware and systems will require replacement or upgrading in the short term?

Settlement Procedures

- If the bank is a member of CHIPS, Fedwire or other clearinghouse system, are procedures inadequate for the proper monitoring of incoming and outgoing wire transfers so that the bank is occasionally unprepared for settlement?
 - Would earnings be significantly affected if the immediate acquisition of funds is required to meet settlement?
 - Is the bank aware of the creditworthiness and ability of the other clearinghouse participants to make settlement?
- Are customers' daylight overdrafts allowed to exceed established credit limits or are they otherwise being improperly monitored?
- Is there a history of daylight overdrafts which have not been covered before the close of business?

Investment Securities

- Are there significant internal control deficiencies associated with the bank's handling of "when issued" trades, futures contracts and forward placements?
 - Is management's knowledge of interest rate hedging techniques insufficient to support such activity?
- Does the bank act as agent on securities or repurchase agreement transactions?
 - If so, does the customer agreement specifically designate liability for failure or performance?

Miscellaneous

- Did the analytical review of income and expenses disclose any additional off balance sheet activities for which management does not exhibit the necessary expertise and does not have adequate internal controls to handle the service?
- Does a review of legal actions against the bank indicate any pattern of practices which are caused by deficient internal controls?
 - If so, have the deficiencies been corrected?
- Is the potential liability arising from pending litigation considered significant in terms of capital adequacy and liquidity, considering the level of other contingent liabilities?
- Are any of the bank's affiliates or subsidiaries experiencing unprofitability or liquidity problems which may affect the soundness of the bank?
- Are operating lease liabilities and annual lease payments significant in terms of the bank's other funding requirements?
- Is potential restitution resulting from Truth in Lending Act violations significant relative to capital and liquidity?
- Is the bank's level of loan commitments, standby letters of credit, commitments to purchase securities and futures/forward contracts imprudent in light of overall circumstances within the bank?

g. *Internal Controls and Audit Procedures*

- Have internal controls deteriorated since the last examination?
- Do any of the following exist at the bank?
 - Low compensation level of internal auditors.
 - Internal or external auditor who reports directly to other than the board of directors or a committee thereof.
 - Internal auditors who perform original work versus monitoring the efforts of others.

- Abnormally low percentage of internal auditors to total personnel.
 - Inadequate training or supervision of internal auditors.
 - Questionable independence of external auditors.
 - Inadequate management response to deficiencies cited by auditors.
- If so, do these or other pertinent factors indicate a less than adequate situation in internal or external audit?
- Are internal controls and audit programs deemed inadequate?

h. *Ownership*

- Have there been significant changes in ownership since the last examination?
 - If so, could the change be detrimental to the soundness of the bank?
- Does any situation exist wherein one individual is capable of controlling the bank?
 - If so, is that detrimental to the bank's soundness?
- Is there any evidence of an impending proxy fight?
- Are ownership interests using borrowed funds to carry the bank's stock?
 - If so, is there an indication that undue pressure for increased earnings is being applied by the owners?
 - If such pressure is being applied, does that have a detrimental impact on the general characteristics of asset composition, as it exists, and asset composition, as it is expected to develop?

i. *Miscellaneous*

- Does the bank exhibit a high dependence on purchasing or participating in loans originated and managed by others?
 - If so, is that attributable to a lack of local loan demand or to a failure of the bank to service its trade area?
- Is there an increasing trend toward making loans and/or accepting deposits from outside of areas in which the bank maintains offices?

- If so, does management and the board fully understand the risks inherent in such activity?
 - Has a trend toward increasing advances to affiliated companies developed?
 - If so, does that presently represent a dangerous situation?
 - Has the bank experienced an abnormally fast rate of growth?
 - If so, is that growth reasonable and does it therefore, have no significant impact on future soundness, based on:
 - Economic conditions within the trade area?
 - The bank's increased marketing efforts?
 - Offering improved services to the community?
 - Other factors?
 - If so, is the bank's management team capable of adequately administering the growth?
 - Does the bank have an imprudent investment in fixed assets?
 - Does the bank depend to an excessive degree on a small, local economy, which is subject to cyclical swings due to local conditions and industries, as opposed to mirroring national economic trends?
 - If so, is that a source of criticism or does it represent a potentially dangerous situation?
 - Are there large fluctuations in the stock price of the bank or its parent?
 - If so, is management unable to discern a cause for such fluctuations?
 - Is management giving inadequate attention to compliance with laws and regulations?
4. Have all questions raised by the UBPR specialist been explored?
 5. Complete workpapers.
 6. Organize general conclusions regarding the present condition of the bank and:
 - a. Correlate plans, projections, forecasts, and budgets with present conditional aspects, area characteristics, and management capability to determine which of the goals the bank has set you believe to be unattainable.
 - b. Project the future condition of the bank based on its present financial condition, the economic expectations of the bank, the quality of management, director supervision and any other relevant factors.
 - c. Formulate recommendations for management to consider when they initiate corrective or preventative action.
 7. Conduct a final summary discussion with management to include:
 - a. Criticisms noted during the examination.
 - b. Conclusions reached about the bank in general.
 - c. Expected future condition:
 - Management's view.
 - Examiner's view.
 - d. Review of other potential problems.
 - e. Planned corrective action:
 - Examiner recommendations.
 - Management commitments.
 8. Update "Management Assessment" conclusion to add any relevant information obtained as a result of procedures performed in this program.
 9. Prepare recommendations for any necessary supervisory action.
 10. Perform the following steps for suspected violations of criminal statutes:
 - a. Determine that a Criminal Referral Form, FR 2230, has been filed, if appropriate.
 - b. Notify the Reserve Bank by telephone immediately if warranted by the type and seriousness of the suspected violation.
 - c. Prepare a separate memorandum to the Reserve Bank containing sufficient detail to be fully informative.
 - d. Prepare brief comments for the confidential section of the report of examination citing the date of the memorandum to the Reserve Bank.
 - e. Segregate, identify, initial and date all appropriate workpapers and transmit them to the Reserve Bank making certain that the workpapers are factual, complete and do not contain expressions of examiner opinion.
 11. Write, in appropriate report form, all comments and conclusions to be included in the confidential section of the examination report.
 12. Update the workpapers with any information that will facilitate future examinations.

INTRODUCTION

The board of directors plays an essential role in the management of a bank's operations and is directly responsible for the soundness of the bank. As a result, in some cases, it is useful for Federal Reserve examiners and/or officers to meet with boards of directors. These meetings provide examiners with the opportunity to inform directors of examination findings, discuss the bank's plans and prospects with the board, and highlight important supervisory issues, particularly in cases that may require initiation of informal or formal supervisory actions. Meetings with boards of directors also provide examiners with a limited opportunity to ascertain the directors' knowledge of and interest in the bank's operations.

If Federal Reserve examiners believe it is necessary or desirable, they may conduct meetings with directors immediately after the on-site portion of an examination and before an examination report is completed and distributed. Such meetings are particularly encouraged when they can be conducted as part of regularly scheduled board meetings that coincide with the on-site examination.

When a bank is determined to be a problem or has exhibited significant deterioration, Federal Reserve examiners must conduct meetings with the directors. Such meetings require the participation of Federal Reserve officers and are typically conducted after the report of examination has been distributed.

GENERAL GUIDELINES

Meetings with boards of directors must be tailored to the individual circumstances of each bank, as well as to the Reserve Bank's supervisory objectives. As a result, uniform procedures for the conduct of these meetings cannot be specified. Nonetheless, the following guidelines should be considered when planning and conducting meetings with bank directors.

Content of Meetings

When participating in meetings with bank boards, examiners should present only informa-

tion needed by, or relevant to, the directorate. This information varies depending on the bank's circumstances; however, examiners should inform the board of the examiner's assessment of the bank's condition; highlight any deficiencies requiring the board's attention; and solicit the board's views on the bank's condition, operations, and prospects. In addition, examiners should obtain the board's commitment to address promptly the deficiencies identified in the examination. Examiners should encourage inquiries and discussions with the directors to learn more about the directors' roles and performance and to foster a good working relationship with them.

Data supporting the examiner's conclusions and comments should be prepared and presented to board members in a professional manner. Slides, handouts, and other visual aids are encouraged. Comparative figures and ratios from previous and present examinations should be reviewed prior to the meeting, with handouts and visual aids highlighting adverse trends.

Outlines for Meetings

Examiners should prepare detailed outlines of each meeting's discussion points and goals. Following is a sample outline that examiners may use as a guide to prepare for meetings with directors. It is not all-inclusive, and examiners should not be limited by its content in developing their own presentations. Generally, comments on these items are warranted when concerns have arisen during the current examination, or when significant changes—positive or negative—have occurred since the last examination.

- I. Introductory remarks by Federal Reserve Bank official or examiner
 - A. Federal Reserve Bank policy regarding board meeting
 - B. Purpose of the meeting
- II. Examiner's presentation
 - A. Duties and responsibilities of directors
 1. Effectively supervise the bank's affairs
 2. Select competent management
 3. Adopt and follow sound, written policies and objectives

4. Avoid self-serving practices
 5. Be informed of the bank's financial condition and management policies
 6. Maintain reasonable capitalization
 7. Observe banking laws and regulations
 - B. Adequacy and effectiveness of policies and procedures
 1. Lending
 2. Investments
 3. Asset/liability management
 4. Personnel
 5. Operations
 - C. Adequacy and accuracy of bank's reporting systems
 1. Reports of the board and committees
 2. Management reports to the board
 3. Management information systems
 4. Regulatory reports
 - D. Condition of the bank/results of the examination
 1. Asset quality
 2. Violations of law, evidence of self-dealing
 3. Capital
 4. Management
 5. Liquidity
 6. Earnings
 7. Internal controls and audit coverage
 8. Future prospects
 9. Relationships with bank holding company
 - E. Required corrective action on problems and board commitment
- III. Summary of overall conclusions
- IV. Questions from the board

Procedural Issues

In general, meetings with the full board are preferable. In certain cases, however, a Reserve Bank may determine that meeting with a board committee, such as the executive or audit committee, will fulfill the Reserve Bank's supervisory objectives. Any person connected with the bank, such as an attorney, auditor, or holding company representative, may attend the board of directors meeting at which the overall findings and conclusions of the examination are discussed. The attendance of any such party should be noted in the minutes of the meeting. However, the examiner may excuse such persons during any portion of his or her presentation if deemed appropriate. Attendance by

honorary directors to participate in discussions and review the examination report is also permitted.

Generally, at least one member of a Reserve Bank's official staff is expected to represent the Federal Reserve at meetings with directors of banks. However, for meetings with the directors of banks that have less than \$500 million in assets, Reserve Banks are granted the discretion to have senior examination staff represent the Reserve Bank. The participation of Reserve Bank presidents in meetings with directors is left to the discretion of the Reserve Bank.

To the extent possible, meetings with the boards of directors of state member banks should include representatives of the relevant state banking authority. A meeting with the directors of a bank that is owned by a holding company may be held at the same time as a meeting with the directors of the holding company, when appropriate.

Whenever a meeting is held between an examiner and a board, the examiner should prepare written comments on the meeting for examination workpapers.

MEETINGS WITH BOARDS OF PROBLEM BANKS AND BANKS EXHIBITING SIGNIFICANT DETERIORATION

When an examination reveals that a bank has significant problems, Federal Reserve policy requires that a meeting be held with its board of directors. The policy further requires that a written summary of examination findings—separate from the complete examination report—be distributed to each director in such cases. A senior Reserve Bank official also must participate in communicating and presenting examination findings on problem banks to their boards of directors. This policy's objective is to ensure that each director of a state member bank considered to be a problem or to have a significant weakness clearly understands the nature and dimension of the problems, as well as the joint and several responsibility of the directors to effect correction.

Criteria Requiring Meetings with Problem Banks

A meeting with the board of directors is to be

held after any full-scope examination in which a state member bank is assigned a CAMELS composite rating of 4 or 5. A meeting is also required if a bank is rated composite 3 and its condition appears to be deteriorating or has shown little improvement since a previous examination in which it received a composite 3 rating. Furthermore, a meeting should be held after a targeted examination if deemed appropriate and desirable by the Reserve Bank. An official of the Reserve Bank and the examiner-in-charge should also meet with a board if any of the following conditions exist:

- The bank is entering into a formal written agreement with the Federal Reserve, a cease-and-desist order is being issued, or the bank is being placed under a memorandum of understanding.
- The bank is already operating under a supervisory action but is in noncompliance with significant provisions or has experienced significant deterioration since the action was initiated.
- Self-serving activities or other unsafe and unsound practices exist in the bank.
- Any other condition or practice that places, or could place, the bank in a seriously weakened or extended condition has been identified during the examination.

Additional Guidelines

Senior Reserve Bank officials are expected to participate in meetings with the directors of problem banks, with the seniority of the participating official determined by the condition and size of the bank. The larger the organization or the more serious its problems, the more senior the Federal Reserve official should be.

A meeting with the board of directors of a problem or deteriorating bank should include a formal, structured presentation with a clear statement that the bank is considered a “problem institution” or is about to become a problem institution if existing conditions deteriorate. The presentation should further make clear the nature of problems confronting the bank, citing examination findings such as the following:

- deficiencies in capital, asset quality, earnings, or liquidity
- violations of law

- inadequacies in policies, practices, and reporting systems necessary for proper risk management and organizational administration
- lack of well-documented lending, collection, investment, asset/liability management, and risk-management policies or the failure to ensure that such policies are being followed
- failure of management to address previously discussed deficiencies
- lack of reporting systems sufficient to keep senior management and the board of directors fully informed
- failure of the board of directors to ensure the active management of the organization

MEETINGS WITH BOARDS OF MULTINATIONAL AND MAJOR REGIONAL BANKS

A meeting with the board of directors is required after every full-scope examination of a multinational organization or major regional organization with assets in excess of \$5 billion. Reserve Banks also are encouraged to conduct such meetings after every full-scope examination of a regional bank with assets in excess of \$1 billion.

MEETINGS WITH BOARDS OF DE NOVO BANKS

After the approval of a membership application, but before a de novo bank is opened, Reserve Bank staff should meet with the full board of directors to discuss applicable statutes, regulations, policies, and supervisory procedures. As with all meetings with directors, the agenda for this meeting should be tailored to the individual circumstances of the bank. At a minimum, the Reserve Bank should apprise the directors of their responsibilities and emphasize their need to adhere to sound operating policies.

DIRECTOR’S SUMMARY OF EXAMINATION FINDINGS

In addition to the report of examination, Federal Reserve Banks must provide written reports to directors summarizing the examination findings for all banks rated composite 3, 4, or 5, and for those rated composite 1 or 2 that show signs of

significant deterioration in condition or apparent violations of law. The summary reports should focus on identified problems—rather than on the strength of the organization—and present the bank’s deficiencies succinctly and clearly. In all cases, the types of actions directors and management should take to address identified problems should be specifically stated. Directors of institutions rated 4 or 5 are to be told their banks are “problem” institutions that warrant “special supervisory attention.” Directors of banks rated 3 are to be informed that the bank’s condition is “not satisfactory,” that the bank is subject to “more-than-normal supervision,” and that the bank may become a “problem” if weaknesses are not addressed adequately.

Summary reports should emphasize the responsibilities of the directors to ensure that corrective actions are taken to address all deficiencies noted in the pages of the full bank examination report entitled “Matters Requiring Board Attention” and “Examination Conclusions and Comments.” In addition, the organization, style, and content of the summary report

should be similar, if not identical, to the text of these report pages.

Summary reports should be sent directly to the bank’s management for distribution to each director. The transmittal letter to the bank should state the report is a summary of identified problems and contemplated supervisory actions and direct bank management to distribute the summary report to each director. The letter should further instruct each director to read the report, sign the introductory statement attesting to having read the report, and return the report to management. Management should keep copies of the directors’ signed statements on file, but should destroy all but one file copy of the summary report itself.

The summary report must be completed and distributed before any meeting between Reserve Bank officials and the bank’s board of directors, to provide the directors with prior notice of deficiencies to be discussed. Reserve Banks should also make every effort to distribute the complete examination report to management before meeting with a board of directors.

Meetings with Board of Directors

Examination Objectives

Effective date March 1984

Section 5030.2

1. To foster a better understanding of the respective roles of directors and examiners.
2. To inform the directors of the examination scope and the bank's condition.
3. To obtain information concerning future plans and proposed changes in bank policies that may have significant impact on the future condition of the bank.
4. To reach an agreement on any significant problems.
5. To obtain a commitment to initiate appropriate corrective action.

Meetings with Board of Directors

Examination Procedures

Effective date March 1984

Section 5030.3

1. Inform management that a meeting will be held with the board of directors. State the Federal Reserve Bank's policy and the purpose of the meeting and establish a tentative date.
2. Finalize the time and place of the meeting when confident that a thorough understanding of the condition of the bank will be developed. If the meeting is to be a "special meeting" resulting from serious areas of concern, perform procedure 7.
3. Develop an outline of matters to be covered at the meeting by reviewing results of the examination.
4. Prepare supportive data for the meeting by:
 - a. Compiling a list of comments and criticisms.
 - b. Preparing schedules of comparative figures for discussion.
 - c. Affirming that the bank has responded adequately to Reserve Bank requests.
 - d. Preparing questions to elicit opinions and attitudes of individual board members.
5. Prepare a brief formal agenda for the meeting and reproduce enough copies to distribute to participants.
6. If it is decided that a meeting will be held:
 - a. Communicate with Reserve Bank office to:
 - Notify office staff of the proposed date and place of the meeting. (Confirm time and place when final.)
 - Determine whether a Reserve Bank official will attend.
 - Determine whether the Reserve Bank official has suggestions for the agenda.
 - b. Submit a copy of the agenda and outline in advance to the Reserve Bank official.
 - c. Inform directors that the following must be submitted to the Reserve Bank office:
 - A copy of a board resolution stating corrective action.
 - A written plan for corrective action to be forwarded within a specified time period.
 - Periodic progress reports.
7. For "special meetings" resulting from serious problems:
 - a. Communicate with the Reserve Bank to:
 - Notify office staff of the proposed date and place of the meeting.
 - Determine whether a Reserve Bank official will attend.
 - Determine whether the Reserve Bank official has suggestions for the agenda.
 - b. Confirm the final time and place of the meeting with the Reserve Bank office.
 - c. Prepare any special supporting data for the meeting, such as areas of noncompliance with memorandums of understanding or cease and desist agreements or orders.
8. Conduct the board meeting in accordance with the agenda and previously prepared outline, being certain to discuss:
 - a. Major criticisms noted during the examination.
 - b. Conclusions reached about the bank in general.
 - c. Expected future conditions.
 - d. Potential problems.
 - e. Planned corrective action:
 - Examiner's recommendations.
 - Management's commitments.
 - Director's commitments.
9. Obtain a definite agreement or commitment from the board that appropriate corrective action will be taken.
10. Prepare a memorandum covering the meeting with the board to include, as a minimum:
 - a. The time and place of the meeting.
 - b. The directors and guests in attendance.
 - c. The matters subject to criticism that were reviewed.
 - d. A summary of the general discussion on the matters presented to the board.
 - e. A summary of the director's reaction to the situation and any commitments obtained from them.
11. Request that copies of the minutes of the board meeting be forwarded to the Reserve Bank and the examiner-in-charge.

INTRODUCTION

The Federal Reserve Board has a broad range of enforcement powers over both domestic and foreign financial institutions and over the individuals associated with them. Generally, formal or informal enforcement actions are taken after the completion of an on-site bank examination. These examinations include commercial, trust, electronic data processing, consumer, or other types of examinations. Formal or informal enforcement actions may also be taken when a Reserve Bank becomes aware of a problem at a bank that warrants immediate attention and correction.

Many of the Board's enforcement powers were initiated or enhanced by title IX of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) and by the Comprehensive Thrift and Bank Fraud Act (Bank Fraud Act).¹ The Board's jurisdiction over individuals associated with financial institutions, that is, "institution-affiliated parties," includes any officer, director, employee, controlling shareholder, or agent of a financial institution, and any other person who has filed or is required to file a change-in-control notice. The term "institution-affiliated party" also includes any shareholder, consultant, joint venture partner, or any other person who participates in the conduct of the affairs of the financial institution, as well as any independent contractors, including attorneys, appraisers, and accountants, who knowingly or recklessly participate in any violation of law or regulation, breach of fiduciary duty, or unsafe or unsound practice that causes (or is likely to cause) more than a minimal financial loss to, or a significant adverse effect on, a financial institution.² The Board's jurisdiction over an institution-affiliated party extends for up to six years after the party's resignation, termination of employment, or separation caused by the closing of a financial institution, provided that any notice (such as a notice of intent to

remove from office and of prohibition) is served on the party before the end of a six-year period.

FORMAL SUPERVISORY ACTIONS

The following statutory tools are available to the Board in the event formal supervisory action is warranted against a state member bank or any institution-affiliated party. The objective of formal action is to correct practices that the regulators believe to be unlawful, unsafe, or unsound.³ The initial consideration and determination of whether formal action is required usually results from examination findings. It is important to provide adequate workpaper documentation to support all recommendations for both formal and informal actions.

Types of Corrective Actions

Generally, under 12 USC 1818, the Board may use its cease-and-desist authority and civil money penalty authority against any state member bank and any institution-affiliated party that meets the statutory criteria for issuing such an order. Prohibition and removal actions may be taken against any institution-affiliated party who meets the statutory criteria to bring such an action.

Cease-and-Desist Orders

Generally, under 12 USC 1818(b), the Board may use its cease-and-desist authority against a state member bank and any institution-affiliated party when it finds that a bank or party is engaging, has engaged, or is about to engage in (1) a violation of law, rule, or regulation; (2) a violation of a condition imposed in writing by the Board in connection with the granting of any application or any written agreement; or (3) an unsafe or unsound practice in conducting the business of the institution. Under 12 USC

1. The Financial Institutions Reform, Recovery, and Enforcement Act was enacted on August 9, 1989; the Comprehensive Thrift and Bank Fraud Act was enacted on November 27, 1990.

2. The Board is authorized to issue regulations further defining which individuals should be considered institution-affiliated parties. Similarly, the Board may determine whether an individual is an institution-affiliated party on a case-by-case basis. (See 12 USC 1813(u).)

3. An unsafe or unsound practice is defined as any action that is contrary to generally accepted standards of prudent operation, the possible consequences of which, if continued, would be abnormal risk or loss or damage to an institution, its shareholders, or the agencies administering the insurance fund.

1818(s), the Board must initiate a cease-and-desist action against a bank when it has failed to establish Bank Secrecy Act procedures required by the Board's Regulation H or has failed to correct any previously noted deficiencies related to these procedures.

A cease-and-desist order may require the bank or person subject to the order to (1) cease and desist from the practices or violations or (2) take affirmative action to correct the violations or practices. Affirmative actions might include returning the bank to its "original condition" before the practice or violation. Affirmative actions may also include restrictions on growth, debt, and dividends; the disposition of any loan or asset; rescission of agreements or contracts; employment of qualified officers or employees; restitution, reimbursement, indemnification, or guarantee against loss if the bank or person was unjustly enriched by the violation or practice, or if the violation or practice involved a reckless disregard for the law or applicable regulations or a prior order; and any other action the Board determines to be appropriate.

When Board staff, in conjunction with the appropriate Reserve Bank, determine that a cease-and-desist action is necessary, the bank or person is generally given an opportunity to consent to the issuance of a cease-and-desist order without the need for the issuance of a notice of charges and a contested administrative hearing. Generally, Board staff draft a proposed cease-and-desist order and, with Reserve Bank staff, present it to the bank or individual for consent before submitting the case to the Board. Banks or individuals are advised that they may have legal counsel present at all meetings with Board or Reserve Bank staff concerning formal corrective actions. If the parties voluntarily agree to settle the case by the issuance of a consent cease-and-desist order, the proposed consent order will be presented to Board officials for ratification and formal issuance of the order, at which time the order will be final and binding.

When a bank or person fails to consent to a cease-and-desist order, the Board may issue a notice of charges and of hearing to the bank or party. The notice of charges contains a detailed statement describing the facts constituting the alleged violations or unsafe or unsound practices. The issuance of the notice of charges and of hearing starts a formal process that includes the convening of a public administrative hear-

ing⁴ conducted before an administrative law judge, appointed by the Board. After the hearing, the judge makes a recommended decision to the Board. A hearing must be held within 30 to 60 days of service of the notice of charges, unless a later date is set by the administrative law judge. After the Board considers the record of the proceeding, including the administrative law judge's recommended decision, it determines whether to issue a final cease-and-desist order. Banks and individuals who are subject to cease-and-desist orders that were issued as a result of contested proceedings may appeal the order to the appropriate federal court of appeals.

Temporary Cease-and-Desist Orders

If a violation or threatened violation of law, rule, or regulation, or if engagement in an unsafe or unsound practice specified in the notice of charges, is likely to cause the bank's insolvency, cause significant dissipation of the bank's assets or earnings, weaken the bank's condition, or otherwise prejudice the interests of depositors before the completion of the proceedings (initiated by the issuance of the notice of charges), the Board may, in conjunction with issuing a notice of charges, issue a temporary cease-and-desist order against the bank or any institution-affiliated party to effect immediate correction (pursuant to 12 USC 1818(c)). The Board may also issue a temporary order if it determines that the bank's books and records are so incomplete or inaccurate that the Board is unable to determine, through the normal supervisory process, the bank's financial condition or the details or purpose of any transaction that may have a material effect on its condition. The temporary order may require the same corrections as a formal cease-and-desist order. The advantage of issuing a temporary cease-and-desist order is that it becomes effective immediately after it is served on the entity or individual. Within 10 days after being served with a temporary order, however, the entity or individual may appeal to a U.S. district court for relief from the order. Unless set aside by the district court, the temporary order stays in effect until the Board issues a final cease-and-desist order or dismisses the action.

4. A private hearing may be held if the Board determines that holding a public hearing would be contrary to the public interest.

Written Agreements

When circumstances warrant a less severe form of formal supervisory action, a written agreement may be used. A written agreement may be with either the Board or with the Reserve Bank under delegated authority (12 CFR 265.11(a)(15)). All written agreements must be approved by the Board's director of the Division of Banking Supervision and Regulation and the general counsel. The provisions of a written agreement may relate to any of the problems found at the bank or to any problems involving institution-affiliated parties.

Prohibition and Removal Authority

The Board is authorized by 12 USC 1818(e) to remove any current institution-affiliated party of a bank for certain violations and misconduct and to prohibit permanently from the banking industry any current or former institution-affiliated party from future involvement with any insured depository institution, bank or thrift holding company, and nonbank subsidiary.⁵

The Board is authorized to initiate removal or prohibition actions when—

- the institution-affiliated party has directly or indirectly—
 - violated any law, regulation, cease-and-desist order, condition imposed in writing, or written agreement;
 - engaged in any unsafe or unsound practice; or
 - breached a fiduciary duty;
- the Board determines that, because of the violation, unsafe or unsound practice, or breach—
 - the institution has suffered or will probably suffer financial loss or other damage;
 - the interests of depositors have been or could be prejudiced by the violation, practice, or breach; or
 - the institution-affiliated party has received financial gain or other benefit from the violation, practice, or breach; and
- the violation, practice, or breach—
 - involves personal dishonesty or

- demonstrates a willful or continuing disregard for the safety or soundness of the institution.

The statute also authorizes the Board to initiate removal or prohibition actions against (1) any institution-affiliated party who has committed a violation of any provision of the Bank Secrecy Act that was not inadvertent or unintentional, (2) any officer or director of a bank who has knowledge that an institution-affiliated party has violated the money-laundering statutes and did not take appropriate action to stop or prevent the reoccurrence of such a violation, or (3) any officer or director of a bank who violates the prohibitions on management interlocks. These removal or prohibition actions do not require a finding of gain to the individual, loss to the institution, personal dishonesty, or willful or continuing disregard for the safety or soundness of the institution.⁶ Like a cease-and-desist order, a removal or prohibition order may be issued either by consent or after an administrative process initiated by the issuance of a notice of intent to remove and prohibit.

If an institution-affiliated party's actions warrant immediate removal from a state member bank, the Board is authorized to suspend the person temporarily from that bank pending the outcome of the complete administrative process. An institution-affiliated party presently associated with a bank may also be suspended or removed for cause based on actions taken while formerly associated with a different insured depository institution, bank holding company, or "business institution." Business institution is not specifically defined in the statute so that it may be interpreted to include any other business interests of the institution-affiliated party.

Under 12 USC 1818(g), the Board is authorized to suspend from office or prohibit from further participation any institution-affiliated party charged or indicted for the commission of a crime involving personal dishonesty or breach of trust that is punishable by imprisonment for a term exceeding one year under state or federal law, if the continued participation might threaten either the interests of depositors or public confidence in the bank. The Board may also suspend or prohibit any individual charged with a violation of the money-laundering statutes. The suspension can remain in effect until the criminal action is disposed of or until the suspension

5. This authority is distinct from the Board's authority under prompt corrective action to dismiss senior officers from a particular bank.

6. See 12 USC 1818(e)(2).

is terminated by the Board. The Board may also initiate a removal or prohibition action against an institution-affiliated party who has been convicted of, or pleaded to, a crime involving personal dishonesty or breach of trust if his or her continued service would threaten the interests of the depositor or impair public confidence in the institution. The Board is required to issue such an order against any institution-affiliated party who has been convicted of, or pleaded to, a violation of the money-laundering statutes.

Furthermore, 12 USC 1829 prohibits any individual who has been convicted of a crime involving dishonesty, breach of trust, or money laundering from (1) serving as an institution-affiliated party of, (2) directly or indirectly participating in the affairs of, and (3) owning or controlling, directly or indirectly, an insured depository institution without the FDIC's prior approval. Under certain circumstances, the statute also prohibits a convicted person from holding a position at a bank holding company or nonbank affiliate of a bank without the FDIC's prior approval. The penalty for violation of this law is a potential fine for a knowing violation of up to \$1 million per day, imprisonment for up to five years, or both. The criminal penalty applies to both the individual and the employing institution.

Violations of Final Orders and Written Agreements

When any final order or temporary cease-and-desist order has been violated, the Board may apply to a U.S. district court for enforcement of the action. The court may order and require compliance.

Violations of final orders and written agreements may also give rise to the assessment of civil money penalties against the offending bank or institution-affiliated party, as circumstances warrant. The civil money penalty is assessed in the same manner as described in the "Civil Money Penalties" subsection below. Any institution-affiliated party who violates a suspension or removal order is subject to a criminal fine of up to \$1 million, imprisonment for up to five years, or both.

Civil Money Penalties

The Board may assess civil money penalties of up to \$5,000 per day against any institution or

institution-affiliated party for any violation of (1) law or regulation; (2) a final cease-and-desist, temporary cease-and-desist, suspension, removal, or prohibition order or for failure to comply with a prompt-corrective-action-directive;⁷ (3) a condition imposed in writing by the Board in connection with the granting of an application or other request; and (4) a written agreement.

A fine of up to \$25,000 per day can be assessed for a violation, an unsafe or unsound practice recklessly engaged in, or a breach of fiduciary duty when the violation, practice, or breach is part of a pattern of misconduct, causes or is likely to cause more than a minimal loss to the bank, or results in pecuniary gain or other benefit for the offender. A civil money penalty of up to \$1 million per day can be assessed for any knowing violation, unsafe or unsound practice, or breach of any fiduciary duty when the offender knowingly or recklessly caused a substantial loss to the financial institution or received a substantial pecuniary gain or other benefit. Civil money penalties may also be assessed, under the three-tier penalty framework described above, for any violation of the Change in Bank Control Act and for violations of the anti-tying provisions of federal banking law, among other provisions.⁸

The Board may also assess civil money penalties for the submission of any late, false, or misleading call reports. If a financial institution maintains procedures that are reasonably adapted to avoid inadvertent errors, but unintentionally fails to publish any report, submits any false or misleading report or information, or is minimally late with the report, it can be assessed a fine of up to \$2,000 per day. The financial institution has the burden of proving that the error was inadvertent under these circumstances. If the error was not inadvertent or the bank lacked the appropriate procedures, a penalty of up to \$20,000 per day can be assessed for all false or misleading reports or information submitted to the Board. If the submission was

7. Prompt-corrective-action directives may be enforced in the federal courts, and they may cause any bank, company, or bank-affiliated party that violates the directive to be subject to civil money penalties. The failure of a bank to implement a capital-restoration plan, or the failure of a company having control of a state member bank to fulfill a guarantee that the company has given in connection with a capital plan accepted by the Federal Reserve, could subject the bank or company or any of their bank-affiliated parties to a civil money penalty assessment. (See section 4133.1.)

8. See 12 USC 1972.

done in a knowing manner or with reckless disregard for the law, a fine of up to \$1 million or 1 percent of the institution's assets, whichever is less, can be assessed for each day of the violation. Under its general civil money penalty authority, the Board may also assess civil money penalties against any institution-affiliated party who participates in a bank's filing of late, false, or misleading call reports.

Administration of Formal Actions

Publication of Final Orders

Under 12 USC 1818(u), the Board is required to publish and make publicly available any final order issued for any administrative enforcement proceeding it initiates. These orders include cease-and-desist, removal, prohibition, and civil money penalties. The Board is also required to publish and make publicly available any written agreement or other written statement that it may enforce, unless the Board determines that publication would be contrary to the public interest.

Public Hearings

Under 12 USC 1818(u), all formal hearings, including contested cease-and-desist, removal, and civil money penalty proceedings, are open to the public unless the Board determines that a public hearing would be contrary to the public interest. Transcripts of all testimony; copies of all documents submitted as evidence in the hearing, which could include examination or inspection reports and supporting documents (except those filed under seal); and all other documents, such as the notice and the administrative law judge's recommended decision, are available to the public.

Appointment of Directors and Senior Executive Officers

Under section 32 of the Federal Deposit Insurance Act (12 USC 1831i) and subpart H of Regulation Y (12 CFR 225.71 et seq.), any state member bank or bank holding company that is in a troubled condition⁹ or does not meet mini-

imum capital standards must provide 30 days' written notice to the Board of Governors before appointing any new director or senior executive officer.¹⁰ This requirement also applies to any change in the responsibilities of any current senior executive officer who is proposing to assume a different senior officer position. Subpart H of Regulation Y details the procedures for filing and the content of the notice. The Board may disapprove a notice if it finds that the competence, experience, character, or integrity of the proposed individual indicates that his or her service would not be in the best interest of the institution's depositors or the public. A disapproved individual or the institution that filed the notice may appeal the Federal Reserve's notice of disapproval under the procedures detailed in Regulation Y. The individual may not serve as a director or senior executive officer while the appeal is pending. In the event that a state member bank or bank holding company that is in a troubled condition appoints a director or senior officer without the required 30 days' prior written notice, appropriate follow-up supervisory action should be taken.

Interagency Notification

Under interagency agreements, any federal banking regulatory agency that proposes to take a formal enforcement action (such as a cease-and-desist order, civil money penalty, or removal) must notify the other federal financial institution regulatory agencies (including the OTS) of the action. For informal enforcement actions, such as memoranda of understanding, notifications must be made when there is an affiliation or interinstitution relationship. Notifications are to be made to a designated contact person specified by each agency. To foster federal-state agency coordination, the Federal Reserve provides the appropriate state supervisory authority with

condition if it (1) has a composite rating, determined at its most recent examination, of 4 or 5; (2) is subject to a cease-and-desist order or formal written agreement that requires action to improve the bank's financial condition; or (3) is expressly informed by the Board or Reserve Bank that it is in troubled condition.

10. The Board or Reserve Bank may permit, under extraordinary circumstances, an individual to serve as a director or senior executive officer before a notice is provided; however, this permission does not affect the Federal Reserve's authority to disapprove a notice within 30 days of its filing. The Board may extend the review period to a maximum of 90 days if needed to process the notice.

9. As defined in section 225.71 of the Board's Regulation Y, a state member bank or holding company is in troubled

notice of its intent to institute a formal corrective action against a bank or its institution-affiliated parties, pursuant to 12 USC 1818(m).¹¹

INFORMAL SUPERVISORY ACTIONS

Informal supervisory tools are used when circumstances warrant a less severe form of action than the formal supervisory actions described above. Informal actions are not enforceable, and their violation cannot serve as a basis for assessing a civil money penalty or initiating a removal and prohibition action. Informal actions are not published or publicly available. These informal actions include the following:

- *Commitments* are generally used to correct minor problems or to request periodic reports addressing certain aspects of a bank's operations. Commitments may be used when there are no significant violations of law or unsafe or unsound practices and when the bank and its officers and directors are expected to cooperate and comply.¹² Commitments are generally obtained by the Reserve Bank's sending a letter to the bank outlining the request and asking for a response and an indication that the commitments are accepted.
- *Board resolutions* generally represent a number of commitments made by the bank's directors and are incorporated into the bank's corporate minutes. The Reserve Bank may request board resolutions in the examination transmittal letter, which asks the bank to provide it with a signed copy of the corporate resolution.
- *Memoranda of understanding (MOU)* are highly structured written, but informal, agreements that are signed by both the Reserve Bank and the bank's board of directors. An MOU is generally used when a bank has multiple deficiencies that the Reserve Bank believes can be corrected by the present man-

agement. Although an informal action, imposition of an MOU may require disclosure to the Securities and Exchange Commission and to the bank's liability bond issuer.

INDEMNIFICATION PAYMENTS AND GOLDEN PARACHUTE PAYMENTS

In general, an indemnification payment is a payment that reimburses an insider for a specified liability or cost that the person incurred (for example, a bank might indemnify a director for the cost of legal fees or even, theoretically, penalties in connection with a Federal Reserve investigation or enforcement action). Golden parachute payments are severance payments or agreements to make severance payments that are paid or entered into at a time when the bank or holding company is in a troubled condition. These payments require the prior written approval of the institution's primary regulator and the FDIC. A golden parachute payment may include a glorified severance payment to a former insider that is paid under specified circumstances. Although both types of payments fall under the same statute, section 18(k) of the Federal Deposit Insurance Act (the FDI Act) (12 USC 1828(k)), the two types of payments are quite different and distinct. However, some of the restrictions on these payments are the same or similar.

Indemnification Agreements and Payments

State member banks may seek to indemnify their officers, directors, and employees from any judgments, fines, claims, or settlements, whether civil, criminal, or administrative. The bylaws of some state member banks may have broadly worded indemnification provisions, or the bank may have entered into separate indemnification agreements that cover the ongoing activities of its own institution-affiliated parties. Such indemnification provisions may be inconsistent with federal banking law and regulations, as well as with safe and sound banking practices.

Supervisory and examiner staff should be alert to the limitations and prohibitions on indemnification imposed by section 18(k) of the

11. The procedures for notification to state agencies and other federal banking regulatory agencies are outlined in SR-97-5, "Policy Statement on Interagency Notification and Coordination of Enforcement Action."

12. Informal commitments are distinct from conditions imposed in writing in connection with the grant of an application or other request by an institution, which may be enforced through the imposition of a civil money penalty.

FDI Act¹³ and the regulations issued thereunder by the FDIC. The law and regulations apply to indemnification agreements and payments made by any bank to any institution-affiliated party, regardless of the condition of the financial institution. The purpose of the law and regulations is to preserve the deterrent effects of administrative enforcement actions (by ensuring that individuals subject to final enforcement actions bear the costs of any judgments, fines, and associated legal expenses) and to safeguard the assets of financial institutions.

A prohibited indemnification payment includes any payment (or agreement to make a payment) by a bank to an institution-affiliated party to pay or reimburse such person for any liability or legal expense in any federal banking agency administrative proceeding that results in a final order or settlement in which the institution-affiliated party is assessed a civil money penalty, is removed or prohibited from banking, or is required to cease an action or take any affirmative action, including making restitution, with respect to the bank.¹⁴ In cases in which the institution-affiliated party prevails, the institution can make a payment if the board of directors determines that it is in the best interest of the institution and the payment does not materially adversely affect the institution's safety and soundness.

The law and the FDIC's regulations apply to all state member banks. They reinforce the Federal Reserve's longstanding policy that an institution-affiliated party who engages in misconduct *should not* be insulated from the consequences of his or her misconduct. From a safety-and-soundness perspective, a state member bank should not divert its assets to pay a fine or other final judgment issued against an institution-affiliated party for misconduct that presumably violates the bank's policy of compliance with applicable law, especially in cases where the individual's misconduct has already harmed the bank.

State member banks should review their bylaws and any outstanding indemnification agreements, as well as insurance policies, to ensure that they conform with the requirements of federal law and regulations. If a state member bank fails to take appropriate action to bring its indemnification provisions into compliance with federal laws and regulations, appropriate

follow-up supervisory action may be taken. As part of the supervisory process, which will include merger and acquisition applications, the Federal Reserve's supervisory and examiner staff will review identified agreements having indemnification-related issues for compliance with federal law and regulations. (See SR-02-17.)

Golden Parachute Payments

"Golden parachute" payment restrictions were enacted as part of the Crime Control Act of 1990.¹⁵ The law added section 18(k) to the Federal Deposit Insurance Act (12 USC 1828(k)) and authorized the FDIC to issue implementing regulations. The FDIC's golden parachute regulations may apply to an insured depository institution if the institution is in a troubled condition as defined in Regulation Y. The purposes of the law and regulations include safeguarding the assets of financial institutions and limiting rewards to institution-affiliated parties who may have contributed to the institution's condition.

In general, the FDIC's regulations prohibit insured depository institutions and their holding companies from making golden parachute payments except in certain circumstances.¹⁶ A golden parachute payment means any payment in the nature of compensation (or agreement to make such a payment) for the benefit of any current or former institution-affiliated party of an insured depository institution or its holding company that meets three criteria. First, the payment or agreement must be contingent on the termination of the institution-affiliated party's employment or association. Second, the payment or agreement is received on or after, or made in contemplation of, among other things, a determination that the institution or holding company is in a troubled condition under the regulations of the applicable banking agency. Third, the payment or agreement must be payable to an institution-affiliated party who is terminated when the institution or holding company meets certain specific conditions, including being subject to a determination that it is in a troubled condition.

15. SR-90-38 generally describes the provisions of the Crime Control Act of 1990.

16. See the FDIC's golden parachute regulations in 12 CFR 359.

13. See 12 USC 1828(k).

14. See 12 CFR 359.

The definition of a golden parachute payment also covers a payment made by a bank holding company that is not in a troubled condition to an institution-affiliated party of an insured depository institution subsidiary that is in a troubled condition, if the other criteria in the definition are met. This circumstance may arise when a bank holding company, as part of an agreement to acquire a troubled bank or savings association, proposes to make payments to the troubled institution's institution-affiliated parties that are conditioned on their termination of employment.¹⁷

A state member bank or bank holding company may make or enter into an agreement to make a golden parachute payment only (1) if the Federal Reserve, with the written concurrence of the FDIC, determines that the payment or agreement is permissible; (2) as part of an agreement to hire competent management in certain conditions, with the consent of the Federal Reserve and the FDIC as to the amount and terms of the proposed payment; or (3) pursuant to an agreement to provide a reasonable severance not to exceed 12 months' salary in the event of an unassisted change in control of the depository institution, with the consent of the Federal Reserve. In determining the permissibility of the payment, the Federal Reserve may consider a variety of factors, including the individual's degree of managerial responsibilities and length of service, the reasonableness of the payment, and any other factors or circumstances that would indicate that the proposed payment would

be contrary to the purposes of the statute or regulations.

A state member bank or bank holding company requesting approval to make a golden parachute payment or enter into an agreement to make such a payment should submit its request simultaneously to the appropriate FDIC regional office and Federal Reserve Bank. The request must detail the proposed payments and demonstrate that the state member bank or bank holding company does not possess and is not aware of any evidence that there is reasonable basis to believe, at the time that the payment is proposed to be made, that the institution-affiliated party receiving such a payment has committed any fraud, breach of fiduciary duty, or insider abuse or has materially violated any applicable banking law or regulation that had or is likely to have a material adverse effect on the bank or company; that the individual is substantially responsible for the institution's insolvency or troubled condition; and that the individual has violated specified banking or criminal laws.

If a state member bank or bank holding company makes or enters into an agreement to make a golden parachute payment without prior regulatory approval when such an approval is required, appropriate follow-up supervisory action should be taken. This follow-up could include an enforcement action requiring the offending institution-affiliated party to reimburse the institution for the amount of the prohibited payment. When state member banks or bank holding companies are identified as having golden parachute-related issues in the supervisory process, those issues should be carefully reviewed for compliance with the law and the FDIC's regulations. The appropriate Reserve Bank supervisory staff and the appropriate staff of the Board's Division of Banking Supervision and Regulation should be notified and consulted on the golden parachute-related issues. (See SR-03-06.)

17. The FDIC's regulations exclude from the definition of a golden parachute payment several types of payments, such as payments made pursuant to a qualified pension or retirement plan; a benefit plan or bona fide deferred compensation plan (which are further defined in the FDIC's regulations); or a severance plan that provides benefits to all eligible employees, does not exceed the base compensation paid over the preceding 12 months, and otherwise meets the regulatory definition of nondiscriminatory and other conditions in the FDIC's regulations.

The Commercial Bank Report of Examination was made available for use by the Federal Reserve System. The report is also available for use by state banking departments in their examinations of state-chartered institutions.

Certain report pages are mandatory for all full-scope bank examination reports prepared by Federal Reserve examiners. Some of the pages are required that address the examiner's conclusions and provide information on capital, asset quality, management, earnings, liquidity, and sensitivity to market risk (CAMELS). Headings on specific report pages for the examiner's assessment of specific CAMELS components provide a series of considerations for the examiner to address in the evaluation of each component. The Federal Reserve has designated other pages as optional.

The instructions reflect the examiners' use of certain content (section) headings for an optional continuous flow reporting format, and the use of the above-mentioned required report pages or sections. The Commercial Bank Examination Report may continue to consist of specific or individual report "pages." This section will provide the examiner with guidance on both when to include certain report pages in the report and how to prepare required and optional report pages. Instructions for optional pages describe situations that warrant their inclusion in full-scope Federal Reserve reports.

FEDERAL RESERVE SYSTEM REPORT INSTRUCTIONS

The following instructions provide general guidance to the examiner in evaluating certain aspects of a bank's operations and in completing the report; they are neither intended to constitute a technical manual on conducting examinations and completing reports nor are they designed to set forth all of the factors, considerations, and issues that examiners must address and evaluate when they conduct examinations. In addition, these instructions are not intended to address legal and compliance questions; rather, examiners should consult the appropriate laws, regulations, and examiner guidelines. Questions on completing the report that are not covered by these instructions should be referred to Reserve Bank management or Board staff.

Instructions for specific pages follow in the order recommended for their inclusion in full-scope examination reports. The header at the top of each section of instructions indicates whether the report page is mandatory or optional.

The instructions and report-page formats do not provide for the use of peer-group data for analytical purposes. The Federal Reserve System advocates the use of peer-group data for financial analysis. Examiners should routinely consider using peer information in report narratives or in charts and tables within narratives to support their conclusions. Comparisons to subsets of the national peer group may also be meaningful. If the examiner uses other than national UBPR peer information for comparison purposes, the substitute peer group should be clearly identified.

Communication of Examination Findings

An important part of the examination of banking organizations is the communication of findings to the directors and senior management. Examination findings may be communicated in writing through formal reports, through letters summarizing the results of targeted reviews or a roll-up (consolidation) of those reviews or through some combination thereof, depending upon the size and complexity of the organization. These written communications are generally directed to the board of directors, an executive-level committee, or senior management, as appropriate.

To be effective, the communication of examination findings must be (1) written in clear and concise language, (2) prioritized based upon importance, and (3) focused on any significant matters that require attention. In addition, written communications to a board of directors should clarify whether the action must be taken directly by the board or whether the action may be delegated by the board even though the board would continue to be held accountable.

To improve the consistency and clarity of written communications, the Federal Reserve uses standardized terminology to differentiate among

- *Matters Requiring Immediate Attention*, matters arising from the examination that the

Federal Reserve is requiring a banking organization to address immediately;

- *Matters Requiring Attention*, matters that are important and that the Federal Reserve is expecting a banking organization to address over time; and
- *Observations*, matters that are informative, advisory, or suggest a means of improving performance or management of the operations of the organization.

Matters Requiring Immediate Attention (MRIA) encompass the highest priority concerns and include matters that have the potential to pose significant risk to the organization's safety and soundness or that represent significant instances of noncompliance with laws and regulations. These concerns must be addressed immediately by the board of directors or senior management. The action required to address the concern may be a single, short-term event, such as injecting capital, or it may involve the development of an action plan with remedial actions identified within a specified timeframe. All MRIs must specify a timeframe for completion. The key element is that action to address the concern must begin immediately.

Matters Requiring Attention (MRA) have a lower priority than MRIs, but nonetheless are matters that, based upon current information, must be addressed over time to preclude a significant issue. While issues giving rise to MRAs must be addressed to ensure the long-term operation of the organization in a safe and sound and compliant manner, the threat to safety and soundness is less immediate than with issues giving rise to MRIs. Nevertheless, communications must also specify a timeframe for MRAs. At least initially, the supervisory team or the institution (when appropriate) may set an imprecise timeframe because the organization may first need to complete preliminary planning. Timeframes for MRAs are likely to become more precise over time or as circumstances change. The key distinction between MRIs and MRAs is the immediacy with which the board of directors or senior management must begin and accomplish remediation.¹

1. For examples and more information on the use of the terms: *Matters Requiring Immediate Attention*, *Matters Requiring Attention*, and *Observations*, see SR-08-01, and in particular, its attachment.

Reserve Banks must formally communicate MRIs and MRAs to the organization in writing through an examination report or a letter summarizing the results of a target review or a roll-up of such reviews. When included in a safety and soundness examination report, MRIs and MRAs should be noted on the page discussing *Matters Requiring Attention*. In the case of findings from consumer compliance examinations, MRIs and MRAs should be reflected in the Executive Summary and Examination Ratings section of the Consumer Affairs Report of Examination.

Observations may be communicated within the body of the reports or conveyed informally to the organization. For example, *Observations* related to enhancement to funds-management policies or practices could be included in the segment on Liquidity Risk Management or discussed with appropriate management personnel.

Communications must specify a timeframe in which the banking organization must complete the action. The expected timeframe for addressing MRIs is generally short, and may be "immediate." In the case of safety-and-soundness findings, corrective actions should be completed within an examination cycle. Supervisory staff should work with senior bank management on the timeframe; however, safety and soundness compliance risk concerns will remain a priority. For MRIs that are necessary to preserve or restore the viability of a banking organization, the timeframe should take into account potential loss to the Federal Deposit Insurance Corporation and whether a delay in action will increase the potential for loss or the cost of resolution.

Communications must also specify a timeframe for MRAs. The timeframe, at least initially, may be imprecise because the organization may first need to complete preliminary planning. The supervisory team may establish the timeframe; however, in some instances, it may be appropriate to request that the institution set forth a reasonable timeframe, subject to supervisory staff concurrence. Timeframes for MRAs are likely to become more precise over time or as circumstances change. Timeframes that span more than one examination cycle for safety-and-soundness issues should include precise or estimated interim targets or thresholds.

Reserve Banks are encouraged to include descriptions of the three categories of findings in

the document communicating findings.² Regardless of whether a finding is an MRIA or MRA, the communication should be clear as to whether the board of directors or senior management is accountable for implementing remedial action.

Combined Reports

Reserve Banks may issue a combined report for a bank holding company and its lead state member bank subsidiary when (1) a bank holding company's lead bank subsidiary is a state member bank and (2) the holding company's board formally approves the release of a combined report to its lead state member bank subsidiary. In cases where the company has more than one state member bank, separate examination reports should be prepared for all other state member bank subsidiaries. At a minimum, a combined report will contain all examination report pages or sections as well as information on the parent company, its subsidiaries, and the consolidated organization. (See SR-94-46 and its attachment.)

The Reserve Bank should send a letter to a qualified holding company that explains its option of receiving a combined report. If the holding company's board wishes to receive a combined report, it should formally approve the release of the combined report to its lead state member bank subsidiary by board resolution.

General Instructions for Financial Information

The following terms are used on many report pages containing financial information. Guidance on the requirements and options available for each term is provided here.

Examination Date (or Exam Date). The date of the financial data used for the examination activity or the ending date of the period reviewed. If the date of the asset-quality review is different from the exam date, any required use of "exam date" in connection with asset quality

should refer to the date of the asset-quality review.

Period Ended. No specific timeframe is designated. These columns reflect information for a time period deemed most appropriate by the examiner to support conclusions presented in the Report of Examination. For comparative purposes, this column may reflect financial data from the same period of the prior year as the examination date, the prior quarter, or the most recent year-end.

The examiner-in-charge is responsible for selecting dates deemed most appropriate to present the examination findings. All amounts should be consistent with instructions for the FFIEC Consolidated Reports of Condition and Income (Call Report). If Call Report amendments have been made, the amended numbers should appear. If a bank's management has made any significant misclassifications that have caused examiners to amend any financial statements, the examiners' numbers should be shown in the report and used to calculate any ratios used in the report. Columns titled "Period Ended" should usually detail previous year-end information. However, the examiner may substitute different dates, such as those of the previous examination, when desired. Ratios should generally be computed according to the instructions in the FFIEC's User's Guide to the Uniform Bank Performance Report. Care should be taken in computing all ratios to ensure that ratios are accurate and consistent throughout the report.

Federal Reserve Examination Report Page List

The following table lists the Federal Reserve's report pages in the order in which they would usually appear, along with a notation of whether their inclusion in the report is mandatory or optional.

2. With respect to an examination report, this description could be included on the Scope page, in a page of the Appendix, as a footnote on the page discussing Matters Requiring Attention, or elsewhere as the Reserve Bank determines is appropriate.

* Some optional pages or sections are mandatory if the circumstances relevant to the page apply. For example, "Compliance with Enforcement Actions" is mandatory if the

bank is subject to corrective action. Optional pages to list classified and special-mention assets are mandatory if items are classified or special mentioned.

These pages or sections may be augmented with supplemental information as needed or required by the Federal Reserve System. Additional supporting schedules and visual aids (for example, graphs and charts) may also be included in the report to communicate and support the examiner's findings.

Sample Report Pages

Samples of most of the report pages or sections are provided. Because each Reserve Bank may use different methods for preparing the report, differences in typographic styles may exist

between the pages presented here and those at any particular Reserve Bank.

Several report pages or sections are blank except for the title, allowing the examiner almost total discretion in choosing how to present the information. Samples of these report pages are not included, although instructions for their use are. Report pages for which samples are not included are

- Scope
- Matters Requiring Board Attention
- Compliance with Enforcement Actions
- Violations of Laws and Regulations
- Other Matters
- Concentrations

REPORT PREPARATION INSTRUCTIONS

Table of Contents (Mandatory)

The table of contents indicates the pages or sections included in full-scope reports. All mandatory pages are to be included in each full-scope Federal Reserve bank examination report. Optional pages or sections will be added to the report as necessary in the order outlined herein, followed by the mandatory Signature of Directors page. Additional supplemental pages or sections to support examiner findings may also be added to the report at the examiner's discretion.

Page numbers are included only for the sake of completeness. The actual page-numbering system used may vary among Reserve Banks.

Scope (Mandatory)

The Scope page or section is used to list areas reviewed during the examination and describes the extent of those reviews. The examiner should generally address the following:

- the date of examination (commencement and conclusion)
- the type of examination (full-scope, targeted, joint, concurrent, combined (bank holding company and bank))
- the agency or agencies conducting the examination
- areas reviewed and analyzed (If the examina-

tion is targeted, the examiner should identify specific areas reviewed.)

- the percentage and type of loans reviewed
- a confirmation that examination results were discussed with the organization and a list of those attending the meeting
- identification of the bank's peer group
- if necessary, recognition that the bank is operating under a formal or informal supervisory action (If so, state that the provisions of the action were reviewed and compliance was assessed.)

Matters Requiring Board Attention (Mandatory)

The Matters Requiring Board Attention page or section is used to inform the bank's board of directors of the most significant issues identified during the examination. It should summarize the most important examination findings. The Matters Requiring Board Attention are intended to complement the complete Report of Examination's findings prepared for use by bank management and directors. This page or section is to focus on identified problems, rather than on strengths of the organization, and present them succinctly and unmistakably clearly. In all cases, the types of actions to be taken by the directors and management to address these problems should be specifically noted. See the section "Communication of Examination Findings" with regard to MRAs, MRAs, and Observations. Institutions rated 4 or 5 are to be told they are problem institutions that warrant special supervisory attention. Institutions rated 3 are to be informed that their condition is not satisfactory, that they are subject to more-than-normal supervision, and that they may become problems if their weaknesses are not addressed adequately.

The Matters Requiring Board Attention report page or section should label the comments therein as being either MRAs, MRAs, or Observations. As a general rule, examiners should expect fewer MRAs or MRAs in stronger organizations than in weaker ones. However, the presence of MRAs or MRAs does not preclude a strong or satisfactory rating. For example, while correction of any violation of law is essential, the presence of inadvertent violations that do not expose the organization to significant risk (such as insufficient Federal Reserve stock shortly after a capital injection or a technical

exception) would not preclude a strong rating if all other factors supported that rating. Conversely, the presence of a large number of examination findings that give rise to MRAs or MRAs that represent a threat to the safety and soundness of the organization or that signify an elevated consumer compliance risk exposure would generally preclude a satisfactory rating and may require consideration of an enforcement action. For institutions between these extremes, examiners should determine the impact of MRAs and MRAs on ratings and assess the need for an enforcement action by considering the severity of these weaknesses and their relative importance in light of all the factors influencing the assessment of the organization. The Federal Reserve examiner's use of this common terminology is designed to enhance the focus and efficiency of communicating supervisory expectations and overseeing their implementation. This page or section should also discuss significant weaknesses in 1- or 2-rated institutions.

In institutions where no specific matters are identified as requiring board attention, this page or section should provide a brief summary of the institution's condition. In all cases, this page or section should contain a concluding statement reminding the directorate of its responsibility to review the entire Report of Examination and should instruct each director to sign the Signature of Directors page.

Examination Conclusions and Comments (Mandatory)

This report page or section should list the composite rating for the current examination and for the two previous examinations at the top of the page. In addition to the composite ratings, the numeric ratings of the six components will be disclosed for examinations began after January 1, 1997. This listing should be followed by the uniform definition of the assigned composite rating. The uniform definitions of the component ratings assigned need not be included in reports; however, they should be made available to bank management and directors upon request.

This report page or section should summarize examination findings, particularly those of significance. The examiner should also provide an overview of the bank's financial condition. The examiner's major recommendations and man-

agement's plans for corrective actions should also be covered on this page or section in appropriate detail, with references to additional supporting information elsewhere in the report. The examiner's comments should also elaborate on the matters requiring board attention listed. All comments should be presented in order of importance. The comments should be primarily on an exception basis, describing areas of the bank's operations and aspects of its financial condition that display weaknesses, deficiencies, or vulnerability. This does not preclude the examiner from recognizing positive actions taken by management; however, laudatory or conclusive remarks and endorsements of specific management actions should be avoided.

Significant recommendations presented elsewhere in the report should be mentioned on this page. Significant violations should also be discussed briefly on this page and in greater detail on the Violations of Laws and Regulations page or section; less serious violations should be noted and reference made to the violations page. Compliance with any enforcement actions should be briefly discussed on this page or section and state that details are provided on the Compliance with Enforcement Actions page.

The Examination Conclusions and Comments page or section and the Matters Requiring Board Attention page or section should not be duplicative and should be easily integrated if the issuance of a Director's Summary of Examination Findings proves necessary.

Compliance with Enforcement Actions (Optional)

The Compliance with Enforcement Actions report page or section will be used if the bank is under any type of supervisory action or has ratified board resolutions at the request of the Federal Reserve or state banking authority. In all cases, the type and date of the action or resolutions and parties to the action should be listed. In addition, the examiner should generally list each provision requiring action and provide a comment addressing compliance with that provision. Specifically, the examiner should comment on how the bank accomplished compliance or the reason why the bank is not in compliance with a particular provision. These comments should be made at the examination when supervisory actions are initiated and at all subsequent examinations until the action is removed.

Comparative Statements of Financial Condition (Mandatory)

The left column titled “Exam Date” should coincide with the FFIEC Consolidated Report of Condition and Income (the Call Report) for the period used—generally, the most recent quarter-end. If Call Report amendments have been made, the amended numbers should appear on this page. If a bank’s management has made any significant misclassifications that have caused examiners to amend any financial statements, the examiner’s numbers should appear on this page. The right column titled “Period Ended” should usually detail previous year-end information. However, the examiner may substitute a different date, such as a previous examination, when desired. All amounts listed in either column should conform to the Call Report instructions. This page should also reflect FASB 115 “Accounting for Certain Investments in Debt and Equity Securities” adjustments to capital. These adjustments are made according to the Call Report instructions and are reflected on the line item “common equity capital.”

Capital Adequacy (Mandatory)

Capital is assessed at each full-scope examination. Consideration is specifically given to risk identified within the bank, equity maintenance, and any growth the bank might be experiencing.

The bank’s capital ratios should be presented as indicated on the report page or section. FASB 115 adjustments are not to be reflected in capital ratios. However, the effect of FASB 115 on stockholders’ equity, if material, should be discussed in the narrative. In cases when the condition of the bank has changed significantly since the last quarter-end (for example, an equity offering) and/or when examination findings have a material impact on conclusions regarding capital adequacy, the examiner should reflect these changes and findings in these ratios. When adjustments are made, the examiner should identify the date of the new capital calculation (presumably subsequent to quarter-end). In any event, when examination findings result in a change in a bank’s prompt-corrective-action designation, the ratios provided must be adjusted. The Capital Category line refers to the prompt-corrective-action (PCA) capital designa-

tion as described in the Federal Deposit Insurance Corporation Improvement Act. (See sections 4133.1 to 4133.3.) Report comments need to clearly convey that this designation is not the sole criterion for determining capital adequacy. If the bank is subject to restrictions under a PCA directive issued by the Board of Governors, a discussion of the directive’s requirements and the related capital-restoration plan are to be included.

The examiner should consider the volume of classified assets and any meaningful asset-quality trends. It is appropriate to address capital ratios adjusted for significant examination classifications in the narrative to emphasize the impact of examination classifications on any valuation reserves and the impact of deficiencies in valuation reserves on the bank’s capital adequacy.

The assessment of capital growth should include consideration of growth from various capital sources, including retained earnings and potential new capital-stock issues, and should be compared to growth in total assets, asset mix, market risk, concentration risk, risks associated with nontraditional activities, interest-rate risk, and off-balance-sheet risks. Risk-based capital guidelines factor in changes in balance-sheet composition and exposure to potential risk via growth of off-balance-sheet activities. Although the guidelines give consideration to the above, examiners still must exercise considerable judgment to evaluate all factors necessary to make an accurate assessment of capital adequacy.

The bank’s capital plan should also be reviewed. The content, degree of formality, sophistication, and form of plan will vary with banks of different sizes and complexity. However, each bank should be monitoring its capital position in relation to the required guideline ratios and risk. In addition, consideration should be given to the bank’s ability to obtain additional outside capital, including support provided by a parent holding company. Also, the bank’s dividend history and plans should be considered in relationship to regulatory guidelines and anticipated profitability.

Capital Calculations (Mandatory)

The Capital Calculations page or section should be prepared using information as of the same date as the exam date shown on the Comparative

Statements of Financial Condition. When the condition of the bank has changed significantly since the exam date (for example, an equity offering) or when examination findings materially affect conclusions regarding capital adequacy, the examiner should reflect these changes and findings in the capital calculation. When adjustments are made, the examiner should identify the date of the new capital calculation. In any event, when examination findings result in a change in a bank's prompt-corrective-action designation, the capital calculations provided must be adjusted. Characteristics of any capital elements that are unusual or significant may require an explanation on the Capital Adequacy page or section, as may any limitations with regard to risk-based capital guidelines.

Ineligible intangibles to be deducted from tier 1 capital should include such items as ineligible purchased credit-card relationships (PCCRs) and mortgage-servicing rights, while the Other Adjustments line should include such items as disallowed deferred-tax assets. Under the risk-weighted assets calculations section, the examiner should ensure that requested data are calculated in accordance with risk-based capital guidelines. All items deducted from capital noted above should also be deducted from the risk-weighted assets calculation. FASB 115 adjustments are not to be reflected on this page or section. Adjusted average total assets is average total assets for the most recent quarter less all goodwill and other disallowed intangibles.

Asset Quality (Mandatory)

Federal Reserve examiners should specifically address the following areas within the Asset Quality page or section. If all conditions are satisfactory, a brief statement that addresses each factor and summarizes the examiner's conclusions will suffice.

- Assess (1) the quality of assets, including their level, distribution, severity, and the trend of problem, classified, past-due, nonaccrual, restructured, and renegotiated loans not in compliance with modified terms for both on- and off-balance-sheet transactions; (2) the existence of asset concentrations; (3) the adequacy of loan policies and loan-administration, credit documentation, or lending practices;

(4) the adequacy of workout procedures for problem credits; (5) the adequacy of the allowance for loan and lease losses; and (6) the adequacy of the bank's internal loan-review and grading systems, including significant differences between internal loan grades and examination classifications.

- Assess (1) the quality of investment securities and (2) the adequacy of investment policies.
- Comment on any off-balance-sheet items, such as unfunded commitments, credit derivatives, commercial and standby letters of credit, and lines of credit, with respect to (1) their volume in relation to total assets, capital, or other appropriate balance-sheet categories; (2) the risks inherent in the activity; and (3) the adequacy of management and control of off-balance-sheet risks.
- Comment on the quality of management with respect to the lending function and management's awareness of problem loans. Examiners should also address the causes of existing credit problems and remedial actions agreed to by management for correction of deficiencies.
- Assess the adequacy of internal controls and management information systems.

The Asset Quality report page or section should provide for a weighted-asset classification to capital ratio; the Federal Reserve System relies heavily on this measure of asset quality. The page or section should include a line for the ratio of weighted classifications to tier 1 capital and for the allowance for loan losses without limitation. The sample page included in this manual contains a line for this ratio.

Assets listed for special mention should neither be included in the classifications total nor should they be referred to as adversely classified in the narrative. Although classified and special-mentioned asset totals should not be commingled, those two categories will display and possibly share underwriting, documentation, or other weaknesses or characteristics to be reported by the examiner.

The examiner should consider the total of other transfer-risk problems, if significant, and briefly discuss the volume and trend of such credits. The examiner should specifically assess whether there are concentrations of credit in any particular economic sectors, the extent that problem credits may be centered in these sectors, and concentrations of transfer risk warranting special comment. Examiners should also address

the loan-loss reserve methodology and the adequacy of the allowance for loan and lease losses. Examiners should comment on the quality and valuation methods for investment securities and trading-account activities and address credit risk associated with off-balance-sheet items.

Examiners should assess the adequacy of policies and procedures relating to loans, investments, and off-balance-sheet activities. Also, examiners should address policies and procedures regarding financial futures, forwards, derivative transactions, and foreign-exchange trading and valuation.

When assessing loan policies, loan administration, and lending practices, consideration should be given to internal loan approval, internal review and monitoring, and grading systems and control procedures; the organization and completeness of the credit files; collateral administration and evaluation procedures; collection procedures; procedures for renewing or extending loans and placing loans on nonaccrual status; the accrual and capitalization of past-due interest and prepaid interest; and any other unfavorable practice that may result in or from poor asset quality.

Deficiencies relating to the lack of written policies in any critical area should be noted in discussing management's adherence to policies on the Management/Administration page or section. Also, if excessive management turnover, weaknesses in middle management, or inadequate internal promulgation of policies affects adherence to or implementation of policies, these areas should also be addressed under Management/Administration.

Examination ratios in this section are to be derived from information obtained during the current and two most recent on-site examinations. The examiner may include in the narrative additional ratios, if necessary, to highlight a particular financial factor. Reserve Banks that are engaged in alternate examination programs with state banking departments should use classified asset totals from state reports in completing and analyzing the trend in asset-quality data on this page.

For the Asset Quality page or section, the tier 1 capital numbers to be used should come from the Capital Adequacy and Capital Calculations pages. However, the examiner may substitute a different date when desired. The total adversely classified assets numbers and total assets numbers should be relevant to the date of the asset-quality review. This will reflect informa-

tion for the period deemed most appropriate by the examiner-in-charge.

Capital is based on the guideline definition of tier 1 capital. Weighted and total classifications are to be compared with tier 1 capital plus the allowance for loan losses, both for purposes of this page and for the asset-quality rating under the CAMELS rating system. Total adversely classified items includes total adversely classified assets plus classified off-balance-sheet items, while total adversely classified assets does not include classified off-balance-sheet items. The past-due and nonaccrual ratio should be consistent with the information contained in the past-due and nonaccrual schedule on the Loans and Lease-Financing Receivables/Past-Due and Nonaccrual Loans and Leases page or section.

Summary of Items Subject to Adverse Classification/Summary of Items Listed as Special Mention (Mandatory)

Summary of Items Subject to Adverse Classification

The Summary of Items Subject to Adverse Classification page or section summarizes items classified by the examiner as of the examination date (for this page, considered the date relevant to the asset-quality review). Total classifications are also presented for the previous examination. Reserve Banks that are engaged in alternate examination programs should provide totals contained in the previous examination report prepared by the state when applicable. The examiner should also consider creating a schedule on the Asset Quality page or section to detail classifications from additional prior examinations if meaningful trend information is noted. The examiner should also present in the report narrative classifications trends for certain asset categories if the analysis is meaningful.

The report format does not contain provisions for other transfer-risk problems or value-impaired assets. For examination of banks engaged in international lending, Reserve Bank examiners should provide additional information to include categories for other transfer-risk problems and value-impaired assets. The format for this page or section will also require adjustments for U.S. addressees and non-U.S. addressees.

For banks with foreign activity, the distinction between U.S. and non-U.S. addressees follows the definition set forth in the instructions for the Call Report: whether a customer is U.S. or non-U.S. is determined by the customer's principal address, that is, by its domicile. A U.S. address would be in the 50 states of the United States, the District of Columbia, Puerto Rico, and U.S. territories and possessions. Non-U.S. addressees include all other geographic areas.

The examiner should list in the appropriate category the amounts of all credits classified due to transfer risk. The value of credits shown as value-impaired should be computed after deducting any allocated transfer-risk reserve established against an asset. In determining total classified assets, examiners should arrive at a net assets classified due to country risk. Examiners should identify any credits classified due to transfer risk that have received the same or more severe classification due to credit risk and are listed above in the summary of classified items due to credit risk. The sum of such assets should be listed in the appropriate column and then deducted to arrive at net assets classified due to country risk. For the purpose of this page or section, any credits classified as value-impaired for transfer-risk purposes should not be included in the summary of credits classified due to credit risk, unless the credits are classified loss.

For the purpose of arriving at total classified assets, add the amount classified due to credit risk to net assets classified due to transfer risk for each category. When computing weighted classifications, the residual portion of any value-impaired assets should be assigned the same weight as substandard classifications. However, the residual exposure still remains value-impaired for examination and classification purposes. Value-impaired assets held in the trading account should also be included in total classified assets but should not be considered classified assets when computing weighted classifications.

Summary of Items Listed as Special Mention

The Summary of Items Listed as Special Mention page or section presents the total of assets listed for special mention. The summary includes special-mention totals for the current and one previous examination. Assets listed for special

mention are not included when computing classification ratios. Reserve Banks that are engaged in alternate examination programs should rely on the previous state examination's special-mention total when applicable.

Loans and Lease-Financing Receivables/ Past-Due and Nonaccrual Loans and Leases (Mandatory)

The examiner has the flexibility to use the same or different dates for the Loans and Lease-Financing Receivables and the Past-Due and Nonaccrual Loans and Leases schedules. The Loans and Lease-Financing Receivables schedule will usually be as of the most recent quarter-end. The Past-Due and Nonaccrual Loans and Leases schedule will usually be as of the asset-quality review date. Based on examination findings, the examiner-in-charge should determine if other "as of" dates best reflect the condition of the institution. For example, the Loans and Lease-Financing Receivables schedule may be presented as of the asset-quality review date if the examiner identifies significant changes since the last quarter-end that need to be incorporated.

The format of the Loans and Lease-Financing Receivables schedule is similar to that used in the Call Report. The definitions of the loan categories as contained in the Instructions for the Call Report should be used in completing the schedule. For examinations of banks engaged in international lending, Reserve Bank examiners should adjust the format of this schedule for U.S. addressees and non-U.S. addressees.

For examinations of banks engaged in international lending, Reserve Bank examiners should adjust the format of the Past-Due and Nonaccrual Loans and Leases schedule for U.S. addressees and non-U.S. addressees. The definitions of past-due and nonaccrual loans and leases as contained in the Instructions for the Call Report should be used in completing this schedule, unless the bank's policy is more conservative, in which case the bank's definition may be used. If so, or if state law requires the bank to apply different definitions, the examiner should discuss the bank's policy or state law in the Comments section following the past-due and nonaccrual schedule. The Memorandum section should include the amount of restruc-

tured loans and leases included in the totals. Relevant issues pertaining to past-due and non-accrual loans and leases should be briefly discussed in the Comments section. More significant issues should be discussed on the Asset Quality page or section.

Management/Administration (Mandatory)

The report-page heading states that management is evaluated against all factors necessary to operate the institution in a safe and sound manner and in accordance with acceptable practices. Consideration is given to technical competence, leadership, and administrative ability; compliance with regulations and statutes; ability to plan and respond to changing circumstances; effectiveness of management information systems; tendencies toward self-dealing; demonstrated willingness to serve the legitimate banking needs of the community; and management depth and succession. In addition, consideration is given to the extent that management is affected by or susceptible to dominant influence or concentration of authority.

In preparation for making report comments, examiners should consider the following:

- the adequacy of supervision by the board of directors, including its role in establishing policies and its responsiveness to recommendations from auditors and supervisory authorities
- compliance with supervisory agreements
- compliance with banking laws and regulations
- management's timeliness in recognizing and resolving problems
- the adequacy of the institution's policies necessary to operate the bank in a safe and sound manner and in compliance with applicable statutes and regulations (Examiners should review the mechanism for formulating, approving, reviewing, and updating policies; determine if the policies are in writing and are properly communicated to all appropriate personnel; and determine if all policies are followed.)
- management's adherence to policies as established by the board of directors
- management information systems and controls used to monitor and control risks throughout the bank and ensure compliance with

established policies, statutes, and regulations (Examiners should also address the adequacy of the overall internal accounting-control system and the audit function employed by the bank. Deficiencies in internal accounting-control systems and the audit function should be discussed in detail.)

- the adequacy and effectiveness of the planning function, including planning and budgeting and the role of management in each process
- the business strategy and policies and procedures for avoiding conflicts of interest
- significant findings and conclusions noted in specialty examinations (for example, trust, EDP, CRA, and consumer) conducted since the previous full-scope commercial examination
- management depth and succession
- the extent that the board of directors and management are affected by or susceptible to dominant influence or concentration of authority
- demonstrated willingness to serve the legitimate banking needs of the community

While topics in this section may appear to overlap with other areas of the report, the discussion in this section should focus on the role of the bank's directors, the bank's internal administration, management supervision and policy development, and management's adherence to operating policies and procedures. This section should not repeat financial assessments set forth elsewhere in the report.

Violations of Laws and Regulations (Mandatory)

The Violations of Laws and Regulations page or section should be included in every Federal Reserve examination; if there are no apparent violations, write "None." When violations of federal or state banking laws and regulations are found, they should be listed in detail on this page. Violations of the Bank Secrecy Act should also be listed on this page in detail.

The format for listing violations should be consistent. A heading for each violation listed should name the applicable regulation and section and provide a brief description of what the law covers. This should be followed by a brief description of the requirements of the regulation or statute and a discussion of how or why the

violation occurred. The examiner should describe any plans or recommendations for correction. If a review of the Bank Secrecy Act is conducted separately, or as part of another examination, a statement to this fact should be included on the Other Matters page or section.

Earnings (Mandatory)

The exam-date column on the Earnings page or section should be prepared using information as of the same date as the exam date shown on the Comparative Statements of Financial Condition page or section. Ratios required on this page are available in the UBPR or may be calculated from the Call Report or the bank's records.

For this page or section, the examiner should address, at a minimum, the following:

- the level of earnings, including trends and stability
- the quality of earnings (for example, strength of the net interest margin, the amount of non-interest income and expense, reliance on unusual or nonrecurring gains or losses, and adequacy of provisions for loan losses)
- plans for correcting any earnings deficiencies
- the bank's budget and expense controls, such as management's earnings projections with regard to reasonableness of assumptions, actual results versus projections, and reasons for significant differences between projected and actual earnings
- the vulnerability of the bank's earnings to interest-rate and other risks (However, full discussion should be in the Liquidity/Asset Liability Management section of the report).
- the ability to provide for adequate capital through retained earnings

When assessing the quality of net income, the examiner should also consider the amount of interest accrued but not collected and other areas for possible overstatement of income. This amount may be reflected in other assets as income earned or not collected, or in the loan account as capitalized interest (interest added to the loan balance). The examiner should also consider the composition, reasonableness, and extent of management's control over operating expenses.

Analysis of Earnings (Mandatory)

The exam-date columns on the Analysis of Earnings page or section should be prepared using information as of the same date as the exam date shown on the Comparative Statements of Financial Condition page or section. The different sections of this page are described below:

Comparative Statement of Income (Institution Only or Consolidated)

Indicate whether this section is for the institution only or is consolidated. For the line item Other Increases/Decreases, reflect the period-to-period change in FASB 115 adjustments (gains/losses on available-for-sale securities).

Reconciliation of Allowance for Loan and Lease Losses

Information for reconciliation of the allowance for loan and lease losses (ALLL) is available from bank records or call reports. The December 31 Consolidated Report of Income for all banks includes a reconciliation of this account on Schedule RI-B (Part II).

Other Component Ratios and Trends

Ratios for this section can be obtained from information in the Call Report, the most recent UBPR, or bank records. The ratio Nonperforming/ALLL refers to noncurrent loans/ALLL as represented in the UBPR.

Liquidity/Asset Liability Management (Mandatory)

The Liquidity/Asset Liability Management page or section addresses both overall bank liquidity and balance-sheet interest-rate sensitivity. Liquidity refers to the ability to meet maturing obligations and commitments and incorporates considerations such as availability of funding and the degree of reliance on volatile or concentrated funding sources. Interest sensitivity considers the overall matching of rate sensitivities of assets and liabilities and the responsiveness

of asset yields, interest expense, and interest margins to changes in market interest rates.

The examiner should consider the level and/or percentages of core and/or volatile deposits, including the composition and stability of deposits. In particular, the level of volatile deposits should be closely scrutinized, and the examiner should consider if the bank must pay premium rates to attract those funds. Volatile deposits are generally composed of certificates of deposit greater than \$100,000 and brokered deposits. Report comments should thoroughly discuss the bank's use of brokered deposits and evaluate the compliance of brokered deposit activity with regulatory guidelines. Report comments should also consider deposit and other liability concentrations and the extent of the bank's reliance on those concentrations. The examiner should also consider vulnerability of the institution's funding to adverse publicity and lowered credit ratings.

The report should consider the level and types of liquid assets. These assets include cash and balances due from depository institutions, U.S. government and agency securities, federal funds sold, and securities purchased under agreements to resell. Liquid assets should be maintained at a sufficient level to cover maturing obligations and allow extended commitments to be fulfilled. The level of temporary investments (federal funds sold, securities purchased under agreement to resell, interest-bearing bank balances, trading-account assets, and debt securities with remaining maturities or earliest pricing opportunities of one year or less) should also be considered. The examiner should also keep in mind the percentage of the bank's securities that are pledged against liabilities and be mindful of whether they are available for sale as well as of any market appreciation or depreciation in the investment portfolio.

To further analyze liquidity, a history of the bank's borrowings, such as federal funds purchased and repurchase agreements, and excess funds sold since the previous examination should be considered. Also, consideration should be given to the bank's ability to obtain borrowings from outside sources, should that be consistent with the bank's funding strategy.

The examiner needs to consider the bank's interest-rate risk exposure. The examiner should assess how the bank is monitoring exposure, any weaknesses inherent in the bank's system, and management's plans to correct any inappropriately mismatched positions. The volume and

impact of any derivative contracts should also be considered.

Examiners should assess the adequacy and reasonableness of the bank's policies regarding liquidity, interest-rate risk, and funding, as well as management's compliance with those policies. The examiner should also consider augmenting the discussion of the organization's liquidity and asset/liability management with gap information or other meaningful financial data presented in reporting schedules.

Sensitivity to Market Risk (Mandatory)

This section reflects the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can affect a bank's earnings or economic capital. When evaluating, the examiner should consider management's ability to identify, measure, monitor, and control market risk; the bank's size and the nature and complexity of its activities; and the adequacy of the bank's capital and earnings in relation to its level of market-risk exposure.

For many banks, the primary source of market risk arises from nontrading position and their sensitivity to changes in interest rates. In some larger banks, foreign operations can be a significant source of market risk. For some banks, trading activities are a major source of market risk. To analyze a bank's market risk, an assessment of the following evaluation factors should be made:

- the sensitivity of the bank's earnings or the economic value of its capital to adverse changes in interest rates, foreign-exchange rates, commodity prices, or equity prices
- the ability of management to identify, measure, monitor, and control exposure to market risk, given the bank's size, complexity, and risk profile
- the nature and complexity of interest-rate risk exposure arising from nontrading positions
- where appropriate, the nature and complexity of market-risk exposure arising from trading and foreign operations

Other Matters (Optional)

Examiners should use the Other Matters report

page or section to discuss other significant issues that have not been mentioned elsewhere in the report or significant matters mentioned elsewhere that require further explanation, such as the type, scope, and volume of any new activity in which the bank is engaged. Examiners should use this report page to make comments on the following specific areas if issues or concerns are noted:

- accounting, audit, and internal controls
- affiliate relationships
- criminal referral procedures
- emergency preparedness
- financial recordkeeping and reporting regulations
- insurance
- investment in bank premises
- litigation
- security and controls against external crimes
- payments system risk
- nontraditional banking activities (for example, mortgage warehousing or data processing services)
- supervisory reporting
- nondeposit investment products

Other examination matters may also warrant comments on this report page.

Concentrations (Optional)

The Concentrations report page or section is to be used only when concentrations are noted. A brief paragraph at the beginning of the page or section should be included to inform the reader that the listing is generally for informational purposes and does not necessarily represent criticism unless otherwise specifically stated. This paragraph should also mention that a concentration includes obligations, direct or indirect, of the same or affiliated interests that represent 25 percent or more of the bank's capital structure. The reader should also be informed that, for the purposes of this page, the capital structure is defined as tier 1 capital plus the allowance for loan and lease losses.

When determining and calculating concentrations, the amount of loan commitments and other off-balance-sheet risk items should be considered. The listing should include all types of loans, overdrafts, cash items, suspense resources, securities, leases, acceptances,

advances, letters of credit, and all other items due to the bank, as well as loans endorsed, guaranteed, or cosigned by related individuals and their related interests.

Concentrations by industry, transfer risk, product line, type of collateral, and others are detailed where appropriate. The listing also includes amounts due from depository institutions, federal funds sold, and other assets where payment is dependent on one financial institution or affiliated group and the total represents 25 percent or more of the bank's capital structure. Treasury securities, obligations of U.S. government agencies and corporations, and any assets collateralized by these items are not included in the listing. The requirements of Regulation F should also be considered as they relate to concentrations involving correspondent banks. See sections 2015.1, 2015.2, 2015.3, and 2015.4.

Items Subject to Adverse Classification (Optional)

The Items Subject to Adverse Classification page is to be included in the report if any items are subject to adverse classification. The page or section should include all assets that are classified but should not include assets listed for special mention. However, for examinations of banks that are involved in international lending, Reserve Banks should develop supporting pages to address exposures warranting special comment, other transfer-risk problems, and value-impaired credits. This page or section should be used by examiners for the individual write-ups for assets subject to classification, including any off-balance-sheet items. It should also be used to list assets subject to classification that do not require write-ups. Assets specially mentioned should be included on the page titled Items Listed for Special Mention.

Requirements for loan write-ups presented on this page are found in section 2060, "Classification of Credits." Examiners should rely on the definitions of substandard, doubtful, and loss, as defined in this section, when classifying assets.

Items Listed for Special Mention (Optional)

The Items Listed for Special Mention page or

section is to be used if any items are listed for special mention. Any assets so listed should meet the definition of special mention found in the “Classification of Credits” section of this manual. Specially mentioned assets must be written up if they exceed the loan review cutoff amount and if the bank’s management disagrees with the examiner’s findings with regard to the asset. Specially mentioned assets are not to be referred to as “criticized assets.” Write-up guidelines for specially mentioned assets are the same as those for classified assets enumerated in the “Classification of Credits” section of this manual.

Assets with Credit-Data or Collateral-Documentation Exceptions (Optional)

The Assets with Credit-Data or Collateral-Documentation Exceptions page or section should be included in the report if a significant volume of documentation exceptions is noted. If credit-data or collateral-documentation exceptions are significant, this page or section should support a discussion of credit-documentation practices on the Asset Quality page or section. In addition to the six common documentation exceptions listed, the illustrated page heading includes space to list other exceptions noted at a particular examination.

Examiners should refrain from listing in this section any loans that bank management has elected to identify as exempt from certain documentation requirements under the March 10, 1993, Interagency Policy Statement on Documentation of Loans to Small and Medium-Sized Businesses and Farms or any other applicable guidelines. See SR-93-30 and its attachments and FRRS at 3-1511. The policy statement is intended to eliminate unnecessary documentation on small and medium-sized business and farm loans for institutions that are highly rated and that are well or adequately capitalized. Under the provisions of the policy statement, these institutions are allowed to identify, within certain limits, an “exempt portion” of their small and medium-sized business and farm-loan portfolios that examiners are to evaluate solely on performance and are exempt from examiner criticism of documentation. With regard to the applicability of the policy statement to the activities of U.S. branches and agencies of foreign banks, see SR-93-26.

Signature of Directors (Mandatory)

The Signature of Directors report page is to be signed by the directors of the bank upon receipt of the completed report and retained in the bank’s records for review by examiners during subsequent examinations.

Confidential Section—Directors (Mandatory)

The Confidential Section—Directors should list all bank directors in alphabetical order. If the bank elects advisory directors, they should be listed alphabetically under a separate heading.

Information requested in the illustrated report-page or section header should be supplied for each director. Specific instructions for certain requested information is as follows:

- Under meetings missed, include all meetings a director has not attended between the previous (FRB or state) and current examination. If a director was elected since the previous examination, only list the number of meetings that he or she missed since the date of election.
- Under fees paid to each director, indicate whether the compensation is based on attendance.
- Under occupation or principal business affiliation, use concise and descriptive designations (for example, farmer, grocer, commercial real estate development).

For banks with active board committees, a code or legend for all committees should be prepared, indicating committee memberships for each director.

Confidential Section—Executive Officers (Mandatory)

The Confidential Section—Executive Officers page or section employs the Regulation O definition of executive officers, but other significant officers may be included at the discretion of the examiner. Information requested by the report page should be supplied.

Additional individuals to be reported may include persons without official designation that exercise considerable influence or executive of-

Officers excluded from the Regulation O definition by board resolution who actually maintain a high level of responsibility. Officers should be listed in order of title or position of responsibility, with dominant individuals shown first. Specific instructions for this requested information is as follows:

- Examples of areas of responsibility include administration, policy formulation, lending, operations, or branch manager.
- Salary should indicate the current annual salary, and bonus should show total bonuses for the previous year.

If executive officers receive any other pertinent forms of compensation beyond their listed salary and bonus (such as commission-based pay, employment contracts, stock options, unusually large benefits and insurance policies or other personal benefit programs, or affiliated bank salaries and fees), these should be discussed in a narrative format below the listing of executive officers or on a separate page.

Confidential Section—Management and Control (Mandatory)

The examiner should respond to each listed question included or illustrated on the Confidential Section—found on the Management and Control page or section. The following instructions are keyed to respective question numbers:

1—Generally, the examiner’s assessment of management should be fully discussed in the open section of the report; however, this question provides a forum to discuss any supervisory matter regarding management that clearly requires confidential treatment.

2—Each principal shareholder’s ability and willingness to offer support to a weakened bank should be assessed. Any other potential forms of support, such as a parent company, other affiliate, or third party desiring to acquire this bank should also be identified. The possibility or likelihood of forthcoming support should also be addressed.

3(a)—Each major shareholder of the bank should be listed, with footnotes for any indirect control, such as control over spousal or family trust

shares. Finally, any special control arrangements, such as buy-sell agreements or control-group structures, should be noted.

3(b)—The degree of control or influence exercised by any one individual or group of individuals should be discussed and include an indication of whether this influence has been positive or detrimental to the bank.

3(c)—In addition to any abusive practices that should be discussed here, such as self-dealing, any other problems, such as weak or unsatisfactory management or other relevant factors, should be addressed.

3(d)—The volume of insider borrowings and the impact of those transactions on the bank should be commented on. If the bank is using the Regulation O small-bank exception regarding aggregate insider borrowings (see section 215.4(d)(2) of Regulation O (12 CFR 225.4(d)(2)—member banks with deposits of less than \$100,000,000), it should be noted, including the presence of the required board resolution sanctioning that level.

4—Any filing of a Suspicious Activity Report (SAR-DI) form or any bond claim relating to insiders should be commented on. The examiner is to explain why legal authorities have not been informed of possible criminal activity.

Confidential Section—Ratings and General Information (Mandatory)

The examiner should respond to each question included or illustrated in the Confidential Section—Ratings and General Information page or section. The following instructions are keyed to the respective question numbers:

2—Items for possible discussion include the bank’s trade area, major employers or primary industries, the area’s economic condition and trend, and the bank’s ability to operate satisfactorily within this environment. Other discussion topics could include competition, expansion plans, and strategic direction.

5—Individuals with Central Point of Contact (CPC) or EIC responsibilities should be listed,

with primary work areas shown for all other examiners (that is, loans or operations). For joint examinations, the agency for non-FRB examiners should be listed. If an examiner was in training and required significant assistance, that person should be designated as a trainee.

CAPITAL ADEQUACY

Capital adequacy is evaluated in relation to supervisory guidelines, the nature and extent of risks to the organization, and the ability of management to address these risks. Consideration is given to the level and quality of capital and the overall financial condition of the bank; the nature, trend, and volume of problem assets and the adequacy of the allowance for loan and lease losses and other valuation reserves; risk exposures presented by off-balance-sheet activities; the quality and strength of earnings; balance-sheet composition, including the nature and amount of intangible assets, market risk, concentration risk, and nontraditional activity risk; growth experiences, plans, and prospects; the reasonableness of dividends; access to capital markets and other appropriate sources of financial assistance; and the ability of management to address emerging needs for additional capital.

ASSET QUALITY

Asset quality is evaluated in relation to the level, distribution, severity, and trend of problem, classified, delinquent, nonaccrual, nonperforming, and restructured assets, both on- and off-balance-sheet; the adequacy of the allowance for loan and lease losses and other valuation reserves; the demonstrated ability to identify, administer, and collect problem assets; the diversification and quality of loan and investment portfolios; the adequacy of loan and investment policies, procedures, and practices; the extent of securities underwriting activities and exposure to counterparties in trading activities; credit risk arising from or reduced by off-balance-sheet transactions; asset concentrations; the volume and nature of documentation exceptions; and the effectiveness of credit-administration procedures, underwriting standards, risk-identification practices, controls, and management information systems.

COMMENTS

MANAGEMENT/ADMINISTRATION

Management and the board of directors are evaluated against all factors necessary to operate the institution in a safe and sound manner and their ability to identify, measure, monitor, and control the risks of the institution's activities. Consideration is given to the level and quality of oversight and support provided by management and the board; compliance with regulations and statutes; the ability to plan for and respond to risks that may arise from changing business conditions or initiation of new products or services; the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems; the adequacy of and compliance with internal policies and controls; the adequacy of audit and internal control systems; the responsiveness to recommendations from auditors and supervisory authorities; the reasonableness of compensation policies and avoidance of self-dealing; a demonstrated understanding and willingness to serve the legitimate banking needs of the community; management depth and succession; the extent that management is affected by or susceptible to dominant influence or concentration of authority; and the overall performance of the institution and its risk profile.

Component Rating	X
------------------	---

EARNINGS

Quality and quantity of earnings are evaluated in relation to the ability to provide for adequate capital through retained earnings; level, trend, and stability of earnings; quality and sources of earnings; level of expenses in relation to operations; vulnerability of earnings to market-risk exposures; adequacy of provisions to the allowance for loan and lease losses and other valuation reserves; reliance on unusual or nonrecurring gains or losses; contribution of extraordinary items, securities transactions, and tax effects to net income; and adequacy of budgeting systems, forecasting processes, and management information systems.

LIQUIDITY/ASSET LIABILITY MANAGEMENT

Liquidity and asset/liability management is evaluated in relation to the trend and stability of deposits; degree and reliance on short-term, volatile sources of funds, including any undue reliance on borrowings or brokered deposits to fund longer-term assets; availability of assets readily convertible to cash without undue loss; availability to securitize and sell certain pools of assets; access to money markets and other sources of funding; adequacy of liquidity sources and ability to meet liquidity needs; effectiveness of liquidity policies and practices, funds-management strategies, management information systems, and contingency-funding plans; capability of management to properly identify, measure, monitor, and control liquidity; and level of diversification of funding sources, both on- and off-balance-sheet.

Component Rating	X
------------------	---

SENSITIVITY TO MARKET RISK

Sensitivity to market risk reflects the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can adversely affect earnings or the economic value of capital; the ability of management to identify, measure, monitor, and control exposures to market risk given the bank's size, complexity, and risk profile; the nature and complexity of interest-rate risk arising from nontrading positions; and, where appropriate, the nature and complexity of interest-rate risk arising from trading and foreign operations.

Component Rating	X
------------------	---

ITEMS SUBJECT TO ADVERSE CLASSIFICATION

Includes assets and off-balance-sheet items which are detailed in the following categories:

Substandard Assets—A substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

Doubtful Assets—An asset classified doubtful has all the weaknesses inherent in one classified substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

Loss Assets—An asset classified loss is considered uncollectible and of such little value that continuance as a bankable asset is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified loss should be promptly charged off.

<i>Amounts, Description, and Comments</i>	<i>Classification Category</i>		
	<i>Substandard</i>	<i>Doubtful</i>	<i>Loss</i>

ITEMS LISTED FOR SPECIAL MENTION

Includes assets that are detailed as follows:

Special-Mention Assets—A special-mention asset has potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may result in deterioration of the repayment prospects for the asset or in the institution's credit position at some future date. Special-mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant adverse classification.

Description

MANAGEMENT AND CONTROL

1. DISCUSS ANY OTHER RELEVANT MATTERS REGARDING THE BANK'S MANAGEMENT NOT PREVIOUSLY ADDRESSED.
2. IF THE BANK IS IN A WEAKENED OR EXTENDED CONDITION, WHAT AID MAY BE EXPECTED FROM SHAREHOLDERS OR OTHERS?
3. (A) LIST EACH MAJOR SHAREHOLDER (5 PERCENT OR MORE) OF THE BANK AND THE RESPECTIVE PERCENTAGE OF OWNERSHIP. WHEN THE MAJOR SHAREHOLDER IS A BANK HOLDING COMPANY, LIST ITS MAJOR SHAREHOLDERS AND THE PERCENT CONTROLLED.

Shareholders

Percentage Owned

- (B) COMMENT ON THE EXTENT TO WHICH A PARTICULAR DIRECTOR(S), SHAREHOLDER(S), OR EXECUTIVE OFFICER(S) CONTROLS OR DOMINATES THE BANK'S POLICIES AND OPERATIONS.
- (C) COMMENT ON ANY ADVERSE EFFECTS OF INSIDERS ON OPERATING POLICIES, PROCEDURES, OR OVERALL FINANCIAL CONDITION OF THE BANK.
- (D) PROVIDE THE AGGREGATE AMOUNT OF BORROWINGS BY DIRECTORS, EXECUTIVE OFFICERS, PRINCIPAL SHAREHOLDERS, AND THEIR RELATED INTERESTS (AS DEFINED IN REGULATION O). DESCRIBE ANY MATERIAL LOANS OR OTHER TRANSACTIONS BETWEEN THE BANK AND ITS EXECUTIVE OFFICERS, DIRECTORS, OR ITS DIRECT OR INDIRECT PRINCIPAL SHAREHOLDER(S) AND THEIR INTEREST(S), AND ASSESS THE IMPACT OF THE TRANSACTIONS ON THE BANK. (AN INTEREST WOULD INCLUDE ANY HOLDING COMPANY AFFILIATE OR OUTSIDE BUSINESS INTEREST OR A BANK OR HOLDING COMPANY INSIDER IN WHICH 25 PERCENT OR MORE IS CONTROLLED.)
4. HAS ANY DIRECTOR, OFFICER, OR EMPLOYEE ALLEGEDLY EMBEZZLED, ABSTRACTED, OR OTHERWISE CRIMINALLY MISUSED THE FUNDS OF THE BANK SINCE THE PREVIOUS EXAMINATION? IF SO, HAVE PROPER AUTHORITIES BEEN NOTIFIED? IF PROPER AUTHORITIES HAVE NOT BEEN NOTIFIED, EXPLAIN WHY.

Examiner

Developments in technology, the expansion of financial services, and a risk-focused approach to examinations necessitate an increased flexibility in structuring and organizing the content of community bank examination reports. The reporting format for community bank examinations has been revised to focus more on “content.” The format allows examiners to use certain content headings, which follow a continuous-flow reporting format, and to use certain required report pages. The community bank examination report format may, however, continue to consist of specific or individual report “pages.”

The community bank reporting instructions distinguish between *mandatory* content (when the bank’s condition or circumstances warrant) versus *optional* content. The examiner thus has discretion in the arrangement of certain content. This guidance applies *only* to the preparation of community bank examination reports. See SR-01-19.

Subject to certain limitations, the examiner may customize and streamline the community bank examination report to better focus the examination’s findings on matters of risk and importance to the bank’s overall financial con-

dition. The revised format for the community bank examination report and its instructions should strengthen communications with the bank’s board of directors and senior management and minimize reporting burden. The report incorporates the specialty examination’s findings with the overall safety-and-soundness findings, thus culminating in a more comprehensive safety-and-soundness assessment.

The scope and depth of matters discussed under a content heading or on an examination report page, whether required or optional, will vary based on the issues and areas of concern presented, as well as on their severity. A more abbreviated discussion may be warranted for community banks that are found to be in sound financial condition, with no material concerns or issues. All examination reports should contain sufficient documentation to support any significant findings, issues, supervisory conclusions, and examiner recommendations.

The following table lists, in their required order, the content headings or report pages of the open and confidential sections of the community bank examination report.

Community Bank Examination Report Content

<i>Mandatory/ optional</i>	<i>Required report page or section heading</i>
	OPEN SECTION
Mandatory	Cover Page (<i>Separate page required.</i>)
Mandatory	Table of Contents (<i>Separate page required.</i>)
Mandatory	Scope (<i>Combined or separate page.</i>)
Mandatory	Matters Requiring Board Attention and Examination Conclusions and Comments (<i>Combined with the Scope or a separate page.</i>)
Optional*	Compliance with Enforcement Actions
<i>The order of the following is at the examiner’s discretion.</i>	
Mandatory	Management/Administration and Risk Management (<i>Separate section required.</i>)
Optional	Risk Assessment Matrix
Mandatory	Analysis of Financial Factors (<i>Separate section required.</i>)
	Capital Adequacy
	Asset Quality
	Earnings
	Liquidity
	Sensitivity to Market Risk

Other optional and mandatory pages or sections:

Optional*	Information Technology Assessment
Optional*	Fiduciary Activities Assessment
Mandatory	Summary of Items Subject to Adverse Classification/Summary of Items Listed as Special Mention
Optional	Loans and Lease-Financing Receivables/Past-Due and Nonaccrual Loans and Leases
Optional*	Items Subject to Adverse Classification
Optional*	Items Listed for Special Mention
Optional*	Assets with Credit-Data or Collateral-Documentation Exceptions
Optional*	Concentrations
Optional*	Violations of Laws and Regulations
Optional	Other Matters
Mandatory	Comparative Statement of Financial Condition
Mandatory	Comparative Statement of Income
Optional*	Capital Calculations

The capital calculations are optional. *However, they may be mandatory if* (1) the bank has a financial subsidiary within the meaning of the Gramm-Leach-Bliley Act, (2) there is a change in the capital category as a result of the examination, or (3) the ratios supporting the capital category in the examination are not derived from the bank's Call Report as of the same date. Exception 3 could occur if the examination ratios were calculated at a date other than a quarter-end or, if calculated at quarter-end, the numbers were adjusted or changed from those filed in the Call Report.

Optional	Other Financial Pages <i>(At the examiner's discretion, other financial pages may alternatively be included in an appendix to the report or in the confidential section.)</i>
Mandatory	Signature of Directors <i>(A separate page is required. The signature page should be the last page in the report.)</i>

CONFIDENTIAL SECTION

The order of the following is at the examiner's discretion.

Mandatory	Directors and Officers
Mandatory	General Information

* Indicates optional pages that are mandatory if circumstances relevant to the page apply.

COMMUNITY BANK EXAMINATION REPORT INSTRUCTIONS

Open Section

Content Heading or Report Page Title

Cover page. A separate cover page is mandatory.

Table of contents. A separate table of contents page is mandatory. The table of contents indicates the pages included in the report. All mandatory pages are to be included in each examination report. Optional pages are added as necessary. The mandatory Signature of Directors page is the last page in the open section of the report. Additional supplemental pages may be added to the report at the examiner's discretion.

Page numbers should be included for completeness. The page-numbering system may vary among Reserve Banks.

Scope

The Scope content heading or report page is mandatory. It may be a *combined* content heading or a *separate* report page. The scope should include the examiner's comments on examination depth, scope, and procedures performed for each area of review, including any specialty areas. The examination's scope should generally address the following:

- the date of examination (commencement and conclusion)
- the type of examination (full-scope, targeted, joint, concurrent, combined (bank and bank holding company))
- the agency or agencies conducting the community bank examination
- areas reviewed and analyzed (If the examination is targeted, the examiner should identify specific areas reviewed.)
- the percentage and type of loans reviewed, if any
- a confirmation that examination results were discussed with the organization, including a list of those who attended the meeting
- identification of the bank's peer group
- if necessary, recognition that the bank is operating under a formal or informal supervi-

sory action (If so, state that the provisions of the action were reviewed and compliance was assessed.)

Matters Requiring Board Attention, and Examination Conclusions and Comments

The content heading or report page is mandatory. The content of the heading or page may be combined with the Scope content heading, or it may be in the form of a separate report page. This section of the examination report informs the bank's board of directors of the most significant and most important supervisory issues or concerns identified during the examination as well as the examination's general conclusions—a summary of the most important findings. The Matters Requiring Board Attention content heading or report page is intended to complement the complete findings of the Report of Examination and is prepared for the use of the board of directors and the bank's management. The focus should be on identified problems, rather than on strengths of the organization. Problems should be presented succinctly and unmistakably clearly. In all cases, the types of actions to be taken by the directors and management to address these problems should be specifically noted.

All supervisory ratings assigned during the examination and for the two previous examinations should be provided. The board of directors and senior management of an institution that is rated a composite 4 or 5 are to be informed that the bank is a problem institution that warrants special supervisory attention. The board of directors and senior management of banks that are rated composite 3 are to be informed that their condition is not satisfactory, that the bank may be subject to more-than-normal supervision, and that the cited supervisory issues and areas of concerns may cause their bank to be considered a problem institution if the weaknesses are not promptly and adequately addressed. This content heading or report page should also discuss significant weaknesses in 1- or 2-rated institutions, and a brief summary of the bank's condition should be provided. Include any specialty or targeted examination ratings assigned or other assessments, including findings from other on-site visits during the recent Federal Reserve examination cycle. In all cases, a concluding statement should be provided that reminds the directorate of its responsibility to review the entire Report of Examination. The

report should instruct each director to sign the Signature of Directors page.

The supervisory ratings should be followed by the uniform definition of the assigned composite rating. The uniform definitions of the component ratings assigned need not be included in reports; they should, however, be made available to the board of directors and management on request. This content heading or report page should summarize examination findings, particularly those of significance. The examiner should also provide an overview of the bank's financial condition. The examiner's major recommendations and management's plans for corrective actions should also be covered in appropriate detail, with references to additional supporting information elsewhere in the report. All comments should be presented in order of importance. Comments should be provided primarily on an exception basis; that is, they should describe areas of the bank's operations and aspects of its financial condition that display weaknesses, deficiencies, or vulnerability. However, the examiner is not precluded from recognizing positive actions taken by management. Laudatory or conclusive remarks and endorsements of specific management actions, however, should be avoided.

Significant recommendations presented elsewhere in the report should be mentioned. Significant violations should also be discussed briefly, but they should be presented in greater detail under the content heading or the report page for Violations of Laws and Regulations.

Compliance with Enforcement Actions

The content heading or report page is optional.

The order of the following headings or pages is at the examiner's discretion.

Management/Administration and Risk Management

The content heading or report page is mandatory. A separate section is required. The reported information under this content heading should always include (1) the risk-management numerical rating; (2) the mandatory discussion of the risk factors—types of risk (that is, credit risk,

market risk, liquidity risk, operational risk, legal risk, and reputational risk); (3) the adequacy of risk management associated with risk levels and risk trends; and (4) the impact of specialty examination areas on relevant risk areas. The fourth item, for example, might consist of a discussion of the impact of any information technology concerns on operational and other relevant risks, what impact any findings on fiduciary activities have on legal or other risks, or compliance concerns.

Within this section of the report, management and the board of directors are to be evaluated against all factors necessary to operate the institution in a safe and sound manner and on their ability to identify, measure, monitor, and control the risks of the institution's activities. Consideration is given to (1) the level, quality, and adequacy of supervisory oversight and support provided by the board of directors and senior management; (2) compliance with banking and other statutes, regulations, and supervisory agreements; (3) the ability to plan for and respond to risks that may arise from changing business conditions or the initiation of a new product or service; (4) the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems used to control risks throughout the bank; (5) the adequacy and level of compliance with the board of directors policies and procedures and the bank's other internal policies and controls that are necessary to operate the bank in a safe and sound manner; (6) the adequacy of internal accounting control systems, the bank's audits and audit function, and the bank's internal control systems (discuss all of these in detail); (7) the responsiveness to recommendations from auditors and supervisory authorities; (8) the reasonableness of compensation policies and avoidance of, or tendency toward, self-dealing; (9) the business strategy and policies and procedures for avoiding conflicts of interests; (10) a demonstrated understanding and willingness to serve the legitimate banking needs of the community; (11) the institution's management depth and succession; (12) the extent that management is affected by or is susceptible to dominant influence or concentration of authority; and (13) the overall risk profile and performance of the institution. See SR-95-51 for specific guidance on rating the adequacy of risk-management processes and internal controls.

Provide the risk-management rating and discuss the risk factors and the adequacy of risk

management associated with the risk levels and risk trends. Also discuss the impact of specialty areas on relevant risk areas. For example, discuss the impact of any information technology concerns on operational and other relevant risks, as well as what impact any findings on fiduciary activities or compliance concerns have on legal and other risks. The section should discuss the management and risk-management analysis and “R” rating assignment for the bank holding company RFI/C(D) rating, as well as the examiner’s risk management-conclusions about the bank holding company.

Risk Assessment Matrix

<i>Type of risk</i>	<i>Inherent risk</i>	<i>Adequacy of risk management</i>	<i>Composite risk</i>	<i>Trend</i>
Credit	Moderate	Weak	Moderate	Increasing
Market	Low	Weak	Low	Stable
Liquidity	High	Strong	Moderate	Decreasing
Operational	Low	Acceptable	Low	Stable
Legal	Low	Acceptable	Low	Stable
Reputational	Low	Acceptable	Low	Stable

Risk Assessment Matrix

The inclusion of a risk matrix is optional under the Management/Administration and Risk Management content heading. A risk assessment matrix may be included either in the Management/Administration and Risk Management section or in the Examination Conclusions and Comments section, if appropriate. If not included in the open section of the report, the risk assessment matrix must be included in the confidential section of the report. The following is an example illustration:

Analysis of Financial Factors

The content heading or report page is mandatory. It is to be included as a separate section and should include all analyses and conclusions for each financial component. Subheadings are to be used to depict the ratings and the analysis of the individual components and other topics of discussion. The order is optional. However, the more significant issues should be addressed at the beginning of this analysis. In addition to the CAELS components listed below, the bank holding company RFI/C(D) rating system component analysis should be reported in this section, if applicable. Financial tables and graphs are optional. They may also be included in an appendix.

1. *[C]apital adequacy.* Capital adequacy should be evaluated in relation to supervisory guidelines, the nature and extent of risks to the bank, and the ability of management to address and control these risks to the organization. Consideration is to be given to (1) the level of, quality of, and changes in capital and the bank’s overall financial condition; (2) the nature, trend, and volume of problem assets and the adequacy of

the allowance for loan losses and other valuation reserves; (3) risk exposures, including those presented by off-balance-sheet activities; (4) the quality and strength of earnings; (5) the balance sheet’s composition, including the nature and amount of intangible assets, market risk, concentration risk, and nontraditional-activity risk; (6) equity maintenance and any growth experiences, plans, and prospects; (7) the reasonableness of dividends; (8) the access to capital markets and other appropriate sources of financial assistance; and (9) the ability of management to address emerging needs for additional capital.

2. *[A]sset quality.* Asset quality should be evaluated in relation to (1) the level, distribution, severity, and trend of problem, classified, delinquent, nonaccrual, nonperforming, and restructured assets, both on- and off-balance-sheet; (2) the adequacy of the allowance for loan and lease losses and other valuation reserves (including the adequacy of the bank’s methodology and written documentation policies, procedures, and practices); (3) management’s awareness of problem loans and their causes and its demonstrated ability to identify, administer, and collect prob-

lem assets; (4) the diversification and quality of loan and investment portfolios; (5) the adequacy of loan-administration and lending policies, procedures, and practices; (6) the adequacy of workout procedures for problem credits; (7) the quality of investment securities and the adequacy of investment policies, procedures, and practices; (8) the extent of securities underwriting activities and exposure to counterparties in trading activities; (9) the credit risk that is arising from, or reduced by, off-balance-sheet transactions; (10) asset concentrations (including those assets, problem credits, and other transfer-risk problems in particular economic sectors); (11) the volume and nature of documentation exceptions; (12) the effectiveness of credit-administration procedures, underwriting standards, risk-identification practices, internal controls, internal loan-review and credit-grading systems (including noted significant differences between the internal loan grades and the examination's loan classifications), and management information systems; and (13) the adequacy of policies, procedures, and practices involving financial futures and foreign-exchange trading.

3. *[E]arnings.* The quality and quantity of earnings should be evaluated in relation to (1) the ability to provide for adequate capital through retained earnings; (2) the level, quality (including the strength of net interest margin, the amount of noninterest income and expense, and the extent of reliance on unusual or nonrecurring gains or losses), and stability of earnings; (3) the level of, composition of, reasonableness of assumptions for, and the extent of management's control over any variances between actual results versus the budgeted projections of income and expenses in relation to the size and nature of the bank's operations; (4) the vulnerability of earnings to market-risk exposures; (5) the adequacy of provisions to the allowance for loan and lease losses and other valuation reserves; (6) the impact of extraordinary items, securities transactions, and tax effects on net income; and (7) the adequacy of budgeting systems, forecasting processes (including the reasonableness of assumptions), and management information systems.

4. *[L]iquidity.* Liquidity and asset-liability management should be evaluated in relation to (1) the trend and stability of deposits; (2) the degree of and reliance on short-term volatile sources of funds, including any undue reliance

on borrowings or brokered deposits to fund longer-term assets; (3) the availability of assets that are readily convertible to cash without undue loss; (4) the bank's ability to securitize and sell certain pools of assets; (5) the extent and ease of the bank's access to money markets and other sources of funding; (6) the adequacy of and ease of access to liquidity sources and the bank's ability to meet liquidity needs; (7) the level of securities pledged against liabilities; (8) the bank's ability to obtain borrowed funds from outside sources that are consistent with the bank's funding strategies; (9) the effectiveness of and the extent of compliance with the bank's policies and procedures for funding and managing liquidity, interest-rate risk, management information systems, and contingency-funding plans; (10) the capability of management to properly identify, measure, monitor, and control liquidity; (11) the level of diversification of funding sources, both on- and off-balance sheet; (12) the extent of the bank's asset-liability and gap-management practices; and (13) the vulnerability of the bank's funding to adverse publicity, increased reputation risk, and lowered credit ratings.

5. *[S]ensitivity to market risk.* Sensitivity to market risk reflects (1) the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can adversely affect earnings or the economic value of capital; (2) the ability of management to identify, measure, monitor, and control exposures to market risk, given the bank's size, complexity, and risk profile; (3) the nature and complexity of interest-rate risk exposure arising from nontrading positions; and (4) where appropriate, the nature and complexity of interest-rate risk arising from trading and foreign operations.

In the following optional and mandatory pages or sections, the asterisk () denotes optional pages that are mandatory if circumstances relevant to the page apply.*

Information Technology Assessment

The inclusion of an information technology assessment as a content heading or report page is optional.* An information technology assessment is mandatory, however, if an information technology (URSIT) rating is assigned (see SR-00-3) or if significant supervisory concerns

exist. Information technology activities should be evaluated based on the nature and extent of information technology risks, including management processes, architecture, integrity, security, and availability. The supporting rationale for composite or component IT ratings should be included. Examiners should note whether a list of technical exceptions was provided to management. The examiner's conclusions should also be reflected in the Analysis of Financial Factors or the Management/Administration and Risk Management sections of the report, as appropriate. Any significant supervisory concerns should be reflected in the Matters Requiring Board Attention and in the Examination Conclusions and Comments section.

Fiduciary Activities Assessment

The content heading or report page is optional.* The heading or page is mandatory, however, if a trust (UITRS) or transfer-agent rating was assigned during the most recent Federal Reserve examination cycle or if significant supervisory concerns exist in these areas. Fiduciary activities should be evaluated relative to management's oversight of fiduciary activities and the nature and extent of risk that the fiduciary activities or business lines evaluated present to the institution. Management's ability to assess the risk of fiduciary products and services offered, including new products, should be evaluated. Note whether a list of technical exceptions was provided to management. The supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in the Analysis of Financial Factors or the Management/Administration and Risk Management sections of the report, as appropriate. Significant supervisory concerns should be reflected in the Matters Requiring Board Attention and Examination Conclusions and Comments section.

Summary of Items Subject to Adverse Classification/Summary of Items Listed as Special Mention

The content heading or report page (and the associated content) is mandatory. The topic, however, must be discussed in the examination report. The Summary of Items Subject to Adverse Classification content heading or report

page summarizes items classified by the examiner as either substandard, doubtful, or loss as of the examination date (for this page, considered the date relevant to the asset-quality review). See SR-04-9 or section 2020.1 for the June 14, 2004, interagency agreement on the Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts.

A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or by the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected. An asset classified Doubtful has all the weaknesses inherent in one classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. Assets classified Loss are considered uncollectible and of such little value that their continuance as bankable assets is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather that it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified Loss should be promptly charged off.

Total classifications are also presented for the previous examination. Reserve Banks that are engaged in alternate-year examination programs should provide totals contained in the previous examination report prepared by the state when applicable. The examiner should also consider creating a schedule under the Asset Quality content heading or page to detail classifications from additional prior examinations if meaningful trend information is noted. The examiner should also present, in the report narrative, classification trends for certain asset categories if the analysis is meaningful.

The report format does not contain provisions for other transfer-risk problems or value-impaired assets. For the examinations of banks engaged in international lending, examiners should provide additional information to include categories for other transfer-risk problems and value-impaired assets. Adjustments are required to be made for U.S. addressees and non-U.S. addressees.

For banks with foreign activity, the distinction between U.S. and non-U.S. addressees follows the definition set forth in the instructions for the Consolidated Report of Condition: whether a customer is U.S. or non-U.S. is determined by the customer's principal address, that is, by its domicile. A U.S. address would be in the 50 states of the United States, the District of Columbia, Puerto Rico, or U.S. territories and possessions. Non-U.S. addressees include all other geographical areas.

The examiner should list in the appropriate category the amounts of all credits classified due to transfer risk. The value of credits shown as value impaired should be computed after deducting any allocated transfer-risk reserve that is established against an asset. In determining total classified assets, examiners should arrive at net assets classified due to country risk. Examiners should identify any credits classified due to transfer risk that have received the same or a more severe classification due to credit risk and that are listed above in the summary of classified items due to credit risk. The sum of such assets should be listed in the appropriate column and then deducted to arrive at net assets classified due to country risk. For the purpose of this content heading or report page, any credits classified as value impaired for transfer-risk purposes should not be included in the summary of credits classified due to credit risk, unless the credits are classified loss.

For the purpose of arriving at total classified assets, add the amount classified due to credit risk to net assets classified due to transfer risk for each category. When computing weighted classifications, the residual portion of any value-impaired assets should be assigned the same weight as substandard classifications. However, the residual exposure still remains value impaired for examination and classification purposes. Value-impaired assets held in the trading account should also be included in total classified assets but should not be considered classified assets when computing weighted classifications.

Summary of Items Listed as Special Mention

The content heading or report page (and the associated content) is mandatory. The topic must be discussed in the examination report. The Summary of Items Listed for Special Mention content heading or report page presents the

total of assets listed for special mention for the current and one previous examination. A special-mention extension of credit is defined as having potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may, *at some future date*, result in the deterioration of the repayment prospects for the credit or the institution's credit position. Special-mention credits are not considered as part of the classified-extensions-of-credit category and do not expose an institution to sufficient risk to warrant classification. The summary does not include assets listed for special mention when computing classification ratios. Reserve Banks that are engaged in alternate-year examination programs should rely on the special-mention total from the previous state's examination when applicable.

Loans and Lease-Financing Receivables/Past-Due and Nonaccrual Loans and Leases

The content heading or report page (and the associated content) is optional. The examiner has the flexibility to use the same or different dates for the Loans and Lease-Financing Receivables and the Past-Due and Nonaccrual Loans and Leases schedules. The Loans and Lease Financing Receivables schedule will usually be as of the most recent quarter-end. The Past-Due and Nonaccrual Loans and Leases schedule will usually be as of the asset-quality review date. On the basis of the examination's findings, the examiner-in-charge should determine if other as-of dates best reflect the condition of the institution. For example, the Loans and Lease-Financing Receivables schedule may be presented as of the asset-quality review date if the examiner identifies significant changes since the last quarter-end that need to be incorporated.

The format of the Loans and Lease-Financing Receivables schedule is similar to that used in the Consolidated Report of Condition. The definitions of the loan categories as presented in the Instructions for the Consolidated Report of Condition should be used in completing the schedule. For examinations of banks engaged in international lending, Reserve Bank examiners should adjust the format of this schedule for U.S. addressees and non-U.S. addressees. For examinations of banks engaged in international lending, Reserve Bank examiners should adjust the format of the Past-Due and Nonaccrual Loans

and Leases schedule for U.S. addressees and non-U.S. addressees. The definitions of past-due and nonaccrual loans and leases as presented in the Instructions for the Consolidated Report of Condition should be used in completing this schedule, unless the bank's policy is more conservative, in which case the bank's definition may be used. If so, or if state law requires the bank to apply different definitions, the examiner should discuss the bank's policy or state law in the Comments section following the past-due and nonaccrual schedule. The Memorandum section should include the amount of restructured loans and leases included in the totals. Relevant issues pertaining to past-due and nonaccrual loans and leases should be briefly discussed in the Comments section. More-significant issues should be discussed on the Asset Quality page.

Items Subject to Adverse Classification

The content heading or report page is optional.* However, a full loan write-up is mandatory for all significant or material classified assets if (1) management disagrees with the disposition accorded by the examiner or (2) the institution will be rated composite 3, 4, or 5. (See SR-99-24 or section 2060.1 for further information.)

Items Listed for Special Mention

The content heading or report page is optional.* However, a full loan write-up is mandatory for all significant or material criticized assets if (1) management disagrees with the disposition accorded by the examiner or (2) the institution will be rated composite 3, 4, or 5. (See SR-99-24 or section 2060.1 for further information.)

Assets with Credit-Data or Collateral-Documentation Exceptions

The content heading or report page is optional.* However, the content heading and a discussion of any supervisory issues and concerns is mandatory if the information needed for loan line sheets is not available or if the information is not reliable due to materially deficient loan-administration systems and processes, particularly with respect to loan and collateral documentation and collateral values. (See SR-99-25

or section 2080.1 for further information.) If the credit-data or collateral-documentation exceptions are significant, this content heading or report page should provide support for a discussion of credit-documentation practices under the asset-quality portion of the Asset Quality content heading or report page.

Concentrations

The content heading or report page (and its associated content) is optional.* If included, the content heading should include a discussion of supervisory issues and concerns regarding any significant concentrations of assets and liabilities. This discussion should address the effectiveness of the bank's internal policies, systems, and controls to identify, monitor, and manage the risk associated with the concentrations and address the bank's alternatives or plans for reducing concentrations.

The content heading or report page should indicate that a concentration includes obligations, direct or indirect, of the same or affiliated interests that represent 25 percent or more of the bank's capital structure. The reader should also be informed that, for the purposes of this page, the capital structure is defined as tier 1 capital plus the allowance for loan and lease losses.

When determining and calculating concentrations, the amount of loan commitments and other off-balance-sheet risk items should be considered. The listing should include all types of loans, overdrafts, cash items, suspense resources, securities, leases, acceptances, advances, letters of credit, and all other items due to the bank, as well as loans endorsed, guaranteed, or cosigned by related individuals and their related interests.

Concentrations by industry, transfer risk, product line, type of collateral, and other characteristics should be detailed when appropriate. The listing should include amounts due from depository institutions, federal funds sold, and other assets in which payment depends on one financial institution or affiliated group and the total represents 25 percent or more of the bank's capital structure. Treasury securities, obligations of U.S. government agencies and corporations, and any assets collateralized by these items should not be included in the listing. The requirements of Regulation F, as they relate to concentrations involving correspondent banks, should also be considered.

Violations of Laws and Regulations

The content heading or report page is optional.* However, when violations of federal or state banking laws and regulations are found, it is mandatory that they be listed in detail on this page. Violations of the Bank Secrecy Act should also be listed on this page in detail.

The format for listing violations should be consistent. A heading for each violation listed should name the applicable regulation and section and provide a brief description of what the law covers. This summary should be followed by a brief description of the requirements of the regulation or statute and a discussion of how or why the violation occurred. The examiner should describe any plans or recommendations for correction. If a review of the Bank Secrecy Act is conducted separately, or as part of another examination, a statement of this fact should be included under the Other Matters content heading or report page.

Other Matters

This content heading or report page is optional. If included, discuss issues or other matters of significance not covered elsewhere in the community bank's examination report. Discuss also significant matters mentioned elsewhere that require further explanation, such as the type, scope, and volume of any new activity in which the bank is engaged. If issues or concerns are noted, examiners should provide comments on such specific areas, such as the following:

- accounting, audit, and internal controls
- affiliate relationships
- criminal referral procedures
- emergency preparedness
- financial recordkeeping and reporting regulations
- insurance
- investment in bank premises
- litigation
- security and controls against external crimes
- payments system risk
- nontraditional banking activities (for example, mortgage warehousing or data processing services)
- supervisory reporting
- nondeposit investment products

Other examination matters may also warrant comments on this report page.

Comparative Statement of Financial Condition

The Comparative Statement of Financial Condition page is mandatory. Alternatively, the statement may be included in an appendix to the examination report or in the confidential section. The left column of the statement should coincide with the Consolidated Report of Condition for the period used—generally, the most recent quarter-end. If Call Report amendments have been made, the amended numbers should appear on this page. If a bank's management has made any significant misclassifications that have caused examiners to amend any financial statements, the examiner's numbers should appear on this page. The right column should usually detail previous year-end information. However, the examiner may substitute a different date, such as a previous examination, when desired. All amounts listed in either column should conform to Consolidated Report of Condition instructions.

Comparative Statement of Income

The comparative statement of income is mandatory. Alternatively, the statement may be included in an appendix to the report or in the confidential section. The examiner should indicate whether the statement is for the institution only or is consolidated.

Capital Calculations

The Capital Calculations page is optional.* Inclusion of capital calculations is mandatory, however, if (1) the bank has a financial subsidiary within the meaning of the Gramm-Leach-Bliley Act, (2) there is a change in the capital category as a result of the examination, or (3) the ratios supporting the capital category in the examination are not derived from the bank's Call Report as of the same date. The third exception could occur if the bank's examination ratios were calculated at a date other than the end of a quarter, or, if calculated at quarter-end, the numbers were adjusted or changed from those filed in the Call Report.

Other Financial Pages

Other optional financial report content headings

or report pages may be included in the examination report at the examiner's discretion. Alternatively, the content headings or report pages may be included in an appendix to the examination report or in the report's confidential section.

Signature of Directors

The content heading is mandatory. A separate report page is required and should be the last page in the open section of the report.

Confidential Section

"Confidential Section" is a required content heading. This section of the bank examination report is mandatory. It must include all information that cannot or should not be disclosed or made available to the public. It should also include internal administrative and supervisory information relevant to the Federal Reserve System and its staff. The order of the following headings or pages is at the examiner's discretion.

Directors and Officers

The content heading or report page is mandatory for inclusion in the report. A separate report page is required. All bank directors should be listed in alphabetical order. If the bank elects advisory directors, they should be listed alphabetically under a separate heading. Information requested in the report-page header should be supplied for each director. Specific instructions for certain requested information are as follows:

- Under meetings missed, include all meetings a director has not attended between the previous (FRB or state) and current examination. If a director was elected since the previous examination, list only the number of meetings that he or she missed since the date of election.
- Under fees paid to each director, indicate whether the compensation is based on attendance.
- Under occupation or principal business affiliation, use concise and descriptive designations (for example, farmer, grocer, or commercial real estate developer).

For banks with active board committees, a code or legend for all committees should be prepared, indicating committee memberships for each director.

The Executive Officers portion of the report page uses the Regulation O definition of executive officers, but other significant officers may be included at the examiner's discretion. Information requested by the report page should be supplied. Additional individuals to be reported may include persons without official designation who exercise considerable influence or executive officers excluded from the Regulation O definition by board resolution who actually maintain a high level of responsibility. Officers should be listed in order of title or position of responsibility, with dominant individuals shown first. Specific instructions for the requested information for the report page are as follows:

- Examples of assigned areas of responsibility may include administration, policy formulation, lending, operations, or branch manager.
- A salary should indicate the current annual salary. The total bonuses should be reported for the previous year.

If executive officers receive any other pertinent forms of compensation beyond their listed salary and bonus (such as commission-based pay, employment contracts, stock options, unusually large benefits, or affiliated bank salaries and fees), these should be discussed in narrative format below the listing of executive officers or on a separate page.

General Information

The content heading is mandatory. It includes (1) a discussion of strategic plans, future technology plans, planned bank products or services, or prospects for the bank; (2) significant or sensitive matters regarding the bank's management not previously addressed; (3) applicable comments on the extent that a particular insider controls or dominates the organization and any adverse effect of insiders on operating policies, procedures, or the overall financial condition of the bank; and (4) a discussion of any recommendations for supervisory actions and any additional material matters of a sensitive or confidential nature not previously addressed. To the extent not included on the Directors and Officers page, this discussion should also include a list of

each of the major shareholders of the bank (those having 5 percent or more ownership) and their respective percentage of ownership. When the major shareholder is a bank holding company, its major shareholders and the percent controlled by each should also be listed. Include a listing of critical turnkey software vendors or

information technology service providers, as well as any client institutions for which processing services are provided. Include any significant matters of a confidential nature regarding vendors or third-party service providers. Also include a description of any electronic banking activities.

SCOPE / MATTERS REQUIRING BOARD ATTENTION
AND EXAMINATION CONCLUSIONS AND COMMENTS

SCOPE

Comment on the examination's depth, scope, and procedures performed for each area of review, including any specialty areas.

MATTERS REQUIRING BOARD ATTENTION

State if there are any matters requiring board of director's attention, including significant issues from specialty examination areas, as applicable.

EXAMINATION CONCLUSIONS

Provide all supervisory ratings assigned during the examination and for the two previous examinations, any significant supervisory concerns, and general conclusions. Include any specialty or target examination ratings assigned or other assessments, including findings from other on-site visits during the recent Federal Reserve examination cycle.

ANALYSIS OF FINANCIAL FACTORS

Include analysis and conclusions for each financial component in this section using subheadings to depict ratings and analysis of individual components and other topics of discussion. The order is optional; however, the more significant issues should be addressed up front. In addition to the CAELS components listed below, the Bank Holding Company Rating component analysis should be written in this section, if applicable. Financial tables and graphs may be included on this page or in an appendix.

Asset Quality ()

Asset quality is considered ____

Liquidity Position ()

The bank's liquidity position and funds management are ____.

Sensitivity to Market Risk ()

Interest rate risk (IRR) management is _____ and exposure to market risk is _____.

Capital Adequacy ()

The bank's capital position is _____.

Earnings ()

Earnings performance is _____.

**MANAGEMENT / ADMINISTRATION
AND RISK MANAGEMENT**

The management and risk management analysis, rating, and conclusion for the bank and holding company, if applicable, should be included in this section.

Management (X)

Management is X.

Risk Management (X)

Mandatory Risk Management Assessment - Provide the risk management numerical rating and discussion of risk factors and the adequacy of risk management associated with risk levels and risk trends. The impact of specialty examination areas on relevant risk areas should be incorporated. For example, the impact of any information technology concerns on operational and other relevant risks should be discussed, as well as the impact on legal or other risks of any findings with respect to fiduciary activities or compliance concerns.

Risk Management is X.

Optional Risk Assessment Matrix - A risk assessment matrix may be included either in the Management/Administration and Risk Management section or in the Examination Conclusions and Comments section, as appropriate.

Risk Assessment Matrix (Optional)

Type of Risk	Inherent Risk	Adequacy of Risk Management	Composite Risk	Trend
Credit	Moderate	Weak	Moderate	Increasing
Market	Low	Weak	Low	Stable
Liquidity	High	Strong	Moderate	Decreasing
Operational	Low	Acceptable	Low	Stable

INFORMATION TECHNOLOGY ASSESSMENT

Mandatory if an Information Technology (URSIT) rating is assigned (refer to SR 00-3 for details) or if significant supervisory concerns exist. Information technology activities should be evaluated based upon the nature and extent of information technology risks including management processes, architecture, integrity, security and availability. Supporting rationale for composite and/or component IT ratings should be included. Note whether a list of technical exceptions was provided to management. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Administration and Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Board Attention and Examination Conclusions section.

Page X of Y

FIDUCIARY ACTIVITIES ASSESSMENT

Mandatory if a Trust (UITRS) or transfer agent rating is assigned during the most recent Federal Reserve examination cycle or if significant supervisory concerns exist in these areas. Fiduciary activities should be evaluated relative to management's oversight of fiduciary activities and the nature and extent of risk to the institution represented by the fiduciary activities or business lines evaluated. Management's ability to assess the risk of fiduciary products and services offered, including new products, should be evaluated. Note whether a list of technical exceptions was provided to management. Supporting rationale for any ratings assigned should be included. Conclusions should also be reflected in Analysis of Financial Factors and/or the Management/Administration and Risk Management sections of the report, as appropriate, and any significant supervisory concerns should be reflected in the Matters Requiring Board Attention and Examination Conclusions and Comments section.

Comments:

ITEMS SUBJECT TO ADVERSE CLASSIFICATION

Includes assets and off-balance-sheet items which are detailed in the following categories:

Substandard Assets - A Substandard asset is inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the institution will sustain some loss if the deficiencies are not corrected.

Doubtful Assets - An asset classified Doubtful has all the weaknesses inherent in one classified Substandard with the added characteristic that the weaknesses make collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable.

Loss Assets - An asset classified Loss is considered uncollectible and of such little value that continuance as a bankable asset is not warranted. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. Amounts classified loss should be promptly charged off.

Amount, Description, and Comments	Classification Category		
	Substandard	Doubtful	Loss

ITEMS LISTED FOR SPECIAL MENTION

Includes assets and off-balance-sheet items which are detailed as follows:

Special Mention Assets - A Special Mention asset has potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may, at some future date, result in the deterioration of the repayment prospects for the asset or in the institution's credit position. Special Mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant adverse classification.

OTHER FINANCIAL INFORMATION

Page X of Y

This section deals specifically with System-wide Federal Reserve policies, practices, and procedures relating to the examination of domestic and international banking departments of state-chartered commercial banks that are members of the Federal Reserve System. The Federal Reserve also has certain supervisory and oversight responsibilities in other areas of banking, both domestic and international, for which it has developed specialized examination procedures, conducts on-site examinations, and completes separate examination reports. These areas are not covered in depth in this manual; Federal Reserve policies and examination procedures relating to each of them are covered in either separate manuals or supervisory letters (SR-letters) issued by the Federal Reserve Board.

BANK HOLDING COMPANIES

The Federal Reserve has the sole regulatory responsibility for supervising bank holding companies. These organizations control commercial banks that hold most of the insured commercial banking assets in the United States. Substantially all bank holding companies are subject to on-site inspection by the Federal Reserve System. The frequency and scope of inspections are determined by the composite rating, size, amount of debt, and complexity of the organization. Inspections cover both financial and managerial factors and include analysis at the parent, bank, nonbank, and consolidated levels.

INTERNATIONAL

Overseas Operations of U.S. Banking Organizations

Under provisions of the Federal Reserve Act and the Board's Regulation K, member banks may establish branches in foreign countries subject to, in most cases, the Board's prior approval. Examinations of the overseas operations of state member banks are generally conducted at the banking organization's head office in the United States, where the ultimate responsibility for the overseas facilities lies. To verify and supplement the results of the head-office examinations, on-site reviews of important over-

seas operations are performed at least every three years.

Edge Act and Agreement Corporations

Under sections 25 and 25A of the Federal Reserve Act, Edge Act and agreement corporations may engage in international banking and foreign financial transactions, and the Federal Reserve is responsible for conducting specialty examinations of these entities and their branches. Edge corporations are chartered by the Board to conduct an international banking business. Agreement corporations are state-chartered companies that enter into an agreement with the Board to limit their operations to international banking. These corporations, which are usually subsidiaries of member banks, provide their owner organizations with additional powers in two areas: (1) they may conduct a deposit and loan business in states other than that of the parent, provided that the business is strictly related to international transactions, and (2) they have somewhat broader foreign-investment powers than member banks, being able to invest in foreign financial organizations, such as finance companies and leasing companies, as well as in foreign banks.

U.S. Activities of Foreign Banking Organizations

During the 1970s and 1980s, foreign entities rapidly expanded their operations in the United States; today, they are a significant element in the U.S. banking system. Although the Federal Reserve previously had significant authority over foreign banking organizations (FBOs), its role was enhanced by the Foreign Bank Supervision Enhancement Act of 1991 (FBSEA). The Federal Reserve has broad oversight authority for the supervision and regulation of FBOs that engage in banking in the United States through branches, agencies, commercial lending companies, and subsidiary banks. In fulfilling this responsibility, the Federal Reserve conducts its own examinations and may also use reports of other agencies. FBSEA also requires Federal Reserve approval for establishment of new FBO offices in the United States, and it gives the

Federal Reserve the authority to terminate such offices.

ELECTRONIC DATA PROCESSING ACTIVITIES

The Federal Reserve is responsible for conducting examinations of electronic data processing (EDP) centers that provide EDP services to state member banks, FBOs, and Edge Act corporations. Section 3 of the Bank Service Corporation Act (12 USC 1863, redesignated as the Bank Service Company Act) generally authorizes bank service companies to perform significant clerical, bookkeeping, or accounting functions, such as demand-deposit accounting and loan processing. Section 7 of the Bank Service Company Act (12 USC 1867) empowers the appropriate federal regulatory agency to examine banking services and operations regardless of whether these services are performed on or off the premises of a particular financial institution. When a financial institution contracts with an external company to provide data processing services, the data processing company's activities that pertain to financial institutions are subject to examination. Larger companies that operate in more than one regulatory district or region are examined pursuant to the Multiregional Data Processing Servicer (MDPS) examination program. EDP examinations, whether of independent processing companies or a state member bank's own EDP functions, are operational in nature and focus on evaluations of internal controls and audit effectiveness. EDP examiners have specialized training that enables them to assess the performance of each data center in four critical functions: audit, management, systems development and programming, and computer operations.

TRUST DEPARTMENTS AND TRUST COMPANIES

The Federal Reserve examines trust departments of state member banks, trust companies that are members of the Federal Reserve System, and certain nondepository trust company subsidiaries of bank holding companies. These examinations determine whether the trust functions are conducted in accordance with applicable fiduciary principles and with other appropriate laws and regulations.

To supplement the supervision of the increasing number of nondepository trust companies that are subsidiaries of bank holding companies, the Federal Reserve has instituted a program of examinations for those trust companies not supervised by any other federal banking agency. In addition, a program of limited inspections of state member banks, bank holding companies, and Edge Act corporations that conduct foreign fiduciary activities has been instituted.

While the Federal Reserve's *Trust Examination Manual* and its *Transfer Agent Manual* provide detailed coverage of those specialized areas, there are activities sometimes viewed as "trust" matters that are not found solely in the bank's trust department. For example, this manual covers recordkeeping and confirmation rules applicable to customer-accommodation services, reporting and inquiry requirements under the Lost and Stolen Securities Program, the registration of transfer agents, employee benefit trusts, and international fiduciary activities.

To engage in providing trust or fiduciary services, a bank must have proper authorization under state or federal law. Under the laws of most states, this requires a specific approval of the state financial supervision agency. Similarly, pursuant to the Board's Regulation H section 208.3(d)(2), the Board's permission must be obtained before changing the general character of a bank's business.

TRANSFER-AGENT ACTIVITIES

Transfer agents countersign and monitor the issuance of securities, register transfers of securities, and exchange or convert securities. Federal Reserve examiners conduct separate examinations of and complete separate reports for the transfer-agency activities of those state member banks and bank holding companies that are registered with the Board of Governors as transfer agents.

MUNICIPAL SECURITIES DEALERS, GOVERNMENT SECURITIES DEALERS, AND CLEARING AGENCIES

As a result of the Securities Act Amendments of 1975, the Board is responsible for supervising state member banks and bank holding compa-

nies that act as municipal securities dealers or clearing agencies. Federal Reserve examiners conduct separate examinations of and complete separate reports for both of these activities. A bank, a separate department or division of a bank, or a bank holding company is required to register as a municipal securities dealer if it “engages in the business” of buying and selling municipal securities for its own account other than in a fiduciary capacity. Examiners should refer to SR-86-40 for examination procedures and report forms on municipal securities dealers.

The Government Securities Act of 1986 (GSA) gave the Federal Reserve responsibility for examining the government securities activities of a state member bank, foreign bank, state branch or state agency of a foreign bank, or commercial lending company owned or controlled by a foreign bank. The GSA requires all government securities brokers or dealers that were previously unregistered to register with the Securities and Exchange Commission. Brokers and dealers receive specialized examinations to determine compliance with the GSA. For banks that have a lower level of government securities activities, compliance with the GSA is determined as part of the commercial examination.

The examination procedures for the GSA are found in SR-87-37, SR-93-40, and several subsequent letters including SR-06-8. The responsible staff at the Reserve Bank conducting the examination needs to ensure that they fully consider their supervisory responsibilities under the GSA in formulating their supervisory plans and conducting risk-focused examinations. In this regard, two key factors should be considered concerning government securities custodial activities. First, all depository institutions that hold government securities for customers, including securities under repurchase agreements, are subject to Treasury’s GSA custody rules. Second, certain financial institutions that are exempt from the definition of a government securities broker or dealer are, nevertheless, subject to the Treasury government securities broker or dealer custody rules when they engage in hold-in-custody repurchase agreements. Under such agreements, the financial institution retains custody of securities that are the subject of a repurchase agreement between the financial institution and a counterparty.¹ These issues are

fully described in the examination procedures pertaining to government securities activities, which are referenced in SR-87-37 and SR-93-40. (See also SR-94-5, SR-90-1, and SR-88-26.)

Reserve Bank staff are to separately report to Board staff only the results of reviews of government securities broker-dealer activities (and such broker-dealer’s related custodial activities). See SR-06-8 and its attachment, which includes the instructions for the report’s transmittal. When preparing these reports, Reserve Banks have the option of either using the Summary Report of Examination of Government Securities Broker-Dealer Activities and Custodial Activities (GSB-D report) or forwarding a copy of the relevant section of the examination report that contains the same information as required in the GSB-D report.

A clearing agency acts as a custodian of securities for the settlement of securities transactions by bookkeeping entries. Separate reporting on the GSB-D form is not required for a government securities custodian that engages in hold-in-custody repurchase agreements but which is otherwise exempt from filing notice as a government securities broker or dealer. See 17 CFR 403.5(a) and (d), and SR-93-40.

CONSUMER EXAMINATIONS

Some banking laws, such as the Truth in Lending Act and the Truth in Savings Act, require banks to disclose information that helps consumers evaluate product options open to them. Other laws (for example, the Community Reinvestment Act and the Equal Credit Opportunity Act) require banks to help meet the credit needs in their communities and promote the availability of credit to all creditworthy applicants. Finally, laws such as the Fair Credit Reporting Act and the Fair Debt Collection Act provide consumer safeguards for the extension, collection, and reporting of consumer credit. At the Federal Reserve, specialized examiners conduct examinations to determine banks’ compliance with these laws and their implementing regulations.

1. See 17 CFR 450, which governs holdings of government

securities for customers, except those held in a fiduciary capacity (17 CFR 450.3).

The international sections focus on the examination of risks and activities associated with international lending, financing instruments, and international banking. In addition to the sections that follow, information on the international aspects of cash accounts, nostro accounts, foreign collections, investments, and borrowed funds can be found in the applicable domestic sections:

- For foreign-currency cash accounts, see section 2000.1, “Cash Accounts.”
- For due from foreign banks—demand (nostro accounts) and foreign collections (cash letters, return items), see section 2010.1, “Due from Banks.”
- For foreign investments, see section 2020.1,

“Investment Securities and End-User Activities.”

- For foreign governments and foreign political entities, see section 3000.1, “Deposit Accounts.”
- For international borrowed funds, see section 3010.1, “Borrowed Funds.”
- For foreign banking organizations, see section 4050.1, “Bank-Related Organizations.”

Additional information on international activities can be found in the *Bank Holding Company Supervision Manual*, *Trading and Capital-Markets Activities Manual*, *Bank Secrecy Act Manual*, *Trust Activities Manual*, and *FFIEC Information Technology (IT) Examination Handbook*.

International—Examination Overview and Strategy

Section 7000.1

Effective date May 2005

Generally, the basic procedures used for the examination and verification of international operations are the same as those used for other domestic bank functions. However, some procedures are modified for different types of bank assets and liabilities and contingent accounts, as well as for separate laws and regulations that may be applicable. Documentation and accounting procedures for international operations may also differ from those used in the domestic banking areas, but the same examination objectives apply. The examination process may also include a review of international banking facilities (IBFs) and periodic visits to selected foreign branches and subsidiaries to determine the safety and soundness of their operations and the adequacy of reporting procedures used by the head office or parent bank to monitor the foreign office.

The increasingly global nature of economic activities has made international banking operations more important to bank customers, importers and exporters of goods and services, and domestic customers with overseas operations who require a source of international financial assistance. As service institutions, commercial banks provide this assistance through global networks of representative offices, branches, and affiliates, as well as through correspondent relationships. These foreign networks also allow banks to offer services outside their traditional market areas. Additionally, in 1981, the Board of Governors amended regulations to allow for the establishment of IBFs in the United States. The activities of these facilities are limited to accepting deposits from and extending credit to foreign residents (including banks), other IBFs, and the institution establishing the IBF.

Many domestic banking activities are also conducted internationally, including providing cash and collection services, placing and taking deposits, making investments, granting loans and overdrafts, and borrowing. The international examiner will use the appropriate examination procedures for domestic operations when reviewing these activities. The examination procedures for the international aspects of these and other activities are covered in the following international sections.

Similarly, other activities that are primarily international are similar to activities found in the domestic banking area. For example, a confirmed letter of credit represents a formal

commitment to extend credit provided that certain collateral and documentary conditions exist. Foreign-exchange trading activities are similar to money-trading operations conducted at domestic funding desks. Foreign-exchange positions are similar to commodity inventories carried at book value that are exposed to fluctuating market prices. Separate international sections in this manual relate to these functions.

IBF activities are to be reviewed during the examination of international operations. The review of assets, internal controls, and operating procedures should be conducted using procedures similar to those used for offshore shell branches. In addition, reports required to be filed by IBFs should be reviewed to ensure that they are prepared properly and filed in a timely manner.

Additional international banking activities, such as direct lease financing, installment loans, real estate loans, real estate construction loans, ownership of bank premises and equipment, and other real estate owned are to be examined using the applicable procedures in section 2210.1, "Other Assets and Other Liabilities," and section 3020.1, "Assessment of Capital Adequacy." International examinations will also require reference to other sections of this manual. Guidelines for using these other sections in international examinations are provided below.

WORKPAPERS

Workpapers should consist of written documentation of the examination procedures followed and of the conclusions reached during the examination of international operations. The definition, purpose, quality standards, preparation, and organization of workpapers used in international examinations are the same as those discussed in section 1030.1, "Workpapers."

EXAMINATION STRATEGY

Careful planning and control are as important in international examinations as they are in domestic examinations. A number of the procedures found in section 1000.1, "Examination Strategy and Risk-Focused Examinations," also apply to international examinations.

When assigning work in the various examination areas, the examiner should consider the organization of the bank. For example, many banks have consolidated their foreign-exchange trading and money market operations into a single division that is responsible for the bank's global money market operations. Similar situations may be encountered for other international-related functions that are combined with domestic operations. Consequently, the examination assignments should address those situations.

In some examinations, the examiner may come across certain activities that are not addressed by any particular section of the international portion of this manual. In these instances, the examiner should extract the appropriate objectives, examination procedures, and internal control questionnaires from the domestic sections of this manual.

The examiner must be certain that all types of individual customer liabilities have been analyzed on a consolidated basis, regardless of the office where they are booked. However, since the procedures for the collection and consolidation of customer liabilities booked in overseas offices differ among banks, the examiner should determine whether the bank's procedures are adequate.

INTERNAL CONTROL

The examiner should use section 1010.1, "Internal Control and Audit Function, Oversight, and Outsourcing," in the domestic portion of this manual to evaluate the objectives of and the work performed by internal and external auditors for the bank's international operations. The internal control section sets forth general criteria to be considered in evaluating the work of internal and external auditors.

EXAMINATION PLANNING

Examiners assigned to review the international activities of the bank should work closely with commercial examiners, especially in those areas in which international and domestic activities have a direct relationship. This cooperation includes the pre-examination analysis of the bank and is intended to determine potential problem areas and provide for adequate staffing.

COMPUTER SERVICES

During an examination that covers information technology (IT) and electronic data processing (EDP) services, provided either in-house or externally, the examiner should review the contents of the IT and EDP report of examination to determine which sections may be applicable to international operations. An IT-EDP examiner will generally perform the procedures in this section and should be consulted on matters applicable to international operations.

ASSET AND LIABILITY MANAGEMENT

Asset and liability management (see section 4020.1) and interest-rate risk management (see section 4090.1) sections of the manual are completed by domestic examiners for the entire bank, based, in part, on information prepared by examiners assigned to various international banking activities. Whether applicable segments of these sections will be completed during overseas examinations depends on the type of overseas examination conducted.

BANK-RELATED ORGANIZATIONS

The domestic examiner assigned to bank-related organizations (see section 4050.1) obtains and circulates lists and information to the international examiner concerning bank-related organizations involved in international activities. Besides determining the legality of the relationships, the international examiner should verify the accuracy and completeness of the information obtained.

REVIEW OF REGULATORY REPORTS

The domestic examiner assigned to review regulatory reports (see section 4150.1) circulates the bank-prepared regulatory reports applicable to international operations. The international examiner will prepare any necessary comments on the appropriate report format and will discuss those comments with bank management.

LITIGATION AND OTHER LEGAL MATTERS, EXAMINATION-RELATED SUBSEQUENT EVENTS

The international examiner should request from bank management a list of pending or threatened litigation and subsequent events applicable to international operations of the bank. Comments in the report should be limited to events or transactions that could materially affect the soundness of the bank. (See section 4100.1.)

MANAGEMENT ASSESSMENT

The overall evaluation of the management of international operations should be made by the examiner assigned to review international operations who is in a position to identify the strengths and weaknesses of the management team. An appraisal of local management should

also be made if on-site examinations of foreign branches and subsidiaries are conducted.

OVERALL CONCLUSIONS REGARDING CONDITION OF THE BANK

The examiner-in-charge is typically responsible for overall conclusions regarding the condition of the bank. (See section 5020.1.) However, the examiner assigned to review international operations must use judgment in deciding which steps in this section should be omitted. For example, certain examination procedures relating to earnings, liquidity, and ownership apply to the entire bank and not to the international area alone. However, international examiners should assist domestic examiners in developing report comments when international activities have a significant impact on the analysis of these areas.

Acceptance. A time draft (bill of exchange or usance draft) drawn by one party and acknowledged by a second party. The drawee, known as the “acceptor,” stamps or writes the word “accepted” on the face of the draft and, above his or her signature, the place and date of payment. Once the draft is accepted, it carries an unconditional obligation on the part of the acceptor to pay the drawer the amount of the draft on the date specified. A *bank acceptance* is a draft drawn on and accepted by a bank. A *trade acceptance* is a draft drawn by the seller of goods on the buyer and accepted by the buyer. See also *Banker’s acceptance*.

Account-account dealing. Foreign-exchange dealing that involves settlement from bank to bank in the due from accounts. No third party (bank) is involved.

Account party. The party, usually the buyer, who instructs the bank to open a letter of credit and on whose behalf the bank agrees to make payment.

Ad valorem. A term meaning “according to value,” used for assessing customs duties that are fixed as a percentage of the value stated on an invoice.

Advance. (1) A drawing or payout of funds representing the disbursement of a loan, including disbursement in stages. (2) In international banking, an extension of credit, usually recurring, in which no instrument (other than a copy of the advice of an advance) is used as evidence of a specified indebtedness, except in special cases. A signed agreement must be on file in the department and state the conditions applicable to payments made to the borrower. This loan category does not include commercial account overdrafts, but an advance may be created to finance payments effected under a commercial letter of credit, to finance payments of collections, or to refinance a maturing loan.

Advance against documents. An advance made on the security of the documents covering a shipment.

Advised letter of credit. See *Letter of credit—advised*.

Advised line. A credit authorization that will be made known to the customer. See also *Guidance line*.

Affiliate. With regard to a member bank, any company (including corporate or other forms of a business entity) of which a member bank is a

subsidiary or any other subsidiary of that company.

After sight. When a draft bears this name, the time to maturity begins at its presentation or acceptance.

Agent bank. The bank that leads and documents a syndicated loan.

Aggregate limit. The total volume of unliquidated foreign-exchange contracts allowed to be outstanding at any one time.

Agreement corporation. A company chartered or incorporated under state law that, like an Edge Act corporation, is principally engaged in international banking. See also *Edge Act*.

Allocated transfer-risk reserve (ATRR). The ATRR is a special reserve established and maintained for specified international assets pursuant to the International Lending Supervision Act of 1983.¹ At least annually, the Federal Reserve and the other federal banking agencies (federal banking agencies) determine jointly—

- which international assets that are subject to transfer risk warrant establishment of an ATRR,
- the amount of the ATRR for the specified assets, and
- whether an ATRR previously established for specified assets may be reduced.

When determining whether an ATRR is required for particular international assets, the federal banking agencies consider if the quality of a banking institution’s assets has been impaired by a protracted inability of public or private obligors in a foreign country to make payments on their external indebtedness, as indicated by factors as to—

- whether such obligors have failed to make full interest payments on external indebtedness, or
- whether such obligors have failed to comply with the terms of any restructured indebtedness, or
- whether a foreign country has failed to comply with any International Monetary Fund or other suitable adjustment program, or
- whether no definite prospects exist for the orderly restoration of debt service.

1. See 12 USC 3904(a). See also the Board’s January 9, 2003, approval of a revision to subpart D (on international lending supervision) of Regulation K (12 CFR 211), International Banking Operations (69 *Fed. Reg.* 1158–1161).

Also, when determining the amount of the ATRR, the federal banking agencies consider—

- the length of time the quality of the asset has been impaired,
- what recent actions have been taken to restore debt-service capability,
- the prospects for restored asset quality, and
- any other factors relevant to the quality of the asset.

The initial year's provision for the ATRR will be 10 percent of the principal amount of each specified international asset, or such greater or lesser percentage determined by the federal banking agencies. Additional provisions, if any, in subsequent years will be 15 percent of the principal amount of each specified international asset, or such greater or lesser percentage determined by the federal banking agencies.

The ATRR is established only by a charge to current income. The amounts charged cannot be included in the banking institution's capital or surplus. (For these and other requirements, as well as for certain other accounting procedures for the ATRR, the reporting and disclosure of international assets, and the accounting for fees on international loans, see sections 211.43, 211.44, and 211.45 of Regulation K.) A banking institution does not have to establish an ATRR if it writes down in the period in which the ATRR is required, or has written down in prior periods, the value of the specified international assets in the requisite amount for each such asset.

Amortizing swap. A transaction in which the notional value of the agreement declines over time.

Appreciation. A rise in the value of a currency relative to the market of another currency.

Arbitrage. Simultaneous buying and selling of foreign currencies, securities, or commodities to realize profits from discrepancies between exchange rates prevailing at the same time in different markets, between forward margins for different maturities, or between interest rates prevailing at the same time in different markets or currencies.

Asian currency unit. A foreign-exchange trading department of a bank located in Singapore that has received a license from the monetary authority in that country to deal in external currencies.

Asked price. The price sought by any prospec-

tive seller of an asset or the price at which a market maker of an asset will sell.

Assignment. The transfer in writing by one person to another of title to personal property. In banking, one bank may assign another the right to receive loan principal and interest from a borrower. The assignment of stocks or registered bonds may be effected by filling in the form printed on the reverse of the certificate.

Association of International Bond Dealers (AIBD). A private association founded in Zurich, Switzerland, in 1969 to establish uniform issuing and trading procedures in the international bond markets.

At sight. A term indicating that a negotiable instrument is payable upon presentation or demand.

At the money. A term used to refer to a call or put option whose strike price is equal (or virtually equal) to the current price of the asset on which the option is written.

Authority to pay. An advice from a buyer, sent by his or her bank to the seller's bank, authorizing the seller's bank to pay the seller's (exporter's) drafts up to a fixed amount. The seller has no protection against cancellation or modification of the instrument until the issuing bank pays the drafts drawn on it, in which case the seller is no longer liable to its bank. These instruments are usually not confirmed by the seller's American bank.

Authority to purchase. Similar to an authority to pay, except that drafts under an authority to purchase are drawn directly on the buyer. The correspondent bank purchases them with or without recourse against the drawer and, as in the case of the authority to pay, they are usually not confirmed by an American bank. This type of transaction is unique to Far Eastern trade.

Baker Plan. Proposed in 1985, this initiative encouraged banks, the International Monetary Fund, and the World Bank to jointly increase lending to less developed countries (LDCs) that were having difficulty servicing their debt, provided the countries undertook prudent measures to increase productive growth.

Balance of payments. A term indicating a nation's external cash flow (to other countries, whether positive or negative) for a given period of time, including trade, current financial, and capital inflows and outflows.

Balance of trade. The difference between a country's total imports and total exports for a

given period of time. A “favorable” balance of trade exists when exports exceed imports.

Band. The maximum range that a currency may fluctuate from its parity with another currency or group of currencies by official agreement.

Bank for International Settlements (BIS). Established in 1930 in Basel, Switzerland, the BIS is the oldest functioning international financial organization. It provides a forum for frequent consultation among central bankers on a wide range of issues.

Banker's acceptance. A time draft that has been drawn on and accepted by a bank. The bank accepting the time bill becomes primarily liable for payment. See also *Acceptance*.

Banker's acceptance liability. The moment the draft is accepted by the bank, a direct liability is recorded in its “Acceptances Executed” account. The contra account on the asset side of the balance sheet is “Customer's Liability on Acceptances.” On the date of maturity of the banker's acceptance, the bank charges the customer's account and retires the acceptance by paying the beneficiary or drawee of the draft. The bank's liability records at this point are liquidated, and the transaction is completed.

Barter. The exchange of commodities using merchandise as consideration instead of money. This scheme has been employed in recent years by countries that have blocked currencies.

Base rate. A rate used as the basis or foundation for determining the current interest rate to be charged to a borrower, such as the prime rate or London Interbank Offered Rate (LIBOR).

Basel Capital Accord. An agreement among the central banks of leading industrialized countries, including those of Western Europe, Canada, the United States, and Japan, to impose common capital requirements on their internationally active banks to take into account bank risk exposure.

Basis. The cash or spot price minus the futures price.

Basis risk. The risk associated with nonparallel movement of interest rates. Banks face exposure in two situations. The first occurs when an operator uses, for example, a Treasury bill to hedge an interest-rate risk in Eurodollars. The interest rates for T-bills and Eurodollars do not always move exactly parallel to each other. The risk of this lack of parallel movement is basis risk. The second occurs when the period of time for which a financial risk exists is not identical with the period of time for which the

hedge is arranged, for example, when a three-month interest risk in a revolving Eurodollar loan is hedged with a six-month futures contract in Eurodollars. A change in the shape of the yield curve can bring about nonparallel movements in interest rates for the two different maturities.

Basis swap. A transaction in which one participant pays a floating rate of interest based on one index, and the other party pays a floating rate of interest based on another interest-rate index.

Beneficiary. The person or company in whose favor a letter of credit is opened or a draft is drawn.

Bid-asked spread. The difference between a bid and the asked price, for example, the difference between 0.4210 and 0.4215 would be a spread of 0.0005 or 5 points.

Bid rate. The price at which the quoting party is prepared to purchase a currency or accept a deposit. If the bid rate is accepted by the party to whom it was quoted, then that party will sell currency or place or lend money at that price. The opposite transaction takes place at the offer rate.

Bilateral trade. Commerce between two countries, usually in accordance with specific agreements on amounts of commodities to be traded during a specific period of time. Balances due are remitted directly between the two nations.

Bill of exchange. An instrument by which the drawer orders another party (the drawee) to pay a certain sum to a third party (the payee) at a definite future time. The terms “bill of exchange” and “draft” are generally interchangeable.

Bill of lading. A receipt issued by a carrier to a shipper for merchandise delivered to the carrier for transportation from one point to another. A bill of lading serves as a receipt for the goods, document of title, and contract between the carrier and the shipper covering the delivery of the merchandise to a certain point or designated person. It is issued in two primary forms: an “order bill of lading,” which provides for the delivery of goods to a named person or to his or her order (designee), but only on proper endorsement and surrender of the bill of lading to the carrier or its agents, and a “straight bill of lading,” which provides for delivery of the goods only to the person designated by the bill of lading.

• **Clean bill of lading.** A bill of lading in which the described merchandise has been received

in “apparent good order and condition” and without qualification.

- *Ocean bill of lading.* A document signed by the captain, agents, or owners of a vessel furnishing written evidence for the conveyance and delivery of merchandise sent by sea. It is both a receipt for merchandise and a contract to deliver it as freight.
- *Order bill of lading.* A bill of lading, usually drawn to the order of the shipper, that can be negotiated like any other negotiable instrument.
- *Order “notify” bill of lading.* A bill of lading usually drawn to the order of the shipper or a bank with the additional clause that the consignee is to be notified upon arrival of the merchandise. However, the mention of the consignee’s name does not confer title to the merchandise.
- *Stale bill of lading.* A bill of lading that has not been presented under a letter of credit to the issuing bank within a reasonable time after its date, thus precluding its arrival at the port of discharge by the time the ship carrying the related shipment has arrived.
- *Straight bill of lading.* A bill of lading drawn directly to the consignee and therefore not negotiable.
- *Through bill of lading.* A bill of lading used when several carriers are used to transport merchandise, for example, from a train to a vessel or vice versa.
- *Unclean bill of lading.* A bill of lading across the face of which exceptions to the receipt of goods “in apparent good order” are noted. Examples of exceptions include burst bales, rusted goods, and smashed cases.

Black market. A private market that operates in contravention of government restrictions.

Blocked account. An account from which payments, transfers, withdrawals, or other dealings may not be made without Office of Foreign Asset Control (OFAC) or U.S. Treasury Department approval. Although the bank is prohibited from releasing funds from these accounts, deposits may be accepted. Banks are subject to significant fines for releasing funds from blocked accounts. See also *Office of Foreign Asset Control*, *Specially designated nationals*.

Blocked currency. A currency that is prohibited by law from being converted into another foreign currency.

Book-entry form. The method by which marketable securities are issued with the buyer receiving only a receipt rather than an engraved

certificate, which indicates that the purchase is recorded on the issuer’s books or recorded in another approved location.

Brady Plan. Proposed in 1989 and named after then U.S. Treasury Secretary Nicholas Brady, the Brady Plan sought to reduce the debt-service requirements of various developing countries and to provide new loans (Brady bonds) to service existing obligations.

Break-even exchange rate. The particular spot exchange rate that must prevail at the maturity of a deposit or debt in a foreign currency (which has not been covered in the forward market) so that there will be no advantage to any party from interest-rate differentials.

Bulldog bonds. British pound sterling-denominated foreign bonds issued in London.

Bullion. Unminted precious metals (gold, silver) of standard or stipulated fineness in the form of bars, ingots, or nuggets. The value of gold bullion, usually in bars, used in the settlement of international balances is determined by weight and degree of fineness.

Buyer’s option contract. A contract in which the buyer has the right to settle a forward contract at any time within a specified period. See also *Option contracts*.

Buying rates. Rates at which foreign-exchange dealers will buy a foreign currency from other dealers in the market and at which potential sellers are able to sell foreign exchange to those dealers.

C & I loans. Commercial and industrial loans.

Cable. A message sent and delivered by an international record carrier via satellite or cable connections to a foreign country. “Cable” as used in the international sections also includes messages transmitted by bank telex. The terms “cable” and “telex” are generally used interchangeably.

Call money. Funds placed with a financial institution without a fixed maturity date. The money can be “called” (withdrawn) at any time by telephone. “Same day” call money means the call must (usually) be made before 10:00 a.m. In addition, “24-hour,” “48-hour,” and “7-day” call money means the money must be called one, two, or seven calendar days before the actual payment date. Although these are the most common varieties of call money, two parties can agree on different dates.

Call option. A contract giving the purchaser the right, but not the obligation, to buy an asset at a stated price on or before a stated date.

Capital controls. Governmental restrictions

on the acquisition of foreign assets or foreign liabilities by domestic citizens or restrictions on the acquisition of domestic assets or domestic liabilities by foreign citizens.

Cedel. Formerly one of the two main clearing systems in the Eurobond market, Cedel, based in Luxembourg, began operations in 1971. Cedel ceased to exist as an independent entity as part of a merger with Clearstream International clearinghouse in 2000. The merger was completed in 2002.

Central bank intervention. Direct action by a central bank to increase or decrease the supply of currency to stabilize prices in the spot or forward market or to move them in a desired direction. On occasion, the announcement of an intention to intervene might achieve the desired results.

Certificate of inspection. A document often required for shipment of perishable goods in which certification is made as to the good condition of the merchandise immediately before shipment.

Certificate of manufacture. A statement, sometimes notarized, by a producer who is usually also the seller of merchandise that manufacture has been completed and that goods are at the disposal of the buyer.

Certificate of origin. A document issued by the exporter certifying the place of origin of the merchandise to be exported. The information contained in this document is needed primarily to comply with tariff laws that may extend more favorable treatment to products of certain countries.

Chain. A method of calculating cross rates. For example, if a foreign-exchange trader knows the exchange rate for Japanese yen against U.S. dollars and for Swiss francs against U.S. dollars, the “chain” makes possible a calculation of the cross rates for Japanese yen against Swiss francs.

Charges forward. A banking term used when foreign and domestic bank commission charges, interest (if any), and government taxes in connection with the collection of a draft are for account of the drawee.

Charges here. A banking term used when foreign and domestic bank commission charges, interest (if any), and government taxes in connection with the collection of a draft are for account of the drawer.

Charter party. A contract, expressed in writing on a special form, between the owner of a vessel and the one (the charterer) desiring to employ the vessel, setting forth the terms of the arrangement, such as freight rate and ports

involved in the trip contemplated.

Chicago Board of Trade (CBT). A futures exchange that merged with the Chicago Mercantile Exchange in 2007 and ceased to exist as an independent entity.

Chicago Board Options Exchange (CBOE). An options exchange in which European foreign-currency options on spot exchange are traded.

Chicago Mercantile Exchange (CME). A futures exchange.

Clean collection. A collection in which a draft or other demand for payment is presented without additional attached documentation.

Clean draft. A sight or time draft to which no other documents, such as shipping documents, bills of lading, or insurance certificates, are attached. This is to be distinguished from a documentary draft. See also *Documentary draft*.

Clean risk at liquidation. A type of credit risk that occurs when exchange contracts mature. There may be a brief interval (usually no more than a few hours) during which one of the parties to the contract has fulfilled its obligations, but the other party has not. During this period, the first party is subject to a 100 percent credit risk, on the chance that, in the interval, an event may prevent the second party from fulfilling its obligations under the contract.

Clearing corporation. A clearinghouse that exists as an independent corporation rather than as a subdivision of an exchange.

Clearinghouse. A subdivision of an exchange or an independent corporation through which all trades must be confirmed, matched, and settled daily until offset.

Clearinghouse funds. Funds used in settlement of a transaction that are available for use or that become good funds after one business day.

Clearing House Interbank Payments System (CHIPS). A computerized telecommunications network provided by the New York Clearing House Association (NYCHA), which serves as an automated clearinghouse for interbank funds transfers.

Closing a commitment. Allowing a covered foreign-exchange position to expire on maturity or reversing it before maturity by a swap operation.

Closing a position. Covering open long or short positions by means of a spot operation and/or outright forward operation.

Comanager. A bank ranking just below that of lead manager in a syndicated Eurocredit or an international bond issue. The status of comanager usually indicates a larger share in the

loan or a larger bond allotment, and a larger share in the fees, than banks of lower rank. Comanagers may also assist the lead managers in assessing the market or determining terms of the loan.

Combined transport document. A through bill of lading that applies to more than one mode of transport.

Commercial paper. A short-term, unsecured debt instrument issued by a corporation and sold at a discount from its maturity value.

Commercial transaction. A transaction between a dealing bank and a nonbanking (commercial) party.

Commodities Futures Trading Commission (CFTC). A U.S. regulatory body that regulates exchange-based futures trading in the United States.

Commodity Credit Corporation (CCC). An instrument of the federal government whose principal purpose is to provide the necessary financial services to carry forward the public price-support activities, including government lending, purchasing, selling, storing, transporting, and subsidizing certain agricultural commodities.

Common carrier. An individual, partnership, or corporation, such as a shipping line, railroad, or airline, that undertakes for hire to transport persons or commodities from place to place. Governed by special laws, common carriers must accept all business offered them under their regulations.

Compromises. Occasions when both parties agree to alter the terms of an existing foreign-exchange contract. These alterations should be approved by an impartial bank officer and the operations personnel must be advised of each compromise to avoid settlement in accordance with the original terms.

Confirmation. The written communication to the counterparty in a foreign exchange, inter-bank deposit, or other money market transaction that recites all the relevant details agreed upon by phone or telex.

Confirmed letter of credit. See *Letter of credit*.

Consignment. The physical transfer of goods from a seller (consignor), with whom the title remains, to another legal entity (consignee), who acts as a selling agent, selling the goods and remitting the net proceeds to the consignor.

Consular documents. Bills of lading, certificates of origin, or special forms of invoice that carry the official signature of the consul of the country of destination.

Consular invoice. A detailed statement on the character of goods shipped, which is duly certified by the consul at the port of shipment. Required by certain countries, including the United States, its principal function is to accurately record the types of goods and their quantity, grade, and value for import duty and general statistical purposes.

Contract limit. A maximum limit on the total gross notional principal amount of outstanding contracts booked with one customer.

Contract risk (counterparty risk). Risk that the counterparty will default before settlement.

Convertibility. Freedom to exchange a currency, under certain circumstances, without government restrictions or controls.

Correspondent bank. A bank located in one geographic area that accepts deposits from a bank in another region and provides services on behalf of this other bank. Internationally, many banks maintain one account with a correspondent bank in each major country to be able to make payments in all major currencies. Correspondent banks are usually established on a reciprocal basis.

Cost, insurance, and freight (C.I.F.). A price quotation under which the seller defrays all expenses involved in the delivery of goods.

Counterpart funds. Local currencies deposited in a special account by recipient governments that represent grant aid extended by another government. Those funds, while remaining the property of the recipient government, can generally be used only by agreement of the donor government.

Country exposure. A measurement of the volume of assets and off-balance-sheet items considered to be subject to the risk of a given country. This measurement is based, in part, on identifying the country of domicile of the entity ultimately responsible for the credit risk of a particular transaction.

Country limit. The amount of money that a bank has established as the maximum it is willing to lend borrowers in a given country regardless of the type of borrower or the currencies involved.

Country risk. Refers to the spectrum of risks arising from the economic, social, and political environment of a given foreign country, which could have favorable or adverse consequences for foreigners' debt and/or equity investments in that country.

Cover. The execution of an offsetting foreign-

exchange trade to close or eliminate an open exposure.

Covered interest arbitrage. The process of taking advantage of a disparity between the net accessible interest differential between two currencies and the forward exchange premium or discount on the two currencies against each other.

Crawling peg system. An exchange-rate system in which the exchange rate is adjusted every few weeks, usually to reflect prevailing inflation rates.

Credit risk. The possibility that the buyer or seller of foreign exchange or some other traded instrument may be unable to meet his or her obligation on maturity.

Credit swap. A link transaction wherein one party places a deposit in one currency (probably dollars) with a foreign bank during the period that the foreign bank lends another currency to a third party. The deposit serves as an inducement for the transaction, and its value is considered in pricing the loan.

Cross-border exposure. The risk that arises when an office of a bank, regardless of its location or currency, extends credit to a borrower that is located outside the booking unit's national border.

Cross-currency risk. The risk associated with maintaining exchange positions in two foreign currencies as the result of one transaction. For example, if a U.S. operator borrows Swiss francs at 5 percent and invests the proceeds in British pounds at 12 percent, the cross-currency risk is the chance that the pounds will depreciate in value against the Swiss francs to such an extent that there will be a loss on the transaction in spite of the favorable interest-rate differential.

Cross-default. A term used to describe a clause in a syndicated loan or bond contract that gives the lender the right to accelerate repayment of the loan if the borrower defaults on another loan.

Cross-hedging. The hedging of an asset with a futures contract of a different asset.

Cross rate. The ratio between the exchange rates of two foreign currencies in terms of a third currency.

Currency futures and options contracts. An agreement that allows businesses or individuals acquiring or selling foreign currencies to protect themselves against future fluctuations in currency prices by shifting currency risk to someone willing to bear that risk.

Currency liquidity. In a multicurrency investment portfolio, the liquidity of a given foreign

currency has to be viewed in terms of exchange liquidity and instrument liquidity. Exchange liquidity depends on the ease with which a currency can be converted into and out of another major currency. Instrument liquidity depends on the ease with which a negotiable instrument denominated in that currency can be purchased and sold without noticeably affecting the market rate for that instrument.

Currency swap. A contractual obligation entered into by two parties to deliver a sum of money in one currency against a sum of money in another currency at stated intervals (or a stated interval) or according to negotiated terms. See *Swap*.

Current account. Those items in the balance of payments involving imports and exports of goods and services as well as unilateral transfers.

Customs union. An agreement between two or more countries in which they arrange to abolish tariffs and other import restrictions on each other's goods and to establish a common tariff for the imports of all other countries.

Date draft. A draft drawn to mature on a fixed date, regardless of its acceptance.

Daylight limit. The maximum net foreign-exchange position that a bank will allow during business hours.

Dealer (or trader). A person who executes foreign-exchange, interbank deposit, or other money market trades for a dealing bank.

Debt for equity swaps. Debt (usually LDC government debt) that is discounted and exchanged for equity in local businesses (often newly privatized).

Debt swaps. The exchange of LDC loans based on the prices quoted in the secondary market. Swaps are often used to decrease exposure to certain countries.

Default risk. The risk to the holder of debt securities that a borrower will not meet all promised payments at the times agreed upon.

Del credere agent. A sales agent who, for a certain percentage above his or her sales commission, guarantees payment to the person for whom he or she is selling on shipments made to the seller's customers.

Delivery. The offset of an obligation to buy or sell an asset by an actual transfer of title to the asset at a prearranged price. In the futures market, the transfer or receipt of a cash instrument against a short or long futures contract.

Delivery order. An order addressed to the holder of goods and issued by anyone who has

authority to do so, that is, by one who has the legal right to order delivery of merchandise. A delivery order is not considered a good titled document.

Delivery risk. The possibility that a seller of foreign exchange, having collected the payment in local currency, may fail to deliver the exchange in the foreign center where it was sold. Also called settlement risk.

Delta of an option. The rate of change of the value of an option with respect to the price of the underlying asset, reference rate, or index evaluated at the current market price of that underlier.

Demand draft. A draft that is payable immediately upon presentation to the drawee. This type of draft is also termed a “sight” or “presentation” draft.

Deposit dealer. A term used in the United States for bank personnel responsible for lending and borrowing funds in the interbank market.

Deposit trader. A term used in Europe for bank personnel responsible for lending and borrowing funds in the interbank market.

Depreciation. A drop in the value of a currency relative to the value of another currency.

Depth of the market. The amount of currency that can be traded in the market at a given time without causing a price fluctuation. Thin markets are usually characterized by wide spreads and substantial price fluctuations during a short period of time. Strong markets tend to be characterized by relatively narrow spreads of stable prices.

Derivative instrument. An instrument that is based on or derived from the value of an underlying asset, reference rate, or index. For example, interest-rate futures are based on various types of securities trading in the cash market. Some interest-rate options are derived from interest-rate futures.

Devaluation. An official act wherein the official parity of a country’s currency is adjusted downward to the dollar, gold, Special Drawing Rights (SDRs), or another currency. After a devaluation, there are more devalued currency units relative to the dollar, gold, SDRs, or other currency. See also *Revaluation*.

Development bank. A lending agency that provides assistance to encourage economic development.

Direct quote. The method of quoting fixed units of foreign exchange in variable numbers of the local currency unit. Also called a “fixed” or “certain” quotation.

Dirty float (or Managed float). A floating

exchange-rate system in which some government intervention still takes place. A government may announce that it will let its currency float, that is, it will let the currency’s value be determined by the forces of supply and demand in the market. The government, however, may secretly allow its central bank to intervene in the exchange market to avoid too much appreciation or depreciation of the currency.

Discount.

- *Lending*—To subtract from a loan, when it is first made, the amount of interest that will be due when it is repaid.

- *Foreign exchange*—The amount by which the forward exchange rate of one currency against another currency is less than the spot exchange rate between the two currencies.

- *Financial*—A deduction from the face value of commercial paper, such as bills of exchange and acceptances, in consideration of cash the seller has received before the maturity date. The rates of discount vary according to the state of the given money market, the financial standing of the persons involved, and other circumstances surrounding the transaction.

- *Commercial*—An allowance from the quoted price of goods, usually made by the deduction of a certain percentage from the invoice price.

Discount rate. Most commonly the rate at which a Federal Reserve Bank (or, in many instances, foreign central banks) is prepared to lend to financial institutions against eligible collateral.

Dishonor. Refusal on the part of the drawee to accept a draft or to pay it when due.

Divergence indicator system. One aspect of the European Monetary System that measures the departure of a country’s economic policies from the European Union’s “average.” The measure of divergence is based exclusively on the movement of a country’s exchange rate with respect to the euro.

Dock receipt. A receipt issued by an ocean carrier or its agent for merchandise delivered at its dock or warehouse that is awaiting shipment.

Documentary collection. A collection in which a draft is accompanied by shipping or other documents.

Documentary credit. A commercial letter of credit providing for payment by a bank to the named beneficiary, who is usually the seller of merchandise, against delivery of documents specified in the credit.

Documentary draft. A draft to which docu-

ments are attached, that is delivered to the drawee upon acceptance or payment of the draft and that ordinarily controls title to the merchandise.

Documents. The shipping and other papers customarily attached to foreign drafts, consisting of ocean bills of lading, marine insurance certificates, and commercial invoices. Certificates of origin and consular invoices may also be required.

Documents against acceptance (D/A). Instructions given by an exporter to a bank that the documents attached to a draft for collection are deliverable to the drawee only against his or her acceptance of the draft.

Documents against payment (D/P). Instructions given by an exporter to his or her bank that the documents attached to a draft for collection are deliverable to the drawee only against his or her payment of the draft.

Domestic bond. A domestic debt security sold by an issuer in its own country and denominated in that country's currency.

Domicile. The place where a draft or acceptance is made payable.

Draft. An order in writing signed by one party (the drawer) requesting a second party (the drawee) to make payment at a determinable future time to a third party (the payee). It may be accompanied by a bill of lading, which the bank will surrender to the buyer upon payment of the draft. The buyer may then claim the goods at the office of the carrier who transported them to the buyer's place of business. See also *Sight draft* or *Time draft*.

Dragon bond. A bond issued by a foreign borrower in an Asian or Pacific country (excluding Japan—see *Samurai bond*).

Drawee. The addressee of a draft, that is, the person on whom the draft is drawn.

Drawer. The issuer or signer of a draft.

Duration. A time-weighted present-value measure of the cash flow of a loan or security that takes into account the amount and timing of all promised interest and principal payments associated with that loan or security.

Duty. (1) Ad valorem duty (according to the value) is an assessment at a certain percentage rate on the actual value of an article. (2) Specific duty is an assessment on the weight or quantity of an article without reference to its monetary value or market price. (3) Drawback is a recovery in whole or in part of duty paid on imported merchandise at the time of reexportation, whether in the same or different form.

Edge Act. Incorporated as section 25A of the Federal Reserve Act, this act authorizes the Board of Governors to charter corporations (Edge corporations) for the purpose of engaging in international or foreign banking or in other international operations.

Eligible acceptance. A banker's acceptance that meets Federal Reserve requirements related to its financing purpose and term.

Eligible value date. A normal business day on which a payment to settle a money market transaction can be made. An eligible value date for a foreign-exchange transaction must be a business day in the home countries of both of the currencies involved.

Engineered swap transaction. A spot transaction and an offsetting forward transaction in which each of the two transactions is carried out with a different party.

Eurobank. A bank that regularly accepts foreign currency-denominated deposits and makes foreign-currency loans.

Eurobonds. Long-term debt securities denominated in a currency other than that of the country or countries where most or all of the security is sold.

Euroclear. Euroclear Clearance System Limited is one of two main clearing systems in the Eurobond market. Euroclear, which began operations in December 1968, is located in Brussels and managed by Euroclear Bank SA. See also *Cedel*.

Eurocurrency. The nonresident ownership of one of the major western European currencies. Eurocurrencies, similar to Eurodollars, are frequently available for borrowing in the London Interbank Market.

Eurocurrency market. The money market for borrowing-and-lending currencies that are held in the form of deposits in banks located outside the countries in which those currencies are issued as legal tender.

Eurodollars. Dollar deposit claims on U.S. banks that are deposited in banks located outside the United States, including foreign branches of U.S. banks. These claims, in turn, may be redeposited with banks or lent to companies, individuals, or governments outside the United States.

Eurodollar deposit rate. The interest rate at which a quoting bank is willing to take wholesale Eurodollar funds with a particular maturity from other than an interbank participant. The rate is usually one-eighth to one-sixteenth of one percent lower than LIBOR.

European Currency Unit (ECU). A portfolio currency used in the European Monetary System as a community “average” exchange rate. It was also used in the private market as a means of payment and as a currency of denomination for lending, borrowing, and trade. On January 1, 1999, the euro replaced the ECU.

European Monetary System (EMS). An arrangement introduced in March 1979 for economic and monetary cooperation among the members of the European Union. The ultimate aim of the EMS is a single European currency and the establishment of a European central bank.

European Union (EU). Formerly the European Community, an economic association of European countries founded by the Treaty of Rome in 1957. The goals of the EU are the removal of trade barriers among countries, the formation of a common commercial policy toward non-EU countries, and the removal of barriers restricting competition and the free mobility of factors of production. Members include Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

Exchange contracts. Documents issued by foreign-exchange dealers, banks dealing in foreign exchange, and foreign-exchange brokers confirming foreign-exchange transactions.

Exchange control or restrictions. Limits on free dealings in foreign exchange or of free transfers of funds into other currencies and other countries.

Exchange control risk. The possibility of defaults on obligations by imposing or reinforcing exchange control.

Exchange-rate differential. The difference between two exchange rates in a swap transaction.

Exchange rates. The price of one currency in terms of another. See also *Spot exchange*, *Buying rates*, *Fixed rate of exchange*, *Floating rate*, and *Interbank rate of exchange*.

Exchange reserves. The total amount of freely convertible foreign currencies held by a country’s central bank.

Exchange risk. The possibility of a loss on an open position as a result of an appreciation or depreciation of the exchange.

Exercise. The use of the right given by an option: purchase (if a call) or sale (if a put) of an

asset at the strike price stated in the option contract.

Exit bonds. Low-interest government bonds issued in LDCs that are equivalent to a portion of the country’s existing bank debt. Designed to facilitate debt management.

Expiration date. The last day on which an option may be exercised.

Export credit insurance. A system to insure the collection of credits extended by exporters against various contingencies. In some countries, only noncommercial risks can be insured.

Export declaration. A document required by the U.S. government for shipments abroad and used to maintain statistics on our exports.

Export-Import Bank of the United States (Eximbank). An institution that provides intermediate and long-term nonrecourse financing for U.S. exports when these facilities are not available from commercial banks. All of the Eximbank’s shares are held by the U.S. Treasury.

Export trading company (ETC). A company designed to facilitate U.S. exports. An ETC may be an affiliate of a bank holding company.

Fail. Nonperformance of an obligation on the specified day, for example, failure to make prompt settlement for either side of a foreign-exchange contract, usually due to a clerical or trader error. A fail usually leads to an interest adjustment for an overdraft in the paying or receiving bank.

F.A.S. See *Free alongside ship*.

Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). This act had various aims, including the least-cost resolution of troubled insured depository institutions, improvement of bank supervision and examinations, and provision of additional resources to the Bank Insurance Fund.

Federal funds. Deposits held by commercial banks at a Federal Reserve Bank. Since reserve requirements of commercial banks are satisfied by federal funds, banks with deposits in excess of required reserves will lend the excess deposits to banks with a reserve shortage at a market-determined interest rate, called the federal funds rate.

Federal Reserve System. The central bank of the United States, created by the Federal Reserve Act of 1913, consisting of the Board of Governors in Washington, D.C., and 12 regional Federal Reserve Banks. The Federal Reserve controls the country’s monetary base and has the power to set reserve requirements, conduct open-market operations, and lend directly to banks.

Fedwire. The large-value payment mechanism owned and operated by the Federal Reserve System. Fedwire provides depository institutions with real-time settlement in the central bank of funds transfers and book-entry securities transfers made for their own account or on behalf of their customers.

Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA). The purpose of this act was to reform, recapitalize, and consolidate the federal deposit insurance system and to enhance the regulatory and enforcement powers of federal financial institutions' regulatory agencies.

Fixed exchange-rate system. A system in which the exchange rate of a country's currency is tied to one major currency, such as the U.S. dollar.

Fixed rate of exchange. A rate of exchange set by a foreign government relative to the dollar, gold, another currency, or perhaps Special Drawing Rights. It remains in effect as long as that government is willing or able to buy and sell at the set rates.

Fixed-rate payer. A position applicable to a rate swap, in which the fixed payer pays the fixed rate and receives the floating rate.

Flexible rate of exchange. A rate of exchange subject to relatively frequent changes. It is determined by market forces but subject to various floors or ceilings relative to the dollar, gold, Special Drawing Rights, or another currency when the rate fluctuates beyond certain parameters.

Floating exchange-rate system. A system in which the values of the currencies of various countries relative to each other are established by supply and demand forces in the market without government intervention.

Floating rate. A rate of exchange that is determined completely by market forces, with no floor or ceiling vis-a-vis the dollar, gold, Special Drawing Rights, or another currency.

Floating-rate notes. Bonds that pay interest at an agreed margin above a market reference rate. The interest rate varies according to variations in the market reference rate.

Floating-rate payer. A position applicable to a rate swap, in which the floating payer pays the floating rate and receives the fixed rate.

F.O.B. See *Free on board (destination or vessel)*.

Foreign Bank Supervision Enhancement Act (FBSEA). Part of the FDIC Improvement Act of 1991, FBSEA expanded the supervisory author-

ity of the Federal Reserve over the U.S. operations of foreign banks.

Foreign bonds. Bonds issued by nonresidents but underwritten primarily by banks registered in the country where the issue is made.

Foreign Credit Insurance Association (FCIA). An insurance company established under the auspices of Eximbank. Insurers trade credits granted by U.S. suppliers of products to purchasers abroad who qualify as normal risks. The insurance protects the exporter, up to an agreed percentage, against any nonpayment resulting from commercial or political risks, or both. Eximbank provides reinsurance for the entire portion of the commercial credit risk and is the sole insurer of the political risk.

Foreign currency. The currency of any foreign country that is the authorized medium of circulation and the basis for recordkeeping in that country. Foreign currency is traded by banks either by the actual handling of currency and checks or by the establishment of balances in foreign currencies with banks in those countries.

Foreign deposits. Those deposits that are payable at a financial institution outside the jurisdiction of the U.S. government and in the currency of the country in which the depository is located. See also *Nostro account*.

Foreign draft. An official bank order drawn on a foreign correspondent bank to pay on demand to a designated payee a specific sum of foreign money or U.S. dollars at the drawee's buying rate.

Foreign exchange. The trading or exchange of a foreign currency in relation to another currency.

Foreign-exchange futures contracts. Standardized contracts traded on an organized futures exchange and settled through the clearinghouse of the exchange. Each contract defines the currencies, contract amounts, and delivery dates for its own contracts.

Foreign-exchange market. Communications between dealers and brokers to transact wholesale business in foreign exchange and Eurocurrencies.

Foreign-exchange rationing. A government requirement that all holders of bills of exchange relinquish them at a stipulated rate.

Foreign-exchange reserves (official). The reserves maintained by a central bank, which usually include gold and easily traded currencies of major industrial nations.

Foreign-exchange risk. The risk associated

with exposure to fluctuation in spot exchange rates.

Foreign Investment Advisory Service (FIAS). Established in 1986, FIAS counsels developing countries on attracting foreign capital. FIAS operates under the aegis of the World Bank and its affiliates, the International Finance Corporation and the Multilateral Investment Guarantee Agency.

Foreign trade zone. An area where goods may be received and stored without entering a country's customs jurisdiction and without paying duty. Sometimes called a "free trade zone."

Forward book. The aggregate of all forward contracts for a given currency or all currencies.

Forward contract. A contract that obligates one party to sell and another to buy a specific asset for a specified price at a designated time.

Forward discount ("at a forward discount"). A phrase used to describe a currency whose forward price is cheaper than its spot price.

Forward exchange. Foreign currency traded for settlement beyond two working or business days from today.

Forward exchange position. The long or short position that a dealer may have in the forward market, as compared to spot dealing.

Forward exchange risk. The possibility of a loss on a covered position as a result of a change in the swap margin.

Forward-forward dealing. The simultaneous purchase and sale of a currency for different forward dates.

Forward premium ("at a forward premium"). A phrase used to describe a currency whose forward price is more expensive than its spot price.

Forward purchase. An outright purchase of a forward contract.

Forward rates. The actual rates at which foreign exchange for future delivery are quoted, bought, and sold.

Forward swap. A transaction in which the initial fixed- and floating-rate payments are deferred until a future period of time.

Forward transaction date. Value dates that are more than two business days following the trade date. Regular forward dates are 30, 60, and 90 days from the trade date.

Free alongside ship (F.A.S.). A term for a price quotation under which the seller delivers merchandise free of charge to the steamer's side and pays lighterage expenses up to that destination, if necessary.

Free on board (F.O.B.) (destination). A term

for a price quotation under which the seller undertakes at his or her risk and expense to load the goods on a carrier at a specified location. Expenses subsequent thereto are for account of the buyer.

Free on board (F.O.B.) (vessel). A term for a price quotation under which the seller delivers the goods at his or her expense on board the steamer at the location named. Subsequent risks and expenses are for account of the buyer.

Free port. A foreign trade zone, open to all traders on equal terms, where merchandise may be stored duty-free pending its reexport or sale within that country.

Free trade area. An arrangement between two or more countries for free trade among themselves, although each nation maintains its own independent tariffs toward nonmember nations. It should not be confused with "free trade zone," which is synonymous with "foreign trade zone."

Fungible securities. Securities that are not individually designated by serial number as belonging to a particular owner. Instead, a clearing system or depository institution credits owners with a given number of a particular bond issue (or other security issue). The owner may have title to 50 bonds, but not to 50 specific bonds with designated serial numbers.

Futures commission merchant (FCM). A firm that is registered with the CFTC and legally authorized to solicit or accept orders from the public for the purchase or sale of futures contracts. Acts as an intermediary between a public customer and a floor broker.

Futures contract. An exchange-traded contract in which one party agrees to buy a security and another agrees to sell a security in the future. If held until maturity, the futures contract may involve accepting (if long) or delivering (if short) the asset on which the futures price is based.

Futures market. A market in which contracts are traded for future delivery of commodities, currencies, and financial instruments. The purchase or sale of a futures contract requires that a deposit, called margin, be maintained with a broker. The market is designed in such a way that it is easy to get out of a contract or cancel. The vast majority of participants, the buyers and sellers of futures contracts, do not intend to take delivery or deliver what they bought or sold. Futures contracts are used as an investment vehicle and as a vehicle for hedging positions.

G-10 countries. The informal term for the

Group of 10 countries, which consists of Belgium, Canada, France, Germany, Italy, Japan, Luxembourg, the Netherlands, Sweden, the United Kingdom, and the United States. Switzerland joined in 1984, but the name remains as is.

Gap. The period, in foreign-exchange transactions, between the maturities for purchases and those for sales of each foreign currency (exchange gap). In money market transactions, the period between the maturities of placements (loans) and the maturities of borrowing (deposits) of each currency (money market gap). The former occurs when a currency is purchased against one currency and sold against another, each time for different maturities. The money market gap is created by lending an amount of a certain currency for a longer or shorter period than that for which the same currency is borrowed.

Global bond. A temporary debt certificate issued by a Eurobond borrower, representing the borrower's total indebtedness. The global bond will subsequently be replaced by individual bearer bonds.

Global line. A bank-established aggregate limit that sets the maximum exposure the bank is willing to have to any one customer on a worldwide basis. See also *Multicurrency line*.

Gray market. A forward market for newly issued bonds that takes the form of forward contracting between market participants during the period between the announcement day of a new issue and the day final terms of the bond issue are signed. Bonds are traded at prices stated at a discount of premium to the issue price.

Group of Eight (G-8). A group of industrialized countries comprising Canada, France, Germany, Italy, Japan, Russia, the United Kingdom, and the United States.

Guidance line. An authorization, unknown to the customer, for a line of credit. If communicated to the customer, the guidance line becomes an advised line of credit commitment.

Hard currency. The term "hard currency" is a carryover from the days when sound currency was freely convertible into "hard" metal, that is, gold. It is used today to describe a currency that is sufficiently sound so that it is generally accepted internationally at face value.

Hedging. A transaction used by dealers in foreign exchange, commodities, or securities, as well as manufacturers and other producers, to protect against severe fluctuations in exchange rates and prices. A current sale or purchase is offset by contracting to purchase or sell at a

specified future date. The object is to defer a profit or loss on the current purchase or sale by realizing a profit or loss on a future purchase or sale. The hedge contract may run for a period that coincides with the expected liquidation of the asset or it may merely last for one, three, six, or twelve months to offset the exchange risk for an asset that is expected to be held for a long term, in which case the choice of the term of the hedge is a matter of relative cost and judgment. Also referred to as "covering."

Host currency. See *Local currency*.

Hot money. Funds temporarily transferred to a financial center and subject to withdrawal at any moment.

ICERC. See *Interagency Country Exposure Review Committee*.

Impact loan. A loan specifically designated by a government as important for the development of the country. It usually involves production for export. The term is most often used in regard to Japanese loans.

Implied forward rate. The rate of interest at which a borrowing or a lending transaction of a shorter maturity may be rolled over to yield an equivalent interest rate with a borrowing or a lending transaction of longer maturity.

Indirect quote. Quotation of a fixed unit of the local currency in variable units of foreign currencies.

Ineligible acceptance. An acceptance that does not meet the Federal Reserve eligibility requirements for use at the discount window.

In the money. A term used to refer to a call option whose strike price is below or a put option whose strike price is above the current price of the asset on which the option is written.

Initial margin. The minimum deposit a futures exchange requires from customers for any futures contract in which a customer has a net long or short position.

Interagency Country Exposure Review Committee (ICERC). A nine-member joint committee of three federal regulatory agencies established to administer the country risk supervision program. ICERC centralizes decision making for determinations about the creditworthiness of individual countries.

Interbank offered rate (IBOR). The rate at which banks will lend to other banks for a particular currency at a particular location.

Interest arbitrage. Involves the movement of short-term funds from one currency to another for the purpose of investing idle funds at a higher yield. However, the real yield advantage

in this situation is not merely the difference in interest rates between the two investment choices, but rather the difference in subtracting the cost of transferring funds into the desired currency and back again from the interest differential. There are four types of interest arbitrage: (1) covered interest arbitrage (transfer of short-term funds into a foreign currency for the sake of a higher yield, with the exchange risk covered), (2) inward interest arbitrage (transfer of short-term funds into local currency for a higher yield), (3) outward interest arbitrage (transfer of short-term funds into a foreign currency for a higher yield), and (4) uncovered interest arbitrage (transfer of short-term funds into a foreign currency for a higher yield, without covering the exchange risk).

Interest negative. The commission charged on foreign deposits on which no interest is allowed.

Interest parities. Differences at a given time between interest rates charged in two financial centers on short-term credits, investments, or time deposits of identical maturities.

Interest rate. The amount (generally expressed as a per annum percentage) of money charged for allowing another party the use of one's money.

Interest-rate cap. A transaction whereby a bank pays a fee up-front and will later receive payments if a designated interest rate exceeds a minimum threshold established in the contract. If during the contract, interest rates do not exceed the threshold, the bank loses the initial fee paid. By contrast, if interest rates exceed the threshold, a bank will receive progressively higher payments to offset higher interest expense. The payment received represents the difference between the designated rate and the threshold.

Interest-rate collar. The collar combines an interest-rate cap and a floor. A bank buys a cap and pays a fee, which protects the institution should interest rates exceed a stated threshold. The bank simultaneously sells a floor and receives a fee to offset the cost of the cap. The collar establishes a band of interest rates for liabilities—rates cannot exceed the cap's ceiling or the floor's minimum.

Interest-rate differential. The difference between the interest rates on two different currencies. Also the swap rate between two currencies expressed as a per annum percentage premium or discount.

Interest-rate floor. The floor obligates a seller to pay funds to the buyer if a specified interest

rate falls below a strike rate.

Interest-rate futures. Interest-rate futures contracts offer a vehicle through which banks can shift interest-rate risk to the market for financial futures. Interest-rate futures are analogous to futures contracts on commodities. See also *Futures market*.

Interest-rate swap. A contractual obligation entered into by two parties to deliver a fixed sum of money against a variable sum of money at periodic intervals. It typically involves an exchange of payments on fixed- and floating-rate debt. If the sums involved are in different currencies, the swap is simultaneously an interest-rate swap and a currency swap.

International Banking Act of 1978 (IBA). The principal legislation pertaining to the activities of foreign banks in the United States. It established a policy of national treatment of foreign banks with regard to their operations in the United States.

International banking facility (IBF). A set of asset and liability accounts segregated on the books and records of a depository institution, U.S. branch or agency of a foreign bank, or an Edge Act or agreement corporation. IBF activities are essentially limited to accepting deposits from and extending credit to foreign residents (including banks), other IBFs, and the institutions establishing the IBF. IBFs are not required to maintain reserves against their time deposits or loans. IBFs may receive certain tax advantages from individual states.

International Center for Settlement of Investment Disputes (ICSID). See *World Bank*.

International Lending Supervision Act (ILSA). Enacted in 1983, the act requires U.S. banking agencies to consult with bank supervisory authorities in other countries to achieve consistent policies and practices in international lending.

International Monetary Fund (IMF). A specialized agency of the United Nations, the IMF encourages monetary cooperation, promotes stable exchange policy, and makes short-term advances and standby credits to members experiencing temporary payments difficulties. Its resources come mainly from subscriptions of members.

International Money Market of the Chicago Mercantile Exchange (IMM). The IMM is one of the world's largest markets for foreign-currency and Eurodollar futures trading.

International Swap Derivatives Association

(ISDA). A trade association for derivative contracts.

Intervention. The actions of a central bank designed to influence the foreign-exchange rate of its currency. The bank can use its exchange reserves to buy its currency if it is under too much downward pressure or to sell its currency if it is under too much upward pressure.

Intracountry foreign-currency exposure. The risk that exists whenever a subsidiary or a branch lends, invests, places, or extends credit to entities that are located within the same country as the booking unit, but in a currency different from that of the country where the borrower and the booking unit are located.

Intraday position. The size of spot and forward positions allowed for a dealer during the business day, which may be larger than that allowed for the end of the date. Sometimes also called “daylight” limits.

Intrinsic value. The amount, if any, by which the current market price of the underlying instrument is above the exercise price for calls and below the exercise price for puts.

Issue price. The price at which a new issue of securities is placed on sale.

Joint venture. The participation of two or more entities in a single business activity. Used to facilitate entry into a market in which other forms of operation may be proscribed.

Last trading date. The final day on a futures or options exchange when trading may occur in a given futures contract month or in a given option series.

Latin American Free Trade Association (LAFTA). Originally developed to create a common market in Latin America among member countries, it has since been reorganized into the Latin American Integration Association (ALADI). Members include Argentina, Bolivia, Brazil, Chile, Colombia, Cuba, Ecuador, Mexico, Paraguay, Peru, Uruguay, and Venezuela.

Lead manager. The commercial or investment bank with the primary responsibility for organizing a syndicated bank credit or bond issue. This includes the recruitment of additional lending or underwriting banks, the negotiation of terms with the borrower, and the assessment of market conditions.

Lending margin. The fixed percentage above the reference rate paid by a borrower in a rollover credit or on a floating-rate note.

Letter of credit—advised. An export letter of credit issued by a bank that requests another bank to advise the beneficiary that the credit has

been opened in its favor. This occurs when the issuing bank does not have an office in the country of the beneficiary and uses the facilities of the advising bank. The advising bank is potentially liable only for its own error in making the notification.

Letter of credit—back-to-back. A letter of credit issued on the strength (or “backing”) of another letter of credit, involving a related transaction and nearly identical terms. For example, ABC company in the United States is designated as the beneficiary of an irrevocable letter of credit confirmed by a U.S. bank to supply XYZ company in Bolivia, whose bank issued the letter of credit, with goods to be purchased from a third company. The third company, however, will not fill ABC’s order unless it receives prepayment for the goods, either through cash or some other type of financing. If ABC is unable to prepay in cash, it will request its bank to issue a letter of credit in favor of the third company. If ABC’s bank agrees, the domestic credit is then “backed” by the foreign letter of credit and a back-to-back letter-of-credit transaction exists.

Letter of credit—cash. A letter addressed from one bank to one or more of its correspondents that makes available to a party named in the letter a fixed sum of money up to a future specific date. The sum indicated in the letter is equal to an amount deposited in the issuing bank by the party before the letter is issued.

Letter of credit—commercial. A letter addressed by a bank, on behalf of a buyer of merchandise, to a seller authorizing the seller to draw drafts up to a stipulated amount under specified terms and undertaking conditionally or unconditionally to provide payment for drafts drawn.

- *Confirmed irrevocable letter of credit*—A letter in which a bank in addition to the issuing bank is responsible for payment.
- *Irrevocable letter of credit*—A letter in which the issuing bank waives all right to cancel or in any way amend without consent of the beneficiary or seller.
- *Revocable letter of credit*—A letter in which the issuing bank reserves the right to cancel or amend that portion of the amount that has not been demanded before the actual payment or negotiation of drafts drawn.
- *Revolving credit*—A letter in which the issuing bank notifies a seller of merchandise that the amount of credit when used will again

become available, usually under the same terms and without the issuance of another letter.

• *Special clauses*—

— *Green clause*—Similar to the red clause letter of credit below, except that advance payment is made, generally upon presentation of warehouse receipts evidencing storage of the goods.

— *Red clause*—A clause permitting the beneficiary to obtain payment in advance of shipment so that the seller may procure the goods to be shipped.

— *Telegraphic transfer clause*—A clause in which the issuing bank agrees to pay the invoice amount to the order of the negotiating bank upon receipt of an authenticated cablegram from the latter that the required documents have been received and are being forwarded.

Letter of credit—confirmed. A letter of credit issued by the local bank of the importer and to which a bank, usually in the country of the exporter, has added its commitment to honor drafts and documents presented in accordance with the terms of the credit. Thus, the beneficiary has the unconditional assurance that, if the issuing bank refuses to honor the draft against the credit, the confirming bank will pay (or accept) it. In many instances, the seller (exporter) may ask that the letter of credit be confirmed by another bank when the seller is not familiar with the foreign issuing bank or as a precaution against unfavorable exchange regulations, foreign-currency shortages, political upheavals, or other situations.

Letter of credit—deferred payment. A letter of credit under which the seller's draft specifies that the draft is payable at a later date, for example, 90 days after the bill-of-lading date or 90 days after presentation of the documents.

Letter of credit—export. A letter of credit opened by a bank, arising from the financing of exports from a country. The issuing bank may request another bank to confirm or advise the credit to the beneficiary. If confirmed, the credit becomes a confirmed letter of credit, and, if advised, it becomes an advised (unconfirmed) letter of credit.

Letter of credit—guaranteed. A letter of credit guaranteed by the customer (applicant) and often backed by collateral security. In domestic banks, the payment of drafts drawn under this credit is recorded in the general-ledger asset account "Customer Liability—Drafts Paid Under

Guaranteed L/C."

Letter of credit—import. A letter of credit issued by a bank on behalf of a customer who is importing merchandise into a country. Issuance of an import credit carries a definite commitment by the bank to honor the beneficiary's drawings under the credit.

Letter of credit—irrevocable. A letter of credit that cannot be modified or revoked without the customer's consent or that cannot be modified or revoked without the beneficiary's consent.

Letter of credit—negotiation. A letter of credit requiring negotiation (usually in the locality of the beneficiary) on or before the expiration date. The engagement clause to honor drafts is in favor of the drawers, endorsers, or bona fide holders.

Letter of credit—nontransferable. A letter of credit that the beneficiary is not allowed to transfer in whole or in part to any party.

Letter of credit—reimbursement. A letter of credit issued by one bank and payable at a second bank that, in turn, draws on a third bank for reimbursement of the second bank's payment to the beneficiary. Those credits are generally expressed in a currency other than that of the buyer (issuing bank) or the seller, and, because of wide acceptability, many are settled in the United States through yet another bank as the reimbursing agent. Upon issuance, the correspondent sends the reimbursing bank an authorization to honor drawings presented by the negotiating bank.

Letter of credit—revocable. A letter of credit that can be modified or revoked by the issuing bank up until the time payment is made.

Letter of credit—revolving. A letter of credit issued for a specific amount that renews itself for the same amount over a given period. Usually, the unused renewable portion of the credit is cumulative as long as drafts are drawn before the expiration of the credit.

Letter of credit—standby. A letter of credit or similar arrangement, however named or described, that represents an obligation to the beneficiary on the part of the issuer—

- to repay money borrowed by or advanced to or for the account party,
- to make payment on account of any indebtedness undertaken by the account party, or
- to make payment on account of any default by the account party in the performance of an obligation.

Letter of credit—straight. A credit requiring presentation on or before the expiration date at the office of the paying bank. The engagement

clause to honor drafts is in favor of the beneficiary only.

Letter of credit—transferable. A credit under which the beneficiary has the right to give instructions to the bank called upon to effect payment or acceptance to make the credit available in whole or in part to one or more third parties (second beneficiaries). The credit may be transferred only upon the express authority of the issuing bank and provided that it is expressly designated as transferable. It may be transferred in whole or in part, but may only be transferred once.

Letter of credit—traveler's. A letter of credit addressed to the issuing bank's correspondents, authorizing them to negotiate drafts drawn by the beneficiary named in the credit upon proper identification. The customer is furnished with a list of the bank's correspondents. Payments are endorsed on the reverse side of the letter of credit by the correspondent banks when they negotiate the drafts. This type of letter of credit is usually prepaid by the customer.

Letter of credit—usance. A letter of credit that calls for payment against time drafts, drafts calling for payment at some specified date in the future. Usance letters of credit allow buyers a grace period of a specified number of days, usually not longer than six months.

London Interbank Offered Rate (LIBOR). The rate at which, theoretically, banks in London place Eurocurrencies/Eurodollars with each other.

London International Financial Futures Exchange (LIFFE). A London exchange where foreign-currency and Eurodollar futures, as well as foreign-currency options, are traded on spot exchange. LIFFE was taken over by Euronext in 2002 and subsequently merged with the New York Stock Exchange in 2007.

Limits (bank customer—foreign-exchange and interbank). Maximum line amounts allowed with other banks for forward exchange transactions, Eurocurrency and Eurodollar transactions, and payments arising from foreign-exchange transactions on the same day.

Listing. The formal process required to have a security regularly quoted on an exchange. Eurobonds are usually listed so that they can be purchased by those institutional investors who are constrained to invest in listed securities.

Local-currency exposure. The amount of assets and non-balance-sheet items that are denominated in the local currency of that country.

Lock-up. The term used to refer to procedures followed in a Eurobond issue to prevent the sale

of securities to U.S. investors during the period of initial distribution.

Long position. An excess of assets (and/or forward purchase contracts) over liabilities (and/or forward sale contracts) in the same currency. A dealer's position when the net purchases and net sales leave him or her in a net-purchased position.

Loro accounts. Current accounts banks hold with foreign banks in a foreign currency on behalf of their customers.

Maintenance margin. The minimum equity a futures exchange requires in a customer's account for each futures contract subsequent to deposit of the initial margin.

Managed float. See *Dirty float*.

Management fee. The fee received by lead banks as compensation for managing a large-syndicate financing.

Manager of participation. The original lender of any loan in which participations are later sold and who generally has a fiduciary relationship with the other lenders. See also *Agent bank*.

Manager of syndicate. The bank that solicits the loan from the borrower and solicits other lenders to join the syndicate making the loan.

Margin. The amount of money and/or securities that must be posted as a security bond to ensure performance on a contract.

Marine insurance. Insurance for losses arising from specified marine casualties. Marine insurance is more extensive than other types as it may provide not merely for losses arising from fire, but also from piracy, wrecks, and most injuries sustained at sea.

- *Average*—A term in marine insurance signifying loss or damage to merchandise.
- *General average*—A loss arising from a voluntary sacrifice of any portion of a shipment or cargo to prevent loss of the whole and for the benefit of all persons at interest. The value of this loss is apportioned not only among all the shippers, including those whose property is lost, but also to the vessel itself. Until the assessment is paid, a lien lies against the whole cargo.
- *Particular average*—A partial loss or damage of merchandise caused by a peril insured against and that does not constitute a general average loss.
- *Free of particular average (F.P.A.)*—Insurance against partial loss regardless of the percentage of the loss.
- *Casco insurance*—Marine insurance on the ship itself (hull) that is usually purchased by

the owners.

- *Cover note*—English equivalent of American binder.
- *Open policy*—A contract between an insurance company and a shipper by which all shipments made by the insured are automatically protected from the time the merchandise leaves the initial shipping point until delivery at destination.

Mark-to-market. The revaluation of a traded asset or commodity to reflect the most recently available market price.

Market-maker. A bank or other financial institution that gives two-sided (bid and offer) quotations. A market-maker stands prepared to do business on either side of the market without knowing if the inquiring institution intends to buy or sell.

Market order. An order that is to be executed immediately at the best available price in the market.

Matched. A forward purchase is matched when it is offset by a forward sale for the same date or vice versa. As a necessity, however, when setting limits for unmatched positions, a bank may consider a contract matched if the covering contract falls within the same week or semimonthly period.

Maturity date. The settlement date or delivery date for a forward contract.

Medium-term notes. Intermediate-term notes that carry a maturity between nine months and ten years.

Merchant bank. A European form of an investment bank.

Money market. A wholesale market for low-risk, highly liquid, short-term debt instruments.

Multicurrency line. A line of credit that gives the borrower the option of using any of the readily available major currencies.

Multilateral exchange contract. An exchange contract involving two foreign currencies against each other, for example, a contract for U.S. dollars against Swiss francs made in London or a contract for British pounds against Japanese yen made in New York. Also called an arbitrage exchange contract.

Multinational bank. A commercial bank engaged in selling services or conducting operations in more than one country.

Nationalization. The act whereby a central government assumes ownership and operation of private enterprises within its territory.

Negative interest. A fee charged by a bank for accepting a deposit from a customer. This can

happen when a currency is under pressure to appreciate. A central bank in this situation can establish capital-import controls and limit the amount of deposits that a bank can receive from nonresidents. If market participants want to deposit more money in the country than the central bank will allow, interest rates will drop initially to zero and, if the pressure continues, produce negative interest. Any taxes that a central bank may impose on foreign deposits can also create negative interest.

Negative pledge. A contractual promise by a borrower in a syndicated loan or a bond issue not to undertake some future action. One typical negative pledge is that future new creditors will not be given rights greater than those of existing creditors.

Negotiable instruments. Written orders or promises to pay that may be transferred by endorsement or delivery, for example, by checks, bills of exchange, drafts, and promissory notes. Governed by article 3 of the Uniform Commercial Code.

Negotiate. (1) Letters of credit—To verify that the documents presented under a letter of credit conform to requirements and then, if the documents are in order, to pay the seller of the goods. (2) Negotiable instruments—To transfer possession of an instrument by a person other than the issuer to another person who thereby becomes its holder.

Net accessible interest differential. The difference between the interest rates that can actually be obtained on two currencies. This difference is usually the basis of the swap rate between the two currencies and, in most cases, is derived from external interest rates rather than domestic ones. These external rates, or Euro-rates, are free from reserve requirements (which would increase the interest rate) and from exchange controls (which would limit access to the money).

Net exchange position. An imbalance between all the assets and purchases of a currency, and all the liabilities and sales of that currency.

Net position. A bank has a net position in a foreign currency when its assets (including future contracts to purchase) and liabilities (including future contracts to sell) in that currency are not equal. An excess of assets over liabilities, including future contracts, is called a net “long” position, and liabilities in excess of assets result in a net “short” position. A net long position in a currency that is depreciating results in a loss because, with each day, the position is convert-

ible into fewer units of local currency. A net short position in a currency that is appreciating represents a loss because, with each day, satisfaction of the position costs more units of local currency.

Netting arrangement. Agreement by two counterparties to examine all contracts settling in the same currency on the same day and to agree to exchange only the net currency amounts. Also applies to net market values of several contracts.

Nominal interest rate. The interest rate stated as a percentage of the face value of a loan. Depending on the frequency of interest collection over the life of the loan, the nominal rate may differ from the effective interest rate.

Nonrevolving. A line of credit that cannot be reused once it has been drawn down to a specified amount.

Nostro accounts. Demand accounts of banks with their correspondents in foreign countries in the currency of that country. These accounts are used to make and receive payments in foreign currencies for a bank's customers and to settle maturing foreign-exchange contracts. Also called due from foreign bank—demand accounts, our balances with them, or due from balances.

Novation. The substitution of a new party for one of the original parties to a contract. The result is a new contract with the same terms, but at least one new party.

Odd dates. Deals within the market are usually for spot, one month, two months, three months, or six months forward. Other dates are odd dates, and prices for them are frequently adjusted with more than a mathematical difference. Hence, most market deals are for regular dates, although commercial deals for odd dates are common.

Offer rate. The price at which a quoting party is prepared to sell or lend currency. This is the same price at which the party to whom the rate is quoted will buy or borrow if it desires to do business with the quoting party. The opposite transactions take place at the bid rate.

Offering circular. A document giving a description of a new securities issue, as well as a description of the entity making the issue.

Office of Foreign Asset Control (OFAC). An office within the U.S. Treasury Department that administers U.S. laws imposing economic sanctions against targeted hostile foreign countries. While OFAC is responsible for administration of these statutes, all of the bank regulatory agencies cooperate in ensuring compliance.

Official rate. The rate established by a country at which it permits conversion of its currency into that of other countries.

Offshore branch. Banking organization designed to take advantage of favorable regulatory or tax environments in another country. Many of these operations are shell branches with no physical presence.

Offshore dollars. The same as Eurodollars, but encompassing the deposits held in banks and branches anywhere outside of the United States, including Europe.

Open contracts (open positions). The difference between long positions and short positions in a foreign currency or between the total of long and short positions in all foreign currencies. Open spot or open forward positions that have not been covered with offsetting transactions. See also *Net position*.

Open interest. The total number of futures contracts for a particular asset that have not been liquidated by an offsetting trade or that have not been fulfilled by delivery.

Open market operations. Purchases or sales of securities or other assets by a central bank on the open market.

Open position limit. A limit placed on the size of the open position in each currency to manage off-balance-sheet items.

Opening bank. The bank that draws up and opens the letter of credit and that makes payment according to the conditions stipulated.

Option contract. A contract giving the purchaser the right, but not the obligation, to buy (call option) or sell (put option) an asset at a stated price (strike or exercise price) on a stated date (European option) or at any time before a stated date (American option).

Organisation for Economic Co-operation and Development (OECD). Founded as a successor organization to the Organization for European Economic Cooperation (OEEC). The OEEC was originally established to administer aid under the Marshall Plan during the post-World War II period. The goals of the successor OECD are to stimulate world trade, economic growth, and economic development. Members include Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

Organization of American States (OAS). An

organization of 35 independent states of the Americas formed to promote intergovernmental cooperation in the Western Hemisphere.

Organization of the Petroleum Exporting Countries (OPEC). A federation of oil-exporting countries that sets petroleum prices for member countries. Members include Algeria, Angola, Ecuador, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

Other transfer risk problems (OTRP). A category assigned by the Interagency Country Risk Exposure Review Committee (ICERC) for countries near default or in noncompliance with their debt requirements.

Out-of-the-money. A term used to refer to a call option whose strike price is above or to a put option whose strike price is below the current price of the asset on which the option is written.

Outright. Forward exchange bought and sold independently from a simultaneous sale or purchase of spot exchange.

Outright forward rate. A forward exchange rate that is expressed in terms of the actual price of one currency against another, rather than, as is customary, by the swap rate. The outright forward rate can be calculated by adding the swap premium to the spot rate or by subtracting the swap discount from the spot rate.

Overbought. The position of a trader who has bought a larger amount of a commodity or asset than he or she has sold.

Overnight. A swap transaction involving same-day settlement of the spot transaction against a value date of the next business day on the forward contract.

Overnight position. A foreign-exchange or money market position maintained overnight. There is more risk involved in this position than in one maintained during the day because political and economic events may take place at night when the operator cannot react immediately to them.

Override limit. The total amount of money (measured in terms of a bank's domestic currency) that the bank is willing to commit to all foreign-exchange net positions.

Oversold. The position of a trader who has sold a larger amount of a certain asset or commodity than he or she has bought.

Over-the-counter (OTC). Transactions not conducted in an organized exchange. OTC markets have no fixed location or listing of products.

Paris Club. An ad hoc group of western creditor governments that meets informally under the chairmanship of the French Treasury. Its function is to start the process of rescheduling a country's official debt.

Parity. A term derived from par, meaning the equivalent price for a certain currency or security relative to another currency or security, or relative to another market for the currency or security after making adjustments for exchange rates, loss of interest, and other factors.

Parity grid. The system of fixed bilateral par values in the European Monetary System. The central banks of the countries whose currencies are involved in an exchange rate are supposed to intervene in the foreign-exchange market to maintain market rates within a set range defined by an upper and a lower band around the par value.

Participation. The act of taking part in a syndicated credit or a bond issue.

Par value. The official parity value of a currency relative to the dollar, gold, Special Drawing Rights, or another currency.

Paying agent. A bank or syndicate of banks responsible for paying the interest and principal of a bond issue to bondholders on behalf of the bond issuer.

Performance bond. A bond supplied by one party to protect another against loss in the event of the default of an existing contract.

Placement memorandum. A document in a syndicated Eurocredit that sets out details of the proposed loan and gives information about the borrower.

Political risk. Political changes or trends, often accompanied by shifts in economic policy, that may affect the availability of foreign exchange to finance private or public external obligations. The banker must understand the subtleties of current exchange procedures and restrictions, as well as the possibilities of war, revolution, or expropriation in each country with which the bank transacts business, regardless of the actual currencies involved.

Portfolio investment. An investment in an organization, other than a subsidiary or joint venture, in which less than 20 percent of the voting shares are held.

Position. A situation created through foreign-exchange contracts or money market contracts in which changes in exchange rates or interest rates could create profits or losses for the operator.

Position book. A detailed, ongoing record of

an institution's dealings in a particular foreign currency or money market instrument.

Position risk. See *Net position*.

Position-trader. A speculator in the futures market who takes a position in the market for a period of time.

Premium. The adjustment to a spot price that is made in arriving at a quote for future delivery. If a dealer were to quote \$2.00 and \$2.05 (bid and asked) for sterling, and the premiums for six months forward are 0.0275 and 0.0300, the forward quotes would be adjusted to \$2.0275 and \$2.0800. The premium usually represents differences in interest rates for comparable instruments in two countries. However, in periods of crisis for a currency, the premium may represent the market anticipation of a higher price.

Price quotation system. A method of giving exchange rates in which a certain specified amount of a foreign currency (1 or 100, usually) is stated as the corresponding amount in local currency.

Primary dealers. Securities firms that are recognized by the Federal Reserve System to buy and sell securities with the Fed.

Private placement. The process of negotiating for the sale of securities, debt, equity, or a combination thereof to a relatively small group of investors.

Protest. The formal legal process of demanding payment of a negotiable item from the maker or drawee who has refused to pay.

Public Law (P.L.) 480. The most common reference to the Agricultural Trade Development and Assistance Act of 1954. Generally, P.L. 480 authorizes the President to provide various types of assistance to American agricultural exporters, such as making sales in the currency of the destination country.

Put. The ability of the bank to require repayment of the debt of a borrower by a third party because of nonperformance of the borrower through an agreement other than a formal guarantee.

Put option. A contract giving the purchaser the right, but not the obligation, to sell a particular asset at a stated strike price on or before a stated date.

Rate risk. In the money market, the chance that interest rates may rise when an operator has a negative money market gap (a short position) or that interest rates may go down when the operator has a positive money market gap (a long position). In the exchange market, the

chance that the spot rate may rise when the trader has a net oversold position (a short position), or that the spot rate may go down when the operator has a net overbought position (a long position).

Rate swap. A transaction in which one participant pays a fixed rate of interest on a notional amount for a given period of time and the other pays a floating rate.

Reciprocal rate. The price of one currency in terms of a second currency, when the price of the second currency is given in terms of the first.

Recourse. The ability to pursue judgment for a default on a negotiable instrument against parties who signed the note.

Representations. Statements made by a borrower in a syndicated credit or bond issue describing the borrower's financial condition.

Representative office. A facility established in U.S. or foreign markets by a bank to sell its services and assist clients; in the United States, these offices cannot accept deposits or make loans.

Repurchase agreement (repo or RP). A holder of assets sells those assets to an investor with an agreement to repurchase them at a fixed price on a fixed date. The security "buyer" in effect lends the "seller" money for the period of the agreement, and the terms of the agreement are structured to compensate the buyer for this. Dealers use repo extensively to finance their positions.

Reserve account. Those items in the balance of payments that measure changes in the central bank's holdings of foreign assets (such as gold, convertible securities, or Special Drawing Rights).

Reserve currency. A foreign currency held by a central bank (or exchange authority) for the purposes of exchange intervention or the settlement of intergovernmental claims.

Reserve requirements. Obligations imposed on commercial banks to maintain a certain percentage of deposits with the central bank or in the form of central-bank liabilities.

Retiming. Restructuring of the timing of interest payable on bonds.

Revaluation. An official act wherein the parity of a currency is adjusted relative to the dollar, gold, Special Drawing Rights, or another currency, resulting in less revalued units relative to those currencies. (See also *Devaluation*.) Also, the periodic computations of the current values (revaluations) of ledger accounts and unmatured future purchase and sales contracts.

Revolving credit. A line of bank credit that may be used at the borrower's discretion. Interest is paid on the amount of credit actually in use, while a commitment fee is paid on the unused portion.

Revolving into term. A commitment that allows a revolving line of credit (usually one to three years) with term provision at the expiration of the revolver for an additional period of time. Most common is a two-year revolver with a five-year, fully amortizing term portion.

Revolving line of credit. A line of credit that permits successive drawings and payments at the borrower's discretion. The funds available to the borrower are replenished by any payments of principal.

Risk-management tools. Financial devices (such as futures or options) that permit a borrower or lender of funds to protect against the risks of changing currency prices and/or interest rates.

Risk participation. An agreement whereby a bank shares the risk in an outstanding credit or instrument. Credit-equivalent amounts of risk participations are assigned based on the risk category appropriate to the account party obligor or, if relevant, to the nature of the collateral or guarantees. Usually treated as a direct credit substitute.

Rollover. The process of selling new securities to pay off old ones coming due, refinancing an existing loan, or extending a maturing forward foreign-exchange contract.

Rollover credit. A bank loan with an interest rate periodically updated to reflect market interest rates. The interest rate in the loan for each subperiod is specified as the sum of a reference rate and a lending margin.

Rollover date. The end of an interest period in a revolving term loan.

Same-day funds. Federal funds, or the equivalent, used in the settlement of a transaction that will probably create an interest adjustment of the trading rate to compensate for the difference in the availability of the funds for use.

Samurai bonds. Yen-denominated bonds issued by a foreign borrower in Japan.

Scalpers. Floor or pit traders in the futures market with short-term horizons who sell slightly above the most recent trade and buy at a price slightly below.

Seasoned securities. Securities that have traded in the secondary market for more than 90 days.

Secondary market. A market in which secu-

rities are traded following the time of their original issue.

Selling concession. The share of total investment-banking fees accruing to the selling group.

Selling group. All banks involved in selling or marketing a new issue of bonds. Sometimes the term is used in reference to dealers acting only as sellers and is intended to exclude reference to underwriters or managers.

Seller's option contract. A contract in which the seller has the right to settle a forward contract at his or her option anytime within a specified period. See also *Option contract*.

Selling rates. Rates at which dealers are prepared to sell foreign exchange in the market.

Settlement day. The day on which the actual transfer of two currencies or the transfer of money for an asset takes place at a previously arranged price.

Settlement price. The official daily closing price for a futures or option contract. This price is established and used by a clearinghouse to determine each clearing firm's settlement variation.

Settlement risk. The possibility that a seller of foreign exchange or securities, having collected the payment in local currency, may fail to deliver the exchange or securities to the buyer.

Settlement variation. The sum of all changes in amount for each of a firm's futures or options positions as calculated from each day's settlement price. This amount is paid to or received from the clearinghouse each day based on the previous day's trading.

Shell branch. See *Offshore branch*.

Shogun bonds. Foreign bonds issued in Tokyo and denominated in currencies other than the Japanese yen. The usual denomination is the U.S. dollar.

Short position. An excess of liabilities (and/or forward sale contracts) over assets (and/or forward purchase contracts) in the same currency. A dealer's position when the net of purchases and sales leaves the trader in a net-sold or oversold position.

Sight draft. A draft payable upon presentation to the drawee or within a brief period thereafter known as "days of grace."

Society for Worldwide Interbank Financial Telecommunications (SWIFT). A telecommunications network established by major financial institutions to facilitate messages among SWIFT participants. These messages typically result in

a monetary transaction between institutions. The network is based in Brussels.

Soft currency. A currency that is not freely convertible into other currencies.

Soft loans. Loans with exceptionally lenient repayment terms, such as low interest, extended amortization, or the right to repay in the currency of the borrower.

Sole of exchange. A phrase appearing on a draft to indicate that no duplicate is being presented.

Sovereign risk. The risk that the government of a country may interfere with the repayment of debt.

Space arbitrage. The buying of a foreign currency in one market and the selling of it for a profit in another market.

Special Drawing Rights (SDRs). International paper money created and distributed to governments by the IMF in quantities dictated by special agreements among its member countries. The value of SDRs is determined by the weighted value of a “basket” of major currencies.

Specially designated nationals. Persons or entities listed by OFAC. These persons or entities are typically front organizations and are subject to OFAC prohibitions. See also *Blocked account, Office of Foreign Asset Control.*

Speculation. The purchase or sale of a trading unit, usually on a forward basis, in hopes of making a profit at a later date. The term is used in the foreign-exchange, commodity, stock, and option markets.

Spot contract. A foreign-exchange contract traded in the interbank market in which the value date is two business days from the trade date.

Spot exchange (or spot currency). Foreign exchange purchased or sold for immediate delivery and paid for on the day of the delivery. Immediate delivery is usually considered delivery in one to two business days after the conclusion of the transaction. Many U.S. banks consider transactions maturing in as many as ten business days as spot exchange. Their reasons vary but are generally to facilitate revaluation accounting policies and to initiate final confirmation and settlement verification procedures on future contracts nearing maturity. See also *Futures (or forward) exchange contract.*

Spot month. The futures-contract month that is also the current calendar month.

Spot/next. In the foreign-exchange market, a term used to describe a swap transaction for value on the spot date with the reverse trans-

action taking place the next working day after the spot date. In the Eurocurrency market, a term used to describe a loan or deposit for value on the spot date with maturity on the next working day after the spot date.

Spot transaction. A transaction for spot exchange or currency.

Spread. The difference between the bid rate and the offer rate in an exchange-rate quotation or an interest quotation. This difference is not identical with the profit margin because traders seldom buy and sell at their bid and offer rates at the same time. In another sense (for example, Eurodollar loans priced at a mark-up over LIBOR), spread means a mark-up over cost, and, in this context, the spread is identical with the profit margin.

Square exchange position (or square-off). To make the inflows of a given currency equal to the outflows of that currency for all maturity dates. This produces a square exchange position in that currency.

Stabilization. The efforts by a lead manager in a securities issue to regulate the price at which securities trade in the secondary market, during the period that the securities syndicate is still in existence.

Sterilization. Intervention in the foreign-exchange market by a central bank in which the change in the monetary base caused by the foreign-exchange intervention is offset by open market operations involving domestic assets.

Straight bill of lading. A bill of lading drawn directly to the consignee and therefore not negotiable. See also *Bill of lading.*

Strike price. The price at which an option buyer may purchase (if a call option) or sell (if a put option) the asset upon which the option is written.

Subscription agreement. An agreement between a securities issuer and the managing banks that describes the terms and conditions of the issue and the obligation of the parties to the agreement.

Subscription period. The time period between the day on which a new securities issue is announced and the day on which the terms of the issue are signed and the securities are formally offered for sale.

Subsidiary. Entity in which a bank has a modicum of control. Used to facilitate entry into foreign markets in which other operations are proscribed.

Sushi bonds. Dollar-denominated Eurobonds issued by Japanese companies and purchased

primarily by Japanese investors. These bond issues are typically managed by Japanese banks.

Swap. The combination of a spot purchase or sale against a forward sale or purchase of one currency in exchange for another. The trading of one currency (lending) for another currency (borrowing) for that period of time between which the spot exchange is made and the forward contract matures. See also *Swap cost (or profit)*.

Swap arrangement—reciprocal. A bilateral agreement between central banks enabling each party to initiate swap transactions up to an agreed limit to gain temporary possession of the other party's currency.

Swap cost (or profit). In a swap transaction, the cost or profit related to the temporary movement of funds into another currency and back again. That exchange cost or profit must then be applied to the rate of interest earned on the loan or investment for which the exchange was used. Furthermore, the true trading profits or losses generated by the foreign-exchange trader cannot be determined if swap profits or costs are charged to the exchange function rather than allocated to the department whose loans or investments the swap actually funded.

Swap and deposit. A combination of swap transactions that enables the borrower to have use of both currencies for the duration of the transaction.

Swap position. A situation in which the scheduled inflows of a given currency are equal to the scheduled outflows, but the maturities of those flows are purposely mismatched. The expectation in a swap position is that the swap rate will change and that the gap can be closed at a profit.

Swap rate. The difference between the spot exchange rate of a given currency and its forward exchange rate.

Swap-swap. A swap transaction involving one forward maturity date against another forward maturity date.

Swaption. An option on a swap. It gives the buyer the right, but not the obligation, to enter into an interest-rate swap at a future period of time.

Syndicate. A group of banks that acts jointly, on a temporary basis, to loan money in a bank credit (syndicated credit) or to underwrite a new issue of bonds (bond underwriting syndicate).

Syndicate leader. See *Manager of syndicate*.

Syndicate participation. Usually, a large credit arranged by a group of lenders, each of whom advances a portion of the required funds. It

differs from a participation loan because the banks participate at the outset and are known to the borrower.

Take-down. The receipt of the principal of a loan by the borrower.

Tariff. A duty or tax on imports that can be either a percentage of cost or a specific amount per unit of import.

Telegraphic transfer (TT) rate. The basic rate at which banks buy and sell foreign exchange. Buying rates for mail transfers, foreign-currency drafts, traveler's checks, and similar instruments are all based on the TT rate. The TT rate may be slightly less favorable than other rates because of the time required for collection. Foreign-currency time (usance) drafts also are bought at the TT rate, but interest to maturity is deducted for the time which must elapse until maturity.

Telex. Direct communication between two banks or companies and organizations via satellite or underwater cable.

Tenor. A term designating payment of a draft as being due at sight, a given number of days after sight, or a given number of days after the date of the draft.

Term structure. The level of interest rates on debt instruments of a particular type, viewed as a function of term to maturity. The interest-rate level may rise or fall with increasing maturity.

Terms of trade. Relative price levels of goods exported and imported by a country.

Test key. A code used in transferring funds by cable or telephone so that the recipient may authenticate the message. A test key generally consists of a series of numbers, including a fixed number for each correspondent bank; a number for the type of currency; a number for the total amount; and, possibly, numbers for the day of the month and day of the week. A single number code indicates whether the total amount is in thousands, hundreds, tens, or digits. To arrive at a test number, the indicated numbers are totaled, and the total amount usually precedes the text of the message.

Third-country bills. Banker's acceptances issued by banks in one country that finance the transport or storage of goods traded between two other countries.

Tied loan. A loan made by a governmental agency that requires the borrower to spend the proceeds in the lender's country.

Time draft. A draft drawn to mature at a fixed time after presentation or acceptance.

Time value. The amount by which an option's market value exceeds its intrinsic value.

Tombstone. In a syndicated credit, an advertisement placed in a newspaper or magazine by banks to record their participation in the loan or, in a bond issue, to record their role in managing, underwriting, or placing the bonds.

Tomorrow next (tom/next). The simultaneous purchase and sale of a currency for receipt and payment on the next and second business day, respectively, or vice versa.

Tradable amount. The minimum amount accepted by a foreign-exchange broker for the interbank market, for example, 100,000 Canadian dollars or 50,000 pounds sterling.

Trade acceptance. A draft drawn by the seller (drawer) on the buyer (drawee) and accepted by the buyer. Also called a trade bill, customer acceptance, and two-name trade paper. See also *Acceptance*.

Trade accounts. Those parts of the balance of payments that reflect money spent abroad by the citizens of a country on goods and services and the money spent by foreigners in the given country for goods and services.

Trader's (or dealer's) ticket (slip). The handwritten record of a foreign-exchange trade and/or placing and taking of deposits that is written by the dealer who executed the transaction.

Trading position worksheet. A record of incomplete transactions in a particular currency.

Tranche. One of a number of drawings of funds made by a borrower under a term loan.

Transaction date. The date on which a contract's terms are negotiated and agreed on.

Transfer risk. The risk arising when a borrower incurs a liability in a currency that is not the currency in which revenues are generated. The borrower may not be able to convert its local currency to service an international loan if foreign exchange is not generated.

Trending of rates. Quoting a slightly higher or lower two-way rate in order to reflect a preference for either purchasing or selling.

Trust receipt. Used extensively in letter-of-credit financing, this is a document or receipt in which the buyer promises to hold the property received in the name of the releasing bank, although the bank retains title to the goods. The merchant is called the trustee, the bank the entruster. Trust receipts are used primarily to allow an importer to take possession of the goods for resale before payment to the issuing bank.

Two-way quotation. A simultaneous quotation of foreign-exchange buying and selling rates implying the willingness of the bank to deal either way.

Two-way rate. An exchange-rate or an interest-rate quotation that contains both a bid rate and an offer rate. The size of the spread between the two rates indicates the relative quality of the quotation.

Unconfirmed letter of credit. See *Letter of credit—advised*.

Undervalued. Decline of the spot rate below purchasing power parities, so that the goods of one county are cheaper than in another country. In relation to forward exchange, “undervalued” means that forward premiums are narrower or forward discounts are wider than the interest parities between the two financial centers.

Underwriting allowance. The share of total investment-banking fees accruing to the underwriting group.

Underwriting syndicate. The banks, in a new securities issue, that agree to pay a minimum price to the borrower even if the securities cannot be sold on the market at a higher price.

Uniform customs and practices for documentary credits. Sets of rules governing documentary letters of credit formulated by the International Chamber of Commerce. Includes general provisions, definitions, forms, responsibilities, documents, and the transfer of documentary letters of credit.

Unmatched. A forward purchase is unmatched when a forward sale for the same date has not been executed or vice versa.

Unmatured transactions. Trading transactions that have not reached their settlement dates.

Usance. The period of time between presentation of a draft and its maturity. See also *Tenor*.

Value-compensated. The payment or collection of a settlement cost on an open forward contract to cancel the contract rather than to execute an offsetting contract for the same maturity date.

Value date. The date on which foreign exchange bought and sold must be delivered and on which the price for the exchange must be paid.

Value-impaired. A category assigned by the Interagency Country Exposure Review Committee that indicates a country has protracted debt problems.

Value today. An arrangement by which spot exchange must be delivered and paid for on the day of the transaction instead of two business days later.

Value tomorrow. An arrangement by which spot exchange must be delivered and paid for on

the business day following the transaction instead of two business days after the transaction.

Variation margins. Positive or negative changes in the value of a security bought on margin or a futures contract. These variations must be paid daily in cash. All securities bought or sold on margin and futures contracts are marked to market.

Volatility. The standard deviation of changes in the logarithm of an asset price, expressed at a yearly rate. The volatility is a variable that appears in option formulas.

Volume quotation system. A method of giving exchange rates in which a certain specified amount of local currency (usually 1 or 100) is stated as the corresponding amount in foreign currency.

Vostro account. A demand account maintained for a bank by a correspondent bank in a foreign country. The nostro account of one bank is the vostro account of the other bank. See also *Nostro account*.

Warehouse receipt. An instrument that lists and is a receipt for goods or commodities deposited in the warehouse that issues the receipt. These receipts may be negotiable or non-negotiable. A negotiable warehouse receipt is made to the “bearer,” while a nonnegotiable warehouse receipt specifies precisely to whom the goods shall be delivered. There are several alternatives for releasing goods held under warehouse receipts: (1) the delivery of goods may be allowed only against cash payment or substitution of similar collateral; (2) some or all of the goods may be released against the trust receipt without payment, or (3) a warehouseman may release a stipulated quantity of goods without a specific delivery order. Banks will accept a warehouse receipt as collateral for a loan only if the issuer of a receipt is a bonded warehouseman. The bank must have protected assurances for the authenticity of the receipt and the fact that the commodities pledged are fully available as listed on the warehouse receipt.

Wash. A transaction that produces neither profit nor loss.

Wire. Often the words “wire” and “cable” are used interchangeably. In some cases, “wire” denotes messages sent within the confines of the United States, and “cable” refers to messages transmitted overseas. Others use “wire” to mean a transfer of funds by telephone rather than by

cable, telex, or telegram.

Withholding tax. A tax imposed by a country on the gross amount of payments to a foreign lender from an in-country borrower.

Within-line facility (or facilities). Subfacilities of the line of credit that establish parameters, terms, and conditions of various other facilities available for specific additional purposes or transactions. The aggregate sum of all outstandings under within-line facilities must not exceed the total of the overall line of credit.

World Bank (The International Bank for Reconstruction and Development). An international financial organization whose purpose is to aid the development of productive facilities in member countries, particularly in developing countries. The chief source of funds is capital contributions made by member countries, which vary with the financial strength of the country. Another funding source is the sale of long-term bonds.

Writer. An individual who issues an option and, consequently, has the obligation to sell the asset (if the option is a call) or to buy the asset (if the option is a put) on which the option is written if the option buyer exercises the option.

Yankee bond. A dollar-denominated foreign bond issued in the U.S. market.

Yield curve. The interest rates for each different tenor or maturity of a financial instrument. A graph of the yield curve has interest rates on the vertical axis and time-to-maturity on the horizontal axis. When longer maturities have higher interest rates than shorter maturities, the curve is called a positive or upward-sloping yield curve. The opposite type of curve is called a negative, downward-sloping, or inverted yield curve. When interest rates are the same for all maturities, the curve is called a flat yield curve. See also *Term structure*.

Yield to maturity. The rate of interest on a bond when calculated as that rate of interest which, if applied uniformly to future time periods, sets the discounted value of future bond coupon and principal payments equal to the current market price of the bond.

Zero coupon bond. A bond that pays no interest but that is redeemed at its face value at maturity.

Although the methods of international loan portfolio management are similar to those established for domestic lending, the additional risks in international lending require specialized expertise and careful management by the bank. Banks conducting international lending activities should establish strong policies that include not only the basic components found in domestic policies but also the following segments.

Geographic limits. The bank should delineate those countries or geographic areas where it can lend profitably and soundly in accordance with its objectives and in consideration of country risks. International lending officers must know the specific country limits established by the board of directors, and the bank should have a monitoring system to ensure adherence to those limits. The limits established will depend on each bank's available financial resources, the qualifications and skills of its staff, the extent of its lending activities, and its further growth potential.

Distribution by category. Limitations based on aggregate percentages of total international loans in real estate, consumer credit, ship financing, or other categories are common. Although loan distribution policy may differ among banks, international loans are generally granted in the following categories:

- import and export financing
- loans to corporations or their overseas branches, subsidiaries, or affiliates with a parent guarantee or other form of support
- loans granted to foreign local borrowers including foreign entities of U.S. concerns that borrow without any form of support from the parent corporation
- loans and placements to foreign banks or to overseas branches of U.S. banks
- loans to foreign governments or foreign governmental entities

The categories of credit extensions that the bank's international division should engage in and the nature of any limitations will depend on the particular bank and its customers. Deviations from policy limitations that have been approved by the board of directors or its designated committee(s) should be allowed to meet the changing requirements of the bank's custom-

ers. During times of heavy loan demand in one category, an inflexible loan distribution policy could cause that category to be slighted in favor of another.

Types of credits. The lending policy should state the types of international credits that the bank can make and set guidelines to follow in granting specific credits. The decision about the types of credits to be granted should be based on consideration of the expertise of the lending officers, deposit structure of the bank, and anticipated credit needs of its customers. Complex credits requiring more than normal policing should be avoided unless or until the bank obtains the necessary personnel to administer those credits properly. Types of credit that have resulted in an abnormal loss to the bank's international division should be controlled or avoided within the framework of stated policy. Syndications and other types of term loans should be limited to a given percentage of the bank's stable funds.

Maximum maturities. International credits should be granted with realistic repayment plans. Maturity scheduling should be related to the anticipated source of repayment, the purpose of the credit, the useful life of the collateral, and the degree of country risk. For term loans, a lending policy should state the maximum number of months during which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and modifications to the original terms of a loan. If the bank requires a cleanup (out-of-debt) period for lines of credit, that period should be explicitly stated.

Loan pricing. Interest rates, fees, commissions, and discounts on various loan types established by the loan policy must be sufficient to cover the costs of funds loaned, servicing of the loan (including general overhead), and probable losses, while providing for a reasonable rate of return. Periodic review allows the rates to be adjusted to account for changes in costs and competitive factors. Additionally, the bank must establish practices to ensure a continuous examination of the relationships between loan pricing and the cost of funds.

Foreign-exchange risks. Lending policy should include controls that minimize risks for loan

portfolios in one currency funded by borrowings in another. These activities must be identified and should be limited by the bank if—

- a particular foreign government is expected to impose stringent exchange controls;
- the currencies involved are or will be subject to wide exchange-rate fluctuations; or
- political, social, or economic developments are likely to intensify exchange risks.

Multicurrency credit commitments permit borrowers to select from a specific list of currencies the one they prefer to use in each rollover period. The listed currencies, however, may be unavailable or available only at a high cost. The bank should protect itself by stating in the loan agreement that its requirement to provide any of the currencies listed is subject to availability at the time requested by the borrower. For detailed information on foreign-exchange risks, see section 7100, “International—Foreign Exchange.”

Documentation and collateral. Trade financing often represents a significant amount of an international division’s lending activity. In this type of financing, the bank deals only in documents, while its customer is responsible for the merchandise under the terms of the sales contract. The bank’s control of documents, especially title documents, is crucial. Lending officers and applicable personnel, therefore, must be knowledgeable in handling documentation, which may be the bank’s ultimate support for certain transactions.

The bank must establish policies for taking overseas collateral as security for a loan to ensure that local required procedures are met. For example, in many countries, liens on fixed assets must be registered with the local government, depending on the type of asset. Lending against current assets also requires special care and monitoring. The bank must know which countries do not recognize the legality of trust receipts as recognized in the United States. In other countries, borrowers sign powers of attorney or similar documents permitting lenders to take specifically defined collateral at any time. For these and other reasons, the bank must retain local lawyers who are thoroughly familiar with that country’s laws, regulations, and practices and who will check loan agreements, guarantees, debt instruments, drafts, corporate resolutions, and other loan documentation. There are

significant differences between loan agreements drawn in the United States and those drawn abroad. Nevertheless, the bank must ensure that its loan agreements with borrowers protect it adequately. Generally, few restrictive covenants are required for international loans because of competition in offshore markets and differing local practices. Nevertheless, the bank should insist on protective covenants when appropriate, especially if the borrowers are small or medium-sized obligors. The bank also should ensure that loan agreements provide for the borrower to reimburse the lender for certain unanticipated costs, including the imposition of taxes on interest withheld at the source without corresponding credits gained on the levy of U.S. taxes and the need to establish or increase bad debt reserves.

Financial information. Current and complete financial information is necessary at the inception and throughout the term of an international loan. The lending policy should specifically define financial-statement requirements for businesses, foreign banks, foreign governments, other foreign public-sector entities, and individuals, and it should include criteria for the requirement of audited, nonaudited, fiscal, interim, operating, cash-flow, and other statements. The requirements should be defined clearly enough so that any credit data exception in the examination report is a clear exception to the bank’s lending policy.

The reliability of financial statements and accompanying information differs greatly among countries. In some countries, accounting standards and traditions are lax and audited statements are virtually unknown. Financial information provided for tax-collection purposes in foreign countries may differ from that given in confidence to the bank to obtain credit.

In analyzing financial statements of foreign entities, factors are present that do not exist when analyzing those of U.S. enterprises, such as markedly different accounting concepts, the wide use of “hidden reserves,” translation problems, different methods of valuing assets, or unfamiliar and sharply different legal principles. A general rule in analyzing local currency statements is not to translate figures to U.S. dollar equivalents. Fluctuating exchange rates can have a significant impact on the analysis of U.S. dollar equivalents over a period of time. If a loan is to be repaid in currency other than the borrower’s domestic currency, an analysis of

probable future foreign-exchange-rate movements is necessary to assess the borrower's ability to generate sufficient local currency to buy the necessary exchange. An analysis of the availability of exchange is also required to ensure full repayment at maturity. Financial Accounting Standards Board Statement No. 52, "Foreign-Currency Translation," takes certain translation adjustments out of earnings and places them in a separate component of equity capital ("foreign-currency translation adjustments"), thereby reducing the fluctuations in earnings produced by changing exchange rates. Since the financial information provided is not always reliable, the bank's policies should enable it to determine by other means the capacity, integrity, experience, and reputation of the foreign borrower.

Extensions of credit to foreign banks constitute an important segment of an international division's foreign loans. It is important to obtain information on the nature of the bank's business; its assets, liabilities, and contingent accounts; and its record of past earnings. A review of these data should lead to a determination of the strength of the bank and its ability to meet its obligations in the foreseeable future. At minimum, this review should include—

- the size and liquidity of primary and secondary reserves;
- the nature of lending activities, including types and terms of loans, extent of collateral held, and loss experience;
- lending policies and controls in effect to ensure compliance with applicable lending laws and regulations;
- the size and character of investments;
- the size of fixed assets;
- the size and nature of investments in subsidiaries and other affiliates and the extent to which the bank will support those entities in times of difficulty;
- the source and nature of deposits and their volatility;
- the nature and extent of other liabilities and contingent liabilities, including standby facilities;
- the earnings and dividend record and the adequacy of capital;
- the activities of the bank in the foreign-exchange and interbank markets;
- the size and character of the bank's international business; and
- the competency of management.

The quality of management is the key to the analysis of foreign banks and is best determined by frequent visits by officers of the lending bank. Credit checks from other lenders should be required with periodic updates. Credit reports are not available in all countries and, when provided, are often incomplete or vague. Consequently, there is no substitute for firsthand information obtained from visits to overseas banks.

Country risk. Balance of payments; exchange control; and economic, political, and social information on each borrower's home country should be on file to enable the bank to assess the elements of country risk. The lack of this information is as serious a weakness as the lack of financial information on the borrowers. For additional information, see section 7040, "International—Transfer Risk."

Limits and guidelines for purchasing loans. Purchasing loans from dealers or correspondent banks is a common practice in banks with limited opportunities to generate international credit extensions on their own. However, these purchases may restrict a bank to low-profit loans at narrow spreads over a medium- to long-term period. Buying loans seldom builds relationships with borrowers since the relationship generally stays with the bank originating the loan. Therefore, the lending policy should limit the amount of paper purchased from any one outside source and should state an aggregate limit on all these loans.

Limitation on aggregate outstanding loans. Limitations on the total amount of loans outstanding relative to other balance-sheet accounts should be established for the bank, with limits (or sublimits) applicable to international loans clearly defined. Controls over the international loan portfolio are usually expressed relative to deposits, capital structure, or total assets.

Concentration of credits. The same types of concentrations of credits found in a domestic loan portfolio may exist in the international portfolio. In international banking, however, an additional concentration involves loans to a foreign government, its agencies, and its majority-owned or -controlled entities. Loans to specific private businesses may be included in those concentrations if an interrelationship exists in the form of guarantees, moral commitments,

significant subsidies, or other factors indicating dependence on the government. The bank's directorate should evaluate the risks involved in various concentrations and determine those concentrations that should be avoided or limited. The lending policy should also require that all concentrations in the international division be reviewed and reported frequently. For a full discussion of this component, see section 2050, "Concentrations of Credits."

Loan authority. The lending policy should establish written limits for all international lending officers. Lending limits also may be established for group authority, allowing a combination of officers or a committee to approve loans larger than those the members would be permitted to approve individually. The reporting procedures and the frequency of committee meetings should be defined. If the bank operates foreign branches, head office–delegated lending authority should be clearly defined and understood by overseas lending officers.

Nonperforming credits and charge-offs. The lending policy should define nonperforming credit extensions of all types (delinquencies, nonaccruals, or reduced rates) and should specify their accounting and reporting requirements. Reports should be submitted regularly to the board of directors and senior management. The management of banks with overseas branches must take extra care to define and communicate their banks' policies and procedures on nonperforming credits to ensure that all bank offices are properly identifying, accounting for, and reporting credits. The reports should include sufficient detail to allow for the determination of risk factors, loss potentials, and alternative courses of action to effect repayment of nonperforming credits. The policy governing delinquent credits should require a follow-up notice procedure that

is systematic and progressively stronger. Guidelines should be established to ensure that all accounts are presented to and reviewed by senior management or the directorate for potential charge-off at a stated period of delinquency.

Other. The lending policy should be supplemented with other written guidelines for specific departments concerned with credit extensions, such as letters of credit, banker's acceptances, and discounted trade bills. Written policies and procedures approved and enforced in those departments should be referenced in the general lending policy of the bank.

Before a bank grants international credit, its objectives, policies, and practices must be clearly established. The bank must consider its overall size, financial resources, the nature of its customers, its geographic location, and the qualifications and skills of its staff. An examiner should review policies and practices to determine if they are clearly defined and adequate to monitor the condition of the portfolio. If written guidelines do not exist, there is a major deficiency in the lending area, and the board of directors is not properly discharging its duties and responsibilities. If no exception is taken to the objectives, policies, and practices, the international loan portfolio can then be reviewed to ensure compliance.

The failure of the directors to establish a sound international lending policy, of the management to establish adequate written procedures, or of both to monitor and administer the international lending function within established guidelines has resulted in serious problems for banks. Major sources and causes of loan trouble, as discussed in domestic "Loan Portfolio Management," section 2040, also apply to international lending.

International—Loan Portfolio Management

Examination Objectives

Effective date May 1996

Section 7020.2

1. To determine if policies, practices, procedures, and internal controls for international loan portfolio management are adequate.
2. To determine if bank officers are operating in conformance with the established bank guidelines.
3. To determine the scope and adequacy of the audit function as it relates to international lending procedures.
4. To determine the overall quality of the international loan portfolio and how that quality affects the soundness of the bank.
5. To prepare information on the bank's lending function in a concise, reportable format.
6. To determine compliance with applicable laws and regulations.
7. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations are cited.

International—Loan Portfolio Management

Examination Procedures

Effective date March 1984

Section 7020.3

1. If selected for implementation, complete or update the International Loan Portfolio Management section of the Internal Control Questionnaire.
2. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examining procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
3. Request reports on the following from the bank's international division, by department, as of the examination date unless otherwise specified:
 - a. Past-due loans. This report should cover:
 - Single payment and demand notes past due.
 - Single payment and demand notes on which interest is due and unpaid for 30 days or more.
 - Consumer, mortgage and term loans payable in regular installments on which one installment is due and unpaid for 30 days or more.
 - Outstandings under cancelled advance (overdraft) facilities that are unpaid.
 - Discounted (purchased) outgoing foreign bills matured and unpaid and advances secured by pledged delinquent foreign bills.
 - Unauthorized overdrafts including any resulting from customers not paying the bank for banker's acceptances or drafts it paid.And should include the following information:
 - Name of the obligor.
 - Original amount of the loan.
 - Outstanding balance of the loan.
 - Date the loan was made.
 - Due date.
 - Terms of the loan.
 - Number of payments the loan is delinquent.
 - Date of the borrower's last payment.
 - Date to which interest is paid.For larger international loans, the report should also include:
 - Purpose of the loan.
 - Any action being taken to bring the loan current.
 - b. International loans on which interest is not being collected in accordance with the terms of the loan.
 - c. International loans the terms of which have been modified by a reduction of interest rate or principal payment or by a deferral of interest or principal.
 - d. International loans for which repayment terms have been restructured.
 - e. International loan participations purchased and sold and participations in consortium credits since the previous examination.
 - f. International loans sold in full since the previous examination.
 - g. International credits considered "problem credits" by management (this report may be either as of the examination date or as of the date the report was last submitted to the officer's loan review committee(s), the loan and discount committee(s), or the board of directors).
 - h. International credit commitments and other contingent liabilities.
 - i. Loans secured by stock of other banks and rights, interest, or powers of a savings and loan association.
 - j. Extensions of credit to employees, officers, directors, or their interests.
 - k. Extensions of credit to executive officers, directors, principal shareholders and their interests of correspondent banks.
 - l. Miscellaneous loan debit and credit suspense accounts.
 - m. Current interest rate structure.
 - n. Current lending authorities of officers and credit committee(s).
4. Obtain the following information:
 - a. A copy of written policies covering all international lending functions.
 - b. A statement of whether a standing committee administers the lending function.
 - c. Copies of reports furnished to the board of directors for its meetings.
 - d. Lists of directors, executive officers, principal shareholders and their interests.
 - e. A summary of the officer borrowing report (debts to own and other banks).

- f. A list of previously charged-off loans approved by the directors.
5. Obtain a copy of the latest reports furnished to the international loan and discount committee(s). (The domestic loan and discount committee(s) sometimes handle(s) international loans and discounts.)
6. Review international lending policies and updates and abstract appropriate excerpts on:
 - a. Distribution of loans by category.
 - b. Geographic area and country exposure limitations.
 - c. Type of borrowing and industrial concentration limitations.
 - d. Lending authorities of committees and officers.
 - e. Any prohibited types of international loans.
 - f. Maximum maturities for various types of international loans.
 - g. Interest rate structure.
 - h. Minimum downpayment for various types of loans.
 - i. Collateral appraisal policies including:
 - Persons authorized to perform appraisals.
 - Lending values of various types of assets.
 - j. Financial information requirements by types of loans.
 - k. Guidelines for purchasing other banker's acceptances and commercial paper.
 1. Guidelines for loans to major shareholders, directors, officers, or their interests.
7. When more than one international lending policy exists, determine if they are internally consistent by reviewing the guidelines previously obtained.
8. Review minutes of the bank's international loan and discount committee(s) meetings to obtain:
 - a. Present members and their attendance record.
 - b. Scope of work performed.
 - c. Any information considered useful in the examination of specific loan categories or other areas of the bank.
9. Compare reports furnished to the board of directors and the loan and discount committee(s), and those received from the bank in step 3 to determine any material differences and that the differences are transmitted to the board in a timely manner.
10. Compare the lists of directors, officers and their related interests to determine:
 - a. Preliminary compliance with Regulation O (12 CFR 215) (loans to insiders).
 - b. Preliminary compliance with established policies.
11. Perform the following steps for past-due loans:
 - a. Compare the following to determine any material inconsistencies:
 - The past-due schedule received in step 3. Delinquency reports submitted to the board.
 - List of loans considered "problem" loans by management.
 - b. Scan the delinquency lists submitted to the board of directors and senior management to determine that reports are sufficiently detailed to evaluate risk factors.
 - c. Compile current aggregate totals of past-due paper.
12. Perform the following using the loan commitments and contingent schedules obtained in step 3:
 - a. Reconcile appropriate contingency totals to memoranda ledger controls.
 - b. Review reconciling items for reasonableness.
13. Obtain the listing of Uniform Review of Shared National Credits and update the listing based on information obtained in step 3.
14. Obtain the classifications and categories of strong, moderately strong, and weak countries from Interagency Country Exposure Review Committee meeting for which write-ups have been made available and update that data based on information obtained in step 3.
15. Distribute the applicable schedules and other information obtained in the preceding steps to the examiners performing the loan examination programs. Request that the examiners test the accuracy of the information. Also, request that they perform appropriate steps in the separate program "Concentration of Credits."
16. Determine the general distribution and characteristics of the international loan portfolio by:
 - a. Determining the percentage of total loans in specific classes and geographic areas.
 - b. Comparing international loan category distributions to policy guidelines.

17. Obtain the results of the reviews performed of the various segments of the international division during the course of the examination, and perform the following:
 - a. Determine any nonadherence to internally established policies, practices, procedures, and controls.
 - b. Compare the various international division results to determine the extent of nonadherence and if it is systemwide.
 - c. Organize internal guideline exceptions in order of relative importance.
 - d. Determine the aggregate amount of statutory bad debts.
 - e. Organize violations by law and regulation.
 - f. Review international credit classifications and assets listed for special mention to determine:
 - Inclusion of all necessary information.
 - Substantiation of classification or criticism.
 - g. Determine the aggregate amount of credit extensions listed in each of the four levels of criticism.
 - h. Compile a listing of all credit extensions not supported by current and satisfactory credit information.
 - i. Compile a listing of all credit extensions not supported by complete collateral documentation.
 - j. Review the separate procedures for “Concentration of Credits” and determine:
 - If all necessary data is included.
 - If there is substantiation for including specific items in the report of examination as a concentration.
 - If the concentration is undue or unwarranted.
 - k. Compute the following ratios and compare to computations from prior examinations:
 - Aggregate international division past due paper to international division loans and overdrafts outstanding.
 - Aggregate international division “A” paper to international division past due.
 - Total international division past due, nonaccrual and renegotiated rate credits to total international division credits.
 - Aggregate classified international credits to primary capital funds.
 - Aggregate classified international credit to total bank classified credits.
 - Weighted classified international credits to primary capital funds.
18. Forward the totals of international division loss and doubtful classifications to the examiner assigned to analyze the adequacy of the bank’s capital.
19. Compare management’s list of “problem” credits from step 3 to the examiner’s listing of international classified and criticized credits to determine the extent of management’s knowledge of its own international credit problems.
20. Determine, through an in-depth analysis of information previously generated, the causes of existing problems or weaknesses within the international division’s systems which present potential for future problems.
21. Forward the following information to the examiner assigned to analyze the bank’s loan loss reserves.
 - a. A listing of international division credits considered “problem” credits by management.
 - b. A listing of classified and criticized credits relating to the international division.
 - c. A listing of previously charged-off loans.
22. Organize the results of the examination of the international lending function to facilitate discussion with the examiner-in-charge and, upon approval, with senior management of the bank.
23. During discussion with senior management, structure inquiries in such a manner as to:
 - a. Gain insight into management’s international lending philosophy.
 - b. Elicit management responses for correction of deficiencies.
24. Write, in appropriate report format, general remarks which may include:
 - a. The scope of the examination of the international lending function.
 - b. The quality of internal policies, practices, procedures, and controls over the international lending function.
 - c. The general level of adherence to internal policies, practices, procedures, and controls that govern the bank’s international lending function.
 - d. The scope and adequacy of the internal loan review system regarding international credit extensions.
 - e. The quality of the entire international credit portfolio.

- f. The competency of management with respect to the international lending function.
 - g. Causes of existing credit problems.
 - h. Expectations for continued sound international lending and correction of existing credit control and quality deficiencies.
 - i. Promises made by management for correction of credit control and quality deficiencies.
 - j. Credit extensions to insiders and their interests.
25. Compile or prepare all information which provides substantiation for your general remarks.
 26. Update the workpapers with any information that will facilitate future examinations.

International—Loan Portfolio Management

Internal Control Questionnaire

Effective date June 1985

Section 7020.4

Review the bank's internal controls, policies, practices, and procedures for managing the bank's loan portfolio. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information.

1. Has the board of directors, consistent with its duties and responsibilities, adopted written international loan portfolio management objectives and policies that:
 - a. Establish suggested guidelines for distribution of international loans by different categories?
 - b. Establish geographic area limits for credits?
 - c. Establish suggested guidelines for aggregate outstanding international loans in relation to other balance sheet categories?
 - d. Establish international loan authority of committees and individual lending officers?
 - e. Define acceptable types of international loans?
 - f. Establish maximum maturities for various types of international loans?
 - g. Establish international loan pricing?
 - h. Establish appraisal policy?
 - i. Establish minimum financial information required at inception of the credits?
 - j. Establish limits and guidelines for purchasing paper?
 - k. Establish guidelines for loans to bank directors, officers, and their related interests?
 1. Establish collection procedures?
 - m. Define the duties and responsibilities of international loan officers and loan committees?
 - n. Outline international loan portfolio management objectives that acknowledge:
 - Concentrations of credit within specific industries and relating to country credits?
 - The need to employ personnel with specialized knowledge and experience?
 - Possible conflicts of interest?
2. Are international loan portfolio management objectives and policies reviewed at least annually to determine if they are compatible with changing market conditions?
3. Are the following reported to the board of directors or its designated committees (indicate which) at their regular meetings (at least monthly):
 - a. Past-due single payment loans (if so, indicate the minimum days past due for them to be included _____)?
 - b. Loans on which interest only is past due (if so, indicate the minimum days past due for them to be included _____)?
 - c. Term loans on which one installment is past due (if so, indicate the minimum days past due for them to be included _____)?
 - d. Outstandings under overdraft facilities that are unpaid (if so, indicate the minimum days past due for them to be included _____)?
 - e. Discounted (purchased) outgoing foreign bills matured and unpaid (or advances collateralized by pledged delinquent foreign bills) (if so, indicate the minimum days past due for them to be included _____)?
 - f. Overdrafts resulting from a customer not paying the bank for banker's acceptances or drafts the bank paid (if so, indicate minimum days past due for them to be included _____)?
 - g. Total outstanding international loan commitments?
 - h. Loans requiring special attention?
 - i. New loans and loan renewals or restructured loans?
4. Are reports submitted to the board or its committees rechecked by a designated person for possible omissions prior to their submission?
5. Are written applications required for all international loans?
6. Does the bank maintain credit files for all international borrowers?
7. Does the credit file contain information on:
 - a. The purpose of the loan?
 - b. The planned repayment schedule?
 - c. The disposition of loan proceeds?

- d. The points to be raised regarding the borrower from which to base questions during officer calling programs?
- e. Lending officer calls on customers and foreign countries?
8. Does the bank require periodic submission of financial statements by all international division borrowers whose loans are not fully secured by readily marketable collateral?
9. Is a tickler file maintained to assure that current financial information is requested and received?
10. Does the bank require submission of certified financial statements based on dollar amount of commitment (if so, state the dollar or equivalent minimum \$_____)?
11. Are financial statements of foreign borrowers spread in the credit file by local currency and U.S. dollar equivalents, if appropriate, on a yearly comparative basis?
12. Are borrower financial statements spread with those of comparable borrowers in the same country?
13. Does the bank perform a credit investigation on proposed and existing borrowers for new loan applications?
14. Does the bank have a periodic lending officer call program for:
 - a. Customers?
 - b. Countries?
15. Is it required that all international loan commitments be in writing?
16. Are international lines of credit reviewed and updated at least annually?
17. Are borrower's outstanding liabilities checked to appropriate lines of credit prior to granting additional advances?
18. Is there an internal review system (it may be a function of the internal audit department) which covers each department and:
 - a. Rechecks interest, discounts, fees, commissions, and maturity date computations?
 - b. Re-examines debt instruments for proper execution, receipt of all required supporting papers, and proper disclosure forms?
 - c. Determines that international loan approvals are within the limits of the bank's lending authorities?
 - d. Determines that international loans outstanding and committed are within the bank's foreign country or foreign currency limits?
- e. Determines that notes and debt instruments are being approved initially by the loan officer?
- f. Ascertains that new international loans are within the limitations set for the borrower by corporate resolution?
- g. Rechecks liability ledgers to determine that new loans have been accurately posted?
- h. Rechecks the preparation of maturity and interest notices?
- i. Examines entries to various general ledger loan controls?
- j. Confirms collateral, loans, and discounts with customers on a test basis?
19. Does the bank have an international loan review section or the equivalent?
20. Is the loan review section independent of the international lending function?
21. Are the initial results of the international loan review process submitted to a person or committee which is also independent of the international lending function?
22. Are all international loans exceeding a certain dollar amount selected for review?
23. Do international lending officers recommend loans for review?
24. Is a method, other than those detailed in steps 23 or 24, used to select international loans for review (if so, provide details)?
25. Are internal reviews conducted at least annually for all international lending areas?
26. In an officer identification system, are guidelines in effect which define the consequences of an officer withholding a loan from the review process?
27. Is the bank's international problem loan list periodically updated by the lending officers?
28. Does the bank maintain a list of international loans reviewed, indicating the date of the review and the credit rating?
29. Does the loan review section prepare summaries to substantiate credit ratings, including pass loans?
30. Are loan review summaries maintained in a central location or in appropriate credit files?
31. Are followup procedures in effect for internally classified international loans, including an update memorandum to the appropriate credit file?
32. Are officers and employees prohibited from holding blank signed notes and other debt

- instruments in anticipation of future borrowings?
33. Are paid and renewed notes cancelled and promptly returned to customers?
 34. Do loan proceeds disbursed in cash require a customer receipt?
 35. Are international loan records retained in accordance with record retention policy and legal requirements?
 36. Are new notes microfilmed daily?
 37. Is a systematic and progressively stronger follow-up notice procedure utilized for delinquent loans?
 38. Does the bank maintain loan interest, discount, fee, and commission rate schedules for various types of international loans?
 39. Does the bank periodically update the above rate schedules (if so, state normal frequency _____)?
 40. Does the bank maintain records in sufficient detail to generate the following information by type of advance:
 - a. The cost of funds loaned?
 - b. The cost of servicing loans, including overhead?
 - c. The cost factor of probable losses?
 - d. The programmed profit margin?
 41. Does the international division maintain adequate and current country analysis information?
 42. Has the international division conducted studies for those industries in which it is a substantial lender?

CONCLUSION

43. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
44. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

International—Loans and Current Account Advances

Effective date May 1996

Section 7030.1

A bank's international division lends, either directly or through state entities, to U.S. importers and exporters, foreign companies, multinational corporations, foreign banks, and foreign governments. The terms of these lending activities are consistent with the purpose of the financing.

Short-term working-capital loans to commercial business enterprises commonly finance inventories or receivables arising from trade. Receivable pledges, warehouse receipts, and liens on inventory or commodities may be held as collateral. However, in certain countries, these forms of collateral are not legally recognized and, therefore, the banks must be thoroughly familiar with applicable local laws, regulations, and practices. Loans to foreign banks are usually short-term and unsecured.

Medium-term lending (one to five years) generally represents capital goods financing, shipping loans, and various specialized credits. Long-term loans (those exceeding five years) are normally used to finance extensive projects of multinational corporations, foreign governments, or foreign state entities. Government guarantees of private long-term loans are common when the project has significant importance to a national economy.

The methods of loan financing in an international division are the same as those for domestic lending. Loans in the international division may be direct or discounted. In both of these instances, the bank holds a promissory note or similar instrument evidencing indebtedness. Current account advances, however, are a category of loans unique to international banking. This method of financing is an American substitute, used by banks in the United States, for the European method of financing by overdrafts, which is also a common lending method of overseas offices of U.S. banks. Current account advances, like overdrafts, are extensions of credit in which no instrument of specific indebtedness is used; however, a signed agreement is on file stating the conditions applicable to advances made by the bank to the obligor. Other types of

international financing treated as loans include own acceptances purchased (discounted), other banker's acceptances purchased, and discounted trade acceptances.

The same credit risks apply to international division loans as to those made in domestic loan departments, with the addition of country risk, which is the primary additional component that distinguishes an international loan from a domestic loan. Country risk encompasses the entire spectrum of risks arising from the economic, social, and political environments of a foreign country and from the governmental policies structured to respond to those conditions that may have adverse consequences for the repayment of a foreign borrower's debt. More specifically, there is a risk associated with a borrower's capacity to obtain the foreign exchange required to service its cross-border debt (that is, transfer risk). An obligor may have the financial means in its domestic currency to repay its indebtedness, but nationalization, expropriation, governmental repudiation of external indebtedness, the imposition of exchange controls, or currency devaluation may preclude the lender from obtaining timely repayment. Apart from a nation's outright repudiation of external debt, these developments might not result in an uncollectible extension of credit; however, the delay in collection could adversely affect the condition of the lending bank.

This section is designed to apply to most types of loans and current account advances found in an international division. However, lending areas in many international divisions and overseas branches are often segregated into separate departments and differ substantially from international loans and current account advances. Those are discussed in separate sections of this manual: "International—Financing Foreign Receivables," "International—Banker's Acceptances," "International—Letters of Credit," and "International—Guarantees Issued," sections 7050, 7060, 7080, and 7090, respectively.

International—Loans and Current Account Advances

Examination Objectives

Effective date May 1996

Section 7030.2

1. To determine the adequacy of policies, practices, procedures, and internal controls for international loans and advances.
2. To determine if bank officers are operating in conformance with established bank guidelines.
3. To evaluate the portfolio for credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function as it relates to international lending procedures.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations are cited.

International—Loans and Current Account Advances Examination Procedures

Effective date October 2008

Section 7030.3

1. If selected for implementation, complete or update the international lending section of the internal control questionnaire.
2. Determine the scope of the examination on the basis of the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest reviews done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records.
 - a. Reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination, review the loan and collateral documentation, and prepare credit line cards.
6. Obtain the following information:
 - a. past-due, nonaccrual, and reduced-rate loans and advances
 - b. loans whose terms have been modified by a reduction in interest rate or principal payment or by a deferral of interest or principal
 - c. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination.
 - d. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
 - e. loan commitments and other contingent liabilities
 - f. reports of the indebtedness of executive officers, principal shareholders, and their related interests to correspondent banks
 - g. a list of correspondent banks
 - h. extensions of credit to major stockholders of the bank and to bank employees, officers, and directors, and to their related interests (specify which officers are considered executive officers)
7. Review the information received and perform the following procedures.
 - a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.*
 - Participations only:
 - Test participation certificates and records, and determine that the parties share in the risks and contractual payments on a pro rata basis.
 - Determine that the bank exercises similar controls and procedures over loans serviced for others as for loans in its own portfolio.
 - Determine that the bank, as lead or agent in a credit, exercises similar controls and procedures over syndications and participations sold as for loans in its own portfolio.
 - All transfers:
 - Investigate any situations in which loans were transferred immediately
 - i. miscellaneous loan-debit and credit-suspense accounts
 - j. Interagency Country Exposure Review Committee (ICERC) determinations
 - k. criticized Shared National Credits (applicable international division credits)
 - l. loans considered “problem loans” by management
 - m. specific guidelines in the lending policy
 - n. current lending authorities of bank officers and credit committees
 - o. the current interest-rate lending structure of the bank
 - p. any useful information on international division credit extensions resulting from the review of the minutes of the loan and discount committee(s) and any other credit committee(s)
 - q. reports on international division credit extensions furnished to the loan and discount committee(s) and any other credit committee(s)
 - r. relevant reports furnished to the board of directors
 - s. loans criticized during the previous examination

- before the date of examination to determine if any were transferred to avoid possible criticism during the examination.
- Determine whether any of the loans transferred were either nonperforming at the time of transfer or classified at the previous examination.
 - Determine that the consideration received for low-quality loans transferred from the bank to an affiliate is properly reflected on the bank's books and is equal to the fair market value of the transferred loans (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such loans as well as an appropriate risk premium). Section 23A of the Federal Reserve Act generally prohibits a state member bank from purchasing a low-quality asset.
 - Determine that low-quality assets transferred to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and its affiliate.
 - If low-quality loans were transferred to or from another lending institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:
 - (1) name of originating institution
 - (2) name of receiving institution
 - (3) type of transfer (i.e., participation, purchase or sale, swap)
 - (4) date of transfer
 - (5) total number of loans transferred
 - (6) total dollar amount of loans transferred
 - (7) status of the loans when transferred (e.g., nonperforming, classified, etc.)
 - (8) any other information that would be helpful to the other regulator
- b. *Miscellaneous loan-debit and credit-suspense accounts.*
 - Discuss with management any large or old items.
 - Perform additional procedures as considered appropriate.
 - c. *Loan commitments and other contingent liabilities.* Analyze the commitment or contingent liability together with the combined amounts of the current loan balance, if any.
 - d. *Loans criticized during the previous examination.* Determine disposition of loans so criticized by transcribing the current balance and payment status or the date the loan was repaid and the source of repayment.
 - Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or as a result of a participation, sale, or swap with another lending institution.
 - If repayment was a result of a participation, sale, or swap, refer to step 7a of this section for the appropriate examination procedures.
 - e. *Shared National Credits.*
 - Compare the schedule of international loans and current account advances included in the Uniform Review of National Credits program with the bank's reports of international loans outstanding.
 - For each loan or advance so identified, transcribe appropriate information to line cards. No further examination procedures are necessary for these credits.
 - f. *ICERC credits.*
 - Identify any loans that were selected for review that are criticized for transfer-risk reasons by ICERC.
 - For each loan or advance so identified, transcribe appropriate information to line cards. No further examination procedures are necessary for these credits.
8. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past-due status.
 9. Prepare credit line cards for any international loan not previously selected for review that, on the basis of information derived

- from the above schedules, requires an in-depth review.
10. Obtain customer liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and other lending areas, and together decide who will review the borrowing relationship. Pass or retain complete credit line cards.
 11. Prepare collateral line cards for all borrowers selected in the preceding steps.
 12. Obtain credit files for all borrowers for whom examiner credit line cards were prepared, and complete the credit line cards, where appropriate. To analyze the international loans, perform the following procedures:
 - a. Analyze balance sheets and profit-and-loss figures as shown in current and preceding financial statements, and determine the existence of any favorable or adverse trends or ratios.
 - b. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure of the borrower.
 - c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, and determine the primary sources of repayment and evaluate the adequacy of those sources.
 - d. Ascertain compliance with provisions of credit agreements.
 - e. Review digests of officers' memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual repayment programs of the borrower's indebtedness.
 - f. Relate collateral values to outstanding debt, and determine when the collateral was last appraised.
 - g. Compare interest rates charged with the current interest-rate schedule of the bank, and determine that the terms are within established guidelines.
 - h. Compare the original amounts of the customer's obligations to the bank with the lending officer's authority.
 - i. Analyze secondary support afforded by guarantors and endorsers.
 - j. Ascertain compliance with the bank's established international loan policy.
 13. For loans selected for review, check the central liability file for borrowers indebted above the cutoff line or for borrowers displaying credit weakness or suspected of having additional liability in other lending areas.
 14. Transcribe significant liability and other information on officers, principals, and affiliations of borrowers selected for review. Cross-reference line cards to borrowers, where appropriate.
 15. Determine the bank's compliance with laws and regulations pertaining to international lending by performing the following steps:
 - a. *Lending limits.*
 - Determine the bank's lending limit as prescribed by state law.
 - Determine advances or combinations of advances with aggregate balances above the limit, if any.
 - b. *Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and the Board's Regulation W.*
 - Obtain a listing of loans to affiliates.
 - Test-check the listing against the bank's customer liability records to determine its accuracy and completeness.
 - Ensure that loans to affiliates do not exceed limits of section 23A and Regulation W.
 - Ensure that loans to affiliates meet the collateral requirements of section 23A and Regulation W.
 - Determine that low-quality assets have not been purchased from an affiliate.
 - Determine that all covered transactions with affiliates are on terms and conditions that are consistent with safe and sound banking practices.
 - Determine that all transactions with affiliates comply with the market-terms requirement of section 23B and Regulation W.
 - c. *18 USC 215, Receipt of Commission or Gift for Procuring Loans.*
 - While examining the international lending function, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.

- Investigate any such suspected instances.
- d. *Federal Election Campaign Act (2 USC 441b), Political Contributions and Loans.*
- While examining the international lending area, determine the existence of any loans in connection with any political campaigns.
 - Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.
- e. *Regulation Y (12 CFR 225.7), Tie-In Provisions.* While reviewing international credit and collateral files, especially loan agreements, determine whether any extension of credit is conditioned upon—
- obtaining or providing any additional credit, property, or service from or to the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
 - the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit.
- f. *Insider lending activities.* The examination procedures for checking compliance with the relevant law and regulation covering insider lending activities and reporting requirements are as follows: (The examiner should refer to the appropriate sections of the statutes for specific definitions, lending limitations, reporting requirements, and conditions indicating preferential treatment.)
- *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests.* While reviewing information relating to insiders received from the bank or appropriate examiner (including loan participations, loans purchased and sold, and loan swaps)—
 - test the accuracy and completeness of information about international loans by comparing it with the trial balance or loans sampled;
 - review credit files on insider loans to determine that required information is available;
 - determine that loans to insiders do not contain terms more favorable than those afforded other borrowers;
 - determine that loans to insiders do not involve more than normal risk of repayment or present other unfavorable features;
 - determine that loans to insiders do not exceed the lending limits imposed by Regulation O;
 - if prior approval by the bank's board was required for a loan to an insider, determine that such approval was obtained;
 - determine compliance with the various reporting requirements for insider loans;
 - determine that the bank has made provisions to comply with the disclosure requirements for insider loans; and
 - determine that the bank maintains records of public disclosure requests and the disposition of the requests for a period of two years after the dates of the requests.
 - *Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (P.L. 95-630), as amended by the Garn-St Germain Depository Institutions Act of 1982, Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.*
 - Obtain from, or request that the examiners reviewing due from banks and deposit accounts verify, a list of correspondent banks provided by bank management, and ascertain the profitability of those relationships.
 - Determine that loans to insiders of correspondent banks are not made on preferential terms and that no conflict of interest appears to exist.
- g. *12 USC 1828(v), Loans Secured by Bank Stock.*
- While examining international loans, determine the existence of any loans or discounts that are secured by the insured financial institution's own stock.
 - In each such case, determine that the chief executive officer has promptly

- reported such fact to the proper regulatory authority.
- h. *12 USC 83 (Rev. Stat. 5201), made applicable to state member banks by section 9, paragraph 6, of the Federal Reserve Act (12 USC 324), Loans Secured by Own Stock (see also Federal Reserve Regulatory Service 3–1505):*
- While examining international loans, determine the existence of any loans secured by the bank's own shares or capital notes and debentures.
 - Confer with the examiner assigned investment securities to determine whether the bank owns any of its own shares or its own notes and debentures.
 - In each case in which such collateral or ownership exists, determine whether the collateral or ownership was taken to prevent a loss on a debt previously contracted (DPC) transaction.
 - In each case of ownership, determine whether the shares or subordinated notes and debentures have been held for a period of not more than six months.
- i. *Regulation U (12 CFR 221).* While reviewing credit files, check the following for all loans that are secured directly or indirectly by margin stock and that were extended for the purpose of buying or carrying margin stock:
- Except for credits specifically exempted under Regulation U, determine that the required Form FR U-1 has been executed for each credit by the customer and that it has been signed and accepted by a duly authorized officer of the bank acting in good faith.
 - Determine that the bank has not extended more than the maximum loan value of the collateral securing such credits, as set by section 221.7 of Regulation U, and that the margin requirements are being maintained.
 - Determine compliance with other specific exceptions and restrictions of the regulation as they relate to the credits reviewed.
- j. *Regulation K (12 CFR 211) and Regulation Y (12 CFR 225), International Banking Operations.*
- Review all applicable sections, especially those concerned with—
 - loans or extensions of credit to foreign banks,
 - loans to executive officers of foreign branches of state member banks,
 - a statement of policy or the availability of information to facilitate supervision of foreign operations, and
 - reporting and disclosure of international assets and accounting for fees on international loans.
- k. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 103), Retention of Credit Files.* Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over \$10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date thereof. (See 31 CFR 103.33.) (Loans secured by an interest in real property are exempt.)
- l. *Export-Import Bank of the United States.* Review extensions of credit to determine compliance with Eximbank's lending standards, policies, guidelines, and regulations as they relate to direct lending programs, cooperative financing facilities, private export funding, exporter credit programs, medium-term export debt obligations, leasing, loan guarantees, export credit insurance, and discount programs.
- m. *7 CFR 1400–1499, Commodity Credit Corporation.* Determine the compliance of international loans relating to Commodity Credit Corporation programs.
- n. *22 CFR 200–299, Agency for International Development.* Review to determine the compliance of international loans related to Agency for International Development programs.
- o. *Section 909, International Lending Supervision Act (12 USC 3908).* Section 909 of the International Lending Supervision Act of 1983 (the act) requires that FDIC-insured banks and Edge and agreement corporations prepare a written economic feasibility evaluation signed by a senior official of the banking institution for any proposed extension of credit by the lead U.S. banking institution or insti-

tutions, which individually or when aggregated with credits of other U.S. banking institutions exceeds \$20 million per project, to finance the construction or operation of any mining operation, any metal or mineral primary processing operation, any metal fabricating facility or operation, or any metal-making (semi- and finished) operation located outside the United States or its territories or possessions. The act stipulates that the evaluation shall consider the profit potential, the competitive and economic impact of the project, and the reasonable expectation of repayment. The act also mandates that any new evaluations be reviewed by federal examiners in the context of every examination. The following checklist should be used to test compliance with the requirements of the act:

- Does the banking institution have a written economic feasibility evaluation for all credit extensions by that banking institution alone or in conjunction with other U.S. banking institutions, which individually or when aggregated with credits of other U.S. banking institutions exceed \$20 million per project, to finance any of the designated projects?
 - Is the evaluation signed by a senior officer of the examined or the lead U.S. banking institution?
 - Does the evaluation consider the following:
 - profit potential of the project
 - impact of the project on world markets
 - inherent competitive advantages and disadvantages of the project over the entire life of the project
 - the likely effect of the project on the overall long-term economic development of the country in which it is located
 - the reasonable expectation of repayment from revenues generated by the project, without regard to any subsidy provided by the government involved or any instrumentality of any country
- not verify its accuracy. However, any negative responses to the foregoing questions would be indicative of noncompliance with the statute and should be discussed with the appropriate level of bank management. Any apparent violations should be cited in the examination report, along with a discussion of any remedial actions taken by bank management during the examination.
16. Perform the appropriate steps in “Concentrations of Credit,” section 2050.3.
 17. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
 - a. delinquent loans;
 - b. violations of laws and regulations;
 - c. loans not supported by current and complete financial information;
 - d. loans on which collateral documentation is deficient;
 - e. concentrations of credit;
 - f. criticized loans;
 - g. inadequately collateralized loans;
 - h. extensions of credit to major shareholders, employees, officers, directors, and their related interests;
 - i. loans whose ultimate collection is questionable for any other reason; and
 - j. other matters regarding the condition of the department.
 18. Provide details of classified international participation loans that are not covered by the Shared National Credit Program. Include the names and addresses of all participating state member banks and copies of the criticized loan comments.
 19. Provide the examiner-in-charge with your findings on—
 - a. the adequacy of written policies relating to international loans;
 - b. the manner in which bank officers are operating in conformance with established policy;
 - c. adverse trends within the international lending function;
 - d. the accuracy and completeness of the schedules obtained from “International—Loan Portfolio Management,” section 7020.3.
 - e. internal control deficiencies or exceptions;
 - f. recommended corrective action when policies, practices, or procedures are deficient;
 - g. the competency of management of the

Although the bank’s evaluation should be done in a professional manner, examiners need

international lending function; and
h. other matters of significance.

20. Update the workpapers with any information that will facilitate future examinations.

International—Loans and Current Account Advances

Internal Control Questionnaire

Effective date March 1984

Section 7030.4

Review the bank's internal controls, policies, practices, and procedures for granting and servicing international loans. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written international loan policies that:
 - a. Establish procedures for reviewing international loan applications?
 - b. Define qualified borrowers?
 - c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are international loan policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary international loan records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
- *4. Are the subsidiary international loan records (control totals) balanced daily with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle loans and post records?
5. Are the following properly recorded as "loans" for accounting and call report purposes:
 - a. Acceptances of other banks purchased?
 - b. Own acceptances purchased (discounted)?
 - c. Customer's liability to the bank on drafts paid under letters of credit for which the bank has not been reimbursed?

- *6. Is a loan delinquency report prepared for and reviewed by management frequently (if so, how often _____)?
- *7. Are inquiries about loan balances received and investigated by persons who do not process loans, handle settlements, or post records?
- *8. Are bookkeeping adjustments checked and approved by an appropriate officer?
 9. Is a daily record maintained summarizing loan transaction details, i.e., loans granted, payments received, and interest collected, to support applicable general ledger account entries?
10. Are frequent note (or record copy) and liability trial balances prepared and reconciled monthly with control accounts by employees who do not process or record loan transactions?

INTEREST

- *11. Is the preparation and posting of interest records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
12. Are any independent interest computations made and compared or adequately tested to initial interest records by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?

COLLATERAL

13. Are multicopy, pre-numbered records maintained that detail the complete description of collateral pledged?
14. Are the functions of receiving and releasing collateral to borrowers and of making entries in the collateral register performed by different employees?
15. Is negotiable collateral held under joint custody?
16. Are receipts obtained and filed for released collateral?
17. Are securities valued and margin requirements reviewed at least monthly?

18. When collateral support is the cash surrender value of insurance policies, is a periodic accounting received from the insurance company and maintained with the policy?
19. Is a record maintained of entry to the collateral vault?
20. Are stock powers filed separately to bar negotiability and to deter abstraction of both the security and the negotiating instrument?
21. Are securities out for transfer, exchange, etc., controlled by pre-numbered temporary vault-out tickets?
22. Are pledged deposit accounts properly coded to negate unauthorized withdrawal of funds?
23. Are acknowledgements received for pledged deposits held at other banks?
24. Is an officer's approval necessary before collateral can be released or substituted?
 - c. Determines that items released on temporary vault-out tickets are authorized and have not been outstanding for an unreasonable length of time?
 - d. Determines that loan payments are promptly posted?
28. Are all notes and advances recorded on a register or similar record and assigned consecutive numbers?
29. Are payment notices prepared and sent by someone not connected with loan processing?
30. Are any notes signed by a customer in blank and held in anticipation of future borrowings properly safeguarded?
31. Are lending officers frequently informed of maturing loans and credit lines?

OTHER

25. Are notes and advance slips safeguarded during bank hours and locked in the vault overnight?
26. Are all loan rebates approved by an officer and made only by official check?
27. Does the bank have an internal review system that:
 - a. Re-examines collateral items and supporting documentation for negotiability and proper assignment?
 - b. Test checks values assigned to collat-

CONCLUSION

32. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
33. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

When banks engage in international lending, they undertake customary credit risk as denoted by the possibility of nonpayment because of an obligor's weak financial condition or a lack of adequate collateral protection. International lending also bears risks associated with conditions within a foreign borrower's home country; these risks are commonly referred to as country risk. Conditions that may give rise to country risk include a country's underlying economic, political, and social trends and movements that may have potential consequences for foreigners' debt and equity investments in that country. In addition to the adverse effect that deteriorating economic conditions and political and social unrest may have on the rate of default by obligors in a country, country risk includes the possibility of nationalization or expropriation of assets, government repudiation of external indebtedness, exchange controls, and currency depreciation or devaluation. An assessment about the level of country risk should reflect an evaluation of the effect of prevailing (and possible future) economic, political, and social conditions on a country's ability to sustain external debt service, as well as reflect the impact of these conditions on the credit risk of individual counterparties located in the country.

Transfer risk is a facet of country risk. It is the possibility that an asset cannot be serviced in the currency of the payment because the obligor's country lacks the necessary foreign exchange or has put restraints on its availability.¹

The traditional examination approach to commercial credit risk is treated separately in other sections of this manual. The purpose of this section is to delineate the current examination policies, objectives, and procedures for evaluating a bank's country- and transfer-risk exposures and its management system for monitoring and controlling them.

COUNTRY RISK

Country or sovereign risk encompasses the entire

1. Exchange controls are an example of transfer risk. The Interagency Country Exposure Review Committee (ICERC) assigns ratings to foreign exposures based on its evaluation of the level of transfer risk associated with a country. See the *Guide to the Interagency Country Exposure Review Committee Process*, which was issued in November 1999, for a comprehensive discussion of the operations of the ICERC. See also section 7040.3.

spectrum of risks and factors that arise from the economic, social, and political environments of a foreign country that may have potential consequences for foreigners' debt and equity investments in that country. A detailed description of these factors is described below.

Macroeconomic Factors

The first factor affecting country risk is the size and structure of a country's external debt in relation to its economy, more specifically—

- the current level of short-term debt and the potential effect that a liquidity crisis would have on the ability of otherwise creditworthy borrowers in the country to continue servicing their obligations, and
- to the extent the external debt is owed by the public sector, the ability of the government to generate sufficient revenues, from taxes and other sources, to service its obligations.

The condition and vulnerability of the country's current account is also an important consideration, including—

- the level of international reserves, including forward market positions of the country's monetary authority (especially when the exchange rate is fixed);
- the level of import coverage provided by the country's international reserves;
- the importance of commodity exports as a source of revenue, the existence of any price-stabilization mechanisms, and the country's vulnerability to a downturn in either its export markets or the price of an exported commodity; and
- the potential for sharp movements in exchange rates and their effect on the relative price of the country's imports and exports.

The role of foreign sources of capital in meeting the country's financing needs is another important consideration in the analysis of country risk, including—

- the country's access to international financial markets and the potential effects of a loss of market liquidity;

- the country's relationships with private-sector creditors, including the existence of loan commitments and the attitude among bankers toward further lending to borrowers in the country;
- the country's current standing with multilateral and official creditors, including the ability of the country to qualify for and sustain an International Monetary Fund or other suitable economic adjustment program;
- the trend in foreign investments and the country's ability to attract foreign investment in the future; and
- the opportunities for privatization of government-owned entities.

Past experience has highlighted the importance of a number of other important macroeconomic considerations, including—

- the degree to which the country's economy may be adversely affected through the contagion of problems in other countries;
- the size and condition of the country's banking system, including the adequacy of the country's system for bank supervision and any potential burden of contingent liabilities that a weak banking system might place on the government;
- the extent to which state-directed lending or other government intervention may have adversely affected the soundness of the country's banking system, or the structure and competitiveness of the favored industries or companies; and
- for both in-country and cross-border exposures, the degree to which macroeconomic conditions and trends may have adversely affected the credit risk associated with counterparties in the country.

Social, Political, and Legal Climate

The analysis of country risk should also consider the country's social, political, and legal climate, including—

- the country's natural- and human-resource potential;
- the willingness and ability of the government to recognize economic or budgetary problems and implement appropriate remedial action;
- the degree to which political or regional

- factionalism or armed conflicts are adversely affecting the government of the country;
- any trends toward government-imposed price, interest-rate, or exchange controls;
- the degree to which the country's legal system can be relied on to fairly protect the interests of foreign creditors and investors;
- the accounting standards in the country and the reliability and transparency of financial information;
- the extent to which the country's laws and government policies protect parties in electronic transactions and promote the development of technology in a safe and sound manner;
- the extent to which government policies promote the effective management of the institution's exposures; and
- the level of adherence to international legal and business-practice standards.

Institution-Specific Factors

Finally, an institution's analysis of country risk should consider factors relating to the nature of its actual (or approved) exposures in the country, including, for example—

- the institution's business strategy and its exposure-management plans for the country;
- the mix of exposures and commitments, including the types of investments and borrowers, the distribution of maturities, the types and quality of collateral, the existence of guarantees, whether exposures are held for trading or investment, and any other distinguishing characteristics of the portfolio;
- the economic outlook for any specifically targeted industries within the country;
- the degree to which political or economic developments in a country are likely to affect the institution's chosen lines of business in the country (For instance, the unemployment rate or changes in local bankruptcy laws may affect certain activities more than others.);
- for an institution involved in capital markets, its susceptibility to changes in value based on market movements (As the market value of claims against a foreign counterparty rises, the counterparty may become less financially sound, thus increasing the risk of nonpayment. This is especially true for over-the-counter derivative instruments.);

- the degree to which political or economic developments are likely to affect the credit risk of individual counterparties in the country (For example, foreign counterparties with healthy export markets or whose business is tied closely to supplying manufacturing entities in developed countries may have significantly less exposure to the local country's economic disruptions than do other counterparties in the country.); and
- the institution's ability to effectively manage its exposures in a country through in-country or regional representation, or by some other arrangement that ensures the timely reporting of, and response to, any problems.

Risk-Management Process for Country Risk

Country risk has an overarching effect on an institution's international activities and should explicitly be taken into account in the risk assessment of all exposures (including off-balance-sheet) to all public- and private-sector foreign-domiciled counterparties. The risk associated with even the strongest counterparties in a country will increase if, for example, political or macroeconomic conditions cause the exchange rate to depreciate and the cost of servicing external debt to rise. Country risk can occur in many different forms, and the nature of specific risks can change over time. A U.S. banking organization with significant direct or indirect international exposure should have in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities. Examiners should be continually evaluating the adequacy of the country-risk management process at internationally active institutions, and they should regularly update their assessments. An institution's country-risk management process should give particular attention to any concentrations of country risk.

Country risk is not necessarily limited to institutions with direct international exposures. Domestic counterparties with significant economic dependence on a foreign country or region (for example, through export dependence) can pose an indirect country risk to institutions that do not have direct international activity. While institutions are not required to incorporate indirect country risk into a formal

country-risk management process, they should nevertheless take these country-risk factors into account, where appropriate, when assessing the creditworthiness of domestic counterparties. Examiners should ensure that the overall credit-risk management process takes into account indirect country risk where applicable in all supervised institutions.

To effectively control the risk associated with international activities, institutions must have a risk-management process that focuses on the broadly defined concept of country risk. A sound country-risk management process includes effective oversight by the board of directors, adequate risk-management policies and procedures, an accurate country-exposure reporting system, an effective country-risk analysis process, a country-risk rating system, country-exposure limits, ongoing monitoring of country conditions, periodic stress testing of foreign exposures, and adequate internal controls and an audit function.

Oversight by the Board of Directors

If country risk is to be managed properly, the board of directors must oversee the process effectively. The board is responsible for periodically reviewing and approving policies governing the institution's international activities to ensure that they are consistent with the institution's strategic plans and goals. The board is also responsible for reviewing and approving limits on country exposure and ensuring that management is effectively controlling the risk. When evaluating the adequacy of the institution's capital and allowance for loan and lease losses (ALLL), the board should take into account the volume of foreign exposures and the ratings of the countries to which the institution is exposed.

Policies and Procedures for Managing Country Risk

Bank management is responsible for implementing sound, well-defined policies and procedures for managing country risk that—

- establish risk-tolerance limits;
- delineate clear lines of responsibility and accountability for country-risk management decisions;

- specify authorized activities, investments, and instruments; and
- identify both desirable and undesirable types of business.

Management should also ensure that country-risk management policies, standards, and practices are clearly communicated to the affected offices and staff.

Country-Exposure Reporting System

To effectively manage country risk, the institution must have a reliable system for capturing and categorizing the volume and nature of foreign exposures. The reporting system should cover all aspects of the institution's operations, whether conducted through paper transactions or electronically. An accurate country-exposure reporting system is also necessary to support the regulatory reporting of foreign exposures on the quarterly Country Exposure Report, FFIEC 009.

The board of directors should regularly receive reports on the level of foreign exposures. If the level of foreign exposures in an institution is significant,² or if a country to which the institution is exposed is considered to be high risk, exposures should be reported to the board at least quarterly. More frequent reporting is appropriate when a deterioration in foreign exposures would threaten the soundness of the institution.

Country-Risk Analysis Process

Although the nature of the country-risk analysis process and the level of resources devoted to it will vary from institution to institution, depending on the size and sophistication of its international operations, a number of considerations are relevant to evaluating the process in all institutions:

- Is there a quantitative and qualitative assessment of the risk associated with each country in which the institution is conducting or planning to conduct business?

2. For purposes of this guidance, concentrations of exposures to individual countries that exceed 25 percent of the institution's tier 1 capital plus the ALLL are considered significant. However, in the case of particularly troubled countries, lesser degrees of exposure may also be considered to be significant.

- Is a formal analysis of country risk conducted at least annually, and does the institution have an effective system for monitoring developments in the interim?
- Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the institution may have targeted in its business strategy?
- Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the institution's exposures in a country?
- Given the size and sophistication of the institution's international activities, are the resources devoted to the analysis of country risk adequate?
- As a final check of the process, are the institution's conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?

Country-Risk Ratings

Country-risk ratings summarize the conclusions of the country-risk analysis process. The ratings are an important component of country-risk management because they provide a framework for establishing country-exposure limits that reflect the institution's tolerance for risk.

Because some counterparties may be more exposed to local country conditions than others, it is a common and acceptable practice for institutions to distinguish between different types of exposures when assigning their country-risk ratings. For example, trade-related and banking-sector exposures typically receive better risk ratings than other categories of exposure because the importance of these types of transactions to a country's economy has usually moved governments to give them preferential treatment for repayment.

The risk-rating systems of some institutions differentiate between public-sector and private-sector exposures. In some institutions, a country's private-sector credits cannot be rated less severely than its public-sector credits (that is, the institution imposes a "sovereign ceiling" on

the rating for all exposures in a country). Both are acceptable practices.

An institution's country-risk ratings may differ from the ICERC-assigned transfer-risk ratings because the two ratings differ in purpose and scope. An institution's internally assigned ratings help it to decide whether to extend additional credit, as well as how it should manage existing exposures. Such ratings should, therefore, have a forward-looking and broad country-risk focus. The ICERC's more narrowly focused transfer-risk ratings are primarily a supervisory tool to identify countries where concentrations of transfer risk might warrant greater scrutiny and to determine whether some minimum level of reserves against transfer risk should be established.

Country-Exposure Limits

As part of their country-risk management process, internationally active institutions should adopt a system of country-exposure limits. Because the limit-setting process often involves divergent interests within the institution (such as the country managers, the institution's overall country-risk manager, and the country-risk committee), country-risk limits will usually reflect a balancing of several considerations, including—

- the overall strategy guiding the institution's international activities,
- the country's risk rating and the institution's appetite for risk,
- perceived business opportunities in the country, and
- the desire to support the international business needs of domestic customers.

Country-exposure limits should be approved by the board of directors, or a committee thereof, and communicated to all affected departments and staff. Exposure limits should be reviewed and approved at least annually—and more frequently when concerns about a particular country arise.

An institution should consider whether its international operations are such that it should supplement its aggregate exposure limits with more discrete controls. Such controls might take the form of limits on the different lines of business in the country, limits by type of counterparty, or limits by type or tenor of exposure. An institution might also limit its exposure to

local currencies. Institutions that have both substantial capital-market exposures and credit-related exposures typically set separate aggregate exposure limits for each because exposures to the two lines of business are usually measured differently.

Although country-by-country exposure limits are customary, institutions should also consider limiting (or at least monitoring) exposures on a broader (for example, regional) basis. A troubled country's problems often affect its neighbors, and the adverse effects may also extend to geographically distant countries with close ties through trade or investment. By monitoring and controlling exposures on a regional basis, institutions are in a better position to respond if the adverse effects of a country's problems begin to spread.

For institutions that are engaged primarily in direct lending activities, monthly monitoring of compliance with country-exposure limits is adequate. However, institutions with more volatile portfolios, including those with significant trading accounts, should monitor compliance with approved limits more frequently. Exceptions to approved country-exposure limits should be reported to an appropriate level of management or the board so that it can consider corrective measures.

Monitoring Country Conditions

The institution should have a system in place to monitor current conditions in each of the countries where it is significantly exposed. The level of resources devoted to monitoring conditions within a country should be proportionate to the institution's level of exposure and the perceived level of risk. If the institution maintains an in-country office, reports from the local staff are an obviously valuable resource for monitoring country conditions. In addition, periodic country visits by the regional or country manager are important to properly monitor individual exposures and conditions in a country. The institution may also draw on information from rating agencies and other external sources.

Communication between senior management and the responsible country managers should be regular and ongoing. The institution should not rely solely on informal lines of communication and ad hoc decision making in times of crisis. Established procedures should be in place for dealing with exposures in troubled countries,

including contingency plans for reducing risk and, if necessary, exiting the country.

Stress Testing

Institutions should periodically stress-test their foreign exposures and report the results to the board of directors and senior management. As used here, stress testing does not necessarily refer to the use of sophisticated financial modeling tools, but rather to the need for all institutions to evaluate in some way the potential impact different scenarios may have on their country-risk profiles. The level of resources devoted to this effort should be commensurate with the significance of foreign exposures in the institution's overall operations.

Internal Controls and Audit

Institutions should ensure that their country-risk management process includes adequate internal controls and that an audit mechanism ensures the integrity of the information used by senior management and the board to monitor compliance with country-risk policies and exposure limits. The system of internal controls should, for example, ensure that the responsibilities of marketing and lending personnel are properly segregated from the responsibilities of personnel who analyze country risk, rate country risk, and set country limits.

TRANSFER RISK

Transfer risk focuses on a borrower's capacity to obtain the foreign exchange required to service its cross-border debt. The examination of transfer risk entails (1) the identification of selected country exposures of a bank that are considered significant relative to the bank's capital and the economic performance of the country; (2) the classifications of substandard, value-impaired, and loss; (3) a determination as to the adequacy of mandated special reserves against certain international assets classified value-impaired; (4) the segregation and analysis of those nonclassified credits into "other transfer-risk problems" that warrant bank management's close attention and into concentrations that warrant special comment; and (5) an in-depth

assessment of the adequacy of the systems the bank employs to monitor and control this facet of international lending. Five report pages have been designed to reflect an examiner's analysis of the transfer-risk element in international lending for a particular bank, as follows.

The first page, "Selected Country Exposures," merely lists, without comments, exposures that are deemed significant in relation to a bank's capital and the economic performance of the country. Exposures, depending on the country grouping, are taken from the bank's last quarterly Country Exposure Report, FFIEC 009, and compared with the bank's capital as of the same date.

The second page, "Classifications Due to Transfer Risk," reflects credits ICERC has classified because of their transfer risk. Totals in each classification should be carried forward to the "Summary of Classified Items" page, with adjustments to eliminate those credits classified because of commercial risk, in accordance with the instructions in section 7040.3.

In December 1983, the federal banking agencies adopted examination categories for identifying credits that have been adversely affected by transfer-risk problems. In addition, the International Lending Supervision Act of 1983 requires banks to establish and maintain a special reserve when the value of international assets has been impaired by a protracted inability of the borrowers in a country to make payments on external indebtedness or when no definite prospects exist for orderly restoration of debt service. Both issues are outlined in section 7040.3.

The third page, "Nonclassified Credits Warranting Attention I; Other Transfer Risk Problems (OTRP)," is used to highlight all or a portion of those credits to a country that is not complying with its external debt-service obligations, but is taking positive steps to restore debt service through economic adjustment measures, generally as part of an IMF program. While not subject to classification, exposures in this category should be considered by examiners as a judgmental factor in their general assessment of a bank's asset quality and the adequacy of its reserves and capital.

The fourth page, "Nonclassified Credits Warranting Attention II; Concentrations of Transfer Risk Warranting Special Comment," identifies exposures, as of the examination date, in which a combination of the amount outstanding in relation to the bank's capital funds, the compo-

sition of the portfolio, and the economic performance of the country would warrant the bank to focus special attention on its exposure.

The fifth page, “Analysis of the Country Exposure Management System,” presents in narrative form an assessment of a bank’s system for monitoring and controlling its transfer-risk exposures. Included are comments relative to

the bank’s procedures for measuring exposure, the system for establishing country lending limits, and the bank’s capability to analyze countries. Comments on page 1 of the report of examination may range from criticisms of weaknesses in the country-exposure-management system to high concentrations of risk in potentially weak or problematic countries.

International—Country Risk and Transfer Risk

Examination Objectives

Effective date November 2002

Section 7040.2

COUNTRY-RISK MANAGEMENT

1. If the bank is internationally active, to determine the nature and extent of the bank's direct and indirect country-risk exposure.
2. If the bank has significant direct or indirect international exposure, to evaluate and determine whether it has in place an effective country-risk management process that is commensurate with the volume and complexity of its international activities.
3. To review and determine if the bank's system of policies, procedures, and internal controls and if its rating system and stress testing for country-risk management are adequate and reliable.
4. To determine if the bank's board of directors oversees and regularly reviews its country-risk management process, approves limits on country exposure, provides for adequate capital that is commensurate with its direct and indirect country-risk exposures, and ensures that management is effectively controlling the risk.
5. To determine if management clearly communicates the bank's country-risk management policies, standards, and practices to the affected offices and staff.
6. To determine if the scope of the bank's audit function is adequate and if the function is sufficiently comprehensive to ensure the integrity of the information senior management and the board use to monitor the bank's country-risk management process. To ensure that the board of directors or its audit committee has provided for adequate audit coverage of country-risk management functions.
7. To recommend corrective action if a bank's country risk-management process and controls are deficient in relation to the level of country-risk exposure.
8. To determine if the bank is properly preparing the Country Exposure Report, FFIEC 009, which is required to be filed quarterly with the respective Reserve Banks.
9. To identify and report individual country exposures considered significant in relation to the bank's capital and the economic performance of the country.

CLASSIFICATIONS DUE TO TRANSFER RISK

1. To evaluate the portfolio to identify those credits in countries considered subject to classification by the Interagency Country Exposure Review Committee (ICERC).
2. To determine if the bank has adequately provided the required special reserves for those international assets included in the country exposures classified value-impaired.
3. To develop information on the composition of those exposures subject to classification.
4. To prepare report pages on all transfer risks subject to classification.
5. To determine the effect of total transfer-risk classifications on the overall quality of the international loan portfolio, as well as on the total bank.

NONCLASSIFIED CREDITS WARRANTING ATTENTION—OTHER TRANSFER-RISK PROBLEMS

1. To identify and report any exposures to countries identified as "other transfer-risk problems."
2. To develop information on the composition of those exposures so identified, for the report page.

NONCLASSIFIED CREDITS WARRANTING ATTENTION—CONCENTRATIONS OF TRANSFER RISK WARRANTING SPECIAL COMMENT

1. To identify and report any concentrations of transfer risk warranting special comment.
2. To develop information on the composition of those concentrations for the report page.

ANALYSIS OF THE COUNTRY-RISK MANAGEMENT SYSTEM

1. To determine if the bank's policies, practices, procedures, and internal controls for the management of transfer risk are adequate.
2. To determine if bank officers are operating in conformance with established guidelines.
3. To prepare narrative commentary on the bank's country-exposure management system and on any noted deficiencies, in a concise reportable format.

International—Country Risk and Transfer Risk Examination Procedures

Effective date November 2002

Section 7040.3

COUNTRY RISK

Country risk, which has an overarching effect on the realization of an institution's foreign assets, encompasses all of the uncertainties arising from the economic, social, and political conditions in a country. It includes the possibility of deteriorating economic conditions, political and social upheaval, nationalization and expropriation of assets, government repudiation of external indebtedness, exchange controls, and currency depreciation or devaluation.

Analysis of the Country-Risk Management System

Generally, all banks have systems for appraising, monitoring, and controlling their foreign-lending activities. These systems differ from bank to bank in terms of the measure of the outstanding exposure, the independence of transfer-risk assessments and control from marketing considerations, the capability to make country judgments on the basis of analytical factors and firsthand knowledge of the country, the centralization and formality of procedures, and the level of in-depth review. When performing and updating the bank's risk assessment, the central point of contact for the institution should include an analysis of the institution's direct and indirect country-risk exposures (including any significant country-risk concentrations) and the adequacy and reliability of its country-risk management. Given the variations, banks' country-risk management systems should consist of three important components.

One component is the provision for evaluation of economic trends, political developments, and the social fabric within countries where bank funds are at risk. These so-called country studies are derived from economic data supplied by the borrower or published by institutional lenders; sociopolitical commentaries; on-site reports from bank branches, subsidiaries, or affiliates; or bank-officer visits to the country.

The second component involves the undertaking by the board of directors and senior management to define the level of country exposure the bank is willing to assume. This undertaking normally includes the establishment of limits

on aggregate outstandings, maturities, and categories of risk exposures by country, which serve as a guide to operating management in the development and servicing of the bank's international credit portfolio.

The third component is the bank's internal-reporting system designed to monitor and control country exposure. A comprehensive reporting system is required to accurately assign risk exposures to the country of risk, ensure adherence to the directives of the board, provide for at least an annual review of portfolio composition in individual countries, and establish a clear-cut methodology for reporting exceptions to established limits.

A summary of the country-risk management system should be prepared. Set forth below are guidelines and procedures for examiners to use in evaluating the systems banks use to monitor and control country-risk elements in their international loan portfolios. In assessing the quality of the country-risk management system, examiners should, as a matter of course, spot-check the accuracy of the data submitted on the Country Exposure Report, FFIEC 009. The review should include the exposures for at least several countries. Material exceptions should be commented on. To prepare this summary, the examiner should perform the following procedures:

1. Obtain any written policies, procedures, or summaries of the bank's country-risk management system. Determine whether the bank's country-risk management system includes—
 - a. effective oversight by the board of directors,
 - b. adequate risk-management policies and procedures,
 - c. an accurate country-exposure reporting system,
 - d. an effective country-risk analysis process,
 - e. a country-risk rating system,
 - f. country-exposure limits,
 - g. ongoing monitoring of country conditions,
 - h. periodic stress testing of foreign exposures, and
 - i. adequate internal controls and an audit function. (See SR-02-5.)

2. Obtain the following from a review of the minutes and reports of the board of directors:
 - a. a copy of written policies covering transfer risk
 - b. the name and composition of the committee responsible for administration of transfer risk
 3. Review international-lending policies and determine—
 - a. if the board of directors regularly reviews and gives final approval to the limits on country exposure at least annually (or quarterly, if the foreign exposures are high risk or the concentrations are significant);
 - b. who initiates the country ratings and country limits;
 - c. how frequently and by whom country ratings and limits are reviewed and changed;
 - d. how the bank defines the ratings assigned to the various countries;
 - e. how country limits are determined;
 - f. who is responsible for monitoring compliance with country limits;
 - g. if country-risk limits consider—
 - the overall strategy guiding the institution's international activities,
 - the country's risk rating and the institution's appetite for risk,
 - perceived business opportunities in the country, and
 - the desire to support the international business needs of domestic customers;
 - h. to what extent country limits are viewed as guidelines that may be exceeded;
 - i. if the bank has different sublimits for private- and public-sector credits;
 - j. if separate limits are established for private- and public-sector credits;
 - k. if the board of directors or a committee thereof periodically reviews country ratings and limits, and evaluates the bank's performance against those standards;
 - l. to what extent comments or classifications of bank supervisors are considered in establishing, increasing, or decreasing country limits;
 - m. how the system has been changed since the last examination;
 - n. if the bank has a reliable system for capturing and categorizing the volume and nature of foreign exposures;
 - o. whether the bank has a system to monitor current conditions in each of the countries where it is significantly exposed;
 - p. if there is regular, ongoing communication between senior management and the responsible country managers;
 - q. if established procedures are in place for dealing with exposures in troubled countries, including contingency plans for reducing risk and, if necessary, exiting the country; and
 - r. whether the bank periodically conducts stress tests (financial modeling or measuring the impact of various scenarios on its country-risk profiles) of its foreign exposures and if the results are reported to senior management and the board of directors.
 4. Review reports furnished to the board or the appropriate committee to ensure that comprehensive and accurate information is being submitted on a timely basis.
 5. Obtain the bank's report on the general distribution and characteristics of the international loan portfolio and compare loan-category distributions for adherence to guidelines.
 6. During discussion with senior management, direct inquiries to—
 - a. gain insight into general management's international lending philosophy, and
 - b. elicit management responses for correction of deficiencies.
- When reporting on the bank's country-risk management system, the examiner should consider factors such as—
1. the quality of internal policies, practices, procedures, and controls over the international-lending functions;
 2. the scope and adequacy of the internal loan-review system as it pertains to country risk;
 3. causes of existing problems;
 4. commitments from management for correction of deficiencies;
 5. expectations for continued sound international lending or correction of existing deficiencies;
 6. the ability of management to monitor and control transfer risk;
 7. the general level of adherence to internal policies, practices, procedures, and controls; and
 8. the scope and adequacy of the bank's analysis of country conditions.

TRANSFER RISK

Transfer risk is one facet of the more broadly defined concept of country risk. Transfer risk focuses more on the availability of foreign exchange to service a country's external debt.

The transfer-risk examination procedures emphasize diversification of exposure in relation to a bank's capital as the primary method of moderating transfer risk. Where concentrations are noted, the degree of risk inherent therein is assessed in light of the composition of the portfolio and the general economic and political factors that may affect the debt-service capacity of the individual countries.

INTERAGENCY COUNTRY EXPOSURE REVIEW COMMITTEE

Information concerning the relative grouping and classification of countries and appropriate comments are prepared by the Interagency Country Exposure Review Committee (ICERC) and will be furnished to examiners as required in the examination process. Since this information is sensitive, adequate safeguards should be established to ensure that it is not accessible to unauthorized personnel. The chief executive officers of those banks filing the quarterly FFIEC 009 receive copies of the write-ups on classified countries for *only* those classifications applicable to their own bank. In no event should the complete listing of country groupings be divulged. This approach parallels that of the Shared National Credit Program.

To promote uniform and consistent application of these procedures, examiners should avoid ad hoc interpretations of the instructions and should address all questions to their respective offices. The federal banking agencies have developed a publication, *Guide to the Interagency Country Exposure Review Committee Process*, to clarify and make more transparent the role of the ICERC in the supervisory process. (See SR-99-35.)

Application of ICERC Ratings

ICERC transfer-risk ratings are applicable in—

- every U.S.-chartered insured commercial bank in the 50 states of the United States, the

District of Columbia, Puerto Rico, and U.S. territories and possessions;

- every U.S. bank holding company, including its Edge and agreement corporations and other domestic and foreign nonbank subsidiaries; and
- the U.S. branches and agencies of foreign banks (however, the allocated transfer-risk reserve (ATTR) requirement does not apply to these entities).

ICERC ratings are generally applicable to all types of foreign assets held by an institution, with the exception of premises, other real estate owned, and goodwill. For purposes of the ICERC rating, the determination of where the transfer risk for a particular exposure lies takes into consideration the existence of any guarantees and is based on the country of residence of the ultimate obligor. (See the instructions for the FFIEC 009.)

The ICERC transfer-risk rating is the only rating applicable to sovereign exposures in a reviewed country (that is, direct or guaranteed obligations of the country's central government or government-owned entities). However, if they are carried on the institution's books as an investment, securities issued by a sovereign entity are also subject to the FFIEC's Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks. The FFIEC agreement provides for specific, and possibly more severe, classification treatment of sub-investment-quality securities. Furthermore, except as noted in the next paragraph, the ICERC transfer-risk rating is also the minimum risk rating applicable to all other cross-border and cross-currency exposures of U.S. banks in a reviewed country.

Regardless of the currencies involved, to the extent that an institution's claims on local country residents are funded by liabilities to local country residents, the ICERC's transfer-risk ratings do not apply. For example, to the extent that it has liabilities to local residents (such as sterling deposits), claims of the London branch of a U.S. bank on a public- or private-sector obligor in the United Kingdom (whether the claims are denominated in sterling, dollars, or marks) are not subject to the ICERC transfer-risk rating.

The ICERC is not able to evaluate the credit risk associated with individual, private-sector exposures in a country. Therefore, based on an evaluation of credit-risk factors (including the

effects of country risk), examiners may assign credit-risk ratings to individual, private-sector exposures that are more severe than the ICERC-assigned transfer-risk rating for the country. For any given private-sector exposure, the applicable rating is *the more severe* of either the ICERC-assigned transfer-risk rating for the country or the examiner-assigned credit-risk rating (including ratings assigned as a result of the Shared National Credit Program).

Questions sometimes arise concerning the consideration that examiners should give to informal expressions of support by the central government of a country for a particular borrower or sector of the economy (most often, banking). Unless they constitute a guarantee or other legally binding commitment, examiners should view such expressions of support as no more than a mitigating factor in their evaluation of the counterparty's credit risk. Informal expressions of support by the central government would not cause the counterparty's credit-risk rating to revert to the ICERC-assigned transfer-risk rating for the country.

Although the ICERC may have rated ordinary short- and/or long-term exposures in a country as OTRP, substandard, value-impaired, or loss, several special categories of exposure in a country may receive a less severe transfer-risk rating if certain conditions are met, as described below.

- *Performing short-term bank and performing short-term trade exposures.*¹ Short-term bank and trade exposures are generally considered to have a lower level of transfer risk because, historically, they have received priority in the allocation of a country's foreign-exchange resources. In recognition of their historical performance, the ICERC usually assigns a more favorable rating to these types of exposures.
- *Securities held in trading accounts.* Presuming that there is an active and liquid market for the securities and that the bank has procedures in place to appropriately value them, the

1. A *performing credit* is current and has not been restructured to avoid delinquency or because of a deterioration in the financial condition of the borrower. A credit is considered "current" if it has not been reported as past due or nonaccrual for the bank call report. *Trade credit* consists of credit extensions that are directly related to imports or exports and that will be liquidated through the proceeds of international trade. These credit extensions will include pre-export financing only when there is a firm export sales order and the proceeds of the order will pay off the indebtedness.

ICERC may, on a case-by-case basis, assign a less severe transfer-risk rating to specific securities held in the bank's trading account. In any case, because FASB Financial Accounting Standard No. 115 requires that they be marked to market, trading-account securities are not subject to an ATRR requirement.

- *Direct-equity investments.* The ICERC may, on a case-by-case basis, assign a less severe transfer-risk rating to specific direct-equity investments when *all* of the following conditions are met:
 - The investment has been marked to market or is valued using the equity-accounting method.
 - The institution has provided the ICERC with evidence that the foreign business is financially viable.
 - The institution has provided the ICERC with evidence of its ability to repatriate dividends, interest payments, and proceeds from the sale of assets on a timely basis.

EXAMINATION REPORTING OF TRANSFER RISK

The entire examination section dealing with transfer risk should be placed in an international operations section of the commercial report of examination. In addition, the discussion of transfer-risk assets should be separated from the discussion of all other loans and assets classified or specially mentioned elsewhere in the report.

Selected Country Exposures

A list should be presented of those transfer-risk exposures considered large relative to the bank's own capital funds, after taking into account the economic, social, and political circumstances within a country. These exposures, which comprise total claims and contingencies, should be taken from the last quarterly FFIEC 009 filed by the bank under examination and compared with consolidated bank capital as of the same date. For this purpose, capital is defined as tier 1 and tier 2, and it should be footnoted as such on this page. The examiner should also note that this report of country exposure and its comparison with bank capital may differ from actual exposure as of the date of examination. The level at

which exposure is listed is based on a review of the performance of each country by the ICERC.

Examiners are encouraged to review the instructions for preparing the country-exposure report for further information concerning the preparation of this page. While it is not expected that examiners review the country-exposure reports filed between examinations for accuracy, a spot-check to verify that such reports are being prepared properly should be made. Material reporting errors uncovered during the examination should be included in comments on reporting exceptions elsewhere in the report of examination. When bank management relies on the data generated for the country-exposure report, and when reporting exceptions are noted, comments should be incorporated in the analysis of the country-risk management system.

Ratings and Classifications Due to Transfer Risk

A list of exposures subject to classification as a result of transfer-risk considerations should be prepared. The decision to classify a bank's exposure to a particular country is made by the ICERC based on criteria incorporated into the provisions of the International Lending Supervision Act of 1983.

The ICERC's assessment of transfer risk reflects the committee's application of the following category definitions.

- *Strong.* The country does not experience social, economic, or political problems that could interrupt repayment of external debt.
- *Moderately strong.* The country experiences a limited number of identifiable economic, social, or political problems that do not presently threaten orderly repayment of external debt.
- *Weak.* The country experiences many economic, social, or political problems. If not reversed, these problems could threaten orderly repayment of external debt.

The ratings and classification categories, and when they are applied, are as follows.

Other Transfer-Risk Problems (OTRP)

- A country is not complying with its external debt-service obligations, as evidenced by

arrearages, forced restructuring, or rollovers; however, the country is taking positive actions to restore debt service through economic adjustment measures, generally as part of an International Monetary Fund (IMF) program.

- A country is meeting its debt obligations, but noncompliance appears imminent.
- Exposures to a country have been classified previously, but recent debt-service performance indicates classification is no longer warranted (for example, the country is complying with the terms of IMF and rescheduling programs). However, sustained resumption of orderly debt service needs to be demonstrated.

Substandard

- A country is not complying with its external service obligations, as evidenced by arrearages, forced restructuring, or rollovers.
- The country is not in the process of adopting an IMF or other suitable economic adjustment program, or is not adequately adhering to such a program.
- The country and its bank creditors have not negotiated a viable rescheduling and are unlikely to do so in the near future.

Value-Impaired

A country has protracted arrearages, as indicated by more than one of the following:

- The country has not fully paid its interest for six months.
- The country has not complied with IMF programs (and there is no immediate prospect for compliance).
- The country has not met rescheduling terms for over one year.
- The country shows no definite prospects for an orderly restoration of debt service in the near future.

Loss

A loan is considered uncollectible and of such little value that its continuance as a bankable asset is not warranted. An example would be an outright statement by a country that it is repudiating obligations to banks, the IMF, or other lenders.

The ICERC also prepares the write-ups supporting each classification. Examiners are to provide commentary on the disaggregation of each country exposure subject to classification. Include comments relative to the bank's country lending limit and any references to any proposed increases or decreases to such limit. The examiner's commentary is to be followed by a standardized write-up on each country for which the bank has exposures, prepared by the ICERC.

Credits Warranting Attention

Other Transfer-Risk Problems (OTRP)

A listing and narrative on the bank's total exposure, or portion thereof, to a country for which the exposures were designated as OTRP should be prepared. Comments for each country will consist of a paragraph detailing the composition of the exposure, as prepared by the examiner. Following the comments will be a standardized write-up prepared by the ICERC, discussing developments in the country. When exposures to a country are split between classifications and OTRP, the standardized country write-up need be shown *only* on the classification page with a reference to such on the OTRP page.

Examiners should consider the total of OTRP exposures as a judgmental factor in their general assessment of a bank's asset quality and the adequacy of its reserves and capital. This view is similar to the consideration given to factors such as concentrations in the portfolio, the level and composition of nonaccruing or reduced-rate assets, and management's demonstrated ability to administer and collect problem credits.

Nonclassified Credits Warranting Attention

Concentrations of Transfer Risk Warranting Special Comment

A listing and narrative on exposures to weak and moderately strong countries as of the examination date and compared with the bank's capital as of that date should be prepared. When the

country-exposure report is filed on a consolidated bank holding company basis, the data may be used to prepare a selected country exposures page and a summary that is compared with the holding company's capital. However, examiners should attempt to segregate the bank's exposures for all other transfer-risk pages. When exposures to particular countries at the holding company are deemed to be significant relative to the bank, examiners are to note such in their commentary on those countries.

Each country exposure should be listed alphabetically, accompanied by a paragraph detailing the composition of the bank's exposure. Include comments relative to the country lending limit and proposals to increase or decrease it. The examiner's commentary is to be followed by a standardized write-up, prepared by the ICERC. The criteria for determining exposures warranting comments are listed below.

Strong countries. The "strong countries" designation applies when the country does not experience social, economic, or political problems that could interrupt repayment of external debt. No exposures to strong countries will be commented on in this page. Extremely large exposures to these countries may be commented on in the discussion of the exposure-management system and in the examiner's summary comments.

Moderately strong countries. The moderately strong countries designation applies when the country experiences a limited number of identifiable economic, social, or political problems that do not presently threaten orderly repayment of external debt. The following criteria apply; item 2 is optional.

1. Exposures exceeding 15 percent of capital must be commented on.
2. For exposures between 10 and 15 percent of capital, there is a presumption in favor of commenting if outstandings with a maturity in excess of one year exceed 7.5 percent of capital. If maturities in excess of one year are less than that amount, there will be a presumption against commenting.
3. Exposures below 10 percent will not be commented on.

Weaker countries. The weaker countries designation applies when the country experiences many economic, social, or political problems. If

not reversed, these problems could threaten orderly repayment of external debt. The following criteria apply; item 2 is optional:

1. Exposures exceeding 10 percent of capital must receive comment.
2. For exposures between 5 and 10 percent of capital, there is a presumption in favor of commenting only if amounts due in excess of one year exceed 5 percent of capital. If amounts maturing in excess of one year are less than 5 percent, the presumption is against commenting.

When comment is optional (points 2 above), the examiner will be allowed some flexibility and may determine not to follow the presumptions if other pertinent banking factors weigh more heavily either for or against comment. These factors might be management ability, the nature of ICERC's comment about the country, or the results of a more detailed breakdown of the composition of the portfolio. It is possible that exposures will be listed on this page with other exposures to the same country either subject to classification or listed as an other transfer-risk problem. In such instances, the standardized write-up should appear on either of those pages with a cross-reference noted on this page.

RESERVING REQUIREMENTS

The agencies believe responsibility for recognizing and accounting for deterioration in the value of a bank's assets, including a deterioration due to transfer-risk problems, rests, in the first instance, with the management of a bank and its auditors. The banking agencies also have a responsibility to ensure that banks are following reasonable and prudent policies in this regard, and that necessary adjustments are being made consistently. To ensure this, the federal banking agencies, pursuant to the International Lending Supervision Act, require U.S. banks to establish an ATRR against the risks presented in certain international assets whose value has been found by the ICERC to have been significantly impaired by protracted transfer-risk problems. The ATRR should be applied to certain international assets that have been classified for transfer-risk reasons as value-impaired. The act also requires that the ATRR be established by a

charge against current income, be segregated from the bank's general allowance for possible loan losses, be deducted from gross loans and leases, and not be included as part of bank capital.

The alternative to establishing an ATRR is the direct charge-off of that portion of the international asset deemed to be of diminished value. However, if this alternative accounting treatment is used, the institution may not write up the value of the assets if the ATRR requirement is later reduced or eliminated. No ATRR provisions are required if the bank has previously written down or charged off the requisite amounts. Furthermore, no ATRR will be required on contingent liabilities. Instead, contingent liabilities to value-impaired countries will be reviewed on a case-by-case basis, but generally will be treated as OTRP.

The ATRR amounts mandated will be reviewed regularly by the ICERC to determine if additional reserves are required or whether downward adjustments need to be made. Initially, special reserves would not apply to net new lending when additional loans are made in the context of an IMF or other appropriate economic adjustment program, and when the lending generally enhances the debt-service capability of the country concerned. Whether an ATRR is subsequently required for these new loans would be determined by the ICERC on the basis of performance and the continued inapplicability of the established criteria.

To calculate the reserves, examiners must multiply the reserve percentage times the amount of the adjusted exposure subject to transfer risk and the ATRR. This calculation should be done on the face amount of each loan outstanding before deducting any previous write-downs. For purposes of this computation, interest payments that have been applied to existing loan balances are tantamount to write-downs and are an acceptable alternative to the establishment of an ATRR. The number derived after the calculation should be netted against previous write-downs to arrive at the mandated ATRR. In accordance with SR-92-2 (FIS), February 10, 1992, the resulting net exposure, after adjusting for the ATRR, is included in the total classified value-impaired, but is weighted like a standard credit *only* in determining the asset quality of the bank and other measures of financial soundness. The resulting net exposure, after adjustment for the ATRR, is included in the total classified value-impaired and is looked on as a

doubtful classification *only* in determining the asset quality of the bank and other measures of financial soundness. When a shortfall exists, management should be apprised and be expected to comply with the statute in establishing the required reserve. Comments relative to any shortfall and management's actions should be made on page 1. Although the general rule is that all exposures rated value-impaired are subject to the ATRR requirement, over the years there have been a number of clarifications and refinements. (See 12 CFR 20, 211, and 351.)

OTHER MATTERS

Discussion of Transfer Risk on Examiner's Comments Page

As a general rule, classifications due to transfer risk are included in the total assets classified and discussed under a major heading, such as "Asset Quality." Transfer-risk classifications of any significance should be highlighted. When the bank has other exposures of concern that warrant not only senior management's special attention, but the attention of the bank's board of directors, comments may be generated under a separate caption entitled "Transfer Risks." The examiner should include comments relative to the classifications; the shortfall, if any, in the mandatory reserves against exposures considered value-impaired; other transfer-risk problems (OTRP); concentrations warranting special

comment; and any other noted deficiency, such as an ineffective country-risk management system.

Sharing Information with State Banking Examiners

When an examination of a state member bank is being conducted concurrently or on a joint basis with state authorities, Federal Reserve examiners may share with state banking examiners information on those countries to which the bank under examination has exposures subject to classification or comment.

Country Categories

The complete listing of countries as prepared by the ICERC is highly confidential and for internal use only. In discussions with bank management, examiners should refer only to countries that will be commented on in that bank's examination report. In this context, any reference to a "categorization" of countries should be couched in neutral terms.

Examiners are to provide the examiner-in-charge with essential information that will help facilitate future examinations. In addition, all workpapers should be maintained in an orderly manner, properly labeled, and available for inspection when and if necessary.

International—Country Risk and Transfer Risk

Internal Control Questionnaire

Effective date November 2002

Section 7040.4

1. Has the board of directors, consistent with its duties and responsibilities, adopted written objectives and policies for international loan portfolio management? Do these policies and objectives—
 - a. establish country-exposure limits for credits, including sublimits for transfer risk?
 - b. establish limits for distribution of credits by type and maturity?
 - c. acknowledge concentrations of credit within countries, and acknowledge the need to employ personnel with appropriate specialized knowledge and experience to supervise those concentrations?
2. Are objectives and policies for international loan portfolio management reviewed at least annually to determine if they are compatible with changing market conditions?
3. Are significant changes in country conditions or levels of exposure promptly brought to the attention of the board of directors or its designated committee?
4. Are country limits revised in response to substantive changes in economic, political, and social conditions within particular countries?
5. Is a formal analysis of country risk prepared, and are country limits reviewed, updated, and approved by the board of directors at least annually?
 - a. Does the analysis take into account all aspects of the broadly defined concept of country risk, as well as any unique risks associated with specific groups of counterparties the institution may have targeted in its business strategy?
 - b. Is the analysis adequately documented, and are conclusions concerning the level of risk communicated in a way that provides decision makers with a reasonable basis for determining the nature and level of the institution's exposures in a country?
 - c. Are the bank's conclusions concerning a country reasonable in light of information available from other sources, including external research and rating services and the Interagency Country Exposure Review Committee (ICERC)?
6. Before granting additional advances or commitments, are outstandings checked to appropriate country limits?
7. Are lending officers cognizant of specific country limitations?
8. Are procedures for exceeding country limits clearly defined?
9. Does the bank have a periodic foreign call program for countries?
10. Is there an internal-review system to determine that international risk assets outstanding and committed are within the bank's foreign-exposure limits?
11. Are country-risk factors (economic, political, and social) and other factors in a particular country considered in the bank's internal periodic review of its risk assets?
12. Does the bank have an adequate, current system for country-risk analysis? Does the system consist of a regular, periodic quantitative and qualitative assessment and review of risk for each country in which the bank conducts or plans to conduct business, and does this system include—
 - a. a review of country conditions on a regular basis (state the frequency and indicate who performs analyses)?
 - b. a continuing review of current country data obtained from internal and external sources?
 - c. an analysis of economic, political, social, and other factors affecting country risk?
13. Does the bank have a formal reporting system on country risk?
14. Does the reporting system provide complete exposure data quickly and in sufficient detail to assess particular risks?
15. Does the bank's country-risk evaluation system accurately recognize exposure from country to country, on the basis of legally binding guarantees, collateral, or reallocation by the office of responsibility?
16. Given the size and sophistication of the institution's international activities, are the resources devoted to the analysis of country risk adequate?
17. Is a regular determination made about each country's transfer risk, including whether transfer risk is increased due to the bank's heavy debt servicing or other financial restraints, and whether the country has

exchange controls and hard-currency restrictions?

18. Has the bank adequately provided the required special reserves for those interna-

tional assets that are included in the country exposures classified value-impaired?

INTRODUCTION

Financing foreign receivables, a specialized area of commercial lending in an international banking division, includes open-account financing, sales on consignment, advances against collections, discounting trade acceptances, banker's acceptances, factoring, and forfaiting. Certain foreign receivables are guaranteed or insured against cross-border risk by the Export-Import Bank of the United States, the Foreign Credit Insurance Association, and other U.S. and foreign organizations. Factoring is discussed in section 2180 of this manual, and accounts receivable financing is discussed in section 2160 (Asset-Based Lending) of this manual.

OPEN-ACCOUNT FINANCING

The simplest method of financing foreign receivables is on open account. In this type of sale, the buyer and seller agree on payment at a specified date without a negotiable instrument, such as a draft or acceptance, evidencing the obligation. In most instances, the shipping documents are sent directly to the buyer rather than through a bank. The exporter may request that the buyer make payment to the bank at which the exporter maintains an account. The advantages of an open-account sale are its simplicity, lack of bank charges, and the avoidance of stamp duties that certain countries apply to drafts.

The financing of open-account sales does have certain risks. Neither the lending bank nor the exporter have control over the shipping documents, and the buyer (importer) may take possession of the goods without the consent of the bank or exporter. In addition, if the importer does not register the goods with the proper authorities, the importer may not have access to the amount of foreign exchange necessary to pay for the imports at the time of payment. Perhaps the greatest risk in open-account financing is the lack of standard trade-financing documentation on which to base legal action against the importer in the event of default. Therefore, open-account sales are most appropriate when the buyer is a subsidiary of a related company or is well known to the seller and when the importing country has no significant economic, political, or social problems and,

consequently, is not encountering foreign-exchange difficulties.

SALES ON CONSIGNMENT

Under a consignment arrangement, goods are consigned to the importer (consignee) abroad, and the exporter (consignor) retains title to them until they are sold to a third party. However, unless the shipment is made to an exporter's overseas branch or subsidiary, the exporter's credit risk may be considerable. As with open-account sales, there is a lack of standard trade-financing documentation on which to base legal action if the consignee defaults. The exporter should thoroughly understand the inherent credit risks, especially when goods are consigned to an agent, representative, or import house abroad.

In countries with free ports or free trade zones, consigned goods may be placed under bonded warehouse control in the name of a foreign bank or branch of the bank. Arrangements may then be made to release the consigned merchandise at the time it is sold. Merchandise is cleared through customs after the sale has been completed. However, that type of consignment should not be made and will not usually be accepted by foreign banks until all pertinent conditions and regulations are verified and storage facilities are arranged. The exporter's bank also should verify that goods not sold may be returned to the country of origin. Consignment shipments financed by the bank should be limited to countries that do not have burdensome foreign-exchange restrictions and that have sufficient foreign exchange available to pay for imports.

To overcome the disadvantages of financing shipments on an open-account or consignment basis, exporters frequently ship goods against documentary collections. Consequently, the exporter, in the case of a time or arrival draft, or the exporter and the importer jointly, in the case of a sight draft, finance the shipment. The exporter and the importer may have unused credit lines with their banks and be in a position to borrow the needed money without tying the financing to the trade transaction. However, often the exporter's or the importer's regular bank lines are fully drawn down, so they may seek bank financing in the form of advances

against outward collections, discounting trade acceptances, banker's acceptances, factoring, or forfaiting.

ADVANCES AGAINST FOREIGN COLLECTIONS

A manufacturer or merchant conducting a strictly domestic business often obtains a loan from a bank, finance company, factor, or forfaiter using accounts receivable as security. The same general type of financing vehicle is available to exporters to finance their foreign receivables.

A common method of financing foreign receivables is through the exporter pledging all outward collections to its bank. The exporter may then borrow from the bank up to a stated maximum percentage of the total amount of receivables pledged at any one time. When notes rather than drafts are used to finance foreign receivables, they are usually paid on demand, enabling the exporter to increase or decrease the loan depending on its needs and the current amount of collections outstanding. Preferably, all of the collections lodged with the exporter's bank should be pledged to the bank. When a particular collection is paid, it is remitted by a foreign collecting bank to the exporter's bank, which has already advanced the funds to the exporter. The exporter's bank then uses the proceeds of the collection to reduce the exporter's loan.

Some exporters have no need for a continuous financing arrangement but occasionally may wish to obtain financing on only one large foreign receivable. In these instances, the exporter's bank may be willing to advance funds to the exporter with only that one receivable as security. Again, the bank establishes a maximum percentage of the amount of the receivable that it is willing to advance. When payment for the receivable is obtained, the bank uses the proceeds to liquidate the loan, crediting any excess to the exporter. Bank financing in the form of advances against export receivables is an accepted practice in international trade and is not considered factoring.

Besides having a lien on the exporter's outward collections, the bank usually retains recourse to the exporter, whose credit strength and reputation are of prime importance. Other factors, however, are also significant. If the foreign importers are companies with strong

reputations and financial strength, the bank will likely advance a larger percentage on collections directed to them. The bank will also likely advance a larger percentage of funds to importers in those countries in which importers promptly pay drafts drawn on them. In other countries where payment is generally slow, perhaps because importers are financially weak or because U.S. dollar or other foreign-currency exchange is hard to obtain, the bank will advance a lower percentage on collections. The exporter's bank may be completely unwilling to finance collections directed to importers or countries with reputations for habitually slow payments.

When a bank advances against foreign receivables, it must carefully scrutinize the supporting documents. Since the bank wishes to maintain control of the merchandise, the bill of lading should be either "to the order of" the shipper and blank-endorsed or "to the order of" the bank. The bill of lading must not be consigned to the buyer (importer) since this gives the buyer control over the goods. Also, financed shipments should be covered by adequate insurance.

DISCOUNTING TRADE ACCEPTANCES

A draft accepted by the foreign importer becomes a trade acceptance carrying the full credit obligation of the importer. These trade acceptances are also frequently called "trade bills" or "trade paper." The acceptance is returned to and becomes the property of the exporter, who will ask the collecting bank to present it to the importer or acceptor for payment at maturity. The exporter is, therefore, providing the financing or "carrying" its own foreign receivables. However, if the exporter needs the funds before maturity of the trade acceptance, the exporter may ask the bank to "discount" the draft. If the primary obligor (the acceptor) is a well-known company of good credit standing, the bank may be willing to discount the draft without recourse to the exporter. More commonly, however, the lending bank looks to the exporter for recourse should the primary obligor fail to pay the amount when due.

When discounting a trade acceptance, the bank applies a discount to the face amount of the draft and advances the remainder to the exporter until the draft's maturity. The bank is "buying" the trade acceptance for value and is entitled to

any benefits from the primary obligor to which it is due as a holder in due course of a negotiable instrument. This is also the case whenever the bank advances against a single collection or a pool of collections. Any intermediary “collecting” bank also has a financial interest in the collection and has all the rights of a holder in due course under the Uniform Commercial Code.

BANKER’S ACCEPTANCES CREATED AGAINST FOREIGN COLLECTIONS

During periods of tight money, banks may choose to finance foreign collections by using banker’s acceptances. Banker’s acceptances are discussed in section 7060, “International—Banker’s Acceptances,” so the following comments relate only to the financing of foreign collections.

As with all acceptance financing, the exporter first submits a signed acceptance agreement to its bank. To obtain acceptance financing for foreign receivables, the exporter draws two drafts. The first is a time draft drawn on the foreign buyer (the importer) that, along with the necessary documents, is sent for collection in the usual manner. The second draft, for the same or a smaller amount as agreed to by the bank and the exporter, is drawn by the exporter on its bank and has the same tenor as the draft drawn on the importer. The bank accepts the second draft and discounts it, crediting the net amount to the exporter’s account. The bank has now created a banker’s acceptance that can be sold in the highly liquid acceptance market, provided the bank’s reputation is solid. When payment is received from the importer, the bank applies the proceeds towards its own acceptance, which will be presented for payment if sold in the market. Should the drawee default, the bank has recourse to the drawer and can demand payment from that source.

FORFAITING

Forfaiting is basically nonrecourse financing of receivables, similar to factoring. However, although a factor normally purchases a company’s short-term receivables, a forfait bank purchases notes that are long-term receivables with maximum maturities of eight years. The forfaiting bank has no recourse to the seller of the

goods, but gets the notes at a substantial discount in exchange for cash. Zurich and Vienna are the centers of forfaiting. Many large banks, including U.S. institutions, provide forfaiting through either their branches or specialized subsidiaries in these cities.

Forfaiting is used when government export credits or credit guarantees are not available or when a seller does not extend long-term credits to areas such as Eastern Europe. Forfaiting is also an important method of financing for small and medium-sized companies because it enables them to engage in transactions that would normally exceed their financial capabilities. By using forfaiting, small and medium-sized concerns can immediately sell their long-term receivables without recourse.

Forfaiting presents all of the risks associated with factoring, along with the risks associated with the long-term nature of purchased receivables. The examiner should review the bank’s forfaiting activities carefully to determine whether long-term receivables have been purchased from countries prone to periodic political or economic turmoil and the resulting fluctuations in exchange rates.

U.S. AND FOREIGN RECEIVABLES GUARANTEE AND INSURANCE PLANS

To reduce credit, political, and other risks associated with foreign receivables financing, banks may avail themselves of a variety of guarantee and insurance plans, both public and private, that are available in many countries. Because of the complexity of the numerous plans available, an examiner must frequently rely on the technical knowledge of the staff in a bank’s international division who handle these transactions. Nevertheless, the examiner should know the risk coverage and claim adjustment provisions of the major plans. Often a bank’s experience with its receivables insurance and guarantee plans is indicative of its effectiveness and of whether the bank has properly met its responsibilities under the programs.

Export-Import Bank of the United States

The Export-Import Bank of the United States (Eximbank) issues to commercial banks, for a

fee, guarantees of payment for foreign receivables that the bank purchases from exporters, generally without recourse to the exporter. The maturities of the receivables range from 181 days to over five years. Generally, the foreign buyer must make a cash payment, either before or upon delivery, of at least 10 percent of the invoice value, and the amount of receivables purchased by the bank without recourse to the exporter normally cannot exceed 90 percent of the financed portion of the sale (invoice amount less cash payment). This guarantee covers political risks, such as inconvertibility of foreign currencies into U.S. dollars, governmental actions preventing importation of goods, war, civil strife, expropriation, and confiscation by government action. Commercial risks, basically the credit risk of the foreign purchaser, usually are covered from six months to five years.

Foreign Credit Insurance Association

The Foreign Credit Insurance Association (FCIA) is an association of leading marine, property, and casualty insurance companies. In cooperation with Eximbank, FCIA offers a comprehensive selection of credit insurance policies that protect policyholders against loss from failure to receive payment from foreign buyers.

FCIA coverage protects the exporter against the failure of the buyer to pay dollar obligations for commercial or political reasons; enables the exporter to offer foreign buyers competitive terms of payment; supports the exporter's prudent penetration of higher risk foreign markets; and gives the exporter greater liquidity and flexibility in administering a foreign receivables portfolio. The FCIA does not itself finance export sales. However, the exporter who insures account receivables against commercial and political risks is usually able to obtain financing from commercial banks and other lending institutions at lower rates and on more liberal terms than would otherwise be possible by assigning the proceeds of the FCIA insurance to the lenders.

Comprehensive FCIA policies protect exporters against nonpayment of receivables due to unforeseeable commercial and political occurrences. Commercial risks covered include insolvency or protracted default, which may be caused by economic deterioration in the buyer's market area, shifts in demand, unanticipated

competition, tariffs, or technical changes. Political risk coverage applies to defaults due to government action, such as currency inconvertibility, expropriation, and cancellation of import license, and to political disturbances, such as war, revolution, and insurrection.

FCIA generally offers four basic types of policies covering political and commercial risks:

- Short-term policies covering shipments normally sold on terms up to 180 days. The usual policy covers 100 percent of political risks and 90 percent of any losses from commercial risk.
- Medium-term policies insuring transactions from six months to five years. FCIA covers up to 100 percent of political risks and 90 percent of commercial risks, with the remainder retained by the exporter.
- Combined short-term/medium-term policies for sales that pass through distributors before reaching final buyers.
- Master policies that include the basic insurance features of the previous policies plus discretionary and deductible provisions. Under a master policy, usually only for short-term transactions, exporters may obtain FCIA authority to grant insured credit up to a certain amount without seeking prior approval. The deductible provision, used only for commercial risks and not political risks, requires the exporter to assume a fixed amount of the first loss on total debts.

Other Insurers

Numerous other private and governmental institutions, both in the United States and overseas, guarantee or insure risks assumed by commercial banks financing foreign receivables. Some examples of these institutions in other countries are the Export Credits Guarantee Department (ECGD) in the United Kingdom, COFACE in France, and HERMES in Germany.

In the United States, the Overseas Private Investment Corporation (OPIC), a corporation wholly owned by the U.S. government, offers insurance against the political risks of inconvertibility, expropriation, war, revolution, and insur-

rection and guarantees the repayment of private U.S. loans for U.S. citizens, U.S. concerns that are substantially and beneficially U.S.-owned,

and foreign concerns that are at least 95 percent owned by U.S. individuals or entities.

International—Financing Foreign Receivables

Examination Objectives

Effective date May 1996

Section 7050.2

1. To determine if the policies, practices, procedures, and internal controls for the financing of foreign receivables are adequate.
2. To determine if bank officers are operating in conformance with established bank guidelines.
3. To evaluate the portfolio for credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function as it relates to the financing of foreign receivables.
5. To determine compliance with laws and regulations.
6. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations are cited.

International—Financing Foreign Receivables Examination Procedures

Effective date November 2003

Section 7050.3

1. If selected for implementation, complete or update the international—financing foreign receivables section of the internal control questionnaire.
 2. Determine the scope of the examination on the basis of the evaluation of internal controls and the work performed by internal or external auditors.
 3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest reviews done by internal and external auditors from the examiner assigned to the audit review, and determine if appropriate corrections have been made.
 4. Obtain trial balances of applicable customer liability records.
 - a. Reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
 5. Using an appropriate technique, select borrowers for examination.
 6. Prepare examiners' credit line cards to include—
 - a. customers' aggregate foreign receivables—financing liability and
 - b. debt instruments aggregating customers' total outstanding liability.
 7. Obtain the following information:
 - a. past-due, nonaccrual, and reduced-rate loans, advances, and acceptances
 - b. loans whose terms have been modified by a reduction in the interest rate or the principal payment or by a deferral of interest or principal
 - c. loans transferred, either in whole or in part, to another lending institution as a result of a sale, participation, or asset swap since the previous examination
 - d. loans acquired from another lending institution as a result of a purchase, participation, or asset swap since the previous examination
 - e. loan commitments and other contingent liabilities
 - f. loans to principal shareholders, officers, and directors and to their related interests (indicate which officers are considered executive officers)
 8. Review the information received and perform the following:
 - a. *Loans transferred, either in whole or in part, to or from another lending institution as a result of a participation, sale or purchase, or asset swap.* Perform procedures in step 7a of section 7030.3, "International—Loans and Current Account Advances: Examination Procedures."
 - b. *Miscellaneous loan-debit and credit-suspense accounts.*
 - Discuss with management any large or old items.
 - Perform additional procedures as considered appropriate.
- g. reports on the indebtedness of executive officers and principal shareholders and their related interests to correspondent banks
 - h. a list of correspondent banks
 - i. miscellaneous loan-debit and credit-suspense accounts
 - j. Interagency Country Exposure Review Committee determinations
 - k. criticized Shared National Credits (applicable international credits)
 - l. loans considered "problem loans" by management
 - m. background information on directors, executive officers, principal shareholders, and their related interests
 - n. specific guidelines in the lending policy governing the financing of foreign receivables
 - o. current lending authorities of officers and lending committee (or committees)
 - p. the current interest-rate structure
 - q. any useful information obtained from the review of the minutes of the loan and discount committee or any similar committee
 - r. reports furnished to the loan and discount committee or any similar committee
 - s. relevant reports furnished to the board of directors
 - t. loans classified during the previous examination

- c. *Loan commitments and other contingent liabilities.* Analyze the commitments and contingent liabilities of the obligors together with the combined amounts of their current loan balances.
- d. *Loans criticized during the previous examination.* Determine disposition of loans so classified by transcribing the current balance and payment status, or the date the loan was repaid and the source of repayment.
- Investigate any situations in which all or part of the funds for the repayment came from the proceeds of another loan at the bank or as a result of a participation, sale, or swap with another lending institution.
 - If repayment was a result of a participation, sale, or swap, refer to step 7a of “International—Loans and Current Account Advances: Examination Procedures,” section 7030.3, for the appropriate examination procedures.
- e. *Shared National Credits.*
- Compare the schedule of foreign receivables financed included in the uniform review of Shared National Credits Program with the listing of credits selected for review to determine which loans in the sample are portions of Shared National Credits.
 - For each loan so identified, transcribe appropriate information from the schedule to line cards. No further examination procedures are necessary in this area.
- f. *Interagency Country Exposure Review Committee credits.* Identify any credits that were selected for review that are criticized for transfer-risk reasons by the Interagency Country Exposure Review Committee.
9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past-due status.
10. Prepare credit line cards for any loan not in the sample that, on the basis of information derived from the above schedules, requires an in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to international cash accounts, overdrafts, and other loan areas, and together
- decide who will review the borrowing relationship. Pass or retain completed credit line cards.
12. Prepare collateral line cards for all borrowers selected in the preceding steps.
13. Obtain credit files for all borrowers for whom examiner credit line cards were prepared, and complete credit line cards, where appropriate. To analyze foreign receivables financed, perform the following procedures:
- a. Analyze the customers’ balance sheets and profit-and-loss figures as shown in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
 - b. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
 - c. Review supporting information for the major balance-sheet items and the techniques used in consolidation, determine the primary sources of repayment, and evaluate their adequacy.
 - d. Determine compliance with provisions of loan agreements.
 - e. Review digests of officers’ memoranda, mercantile reports, credit checks, and correspondence to determine the existence of any problems that might deter the contractual repayment program.
 - f. Obtain the following information:
 - *Open-account financing.*
 - whether the shipment is directed to third parties or branches and subsidiaries of the borrower
 - the financial strength and trustworthiness of the overseas buyer
 - the extent of foreign-exchange control and the availability of exchange for the importer to effect payment
 - the bank’s past experience in dealing with the borrower who sells on open account
 - *Sales on consignment.*
 - whether the shipment is directed to third parties or branches and subsidiaries of the obligor
 - the financial strength and trustworthiness of the foreign consignee
 - the responsibilities of the foreign sales agent, overseas representa-

- the extent of foreign-exchange control and the availability of exchange for that type of transaction in the country of destination
- whether the borrower's goods, without a definite buyer, are consigned abroad in the name of the borrower's bank or a foreign bank
- whether the goods being shipped are assigned to a responsible warehouseman
- any arrangements that have been made whereby the selling agent negotiates for the sale of the goods
- the regulations in the country of destination regarding the return of unsold consigned goods to the country of origin
- the bank's past experience in dealing with the borrower who sells on consignment
- *Advances against collections.*
 - the relationship between the amount collected in a month on the collections pledged as collateral and the borrower's credit limit
 - the tenor of sight drafts—a stated number of days after sight or a stated number of days after the date of the draft
 - instructions regarding delivery of documents against payment (D/P) or documents against acceptance (D/A)
 - whether amounts advanced against collections are within the percentage of advance limitation established
 - aging of drafts (collections)
 - ineligible drawees, including house bills
 - concentrations of drawees
 - financial strength of drawees
 - unusual situations such as disputes, nonacceptance of goods, and possession of goods without payment
 - dishonor and protest instructions
 - any special instructions
 - the extent of foreign-exchange controls and the availability of exchange for that type of transaction in the country of destination
- the bank's experience in dealing with the borrower who receives advances against collections
- *Discounted trade acceptances.*
 - the relationship between the amount collected in a month on the trade acceptances discounted and the borrower's credit limit
 - whether the bank discounted the trade acceptance with or without recourse
 - whether the borrower retains a percentage of the trade acceptance endorsed to the bank
 - aging of trade acceptances
 - ineligible drawees, including house bills
 - concentrations of drawees
 - financial strength of the drawees
 - unusual situations, such as disputes, nonacceptance of goods, and possession of goods without payment
 - dishonor and protest instructions
 - any special instructions
 - the extent of foreign-exchange controls and the availability of exchange for that type of transaction in the country of destination
 - the bank's experience in dealing with the borrower for whom its trade acceptances are discounted by the bank
- *Banker's-acceptance financing.*
 - the relationship between the amount collected from the foreign buyer in a month and the borrower's credit limit
 - whether the discounted draft drawn by the exporter (customer) on the exporter's bank has the same tenor as the draft addressed to the foreign buyer
 - the procedures for applying payment received from the foreign buyer to pay the bank's own acceptance
 - aging of time drafts drawn on the importer (drawee)
 - ineligible foreign buyers (drawees), including house bills
 - concentrations of foreign buyers (drawees)
 - financial strength of the foreign buyers (drawees)

- disputes, nonacceptance of goods, and possession of goods without payment
- dishonor and protest instructions
- any special instructions
- the extent of foreign-exchange control and the availability of exchange for that type of transaction in the country of destination
- the bank's experience in dealing with the borrower
- *Factoring.*
 - the extent the factor “guarantees” letters of credit opened by the bank in favor of overseas suppliers
 - whether the title documents on import transactions are consigned to or endorsed over to the factor
 - whether the importer who receives goods under trust receipt agrees to hold them in trust for the factor
 - whether the imported goods held under warehouse receipt are stored in an independent warehouse for the account of the factor
 - whether usance letters of credit are paid to the bank by the factor at maturity, and whether the resulting acceptances are charged to the bank customer's account for payment to the factor when due
 - whether the factor borrows from the bank or creates a banker's acceptance pending payment of accounts receivable resulting from the sale of goods imported under letters of credit
 - the financial strength of the importer for whom the bank opened the letter of credit
 - any disputes, nonacceptance of goods, and possession of goods without payment
 - the bank's experience in dealing with the factor
- *Forfeiting.*
 - agings of debtor accounts purchased
 - ineligible debtor accounts purchased, including affiliate receivables, if any
 - concentration of debtor accounts purchased
 - the adequacy of the bank's credit investigation before approving the sale (or signing of a sales contract) creating a receivable
 - the financial strength of the debtor accounts purchased
 - the capability of the exporter from whom receivables were purchased to provide any required after-sales service and to honor warranties
 - disputes and returns
 - the extent of foreign exchange restrictions, availability of exchange, and country risk involved that could jeopardize collection of receivables purchased
 - the bank's experience in dealing with both the debtors and the exporter
- *U.S. and foreign receivables guarantee and insurance plans.* Determine whether foreign receivables coverage by FCIA, Eximbank, or other insurance or guarantee programs is sufficient, adequately identifies risks, and is consistent with established limits.
- g. Analyze secondary support offered by guarantors and endorsers.
- h. Determine compliance with the bank's established international loan policy.
- 14. For loans in the sample, check the central liability file on borrowers indebted above the cutoff line or borrowers displaying credit weaknesses or suspected of having additional liability in other loan areas.
- 15. Transcribe significant liability and other information of officers, principals, and affiliations of appropriate borrowers contained in the sample. Cross-reference line cards to borrowers, where appropriate.
- 16. Determine compliance with laws and regulations pertaining to financing foreign receivables by performing the following steps.
 - a. *Lending limits.* Determine the bank's lending limit as prescribed by state law, and note any exceptions.
 - b. *Section 23A, Relations with Affiliates (12 USC 371c), and section 23B, Restrictions on Transactions with Affiliates (12 USC 371c-1), of the Federal Reserve Act, and the Board's Regulation W.* Perform procedures in step 15b of “International—Loans and Current Account Advances: Examination Procedures,” section 7030.3.
 - c. *18 USC 215, Receipt of Commission or*

Gift for Procuring Loans.

- While examining foreign receivables financing, determine the existence of any possible cases in which a bank officer, director, employee, agent, or attorney may have received anything of value for procuring or endeavoring to procure any extension of credit.
 - Investigate any such suspected irregularities.
- d. *Federal Election Campaign Act (2 USC 441b), Political Contributions.*
- Determine the existence of any loans in connection with any political campaigns.
 - Review each such credit to determine whether it is made in accordance with applicable banking laws and in the ordinary course of business.
- e. *12 USC 1972 and Regulation Y (12 CFR 225.7), Tie-In Provisions and Exceptions.* Determine whether any credit extension is conditioned upon—
- obtaining or providing any additional credit, property, or service from or to the bank or its holding company (or a subsidiary of its holding company), other than a loan, discount, deposit, or trust service, or
 - the customer not obtaining a credit, property, or service from a competitor of the bank or its holding company (or a subsidiary of its holding company), other than a reasonable condition to ensure the soundness of the credit
- f. *Regulation O (12 CFR 215), Loans to Executive Officers, Directors, and Principal Shareholders and Their Related Interests, and Title VIII of the Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRA) (12 USC 1972(2)), as amended by the Garn–St Germain Depository Institutions Act of 1982, Loans to Executive Officers, Directors, and Principal Shareholders of Correspondent Banks.* Perform the Regulation O procedures of “International—Loans and Current Account Advances: Examination Procedures,” section 7030.3.
- g. *Financial Recordkeeping and Reporting of Currency and Foreign Transactions (31 CFR 103), Retention of Credit Files.* Review the operating procedures and credit file documentation, and determine if the bank retains records of each extension of credit over \$10,000, specifying the name and address of the borrower, the amount of the credit, the nature and purpose of the loan, and the date thereof. (Loans secured by an interest in real property are exempt.)
17. Perform the appropriate procedural steps in “Concentrations of Credit: Examination Procedures,” section 2050.3.
18. Discuss with appropriate officers, and prepare summaries in appropriate report form of—
- a. delinquent loans;
 - b. loans not supported by current and complete financial information;
 - c. loans on which documentation is deficient;
 - d. loans with credit weaknesses;
 - e. inadequately collateralized loans;
 - f. criticized loans, including supporting commentaries;
 - g. concentrations of credit;
 - h. extensions of credit to major shareholders, officers, and directors and to their related interests;
 - i. violations of laws and regulations; and
 - j. other matters regarding the condition of the department.
19. Evaluate the bank for—
- a. the adequacy of written policies relating to financing foreign receivables;
 - b. the manner in which bank officers are operating in conformance with established policy;
 - c. adverse trends in those sections of the international sector of the bank concerned with financing foreign receivables;
 - d. the accuracy and completeness of the schedules obtained from “International—Loan Portfolio Management,” section 7020.3;
 - e. recommended corrective action when policies, practices, or procedures are deficient;
 - f. the competency of departmental management; and
 - g. other matters of significance.
20. Update the workpapers with any information that will facilitate future examinations.

International—Financing Foreign Receivables Internal Control Questionnaire

Effective date March 1984

Section 7050.4

Review the bank's internal controls, policies, practices, and procedures regarding foreign receivables financing. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used, and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written foreign receivables financing policies that:
 - a. Establish procedures for reviewing financing applications?
 - b. Establish standards for determining credit lines?
 - c. Establish standards for determining the percentage of advances made against acceptable collections (receivables)?
 - d. Define acceptable receivables (collections)?
 - e. Establish minimum requirements for verification of borrower's receivables (collections)?
 - f. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are foreign receivables financing policies reviewed at least annually to determine if they are compatible with changing market conditions?

ACCOUNTING RECORDS

- *3. Is the preparation and posting of subsidiary records performed or adequately reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
- *4. Are subsidiary records reconciled, at least monthly, with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle foreign receivables financing?

5. Are inquiries regarding foreign receivables financing loan balances received and investigated by persons who do not normally process documents, handle settlements, or post records?
- *6. Are bookkeeping adjustments checked and approved by an appropriate officer?
- *7. Is a daily record maintained summarizing transaction details, i.e., loans made, payments received, and interest collected to support applicable general ledger entries?
- *8. Are frequent debt instrument and liability ledger trial balances prepared and reconciled monthly with control accounts by employees who do not process or record loan transactions?

DOCUMENTATION

9. Are terms, dates, weights, description of the merchandise, etc., shown on invoices, shipping documents, trust receipts, and bills of lading scrutinized for differences?
10. Are procedures in effect to determine if the signatures shown on the above documents are authentic?
11. Are payments received from customers scrutinized for differences in invoice dates, numbers, terms, etc.?

LOAN INTEREST

- *12. Is the preparation and posting of loan interest records performed or adequately reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
13. Are independent interest computations made and compared or adequately tested to initial loan interest records by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?

COLLATERAL

- *14. Does the bank record on a timely basis a first lien on assigned foreign receivables for each borrower?

15. Do loans granted on the security of the foreign receivables also have an assignment of the inventory?
16. Does the bank verify the borrower's receivables or require independent verification on a periodic basis?
17. Does the bank require the borrower to provide aged receivables schedules on a periodic basis?
18. Are underlying bills of lading covering shipments either to the order of the shipper or blank endorsed to the order of the bank rather than the foreign buyer?
19. Are the shipments being financed covered by adequate insurance?
- U.S. banks forwarded directly to the bank and not through the exporter?
30. If the exporter accepts importer (drawee) payments directly, are controls established or audits of exporter's books conducted (if so, explain briefly)?
31. Are employees handling collections periodically rotated, without advance notification, to other banking duties?
- *32. Is the employee handling collection proceeds required to apply them to the borrower's advance on the same business day that payment is received?
33. Is the disposition of each collection noted on the register so that verification of disposition can be made?
- *34. Has a regular policy of following procedures been established for sending tracers and inquiries on unpaid collections in the hands of correspondents?
- *35. Should the foreign drawee refuse to honor the draft, are instructions clear as to what actions should be taken by the collecting bank?
36. In the event of non-payment of the collection, is the borrower promptly notified by the bank?
- *37. Are collections against which advances have been made or trade acceptances discounted distinctly segregated from ordinary collection items?
- *38. Are collections above maintained under memorandum control and is the control balanced regularly?
- *39. Are collections against which advances have been made or trade acceptances discounted booked by persons other than employees handling those items?
- *40. Are collections carried over to the next business day adequately secured?
41. Does the customer for whom trade acceptances were discounted know whether they were purchased with or without recourse to that customer?
- *42. Do all parties, i.e., the seller (exporter), importer (buyer), and banks, clearly understand whether interest, discount, and collection charges are to be absorbed by the seller or paid by the importer?

ADVANCES AGAINST COLLECTIONS AND DISCOUNTED TRADE ACCEPTANCES

20. Are permanent registers kept for foreign collections against which advances were made or trade acceptances discounted?
21. Are all collections indexed in a collection register?
22. Do these registers furnish a complete history of the origin and final disposition of each collection against which advances were made or trade acceptances discounted?
23. Are receipts issued to loan customers for all collections received from them?
24. Are serial numbers or prenumbered forms assigned to each collection item and all related papers?
- *25. Are all incoming tracers and inquiries handled by an officer or employee not connected with the processing of collections?
26. Is a daily record maintained showing the various collections which have been paid and credited to the borrower's advance?
- *27. Are proceeds of paid collections credited to the correct customer's advance?
28. Is an itemized daily summary made of all interest charged and received from the exporter or importer (drawee) indicating underlying collection numbers and amounts?
29. Are payments collected from importers (drawees) by foreign banks or branches of

FACTORING

43. Has the bank properly surrendered the

- shipping documents to the factor either through endorsement or consignment?
- *44. Do bank advances or banker's acceptances to the factor in payment of sight or time draft coincide with the expected payment of the accounts receivable by the ultimate customer?

FOREIGN CREDIT INSURANCE ASSOCIATION INSURANCE

45. Is the bank aware of risks not covered under its FCIA insurance?
46. Does the bank monitor whether the borrower exceeded its FCIA established credit limits?
47. Does the bank monitor whether the borrower properly assigned the proceeds of its FCIA insurance to the bank?
48. Is the bank aware whether the FCIA insurance is on either "simple notice" or a "special assignment" basis?
49. Does the bank retain recourse to the exporter under its FCIA arrangement?
50. Has the bank reported delinquencies to FCIA in accordance with its agreement with the Association?
51. If default occurs, does the bank file a proper claim with FCIA?

EXPORT-IMPORT BANK OF THE UNITED STATES

52. Does the bank, financing under Eximbank arrangements, have properly executed

- Eximbank guarantees or commitments covering transactions?
53. If the bank has discretionary authority from Eximbank, does it nevertheless inform Eximbank of each transaction thereunder?
54. If the bank has been issued an "equipment political risk guarantee" by Eximbank, does it have a written statement from the government of the country in which the equipment will be used indicating that it will permit the importation, use, and any subsequent exportation of the equipment?
55. Does the bank monitor whether loan agreements between applicable borrowers and the bank are acceptable to Eximbank?
56. Does the bank report delinquencies to Eximbank in a timely manner as specified in its agreement with that agency?
57. If default occurs, does the bank file a proper claim with Eximbank?

CONCLUSION

58. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
59. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

One method of financing international trade is by the use of a banker's acceptance. This instrument may be used to finance all of the successive stages of the movement of goods through the channels of trade from the point of origin to the final destination.

A banker's acceptance is an order in the form of a time draft (also referred to as a bill of exchange or a usance draft) drawn by one party (the drawer) in favor of itself or another party (the payee), addressed to (drawn on) a bank (the drawee), and accepted by that bank to pay the holder a certain sum on or before a specified date. The bank's acceptance of this order from the drawer, by stamping "ACCEPTED" across the face of the draft and dating and signing the stamp, is a formal acknowledgment of the obligation and constitutes an unconditional promise by that bank to honor the time draft at maturity. The drawee bank creating the acceptance is primarily liable for the instrument while the payee, as first endorser, is secondarily liable for paying the holder in due course. If the drawee (acceptor) is other than a bank, the instrument is a trade acceptance, not a banker's acceptance.

Most banker's acceptances are used to finance trade transactions. Accordingly, acceptances are often created in connection with a letter of credit, although they may arise in connection with collection or open-account transactions. (See section 7080, "International—Letters of Credit.") In general, acceptance credit is considered self-liquidating in that it must provide the means for its own payment at maturity. To accomplish this, the acceptance must be based on a specific trade transaction in which goods are being shipped before entering the channels of trade. There should be satisfactory evidence to indicate that the draft, when created, is based on an actual shipment or storage and that, at maturity of the draft, the proceeds from the sale of the goods will be used to settle the draft. To a lesser extent, acceptances also finance the domestic shipment of goods and domestic or foreign storage of readily marketable staples.

The payee of the acceptance may hold an acceptance until maturity, discount it with his or her bank, or sell it in the acceptance market. When a bank discounts (purchases) its own acceptance for the payee, its "Customer's Liability on Acceptances" (asset) and "Bank's Liability on Acceptances" (liability) accounts are reduced, and the discounted acceptance is

recorded with other loans and discounts. If the accepting bank subsequently rediscounts (sells) the acceptance in the market, that acceptance is rebooked as "Customer's Liability on Acceptances" and "Bank's Liability on Acceptances," and the loan and discount accounts are reduced. Rediscounted acceptances are not considered borrowings. The customer's liability on acceptances is reduced by a customer's prepayment or anticipation of an acceptance outstanding. The bank's liability is not similarly reduced by an anticipation.

The established market for banker's acceptances in the United States is regulated by the Federal Reserve System. Federal Reserve Banks are authorized to discount or purchase eligible banker's acceptances subject to qualitative and quantitative limits, thus providing a source of liquidity to the selling banks. The creation of banker's acceptances is governed by section 13 of the Federal Reserve Act, which establishes criteria that must be met for the instrument to be eligible for either discount or purchase by a Federal Reserve Bank. The rules governing whether an acceptance meets the eligibility requirements for discount or purchase are important for two major reasons. First, acceptances meeting the conditions of eligibility are more readily salable in the market than acceptances that do not satisfy these conditions and, as such, provide a greater degree of liquidity for the accepting bank. Second, ineligible acceptances, unlike those that are eligible, are subject to reserve maintenance requirements, thus raising the cost to the borrower over that of an eligible acceptance. The examiner must be familiar with the criteria used for determining eligibility for discount or purchase by a Federal Reserve Bank.

Section 207 of the Bank Export Services Act (title II of P.L. 97-290), which amended section 13 of the Federal Reserve Act (12 USC 372), limits the aggregate amount of eligible banker's acceptances that may be created by a member bank to 150 percent (or 200 percent with the permission of the Board) of its paid-up and unimpaired capital stock and surplus. In addition, a member bank is prohibited from creating eligible banker's acceptances for any one person in the aggregate in excess of 10 percent of the institution's capital. Eligible banker's acceptances growing out of domestic transactions are not to exceed 50 percent of the aggregate of all eligible acceptances authorized for a member

bank. All of the foregoing limitations are also applicable to U.S. branches and agencies of foreign banks that are subject to reserve requirements under section 7 of the International Banking Act of 1978 (12 USC 3105).

Banker's acceptances as a source of financing and investment offer significant advantages to

borrowers, accepting banks, and investors alike. Over the years, a banker's acceptance has often been a cheaper financing vehicle than a loan since it is readily marketable, considered an important secondary reserve for the accepting bank, and a relatively secure investment to the investor because of its two-name backing.

International—Banker's Acceptances

Examination Objectives

Effective date May 1996

Section 7060.2

1. To determine if objectives, policies, practices, procedures, and internal controls for banker's acceptances are adequate.
2. To determine if bank officers are operating in conformance with the established guidelines.
3. To determine the scope and adequacy of the audit function as it applies to banker's acceptances.
4. To evaluate the portfolio for documentation and collateral sufficiency, credit quality, and collectibility.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when objectives, policies, practices, procedures, or internal controls are deficient or when violations of laws and regulations have been cited.

International—Banker's Acceptances Examination Procedures

Effective date March 1984

Section 7060.3

1. If selected for implementation, complete or update the banker's acceptance section of the Internal Control Questionnaire.
2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records and:
 - a. Reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select borrowers for examination.
6. Prepare credit line cards to include:
 - a. Customer's aggregate banker's acceptance liability.
 - b. Banker's acceptances aggregating the customer's total liability, listing:
 - Current balance of the acceptance.
 - Indicate any prepayments (anticipations) and portions sold under participation certificate.
 - Date the acceptance was created.
 - Tenor of the acceptance (give exact maturity date, if specified).
 - Type of acceptance.
 - Import.
 - Export.
 - Third country shipment.
 - Domestic shipment.
 - Storage.
 - To create dollar exchange.
 - Working capital and/or pre-export.
 - Refinancing of sight letters of credit.
 - Current status of the acceptance.
7. Obtain the following information, if applicable to banker's acceptances, which may necessitate inclusion of additional customers (borrowers) in the credit review:
 - a. Delinquencies.
 - b. Participations purchased and sold (including syndicate participations).
 - Acceptance participations sold.
 - Acceptance pool participations (borrowings).
 - c. Loan commitments and other contingent liabilities.
 - d. Extensions of credit to major stockholders, officers, directors and their interests.
 - e. Extensions of credit to executive officers, directors and their interests of correspondent banks.
 - f. Miscellaneous loan debit and credit suspense accounts.
 - g. Criticized shared national credits (applicable foreign credits).
 - h. Interagency Country Exposure Review Committee determinations.
 - i. Extensions of credit considered "problem loans" by management.
 - j. Information on directors, executive officers, principal shareholders and their interests.
 - k. Specific guidelines in the lending policy pertaining to banker's acceptances.
 - l. Each officer's current lending authority.
 - m. The current fee structure.
 - n. Any useful information resulting from the review of the minutes of the Loan and Discount Committee or any similar committee.
 - o. Reports furnished to the Loan and Discount Committee or any similar committee.
 - p. Reports furnished to the directorate.
 - q. Loans criticized during the previous examination.
8. Review the information received and perform the following for:
 - a. Participations purchased and sold:
 - Test participation certificates and records and determine that the parties share in the risks and contractual payments according to the agreement.
 - Determine that the books and records of the bank properly reflect the bank's liability.
 - Investigate any participations sold immediately prior to the date of examination to determine if any were sold to

- avoid possible criticism during the examination.
- b. Loan commitments (including acceptance commitments) and contingent liabilities.
 - Analyze the commitment or contingent liability if the borrower has been advised of the commitment together with the combined amounts of the current loan balance, if any.
 - c. Banker's acceptances created for officers and directors of other banks:
 - Investigate any circumstances which indicate preferential treatment.
 - d. Miscellaneous loan debit and credit suspense accounts:
 - Discuss with management any large or old items relating to banker's acceptances.
 - e. Shared national credits:
 - Compare the schedule of banker's acceptances included in the Uniform Review of National Credits Program to the sample selection to determine which banker's acceptances in the sample are portions of shared national credits (including applicable foreign credits).
 - For each banker's acceptance so identified, transcribe appropriate information from the schedule to line sheets and return the schedule. No further examination procedures are necessary for this area.
 - f. Cross-border lending:
 - Review credit risk without regard to cross-border considerations which will be analyzed separately. No further examination procedures are necessary in this area.
 - g. Loans criticized during the previous examination:
 - Determine disposition of banker's acceptances so criticized by transcribing:
 - current balance and payment status, or
 - date the banker's acceptance was repaid and the source of repayment.
10. Prepare a credit line card for any banker's acceptance not in the sample which, based on information derived from the above schedules, requires an in-depth review.
 11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and other loan areas and, together, decide who will review the borrowing relationship. Pass or retain completed credit line cards.
 12. Obtain credit files for all borrowers for whom credit line cards were prepared and complete credit line cards, where appropriate. To analyze the loans, perform the following procedures:
 - a. Analyze balance sheet and profit and loss figures as shown in current and preceding financial statements, and determine the existence of any unfavorable trends.
 - b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
 - c. Review components of the balance sheet as shown in the current financial statements and determine the reasonableness of each item as it relates to the total financial structure.
 - d. Review supporting information for the major balance sheet items and the techniques used in consolidation and determine the primary sources of repayment and evaluate their adequacy.
 - e. Review compliance with the provisions of acceptance agreements.
 - f. Review the digest of officer's memoranda, mercantile reports, credit checks and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
 - g. Relate any collateral values to outstanding debt, including margin and cash collateral deposits.
 - h. Compare fees charged to the fee schedule(s) and determine that the terms are within established guidelines.
 - i. Compare the amount of banker's acceptances outstanding with the lending officer's authority.
 - j. Analyze secondary support afforded by guarantors.
 - k. Ascertain compliance with the bank's established banker's acceptance policy.

13. For banker's acceptances in the sample, check the central liability file on borrowers indebted above the cutoff and on borrowers displaying credit weaknesses or suspected of having additional liability in loan areas.
14. Transcribe significant liability and other information on officers, principals and affiliations of appropriate obligors contained in the sample. Cross-reference line sheets to borrowers, where appropriate.
15. Determine compliance with laws, regulations, and eligibility requirements regarding banker's acceptance financing by performing the following steps:
 - a. Determine bank compliance with state limits or the aggregate amount of acceptances that may be created for any one customer, and acceptances created to furnish dollar exchange.
 - b. Determine compliance with stipulated aggregate liability limitations on acceptances outstanding. (See Federal Reserve Act, section 13 for single person and aggregate limitation provisions.)
 - c. Determine which acceptances are ineligible and therefore subject to loan limitations imposed by state law. In general, an eligible banker's acceptance is one which must arise out of a transaction described in section 13 of the Federal Reserve Act. For details of eligibility requirements, refer to the operating provisions of the Federal Open Market Committee and interpretations of the Board of Governors of the Federal Reserve System. Eligibility can be determined by reviewing documentary evidence detailing the nature of the transaction underlying the credit extended. This evidence may be correspondence, title documents or document transmittal letters which provide sufficient detail to judge eligibility according to established criteria. Details provided should cover:
 - Value of merchandise.
 - Description of merchandise.
 - Origin and destination of shipment.
 - Date of shipment.
 - Certification that the merchandise is not being financed elsewhere.
 - d. Ensure that all of the bank's own acceptances discounted that are not rediscounted, whether eligible or ineligible, are booked as loans and thus subject to the loan limitations imposed by state law.
- e. Determine if state law imposes loan limitations on eligible acceptances of other banks purchased.
- f. Review acceptance participation agreements to determine if the purchaser has recourse to the bank in the event of default by the account party, in which case the liability would be considered a borrowing. Such borrowings may be subject to limitations on indebtedness of member banks imposed by state law.
- g. Determine acceptances issued on behalf of an affiliate which constitute extensions of credit under section 23A of the Federal Reserve Act.
16. Perform appropriate procedural steps in the Concentration of Credits section.
17. Discuss with appropriate officer and prepare summaries in appropriate report form of:
 - a. Violations of laws and regulations.
 - b. Acceptances not supported by current and complete financial information.
 - c. Acceptances on which collateral documentation is deficient.
 - d. Concentrations of credit.
 - e. Criticized loans.
 - f. Inadequately collateralized acceptances, if applicable.
 - g. Banker's acceptances created for major shareholders, employees, officers, directors and related interests.
 - h. Banker's acceptances which, for any other reason, are questionable as to quality and ultimate collection.
18. Evaluate the bank with respect to:
 - a. The adequacy of written policies relating to banker's acceptances.
 - b. The manner in which bank officers are operating in conformance with established policy.
 - c. Adverse trends within the banker's acceptance department.
 - d. The accuracy and completeness of the schedules obtained.
 - e. Internal control deficiencies or exceptions.
 - f. Recommended corrective action when policies, practices or procedures are deficient.
 - g. The quality of departmental management.
 - h. Other matters of significance.
19. Update the workpapers with any information that will facilitate future examinations.

International—Banker's Acceptances

Internal Control Questionnaire

Effective date June 1985

Section 7060.4

Review the bank's internal controls, policies, practices and procedures for creating and servicing banker's acceptances. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written banker's acceptance policies that:
 - a. Establish procedures for reviewing banker's acceptance applications?
 - b. Define qualified customers?
 - c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are banker's acceptance policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

3. Is the preparation and posting of subsidiary banker's acceptance records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
4. Are the subsidiary banker's acceptance records balanced daily with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle acceptances and post records?
5. Are acceptance delinquencies prepared for and reviewed by management on a timely basis?
6. Are inquiries about acceptance balances received and investigated by persons who do not normally handle settlements or post records?
7. Are bookkeeping adjustments checked and approved by an appropriate officer?
8. Is a daily record maintained summarizing acceptance transactions details, i.e., bankers acceptances created, payments received and

fees collected, to support applicable general ledger account entries?

9. Are acceptances of other banks that have been purchased in the open market segregated on the bank's records from the bank's own acceptances created?
10. Are prepayments (anticipations) on outstanding banker's acceptances netted against the appropriate asset account "Customer Liability for Acceptances" (or loans and discounts, depending upon whether or not the bank has discounted its own acceptance), and do they continue to be shown as a liability "Bank's Liability on Acceptances"?
11. Are banker's acceptance record copies and liability ledger trial balances prepared and reconciled monthly with control accounts by employees who do not process or record acceptance transactions?

FEES

12. Is the preparation and posting of fees and discounts performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
13. Are any independent fee and discount computations made and compared or adequately tested to initial fee and discount records by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?

COLLATERAL

See International—Loans and Current Account Advances section.

OTHER

14. Are acceptance record copies, own acceptances discounted (purchased), and acceptances of other banks purchased safeguarded during banking hours and locked in the vault overnight?

15. Are blank (pre-signed) customer drafts properly safeguarded?
 16. Are any acceptance fee rebates approved by an officer?
 17. Does the bank have an internal review system that:
 - a. Re-examines collateral and supporting documentation held for negotiability and proper assignment?
 - b. Test checks the values assigned to collateral at frequent intervals?
 - c. Determines that lending officers are periodically advised of maturing banker's acceptances or acceptance lines.
 18. Does the bank's acceptance filing system provide for the identification of each acceptance, e.g., by consecutive numbering and applicable letter of credit, to provide a proper audit trail?
- CONCLUSION**
19. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
 20. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

U.S. banks and their overseas branches maintain interest-bearing time deposits, known as “due from banks—time,” with foreign banks and overseas branches of U.S. banks. These assets may also be referred to as placements, placings, interbank placements (deposits), call money, or redeposits. Due from banks—time deposits have maturities ranging from one day to several months or years. Certain examination procedures, internal control considerations, and verification procedures in the domestic due from banks section (section 2010) are relevant to international due from banks—time. However, the specialized nature of foreign deposits necessitates additional examination procedures.

Constraints are placed on the amount member banks may deposit with domestic depository institutions. A member bank may not keep on deposit with any depository institution not having access to the Federal Reserve discount window more than 10 percent of its paid-in and unimpaired capital and surplus funds. State member banks may keep on deposit with foreign banks an amount exceeding that 10 percent limitation.

Due from banks—time deposit activities became important with the growth of the Eurodollar market. The bulk of due from banks—time deposits now consists of Eurodollars with smaller amounts in other Eurocurrencies. Other Eurocurrency time deposits are placed in substantially the same manner as Eurodollar deposits, but may be subject to differing exchange control regulations depending on the location of the office making the deposit.

Eurodollar deposits are sometimes linked with foreign-exchange transactions. As a result, the Eurocurrency deposit trader will frequently work closely with the foreign-exchange trader when making the deposit decision. Foreign-exchange brokers may act as intermediaries if warranted by market conditions, local customers, the size of the bank, or other factors.

Due from banks—time deposits are treated as deposits in the Report of Condition, but contain the same credit and country risks as loans or extensions of credit. Consequently, a prudently managed bank should place deposits only with other sound and well-managed banks. The deposit traders should be provided with a list of approved banks with which funds can be deposited up to specific limits. Due from banks—time deposits differ from other types of credit extensions because they often represent deposits of relatively short maturity, which normally receive first priority on repayment in case of insolvency. Nevertheless, as credit and transfer risk exists, exposure limits are to be established by credit officers and not by foreign-exchange or deposit traders. These limits must be reviewed regularly by credit officers, particularly during periods of money market uncertainty or rapidly changing economic and political conditions. Incoming confirmations of transactions from depository institutions must be carefully verified against bank records to protect against fraud and error. Similarly, a systematic follow-up on nonreceipt of incoming confirmations should be closely monitored.

International—Due from Banks—Time

Examination Objectives

Effective date May 1996

Section 7070.2

1. To determine if the policies, practices, procedures, and internal controls for due from banks—time (interbank placements and call money) are adequate.
2. To determine if bank officers and employees are operating in conformance with the established guidelines.
3. To determine that all due from banks—time accounts are reasonably stated and represent funds on deposit with other banks.
4. To determine whether the bank evaluates the credit quality of banks with which time accounts are maintained.
5. To determine the scope and adequacy of the internal and external audit function as it applies to international due from banks—time.
6. To determine compliance with laws and regulations.
7. To recommend corrective action when policies, practices, procedures, or internal controls are deficient or when violations of laws, rulings, or regulations have been cited.

International—Due From Banks—Time Examination Procedures

Effective date March 1984

Section 7070.3

1. If selected for implementation, complete or update the Due from Banks—Time (placement and call money) section of the Internal Control Questionnaire.
2. Determine the scope of the examination based on the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records pertaining to due from banks—time by currency and maturity and:
 - a. Reconcile balance to department controls and general ledger.
 - b. Review reconciling items for reasonableness.
5. Determine those due from banks—time deposits that are unconfirmed as of examination date and:
 - Determine why incoming matching confirmations are lacking.
 - Review the extent of follow-up procedures.
6. Using an appropriate technique, select deposit customers for examination.
7. Prepare credit line cards on the customers selected for review to include the following:
 - a. Name of bank and location.
 - b. Customer's aggregate due from bank—time liability.
 - c. For each due from bank—time deposit placement comprising the customer's total exposure to the bank, record the following information:
 - Amount.
 - Currency.
 - Inception date.
 - Value date.
 - Maturity date.
 - Interest rate.
8. Determine whether selected customers are:
 - a. Affiliates of the bank or other banks.
 - b. Banks and not finance companies or commercial borrowers.
9. Obtain and review the following information, if applicable:
 - a. Matured and unpaid due from banks—time deposits.
 - b. Miscellaneous loan debit and credit suspense accounts.
 - c. Interagency Country Exposure Review Committee determinations.
 - d. Due from banks—time deposit placements that are considered problem assets by management.
 - e. Specific guidelines in bank policy relating to due from banks—time.
 - f. A current listing of due from banks—time approved customer lines.
 - g. The current interest rate structure.
 - h. Any useful information resulting from the review of the minutes of the Loan and Discount Committee or any similar committee.
 - i. Reports furnished to the Board of Directors.
 - j. Due from banks—time deposit placements that were criticized during the previous examination.
 - k. A listing of due from banks—time deposits that were previously charged-off.
10. Transcribe or compare information from the above schedules to credit line cards where appropriate, and indicate any cancelled bank lines.
11. Prepare credit line cards for any due from bank—time not in the sample which, based on information derived from the above schedules, requires an in-depth review.
12. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and loan areas and decide who will review the borrowing relationship. Pass or retain completed credit line cards.
13. Obtain credit files for all borrowers for whom credit line cards were prepared and complete credit line cards where appropriate. To analyze due from banks—time, perform the following procedures:
 - a. Analyze balance sheet and profit and loss figures as shown in current and preceding financial statements, and determine

- the existence of any favorable or adverse trends.
- b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
 - c. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the customer's total financial structure.
 - d. Review supporting information for the major balance sheet items and the techniques used in consolidation, and determine the primary sources of repayment and evaluate their adequacy.
 - e. Compare each bank's balance sheet, profit and loss items and ratios with those of comparable banks in the same country to help identify banks which may be overextended.
 - f. Review compliance with provisions of due from banks—time deposit agreements.
 - g. Review digest of officers' memoranda, mercantile reports, credit checks and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
 - h. Compare interest rate(s) charged to the interest rate schedule(s), and determine that the terms are within established guidelines.
 - i. Compare the amount of due from banks—time deposits with:
 - Lending officer's authority.
 - Depositor's limit established by the bank.
 - j. Detail the major owners of the bank and whether there is any support by the government.
 - k. Ascertain compliance with established bank policy.
14. For banks in the sample, check the customer central liability reporting system for any other indebtedness.
 15. Transcribe significant liability and other information on officers, principals and affiliates of banks contained in the sample. Cross-reference line cards to banks (borrowers), where appropriate.
 16. Determine compliance with state laws and regulations pertaining to due from banks—time.
 17. Determine the existence of any concentration of time deposits with other banks. Include due from banks—demand (nostro), time deposits and any call money in computation. For concentrations exceeding 25 percent of the bank's capital structure, forward information to examiners assigned "Concentrations of Credit" for possible inclusion in the report of examination.
 18. Discuss with appropriate officer(s) and prepare summaries in appropriate report form of:
 - a. Matured and unpaid due from banks—time deposits.
 - b. Violations of laws and regulations.
 - c. Due from banks—time deposits not supported by current and complete financial information.
 - d. Due from banks—time deposits on which documentation is deficient.
 - e. Concentrations.
 - f. Criticized credits (portions applicable to due from banks—time deposits).
 - g. Due from banks—time deposits which, for any other reason, are questionable as to quality and ultimate repayment.
 - h. Other matters regarding the condition of the department.
 19. Evaluate the bank with respect to:
 - a. The adequacy of written policies relating to due from banks—time.
 - b. The manner in which bank officers are operating in conformance with established policy.
 - c. Adverse trends within the due from banks—time department.
 - d. The accuracy and completeness of the schedules.
 - e. Internal control deficiencies or exceptions.
 - f. Recommended corrective action when policies, practices or procedures are found to be deficient.
 - g. The quality of departmental management.
 - h. Other matters of significance.
 20. Update the workpapers with any information that will facilitate future examinations.

International—Due From Banks—Time Internal Control Questionnaire

Effective date March 1984

Section 7070.4

Review the bank's internal controls, policies, practices and procedures regarding due from banks—time. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies for international due from banks—time that:
 - a. Establish maximum limits of the aggregate amount of due from bank—time deposits for each:
 - The bank?
 - The currency of deposit?
 - The country of deposit?
 - b. Restrict due from bank—time deposits to only those customers for whom lines have been established?
 - c. Establish definite procedures for:
 - Balancing of accounts?
 - Holdover deals?
 - Rendering of reports to management, external auditors and regulating agencies?
 - Accounting cutoff deadlines?
 - Handling of interest?

CERTIFICATES OF DEPOSIT

2. Are bank issued certificates of deposits safeguarded as other negotiable investment instruments?
3. Are safekeeping receipts for certificates of deposits issued, but held by others, checked to the original purchase order for accuracy?

DEALING ROOM INSTRUCTIONS

(Although dealing room and instructions functions must be separate, often foreign exchange

and due from bank—time activities relating to those functions are combined.)

4. Are dealer slips and contract/confirmation sets relating to due from banks—time numbered sequentially and checked periodically?
5. Is a positions clerk present in the dealing room to maintain dealers' memoranda records of due from bank—time deposits?
6. Is due from banks—time "instructions" (operations) organizationally and physically separate from the foreign exchange dealers?
- *7. Do good communications appear to exist between the dealing room and instructions to assure:
 - a. An effective working relationship with operations and management to ensure adequate control and management information?
 - b. Coordination with operations regarding correct delivery/settlement instructions?
- *8. Does operations maintain all official accounting records relating to due from banks—time?
- *9. Does operations:
 - a. Balance official records against dealing room memoranda records as scheduled by management?
 - b. Check confirmations for errors?
 - c. Receive, review and control dealer's slips?
 - d. Handle all payments and receipts?
- *10. Are confirmations compared to the general ledger entries for accuracy?

CONFIRMATIONS

- *11. Does operations monitor follow-up on non-receipt of incoming confirmations?
- *12. Are outgoing and incoming confirmations ever handled by dealers who initiate due from bank—time transactions?
- *13. Does the bank check that there are no confirmation deals dated:
 - a. Prior to the bank's own due from bank—time deal dates?
 - b. After the bank's own due from bank—time deal dates?

TESTING ARRANGEMENTS

(See the Wire Transfer section.)

SIGNATURE BOOKS

- *14. Are customer signature books updated with regard to those with whom regular business is transacted?
- *15. Does the bank check signatures on incoming confirmations for authenticity? (Many banks do not check signatures on incoming confirmations.)
- *16. Does the bank check signatures for deals with non-bank customers?
- *17. Are banks that do not sign confirmations asked to confirm such practice in writing over an authorized signature?

ACCOUNT RECORDS

- *18. Are subsidiary records reconciled with the general ledger accounts and reconciling items adequately investigated by persons who do not post transactions to such records?
- 19. Is a due from foreign bank—time deposit trial balance prepared on a periodic basis (if so, indicate frequency _____)?
- 20. Is a daily reconciliation made of due from

bank—time deposit controls to the general ledger?

- 21. Are reconciliations reviewed by an officer independent of the reconciliation?

OTHER

- 22. Are individual interest computations checked or adequately tested by persons independent of those functions?
- 23. Are accrual balances for due from banks—time verified periodically by an authorized official (if so, indicate frequency _____)?
- 24. Do all internal entries require the approval of appropriate officials?

CONCLUSION

- 25. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
- 26. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

INTRODUCTION

Letters of credit are the most widely used instrument to finance foreign transactions. The two major types of letters of credit are the commercial documentary letter of credit and the standby letter of credit.

COMMERCIAL DOCUMENTARY LETTERS OF CREDIT

This type of letter of credit is used most commonly to finance a commercial contract for the shipment of goods from seller to buyer. A commercial documentary letter of credit is a letter addressed by a bank (issuing bank) on behalf of its customer, a buyer of merchandise (account party), to a seller (beneficiary) authorizing the seller to draw drafts up to a stipulated amount under specified terms. The beneficiary will be paid when the terms of the letter of credit are met and the required documents are submitted to the paying bank.

Generally, the issuance of letters of credit is governed by article 5 of the Uniform Commercial Code (UCC). However, if the credit is issued under New York law, the credit will be governed instead by the Uniform Customs and Practice for Documentary Credits (UCP). The parties may also stipulate that the UCP rather than the UCC applies. Letters of credit may also be governed by foreign law. Generally, letters of credit are—

- signed and in writing,
- in favor of a definite beneficiary,
- for a specific amount of money, and
- in a form clearly stating how payment to the beneficiary is to be made and under what conditions.

In addition, they are issued with a definite expiration date.

Commercial letters of credit are issued in either irrevocable or revocable form. Once the beneficiary receives an irrevocable letter of credit, it cannot be canceled or amended without the beneficiary's consent. Conversely, a revocable letter of credit can be canceled or

amended by the issuing bank at any time without notice to or consent from the customer or the beneficiary.

An irrevocable letter of credit constitutes a definite commitment by the issuing bank to pay, provided the beneficiary complies with the letter's terms and conditions. In contrast, the revocable credit is not truly a bank credit but serves as a device that provides the buyer and seller with a means of settling payments. Since a revocable credit can be canceled or changed without notice, the beneficiary should not rely on the credit but rather on the willingness and ability of the buyer to meet the terms of the underlying contract.

The letter of credit may be sent to the beneficiary directly by the issuing bank or through the issuing bank's correspondent (advising bank) located in the same place as the beneficiary. The advising bank gives notice of the issuance of a letter of credit without assuming any obligation to honor demands for payment. Advised letters of credit will bear a notation by the advising bank that it makes "no engagement" or words to that effect. An irrevocable advised letter of credit is, therefore, an undertaking to pay by the issuing bank, but not by the advising bank.

Some beneficiaries (sellers), particularly those not familiar with the issuing bank, request the buyer to have the irrevocable credit issued in the buyer's country and "confirmed" by a bank in the seller's country. Confirmed letters of credit are evidenced by the confirming bank's notation: "We undertake that all drafts drawn . . . will be honored by us" or similar words. The beneficiary of a confirmed credit has a definite commitment to pay from a bank in his or her country and need not be concerned with the willingness or ability of the issuing bank to pay. An advising bank may add its confirmation and be designated in the letter as the paying bank.

Payment terms of a letter of credit usually vary from sight to 180 days, although other terms are sometimes used. The letter will specify on which bank drafts are to be drawn. If the draft is drawn at sight, the bank will effect payment upon presentation of the draft, provided the terms of the credit have been met. If the draft is drawn on a time basis, the bank will accept the draft (by stamping "Accepted" on the face of the draft), which then can be held by the seller or the bank until maturity. Alternatively, the accepted draft can be sold or discounted.

(See section 7060, “International—Banker’s Acceptances.”)

Certain categories of commercial letters of credit, such as back-to-back and red clause credits, contain an element of risk, and banks should exercise caution in their negotiation. Similarly, deferred-payment letters of credit, which become direct assets and liabilities of a bank after presentation and receipt of the beneficiary’s documents, involve greater potential risk when coupled with the length of time the credit is outstanding.

A transferable letter of credit enables the original beneficiary to transfer the rights of payment to one or more beneficiaries. Frequently, the beneficiary is a middleman who does not own the goods at the time the letter of credit is issued. Thus, the beneficiary may seek to use the letter of credit to finance the acquisition of the goods. Under the UCP, a transferable letter of credit may be transferred only once unless otherwise stated.

A revolving letter of credit allows for monthly shipments with payments being either cumulative or noncumulative. In the case of cumulative credits, undrawn amounts carry over to future periods. However, most letters of credit are nonrevolving and are valid for one transaction. Since the maximum exposure under an irrevocable revolving credit can be large, most revolving credits are issued in revocable form.

Documentation is of paramount importance in all letter of credit transactions. The bank is required to examine all documents with care to determine that they conform to all of the terms and conditions of the letter of credit. Many letters of credit are part of continuous transactions, evolving from letters of credit to sight drafts or acceptances or to notes and advances covered by trust receipts or warehouse receipts. Ultimate repayment often depends on the eventual sale of the goods involved. Thus, the proper handling and accuracy of the documents required under the letter of credit is of primary concern.

STANDBY LETTERS OF CREDIT

A standby letter of credit guarantees payment to the beneficiary by the issuing bank in the event of default or nonperformance by the account party (the bank’s customer). Although a standby letter of credit may arise from a commercial

transaction, it is not linked directly to the shipment of goods from seller to buyer. It may cover performance of a construction contract, serve as an assurance to a bank that the seller will honor his or her obligations under warranties, or relate to the performance of a purely monetary obligation, for example, when the credit is used to guarantee payment of commercial paper at maturity.

Under all letters of credit, the banker expects the customer to be financially able to meet his or her commitments. A banker’s payment under a commercial credit for the customer’s account is usually reimbursed immediately by the customer and does not become a loan. However, the bank makes payment on a standby letter of credit only when the customer, having defaulted on his or her primary obligation, is unable to reimburse it.

A standby letter of credit transaction involves greater potential risk for the issuing bank than a commercial documentary letter of credit. Unless the transaction is fully secured, the issuer of a standby letter of credit retains nothing of value to protect against loss, whereas a commercial documentary letter of credit provides the bank with title to the goods being shipped. To reduce the risk of a standby letter of credit, the issuing bank’s credit analysis of the account party should be equivalent to the analysis of a borrower in an ordinary loan situation.

The standby letter of credit transactions of state member banks are subject to the legal restrictions of Regulation H and section 23A of the Federal Reserve Act. For reporting purposes, standby letters of credit are shown as contingent liabilities in the issuer’s Report of Condition.

Under the revised capital/risk assets guidelines, banks now must allocate capital against standby letters of credit. See the capital adequacy guidelines of November 1995 for information concerning capital allocation requirements against standby letters of credit.

ANTI-BOYCOTT REGULATIONS

The Export Administration Act of 1973 prohibits banks from taking or knowingly agreeing to take actions that support any boycott against a country friendly to the United States. Under anti-boycott regulations (which are issued by the Department of Commerce and enforced by the

Office of Anti-Boycott Compliance), U.S. banks are required to report letters of credit they receive that include illegal boycott terms or conditions and should establish an ongoing program to review all letters of credit. These regulations apply to both domestic and overseas branches of all U.S. banks.

The anti-boycott provisions prohibit banks from opening, negotiating, confirming, or paying international letters of credit that contain illegal terms or conditions. The improper language is most often seen in documentary letters of credit, sight reimbursements, and pass-on letters of credit, but may also appear in drafts and wire payments. Often, a bank's customer

may try to add improper language orally rather than in writing. Boycott language includes clauses or requirements such as—

- certification that the goods are not of a particular origin, such as Israeli or South African;
- certification that any supplier or provider of services does not appear on the Arab blacklist;
- the condition, “Do not negotiate with black-listed banks,” or words to that effect;
- a request not to ship goods on an Israeli carrier or on a vessel or carrier that calls at Israel en route to a boycotting country; and
- a request for a certificate stating the origin of the goods or the destination of the goods.

International—Letters of Credit Examination Objectives

Effective date May 1996

Section 7080.2

1. To determine if objectives, policies, practices, procedures, and internal controls for letters of credit are adequate.
2. To determine whether bank officers are operating in conformance with established guidelines.
3. To determine the scope and adequacy of the audit function.
4. To evaluate the portfolio for documentation and collateral sufficiency, credit quality, and collectibility.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when objectives, policies, practices, procedures, or internal controls are deficient or when violations of laws or regulations are noted.

International—Letters of Credit Examination Procedures

Effective date March 1984

Section 7080.3

1. If selected for implementation, complete or update the Letters of Credit section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal and external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer liability records and:
 - a. Reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select customers for examination.
6. Prepare examiners' credit line cards for each customer selected to include:
 - a. Total line available for letters of credit.
 - b. Total outstanding letters of credit.
 - Undrawn amount.
 - Date of issuance.
 - Expiration date of the credit.
 - Name of the beneficiary.
 - Tenor of the drafts to be drawn.
 - Purpose for the credit.
 - Issued or confirmed.
 - Revocable or irrevocable.
 - Negotiable or non-negotiable.
 - Revolving.
 - Cumulative or noncumulative.
 - Transferable.
 - Assignable.
 - Amendments.
 - Issued on behalf of domestic banks.
 - Application (with official approval) is on file and in agreement with letter of credit terms.
 - Bank's copy is initialed by the officer who signed the original letter of credit.
7. Obtain the following information if it is applicable to the letter of credit department.

Such information may necessitate inclusion of additional customers in the credit review.

 - a. Delinquencies.
 - b. Participations purchased and sold since the preceding examination (including syndicate participations).
 - c. Loan commitments and other contingent liabilities.
 - d. Letters of credit issued (or confirmed) for major shareholders, officers, directors and their related interests.
 - e. Letters of credit issued (or confirmed) for employees, officers and directors of other banks.
 - f. Miscellaneous loan debit and credit suspense accounts.
 - g. Criticized shared national credits (applicable foreign credits).
 - h. Interagency Country Exposure Review Committee determinations.
 - i. Letters of credit considered problems by management.
 - j. Information on directors, executive officers, principal shareholders and their interests.
 - k. Specific guidelines in the lending policies.
 - l. Each officer's current lending authority.
 - m. Current letter of credit commission and fee structure.
 - n. Any useful information obtained from the review of the minutes of the Loan and Discount Committee or any similar committee.
 - o. Reports furnished to the Loan and Discount Committee or any similar committee.
 - p. Reports furnished to the board of directors.
 - q. Loans criticized during the previous examination.
8. Review the information received and perform the following for:
 - a. Participations purchased and sold (including syndicate participations).
 - Test participation certificates and records and determine that the parties share in the risks and contractual payments according to the agreement.

- Determine that the books and records of the bank properly show the bank's liability.
 - Investigate any participations sold immediately prior to the date of examination to determine if any were sold to avoid possible criticism during the examination.
- b. Loan commitments and other contingent liabilities:
- Analyze the commitment or contingent liability if the borrower has been advised of the commitment and the combined amounts of the current loan balance (if any) and the commitment or other contingent liability exceeds the cutoff.
- c. Letters of credit issued (or confirmed) for officers, directors and their interests:
- Investigate any circumstances which indicate preferential treatment.
- d. Letters of credit issued (or confirmed) for officers and directors of other banks:
- Investigate any circumstances which indicate preferential treatment.
- e. Miscellaneous loan debit and credit suspense accounts relating to letters or credit:
- Determine liability to the bank on drafts paid under letters of credit for work which the bank has not been reimbursed by the customer.
 - Investigate any large or old items.
- f. Shared national credits:
- Compare the schedule of letters of credit included in the program to the bank's reports of unexpired letters of credit.
 - For each letter of credit so identified, transcribe appropriate information to line cards. No further examination procedures are necessary in this area.
- g. Interagency Country Exposure Review Committee credits:
- Identify any credits that were selected for review that are criticized for transfer risk reasons by the Interagency Country Exposure Review Committee.
- h. Letters of credit criticized during the previous examination:
- Determine disposition of letters of credit so criticized by transcribing:
 - Current balance and payment status, or
 - Date the letter of credit was drawn down (refinanced), paid, expired or cancelled, and the source of repayment.
9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past due status relating to letters of credit.
10. Prepare credit line cards for any letter of credit not in the sample which, based on information derived from the above schedules, requires an in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, and loan areas and decide who will review the borrowing relationship. Pass or retain examination credit line cards.
12. Obtain credit files for all bank customers for whom credit line cards were prepared and complete credit line cards, where appropriate. To analyze the letters of credit, perform the following procedures:
- a. Analyze balance sheet and profit and loss items as shown in current and preceding financial statements, and determine the existence of any favorable or adverse trends.
 - b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
 - c. Review components of the balance sheet as shown in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
 - d. Review supporting information for the major balance sheet items and the techniques used in consolidation, and determine the primary sources of repayment and evaluate their adequacy.
 - e. Review compliance with provisions of letter of credit agreements.
 - f. Review digest of officers' memoranda, mercantile reports, credit checkings and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
 - g. Relate any collateral values, including margin and cash collateral deposits, to outstanding letter of credit debt.
 - h. Compare fees charged to the fee schedule(s), and determine that terms are within established guidelines.

- i. Compare the amount of letters of credit outstanding with the lending officer's authority.
- j. Analyze any secondary support afforded by guarantors.
- k. Ascertain compliance with the bank's established commercial loan policy.
- l. Analyze the following specific types of letters of credit (when applicable) to determine the following:
 - For red-clause letters of credit (packing credits)—
 - is clean advance or anticipatory drawing finance to the beneficiary (exporter or agent) authorized under the letter of credit?
 - does the beneficiary undertake to deliver, within the expiration date, the shipping documents called for in the letter of credit?
 - does the foreign bank make advances to the beneficiary, and is it paid by drawing its own draft on the opening bank, or is the beneficiary authorized to draw its draft on the issuing bank, and are the drafts received charged to the importer?
 - For traveler's letters of credit—
 - is a traveler's letter of credit authorizing the issuing bank's correspondent to negotiate drafts drawn by the beneficiary named in the credit, up to a specified amount, upon proper identification?
 - is the customer furnished with a list of the issuing bank's correspondents abroad?
 - is the letter of credit prepaid in full?
 - For back-to-back letters of credit—
 - is the backing letter of credit properly assigned as collateral to the bank issuing the letter of credit?
 - are the terms of the letter of credit issued identical to the backing credit, except that—
 - the beneficiary and account party are different,
 - the amount may be less but not more than the backing credit,
 - the expiration date is reduced by sufficient time to allow completion of the transaction before the backing letter of credit expires, and
- the beneficiary of the backing letter of credit is a regular customer of the bank opening the second letter of credit?
- For standby letters of credit—
 - do they represent undertakings to pay up to a specific amount on presentation of a draft (or drafts) or documents before a specified date?
 - do they represent obligations to a beneficiary on the part of the issuer to—
 - repay money borrowed by or advanced to, or for the account of, a party; or
 - make payment on account of any indebtedness undertaken by the account party, or make payment on account of default by the account party in the performance of an obligation, for example, default on loans, performance of contracts, or relating to maritime liens?
- For deferred-payment letters of credit (trade-related)—
 - does the letter of credit call for drawing of sight drafts with the provision that such drafts are not to be presented until a specified period after presentation and surrender of shipping documents to the bank?
 - is the bank's liability for outstanding letters of credit calling for deferred payment reflected as a contingent liability until presentation of such documents?
 - has the bank received, approved, and acknowledged receipt of the documents, thereby becoming directly liable to pay the beneficiary at a determinable future date (or dates)?
 - will payment be made to the beneficiary in a specified number of months or quarterly, semiannually, annually, or beyond? (If the bank has advanced money to the beneficiary against the deferred-payment letter of credit, with its proceeds assigned as collateral to repay the advance, the transaction should be treated as a loan rather than a

- deferred-payment letter of credit).
- For clean deferred-payment letters of credit—
 - do such deferred-payment credits call for future payment against simple receipt without documents evidencing an underlying trade transaction?
 - are such letters of credit shown as direct liabilities on the bank's records when drafts are presented by the beneficiary and received by the bank?
 - For authority to purchase—
 - is the authority to purchase with recourse to the drawer, without recourse to the drawer, or without recourse to the drawer but confirmed by the negotiating bank?
 - For Agency for International Development (AID) letters of credit—
 - does the bank have an AID letter of commitment authorizing the transaction?
 - has the bank checked to make sure that all documents, including those presented by the beneficiary, comply with the terms of both the letter of credit and the AID commitment?
 - does a letter of agreement between the bank and the foreign government exist, whereby the bank has recourse if AID fails to reimburse the bank?
 - For Commodity Credit Corporation (CCC) letters of credit—
 - does the bank have a CCC letter of commitment authorizing the bank under examination to issue letters of credit to beneficiaries supplying eligible commodities to foreign importers?
 - in instances where the bank has issued standby letters of credit in favor of the CCC, have the following requirements been met:
 - Has at least 10 percent of the financed amount been confirmed, i.e., guaranteed by a U.S. bank, for commercial credit risk? Is the total value of the credit advised through a U.S. bank?
 - For the Export-Import Bank (Eximbank) of the United States—
 - does the bank have an agency agreement from Eximbank stating—
 - that Eximbank has entered into a line of credit with a foreign borrower,
 - the amount of the line,
 - that the bank has been designated to issue the letter of credit (or credits), and
 - that any payments made under an Eximbank-approved letter of credit will be reimbursed by Eximbank?
 - has the bank checked to make sure that all documents, including those presented by the beneficiary, comply with the terms of both the letter of credit and the Eximbank agreement?
 - For advised (notified) letters of credit—
 - is the bank only advising the beneficiary without responsibility on its part? (These banks should not be examined unless the bank has notified the letter-of-credit terms erroneously to the beneficiary, thus resulting in a possible liability for the bank.)
 - For other types of letters of credit—
 - do any of the following U.S. government agencies and international organizations reimburse the bank for issuing letters of credit on their behalf:
 - International Bank for Reconstruction and Development (World Bank)
 - Inter-American Development Bank
 - Overseas Private Investment Corporation
13. For loans in the sample, check the central liability file on borrowers who are indebted above the cutoff, or on borrowers who display credit weaknesses or are suspected of having additional liability in other loan areas.
 14. Transcribe significant liability and other information on officers, principals, and affiliations of appropriate obligors contained in the sample. Cross-reference line cards to borrowers, where appropriate.
 15. Determine compliance with section 208.24 of Regulation H regarding standby letters of

credit by performing the following steps:

- a. Determine which letters of credit are standby letters of credit as defined by section 208.24(a) of Regulation H.
 - b. Determine that the amount of standby letters of credit does not exceed the legal limitations on loans imposed by the state (including limitations to any one customer or on aggregate extensions of credit).
 - Combine standby letters of credit with any other nonexcepted loans to the account party by the issuing bank for the purpose of applying state loan limitations to any one customer.
 - A standby letter of credit is not subject to loan limitations imposed by state law in the following instances:
 - Before or at the time of issuance of the credit, the issuing bank is paid an amount equal to the bank's maximum liability under the standby letter of credit.
 - Before or at the time of issuance, the bank has set aside sufficient funds in a segregated, clearly earmarked deposit account to cover the bank's maximum liability under the standby letter of credit.
 - c. Determine, for standby letters of credit that constitute extensions of credit under section 23A of the Federal Reserve Act when issued on behalf of an affiliate, that—
 - the legal lending limits pertaining to loans to affiliates have not been exceeded, and
 - appropriate collateral requirements have been met.
 - d. Determine that the bank maintains adequate control and clearly earmarked subsidiary records of its standby letters of credit in conformance with section 208.24 of Regulation H.
 - e. Determine that the credit standing of the account party under any standby letter of credit is the subject of credit analysis that is equivalent to that applicable to a potential borrower in an ordinary loan situation.
16. Perform the appropriate procedural steps in the "Concentration of Credits" section.
 17. Discuss with the appropriate officer (or officers) and prepare summaries in appropriate report form of—
 - a. letters of credit not supported by current and complete financial information,
 - b. letters of credit on which collateral documentation is deficient,
 - c. inadequately collateralized letters of credit,
 - d. criticized letters of credit,
 - e. concentrations of credit,
 - f. letters of credit issued in favor of major shareholders, employees, officers, directors, and their interests,
 - g. letters of credit which, for any other reason, are questionable in quality,
 - h. violations of laws and regulations, and
 - i. other matters regarding the condition of the letters-of-credit department.
 18. Prepare and give to the examiner-in-charge a written evaluation of the letters-of-credit department with respect to—
 - a. the adequacy of written policies relating to letters of credit;
 - b. the manner in which bank officers are operating in conformance with established policies;
 - c. delinquencies relating to letters of credit, segregating those considered "A" paper;
 - d. adverse trends within the letter-of-credit department;
 - e. the accuracy and completeness of the schedules obtained;
 - f. internal-control deficiencies or exceptions;
 - g. recommended corrective action when policies, practices, or procedures are deficient;
 - h. the quality of departmental management; and
 - i. other matters of significance.
 19. Update the workpapers with any information that will facilitate future examinations.

International—Letters of Credit Internal Control Questionnaire

Effective date March 1984

Section 7080.4

Review the bank's internal controls, policies, practices and procedures for letters of credit issued and confirmed. The bank's system should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written letter of credit policies that:
 - a. Establish procedures for reviewing letter of credit applications?
 - b. Define qualified customers?
 - c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are letter of credit policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary letter of credit records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
- *4. Are the subsidiary letter of credit records (control totals) balanced daily with the appropriate general ledger accounts and reconciling items adequately investigated by persons who do not normally handle letters of credit and post records?
- *5. Are delinquencies arising from the non-payment of instruments relating to letters of credit prepared for and reviewed by management on a timely basis?
- *6. Are inquiries regarding letter of credit balances received and investigated by persons who do not normally process documents, handle settlements or post records?
- *7. Are bookkeeping adjustments checked and approved by an appropriate officer?

- *8. Is a daily record maintained summarizing letter of credit transaction details, i.e., letters of credit issued, payments received, and commissions and fees collected, to support applicable general ledger account entries?
9. Are frequent letter of credit record copies and liability ledger trial balances prepared and reconciled monthly with control accounts by employees who do not process or record letter of credit transactions?

COMMISSIONS

- *10. Is the preparation and posting of commission records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
11. Are any independent commission computations made and compared or adequately tested to initial commission records by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?

DOCUMENTATION

12. Are terms, dates, weights, description of merchandise, etc. shown on invoices, shipping documents, delivery receipts and bills of lading scrutinized for differences with those detailed in the letters of credit instruments?
13. Are procedures in effect to determine if:
 - a. The above documents are signed when required?
 - b. All copies of letters of credit are initialed by the officer who signed the original letter of credit?
 - c. All amendments to letters of credit are approved by an officer?

COLLATERAL

(See International—Loans and Current Account Advances section.)

**DEFERRED PAYMENT LETTERS
OF CREDIT**

- *14. Are deferred payment letters of credit:
- Recorded as direct liabilities of the bank after it acknowledges receipt of the beneficiary's documents?
 - Included in "Other Assets" and "Other Liabilities" in the call report?

STANDBY LETTERS OF CREDIT

- *15. Are standby letters of credit segregated or readily identifiable from other types of letters of credit and/or guarantees?

OTHER

16. Are outstanding letter of credit record copies and unissued forms safeguarded during banking hours and locked in the vault overnight?
- *17. Are advised letters of credit recorded as memoranda accounts separate from letters of credit issued or confirmed by the bank?
18. Are letters of credit which have been issued with reliance upon a domestic bank, whether on behalf of, at the request of, or under an agency agreement with the domestic bank, recorded as contingent liabilities under the name of that domestic bank?
19. Are any commission rebates approved by an officer?

20. Does the bank have an internal review system that:
- Re-examines collateral items for negotiability and proper assignment?
 - Test check values assigned to collateral when the letter of credit is issued or confirmed and at frequent intervals thereafter?
 - Determines that customer payments of letters of credit issued are promptly posted?
 - Determines all delinquencies arising from the non-payment of instruments relating to letters of credit?
21. Are all letters of credit recorded and assigned consecutive numbers?
22. Are lending officers frequently informed of maturing letters of credit and letter of credit lines?

CONCLUSION

23. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
24. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

State member banks may not issue guarantees and sureties except for those that may be incidental or usual in conducting banking business, such as when a bank has a substantial interest in the performance of the transaction involved or has a segregated deposit sufficient in amount to cover its total potential liability. A state member bank also may guarantee or endorse notes or other obligations sold by the bank for its own account. The amount of the obligations covered by the guaranty or endorsement is to be recorded as a liability on the bank's records. These liabilities are included in computing the aggregate indebtedness of the bank, which may be subject to limitations imposed by state law. Furthermore, a state member bank is permitted to guarantee the deposits and liabilities of its Edge Act and agreement corporations and of its corporate instrumentalities in foreign countries.

A foreign branch of a member bank may engage in certain activities under Regulation K (12 CFR 211) in addition to its general banking powers to the extent that they are consistent with its charter. Those additional activities include guaranteeing a customer's debts or agreeing to make payment on the occurrence of readily ascertainable events, including, but not limited to, nonpayment of taxes, rentals, customs duties, the cost of transportation and loss, or the non-conformance of shipping documents. The guarantee or agreement must specify maximum

monetary liability. The liabilities outstanding are subject to loan limitations on any one customer imposed by state law.

A common example of a guarantee is a shipside bond. Frequently, in an international sale of goods, the merchandise arrives at the importer's (buyer's) port before the arrival of correct and complete bills of lading. In these instances, it is customary for the importer (buyer) to obtain immediate possession of the goods by providing the shipping company with a bank guarantee, often called a shipside bond, that holds the shipping company blameless for damage resulting from release of the goods without proper or complete documents. Usually, the bank's guarantee relies on a counter-guarantee issued to the bank by the importer.

All types of guarantees issued are to be recorded as contingent liabilities by the bank. Usually, the party for whom the guarantee was issued will reimburse the bank should it be required to pay under the guarantee; however, in certain situations, some other designated party may reimburse the bank. That other party may be designated in the guarantee agreement with the bank or in the guarantee instrument itself. The bank may also be reimbursed from segregated deposits held, from pledged collateral, or by a counter-guarantor. Letters of credit, as distinguished from guarantees, are discussed in section 7080, "International—Letters of Credit."

International—Guarantees Issued

Examination Objectives

Effective date May 1996

Section 7090.2

1. To determine if policies, practices, procedures, and internal controls for guarantees issued are adequate.
2. To determine if bank officers are operating in conformance with established guidelines.
3. To evaluate the portfolio of guarantees for credit quality, collectibility, and collateral sufficiency.
4. To determine the scope and adequacy of the audit function as it applies to guarantees.
5. To determine compliance with applicable laws and regulations.
6. To recommend corrective action when objectives, policies, practices, procedures, or internal controls are deficient and when violations of laws and regulations have been cited.

International—Guarantees Issued Examination Procedures

Effective date March 1984

Section 7090.3

1. If selected for implementation, complete or update the Guarantees Issued section of the Internal Control Questionnaire.
2. Determine the scope of the examination based upon the evaluation of internal controls and the work performed by internal and external auditors.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with performing the remaining examination procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal and external auditors from the examiner assigned to the audit review and determine if appropriate corrections have been made.
4. Obtain a trial balance of the customer (account party) liability records and:
 - a. Reconcile balances to department controls and the general ledger.
 - b. Review reconciling items for reasonableness.
5. Using an appropriate technique, select guarantee account parties for examination.
6. Prepare credit line cards to include:
 - a. Total line available for guarantees.
 - b. Total outstanding guarantees.
7. Obtain the following information if it is applicable to the guarantees issued area:
 - a. Loan commitments and contingent liabilities.
 - b. Miscellaneous loan debit and credit suspense accounts.
 - c. Criticized shared national credits.
 - d. Interagency Country Exposure Review Committee determinations.
 - e. Loans considered “problem loans” by management.
 - f. Specific guidelines in the lending policy.
 - g. Each officer’s current lending authority.
 - h. Any useful information resulting from the review of the minutes of the Loan and Discount Committee or any similar committee.
 - i. Reports furnished to the Loan and Discount Committee or any similar committee.
 - j. Reports furnished to the board of directors.
 - k. Loans criticized during the previous examination.
8. Review the information received and perform the following for:
 - a. Miscellaneous loan debit and credit suspense accounts:
 - Determine any liability to the bank resulting from guarantees paid by the bank for which it has not been reimbursed by an account party.
 - Discuss with management any large or old items.
 - Perform additional procedures as considered appropriate.
 - b. Shared national credits:
 - Compare the schedule of guarantees issued included in the program to the bank’s reports of unexpired guarantees.
 - For each guarantee so identified, transcribe appropriate information to line cards. No further examination procedures are necessary for these items.
 - c. Interagency Country Exposure Review Committee Credits:
 - Identify any guarantees that were selected for review that are criticized for transfer risk reason by the Interagency Country Exposure Review Committee.
9. Transcribe or compare information from the above schedules to credit line cards, where appropriate, and indicate any past due status.
10. Prepare credit line cards for any guarantee not in the sample which, based on information derived from the above schedules, requires an in-depth review.
11. Obtain liability and other information on common borrowers from examiners assigned to cash items, overdrafts, loans and current account advances, due from foreign banks—time, and other loan areas and decide who will review the borrowing relationship. Pass on or retain completed credit line cards.
12. Obtain credit files for all customers (account parties) for whom credit line cards were prepared and complete credit line cards, where appropriate. To analyze the guarantees, perform the following procedures:
 - a. Analyze balance sheet and profit and loss figures as shown in current and preced-

- ing financial statements, and determine the existence of any favorable or adverse trends.
- b. Relate items or groups of items in the current financial statements to other items or groups of items set forth in the statements, and determine the existence of any favorable or adverse ratios.
 - c. Review components of the balance sheet as reflected in the current financial statements, and determine the reasonableness of each item as it relates to the total financial structure.
 - d. Review supporting information for the major balance sheet items and the techniques used in consolidation. Determine the primary sources of repayment and evaluate the adequacy of those sources.
 - e. Determine compliance with the provisions of guarantee agreements.
 - f. Review digest of officers' memoranda, mercantile reports, credit checkings and correspondence to determine the existence of any problems which might deter the contractual liquidation program.
 - g. Relate collateral values, if any, to outstanding guarantee.
 - h. Compare fees charged to the bank's fee schedule and determine that the terms are within established guidelines.
 - i. Compare the original amount of the guarantee with the lending officer's authority.
 - j. Analyze support afforded by counter-guarantors.
 - k. Ascertain compliance with the bank's established guarantee issued policy.
13. For guarantees issued in the sample, check central liability file on borrower(s) indebted above the cutoff or borrower(s) displaying credit weakness or suspected of having additional liability in loan areas.
 14. Transcribe significant liability and other information on officers, principals and affiliations of appropriate account parties contained in the sample. Cross-reference line cards to borrowers, where appropriate.
 15. Determine compliance with state laws and regulations pertaining to guarantees issued by performing the following steps:
 - a. Determine that the obligations covered by such guarantees or endorsements are shown as contingent liabilities on the records and in the reports of condition of the bank and that such liabilities are included in computing the aggregate indebtedness of the bank, if such limitations are imposed by state law.
 - b. Determine which guarantees are subject to individual loan limitations to any one customer by state law. Combine guarantees with any other extensions of credit to the account party by the issuing bank subject to loan limitations imposed by state law.
 16. Perform appropriate procedural steps in the Concentration of Credits section, as applicable.
 17. Discuss with appropriate officers and prepare summaries in appropriate report form of:
 - a. Guarantees not supported by current and complete financial information.
 - b. Guarantees on which collateral documentation is deficient.
 - c. Concentrations of credit.
 - d. Criticized guarantees.
 - e. Inadequately collateralized guarantees, if applicable.
 - f. Guarantees issued in favor of major shareholders, employees, officers, directors and related interests.
 - g. Guarantees, which for any other reason, are questionable as to quality and ultimate collection.
 - h. Violations of laws and regulations.
 18. Evaluate the bank with respect to:
 - a. The adequacy of written policies relating to guarantees issued.
 - b. The manner in which bank officers are operating in conformance with established policy.
 - c. Adverse trends within the guarantees issued department.
 - d. The accuracy and completeness of the schedules obtained.
 - e. Internal control deficiencies or exceptions.
 - f. Recommended corrective action when policies, practices or procedures are deficient.
 - g. The quality of departmental management.
 - h. Other matters of significance.
 19. Update the workpapers with any information that will facilitate future examinations.

International—Guarantees Issued

Internal Control Questionnaire

Effective date March 1984

Section 7090.4

Review the bank's internal controls, policies, practices and procedures for issuing and servicing guarantees. The bank's system should be documented in a complete and concise manner and should include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its duties and responsibilities, adopted written policies pertaining to guarantees issued that:
 - a. Establish procedures for reviewing guarantee applications?
 - b. Define qualified guarantee account parties?
 - c. Establish minimum standards for documentation in accordance with the Uniform Commercial Code?
2. Are guarantee policies reviewed at least annually to determine if they are compatible with changing market conditions?

RECORDS

- *3. Is the preparation and posting of subsidiary guarantee records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
- *4. Are the subsidiary guarantees issued records balanced daily with the general ledger and are reconciling items adequately investigated by persons who do not normally handle guarantees?
- *5. Are guarantee delinquencies prepared for and reviewed by management on a timely basis?
6. Are inquiries regarding guarantee balances received and investigated by persons who do not normally handle guarantees or post records?
- *7. Are bookkeeping adjustments checked and approved by an appropriate officer?

- *8. Is a daily record maintained summarizing guarantee transaction details, i.e., guarantees issued, guarantees cancelled or renewed, payment made under guarantees and fees collected, which support general ledger entries?
9. Are frequent guarantee instrument and liability ledger trial balances prepared and are they reconciled monthly with control accounts by persons who do not process or record guarantee transactions?

GUARANTEE FEES

- *10. Is the preparation and posting of fees collected records performed or reviewed by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?
11. Are independent fee computations made, compared or adequately tested to initial fee records by persons who do not also:
 - a. Issue official checks or drafts?
 - b. Handle cash?

COLLATERAL

(See International—Loans and Current Account Advances section.)

OTHER

12. Are guarantees issued instruments safeguarded during banking hours and locked in the vault overnight?
13. Are all guarantees issued recorded as liabilities and assigned consecutive numbers?
14. Are all guarantees issued recorded on individual customer (account party) liability ledgers?

CONCLUSION

15. Is the foregoing information an adequate basis for evaluating internal control in that

there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.

16. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

This section provides examiners with the basic principles and risks associated with foreign exchange trading. By its very nature, foreign exchange trading involves risk. The examiner's primary function is to understand that risk and ensure that bank management, by means of policies, limits, and systems, is controlling that risk in a prudent manner. For the purpose of this section, foreign currency money market functions will be combined with foreign exchange activities since the principles and risks are virtually the same.

In order to evaluate a bank's foreign exchange and controls, the examiner needs a basic understanding of the foreign exchange market, the commercial bank's role in the market, trading fundamentals, and the principal risks involved in trading.

The foreign exchange market exists to service the foreign currency needs of importers, exporters, manufacturers, and retailers. Foreign exchange transactions arising from international trade and investment are frequently large and recurrent.

Large or small, all foreign exchange transactions represent the exchange of one country's money for another's. The exchange rate is simply the price of one currency in terms of another.

Until the late 1970s, foreign exchange rates in this country were normally expressed and quoted in dollars per unit of foreign currency, also known as "U.S. Terms." Under this method, for example, the rate for Swiss francs would be expressed as CHF1=U.S.\$1.5500. However, because of vastly improved communications and a rapidly expanding market, it became necessary for traders worldwide to quote rates in a uniform manner. As a result, American foreign exchange traders began using foreign currency units per dollar or "European Terms" for most rates. Using European terms, the quote in this example would be U.S.\$1=CHF.64516. Thus, European terms represent the value of the U.S. dollar in units of the foreign currency. A quote in European terms is simply the reciprocal of a quote in U.S. terms. One major exception to this shift is the British pound sterling which, for historical purposes, is always quoted in U.S. terms such as 1£=\$1.7450.)

Any commercial bank which maintains due from bank balances, commonly known as "nostro" accounts, in banks in foreign countries

in the local currency has the capability of engaging in foreign exchange. The majority of U.S. banks restrict foreign exchange to the servicing of their customers' foreign currency needs. The banks will simply sell the currency at a rate slightly above the market and subsequently offset the amount and maturity of the transaction through a purchase from another correspondent bank at market rates. This level of activity involves virtually no exposure as currency positions are covered within minutes. A small profit is usually generated from the rate differential, but the activity is clearly designated as a service center.

Greater emphasis is placed on foreign exchange activity by regional banks. The servicing of the corporate customers' needs is also a priority, but most regional banks also participate in the interbank market. These banks look at the trading function as a profit center as well as a service. Such banks usually employ several experienced traders and, unlike the previous group, will take positions in given currencies based on anticipated rate movements.

Multinational banks assume, by far, the most significant role in the foreign exchange marketplace. While still servicing customer needs, these banks are heavily engaged in the interbank market and look to their foreign exchange trading operation for sizable profits. Such banks trade foreign exchange on a global basis through international branch networks.

A major aspect of any foreign exchange review is the ability of the examiner to determine if the bank has the capability to adequately handle the level of its foreign exchange volume and the extent of the exposures taken. This judgment is, by necessity, subjective; however, it must take into consideration asset size, capital base, customer volume in foreign exchange, depth and experience of traders, and management understanding of and commitment to trading. The fundamental principles of foreign exchange trading outlined below are designed to assist the examiner in this analysis.

SPOT TRADING

Buying and selling foreign exchange at market rates for immediate delivery represents spot trading. In reality, spot trades have a "value

date” (maturity or delivery date) of two to five business days (one for Canada and Mexico). Foreign exchange rates that represent the present market value for the currency are known as spot rates. The risk of spot trading results from rate movements occurring when the bank’s position in foreign currency is not balanced with regard to exchange bought and sold. Such unbalanced positions are referred to as net open positions and are defined as follows:

Net Open Positions—A bank has a net position in a foreign currency when its assets, including spot and future contracts to purchase,

and its liabilities, including spot and future contracts to sell, in that currency are not equal. An excess of assets over liabilities is called a net “long” position and liabilities in excess of assets a net “short” position. A “long” position in a foreign currency which is depreciating will result in an exchange loss relative to book value because, with each day, that position (asset) is convertible into fewer units of local currency. Similarly, a “short” position in a foreign currency which is appreciating represents an exchange loss relative to book value because, with each day, liquidation of that position (liability) will cost more units of

1. Does not include a Swiss franc 1,000M (U.S. \$386M) unhedged investment in a Swiss subsidiary and Swiss franc 573M (U.S. \$217M) unhedged investment in branch fixed assets. The unhedged term “long” position was approved by senior bank management.

2. Net overnight position in excess of established limit. Formally approved as a special situation by senior management prior to the transaction.

local currency. (Examples of net open position schedules appropriate for use in preparing the report of examination appear on the preceding page.)

It is important to remember that the net open position consists of both balance sheet accounts and contingent liabilities. For most banks, the nostro accounts represent the principal assets; however, foreign currency loans as well as any other assets or liability accounts denominated in foreign currency that are sizable in certain banks, must be included. All future foreign exchange contracts outstanding are contingents. When a contract matures, the entries are posted to a nostro account in the appropriate currency.

Each time a bank enters into a spot foreign exchange contract, its net open position is changed. For example, assume that Bank A opens its business day with a balanced net open position in pound sterling (assets plus purchased contracts equal liabilities plus sold contracts). This is often referred to as a “flat” position. Bank A then receives a telephone call from Bank B requesting a “market” in sterling. Because it is a participant in the interbank foreign exchange trading market, Bank A is a “market maker.” This means it will provide Bank B with a two-sided quote consisting of its bid and offer for sterling. If a different currency was requested, European terms would be the opposite as the bid and offer would be for dollars instead of the foreign currency. In determining the market given, Bank A’s trader of sterling will determine where the market presently is (from brokers and/or other banks) and attempt to anticipate where it is headed and whether Bank B is planning to buy or sell sterling.

When Bank A gives its quote on sterling, \$1.7115–25 for example, it is saying that it will buy sterling (its bid) at \$1.7115 or sell sterling at \$1.7125 (its offer). If Bank B’s interest is to buy sterling and the given quote is appealing, it will buy sterling from Bank A at \$1.7125 (Bank A’s offer of sterling). Note, that while Bank B may choose to buy, sell, or pass as it wishes, it must do business on the terms established by Bank A. These terms will be in Bank A’s favor. As soon as Bank B announces it will purchase sterling at \$1.7125, Bank A acquires a net open position (short) in sterling. Bank A must then decide whether to hold its short position (in anticipation of a decline in sterling) or cover its position. Should it wish to cover, it may call another bank and purchase the

amount it sold to Bank B. However, in this case, as the calling bank, Bank A would buy its sterling from the offered side of the quote it receives and must buy it at \$1.7125 or less to avoid a loss.

Banks engaging in interbank spot trading will often be involved with sizable net open positions, though many for just brief periods. No matter how skilled the trader, each will encounter at least occasional losses. Knowing when to close a position and take a small loss before it becomes large is a necessary trait for a competent trader. Many banks employ a “stop loss policy” whereby a net open position must be covered if losses from it reach a certain level. While a trader’s forecast may ultimately prove correct within a day or week, rapid rate movements often force a loss within an hour or even minutes. Also, access to up-to-the-minute information is vital for involvement in spot trading. Banks who lack the vast informational resources of the largest multinationals may be particularly vulnerable to sudden spot rate movements prompted by inside information or even rumors. As a result, examiners should closely review banks where foreign exchange activities consist primarily of interbank spot trading.

FORWARD TRADING

A forward transaction differs from a spot transaction in that the value date is more than two to five business days in the future. The maturity of a forward foreign exchange contract can be a few days, months, or even years in some instances. The exchange rate is fixed at the time the transaction is agreed. But nostro accounts are not debited or credited, i.e., no money actually changes hands, until the maturity date of the contract. There will be a specific exchange rate for each forward maturity, and each of those rates will generally differ from today’s spot exchange rate. If the forward exchange rate for a currency is higher than the current spot rate, dealers say the currency is trading at a “premium” for that forward maturity. If the forward rate is below the spot rate, then the currency is said to be trading at a “discount.” For instance, sterling for value in three months is at a discount if the spot rate is \$1.75 and the three-month forward rate is \$1.72.

Banks active in the foreign exchange market find that interbank currency trading for any specific value date in the future is inefficient and

engage in it only infrequently. Instead, for future maturities, banks trade among themselves as well as with some corporate customers on the basis of a transaction known as a “swap.” A swap transaction is a simultaneous purchase and sale of a certain amount of foreign currency for two different value dates. The key aspect is that the bank arranges the swap as a single transaction with a single counterparty, either another bank or a nonbank customer. This means that, unlike outright spot or forward transactions, a trader does not incur a net open position since the bank contracts both to pay and to receive the same amount of currency at specified rates.

A swap allows each party to use a currency for a period in exchange for another currency that is not needed during that time. Thus, the swap offers a useful investment facility for temporary idle currency balances of a corporation or a financial institution. Swaps also provide a mechanism for a bank to accommodate the outright forward transactions executed with customers or to bridge gaps in the maturity structure of its outstanding spot and forward contracts.

The two value dates in a swap transaction can be any two dates. But, in practice, markets exist only for a limited number of standard maturities. One of these standard types is called a “spot against forward” swap. In a spot against forward swap transaction, a trader buys or sells a currency for the spot value date and simultaneously sells or buys it back for a value date a week, a month, or three months later.

Another type of transaction of particular interest to professional market-making banks is called a “tomorrow-next” swap or a “rollover.” These are transactions in which the dealer buys or sells a currency for value the next business day and simultaneously sells or buys it back for value the day after. A more sophisticated type of swap is called a “forward-forward” in which the dealer buys or sells currency for one future date and sells or buys it back for another future date. Primarily, multinational banks specialize in transactions of that type.

Any swap transaction can be thought of as if it were a simultaneous borrowing and lending operation. For example, on September 11, Bank A “swaps in” three-month sterling in a spot against a forward transaction with Bank B. On September 13, Bank A pays dollars to Bank B’s account at a New York bank and Bank A receives sterling for its account at a bank in London. On December 13, the swap is reversed. Bank A pays

back the sterling to Bank B, while B pays back the dollars to A. In the meantime, Bank A has the use of the sterling, in effect “borrowing” sterling, while giving up use of the dollars, in effect “lending” the dollars. Banks recognize this close equivalence to actual short-term borrowing and lending. Many fold in swap transactions with other money market transactions in managing their global banking activities.

Forward exchange rates can be expressed in three ways. Like spot rates, outright forward prices are expressed in dollars and cents per currency unit or vice versa. Traders normally only quote forward prices to corporate customers or to small correspondent banks seeking to buy or sell a currency for a particular future date. For instance, a trader may quote an outright six-month rate to buy sterling of \$1.8450, while, by comparison, a quotation to buy spot sterling might be less (\$1.8200) or more (\$1.8625).

In swap transactions, the trader is only interested in the difference between spot and forward rates, the premium or discount, rather than the outright spot and forward rates themselves. Premiums and discounts expressed in points (\$0.0001 per pound sterling or € 0.0001 per dollar) are called swap rates. For the first spot rate above, the premium is 250 points (\$0.0250). For the second, the discount is 175 points (\$0.0175).

Since, in a swap, a trader is effectively borrowing one currency and lending the other for the period between the two value dates, the premium or discount is often evaluated in terms of percent per annum. For the examples above, the premium of 250 points is equivalent to 2.75 percent per annum, while the discount of 175 points is equivalent to 1.88 percent per annum. To calculate the percentage premium for the first case:

- Take the swap rate (\$0.0250)
- Multiply by 12 months and divide by 6 months (a per annum basis)
- Divide by the spot rate (\$1.8200), and
- Multiply by 100 (to get a percent basis).

On a formula basis, this can be expressed as:

$$\% \text{ per annum} = \left(\frac{\text{Premium or Discount} \times 12}{\text{Spot rate} \times \text{number of months of forward contract}} \right) \times 100$$

As can be seen from the above, forward rates (premiums or discounts) are solely influenced by the interest rate differentials between the two countries involved. As a result, when the differential changes, forward contracts previously booked could now be covered at either a profit or loss. For example, assume an interest rate differential between sterling and dollars of 3 percent (with the sterling rate lower). Using this formula, with a spot rate of \$1.80, the swap rate on a three month contract would be a premium of 135 points. Should that interest rate differential increase to 4 percent (by a drop in the sterling rate or an increase in the dollar rate), the premium would increase to 180 points. Therefore, a trader who bought sterling three months forward sterling at 135 points premium could now sell it at 180 points premium, or at a profit of 45 points (expressed as .0045).

Thus, the dealer responsible for forward trading must be able to analyze and project dollar interest rates as well as interest rates for the currency traded. Additionally, because forward premiums or discounts are based on interest rates differentials, they do not reflect anticipated movements in spot rates.

Active trading banks will, of course, have a large number of forward contracts outstanding. The portfolio of forward contracts is often called a "forward book." As a result, these forward positions must be managed on a gap basis. Normally, banks will segment their forward books into 15-day periods and show the net (purchased forward contracts less sold ones) balance for each period. A typical forward book would look as follows:

<i>Foreign Currency</i>	<i>Maturity Date</i>	<i>Purchases</i>	<i>Sales</i>	<i>Net Position for Period</i>
England (amounts in pound sterling)	Dec. 1–15	1 000 000	800 000	200 000
	16–31	700 000	900 000	(200 000)
	Jan. 1–15	1 500 000	500 000	1 000 000
	16–31	1 400 000	600 000	800 000
	Feb. 1–15	1 100 000	700 000	400 000
	16–28	1 400 000	400 000	1 000 000
	Mar. 1–31	200 000	1 300 000	(1 100 000)
	Apr. 1–30	400 000	1 600 000	(1 200 000)
	May 1–31	300 000	900 000	(600 000)
	June 1–30	350 000	450 000	(100 000)
	July 1–31	550 000	450 000	100 000
	Aug. 1–31	1 000 000	1 000 000	—
	Sept. 1–30	500 000	600 000	(100 000)
	Oct. 1–31	600 000	500 000	100 000
	Nov. 1–30	100 000	100 000	—
Dec. 1–31	100 000	200 000	(100 000)	
	Totals	11 200 000	11 000 000	200 000

In this forward book, volumes and net positions are limited with only the first three months segregated into 15-day periods with the remainder grouped monthly. The trader will use the forward book to manage his overall forward positions.

A forward book in an active currency may consist of numerous large contracts but, because of the risks in a net open position, total forward purchases will approximately equal total for-

ward sales. (Note: In the above forward book, the net position is only £200,000.) What matters in reviewing a forward book is the distribution of the positions by period. In the above example, the forward sterling is long a net 3,200,000 for the first three months (December through February) and short a net 3,000,000 for the next four months (March through June). In this instance, the forward book is structured for an anticipated decline in dollar interest rates as compared with

sterling interest rates since these sold positions could be offset (purchase of a forward contract to negate the sold forward position) at a lower price—either reduced premium or increased discount.

Trading forward foreign exchange thus involves projecting interest rate differentials and managing a forward book to be compatible with these projections. An understanding of these concepts is essential when looking at forward trading from risk and profitability aspects.

COMPUTING FOREIGN EXCHANGE PROFITS AND LOSSES

If traders did nothing but spot transactions and never took open positions from day to day, calculating profit or loss would be straightforward. For example: on January 21, the traders buy £1,000,000 spot at \$1.75 and £3,000,000 at \$1.74 and sell £2,000,000 at \$1.7450 and £2,000,000 at \$1.7380. On the spot value dates, two business days later, the bank's *nostro* or clearing account in London is credited and debited by £4,000,000 from the maturing transactions.

The sterling position is square, since debits and credits are equal. In New York, the bank pays \$6,970,000 but receives only \$6,966,000. There is a net loss of \$4,000 on the four transactions. This is so because the bank's accountant would calculate that the traders acquired sterling at an average rate of \$1.7425 =

$$\frac{\text{£}1,000,000 \times \$1.75 + \text{£}3,000,000 \times \$1.74}{\text{£}4,000,000}$$

Against that, the traders sold sterling at \$1.7450, for a profit of \$5,000 (i.e., \$1.7450 – \$1.7425 = \$0.0025 × 2,000,000 = \$5,000). Traders also sold another £2,000,000 at \$1.7380 for a loss of \$9,000 (\$1.7380 – \$1.7425 = –\$0.0045 × £2,000,000 = –\$9,000). In this instance, the computed net loss of \$4,000 is precisely the same as the excess of dollar payments over dollar receipts.

In practice, computing profits and losses is far more complex for two basic reasons. Banks do not trade only for spot value—they also do forward contracts. Moreover, most major banks do not operate from day to day with completely square positions in each currency. Because of

the way different forward contracts mature each day, it is unusual for payments and receipts to balance perfectly until the traders arrange swaps to achieve that result. Because some traders take a view about the future movements of a currency, short or long positions are built up; and, because of the changing influences on market developments and traders' decisions, long or short positions can be altered any number of times each and every day.

In this kind of fluid trading environment, a bank needs to establish accounting procedures for calculating profits and losses which can handle the problem of maturity mismatches and open foreign currency positions. The principles underlying the accounting procedures are much the same from bank to bank, although specific practices vary. The first principle is that banks do not formally calculate profits or losses daily; most compute profits and losses monthly. Some banks do make these calculations more frequently for management information purposes.

The next principle is that banks calculate profits or losses on the entire foreign exchange book as of the calculation date. On any day, the book includes all spot and forward contracts which have not yet matured, along with *nostro* balances in each currency. Each contract represents a purchase or sale of a foreign currency at a specified exchange rate.

On the profit calculation date, the bank's accountants revalue the foreign exchange book. They use the latest market exchange rates, spot and forward, for each value date on which contracts are outstanding. For each contract, the difference between the current market rate for the value date of the contract and the rate specified in the contract is calculated. For example, if the bank previously bought a currency, e.g., sterling at \$1.75, and the current market rate for the relevant maturity is higher, e.g., sterling at \$1.80, there is an unrealized profit.

These calculated unrealized profits and losses are amalgamated with the realized profits or losses that accrue every day as foreign exchange contracts mature. The net profit or loss, realized plus unrealized, is then incorporated in bank operating income, reflecting the net contribution of foreign exchange trading before expenses.

To recapitulate, a bank with a large number of spot and forward contracts and possibly with open positions in one or more currencies needs a formal method of computing unrealized profits and losses at regular intervals. It uses a revaluation procedure that, in effect, measures what

the profits and losses would be if the bank covered in the market all outstanding positions that were not already covered. The revaluation procedure ensures that the bank's open positions show changes in exchange rates as they occur, rather than when open positions are eventually covered or when individual contracts mature. Periodic profit and loss calculations therefore provide bank management with ongoing insights into the performance of the trading function.

Following is an illustration of the revaluation procedure. Assume that on the revaluation date, January 15, Bank A had three outstanding contracts in its sterling book:

- A sale of £1,000,000 at \$1.75 for value March 15.
- A purchase of £3,000,000 at \$1.70 for value May 15.
- A sale of £1,000,000 at \$1.65 for value August 15.

The book is “long” £1,000,000 since purchases of sterling are greater than sales. For now, the nostro account and the calculations of realized profits and losses are left aside.

To revalue the book, the accountants find on January 15 that two-month, four-month, and seven-month forward rates in the market are \$1.80, \$1.75, and \$1.70, respectively. They proceed conceptually as if the traders were to cover the contracts at the going market rates, buying sterling to offset sales and selling sterling to offset purchases. On this basis, for the first contract, they compute an unrealized loss of \$50,000 ($\$1.75 - \$1.80 = -\$0.05 \times \text{£}1,000,000$). For the second contract, they compute an unrealized profit of \$150,000 ($\$1.75 - \$1.70 = \$0.05 \times \text{£}3,000,000$). For the third contract, they compute an unrealized loss of \$50,000 ($\$1.65 - \$1.70 = -\$0.05 \times \text{£}1,000,000$). The net is an unrealized profit of \$50,000 which is entered on the income statement as the trading profit.

The accountant's task actually is far more complicated. A foreign exchange book of a major bank may include hundreds of outstanding contracts in a dozen or more currencies.

Value dates range from the next day to a year or more in the future. Market exchange rates are readily available for the “even” dates—one, two, three, six, twelve, and twenty-four months into the future. The Federal Reserve Bank of New York publishes such a daily series which can be used by bank accountants and examiners. But for “odd” dates, the accountant must approximate rates, possibly through a computer program that interpolates between even date quotations.

As contracts in the foreign exchange book mature, they affect the cash flow of the bank. Maturing purchase and sale contracts are treated asymmetrically. In a U.S. bank, which posts its profits and losses in dollars, maturing purchase contracts result in credits to its nostro account in that currency. Each day, the bank's accountants compute a new average acquisition rate for the nostro account based on existing holdings and all flows into the account that day. Maturing sale contracts result in debits to the nostro account. They yield a gain or loss measured against the average acquisition rate for funds available in the nostro account. The net realized profit or loss is placed in a suspense account which, at regular intervals, is incorporated into the bank's income statement along with the unrealized profits or losses resulting from the periodic revaluation of the foreign exchange book. In practice, the revaluation can be done on a worksheet as long as net positions for time periods and present market rates are known. While banks will revalue monthly and make the appropriate entries to income accounts, traders will spot-check their profitability more frequently. Examiners should understand the revaluation procedure for the necessary test checking of reported profits, as time restrictions do not normally allow for the proving of all of the bank's open positions.

To revalue the nostro accounts, which represent realized profit or loss, the net foreign currency balance is multiplied by the current spot rate and the result, or market value, is compared to the U.S. \$ equivalent on the books to determine profit or loss as shown below:

<i>Foreign Amount</i>	<i>Spot Rate</i>	<i>Market Value</i>	<i>U.S. \$ Equivalent Book Value of Ledger Accounts</i>	<i>Profit or Loss</i>
15,172	\$1.7155	26,028	21,229	+4,799

The same principle holds true when comparing market value to book, even if credit balances exist. (A market value of $-19,055$ and a book value of $-20,155$ would result in a profit of $1,100$.)

A worksheet revaluation of forward contracts, for unrealized profits, is an expansion of the forward book previously shown. All rates must be expressed in “U.S. terms.”

FORWARD BOOK

Foreign Currency	Maturity Date	Purchases	Sales	Net Position for Period	D-Discount P-Premium Rate	Profit	Loss
England	Dec. 1–15	1 000 000	800 000	200 000	.0025 P	500	
	16–31	700 000	900 000	(200 000)	25 P		500
	Jan. 1–15	1 500 000	500 000	1 000 000	15 P	1,500	
	16–31	1 400 000	600 000	800 000	15 P	1,200	
	Feb. 1–15	1 100 000	700 000	400 000	5 P	200	
	16–28	1 400 000	400 000	1 000 000	5 P	500	
	Mar. 1–31	200 000	1 300 000	(1 100 000)	5 D	550	
	Apr. 1–30	400 000	1 600 000	(1 200 000)	15 D	1,800	
	May 1–31	300 000	900 000	(600 000)	30 D	1,800	
	June 1–30	350 000	450 000	(100 000)	45 D	450	
	July 1–31	550 000	450 000	100 000	5 P	50	
	Aug. 1–31	1 000 000	1 000 000	—	25 D	—	
	Sept. 1–30	500 000	600 000	(100 000)	0	—	
	Oct. 1–31	600 000	500 000	100 000	45 D	—	450
	Nov. 1–30	100 000	100 000	—	25 D	—	
	Dec. 1–31	100 000	200 000	(100 000)	5 P	—	50
	Totals	11 200 000	11 000 000	200 000		+7550	

In completing a worksheet in the above format, the following must be kept in mind:

- A long position at a premium = profit
- A short position at a premium = loss
- A long position at a discount = loss
- A short position at a discount = profit

The $\$7,550$ is simply the profit that would be obtained if the forward book positions were fully liquidated at this time, i.e., purchases offset by sales. To calculate the profit, the unrealized profit from the previous month ($\$6,400$ in this example) must be reversed. Thus, the sterling profit for this month would be:

\$4,799	Nostro balance profit
7,550	Forward book profit (unrealized)
<u>-6,400</u>	Reversal of last month's forward book
\$5,949	Sterling profit for the month

Most automated systems will eliminate the need for manual calculations. However, the

resulting figure is only as accurate as the rates applied. As a result, examiners should test-check at least one major currency using independent rates (supplied by the Federal Reserve Bank of New York or another independent source). This should be done concurrently with the bank's own monthly revaluation. If a sizeable discrepancy results, rates and revaluation methods used by the bank should be reviewed with both management and the traders.

DEFINING AND CONTROLLING FOREIGN EXCHANGE RISKS

Foreign exchange trading encompasses a variety of risks. Exchange rate risk, maturity gaps and interest rate risk relate to spot and forward trading. The latter two risks relate to exposures inherent in all phases of international banking.

Exchange Rate Risk

Exchange rate risk is an inevitable consequence of trading in a world in which foreign currency values move up and down in response to shifting market supply and demand. When a bank's dealer buys or sells a foreign currency from another bank or nonbank customer, exposure from a net open position is created. Until the time that the position can be covered by selling or buying an equivalent amount of the same currency, the bank is exposed to the risk that the exchange rate might move against it. That risk exists even if the dealer immediately seeks to cover the position because, in a market in which exchange rates are constantly changing, a gap of just a few moments can be long enough to transform a potentially profitable transaction into a loss. Since exchange rate movements can readily accumulate in one direction, a position carried overnight or over a number of days entails greater risk than one carried a few minutes or hours. Again, the acid test of a good trader is to know when to take a small loss before it becomes larger.

At any time, the trading function of a bank may have long positions in some currencies and short positions in others. These positions do not offset each other, even though, in practice, some currencies do tend to move more or less together. The bank's traders recognize the possibility that the currencies in which they have long positions may fall in value and currencies in which they have short positions may rise. Consequently, gross trading exposure is measured by adding the absolute value of each currency position expressed in dollars. The individual currency positions and the gross dealing exposure must be controlled to avoid unacceptable risks.

To accomplish this, management limits the open positions dealers may take in each currency. Practices vary among banks, but, at a minimum, limits are established on the magnitude of open positions which can be carried from one day to the next (overnight limits). Several banks set separate limits on open positions dealers may take during the day. These are called "daylight" limits. Formal limits on gross dealing exposure also are established by some banks, while others review gross exposure more informally. The various limits may be administered flexibly, but the authority to approve a temporary departure from the norm is typically reserved for a senior officer.

For management and control purposes, most banks distinguish between positions arising from actual foreign exchange transactions (trading exposure) and the overall foreign currency exposure of the bank. The former includes the positions recorded by the bank's trading operations at the head office and at branches abroad. In addition to trading exposure, overall exposure incorporates all bank assets and liabilities denominated in foreign currencies including loans, investments, deposits, and the capital of foreign branches. Control of overall foreign currency exposure usually is the responsibility of a senior officer accountable to the bank's senior management.

Maturity Gaps and Interest Rate Risk

Interest rate risk arises whenever there are mismatches or gaps in the maturity structure of a bank's foreign exchange forward book. Managing maturity mismatches is an exacting task for a foreign exchange trader.

In practice, the problem of handling mismatches is involved. Eliminating maturity gaps on a contract-by-contract basis is impossible for an active trading bank. Its foreign exchange book may include hundreds of outstanding contracts. Some will mature each business day. Since the book is changing continually as new transactions are made, the maturity gap structure also changes constantly.

While remaining alert to unusually large mismatches in maturities that call for special action, traders generally balance the net daily payments and receipts for each currency through the use of rollovers. Rollovers simplify the handling of the flow of maturing contracts and reduce the number of transactions needed to balance the book. Reliance on day-to-day swaps is a relatively sound procedure as long as interest rate changes are gradual and the size and length of maturity gaps are controlled. However, it does leave the bank exposed to sudden changes in relative interest rates between the United States and other countries, which influence market quotations for swap transactions and, consequently, the cost of bridging the maturity gaps in the foreign exchange book.

The problem of containing interest rate risk is familiar to major money market banks. Their business often involves borrowing short-term and lending longer-term to benefit from the

normal tendency of interest rates to be higher for longer maturities. But in foreign exchange trading, it is not just the maturity pattern of interest rates for one currency that counts. Rather, in handling maturity gaps, the differential between interest rates for two currencies is decisive. So the problem is more complex.

To control interest rate risk, senior management generally imposes limits on the magnitude of mismatches in the foreign exchange book. Procedures vary, but separate limits are often set on a day-to-day basis for contracts maturing during the following week or two and for each consecutive half-monthly period for contracts maturing later. At the same time, management relies on branch officers abroad, domestic money market experts, and its Economic Research Department to provide an ongoing analysis of interest rate trends.

Credit Risk

When a bank books a foreign exchange contract, it faces a risk, however small, that the counterparty will not perform according to the terms of the contract. In both instances, there is a credit risk, although, in the foreign exchange case no extension of credit is intended. To limit credit risk, a careful evaluation of the creditworthiness of the customer is essential. Just as no bank can lend unlimited amounts to a single customer, no bank would want to trade unlimited amounts of foreign exchange with one counterparty.

Credit risk arises whenever a bank's counterparty is unable or unwilling to fulfill its contractual obligations. That happens most blatantly when a corporate customer enters bankruptcy or a bank counterparty is declared insolvent. In any foreign exchange transaction, each counterparty agrees to deliver a certain amount of currency to the other on a particular date. Every contract is immediately entered into the bank's foreign exchange book. In balancing its trading position, a bank counts on that contract being carried out in accordance with the agreed upon terms. If the contract is not liquidated, then the bank's position is unbalanced and the bank is exposed to the risk of changes in the exchange rates. To put itself in the same position it would have been in if the contract had been performed, a bank must arrange for a new transaction. The new transaction may have to be arranged at an adverse exchange rate. The trustee for a bankrupt com-

pany may perform only contracts which are advantageous to the company and disclaim those contracts which are disadvantageous.

Another and potentially more pernicious form of credit risk stems from the time zone differences between the United States and foreign nations. Inevitably, a bank selling sterling, for instance, must pay pounds to a counterparty earlier in the day than it will be credited with dollars in New York. In the intervening hours, a company can go into bankruptcy or a bank can be declared insolvent. Thus, the dollars may never be credited.

Managing credit risk is the joint responsibility of the bank's trading department and its credit officers. A bank normally deals with corporations and banks with which it has an established relationship. Dealing limits are set for each counterparty and are adjusted in response to changes in its financial condition. In addition, some banks set separate limits on the value of contracts that may mature on a single day with a particular customer. Some banks, recognizing credit risk increases as maturities lengthen, restrict dealings with certain customers to spot transactions or require compensating balances on forward transactions. A bank's procedures for evaluating credit risk and minimizing exposure are reviewed by supervisory authorities as part of the regular examination process.

Transfer Risk

At one time or another, virtually every country has interfered with international transactions in its currency. Interference might take the form of regulation of the local exchange market, restrictions on foreign investment by residents, or limits on inflows of investment funds from abroad. Governments take such measures for a variety of reasons: to improve control over the domestic banking system, or to influence the pattern of receipts and payments between residents and foreigners. Restrictions on the exchange market or on international transactions generally are intended to affect the level or movement of the exchange rate.

Changes in regulations or restrictions usually do have an important exchange market impact. From the viewpoint of a commercial bank's foreign currency traders, most disruptive are changes in rules which interfere with the normal payments mechanism. Traders make foreign

exchange contracts on the expectation that both parties will perform according to the terms of the contract. But if government regulations change and a counterparty is either forbidden to perform as expected or is required to do something extra, then a trader might be left with an unintended open position or an unintended maturity mismatch. As described in the previous section, dealing with unintended long or short positions can be costly.

Other changes in official regulations do not in the first instance, affect the payments mechanism, but they do influence international investment transactions. Consequently, when one of the factors affecting the buying or selling of a currency changes, the exchange rate is likely to respond. Currency traders usually try to limit open positions and maturity gap mismatches, whenever modifications in official regulations appear likely. Nevertheless, changes in controls often are unpredictable; and unanticipated changes in regulations can spark significant exchange rate response.

Monitoring and responding to changing official exchange controls abroad has to be done by a well-run foreign exchange trading function. Most U.S. banks have judged that the simplest approach is to avoid trading in those currencies for which the market is heavily regulated. This decision is reflected in turnover statistics which show that trading is concentrated in the major currencies subject to the fewest controls; generally the euro, Canadian dollar, British pound sterling, Swiss franc, and Japanese yen.

POLICY

The relative importance of each of those risk determinants varies with each currency traded and with the country of each counterparty. Senior bank management must fully understand the risks involved in foreign exchange and money market operations and must establish, in writing, its goals and policies regarding those risks. Management must be able to defend logically the basis upon which such policies are formed. It is imperative that responsible officers, traders, clerks and auditors fully understand the intent as well as the detail set forth in those directives.

At a minimum, policies should define dealing limits and reporting requirements as well as

accounting and audit and control systems to provide for proper surveillance over those limits and exceptions thereto.

Limits must be established for overnight net positions in each currency. Depending on the size of the limits and the manner in which they are calculated, a smaller aggregate position limit for all currencies may be desirable. An aggregate limit should not permit the netting of short against long positions, but should require that they be added to determine conformance to that limit. Many U.S. banks consider whether to establish daylight (intraday) position limits only if efficient computerization and input systems are in effect to incorporate each trade into the appropriate currency position at nearly the precise moment it is transacted.

Gap (net inflow and outflow) limits must be instituted to control the risk of adverse rate movement and liquidity pressures for each currency for each daily, weekly, and biweekly future time frame designated in the bank's maturity reports. Such limits might range from stated absolute amounts for each time frame to weighted limits that emphasize increasing rate movement exposure applicable to the relative distance into the future in which the gap appears.

Aggregate trading and placement limits must be established for each customer, based primarily on the amount of business considered to be appropriate to its creditworthiness and, secondly, on the volume of its foreign currency needs. In addition, absolute sub-limits should be placed upon the amount of that customer's business that may be settled on one day. Should the customer be unable to meet obligations on one day, the trader will:

- Be forewarned against delivery prior to receipt of customer funds on the remaining contracts outstanding, and
- Have an opportunity to determine whether alternate cover must be obtained to meet third-party transactions that may initially have provided cover for the remaining transactions with that customer.

It is difficult to monitor aggregate volume limits effectively and ensure compliance with settlement limits for a large number of customers. An effective settlement limit program for at least those relationships that possess a greater potential for late delivery or default should be enacted by senior management.

REPORTS

Properly designed reports are the most important supervisory tool available to management. They must be prepared in a concise, uniform, and accurate manner and submitted punctually. Management should receive daily net position reports for each currency traded. Normally, position reports should include all foreign currency balance sheet items and future contracts as well as afterhour and holdover transactions, excepting fixed assets and equity investments. The hedging of those investments is usually a management decision outside the normal responsibility of the traders. The reports should be prepared by the foreign exchange and money market bookkeeping section and reconciled daily to the trader's blotter. In the event that formal position reports cannot be submitted at the end of a business day, management should be apprised of the traders estimated position at the end of each day and especially before weekends and holidays.

Gap or maturity reports are essential to the proper management of a bank's liquidity in each foreign currency and significant maturity gaps may affect overall liquidity. Those reports should show daily gaps for at least the first two weeks to one month. Beyond that time, gap periods of a maximum of two weeks each are preferred. Gap reports are generally accurate only for the day on which they are prepared. Therefore, it is essential that banks have the capability to produce detailed management reports daily. Loans, deposits, and future contracts, as well as commitments to take or place deposits should be reflected in the periods in which they are scheduled for rollover or interest adjustment. In most instances, an additional report showing those items at final maturity is desirable in analyzing the bank's medium- and longer-term dependence on money market funding sources.

Exception reports must be promptly generated upon the creation of excesses to position limits, gap limits, and customer trading and settlement limits. Excesses over any established limits should conform to overall policy guidelines and should receive prior approval by the responsible supervisory officers. If prior approval is not possible, evidence of subsequent officer concurrence or disagreement as well as any corrective action should be available for audit review and management records.

REVALUATION AND ACCOUNTING SYSTEMS

Revaluation and accounting systems should be in place to accurately determine actual as well as estimated future profits and losses and to present them in such a manner as to facilitate proper income analysis by management, bank supervisory personnel, and the public. A bank's revaluation procedure should be test-checked at the time of monthly revaluation using independently obtained rates. While methods and systems may vary to some degree within banks, all revaluation systems should incorporate the following two aspects:

- Actual realized profit or loss as determined by applying current spot rates to balance sheet accounts as well as contracts of near maturities. Adjustments to the local currency book values would either be allocated and posted to each of the applicable local currency ledger accounts or, for short interim periods, be charged to a separate foreign exchange adjustment account with an offset to the profit and loss account.
- Unrealized (estimated future) profit or loss on future transactions as determined by applying the appropriate forward rates to the net positions shown for each future period appearing in the bank's gap or maturity reports. An account such as "estimated profit (loss) on foreign exchange—futures" should be charged or credited for the amount of the adjustment with an offset to the profit and loss account. Provided that the amount of that adjustment is the difference between the existing forward rates and the actual contract rates, each month's entries merely involves reversing the adjustment from the prior revaluation and entering the new figures.

SPECIALIZED TRANSACTIONS

Financial Swaps

A financial swap is the combination of a spot purchase or sale against a forward sale or purchase of one currency in exchange for another. It is merely trading one currency (lending) for another currency (borrowing) for that period of time between which the spot exchange

is made and the forward contract matures. The swap is the simple identification of one transaction contracted at the spot rate with another transaction contracted at the forward rate to establish the exchange cost or profit related to the temporary movement of funds into another currency and back again. That exchange (swap) profit or cost must then be applied to the rate of interest earned on the loan or investment for which the exchange was used. For example, the true yield of an investment for 90 days in United Kingdom Treasury bills cannot be determined without having considered the cost or profit resulting from the swap needed to make pounds sterling available for that investment. Likewise, the trading profits or losses generated by the trader cannot be determined if financial swap profits and expenses are charged to the exchange function rather than being allocated to the department whose loans or investments the swap actually funded.

Arbitrage

As it pertains to money markets and foreign exchange, arbitrage may take several forms. The creation of an open position in a currency in anticipation of a favorable future movement in the exchange rate, in addition to being speculative, is sometimes referred to as “arbitrage in time.” Buying a currency in one market and simultaneously selling it for a profit in another market is called “arbitrage in space.” Slightly more involved is the practice of interest arbitrage which involves the movement of funds from one currency to another so they may be invested at a higher yield. The real yield advantage in such a situation is not determined merely by the difference in interest rates between the two investment choices, but rather by subtracting the cost of transferring funds into the desired currency and back again (the swap cost) from the interest differential. For example, there is no arbitrage incentive involved in swapping from dollars into the other currency at a 60 point per month discount (swap cost) which exactly offsets the 3 percent gain in interest. However, should the swap rate move to 40 points per month (or 480 points per year), the investment might become attractive. This can be tested by converting the swap rate to an annual percentage rate:

$$\frac{\text{Discount or Premium} \times 360 \times 100}{\text{Spot rate} \times \text{No. of days of future contract}} = \% \text{ P.A.}$$

$$\frac{.0040 \times 360 \times 100}{2.4000 \times 30} = 2\% \text{ P.A.}$$

This results in a true yield incentive of 1 percent, 3 percent less the swap cost of 2 percent.

Unless the bank’s accounting system can identify swap costs or profits and allocate them to the investments for which they were entered, both the earnings on those investments and the earnings upon which the trader’s performance are measured will be misstated.

Options

Option contracts permit a bank to contract to buy from or sell to a customer when that customer can only generally predict the dates when the currency will be required. The option contract specifies the dates, and the rate cited is that which, in the judgment of the trader at the time of making the contract, contains the least exposure for the bank. This type of contract is commonly requested by commercial customers who wish to cover drafts drawn under letters of credit denominated in a foreign currency. Such contracts involve more risk as there is no way for the bank to acquire a precisely matching cover.

Compensated Contracts

There are occasions when both parties are agreeable to altering the terms of an existing contract. Such alterations should be approved by a bank officer without responsibilities in the trading room and the operations personnel must be advised of each compromise to avoid settlement in accordance with the original instructions and terms.

OTHER RELATED MATTERS

Departmental Organization and Control

It is imperative that there be a distinct separation

of duties and responsibilities between the trading and the accounting and confirmation functions within the department. Many opportunities exist to avoid established limits and policies or for personal financial gain, whether by speculating beyond loosely controlled limits, concealing contracts because of poor confirmation procedures or by simple fraud. Periodic audits and examinations are no substitute for the existence of sound safeguards.

Supervision of Branches and Subsidiaries

Whether a bank maintains central control over all foreign-exchange and money market activi-

ties at the head office or elects to decentralize that control, the policies, systems, internal controls, and reporting procedures should not differ among separate offices within the bank.

The bank should be apprised of its worldwide positions by daily summary reports. Detailed net position and maturity gap reports should be received periodically in order to prepare consolidated positions, as required, and to monitor individual unit trading volume and funding methods.

International—Foreign Exchange Examination Objectives

Effective date March 1984

Section 7100.2

1. To determine if the policies, practices, procedures and internal controls regarding foreign exchange activities are adequate.
2. To determine if bank officers, traders and clerks are operating within the established guidelines.
3. To determine the extent of risk attributable to net open positions, maturity gaps and counterparty credit weakness.
4. To determine the scope and adequacy of the audit function.
5. To determine if the revaluation and accounting systems are adequate and accurately reflect the results of the trading operation.
6. To determine compliance with laws and regulations.
7. To initiate corrective action when policies, practices, procedures or internal controls are deficient, or when violations of laws or regulations have been noted.

International—Foreign Exchange Examination Procedures

Effective date March 1984

Section 7100.3

1. If selected for implementation, complete or update the foreign exchange section of the Internal Control Questionnaire.
2. Based on the evaluation of internal controls and the work performed by internal and external auditors, determine the scope of the examination.
3. Test for compliance with policies, practices, procedures and internal controls in conjunction with the remaining examination procedures. Also obtain a listing of any deficiencies noted in the latest review done by internal/external auditors, and determine if appropriate corrections have been made.
4. Obtain a trial balance, including local currency book values, of customer spot and future contract liabilities by customer and by maturities and:
 - a. Agree or reconcile balances to appropriate subsidiary controls and to the general ledger.
 - b. Review reconciling items for reasonableness.
5. Review foreign currency and appropriate local currency subsidiary control ledgers to determine that for each local currency entry there is an accompanying foreign currency entry unless they represent:
 - a. Brokerage charges to the local currency ledger.
 - b. Profit and loss adjustments to the local currency ledger.
 - c. Correction of errors in either ledger.
6. Provide liability and other information on common borrowers to the examiner assigned to "International—Loans and Current Account Advances."
7. Identify those contracts with counterparties who are affiliates of or otherwise related to the bank, its directors, officers, employees, or major shareholders, and
 - a. Compare the contracted rates with available rates for the same transaction date or with other similar contracts entered as of the same transaction date.
 - b. Investigate any instances involving off-market rates.
8. Perform an independent revaluation of at least one major currency using rates obtained from independent sources, and compare results to the accounting department's monthly foreign exchange profit and loss entries.
9. Check the most recent revaluation workpapers and resultant accounting entries to determine that:
 - a. Foreign currency amounts and book values were properly reconciled to subsidiary ledger controls.
 - b. Rates used are representative of market rates as of revaluation date.
 - c. Arithmetic is correct.
 - d. Profit and loss results are separately recorded and reported to management for:
 - Realized profit or loss, i.e., that which is determined through the application of spot rates.
 - Unrealized (estimated future) profit and loss, i.e., that which is determined through the application of forward rates.
 - e. Financial swap related assets, liabilities and future contracts are excluded from the normal revaluation process so that the results identified in step 9d reflect more accurately the trader's outright dealing performance.
 - f. Financial swap related costs and profits are:
 - Amortized over the life of the applicable swap.
 - Appropriately accounted for as interest income and expense on loans, securities, etc. Test financial swap income and expense calculations and verify the accounting entries.
10. Review workpapers for selected revaluations performed since last examination. Test-check and, if satisfied that they are accurate,
 - a. Analyze combined realized earnings to determine that profits are commensurate with risks taken.
 - b. Analyze monthly unrealized revaluation results (forecasts) to determine that:
 - The resulting amount for the last revaluation, if loss, is not large.
 - An increasing loss trend over previous revaluations does not exist. (Although month-to-month variations are not uncommon, an increasing unrealized loss trend could indicate that a trader is

- caught in a loss position and is pursuing a notion that a negative trend in the exchange rate for that currency will reverse and, if combined with an ever multiplying increase in volume, might eventually be able to repay accumulated losses.)
11. Obtain the percentage of total contracts outstanding (dollar value of purchases plus sales that are with corporate customers). Analyze this percentage in regard to trend and comparison, if possible, to banks with similar trading volume. Ascertain if corporate volume is commensurate with written policy in regards to purpose and scope of the foreign exchange trading function.
 12. Determine compliance with laws and regulations pertaining to foreign exchange activities by performing the following for Foreign Currency Forms FC-1, FC-1a, FC-2, and FC-2a:
 - a. Obtain the most recently prepared monthly and weekly reports and review for accuracy.
 - b. Select random bank-prepared daily net position reports for Wednesdays and month-end business days and test to see that:
 - Reports are being filed as required.
 - Reports are accurate.Be aware of instances in which net positions are generally large but reduced as of Wednesday and month-end reporting dates.
 13. Discuss with appropriate officers and prepare in appropriate report format:
 - a. Net position schedules.
 - b. Maturity gap schedules.
 - c. Frequent or sizeable excesses over any established limits.
 - d. Any limits deemed excessive relative to:
 - Management's policy goals regarding the nature and volume of business intended.
 - The bank's capital structure.
 - The creditworthiness of trading counterparties.
 - Individual currencies which are subject to or are experiencing relatively sporadic rate changes.
 - Individual currencies for which limited spot and future markets exist.
 - Experience of traders.
 - The bank's foreign exchange earnings record.
 - e. The absence of any limits deemed appropriate in present and foreseeable circumstances.
 - f. Customers whose obligations are otherwise previously classified or intended to be criticized.
 - g. Foreign exchange contracts which, for any other reason, are questionable in quality or ultimate settlement.
 - h. Violations of laws and regulations.
 - i. Deficiencies in internal controls.
 - j. Other matters regarding the efficiency and general condition of the foreign exchange department.
 14. Update the workpapers with any information that will facilitate future examinations.

International—Foreign Exchange Internal Control Questionnaire

Effective date March 1984

Section 7100.4

A review of the bank's internal controls, policies, practices and procedures regarding foreign exchange trading is essential to ensure no excessive risk or exposures exist. The bank's systems should be documented in a complete and concise manner and include, where appropriate, narrative descriptions, flowcharts, copies of forms used and other pertinent information. Items marked with an asterisk are particularly significant and require substantiation by observation or testing.

POLICIES

1. Has the board of directors, consistent with its responsibilities, adopted written policies governing:
 - a. Trading limits, including:
 - Overall trading volume?
 - Overnight net position limits per currency?
 - Intra-day net position limits per currency?
 - Aggregate net position limit for all currencies combined?
 - Maturity gap limits per currency?
 - Individual customer aggregate trading limits, including spot transactions?
 - Written approval of excesses to above limits?
 - b. Segregation of duties among traders, bookkeepers and confirmation personnel?
 - c. Accounting and revaluation procedures?
 - d. Management reporting requirements?
2. Do policies attempt to minimize:
 - a. Undue pressure on traders to meet specific budgeted earnings goals?
 - b. Undue pressure on traders, by account officers, to provide preferred rates to certain customers?
- *3. Are traders prohibited from dealing with customers for whom trading lines have not been established?
4. Are all personnel, except perhaps the head trader, prohibited from effecting transactions via off-premises communication facilities?
5. Is approval by a non-trading officer required for all compensated transactions?
6. Do credit approval procedures exist for settlement (delivery) risk either in the form of settlement limits or other specific management controls?
7. Does a policy procedure exist to ensure that, in case of an uncertain or emergency situation, the bank's delivery will not be made before receipt of counterpart funds?
8. Do the above policies apply to all branch offices as well as majority-owned or controlled subsidiaries of the bank?
9. Does the bank have written policies covering:
 - a. Foreign exchange transactions with its own employees?
 - b. Foreign exchange transactions with members of its board of directors?
 - c. Its traders' personal foreign exchange activities?
 - d. Its employees' personal business relationships with foreign exchange and money brokers with whom the bank trades?
- *10. Are the above policies understood and uniformly interpreted by all traders as well as accounting and auditing personnel?

TRADING FUNCTION

11. Is a trader's position sheet maintained for each currency traded?
- *12. Does management receive a trader's position report at the end of each trading day?
- *13. Does the trader's position report reflect the same day's holdover and after-hours transactions?
14. Are trader's dealing tickets prenumbered?
 - a. If so, are records and controls adequate to ascertain their proper sequential and authorized use?
 - *b. Regardless of whether or not prenumbered,
 - Are dealing tickets time date stamped, as completed, or
 - Are dealing tickets otherwise identified with the number of the resultant contract to provide a proper audit trail?

ACCOUNTING AND REPORTING

- *15. Is there a definite segregation of duties, responsibility and authority between the trading room and the accounting and reporting functions within the division and/or branch?
16. Are contract forms prenumbered (if so, are records and controls adequate to ensure their proper sequential and authorized use)?
17. Are contracts signed by personnel other than the traders?
- *18. Are after-hours or holdover contracts posted as of the dates contracted?
- *19. Do accounting personnel prepare a daily position report, for each applicable currency, from the bank's general ledger and:
- Do reports include all accounts denominated in foreign currency?
 - Are those reports reconciled daily to the trader's position reports?
 - Are identified or unreconciled differences reported immediately to management and to the head trader?
 - Are all counterparty non-deliveries on expected settlements reported immediately to management and to the head trader?
- *20. Are maturity gap reports prepared for liquidity and foreign exchange managers at least biweekly to include:
- Loans and deposits reflected in the appropriate forward maturity periods along with foreign exchange contracts?
 - Loans, deposits and foreign exchange contracts (specify whether reflected in the maturity periods in which they fall due or in which they are scheduled for rollover _____)?
 - Commitments to accept or place deposits reflected in the appropriate maturity periods by both value and maturity dates?
 - All those items (specify whether as of the day on which they mature or bi-weekly or monthly maturity periods _____)?
 - All those items as of the day on which they mature, if necessary, i.e., in the event of a severe liquidity situation?
- *21. Does the accounting system render excesses of all limits identified at step 1 immediately to appropriate management and is officer approval required?
- *22. Are local currency equivalent subsidiary records for foreign exchange contracts balanced daily to the appropriate general ledger account(s)?
- *23. Are foreign exchange record copy and customer liability ledger trial balances prepared and reconciled monthly to subsidiary control accounts by employees who do not process or record foreign exchange transactions?
24. Do the accounting and filing systems provide for easy identification of "financial swap" related assets, liabilities and future contracts by stamping contracts or maintaining a control register?

CONFIRMATIONS

25. Is there a designated "confirmation clerk" within the accounting section of the division or branch?
- *a. Incoming confirmations:
- Are incoming confirmations delivered directly to the confirmation clerk and not to trading personnel?
 - Are signatures on incoming confirmations verified with signature cards for:
 - Authenticity?
 - Compliance with advised signature authorizations of the counterparty?
 - Are all data on each incoming confirmation verified with file copies of contracts to include:
 - Name?
 - Currency denomination and amount?
 - Rate?
 - Transaction date?
 - Preparation date if different from transaction date?
 - Maturity date?
 - Delivery instructions, if applicable?
 - Are discrepancies directed to an officer apart from the trading function for resolution?
 - Is a confirmation discrepancy log or other record maintained to reflect the identity and disposition of each discrepancy?

- Are telex tapes retained for at least 90 days as ready reference to rates and delivery instructions?
- *b. Outgoing confirmations:
- Are outgoing confirmations mailed/telexed on the day during which each trade is effected?
 - Are outgoing confirmations addressed to the attention of persons other than trading personnel at counterparty locations?
 - Does the accounting and/or filing system adequately segregate and/or identify booked contracts for which no incoming confirmations have been received?
 - Are follow-up confirmations sent by the confirmation clerk if no corresponding, incoming confirmation is received within a limited number of days after the contract is effected (if so, specify _____)?
 - Is involvement by the auditing department required if no confirmation is received within a limited number of days after the transmittal of the second request referred to above (if so, specify _____)?
 - Are confirmation forms sent in duplicate to customers who do not normally confirm?
 - Are return copies required to be signed?

REVALUATIONS

- *26. Are revaluations of foreign currency accounts performed at least monthly?
- a. Does the revaluation system provide for segregation of and separate accounting for:
 - Realized profits and losses, i.e., those which are determined through the application of spot rates?
 - Unrealized profits and losses, i.e., those which are determined through the application of forward rates?
 - b. Are financial swap related assets, liabilities and future contracts excluded from

- the revaluation process so that the results identified in step 26a above more accurately reflect the trader's outright dealing performance?
- c. Are financial swap costs and profits:
 - Amortized over the life of the applicable swap?
 - Appropriately accounted for as interest income and expense on loans, securities, etc?
 - d. Are rates provided by, or at least verified with, sources other than the traders?

OTHER

- *27. Is the bank's system capable of adequately disclosing sudden increases in trading volume by any one trader?
28. Do such increases require officer review to insure that the trader is not doubling volume in an attempt to regain losses in his or her positions?
 29. Does the bank retain information on, and authorizations for, all overdraft charges and brokerage bills within the last 12 months?
 30. Does an appropriate officer review a comparison of brokerage charges, monthly, to determine if an inordinate share of the bank's business is directed to or handled by one broker?

CONCLUSION

31. Is the foregoing information an adequate basis for evaluating internal control in that there are no significant deficiencies in areas not covered in this questionnaire that impair any controls? Explain negative answers briefly, and indicate any additional examination procedures deemed necessary.
32. Based on a composite evaluation, as evidenced by answers to the foregoing questions, internal control is considered (adequate/inadequate).

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Effective date September 1992

Section 7110.1

The prospects for full LDC debt repayment decreased during the mid-1980s because of depressed commodity prices and inflated interest rates. The market value of public and private sector LDC loans fell sharply below book value to the point where those loans became deeply discounted. A secondary market for trading LDC debt evolved and reached a degree of maturity in 1987 when banks significantly increased their loan loss reserves for their exposures to LDCs. Financial institutions in the United States and overseas, including commercial, merchant and investment banks, began to actively purchase, sell, swap and rent debt obligations of less developed countries for their own account and as intermediaries for others. U.S. multinational banks with significant LDC loan exposures established LDC trading units which initially had the primary responsibility to decrease the banks' LDC portfolios. As the secondary market matured, these units not only traded for their own accounts but became market makers and/or active participants in purchasing, selling, swapping and renting LDC debt. An options market based on LDC debt also is emerging.

The LDC debt market, once dismissed as illiquid, has evolved from a trickle of activity between 1985 through 1988, to a turnover of approximately \$100 billion during 1990. This momentum is expected to continue as participants in this market have realized the potential for generating substantial profits in trading LDC debt. The majority of this paper is Latin American, followed by Eastern European and African obligations. Debt of approximately 30 countries in 300 instruments may be handled by an active participant.

The LDC trading arena includes a broad range of counterparties. Although multinational banks with significant LDC debt exposures are the most active participants in the market, the number of intermediaries and principals has grown substantially. International financial institutions, corporations, high net worth individuals and public sector entities are primarily engaged in buying, selling and renting LDC debt for their own account.

The price of LDC paper, which is almost always at a discount from face amount, may vary widely, depending on the issuer and maturity of the instrument and the country of risk.

Prices (and liquidity) in the LDC debt market are influenced by a multitude of factors such as the ability/intent of public and private sector borrowers to service the debt, availability of debt-equity exchange programs, anticipated refinancing of existing debt programs and the underlying political and economic conditions in the developing countries.

Banks generally participate in this market to decrease their LDC exposures; however, some banks are also motivated to:

- Generate trading profits from the spread between the bid and offer prices
- Produce fee and commission revenues from acting as intermediaries for principals and brokers
- Participate in swap programs to facilitate debt/equity market development

Pricing, liquidity, potential conflicts of interest, violation of U.S. and foreign country laws and operational inefficiencies are the major problems faced by banks which are active market participants. The lack of liquidity in the secondary market for LDC paper could present a variety of risks to market participants. In the absence of depth in the market, the judgement of the trader is a significant factor in determining the current price of thinly traded issues. The reliance on one individual to determine prices and using those amounts to revalue the position, could result in under or overstating the profit and loss and the valuation of the position itself. A conflict of interest could result in potential future liability if there is no clear segregation of duties and responsibilities between a bank's trading in LDC assets and its role on debt renegotiation committees.

Access to LDC debt rescheduling information could give a bank unfair advantage over other creditor banks, which do not participate in the restructuring process. Another concern is the potential for a bank or its employees to knowingly or inadvertently violate U.S. or foreign country laws or aid or abet violations by its customers or trading partners. It is clear that banks have a responsibility to determine that they deal only with reputable counterparties. The relative newness of the market and the absence of industry guidelines pose challenges to both bank managements and the bank supervisory agencies.

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Examination Objectives

Effective date September 1992

Section 7110.2

The objectives of conducting an examination of LDC asset purchases, sales, trading, swaps, rentals and options should include the following:

1. To determine if LDC asset purchases, sales, trading, swaps, rental and options policies, procedures and internal controls are adequate.
2. To evaluate the ability of the bank's reporting system to adequately monitor compliance to established policies, procedures and limits.
3. To review the bank's reporting system to determine whether it is adequate and effective.
4. To ascertain, to the extent possible, whether LDC trading activities are in compliance with applicable U.S. and local foreign laws.
5. To determine the extent of involvement by committees responsible for LDC trading activity in strategy and planning. For example, have contingency plans been developed if the need arises to liquidate a portfolio of LDC paper.
6. To identify potential conflicts of interest liability between those on committees for debt renegotiations or those acting as agents for the debtor country and those on the portfolio sales personnel and LDC debt traders.
7. To determine whether accounting procedures that have been established properly identify and account for loan sales, purchases, swaps, rentals and other LDC trading activity. Compare these accounting procedures to industry practices.
8. To ascertain that outstandings and traders' positions are reconciled to the official records of the bank.
9. To evaluate the LDC asset purchases, sales, trading, swaps or rentals for profitability.
10. To review the revaluation process utilized in determining profitability.
11. To determine the adequacy of the bank's risk management as it relates to LDC activities. Evaluate the bank's ability to monitor and control the following risks:
 - a. Market risk
 - b. Credit risk
 - c. Settlement risk
 - d. Liquidity risk
 - e. Operational risk
 - f. Legal risk
12. To review and assess the adequacy of the audit coverage with respect to the frequency and scope of the audit program, experience of auditors, quality of audit reports and effectiveness of management follow-up. Determine the extent of the outside accountants involvement in reviewing these activities.
13. To determine if sufficient legal documentation exists to establish an enforceable agreement, and to ascertain the nature of and purpose behind the underlying transaction.
14. To review the bank's procedures for conducting due diligence on nonbank parties.
15. To determine the sufficiency of the bank's transaction files.
16. To determine if the bank allows sales, borrowing or substitutions from its loan portfolio to its trading positions. If yes, how is the pricing on the loan portfolio done? Does the bank have the proper accounting and tracking procedures in place?
17. To review any unusual charges/fees and any split of fees or unusual destination of a payment.
18. To review margin lending practices and policies of banks offering financing to customers dealing in LDC debt.
19. To review bank's policies and procedures regarding traders' ability to trade in LDC debt for their own personal account to ensure that adequate controls are in place to avoid conflicts of interest and diversion of bank's corporate opportunities to traders' personal benefit.

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Examination Procedures

Effective date September 1992

Section 7110.3

An examination of a bank's LDC asset purchases, sales, trading, swaps, rental, and options program should focus on written policies, accounting, management reporting, conflict of interest, risk management, and internal controls. In addition, the examiners should address the general nature, volume and importance of these activities.

1. Evaluate the adequacy of the bank's written policies regarding its LDC trading activity and determine whether:
 - a. The objectives, strategy and philosophy adhere to those approved by the bank's board of directors.
 - b. All documentation and legal requirements (both local and foreign) regarding this activity have been addressed.
 - c. An approval process has been established to execute unusual or complex transactions in LDC paper that lacks liquidity or has some unusual feature.
 - d. The policy stipulates the options available if the need arises to remove the asset from inventory.
2. Review the bank's accounting policy for LDC transactions.
 - a. Review the accounting and reporting guidelines to assure that all aspects of this activity are captured on the books of the bank.
 - b. Review the subsidiary ledgers and reconcile these with the general ledger and contingent accounts.
 - c. Reconcile the traders position sheet with the general ledger accounts.
 - d. Review the accounting procedures governing the bank borrowing LDC debt from its own portfolio and purchasing or borrowing from a third party.
 - e. Determine if the revaluation process is conducted separately from the trading process and that the resultant gains or losses are properly recorded.
3. Determine whether the bank has addressed the "conflict of interest" issue sufficiently, so that trading activities are not being influenced by other areas of the bank that may be negotiating debt restructuring activities or that may have provided advice to such country on financial or economic matters. Are the same individuals participating as members of a debt renegotiating committee or acting in an agency capacity for the debtor country also involved in or communicating with those trading, swapping and renting LDC debt?
 - a. Does the policy address all the roles that the bank performs? Has management established procedures to identify the responsibility of renegotiating committee members, agency personnel, portfolio sales personnel and LDC debt traders?
4. Review the bank's procedures to ensure that it is complying with local and sovereign laws.
 - a. Is the bank aware of local and foreign laws governing the trading of a particular country's debt? Are there records demonstrating that legal personnel are reviewing transactions to determine compliance with U.S. and foreign laws? To what extent is this information disseminated to traders?
 - b. Is the bank assuring itself that trading partners are not violating these laws or are using the bank to circumvent compliance with applicable laws and regulations?
5. Evaluate management's understanding of the risks associated with LDC asset purchases, sales, trading, swaps, options and rentals. Determine whether all risks have been considered and assess management's ability to monitor and control them. The following risks should be considered:
 - a. *Market Risk*—The relevant risk interval for counterparty exposure is the time period from trade date to final settlement date. The exposure is a function of the change in the price during the risk interval. Determine how the bank monitors and controls its exposure to an increase in price, if it is buying, and decrease in price, if selling.
 - b. *Credit Risk*—Does the bank require credit approval from appropriate lending officers for each counterparty? Review counterparty credit lines for proper approval.

- Review margin lending practices as related to LDC debt sales.
- c. *Settlement Risk*—While it occurs only when purchasing LDC assets, examiners should determine how the bank protects itself from this risk.
 - d. *Liquidity Risk*—Have restrictions been placed on dealing in LDC debt which is not actively traded?
 - e. *Operating Risk*—Review the bank’s policies and procedures for deficiencies. Assure that all operating groups supporting this activity are adhering to established guidelines.
 - f. *Legal Risk*—Has counsel reviewed all segments of this activity from a legal perspective?
6. Determine whether the bank’s LDC trading activities are subject to regular audits.
 - a. Obtain copies of all recent audits and review their findings;
 - b. Determine whether the audit procedures covering these activities are sufficiently comprehensive; and
 - c. Determine whether management has taken appropriate action to resolve significant audit concerns.
 7. Evaluate the bank’s internal control policies and procedures with emphasis on:
 - a. Are traders’ lines and LDC debt limits established by country, type of paper and customer?
 - b. Are limits established by credit officers who are independent of the LDC trading function?
 - c. Determine that exceptions to established limits have been properly reported and approved.
 8. Evaluate the policies and procedures governing traders’ behavior:
 - a. What type of controls are in place with regard to after hour trading?
 - b. Describe the bank’s procedures for recording phone conversations. Are traders permitted to override the recording devices? How long are these recordings retained?
 - c. Describe the bank’s policy regarding traders’ remuneration.
 - d. What types of procedures and policies have the bank implemented to address self-dealing in LDC debt by traders?
 - e. In what manner are the traders educated about the bank’s policies and procedures?
9. Describe the type of LDC transactions entered into by the bank:
 - a. Does the bank engage in fronting (i.e., sales of participations, etc.) transactions? When engaging in fronting transactions, does the bank conduct the proper legal analysis regarding whether such transaction would violate any U.S. or foreign laws or restructuring agreements? Does the bank inquire as to the customer’s purpose for acquiring LDC debt in fronting transactions?
 - b. Does the bank engage in parking transactions through a third party or another banking unit? Does the bank permit other financial institutions to park debt with it?
 10. Evaluate the private banking unit/group’s involvement in LDC transactions:
 - a. How are the private banking clients obtained?
 - b. What types of LDC transactions does the bank enter into for its private banking clients? Does the bank inquire as to purpose of transactions entered into for private banking clients?
 - c. What type of scrutiny is performed to assure that the bank “knows its private banking clients?”
 11. Describe the types of fees which the bank pays when engaging in LDC transactions:
 - a. What are the amounts of broker fees? Are these fees easily determinable? Are these fees in line with the industry practices?
 - b. Does the bank have any other type of fee arrangements (i.e., specially negotiated fees, partnerships, etc.)?
 - c. Has the bank diversified its use of brokers adequately?
 12. Evaluate broker involvement in the LDC trading activity and review the fee structure on transactions.

International—Purchases, Sales, Trading, Swaps, Rentals, and Options of LDC Assets

Effective date September 1992

Section 7110.4

FIRST-DAY LETTER

Please provide the following information regarding your bank's LDC asset sales, purchases, swaps, options, and rental programs as of (*examination date*).

1. A complete inventory, broken down by country, of all LDC paper held in the trading account and the investment account.
2. A listing of all sales/purchases of LDC paper that identifies the assets or commitments sold/bought and inventory by (a) obligor, (b) face amount, (c) maturity, (d) price, (e) closing date, (f) counterparty names, and (g) the names and address of the assignor and assignee.
Sales from the bank's own portfolio should be reported separately from transactions of the LDC trading unit.
3. Listing of all rentals of and options held on LDC paper.
4. A copy of the bank's specific policies and procedures for LDC asset purchases, sales, swaps, options and rentals.
5. A copy of all rules of conduct, procedures and policies governing LDC activities.
6. An organizational chart and the names and titles of individuals designated as responsible for LDC trading activities.
7. A listing and brief description of all management information reports covering these activities and copies of these reports.
8. Describe accounting policies and operating procedures if the LDC trading unit borrows from the bank's loan portfolio to effect delivery or borrows/lends LDC debt from/to third parties.
9. Information broken down by trading location/profit center showing the volume of LDC assets purchased, sold, swapped and rented during the two prior years, the current year to date and a projection of the volume of activity for the balance of this year and next year.
10. A listing of all limits, including the bank's overall inventory limit, country limits, type of paper limit, customer settlement limit and trader limits. Indicate the policy regarding the review dates of limits. A list of any exception reports to these limits and management's responses to exceptions.
11. A listing of principal counterparties and approved counterparty lines.
12. A list of brokers used and indicate the approximate percentage of total business conducted with each and the fees paid to such brokers.
13. Copies of any standard documents used by the bank in its LDC asset sales, purchases, swaps and rentals.
14. A copy of trading policies. If the bank is a market maker, list the type of LDC debt in which it makes a market.
15. A listing of all general ledger contingency and memoranda accounts, income and expense accounts to record LDC asset sales, swaps and renting transactions.
16. Income and expenses of LDC trading activities for the two prior years and year-to-date.
17. Copies of the most recent audit reports conducted by both the internal and external auditors, including management responses on the bank's LDC asset trading activities.
18. A copy of the internal and external audit programs and procedures used for the audits of these activities.
19. If conducted outside of the United States, any information submitted to local regulatory authorities regarding the LDC trading function should be requested.
20. Copies of any legal opinions rendered on specific transactions and a list of any pending litigations.
21. A copy of the industry association's rules and regulations.

Statutes and Regulations Administered by the Federal Reserve

Effective date May 2000

Section 8000.1

Following is a table of statutes and regulations that apply to the Federal Reserve System and to banking institutions that the Federal Reserve Board supervises and regulates. The table consists of five columns:

Statute. The name of the law as enacted by Congress and the section.

U.S. Code citation. The section of the United States Code where the statute can be found.

Description. A summary of the particular section of the statute.

FRB regulation. The implementing regulation, usually the Federal Reserve regulation, and the appropriate citation from the Code of Federal Regulations (CFR).

FRRS locator number. The location of the statute, regulation, or other reference in the *Federal Reserve Regulatory Service (FRRS)*.

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Federal Election Campaign Act	2 USC 441b	Limits political contributions by member banks.		
Foreign Gifts and Decorations Act	5 USC 7342	Restricts Board members' and employees' acceptance of foreign gifts and decorations.	Rules Regarding Foreign Gifts and Decorations, 12 CFR 264b	8-610 et seq.
Federal Reserve Act, sec. 10, para. 8	12 USC 1	Issuance of national currency and Federal Reserve notes under general supervision of FRB.		1-084
National Bank Act, as amended by the Banking Act of 1935	12 USC 51b-1	Impairment of the capital of national banks and state member banks.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.4	1-307 3-159
National Bank Act, as amended by the Banking Acts of 1933 and 1935	12 USC 71a	Specific criteria for director selection and qualification for national banks and state member banks.		1-292
Emergency Banking Act of 1933, sec. 4	12 USC 95	Provides the president with power to require member banks to suspend operations during an emergency period.		1-323
Trading with the Enemy Act, sec. 5	12 USC 95a	Provides the president with wartime powers over banking.		1-440 1-441

Federal Deposit Insurance Act, sec. 8(e)	12 USC 1818(e)	Authorizes suspension, removal, or prohibition from participation of parties affiliated with state member banks, bank holding companies, and other institutions under the Board's jurisdiction for violations of law or unsafe or unsound practices.	Rules of Practice for Hearings, 12 CFR 263, subpart A	1-363 et seq. 8-043 et seq.
Federal Deposit Insurance Act, sec. 8(g)	12 USC 1818(g)	Authorizes suspension, removal, or prohibition from participation of parties affiliated with a state member bank who is charged with a felony.	Rules of Practice for Hearings, 12 CFR 263, subpart D	1-369 et seq. 8-086.9 et seq.
Federal Deposit Insurance Act, sec. 8(i)	12 USC 1818(i)	Provides for civil money penalty of up to \$5,000 per day for violation of an order issued under 12 USC 1818(b), (c), (e), (g), or (s). Also provides for enforcement of an order.	Rules of Practice for Hearings, 12 CFR 263, subparts A and C	1-374 et seq. 8-043 et seq. 8-086.3 et seq.
Federal Deposit Insurance Act, sec. 8(r)	12 USC 1818(r)	Provides for removal of an officer, director, employee, or agent of a foreign bank for a violation of law or unsafe or unsound practice in the United States.	Rules of Practice for Hearings, 12 CFR 263, subpart A	1-383.1 et seq. 8-043 et seq.
Federal Deposit Insurance Act, sec. 10(c) and (d)	12 USC 1820(c) and (d)	Authorizes taking of testimony under oath and the issuance of subpoena in connection with bank examination.		1-385 1-385.01
Federal Deposit Insurance Act, sec. 13(f); Bank Holding Company Act of 1956, sec. 3(d)	12 USC 1823(f) and 1842(d)	Permits a bank holding company to acquire a failing bank in a state outside its principal state of banking operations.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.13(c)	1-385.2 et seq. 4-069 4-024
Bank Merger Act of 1966	12 USC 1828(c)	Requires prior written agency approval for any insured bank merger or consolidation or the acquisition of assets by an insured bank. Establishes uniform approval standards and notice requirements.		1-386 et seq.
Federal Deposit Insurance Act, sec. 18(i)	12 USC 1828(i)	Requires prior written approval of the appropriate agencies for an insured bank to convert to an insured state bank if the bank will reduce or retire stock as part of the conversion.		1-396 1-397

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Federal Deposit Insurance Act, sec. 19	12 USC 1829	Prohibition against service, without FDIC approval, as director, officer, or employee of an insured bank upon conviction for crime involving dishonesty or breach of trust.		1-398.5 et seq.
Bank Secrecy Act of 1970; Currency and Foreign Transactions Reporting Act of 1978	12 USC 1829b 12 USC 1951–1959 31 USC 5311–5330	Requires insured banks and uninsured banks to maintain records on identities of account holders; requires reproductions or microfilm of checks and other instruments drawn on or presented to it, and other records for use in criminal, tax, or regulatory investigations. Requires the maintenance of appropriate types of records and the making of appropriate reports by businesses in the United States when records or reports have a high degree of usefulness in criminal, tax, or regulatory investigations or proceedings.	Financial Recordkeeping and Reporting of Currency and Foreign Transactions, 31 CFR 103 (Treasury reg)	3-1700 et seq.
Federal Deposit Insurance Act, sec. 38	12 USC 1831o	Prompt corrective action—defines the capital measures and capital levels used for determining supervisory actions.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.40	1-400.4 et seq. 3-325 3-326
Federal Deposit Insurance Act, sec. 39	12 USC 1831p-1	Safety-and-soundness standards. Requires banking agency to prescribe standards relating to banking operations, asset quality, earnings, and executive compensation.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208, app. D-1	1-401 et seq. 3-1579.3
Consumer Checking Account Equity Act of 1980; Federal Reserve Act, sec. 19(i)	12 USC 1832, 371a	Authorizes depository institutions to offer NOW accounts and automatic transfers from savings to checking.		1-175
Bank Holding Company Act of 1956	12 USC 1841 et seq.	Governs acquisition of bank stock by companies and provides generally for the separation of banking and commerce by restricting the activities in which bank affiliates may engage.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225	4-001 et seq.

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Bank Holding Company Act of 1956, sec. 2(h)(2); International Banking Act of 1978	12 USC 1841(h)(2) 12 USC 3101 et seq.	Permits foreign banks that are subject to the International Banking Act to hold shares of a foreign nonbanking company that engages in business in the United States, provided that the U.S. activities are in the same line of business as the foreign activities of the foreign nonbank company. Exemption does not extend to securities activities or banking or financial operations.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.22(h); Reg K, International Banking Operations, 12 CFR 211, subpart B	4-064 4-037 1-562 et seq. 3-671 3-630 et seq.
Bank Holding Company Act of 1956, sec. 3	12 USC 1842	Requires prior Board approval to become a bank holding company; to acquire more than 5% of another bank; to merge or consolidate bank holding companies. Requires notice of filing of applications to other regulators. Prohibits interstate acquisitions except in the case of failing institutions under 12 USC 1823(f) or where state law permits.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225, subpart B	4-066 et seq. 4-018 et seq.
Bank Holding Company Act of 1956, sec. 4	12 USC 1843	Generally prohibits acquisition of more than 5% of the shares of a nonbank company. Exceptions include shares of kind eligible for investment by national banks; and where Board finds the activities to be so closely related to banking as to be a proper incident thereto. The Board has delineated over 20 activities as closely related to banking.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225, subpart B	4-071 et seq. 4-018 et seq.
Bank Holding Company Act of 1956, sec. 4(a)(2)	12 USC 1843(a)(2)	Provides grandfather rights for non-banking activities commenced before June 30, 1968.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.22(g)	4-071 4-072 4-037
Bank Holding Company Act of 1956, sec. 4(c)(9)	12 USC 1843(c)(9)	Permits Board to grant further non-banking exemptions to foreign banks if the exemptions are not substantially at variance with the purposes of the act and are in the public interest.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.22(h); Reg K, International Banking Operations, 12 CFR 211, subpart B	4-078 4-037 et seq. 3-630 et seq.

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Bank Holding Company Act of 1956 sec. 4(c)(13)	12 USC 1843(c)(13)	Permits bank holding companies to acquire foreign companies that do no business in the United States except as an incident to their foreign business.	Reg K, International Banking Operations, 12 CFR 211.5	4-080 3-609 et seq.
Bank Holding Company Act of 1956, sec. 4(c)(14)	12 USC 1843(c)(14)	Permits bank holding companies to invest in export trading companies, i.e., companies exclusively engaged in matters relating to international trade and principally engaged in exporting.	Reg K, International Banking Operations, 12 CFR 211, subpart C	4-080.1 3-649 et seq.
General authority to consider safety and soundness		Prohibits redemption of bank holding company equity securities under certain circumstances without prior notice to Board in order to prevent unsafe or unsound reductions of capital.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.4(b)	4-013 et seq.
Bank Holding Company Act sec. 4(k)-(o)	12 USC 1843(k)-(o)	Permits bank holding companies and foreign banks that qualify as financial holding companies to engage in securities, insurance, and other activities that are financial in nature or incidental to a financial activity and to make merchant banking investments.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225, subparts I and J	4-082.7 et seq. 4-056 et seq.
Bank Holding Company Act of 1956, sec. 5(a)-(d), (f)	12 USC 1844	Requires bank holding companies to register with Board and authorizes Board to issue regulations to carry out the purposes of the act, to require reports and conduct examinations of bank holding companies and their subsidiaries, and to take depositions and subpoena documents.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225; Rules of Practice for Hearings, 12 CFR 263	4-083- 4-085 4-088 4-001 et seq. 8-043 et seq.
Bank Holding Company Act of 1956, sec. 5(e)	12 USC 1844(e)	Authorizes Board to require divestiture of nonbank subsidiaries or termination of nonbank activity if the Board determines that the subsidiary or activity constitutes a serious risk to the financial safety and soundness or stability of bank holding company.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.4(a)	4-086 4-087 4-012
Bank Holding Company Act Amendments of 1970, sec. 106(b)	12 USC 1972	Prohibition against tie-in arrangements by banks. The Board has rulemaking and exemptive authority.	Reg Y, Bank Holding Companies and Change in Bank Control, 12 CFR 225.7	4-147 et seq. 4-017.1 4-017.2

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Bank Holding Company Act Amendments of 1970, sec. 106(b)(2)	12 USC 1972(2)	Prohibits preferential extensions of credit by insured banks based on correspondent account relationships.	Reg O, Loans to Executive Officers, Directors and Principal Shareholders of Member Banks, 12 CFR 215, subpart B	3-1018 et seq. 3-987 et seq.
Bank Holding Company Act Amendments of 1970, sec. 106(b)(2)(G)(i)	12 USC 1972(2)(G)(i)	Reporting and public disclosure requirements for executive officers and principal shareholders of insured banks with respect to extensions of credit from correspondent banks.	Reg O, Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks, 12 CFR 215, subpart B	3-1023 et seq.
Bank Holding Company Act Amendments of 1970, sec. 106(b)(2)(G)(ii)	12 USC 1972(2)(G)(ii)	Reporting and public disclosure requirements for insured banks regarding extensions of credit by correspondent banks to the reporting bank's officers and principal shareholders.	Reg O, Loans to Executive Officers, Directors, and Principal Shareholders of Member Banks, 12 CFR 215, subpart B	3-1024 et seq.
Bank Service Company Act, sec. 1-7	12 USC 1861-1867	Permits insured banks to invest in a corporation that provides services for depository institutions; and, with the prior approval of the agency, in a bank service company that provides services to others that are authorized for its bank parent(s) only at locations where its bank parent(s) may perform such services.		1-324 et seq.
Bank Service Company Act, sec. 5	12 USC 1865	Requires prior Board approval for a member bank to invest in a bank service company that performs services permissible for bank holding companies under section 4(c)(8) of the BHC Act and at any geographic location other than where its parent could perform the service.		1-327.1

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Bank Protection Act of 1968, sec. 2-5	12 USC 1881-1884	Requires establishment of standards for installation, maintenance, and operation of bank security devices and procedures. Requires annual reports of compliance and appointment of a security officer.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.61	1-472 et seq. 3-371 et seq.
Credit Control Act	12 USC 1901-1909	Permits Board, upon authorization by the president, to regulate and control all extensions of credit, and to require reports regarding any extensions of credit. Authorizes imposition of civil money penalties on any person who violates the regulations or fails to report as required. (Expired June 30, 1982.)		1-535 et seq.
Real Estate Settlement Procedures Act	12 USC 2601-2617	Requires disclosure of all costs associated with purchases of real estate and prohibits payments of kickbacks and unearned fees in any transaction concerning a federally related mortgage.	Real Estate Settlement Procedures, 24 CFR 3500 (HUD reg)	6-1350 et seq. 6-1370 et seq.
Home Mortgage Disclosure Act	12 USC 2801-2811	Requires reports and public disclosure of the number and amount of mortgage loans made by depository institutions within a geographic area by census tract.	Reg C, Home Mortgage Disclosure, 12 CFR 203	6-228 et seq. 6-200 et seq.
Community Reinvestment Act	12 USC 2901-2905	Requires federal financial supervisory agencies to examine depository institutions to determine whether such institutions are meeting the credit needs of their communities; and requires such agencies to consider the records of such institutions in meeting community credit needs in acting on applications by such institutions for additional deposit facilities.	Reg BB, Community Reinvestment, 12 CFR 228	6-1247 et seq. 6-1220 et seq.
International Banking Act of 1978, sec. 1	12 USC 3101	Foreign banks required to designate a home office if they do not have deposit-taking offices. The Riegle-Neal Interstate Banking Act of 1994 removed geographic restrictions on interstate banking by foreign banks.	Reg K, International Banking Operations, 12 CFR 211.22	1-562 et seq. 3-633

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
International Banking Act of 1978, sec. 5	12 USC 3103	Restricts the U.S. expansion of a foreign bank's deposit-taking capabilities across state lines; provides for establishment of limited branches that accept only those deposits permissible for an Edge corporation; and imposes prohibition contained in section 3(d) of the Bank Holding Company Act on acquisition of bank assets or shares outside the foreign bank's home state.	Reg K, International Banking Operations, 12 CFR 211, subpart B	1-565 et seq. 3-630 et seq.
International Banking Act of 1978, sec. 7(a)	12 USC 3105(a)	Subjects U.S. branches and agencies of foreign banks to reserve requirements and prohibition against payment of interest on demand deposits.	Reg D, Reserve Requirements of Depository Institutions, 12 CFR 204; Reg Q, Prohibition Against Payment of Interest on Demand Deposits, 12 CFR 217	1-567 et seq. 2-380 et seq.
International Banking Act of 1978, sec. 7(c); Federal Reserve Act, sec. 13, para. 14	12 USC 3105(c) 12 USC 347d	Gives Board authority to examine each U.S. branch, agency, or commercial lending company of a foreign bank. Requires each branch or agency to submit quarterly Reports of Condition. Subjects branches and agencies to prohibitions on underwriting and dealing in securities.		1-569 1-123.1
International Banking Act of 1978, sec. 8	12 USC 3106	Subjects foreign bank with a U.S. branch, agency, commercial lending company, or subsidiary bank to the Bank Holding Company Act; grandfathers certain activities and investments of foreign banks; prohibits tie-in arrangements under section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 USC 1972).	Reg K, International Banking Operations, 12 CFR 211, subpart B	1-571 et seq. 3-630 et seq.
		Foreign banks permitted to establish U.S. representative offices without filing a formal application.	Reg K, International Banking Operations, 12 CFR 211.24	3-648.1

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
		Criteria for “well-managed.”	Reg K, International Banking Operations, 12 CFR 211.5	3-609 et seq.
		Criteria for evaluating the U.S. operations of foreign banks that the Board determines are not subject to comprehensive consolidated supervision or regulation.	Reg K, International Banking Operations, 12 CFR 211.30	3-648.7 et seq.
International Banking Act of 1978, sec. 9(b)	12 USC 3106a	Prohibits discrimination by U.S. offices of foreign banks and requires disapproval of applications by such foreign banks if banks do not agree to comply with antidiscrimination laws.		1-573.1
Depository Institutions Management Interlocks Act	12 USC 3201–3208	Prohibits management official interlocks between two depository organizations if they are not affiliated and are either very large or located in the same local area.	Reg L, Management Official Interlocks, 12 CFR 212	3-801 et seq. 3-775 et seq.
Federal Financial Institutions Examination Council Act	12 USC 3301–3308	Establishes a council to prescribe uniform principles, standards, and report forms for examination of financial institutions and to promote uniformity in other supervisory matters.	12 CFR 1101 (FFIEC reg)	
Right to Financial Privacy Act	12 USC 3401–3422	Establishes standards under which a federal government agency may obtain, and a financial institution may provide, information contained in financial records of a customer of the financial institution. Provides for cost reimbursement to institution for furnishing records of customers.	Reg S, Reimbursement to Financial Institutions for Assembling or Providing Financial Records, 12 CFR 219	6-1750 et seq. 3-1200 et seq.
Garn–St Germain Depository Institutions Act of 1982, sec. 204	12 USC 3503	Establishes a deposit account directly equivalent to a money market mutual fund and exempts such account from transaction account reserves, section 19(b) of the Federal Reserve Act (12 USC 461).	Reg D, Reserve Requirements of Depository Institutions, 12 CFR 204.2(d)(2)	2-138.1
Truth in Savings Act	12 USC 4301 et seq.	Requires clear and uniform disclosures about deposit accounts.	Reg DD, Truth in Savings, 12 CFR 230	6-1900 et seq.

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>

Clayton Antitrust Act, sec. 7 and 8	15 USC 18, 19	Prohibits mergers, acquisitions, and similar transactions between banks that substantially lessens competition. Prohibits certain interlocking bank directorates.		1-404 et seq.
Robinson-Patman Anti-Discrimination Act, sec. 11	15 USC 21	Authorizes Board to take enforcement action against banks for discrimination in price, services, and facilities.		1-407 et seq.
Federal Trade Commission Act, sec. 18(f)	15 USC 57a(f)	Authorizes Board to adopt rules prohibiting unfair or deceptive acts or practices by banks and to take regulatory action to prohibit those acts or practices on its own motion and to mirror comparable rules adopted by Federal Trade Commission.	Reg AA, Unfair or Deceptive Acts or Practices, 12 CFR 227	6-1203 6-1204 6-1200 et seq.
Securities Exchange Act of 1934, sec. 17A	15 USC 78q-1	Provides for the registration of state member banks acting as transfer agents and municipal securities dealers; establishes procedure for registration and withdrawal of transfer agents and municipal securities dealers and sets forth enforcement authority over clearing agents, transfer agents, and municipal securities dealers.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208, subpart C	5-173 et seq. 3-250 et seq.
Securities Exchange Act of 1934	15 USC 78b, 78c, 78i, 78j, 78l, 78p, 78r, 78t, 78u, 78w, 78x, 78aa, 78bb, 78dd, 78ff	Regulates transactions in bank securities to prevent unfair or manipulative practices, requires reports by publicly held banks, including securities registration statements, proxy statements, and periodic financial statements and reports by officers and directors regarding their shareholdings.	Reg H, Membership of State Banking Institutions in the Federal Reserve System, 12 CFR 208.36	5-001 et seq. 3-285 et seq.

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Securities Exchange Act of 1934, sec. 7 and 8	15 USC 78g, 78h	Authorizes Board to regulate amount of credit that may be extended to finance securities transactions; makes it unlawful for brokers, dealers, members of exchanges, or other persons to extend credit for the purpose of purchasing or carrying securities without complying with rules issued by the Board. Also makes it unlawful for any person to obtain an extension of credit in the United States or for a U.S. person or a foreign person controlled by or acting on behalf of a U.S. person to purchase various types of securities without complying with rules issued by the Board. Makes it unlawful for any registered broker, dealer, or member of a national securities exchange to (1) borrow on any registered security except from specified classes of banks, (2) arrange for the hypothecation of customer securities in contravention of Board rules, and (3) lend or arrange for the lending of a customer's securities in contravention of Board rules.	Reg T, Credit by Brokers and Dealers, 12 CFR 220; Reg U, Credit by Banks or Persons Other Than Brokers or Dealers for the Purpose of Purchasing or Carrying Margin Stocks, 12 CFR 221; Reg X, Borrowers of Securities Credit, 12 CFR 224	5-049 et seq. 5-392 et seq. 5-745 et seq. 5-970 et seq.
Securities Exchange Act of 1934, sec. 30A and 30B	15 USC 78dd-1, 78dd-2	Prohibits an issuer of securities registered under the Securities Exchange Act from giving anything of value to a foreign official to influence any act or decision of said official. Banking agencies have determined that such actions are considered unsafe and unsound practices.		5-248 et seq.
Public Utility Holding Company Act	15 USC 79q	Prohibits director and officer interlocks between a public utility holding company and a bank without SEC approval.		
Investment Company Act of 1940, sec. 10(c)	15 USC 80a-10	Prohibits a registered investment company from having a majority of its board of directors consist of officers, directors, or employees of any one bank.		5-262
Small Business Act, sec. 6	15 USC 635(a)	Authorizes Federal Reserve Banks to act as fiscal agents for the Small Business Administration.		1-277

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>
Small Business Investment Act, sec. 302	15 USC 682	Authorizes member banks to invest in Small Business Investment Companies up to 5% of bank's capital and surplus.		1-299
Truth in Lending Act	15 USC 1601–1646	Requires creditors to disclose to consumers the cost and terms of credit; gives consumers the right to cancel certain credit transactions; regulates credit card issuance and liability; prescribes certain requirements for advertising credit.	Reg Z, Truth in Lending, 12 CFR 226 (covers all creditors)	6-1030 et seq. 6-600 et seq.
Fair Credit Billing Act	15 USC 1666–1666j	Provides for fair and timely resolution of credit billing disputes; regulates certain credit card practices.	Reg Z, Truth in Lending, 12 CFR 226 (covers all creditors)	6-1109 et seq. 6-600 et seq.
Consumer Leasing Act	15 USC 1667–1667e	Requires accurate disclosure of consumer leasing terms; limits lessee liability; prescribes certain requirements for advertising consumer leases.	Reg M, Consumer Leasing, 12 CFR 213 (covers all lessors)	6-550 et seq. 6-500 et seq.
Fair Credit Reporting Act	15 USC 1681–1681t	Protects consumers against inaccurate or misleading information in credit files maintained by credit bureaus; requires these bureaus to allow credit applicants to correct erroneous reports.		6-1550 et seq.
Equal Credit Opportunity Act	15 USC 1691–1691f	Prohibits credit discrimination on the basis of race, color, religion, national origin, sex, marital status, or age or because of receipt of public assistance or exercise of rights under the consumer Credit Protection Act; requires creditors to notify applicants of action taken on the application.	Reg B, Equal Credit Opportunity, 12 CFR 202 (covers all creditors)	6-091 et seq. 6-001 et seq.
Equal Credit Opportunity Act, sec. 703(b)	15 USC 1691b	Authorizes Board to establish a Consumer Advisory Council to advise and consult with the Board on the Consumer Credit Protection Act and other consumer-related matters.	Rules of Organization and Procedure of the Consumer Advisory Council, 12 CFR 267	6-100 et seq. 6-2500 et seq.
Fair Debt Collection Practices Act	15 USC 1692	Prohibits the use of abusive, deceptive, and unfair debt collection practices by third-party debt collectors.		6-1675 et seq.

<i>Statute</i>	<i>U.S. Code Citation</i>	<i>Description</i>	<i>FRB Regulation</i>	<i>FRRS Locator Number</i>

Internal Control: Supplement on Internal Auditing

Effective date May 2006

Section A.1010.1

The information in the first part of this section is reprinted from a publication of the Bank Administration Institute (BAI), entitled "Statement of Principle and Standards for Internal Auditing in the Banking Industry." The second part of this section reproduces appendixes A and B from the February 9, 2006, Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters. (See section 1010.1 of this manual.)

A STATEMENT OF PRINCIPLE CONCERNING INTERNAL AUDITING IN THE BANKING INDUSTRY

Internal auditing is that management function which independently evaluates the adequacy, effectiveness and efficiency of the systems of control within an organization and the quality of ongoing operations.

The systems of control comprise the plan of organization and all methods and measures designed to:

- Provide reasonable assurance that assets are safeguarded, information (financial and other) is timely and reliable, and errors and irregularities are discovered and corrected promptly.
- Promote operational efficiency.
- Encourage compliance with managerial policies, laws, regulations, and sound fiduciary principles.

Ongoing operations comprise all activities involved in the conduct of the organization's business.

The internal auditor is accountable to the board of directors and executive management. This accountability precludes the auditor from organizational relationships that may conflict with the need for independence.

STANDARDS OF INTERNAL AUDITING IN THE BANKING INDUSTRY

Organization Standards

1. The organization shall have an internal audit function responsible for evaluating the adequacy, effectiveness and efficiency of its systems of control and the quality of ongoing operations.
2. The organization shall maintain an environment within which the auditor has the freedom to act.
3. The organization shall allocate sufficient resources to the audit function to enable it to conform to the standards of internal auditing.
4. The organization shall require management to respond formally to adverse audit findings and to take appropriate corrective action.
5. The organization's systems of control shall include measurement of audit effectiveness and efficiency.

Personal Standards

1. An internal auditor shall have adequate technical training and proficiency.
2. An internal auditor shall maintain a sufficiently independent state of mind to clearly demonstrate objectivity in matters affecting audit conclusions.
3. An internal auditor shall respect the confidentiality of information acquired while performing the audit function.
4. An internal auditor shall only engage in activities that do not conflict with the interests of the organization.
5. An internal auditor shall adhere to conduct that enhances the professional stature of internal auditing.
6. An internal auditor shall exercise due professional care in the performance of all duties and in the fulfillment of all responsibilities.

Performance Standards

1. The internal auditor shall prepare a formal audit plan that covers all significant organizational activities over an appropriate cycle of time.
2. The audit plan shall include an evaluation of controls within new systems and significant modifications to existing systems before they become operational.
3. Audit procedures shall provide sufficient and

competent evidential matter to support conclusions regarding the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations.

4. The organization of the audit function and related administrative practice shall provide for the proper supervision of persons performing audits and for the proper review of work performed.

control should extend beyond accounting matters. This broader concept better serves the board of directors and executive management to whom the internal auditor is accountable. Bank Administration Institute believes the systems of control and ongoing operations, as defined herein, provide a preferred perspective for discussing internal auditing within the framework of the auditing discipline taken as a whole.

Communication Standards

1. The auditor shall prepare a formal report on the scope and results of each audit performed.
2. Each audit report shall contain an opinion on the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations; the degree of compliance with previously evaluated systems of control; or an explanation of why an opinion cannot be expressed. When an adverse opinion is expressed, the report shall contain a statement about the exposures that may exist in the absence of corrective action.
3. The auditor shall communicate audit findings in a timely manner to the managers responsible for corrective action.
4. At least once each year the auditor shall make a summary report of audit activities to the board of directors and executive management. The report shall include an opinion on the overall condition of the organization's controls and operations.

Concepts of Control

The systems of control exist to assure the achievement of intended results, to promote operating efficiency and to encourage compliance with policies and other established constraints. Although internal auditors have a definite interest in verifying the results of business activity, their primary concern must be the continuing effectiveness of the systems of control that influence business results. The important qualities that must be evaluated are adequacy, effectiveness and efficiency.

In evaluating adequacy, the auditor analyzes systems to determine that they include design features proper to the circumstances and reasonably sufficient to effect control. The evaluation of adequacy begins with the comparison of "what should be" to "what is." Initial audits and audits of proposed procedures or organization structures focus primarily on the adequacy of control.

In evaluating effectiveness, the auditor measures the degree of compliance with control features and the extent to which compliance serves the intended purposes. The question that must be answered is: "Do the controls work?"

In evaluating efficiency, the auditor judges the practicality of controls in terms of their cost relative to their intended benefit. It is not intended that the auditor should evaluate adequacy or effectiveness in absolute terms, nor is it intended that the auditor judge efficiency in absolute terms. An internal auditor's evaluation of efficiency is restricted to the controls themselves and does not extend to the measures of operating performance associated with the functioning of such controls. In judging efficiency, the internal auditor must conclude whether the benefits provided by the controls exceed their cost.

The systems of control and not the audit function:

COMMENTARY

The following comments are presented in order to promote the acceptance of the "Statement of Principle and Standards for Internal Auditing in the Banking Industry," to provide a context for the application of its concepts and to enhance the understanding of internal auditing. It is intended that the statement and the commentary will serve as a basis for the continuing advancement of the profession's influence and service.

Internal Auditing as a Discipline

Internal auditing is developing a broader perspective by recognizing that all operations are properly subject to control and within the scope of auditing. The internal auditor's concern for

- Provide reasonable assurance that assets are safeguarded, information (financial and other) is timely and reliable, and errors and irregularities are discovered and promptly corrected.

- Promote operational efficiency.
- Encourage adherence to managerial policies, laws, regulations and sound fiduciary principles.

Those members of management who are responsible for policy implementation are also responsible for the design and the maintenance of the systems of control. Internal auditors are responsible for that management function which independently evaluates the adequacy, effectiveness and efficiency of the systems of control. Internal auditors should make sure that those who rely on their opinions understand that no practical system can guarantee the quality of future performance.

Controls act as a positive force to facilitate successful operations as well as a negative one that restricts activities. Accordingly, the auditor should evaluate control systems in terms of the incentives they provide as well as the sanctions.

Safeguarding assets relates to physical, legal and all other protective means by which the organization assures the full realization of its resources.

All information should be subject to the systems of control. Timely information is that which anticipates a decision need and is available to the persons who will use it when they need it. Reliable information provides a sound basis for decision because of the authenticity of its source, the manner in which it is recorded and the form and content of its presentation.

The systems of control must detect and correct errors and irregularities when preventive controls fail. Sound systems of control contain safeguards that will counteract failures in other controls.

The systems of control should promote operational efficiency. The features of control systems that promote operational efficiency include the processes used to select and train personnel, establish procedures, set performance requirements, measure results and provide incentives.

Managerial policies, laws, regulations and sound fiduciary principles establish bounds within which the organization can conduct its business. The features of the control system that encourage compliance with these requirements include the separation of duties, the employment of persons likely to comply, the establishment of authority limits and the communication of expected conduct.

Ongoing Operations

Management must evaluate the quality of operations based on information provided by the control systems. Adequate control systems produce sufficient information to reliably appraise operations. To confirm that the control systems are adequate and effective, the internal auditor should independently evaluate the quality of ongoing operations. Only ongoing operations have future significance.

Internal auditors should express their opinion on whether the quality of ongoing operations is satisfactory or unsatisfactory. Satisfactory operations are those which, in the opinion of the auditor, require no extraordinary intervention by executive management or the directors. Conversely, unsatisfactory operations require extraordinary intervention before appropriate remedial action is likely to occur. A qualified opinion may be expressed by citing specific exceptions to satisfactory operations. Auditors may assess the quality of operations more precisely and report on grades of quality, provided the grades are clearly understood by management.

Circumstances may preclude the auditor from forming an opinion on the quality of ongoing operations. This, by itself, is significant because the information provided by the control systems should be adequate for the evaluation of ongoing operations.

Accountability

Accountability refers to the measures of effective audit performance. The organization standards of this statement define the conditions necessary to hold the auditor accountable for the other standards.

Only the board of directors can protect the auditor's need for independence; consequently, the board should be the final judge of the auditor's performance. The fact that the process of measurement may be done through an audit committee does not alter the auditor's ultimate accountability to the board.

Both the auditor and executive management have received a delegation of authority from the board: management to design and maintain systems of control; the auditor to evaluate these systems of control. Because the evaluation process exists to serve the design and maintenance responsibility, the auditor must also be account-

able to executive management. This accountability, however, does not create the usual corollary right of the executive to directly apply sanctions or to otherwise restrict the auditor's functional independence. Such action, if necessary, must be decided by the board.

The auditor should be mindful that the audit function serves many users. The auditor has an obligation, if not accountability, to those users. The auditor's personal relationship with others should be characterized by integrity, open communication and mutual respect. User satisfaction should be an important consideration in the board's evaluation of audit performance.

Independence is a matter of personal quality rather than of rules. The auditor's relationships, as indicated by the plan of organization and by the way in which the work is conducted, must always be such that a presumption of independence logically follows in the mind of the observer.

Organization Standards

A banking organization can best evidence its support and commitment to the professional standards of internal auditing by formally adopting these standards.

The organization standards are prerequisites to the personal, performance and communication standards. They simply state that an internal auditor cannot be accountable for adherence to the other standards without the necessary resources and support of the organization.

Many banks cannot afford the services of a competent and independent internal auditor. It should be clearly understood that those banks are not in compliance with these standards. Their directors and executive management, therefore, bear the burden of providing additional supervision to assure the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations.

The organization shall provide and maintain an environment within which the internal auditor has the freedom to act. Persons whose duties and responsibilities are subject to audit cannot have the authority to regulate the scope of audit work nor the procedures considered necessary by the auditors. The auditor's responsibility to independently evaluate the systems of control must carry with it the authority to set the scope and choose the means of examination.

Budgeting should be based on a complete plan of audit that demonstrates fulfillment of the organization's audit needs and adherence to the standards of internal auditing. In committing resources to the internal audit function, the organization should expect the auditor to properly support requested allocations through the established budget process.

The audit process is not complete until the auditor is satisfied that audit findings have received appropriate attention. By requiring management to respond formally to audit findings, the organization contributes to the effectiveness of the audit function and increases the likelihood that the findings will receive appropriate attention.

The organization should measure the performance of its internal audit function in relation to the timeliness, efficiency and the quality of its work. Timeliness is indicated by scheduling the work in recognition of risk assessments and by the prompt issuance of reports. Efficiency is indicated by completing the work within the time budgeted. An efficient internal audit program also minimizes the time required by examiners and public accountants without affecting adequate coverage. Formal work programs, workpapers and the form and content of reports evidence the quality of an audit function. The organization should consider using the opinions formed by bank examiners, certified public accountants and other professional auditors to assist in this performance evaluation. Smaller banks may find the services offered by their correspondents include such evaluations.

Personal Standards

Personal standards relate to the qualifications of auditors, the quality of audit practice and the rules of professional conduct. They concern all persons who apply audit procedures under a delegation of authority from the board to support conclusions regarding the systems of control. Personal standards are prerequisites to performance and communication standards.

All persons engaged in the practice of internal auditing shall have the technical training and proficiency necessary to conduct their audit duties in accordance with these standards. Technical training and proficiency are separate requirements. Technical training relates to education; proficiency relates to the skill and judgment acquired through experience.

The qualified internal auditor will have successfully completed a course of study and training in disciplines having audit significance and will understand their application to banking. These disciplines include the principles of accounting, auditing, economics, finance, operations analysis, management, statistics, commercial law and computer science.

Experience is gained by working under the close supervision and review of an experienced professional. This relationship should make the job itself a vehicle for seasoning and refining the technical training acquired through formal education. On-the-job training should be carefully planned and organized. Those responsible for managing the audit function should define the elements of knowledge and judgment that may be gained from experience and establish a way to measure the resulting proficiency.

Proficiency is demonstrated by the proper exercise of professional judgment. It is difficult for users of professional services to accurately assess proficiency. Therefore, recognized professions, including internal auditing, provide certification programs for their practitioners. Each person engaged in the internal audit function can demonstrate proficiency by earning a professional designation such as chartered bank auditor, certified internal auditor or certified public accountant. The last two designations, however, require successful banking or related experience to demonstrate a practical knowledge of the industry.

The modern business environment demands that an internal auditor maintain proficiency by active participation in programs of continuing education and professional association.

There is no concept more important to internal auditing than independence. The essence of independence is intellectual honesty informing conclusions and expressing opinions. Conclusions must be reached fairly without bias or the propensity to prejudice circumstances. Opinions must be expressed forthrightly despite the conflicts that may arise. Although the appearance of independence relies on a plan of organization that grants the auditor freedom from conflicting accountabilities, the actual attainment of independence depends solely on the individual. The concept of independence is most fundamental to the definition and practice of auditing.

Independence is not isolation. Auditors should not allow their need for independence to inhibit the contacts and rapport necessary for a fully effective audit function.

Banking organizations properly require all employees to honor the confidentiality of financial and other information obtained during their employment. This requirement is all the more important for internal auditors because of the nature and scope of their work. Confidentiality also applies to the judicious use of information within the organization.

An internal auditor should not accept employment or participate in activities that compete or otherwise oppose the lawful objectives of the organization. Loyalty reflects integrity and credibility. Relationships which may, even by implication, raise doubt concerning the auditor's loyalty to the bank therefore must be avoided.

All members of a profession owe allegiance to their colleagues. The reputation of all depends to some degree on the conduct of each. Internal auditors develop professional recognition by supporting and participating in associations organized to serve their common needs. Each internal auditor is also obligated to maintain proficiency and awareness through self-education.

Due professional care imposes an ethical obligation on all auditors to demonstrate competency. Due care acts as a safeguard against negligence and oversight. Due professional care applies to the administrative practices that bear on the quality of audit results as well as to the use of audit procedures that provide sufficient competent evidence.

Due professional care is a subjective standard based on reasonableness. The duty of due professional care requires the auditor to know the extent of reliance that others within the organization place on audit results. When such reliance is unrealistic or misunderstood, the auditor should resolve the misunderstanding and temper unrealistic expectations.

The organization should require the presentation of audit findings in a manner that convinces management that the auditor exercised due professional care.

Performance Standards

The audit plan should be written and presented in a form that is suitable for critical review by audit committees, certified public accountants, regulatory examiners and others who must evaluate the adequacy of audit coverage.

An audit plan is based on a catalog of examinations that includes all significant activities of the organization classified by logical

units for work scheduling. For example, demand deposit bookkeeping functions may be classified as three separate audits: overdraft control practices, confirmation of balances and bookkeeping operations.

The frequency of audit should be determined by reference to factors affecting risk, management information, customer satisfaction and the need to create an awareness of audit presence. Risk assessment involves audit judgment regarding how often and to what extent the systems of control must be evaluated.

In mature audit operations, the problem of balancing audit objectives with audit resources has usually been solved. Risk assessment in the context of audit planning does not normally change in the near range. The audit plan for each cycle does not prescribe a detailed listing of tests and procedures to be applied. These tactical steps are to be found in the work program.

The audit plan, which usually represents work contemplated for the current year, should present the information necessary to schedule and assign the work. It should cover resources requirements, administrative goals and objectives and the estimated costs of audit. Resource plans identify the number of persons needed, schedule their time (including such non-audit time as administration, vacation, lost days, staff training) and specify the level of ability. Administrative goals and objectives should reflect the audit implications of conditions that influence the organization. Audit costs should be identified in sufficient detail to encourage the audit manager to justify their cost and impact on the organization.

While cost justifying the audit plan, the auditor should recognize that the organization's cost of control includes its cost of auditing. In certain areas, efficiencies may best be achieved by strengthening the control systems as an alternative to audit coverage.

The audit plan shall include an evaluation of the adequacy of controls within new systems and significant modifications to existing systems before they become operational. This evaluation should include the controls designed into the conversion plan. Significant modifications are those that affect controls to an extent that audit concern is created regarding the organization's resulting exposure to loss.

The second performance standard concerns the timing of audit but not its scope. Identifying significant changes and establishing audit procedures is a matter of individual audit judgment. Modern complex systems are expensive to

develop and maintain. Building adequate controls within the original design is usually less costly than adding them after the system is operational. The cost of evaluation, however, is usually no greater before implementation than after.

The reliability of audit results depends on the character of supporting evidence. Audit procedures should be selected and applied in a way that assures such evidence is sufficient and competent.

The term "sufficient" as used here means that enough evidence is assembled to assure that audit conclusions are well founded. The internal auditor's determination of what constitutes enough evidence is a matter of professional judgment relative to the controls and operations under evaluation. Frequently, sufficiency can be demonstrated by the application of statistical sampling techniques.

The term "competent" means relevant and valid. Competent evidence has the requisite ability to convince. Both the substance and the interrelationship of evidence demonstrate competence. Whereas sufficient is a quantitative concept, competent is a qualitative one.

Competency for audit purposes depends on the procedures used to obtain evidence. Direct knowledge, such as obtained by observation or inspection, is more reliable than indirect knowledge, such as obtained by confirmation and inquiry. Obtaining the most competent evidence, however, is not always feasible. Selecting and applying those procedures that collectively produce the most competent evidence under the circumstances demonstrates audits proficiency.

Audit work should be organized so that the objectives at each level of detail are clearly defined. Each phase of the work as well as the contribution of each person should be viewed by a superior. Audit management should review the audit programs, questionnaires and other planning features for completeness, applicability and efficiency. The reviewer should be satisfied that those who perform field work understand the systems under examination and the audit procedures that have been selected for application.

The auditor in charge of each assignment should perform a detailed review of the work as it is completed. No work should be accepted unless it complies with the standard of evidence. Audit management should conduct a comprehensive final review of the workpapers to determine that proper procedures were applied, sufficient evidence was assembled and all excep-

tions were properly evaluated in terms of their control significance. Audit management should also make interim field reviews.

Reviews must be documented. All auditors should appreciate the importance of the review process and perform their work in a manner that facilitates review. Review serves as an educational process as well as a control. Directors of banks employing only one auditor should supervise the auditor's work in a manner that provides a check on audit quality.

Communication Standards

The auditor has a responsibility to report the results of all audit work performed. Some auditors prefer to report only significant exceptions; however, this practice reinforces a negative view of the audit function. The auditor's responsibility to evaluate control systems and ongoing operations carries with it an obligation to report the results of that evaluation. Without a report, management does not have positive assurance that auditing is meeting its commitments. Consequently, management can only assume that adequate coverage is maintained and that the systems of control are functioning adequately, effectively and efficiently. By implication, audit reporting only on an exception basis extends the auditor's responsibility beyond what the actual work can support and causes misunderstanding.

Requiring auditors to express an opinion on the adequacy, effectiveness and efficiency of the systems of control and the quality of ongoing operations enables the board of directors, management and other interested parties to better judge the reliability of the control systems and ongoing operations. This service is a natural and logical part of the internal auditor's accountability.

Expressing an opinion imposes a serious obligation on the auditor. The requirement of due professional care extends to both the opinion and the commentary supporting it. Clear identification of the systems of control audited is the key to a meaningful opinion.

Each auditor should develop standard language for rendering an opinion. Standardization of language minimizes misunderstanding and promotes recognition of circumstances that require responsive action.

It is suggested that auditors develop their opinion statement along the following lines:

“In our opinion (the audit subject's) operating and accounting procedures include those practices usually necessary to provide adequate and efficient control. Also in our opinion, the degree of compliance with such procedures provided effective control during the (period of audit). We found the quality of ongoing operations satisfactory.”

This opinion assumes the auditor has reviewed the systems of control before they became operational and is satisfied that they include design features proper to the circumstances and reasonably sufficient to effect control. The second sentence of the opinion addresses the degree of compliance with control features previously found adequate and efficient. Audits of operations that are subject to a common control system such as a typical branch bank audit need not include a review of the system each time a unit audit is performed. The auditor, however, should be satisfied that all modifications to the existing system that significantly affect control have been evaluated.

Auditors occasionally form adverse conclusions concerning the adequacy, effectiveness or efficiency of the systems of control or the quality of ongoing operations. In these cases, they should qualify their opinion and identify exposures that may exist in the absence of corrective action. Risk measures the degree to which exposures are uncontrolled. The applicable equation is: Exposure minus control equals risk. A calculated risk is taken only when the exposure is fully identified and the implications of the lack of control are understood. To make an adverse opinion clear and meaningful, therefore, the auditor must identify relevant exposures and explain their significance.

Every audit report should identify the area audited and disclose all matters the auditor believes require responsive action by the recipient. Auditors should clearly distinguish between those matters to which they take exception and those that are reported for other reasons. The degree of detail reported is largely a matter of judgment, influenced greatly by the preferences of management. Some managements prefer to have all audit findings reported no matter how minor. Others prefer only a general description of significant findings. Auditors must bear in mind that their ultimate accountability demands that findings of major significance be brought to the attention of executive management and the board of directors.

The standards do not require the auditor to recommend corrective action. In practice, however, auditors find that many managements expect suggestions for corrective action, particularly when the technical aspects of controls are involved. By suggesting corrective action, the auditor demonstrates a positive approach to the organization's problems. In making suggestions, auditors should recognize that their recommendations may not be the only means of achieving the control purpose intended. The focus of concern should be the control purpose and not the particular means selected from a range of acceptable choices.

A draft of each audit report should be made available to the manager of those operations under examination. Findings should be discussed with the manager before final issuance of the report. Any revisions should be similarly reviewed. The final report must clearly present audit findings and avoid language that may imply a meaning inconsistent with the supporting evidence. A review and a discussion of the draft assure this result.

Auditors must establish the facts of their findings but do not have to obtain complete management acceptance of their comments before issuing a report. Auditors should be prepared for occasional conflict and disagreement.

The ease with which auditors can retrieve information, support fact and amplify findings validates the adequacy and the quality of audit evidence. The extent to which auditors gain acceptance of their comments ultimately measures the effectiveness of internal auditing's contribution to the organization.

The timeliness with which audit findings are reported is very important and often critical for effective response. When timeliness is critical, the auditor should communicate findings promptly and not await the preparation of a formal report. Findings should be communicated to the manager whose operation is directly affected.

The extent and frequency of audit reports required by the board of directors varies with the organization. At least annually, however, the auditor shall formally report to the board of directors and executive management. The board of directors and executive management are entitled to a report that measures audit performance against plan and provides information normally required to establish accountability. The auditor should use this opportunity to pro-

mote an understanding of the audit function and how it serves the organization.

In the summary report, the auditor should express an opinion on the overall condition of the organization's controls and ongoing operations. The report should present all known control problems of significance as well as an evaluation of corrective action taken. Although the report is formal, it should be presented personally to ensure proper interpretation and to provide the benefit that flows from the exchange of information and concerns.

Fraud and the Auditor's Responsibility

The auditor is charged with understanding the purposes of the business, the control practices usually necessary to achieve them, and the type of evidence that indicates they will continue to be achieved. The following questions are prerequisite to evaluating the systems of control: What is the purpose of the system? How is it controlled? What can go wrong?

Audit proficiency includes the ability to evaluate fraud exposures. Sufficient information is available in the literature on auditing concerning how frauds may be committed in banking. The auditor should be familiar with that literature.

The systems of control and not the internal audit function provide the primary assurance against fraud. Internal auditors, however, must evaluate the capability of the systems to achieve that end. When in doubt, the auditor should consider applying additional procedures to determine if fraud has actually occurred.

In fixing the internal auditor's responsibility for detecting fraud, it should be recognized that the internal auditor cannot be responsible for detecting irregular transactions for which there is no record, e.g., an unrecorded receipt of cash from a source for which there is no evidence of accountability; an isolated transaction that does not recur, e.g., a single fraudulent loan; or irregularities that are well concealed by collusion. However, in the usual course of the audit cycle, the internal auditor should detect irregularities that significantly affect the financial statements, repeatedly follow a suspicious pattern of concurrence, or those that can be detected by a reasonable audit sampling. Internal auditors must also accept responsibility for those irregularities that result from their failure to report known weaknesses in the systems of control.

In judging the preventive capacity of the control systems and the internal auditor's responsibility, the principle of relative risk should not be ignored, namely, costs must be balanced against intended benefit.

CONCLUSION

Professional internal auditors can contribute a wealth of information to their organizations over and above the assurance they provide by evaluating the quality of control systems and ongoing operations. The word, "audit," comes from the Latin word, *audire*, meaning to hear. Internal auditors should be good listeners and observers. They should demonstrate an in-depth understanding of the strengths and weaknesses of the organization, the accomplishments and current problems of its departments, the quality of its services, the pride and concerns of its people and the efficiencies and diseconomies of its operations. In turn, executives and directors should listen to professional internal auditors and capitalize on their observations.

EXAMPLES OF UNSAFE AND UNSOUND LIMITATION-OF-LIABILITY PROVISIONS

The following information was contained in appendix A of the February 9, 2006, interagency advisory.

Presented below are some of the types of limitation-of-liability provisions (with an illustrative example of each type) that the agencies observed in financial institutions' external audit engagement letters. The inclusion in external audit engagement letters or agreements related to audits of any of the illustrative provisions (which do not represent an all-inclusive list) or any other language that would produce similar effects is considered an unsafe and unsound practice.

1. "Release from Liability for Auditor Negligence" Provision

In this type of provision, the financial institution agrees *not* to hold the audit firm liable for

any damages, except to the extent determined to have resulted from willful misconduct or fraudulent behavior by the audit firm.

Example: In no event shall [the audit firm] be liable to the Financial Institution, whether a claim be in tort, contract or otherwise, for any consequential, indirect, lost profit, or similar damages relating to [the audit firm's] services provided under this engagement letter, except to the extent finally determined to have resulted from the willful misconduct or fraudulent behavior of [the audit firm] relating to such services.

2. "No Damages" Provision

In this type of provision, the financial institution agrees that *in no event* will the external audit firm's liability include responsibility for any compensatory (incidental or consequential) damages claimed by the financial institution.

Example: In no event will [the audit firm's] liability under the terms of this Agreement include responsibility for any claimed incidental or consequential damages.

3. "Limitation of Period to File Claim" Provision

In this type of provision, the financial institution agrees that *no* claim will be asserted after a fixed period of time that is shorter than the applicable statute of limitations, effectively agreeing to limit the financial institution's rights in filing a claim.

Example: It is agreed by the Financial Institution and [the audit firm] or any successors in interest that no claim arising out of services rendered pursuant to this agreement by, or on behalf of, the Financial Institution shall be asserted more than two years after the date of the last audit report issued by [the audit firm].

4. "Losses Occurring During Periods Audited" Provision

In this type of provision, the financial institu-

tion agrees that the external audit firm's liability will be limited to any losses occurring during periods covered by the external audit, and will *not* include any losses occurring in later periods for which the external audit firm is not engaged. This provision may not only preclude the collection of consequential damages for harm in later years, but could preclude any recovery at all. It appears that no claim of liability could be brought against the external audit firm until the external audit report is actually delivered. Under such a clause, any claim for liability thereafter might be precluded because the losses did not occur during the period covered by the external audit. In other words, it might limit the external audit firm's liability to a period before there could be any liability. Read more broadly, the external audit firm might be liable for losses that arise in subsequent years only if the firm continues to be engaged to audit the client's financial statements in those years.

Example: In the event the Financial Institution is dissatisfied with [the audit firm's] services, it is understood that [the audit firm's] liability, if any, arising from this engagement will be limited to any losses occurring during the periods covered by [the audit firm's] audit, and shall not include any losses occurring in later periods for which [the audit firm] is not engaged as auditors.

5. “No Assignment or Transfer” Provision

In this type of provision, the financial institution agrees that it will not assign or transfer any claim against the external audit firm to another party. This provision could limit the ability of another party to pursue a claim against the external auditor in a sale or merger of the financial institution, in a sale of certain assets or a line of business of the financial institution, or in a supervisory merger or receivership of the financial institution. This provision may also prevent the financial institution from subrogating a claim against its external auditor to the financial institution's insurer under its directors' and officers' liability or other insurance coverage.

Example: The Financial Institution agrees that it will not, directly or indirectly, agree to assign or transfer any claim against [the audit firm] arising out of this engagement to anyone.

6. “Knowing Misrepresentations by Management” Provision

In this type of provision, the financial institution releases and indemnifies the external audit firm from any claims, liabilities, and costs attributable to any knowing misrepresentation by management.

Example: Because of the importance of oral and written management representations to an effective audit, the Financial Institution releases and indemnifies [the audit firm] and its personnel from any and all claims, liabilities, costs, and expenses attributable to any knowing misrepresentation by management.

7. “Indemnification for Management Negligence” Provision

In this type of provision, the financial institution agrees to protect the external auditor from third-party claims arising from the external audit firm's failure to discover negligent conduct by management. It would also reinforce the defense of contributory negligence in cases in which the financial institution brings an action against its external auditor. In either case, the contractual defense would insulate the external audit firm from claims for damages even if the reason the external auditor failed to discover the negligent conduct was a failure to conduct the external audit in accordance with generally accepted auditing standards or other applicable professional standards.

Example: The Financial Institution shall indemnify, hold harmless and defend [the audit firm] and its authorized agents, partners and employees from and against any and all claims, damages, demands, actions, costs and charges arising out of, or by reason of, the Financial Institution's negligent acts or failure to act hereunder.

8. “Damages Not to Exceed Fees Paid” Provision

In this type of provision, the financial institution agrees to limit the external auditor's liability to the amount of audit fees the financial institution paid the external auditor, regardless of the extent of damages. This may result in a

substantial unrecoverable loss or cost to the financial institution.

Example: [The audit firm] shall not be liable for any claim for damages arising out of or in connection with any services provided herein to the Financial Institution in an amount greater than the amount of fees actually paid to [the audit firm] with respect to the services directly relating to and forming the basis of such claim.¹

FREQUENTLY ASKED QUESTIONS ON THE APPLICATION OF THE SEC'S AUDITOR-INDEPENDENCE RULES

The following information is contained in appendix B of the February 9, 2006, interagency advisory.

Question²

Inquiry was made as to whether an accountant who certifies financial statements included in a registration statement or annual report filed with the commission under the Securities Act or the Exchange Act would be considered independent if he had entered into an indemnity agreement with the registrant. In the particular illustration cited, the board of directors of the registrant formally approved the filing of a registration statement with the commission and agreed to indemnify and save harmless each and every accountant who certified any part of such statement "from any and all losses, claims, damages or liabilities arising out of such act or acts to which they or any of them may become subject under the Securities Act, as amended, or at 'common law,' other than for their willful misstatements or omissions."

Answer

When an accountant and his client, directly or through an affiliate, have entered into an agree-

1. The agencies also observed a similar provision that limited damages to a predetermined amount not related to fees paid.

2. The subtitles in this section have been revised for this manual.

ment of indemnity which seeks to assure to the accountant immunity from liability for his own negligent acts, whether of omission or commission, one of the major stimuli to objective and unbiased consideration of the problems encountered in a particular engagement is removed or greatly weakened. Such condition must frequently induce a departure from the standards of objectivity and impartiality which the concept of independence implies. In such difficult matters, for example, as the determination of the scope of audit necessary, existence of such an agreement may easily lead to the use of less extensive or thorough procedures than would otherwise be followed. In other cases it may result in a failure to appraise with professional acumen the information disclosed by the examination. *Consequently, the accountant cannot be recognized as independent for the purpose of certifying the financial statements of the corporation.*

Question

Has there been any change in the commission's long-standing view (Financial Reporting Policies—Section 600—602.02.f.i., "Indemnification by Client") that when an accountant enters into an indemnity agreement with the registrant, his or her independence would come into question?

Answer

No. When an accountant and his or her client, directly or through an affiliate, enter into an agreement of indemnity that seeks to provide the accountant immunity from liability for his or her own negligent acts, whether of omission or commission, *the accountant is not independent.* Further, including in engagement letters a clause that a registrant would release, indemnify or hold harmless from any liability and costs resulting from *knowing misrepresentations by management would also impair the firm's independence.³*

3. U.S. Securities and Exchange Commission; Office of the Chief Accountant: Application of the Commission's Rules on Auditor Independence—Frequently Asked Questions; Other Matters, Question 4 (issued December 13, 2004).

Cash Accounts: Financial Recordkeeping and Reporting Regulations— Examination Procedures

Section A.2000.1

The material in this section has been incorporated into the *Bank Secrecy Act Examination Manual*.

Loan Portfolio Management: Comprehensive Mortgage Banking Examination Procedures

Effective date May 2004

Section A.2040.3

The following comprehensive examination procedures address the examination and supervisory concerns discussed in the February 25, 2003, Interagency Advisory on Mortgage Banking and in SR-03-4. The procedures incorporate and consolidate that supervisory and examination guidance, the Federal Reserve System's examination modules, and the Federal Reserve's mortgage banking inspection procedures found in section 3070.0 of the *Bank Holding Company Supervision Manual*. The comprehensive procedures are organized according to the typical structure of a banking organization and its primary activities.

PRELIMINARY REVIEW AND ASSESSMENT

1. Perform the following preliminary examination review procedures.
 - a. Review the following reports and documentation:
 - internal auditors' reports
 - the most recent external audit report and management letter, and management's response to criticisms and recommendations
 - government-sponsored agencies' reports and significant private investors' reports, if available
 - internal memoranda and management reports on the mortgage banking unit prepared since the previous examination
 - b. Briefly review information about the mortgage banking entity's financial performance to gain a basic understanding of its assets, liabilities, and profitability.
2. Review the types of products offered and markets targeted by the bank's mortgage banking entity.
 - a. Ascertain whether the entity has an over-reliance on one product type or if it relies on a few large geographic concentrations.
 - b. Determine if the entity has made any material changes in its types of products, underwriting criteria, production and servicing volumes, and market focus.
3. Review the findings of the external and internal auditors, the quality-control unit, and any other reviews, including any

reviews conducted by independent investors, other governmental agencies, and quasi-governmental investor or guarantor agencies (all those audits and reviews conducted since the previous examination). Pay particular attention to the status of compliance with internal controls and quality controls as well as compliance with the limits and controls on lending, securitization, and hedging activities.

- a. On the basis of this examination review, make a preliminary determination about the current volume and level of risk (that is, credit risk (borrower and counterparty risk), market risk (pipeline, interest-rate, trading, price, prepayment, hedging, and foreign-exchange risks), liquidity—funding, operational, and legal risk (compliance, strategic, and contingency risks), and reputational risk.
 - b. Assess the adequacy of risk management and the level and direction of composite risk for significant activities.
 - c. Determine the scope and focus of the examination of mortgage banking operations, transactions, and activities.
4. Develop a preliminary assessment of the financial impact of the mortgage banking entity's operations, transactions, activities, and most significant risks on the bank's current financial condition, liquidity, earnings, and capital.

BOARD AND SENIOR MANAGEMENT OVERSIGHT

Board of Directors

1. Review the biographies of the members of the board of directors and review the board's and board committees' meeting minutes. Determine whether the directors have the necessary education and experience to fulfill their fiduciary responsibilities.
2. Assemble and review several of the most recent informational packages that were provided to the directors before their scheduled meetings. Find out if the directors receive sufficient detailed information to make informed judgments about the financial condition, internal controls, and risk-

management controls and procedures of the mortgage banking entity.

3. Ascertain whether the board of directors is fulfilling its fiduciary responsibilities in business planning, approving operating policies, hiring competent management, and overseeing business performance.

Management

4. With respect to senior management, determine—
 - a. if detailed policies and procedures are in place to monitor and control mortgage banking activities involving loan production (including origination, underwriting, closing, and wholesale and correspondent lending activities), pipeline (unclosed loans) and warehouse (closed loans) administration, secondary-market (selling, recourse, and servicing) transactions, servicing operations, and management (including hedging) of mortgage-servicing assets; and
 - b. if the reports and limits focus on key risks, profitability, and proper accounting practices.
5. Review the biographies of executive management.
 - a. Determine if the level of experience, education, technical knowledge, leadership skills, expertise, and administrative capabilities of management is sufficient for overseeing the mortgage banking operations.
 - b. Determine whether senior management's salaries are commensurate with the biographical information provided.
 - c. Determine if management's depth and succession plans are adequate.
6. Determine if a separate board committee for mortgage banking activities exists. If so, review the committee's minutes for significant approvals for transactions, activities, and other authorized actions.
7. Determine if the directors, management, and auditors are adequately evaluating, monitoring, and maintaining internal controls over the valuation and modeling processes, the most significant risks and their respective hedging activities, management information systems, and the internal audit function.
8. Review the mortgage banking strategic plan

and planning process. Determine if the goals are reasonable, attainable, and complement the bank's overall business plan.

9. Evaluate the documentation of the planning process, including the most recent operating budget, the business plan, and the related performance measurement system reports. Determine whether the objectives, goals, and growth targets are reasonable and properly aligned with achievable performance levels.
10. Determine if adequate disaster-recovery and contingency plans exist to address the mortgage banking entity's primary risks.

Policies and Procedures

11. Review and evaluate the quality and effectiveness of the bank's mortgage banking policies and procedures within each of the functional internal control areas. Also evaluate the extent to which compliance is achieved, monitored, and reported in the following areas, among others:
 - a. defined permissible mortgage banking activities
 - b. the responsibilities designated to individual officers and employees
 - c. lending limits
 - d. segregation of duties
12. Determine if the bank's policies, procedures, and strategies within other functional areas consider mortgage banking activities. Consult with those examiners reviewing the other functional areas and coordinate your findings with them.
13. Investigate why any identified policy and procedure deficiencies exist. Discuss any recommendations for the correction of deficiencies with management. Ascertain whether—
 - a. management overlooked the needed policies and procedures,
 - b. management is unfamiliar with prudent mortgage banking guidelines and procedures, or
 - c. management is unwilling to create or enhance policies and procedures.
14. If there is lack of compliance with policies and procedures, determine whether the reasons are the result of a—
 - a. lack of awareness of the existence of the policies,
 - b. disregard for the established policies,

- c. misunderstanding of the intent of policy guidelines, or
 - d. a poor internal process for communicating any revisions to the policies and procedures.
15. Determine if management commits to and supports proper controls and monitoring to ensure that policy guidelines will be adhered to in the future.

INTERNAL AUDIT OR INDEPENDENT REVIEW, EXTERNAL AUDIT, INTERNAL CONTROLS, AND QUALITY CONTROL

1. Review the findings of the internal and external audits, quality-control reports, and investor audits to find out if the internal controls are functioning effectively.

Internal Audit or Independent Review

2. Determine whether a separate and independent internal audit function exists and if each internal auditor is independent.
3. Review and assess the qualifications of the internal audit manager and the internal audit staff for mortgage banking, including their accounting and auditing expertise. When making the assessment, consider the department's size; the complexity of its operations and activities; the quality of ongoing staff-training programs; and the staff's experience, education, and certification levels in relation to the volume of existing risk exposures.
4. Determine if, since the previous examination—
 - a. the scope and frequency of the most recent audits and independent reviews were adequate to identify policy, reporting, and internal control deficiencies and all areas of high or significant risk; and
 - b. the audit schedule or plan and coverage included a review of the underwriting practices and other high-risk areas of the mortgage unit or entity.
5. Review all internal audits, internal audit follow-up reports, and management responses to the auditors' findings that were issued since the previous examination.
 - a. Select a significant sample of the work-

papers from the audits for the bank's high-risk mortgage banking operations and activities. Conduct an intensive review of those phases of the internal audits.

- b. Ascertain whether all significant issues and exceptions were brought forward to the final audit report, that the report was promptly presented to the board of directors or its designated audit committee, and whether the cited significant problems or control weaknesses received appropriate and prompt management attention and correction.
 - c. Evaluate the system internal audit uses to follow up on unresolved issues or problems.
6. Assess the adequacy of the reviews of mortgage-servicing assets that were conducted by internal audit or quality control or by independent reviews.
 7. Determine if the internal audit or quality-control programs cover compliance with state and federal laws, generally accepted accounting principles, and investor requirements (including minimum capital requirements).
 - a. Interview those responsible for monitoring compliance and find out the nature of outstanding problems and issues.
 - b. Assess the adequacy and extent of the correction of the problems and issues.
 8. Review any high-risk transactions or activities conducted since the previous examination that were not adequately addressed during the internal audit or independent review.
 9. Investigate any remaining identified internal audit or independent-review deficiencies that have occurred since the previous examination.

External Audit

10. Review, follow, and apply the examination guidance on the review of external auditing programs that is found in the Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations. In addition, follow the examination guidance in part IV of the Policy Statement on the External Audit Function, adopted May 17, 2003. (For both policies, see section 1010.1.)

11. Review the engagement letters for the external audits performed since the previous examination.
 - a. Determine the extent of the external auditor's scope and responsibilities and the extent to which the external auditors relied on the findings of the internal auditors.
 - b. Verify that the external auditor's report included an unqualified opinion on the bank's (and also the mortgage banking entity's) financial condition and on the results of the bank's (or mortgage banking entity's) operations. If a qualified opinion was issued, review and investigate any cited internal control or other significant weaknesses or risks.
 - c. Review the notes to the financial statements and determine if all required disclosures were made.
12. Review and determine the adequacy of the workpapers supporting the external audits performed since the previous examination.
 - a. On the basis of the nature and extent of the audit work performed, management's representations and responses to management letters, and the results of the audit, determine if there were any audit weaknesses or any cited unusual items, practices, or weaknesses in internal control and other areas of concern.
 - b. Investigate the nature and status of any of the uncorrected items (and the respective management responses) with the external auditor and the audit committee. In particular, review and discuss any items that were considered to be material or high risk in relation to the mortgage banking entity's size and complexity of operations.
 - c. Determine whether the scope of any phase of the external audits conducted since the previous examination needs additional examination scrutiny or needs to be expanded to address unresolved significant concerns, problems, or risks (in particular, for the examination and other concerns listed in section 2040.1).
13. Find out and investigate the reasons for any recent or frequent changes in the external auditors who perform audits of the bank, including the mortgage banking entity. If significant, discuss those reasons with the audit committee and the lead or managing external auditor.

Internal Controls

14. Determine if management establishes and implements an effective, high-quality internal control program that identifies, controls, and minimizes significant risks. Verify that the internal control program includes internal and external audits, accounting controls, loan-quality controls, and internal control procedures for all activities of the mortgage banking entity's operations; insurance coverage; and fraud detection. Determine if the program is reviewed annually.
15. Determine and evaluate the nature of the internal control environment and how risk parameters (limits) are communicated to employees within the mortgage banking entity.
16. Evaluate the internal control process for granting exceptions to the bank's policies and procedures.
17. Find out if internal control procedures exist to—
 - a. control legal risk (guarding against material insurance claims, class-action lawsuits, etc.);
 - b. detect fraud, investigate suspected fraudulent activity, and ensure the filing of criminal referrals; and
 - c. ensure the issuance of appropriate management reports.

Quality Control

Quality control implements a system of internal controls that provides management with an opportunity to examine and, if necessary, adjust its policies and procedures. It comprises a system of internal controls that sets standards, measures performance, and determines compliance with applicable legal, federal-agency, and investor requirements. Quality control also provides for the timely correction of deficiencies when they are identified.

18. Ascertain whether the bank's mortgage banking entity has a quality-control unit that is independent of the production function.
 - a. Determine if the quality-control unit is organized to (1) promote efficiency, (2) prevent costly errors that could drain profits, (3) ensure that standardized policies and procedures are known and

- adhered to, (4) verify that policies and procedures are revised on a timely basis, (5) ensure that employees are held accountable for failures, and (6) ensure that procedures exist to facilitate the expansion of the internal audit function when needed.
- b. Ascertain whether quality control evaluates the quality of loans originated or purchased (this evaluation is usually required by investors). Verify that the quality-control program ensures that all loans are originated, processed, underwritten, closed, and serviced according to the bank's internal lending policy and investors' standards and criteria.
19. Determine if the quality-control program meets varying investor guidelines.
 - a. Verify that the quality-control program covers both retail and wholesale loan production.
 - b. If certain investors require 10 percent of closed loans to be reviewed, find out if the reviews are conducted within 90 days of closing.
 20. Find out if any of the quality-control-review activities are outsourced and if they are outsourced in compliance with the bank's quality-control standards.
 21. Review a sample of reports the quality-control unit has issued since the previous examination. Determine if the review coverage was adequate and if the unit's findings were correct and appropriate.
 22. Determine if the quality-control findings are clearly documented and promptly presented to the board of directors and senior management. Determine whether the directors and senior management follow up on the findings and oversee their timely resolution.
 23. If any of the quality-control loan reviews disclosed significant risk, deficiencies, and areas of concern that have arisen since the previous examination, determine (1) if management's responses were reasonable and appropriate and (2) if the problems cited were promptly corrected or resolved.
 24. Determine if any of the quality-control findings or areas of concern were addressed by the internal or external auditors. Review the auditors' workpapers pertaining to any reported significant and persistent problems or areas of concern.

ACCOUNTING

Held for Sale

1. Determine if, at the time a loan is transferred to the held-for-sale account, there was (1) any reduction recorded for the loan's cost in excess of its fair value, resulting in a new cost basis, and (2) a corresponding reduction in the allowance for loan and lease losses (ALLL). If a reduction was not recorded for a loan's cost in excess of its fair value in the ALLL, determine whether there was an additional loan-loss provision recorded to maintain the ALLL at an adequate level.
2. Determine if assets held for sale are segregated from portfolio loans, revalued at each subsequent reporting date until sold, and then reported at the lower of cost or fair value, as required by Statement of Financial Accounting Standards No. 115 (FAS 115), as amended by Statement of Financial Accounting Standards No. 140 (FAS 140).
3. Determine if loans and other assets that are transferred to the held-for-sale account are being revalued at each subsequent reporting date until sold and whether they are reported at the lower of cost or fair value.
4. Determine if warehoused assets held for sale are segregated from portfolio mortgages. Determine if assets held for sale are recorded on the books at the lower of cost or fair value in accordance with FAS 115 (as amended by FAS 140). If the cost of the assets exceeds fair value, determine if the excess is accounted for as a valuation allowance and that there is no ALLL for assets held for sale.
 - a. Verify that assets transferred from the warehouse to the permanent portfolio are being revalued at each subsequent reporting date until sold. Verify that the asset transfers are reported at the lower of cost or fair value.
 - b. Determine if warehouse loans are accurately recorded in the general ledger and in the bank's financial statements and reports of condition.
5. Determine if any declines in loan value (including those attributable to changes in credit quality) and loan recoveries on such declines in value occur after the loans are transferred to the held-for-sale account. Find

out if declines or recoveries are accounted for as increases or decreases in a valuation allowance for loans held for sale and not as adjustments to the ALLL.

- a. Confirm that changes in the valuation allowance are being reported in current earnings and that the valuation allowance for held-for-sale loans is not being reduced below zero (that is, the allowance cannot have a debit balance).
 - b. Verify that valuation allowances are not being reported as part of the ALLL and that the valuation allowances are not included in tier 2 capital for risk-based capital purposes.
6. When the income or expense amounts relating to increases or decreases in the valuation allowance are material, ascertain, for financial reporting purposes, that the income and expense amounts are separately disclosed and appropriately described either on the face of the income statement or in the notes to financial statements.

Held to Maturity

7. Determine if held-to-maturity debt securities are reported at amortized cost (paragraph 7 of FAS 115, as amended by FAS 140) in the statement of financial position only when the bank ensures its positive intent and ability to hold those securities to maturity.
8. Ascertain that the carrying value of assets held to maturity is adjusted to reflect the use of futures or forwards as bona fide hedges according to Statement of Financial Accounting Standards No. 133 (FAS 133), "Accounting for Derivative Instruments and Hedging Activities," as amended by Statement of Financial Accounting Standards No. 138 (FAS 138), "Accounting for Certain Derivative Instruments and Certain Hedging Activities." Determine if there is similar accounting treatment for firm commitments.
9. Determine if transfers from the warehouse to the permanent portfolio are accounted for at fair value.

Mortgage-Servicing Assets

10. Determine whether purchased or assumed mortgage-servicing assets and liabilities are

initially measured at fair value (presumptively, the price paid).

11. Find out if mortgage-servicing assets or liabilities are amortized in proportion to and over the period of estimated net servicing income (servicing revenue in excess of servicing costs) or net servicing loss (servicing costs in excess of servicing revenue).
12. Determine if the notes to the financial statements disclose the following information on mortgage-servicing assets and liabilities:
 - a. the amounts of servicing assets and liabilities recognized during the period (including the amount of mortgage-servicing assets (MSAs) purchased)
 - b. the lower of the amortized cost or fair value of the recognized servicing assets and liabilities and the method and significant assumptions used
 - c. the method and amount of amortization for the reporting period
 - d. reasons for not estimating the fair value of MSAs and mortgage loans without MSAs
 - e. the risk characteristics of the underlying financial assets used to stratify recognized servicing assets for the purposes of measuring impairment
 - f. the activity in any valuation allowance for impairment of recognized servicing assets—including beginning and ending balances, aggregate additions charged and reductions credited to operations, and aggregate write-downs charged against the allowances—for each period for which results of operations are present

Loan-Originiation, Loan-Commitment, and Other Fees

13. Determine if management defers loan-origination fees (also points, placement fees, commitment fees, application fees, management fees, restructuring fees, and syndication fees), net of their costs over the remaining lives of their related loans or group of loans, as an adjustment of yield in accordance with Statement of Financial Accounting Standards No. 91 (FAS 91), generally using the interest method, which is based on the loans' contractual terms.

14. If a commitment expires unexercised, determine if the commitment fees are recognized as income upon the expiration of the commitment.

MANAGEMENT INFORMATION AND COMMUNICATION SYSTEMS

1. Assess whether the management information system (MIS) has the capacity to handle existing volume and activities as well as projected strategies and objectives.
2. Determine if the MIS is capable of producing all necessary reports. Ascertain whether the reports—
 - a. identify closed loans as either held-to-maturity or held-for-sale;
 - b. segregate loans by product type and identify the dollar amount and percentage of total loans for each type;
 - c. monitor the volume of loan applications throughout the origination process;
 - d. identify the applications accepted, outstanding commitments and their delivery status, the effectiveness of hedges, and the historical fallout rates for specific loan categories;
 - e. monitor the status of the delivery of commitments to investors and the effectiveness of hedges; and
 - f. reflect the mortgage banking entity's daily position, including pipeline commitments, warehouse inventory, and forward sales contracts.
3. Assess the quality of reports that are presented to the board of directors. Determine whether the reports include or convey the following information in sufficient detail, given the size and complexity of the department:
 - a. liquidity and capital needs
 - b. various rate-shock scenarios and risk exposures
 - c. hedging activities, including products, results, and strategies
 - d. analyses of fair (mark-to-market) values, including the assumptions and documentation supporting those values
 - e. operating results, including profitability, efficiency, and cost information
 - f. asset-quality trends, including delinquencies, charge-offs, foreclosures, and collection accounts
 - g. production volume
 - h. inventory or warehouse aging (how long loans are in the warehouse or their turnover rate)
 - i. industry and peer-group performance statistics
 - j. policy, operating-procedure, and credit-quality exception reports
 - k. quality-control reports that discuss the analytical review of credit quality, loan characteristics and demographics, trends, and sources of problems (such as a deterioration in production quality and salability or weaknesses in internal controls that may not detect fraudulent activities)
 - l. processing backlogs
 - m. internal and external audit assessments of the effectiveness of the control procedures
4. Determine why management and board reports are deficient. Obtain management's responses to and the corrective actions taken for the deficiencies. Determine the causes for the deficient reports and whether any of the deficiencies stem from the following circumstances:
 - a. The reports contain inaccurate information, and the input and output of information has not been tested.
 - b. The necessary reports cannot be or are not generated.
 - c. Management is unfamiliar with the information system's capabilities.
 - d. Management is unfamiliar with the necessary monitoring of the reports.
5. Review investor-reporting requirements and determine the quality and extent of compliance with those reporting requirements. Investor reporting may vary depending on the servicing contracts in place, but typically the servicing bank is responsible for the following information:
 - a. detailed account reconciliations
 - b. information on the mortgagor's name, principal balance outstanding, and escrow balance
 - c. payment status and any foreclosure activity or transfers to the servicer's other real estate owned (OREO) account

PRODUCTION

1. Review the guidelines for the loan-production area and determine if the guidelines address the following areas:

- a. types of loans that will be originated or purchased
 - b. sources from which the loans will be acquired, including sources from the Internet
 - c. underwriting standards, concentrations of credit, production channels, and production strategies
 - d. documentation requirements
2. Review organization charts to determine the structure of the production function. Verify that the functional units such as pipeline entry, processing, underwriting, closing, and funding are independent from one another.
 3. Find out the types of mortgage products offered, the actual product mix, and the nature of the bank's targeted markets. Evaluate portfolio trends with respect to any product, geographical income, or demographic or other higher-risk concentration.
 4. Ascertain whether operations risk has increased because of high management and staff turnover, an inability to meet investor-documentation requirements, an increase in the number of pools that have not received final certification, an unusually high cost structure, workloads that exceed capacity, and an increased loan delinquency.
 5. Find out whether the board has approved and management uses predetermined risk-tolerance levels. Evaluate whether credit risk (recourse and nonrecourse), interest-rate risk, or liquidity risk has increased because of operational inefficiencies and an inability to sell loans in the secondary market.
 6. Ascertain the nature of the mortgage banking entity's credit culture, compensation methods, and growth targets. Determine whether credit quality is weakened by an emphasis on income compensation versus loan volumes, aggressive or inappropriate lending strategies, relaxed credit standards, low documentation requirements, limited production channels, or geographic concentrations.
 7. Determine the level of and the reasons for nonconforming or unsalable loans and whether they present an undue level of risk. Determine whether the delinquency trends of such loans are being adequately monitored.
 - a. Ascertain how prices are determined.
 - b. Determine if the pricing strategy is typically at, above, or below fair (market) value.
 - c. Assess the impact that pricing strategies have on current and future profitability.
 8. Determine the frequency of price changes for retail, wholesale, and broker channels by reviewing historical price sheets. Evaluate the timing of changes relative to significant market interest-rate movements.
 9. Find out if the secondary marketing manager determines any new product's marketability and pricing strategy. Determine if the marketing manager overly influences the bank's ability to price, deliver, and service the product.

Origination and Underwriting

10. Review the policies and procedures for loan originations.
 - a. Determine if the originators' compensation is highly dependent on loan volume and if that sacrifices loan quality.
 - b. Find out if originators can alter established pricing parameters set by the secondary marketing unit.
 - c. To ensure objectivity, verify that the underwriting unit does not report to production-function management.
11. Review the qualification levels of underwriters (their education, experience, training, and certification credentials).
12. Determine the methods used to evaluate loan originations.
 - a. Review the compensation programs of the bank's mortgage banking entity. Determine if the compensation program is based on normal loan-origination volumes and on qualitative factors such as loan quality and fully completed applications (including the documentation on liens, adequate values of collateral, and thorough documentation of the applicant's financial information that supports the originator's determination that the potential borrower has the financial capacity to repay the loan).
 - b. Find out if management holds originators accountable for weak loan quality and credit risk.
13. Determine if adequate control processes are in place for front-end and post-closing loan documents. Find out if the processing activities are controlled through the use

- of standardized procedures, checklists, and systems.
14. Review a representative sample (that is, a statistical sample) of current loans to test the underwriting policies and procedures. Determine the validity and adequacy of documentation supporting loans held for sale or investment.
 15. Determine whether notifications to management on withdrawn mortgage applications are sufficient to allow for proper hedging strategies.
 16. Determine how management monitors originators' adherence to underwriting and investor guidelines.
 17. If underwriting is performed in-house, determine if management establishes, reviews, and monitors approval limits, exception standards, and documentation procedures for loans that are rejected or suspended. Find out if management receives and reviews adequate current reports tracking the quality of loans for each underwriter.
 18. If a scoring underwriting system is used, review the credit scoring methodology and determine if the system can be overridden and by whom.

Overages

An overage exists when a lender permits an originator or a broker to impose a higher number of points (or a higher interest rate) on a loan to certain borrowers than is imposed for the same product offered to other borrowers at a given point in time. The amount of overage that is received is usually shared between the mortgage banking entity (the originator) and the broker. Overages are often referred to as *yield-spread premiums* (YSPs).

19. If the bank's mortgage banking entity is involved in overage activities, determine if management has developed comprehensive policies and procedures, detailed documentation and tracking reports, accurate financial reporting systems and controls, and comprehensive customer complaint tracking systems to adequately monitor and supervise overage activities.
20. Since the previous examination, determine if overage activities are an essential component of the mortgage banking entity's earnings. Find out the percentage of originations

that resulted in overages and the average overage per loan.

21. Ascertain whether overages are a major component of loan officer or broker compensation.
22. Determine whether overages were reviewed during the last consumer compliance fair lending examination and whether any recommendations were made regarding overage activities.

Closing

23. Evaluate procedures for closing loans. Ascertain whether adequate analyses are prepared and if any allowances are established for estimated probable losses arising from documentation deficiencies on closed loans.
24. Determine if management requires that necessary and required documents be obtained and properly signed before funds are released.
25. Evaluate management's controls over the loan-funding process.
26. Assess management's plans for funding originations during peak volume periods.
27. Determine if a post-closing documentation-review process exists to differentiate, track, and obtain both trailing and missing documents.

Wholesale and Correspondent Loan Production

28. Determine if the bank has adequate control processes in place to monitor and manage the risks associated with purchasing third-party-originated loans and approvals (controls include management's close supervision of underwriting that is delegated to brokers or correspondents).
 - a. Find out if the bank's reporting systems monitor and manage—
 - the quality of mortgages purchased from wholesale and other third-party sources and
 - the methods used to evaluate the loans on an ongoing basis.
 - b. Determine if controls over the independent appraisal and underwriting process are adequate and if due diligence over

- third-party relationships is adequate to prevent poor-credit-quality loan originations, including fraudulent originations.
29. Review the policies and procedures for wholesale and hybrid purchases.
 - a. Find out the production channels that are used and how they perform. (The channels may include whole loan purchases (production flow) or hybrid purchases such as table funding, assignment of trade, or co-issuances (bulk purchases of servicing assets).)
 - b. Determine the nature and extent of the compensation of brokers and correspondents for each production channel.
 30. Review the bank's approved list of wholesale sources of loans. Determine the types and dollar volume of loans purchased from each wholesale source. Investigate any purchases from sources not on the approved list.
 31. Determine management's process for evaluating and monitoring the quality of loans purchased from wholesalers. Ascertain whether the process considers the following:
 - a. historical default and foreclosure levels
 - b. nondelivery history
 - c. HUD, Fannie Mae, FHLMC (Freddie Mac), or GNMA investor status (when applicable)
 - d. documentation deficiencies
 - e. financial statements
 32. Determine if the bank underwrites mortgages purchased from wholesale sources.
 - a. If the bank delegates underwriting responsibilities to a correspondent or a third party, determine and evaluate the adequacy of the process for reviewing and monitoring the quality of mortgages purchased.
 - b. Find out if—
 - post-purchase reviews adequately assess the loan quality and completeness of the documents;
 - the bank maintains records of post-loan-purchase reviews, including the volume of loan rejections from each source; and
 - the bank frequently returns to the seller noncompliant loans (loans not meeting contractual requirements) purchased from wholesale sources.
 33. Ascertain what methods are used for reviewing and approving brokers and correspondents and what the specific programs are. Determine which loans are purchased.
 - a. Determine if there is an approved list of correspondents and how the list is updated.
 - b. If there are deviations from the list, determine who authorized them and if there are controls to prevent unauthorized purchases.
 34. Find out if financial reviews of the correspondents are conducted, who conducts the analysis, and how frequently analyses are conducted. Determine whether adequate controls are in place to detect changes in the financial condition of a correspondent, test and monitor the quality of loans purchased, and evaluate the correspondent's financial capacity to perform under contractual repurchase agreements.
 35. Ascertain how the bank manages funding and liquidity risk for wholesaling mortgages.
 - a. Determine if the collateral is received before payment.
 - b. Determine what controls are in place to prevent unnecessary loss exposures.

PIPELINE, WAREHOUSE, AND HEDGING ACTIVITIES

1. Review the written policies and procedures for pipeline, warehouse, and hedging activities.
 - a. Determine the process for granting exceptions (including the prior-approval requirements and whether the policy exceptions are reported to the asset/liability committee) that are contrary to the established lending policies and limits.
 - b. Find out if the policies define the following criteria:
 - position and earnings-at-risk limits
 - permissible hedging activities
 - individuals authorized to engage in hedging activities
 - fair (market) values
2. Evaluate the effectiveness of the lending limits, approval requirements, MIS reports, and pipeline or warehouse hedging strategies to identify, monitor, measure, and control risks.
3. Determine if an appropriate separation of duties exists for the pipeline, warehouse,

- and hedging process. Ascertain whether there are proper controls in place for the various phases of each process.
4. Ascertain whether the control systems exist to ensure that the fair (market) value determinations are performed by a person who is not directly responsible for pipeline and warehouse hedging activities.

Pipeline Management

The pipeline consists of applications approved but not yet funded. Typically, two types of loans are in the pipeline: rate-locked and floating-rate. The key to effective hedging of pipeline loans is predicting the fallout rates of rate-locked loans (the rate at which approved, rate-locked loans will *not* be funded).

5. Review the methodology used and the adequacy of its documentation to predict the volume of loan applications that are expected to “fall out” of the mortgage pipeline.
6. Find out how management tracks the bank’s loan-fallout activity and how the tracking process and information are used to control and lessen the risks associated with its hedging activities.
7. Review the reports on pipeline management that provide the pipeline-fallout ratios for each type of loan product. Assess the effect of unanticipated fallouts on the results of hedging activities.
8. Review the frequency and accuracy of pipeline-commitment reporting. Find out how pipeline commitments are identified (including by their product type and interest rate, and the separate identification of the locked-rate and floating-rate commitments) and reported on MIS reports.
9. Review the signed pipeline-commitment reconciliations and verify that they are prepared monthly. Compare them against the pipeline position reports.
 - a. Determine if commitments are specifically identified by product type and interest rate.
 - b. Determine if rate-locked commitments and floating-rate commitments are separately identified and tracked.
 - c. Determine what management’s process is for handling expired rate-lock commitments.
10. Determine if pipeline commitments are accurately disclosed in the notes to the financial statements and in reports of condition.
11. Review management’s procedures for monitoring and projecting the volume of applications that are expected to fall out of the mortgage pipeline.
 - a. Determine how the fallout rates correspond to hedging practices.
 - b. Determine whether management assumptions relative to loans that will not close equate to the hedging practices in place.
 - c. Ascertain if the bank uses simulation models to predict fallout percentages and to determine hedging strategies, which are dependent on the interest-rate environment.
12. If the bank has been unable to meet mandatory commitments, determine if management purchased loans from other sources or paid investors a pair-off fee.
 - a. Determine if the situation was reported to the board of directors or a board committee.
 - b. Ascertain the reasons why the bank was unable to meet mandatory commitments.

Warehouse Management

Warehouse loans are funded loans waiting to be delivered to the secondary market.

13. Review internal warehouse-reconciliation reports, which should be prepared at least monthly.
 - a. Assess the adequacy of controls over the warehouse account.
 - b. Determine if errors are promptly corrected (errors such as mortgages that are funded more than once or mortgages that are funded but not closed).
14. Review warehouse-turnover and -aging reports, which should be prepared at least monthly.
 - a. Determine if mortgage loans are removed from the warehouse within a reasonable period of time (usually 90 days or less).
 - b. Find out why loans are remaining in the warehouse for a longer period.
15. Ascertain whether any warehouse loans are being held beyond the bank’s normal time frames in anticipation of improved market conditions. If the bank is taking specula-

- tive positions with warehouse inventory, determine if the positions are within the approved dollar limits. (Loans held for sale are typically newly originated credits and are normally held in the warehouse only for a short period of time; therefore, delinquencies and protracted holding periods are not normal.)
16. Review management's methods for handling warehouse loans that are ineligible for sale. Find out if a significant volume of ineligible loans is being placed in the bank's held-for-investment loan portfolio because they are delinquent, have documentation problems, or have other weaknesses. If the volume of ineligible loans is significant, determine the methods used for handling the resolution of such loans.
 17. Assess management's strategies for hedging pipeline or warehouse loans, the characteristics of these loans (such as adjustable-rate-mortgages (ARMs) or loans with interest-rate caps and floors), and the types of hedging instruments used.
 - a. Review actual hedging practices and ascertain if they conform with established policy limitations and guidelines.
 - b. Obtain and review the hedging information provided to executive management and the board of directors.
 - Evaluate whether hedging practices are properly approved and adequately supervised.
 - Determine if the board of directors approves all hedging strategies and the individuals who perform them.
 18. Review the effectiveness and financial results of hedging strategies, such as the use of forward sales or options, to hedge risks associated with rate-locked commitments in the pipeline. (Some banks may not hedge interest-rate risk associated with rate-locked loans.)
 - a. Determine management's strategies for hedging loans with special risks (such as ARMs or loans with interest-rate caps or floors).
 - b. Find out if the bank is assuming excessive basis risk for any hedging product.
 - c. Determine if correlation is used to analyze the bank's hedging strategies (to measure the degree of correlation between the hedge product and the underlying position being hedged, and the degree of risk each strategy or position entails).
 19. Find out if call options are written to enhance inventory levels. If so, verify that they are written against covered positions. Ascertain whether management is speculating in any way and whether this activity subjects the bank and its mortgage banking entity to undue risk.
 20. Review recent profit or loss reports for mortgage banking hedging activities. Assess the effectiveness of the hedging strategies on mortgage banking operations, including the use of such strategies to offset the risk inherent in funded but unsold loans.
 21. Review management reports relating to pipeline and closed-loan hedging operations.
 - a. Determine whether the reports are complete, accurate, and timely.
 - b. Analyze whether the reports are effective in adequately limiting excesses, recording exception approvals, and detailing the risk exposures.
 22. Find out if the bank uses any simulation models to establish risk limits and hedging strategies.
 - a. Determine if the simulation assumptions are reasonable and if the volatility assumptions are consistent with the market.
 - b. Find out how frequently the assumptions and other model inputs are reviewed, tested, and updated.
 - c. Ascertain if budget and management decisions are included in the model's assumptions and the extent to which they are incorporated.
 23. Determine if management adequately assesses counterparty risk and establishes appropriate limits.
 24. Determine if hedging instruments are accurately and properly disclosed in the notes to the bank's financial statements and in its reports of condition.
 25. Find out from discussions with management what systems the board of directors has authorized for use in—
 - a. measuring, controlling, and hedging interest-rate risk;
 - b. defining the level of interest-rate risk the bank's board is willing to accept; and
 - c. specifying the hedging and other current or future strategies for achieving and

- maintaining the bank's desired goals. (Depending on the current and forecasted interest-rate environment and projected fallout rates, management may be either over- or underhedging pipeline and warehouse loans.)
26. Determine and evaluate the adequacy of the internal controls in place to oversee hedging activities (controls include monitoring the effectiveness of the authorized hedging strategies and reviewing hedged-instrument concentrations and counterparties).
 27. Review MIS reports relating to hedging strategies. Verify that the reports are accurate, adequate, current, and complete and are prepared regularly.
 - a. Verify that the reports sufficiently detail risk exposures.
 - b. Review reconcilements of outstanding trades to the daily position report.
 28. If hedging strategies are ineffective, determine if the following situations are the cause:
 - a. poor correlation of data
 - b. unreliable data
 - c. speculation
 29. Determine if the following controls over forward sales activities exist:
 - a. Traders are prohibited from entering forward sales data into the system, and individual trade tickets are required to be prepared and submitted to an independent unit for processing.
 - b. Third-party trade confirmations are received and reviewed by a separate, independent unit.
 - c. The bank has established prudent follow-up procedures for unconfirmed trades and confirmation discrepancies. Management uses the follow-up procedures to resolve or correct any unconfirmed trades or discrepancies.
- prevented from overly influencing or dominating pricing decisions.
- b. Review the current list of mortgage-product offerings and the daily price sheet. Find out if the prices are determined centrally and are uniform.
 - c. Ascertain whether the pricing methods and procedures used are consistent with the bank's strategic plans.
 - d. Find out from management what pricing strategies it uses; whether mortgages are priced using comparative security-price screens; and if the mortgages are priced neutrally or above, below, or at their fair (market) values.
 - e. Using management's pricing analysis, ascertain whether management makes its pricing decisions on the basis of the bank's competitors, the overall costs of loan production and secondary marketing, and the value of servicing assets that are generated. Evaluate the current and future profitability impact of the bank's pricing decisions.
2. Find out the change in pricing frequencies for retail, wholesale, and broker channels. Evaluate the timing of pricing changes relative to significant market interest-rate movements.
 3. Determine what procedures are in place to ensure that deviations from the approved pricing policies receive the proper degree of scrutiny and approval by senior management.
 - a. If deviations are common, determine why they are occurring. (For example, are they occurring because of competition, compensation schemes, or departmental profitability considerations or targeted goals?)
 - b. Ascertain what impact the deviations have had on the mortgage banking entity's production volumes and profitability.
 4. Find out what policies are in effect for governing customer rate locks.
 - a. Determine if rate locks expire, automatically renew, or are renegotiated at current interest rates.
 - b. Ascertain whether the number and dollar volume of loans with expired rate locks are adequately monitored, tracked, and controlled.

SECONDARY MARKETING

Mortgage Pricing

1. Review the mortgage-pricing methods and procedures to find out how the prices for mortgages are established.
 - a. Determine if the secondary-market unit is responsible for setting mortgage prices and if the mortgage originators are

Selling Mortgages

5. Find out what marketing programs are used to sell mortgages to investors. Review and assess the financial impact of these programs on sales volume.
6. Sample and review the larger-investor master sales commitments:
 - a. Review investors' requirements for underwriting, delivery, documentation, and servicing.
 - b. Determine the amount, maturity, and terms of the commitments.
 - c. Determine whether the bank has been able to meet investors' requirements and the mandatory sales commitments. If not, determine the potential financial exposure to the bank.
7. Determine the number of sold loan pools that lack final pool certification, the reasons why, and if the mortgage banking group was required to post a letter of credit.
8. Determine if the bank participates in a mortgage-backed security swap program. Review the terms of the swap agreements and determine if any of the terms are financially detrimental to the bank.

Recourse Transactions and Obligations

9. Review a sample of sales contracts and servicing agreements to determine if the bank has any continuing recourse obligations to the purchaser beyond normal representations and warranties.
10. When loans are sold with recourse, determine if—
 - a. the bank has adequate MIS to track all recourse obligations;
 - b. management is adequately identifying and managing the risk associated with recourse obligations;
 - c. the bank is negotiating the assumption of excess risk in exchange for lower guarantee fees;
 - d. reserve levels are adequate for loans sold with recourse (see FAS 140); and
 - e. management properly accounts for all loans sold with recourse in the bank's reports of condition.

MORTGAGE SERVICING

Portfolio Supervision

1. Review the written policies and procedures for mortgage loan servicing and determine if they adequately cover all facets or functional areas of the servicing operations.
 - a. Determine whether reports to management adequately monitor compliance with the established policies and procedures.
 - b. Determine how exceptions to the policies and procedures are identified and addressed.
2. Review a sample of investor-account reconciliations and determine if—
 - a. each investor account is reconciled at least monthly,
 - b. outstanding items are resolved in a timely manner,
 - c. management regularly charges off stale, unreconciled items, and
 - d. a supervisor reviews and approves the reconciliations.
3. Review and determine the accuracy and adequacy of the most recent management reports that state operating results for the servicing unit. Determine if the details provided are adequate to supervise the servicing function.
4. Review the most recent analysis of servicing revenues and costs for the primary product types. Ascertain whether costs are estimated and prepared on an average or incremental basis.
 - a. Determine if management's analysis of revenue considers all sources of revenue, including contractual servicing fees, ancillary fees, and the benefits derived from compensating balances from custodial funds.
 - b. Assess the adequacy of the servicing unit's current and projected profitability. Determine if management analyzes profitability on a product-by-product basis and how this analysis is factored into strategic decisions.
 - c. Determine if management's cost analysis includes all direct and indirect servicing expenses.
5. Review the list of outside vendors and subservicers the bank employs to perform servicing functions.

- a. Determine how management assesses (at least annually) the quality of work performed by outsiders.
 - b. Find out if management regularly reviews and evaluates the financial condition of each vendor or servicer.
 - c. Ascertain whether the bank has a contingency plan to ensure it fulfills servicing responsibilities if a vendor or servicer fails to perform.
6. Evaluate the asset quality of the servicing portfolio.
 - a. Review the reports on the volume of delinquencies, foreclosures, bankruptcies, losses, and other real estate owned that have been prepared since the previous examination. Assess the extent and impact of those reported results on profitability and financial performance.
 - b. Determine the extent and impact any geographical credit concentrations have had on profitability and financial performance.
 7. Determine if complaints are appropriately resolved. Review significant complaints to ascertain if there are any possible internal control deficiencies or substantial legal risks.
 8. Determine if the bank has purchased loans from the servicing portfolio.
 - a. Determine if appropriate policies and procedures governing the purchases are in place.
 - b. Determine the reasons for the purchases.
 - c. Analyze the volume and trend of purchases.
 9. Review the procedures for receiving payments from borrowers, depositing funds into segregated custodial accounts, and remitting funds to investors.
 - a. Assess the bank's system for ensuring borrowers' payments are accurately applied and ensuring investors receive payments on schedule.
 - b. Determine if adequate controls exist over custodial accounts (controls include daily balancing, monthly reconcilements, authority for disbursements, and segregation of administrative duties).
 10. Review written servicing agreements to determine investor-servicing requirements, funds remittance schedules, contractual servicing fees, guarantee fees, and servicer representations and warranties.
 - a. Determine if loan delinquencies have prompted the use of bank funds to meet remittance requirements.
 - b. Track the timeliness of the flow of funds at the investors' cutoff dates, the dates of remittance of funds to investors and security holders, and the recognition dates of servicing revenue.
 11. Assess the adequacy of the system for ensuring the timely payment of taxes, insurance, and other obligations of the borrower.
 12. Find out what methods are used for correcting shortages and surpluses in escrow accounts.
 13. Review the procedures for ensuring that tax and insurance payments are made on delinquent loans.
 14. Assess the methods used to evaluate the financial condition of subservicers.
 15. Evaluate the servicer's and subservicer's agreements as to their responsibilities, reporting requirements, performance, and fees. Verify that management confirms that no additional liabilities, real or contingent, are being (or can be) imposed on the bank's mortgage banking entity beyond its responsibilities as a servicing agent.

Mortgage-Servicing Assets

16. Determine if and the extent to which mortgage-servicing assets (MSAs) are reviewed by the external auditors.
17. Review management's procedures for initially recording, amortizing, and periodically re-evaluating MSAs. Verify that reports of condition and income reflect quarterly revaluations of MSAs. Determine if the procedures require MSA documentation of—
 - a. the methods employed for assigning a relative fair value to each MSA asset, specifically, the assumptions and procedures used (which should incorporate assumptions that market participants would use) to derive fair value;
 - b. the recording of the fair value of MSAs and their amortization in proportion to and over the period of their estimated net servicing income or loss (a valuation allowance must be established if costs exceed the fair value);
 - c. the systems for recordkeeping and impairment testing;
 - d. the policies, procedures, and operating

- requirements for the ongoing supervision of MSAs;
- e. at least quarterly reviews of the book values of MSAs to determine if they are recorded at their fair values;
 - f. the procedures to ensure compliance with other accounting and regulatory requirements, investor criteria, and internal policies;
 - g. the stratification of MSAs into groups based on one or more of the predominant risk characteristics of the underlying financial assets to determine the fair value of the MSAs;
 - h. the recognition of an impairment when the book value of a stratum of a servicing asset exceeds the asset's fair value, and the adherence to the accounting requirement that the book value be reduced to fair value through a valuation allowance for that stratum;
 - i. the validation process to ensure that the actual performance of MSAs is compared with their predicted performance;
 - j. the procedures to ensure that the fair (market) value or valuation assumptions used for the impairment analysis are current and reasonable and that they reflect the expected levels of mortgage prepayments and market discount rates (When checking impairment, ensure that the bank's test uses the current (not the original) level of servicing fees (prepayments on the underlying loans cause the weighted average coupon (WAC) to change, which changes the level of servicing over time.);
 - k. management's review and approval of the results and assumptions employed; and
 - l. the process to determine when and how adjustments should be made to the respective valuation allowance on the basis of the results of impairment analyses.
18. Evaluate the due-diligence process for bulk acquisitions of purchased MSAs, if applicable.
 - a. Determine if the bank performs a comprehensive due-diligence review before purchasing a servicing portfolio.
 - b. Determine if management applies and documents reasonable valuation assumptions (documentation includes data on the underlying mortgages, servicing revenues and costs, prepayment speeds, and discount rates as well as explanations of how the particular valuation assumptions used were determined).
 - c. Verify that management is properly reporting MSAs in Schedule RC-M of the bank's report of condition and is reporting the results of the MSA transactions in its report of income.
 19. Determine if management separately identifies servicing assets and any related interest-only strips receivables.
 20. Review MSAs recorded as a result of retail production (originated) or purchased activities.
 - a. Determine if the bank obtains commitments to resell the mortgages before or within 30 days of their purchase.
 - b. Confirm that the purchase or origination cost of the loans and their MSAs are based on quoted market prices or the best available information, considering the prices for similar assets and asset-valuation techniques (such as estimating the future cash flows using a discount rate that is commensurate with the risks involved). Other valuation techniques include option-pricing models, matrix pricing, option-adjusted spread models, and fundamental analyses.
 - c. If other valuation techniques are used, determine if they are consistent with the objective of measuring fair value and if they incorporate assumptions that market participants would use when estimating future servicing income, including assumptions about prepayment, default, and interest rates.
 - d. Find out if the mortgage banking entity is allocating costs to mortgage-servicing rights when it is practicable to estimate the fair value of those rights and the related mortgage loans. If not, determine that the MSAs are recorded at zero and if they are disclosed in the bank's financial statements. (The reasons why it was not practicable to estimate their fair values should also be disclosed.)
 21. Complete an in-depth review of the valuations that are based on the fair (market) values for MSAs.
 - a. Determine if management identifies the characteristics of the servicing portfolio, specifically the following items:
 - investors

- types of products
 - transactions made with or without recourse
 - geographic dispersion of borrowers
 - average loan size
 - range of interest rates
 - projected life and average age of loans
 - delinquency, foreclosure, OREO, and bankruptcy levels
 - loss experience
- b. Review prepayment-speed assumptions to determine if they are realistic and conform to acceptable industry standards.
 - c. Determine if the discount-rate valuation assumptions used to estimate future cash flows are realistic and in line with industry practices.
22. Request that management recalculate the fair value of any MSAs if the assumptions used are unrealistic and examiners believe the reported MSA values are materially overstated (if the bank's internal model is considered reliable, it may be used to recalculate the MSA's value, after substituting more realistic assumptions). Following the recalculation of these fair values, review the assumptions used. Evaluate and verify the results.

Collections

23. Review policies and procedures for collecting delinquent loans.
 - a. Determine if collection efforts follow investor guidelines.
 - b. Determine if the bank documents all attempts to collect past-due payments.
 - c. Determine if the bank charges off uncollectible balances in a timely manner.
24. Review loan-delinquency reports. Select and review a sample of files for severely delinquent borrowers (particularly those borrowers over 120 days delinquent).
 - a. Determine if the bank initiates foreclosure proceedings in a timely manner and properly notifies borrowers and investors.
 - b. Review a sample of loans in which the foreclosure action is delayed due to forbearance agreements. Determine if the agreements are within investors' guidelines.
25. Review a sample of investor-owned OREO properties to determine if administrative

and marketing practices comply with investor guidelines.

26. Determine if there are any contingencies resulting from the improper administration of foreclosed properties.

FINANCIAL ANALYSIS

Financial-Statement Level and Trends

1. If separate-unit or subsidiary financial statements are prepared for the mortgage banking entity, perform a volume and trend analysis of the entity's financial condition and performance for the current and previous two-year period. Pay particular attention to any comparative disparities that fall within the current examination period.
2. Review any of the mortgage banking entity's primary or large balance-sheet and income-statement categories or items that may represent or pose significant financial or other risk concentrations. Investigate any items or categories that pose undue financial or other risks. Discuss these categories or items with management and the internal and external auditors.
3. Determine whether the analyzed financial trends are consistent with the economic environment, interest-rate movements, the bank's business orientation, and management's intended growth strategy.
4. Determine whether reports filed with the Federal Reserve (or other federal regulatory departments, agencies, or government-sponsored agencies that are directly involved with mortgage banking or asset securitizations involving real estate) are prepared accurately and submitted in a timely manner. Pay particular attention to the reporting for mortgage-servicing assets and recourse obligations retained by the mortgage banking entity.

Earnings Performance and Profitability

5. Using ratios and industry comparisons, analyze and evaluate the mortgage banking entity's earnings performance in terms of the level, composition, and trend of net income. Consider internal factors such as

- the entity's business orientation and management's growth plans. Also consider external factors such as interest rates, the economic environment, and industry performance trends. (Ratios that compare earnings to total assets or equity are of limited use unless the examiner also considers the transitory nature of the balance sheet and the impact of off-balance-sheet servicing activities on the company's use of financial leverage.)
6. Review and discuss with management and internal or external auditors any unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, reserves, write-downs or adjustments in MSA amortization, salaries and overhead items, or income taxes.
 7. Evaluate officer-compensation arrangements that are tied to the department's or bank's profitability. Ascertain whether any of the compensation or incentive programs pose significant financial burdens or risks to the extent that they materially affect the institution's profitability or that they promote unsafe or unsound practices.
 8. Investigate the causes for operating losses in the mortgage banking entity's operations and evaluate the prospects for profitability.
 - a. Determine if elevated operating costs or other inefficiencies are impairing profitability.
 - b. Establish whether excessive borrowing activities have led to adverse changes in the cost of funds. Ascertain what impact a change in the cost of funds would have on the net interest margin.
 - c. Determine why hedging strategies have not appropriately controlled interest-rate risk.
 9. Determine management's process for meeting the liquidity needs of the mortgage banking department, considering the size of loans in the pipeline and the warehouse as well as the nature and extent of other longer-term assets.
 10. Evaluate management's process for meeting the liquidity needs of the mortgage banking department, considering the size of loans in the pipeline and the warehouse as well as the nature and extent of other longer-term assets.
 11. Determine whether liquidity sources are adequate for current conditions and projected funding needs.
 - a. Evaluate the methods used to fund mortgage operations. Funding methods may include repurchase agreements, commercial paper, revolving warehouse lines of credit, and long-term debt.
 - b. Review asset and liability management practices to determine if funding maturities approximate the maturities of underlying assets.
 12. Determine whether sources of liquidity are adequate under both current conditions and economic duress. Consider earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, the maintenance of debt covenants, and contingent liquidity-planning capabilities.
 13. Evaluate the financial instruments used to fund mortgage operations. Financial instruments may include repurchase agreements, commercial paper, revolving warehouse lines of credit, or long-term debt (or a combination of these instruments). Review related credit agreements and the systems used to monitor compliance with debt covenants.
 14. Evaluate whether excessive borrowing activities have led to a highly leveraged financial position that exposes the company to money market changes in the cost of funds. Assess what the impact would be if there were a change in the bank's and the mortgage banking entity's cost of funds.
 15. Determine the degree of financial flexibility the bank and mortgage banking entity maintain.¹ Ascertain whether the bank and mortgage banking entity possess adequate financial strength and whether they have sufficient access to lines of credit or assets (or both) that can be easily collateralized to readily obtain borrowed funds.
 16. Review the net current items on the cash-flow statement pertaining to cash flow from

Analysis of Risk, Liquidity, and Funding

9. Determine which risks associated with mortgage banking, such as credit risk, interest-rate risk, price risk, transaction risk, liquidity risk, compliance risk, and strategic risk, pose the most material threat to earnings, capital, and liquidity. Determine whether the bank complies with SR-96-13 and the June 26, 1996, Joint Agency Policy Statement on Interest Rate Risk.

1. Financial flexibility is the ability to obtain the cash required to make payments as needed.

operations, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. From the level of current transactions, determine whether sufficient positive cash flow exists. (The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity.)

17. Review asset and liability management practices to determine whether funding maturities closely approximate the maturities of underlying assets or whether any funding mismatches exist. Determine if the bank and its mortgage banking entity are exposed to short-term interest-rate fluctuations that may result in significant earnings volatility if interest rates change rapidly.

INTERCOMPANY TRANSACTIONS

Follow the examination guidance, instructions, and procedures in sections 4050.1, 4050.2, 4050.3, and 4050.4 that apply to Federal Reserve Act sections 23A and 23B and Regulation W.

1. Review the following transactions between the bank and its affiliates. Determine if there is compliance with the applicable determinants of control, quantitative and other limitations, and collateral and valuation requirements of Federal Reserve Act section 23A and Regulation W.
 - a. loans or extensions of credit
 - b. purchases of securities or assets
 - c. the bank's issuance of a guarantee (credit enhancements, cross guarantees, and keepwell agreements), an acceptance, or a letter of credit on behalf of the mortgage banking entity or its affiliate
 - d. the acceptance from a third party of securities issued by an affiliate (including mortgage-backed securities) as collateral for a loan
 - e. purchases of low-quality assets by the bank
 - f. merger and acquisition transactions
 - g. transactions with third parties when the proceeds are transferred to or used for the benefit of an affiliate
2. Review the following intercompany and affiliate transactions. Ascertain whether there are any underlying reasons (for example, non-independent credit reviews, transfers

being classified as purchases, blanket advance-purchase commitments, no evidence of providing consideration, absence of safe and sound banking practices, etc.) why the following mortgage bank and intercompany or affiliate transactions do not qualify for the applicable exemptions found in section 23A or Regulation W:

- a. transactions involving sister bank
- b. transactions giving immediate credit for uncollected items in the ordinary course of business
- c. loans, guarantees, acceptances, or lines of credit secured by segregated, earmarked deposits or U.S. or U.S.-guaranteed obligations
- d. asset purchases that have a readily identifiable and publicly available market quotation
- e. transfers of subsidiaries to the bank
- f. asset purchases on a nonrecourse basis if—
 - the extension of credit was originated by the affiliate;
 - the member bank makes an independent evaluation of the creditworthiness of the borrower before the affiliate makes or commits to make the extension of credit;
 - the member bank commits to purchase an extension of credit before the affiliate makes or commits to make the extension of credit;
 - the member bank does not make a blanket advance commitment to purchase extensions of credit from the affiliate; and
 - the dollar amount of the extension of credit, when aggregated with the dollar amount of all other extensions of credit purchased from the affiliate during the preceding 12 calendar months by the member bank and its depository institution affiliates, does not represent more than 50 percent (or such lower percent as imposed by the member bank's appropriate federal banking agency) of the dollar amount of extensions of credit originated by the affiliate during the preceding 12 calendar months.
3. Review the following intercompany, affiliate, or covered transactions for compliance with section 23B of the Federal Reserve Act, including its competitive terms and conditions requirement.

- a. all transactions subject to section 23A
- b. any transaction in which the proceeds are used to benefit the mortgage banking nonbank subsidiary or entity
- c. sales of securities or assets to another affiliate, including those sales subject to an agreement to repurchase
- d. payments of money or the furnishing of services to an affiliate under contract, lease, or otherwise
- e. transactions in which the mortgage banking nonbank subsidiary or entity acts as agent or broker or receives a fee for providing services to the bank
- f. transactions with a third party if the mortgage banking subsidiary or entity has a financial interest in the third party or participates in the transaction
- g. purchases of assets as a fiduciary
- h. purchases of securities underwritten by the bank as the principal underwriter
- i. transactions or advertisements whereby the bank assumes responsibility for an affiliate's obligations

of its capital adequacy. Ascertain how the bank's analysis relates to the determination of its risk-weighted assets and the levels of risk attributable to the mortgage banking entity, compared with the entity's accumulated earnings and other contributions to the bank's capital. Determine if the mortgage banking entity is providing sufficient capital resources to support the overall level of risk arising from its operations, without having a negative impact on the bank's level of capital attributable to its other operations.

3. Determine if the mortgage banking entity's assets (including MSAs) and risks (on- and off-balance-sheet) are correctly computed and quantified as part of the bank's overall determination of compliance with the risk-based capital adequacy guidelines (12 CFR 208, appendix A) and the tier 1 leverage capital adequacy guidelines (12 CFR 208, appendix B). Follow and apply the applicable examination guidance and procedures in sections 3020.1, "Assessment of Capital Adequacy," and 4030.1, "Asset Securitization."
4. Determine whether a written capital-generation plan or policy has been developed, approved, and reviewed at least annually by the board of directors. The plan should specify what capital-generation levels are needed to support the mortgage banking entity's current operations and projected future growth, given the prescribed risk-tolerance levels that arise from the bank's mortgage banking transactions and activities.

CAPITAL ADEQUACY

1. Ascertain whether management has periodically verified that the mortgage banking entity meets the nominal capital levels required by investors (Fannie Mae, Freddie Mac, etc.) and meets any additional required capital for loans serviced for investors, on the basis of the bank's financial reporting under generally accepted accounting principles.
2. Review the bank's computation and analysis

Overall Conclusions Regarding Condition of the Bank: Uniform Financial Institutions Rating System

Effective date May 1997

Section A.5020.1

OVERVIEW

Since 1979, state member banks have been rated using the interagency Uniform Financial Institutions Ratings System (UFIRS), which was recommended by the Federal Reserve and other banking agencies. This rating system, referred to industry-wide by the acronym CAMEL, evaluated five components: capital adequacy, asset quality, management and administration, earnings, and liquidity.

Over the years, the UFIRS has proven to be an effective internal supervisory tool for uniformly evaluating the soundness of financial institutions and for identifying those institutions requiring special attention or concern. Recently, the UFIRS was revised and updated to address changes in the financial services industry and in supervisory policies and procedures. The revisions include the addition of a sixth component addressing sensitivity to market risks, explicit reference to the quality of risk-management processes in the management component, and identification of risk elements within the composite and component rating descriptions.

The revisions to UFIRS are not intended to add to the regulatory burden of institutions nor require additional policies or processes. Instead, they are intended to promote and complement efficient examination processes. The revisions have been made to update the rating system, while retaining the basic framework of the original system.

The UFIRS considers certain financial, managerial, and compliance factors that are common to all institutions. Under this system, the supervisory agencies endeavor to ensure that all financial institutions are evaluated comprehensively and uniformly and that supervisory attention is appropriately focused on the financial institutions exhibiting financial and operational weaknesses or adverse trends.

The UFIRS is a useful vehicle for identifying problem or deteriorating financial institutions, as well as for categorizing institutions with deficiencies in particular component areas. Further, the rating system helps Congress follow safety-and-soundness trends and assess the aggregate strength and soundness of the financial industry, which helps the federal banking agencies in fulfilling their collective mission of

maintaining stability and public confidence in the nation's financial system.

COMPOSITE RATINGS

Under the UFIRS, each financial institution is assigned a composite rating based on an evaluation and rating of six essential components of its financial condition and operations. These component factors address the adequacy of capital, quality of assets, capability of management, quality and level of earnings, adequacy of liquidity, and sensitivity to market risk. Evaluations of the components take into consideration the institution's size and sophistication, the nature and complexity of its activities, and its risk profile.

Composite and component ratings are assigned based on a 1-to-5 numerical scale. A "1" is the highest rating, indicating the strongest performance and risk-management practices and the least degree of supervisory concern. A "5" is the lowest rating, indicating the weakest performance, inadequate risk-management practices, and the highest degree of supervisory concern.

The composite rating generally bears a close relationship to the component ratings assigned. However, the composite rating is not derived by computing an arithmetic average of the component ratings. Each component rating is based on a qualitative analysis of the factors that make up that component and its interrelationship with the other components. When assigning a composite rating, some components may be given more weight than others depending on the situation at the institution. In general, assignment of a composite rating may incorporate any factor that bears significantly on the overall condition and soundness of the financial institution. Assigned composite and component ratings are disclosed to the institution's board of directors and senior management.

The ability of management to respond to changing circumstances and address the risks that may arise from changing business conditions or the initiation of new activities or products is an important factor in evaluating a financial institution's overall risk profile, as well as the level of supervisory attention warranted. For this reason, the management component is given

special consideration when assigning a composite rating.

Furthermore, the ability of management to identify, measure, monitor, and control the risks of its operations is taken into account when assigning each component rating. Examiners should recognize, however, that appropriate management practices vary considerably among financial institutions, depending on their size, complexity, and risk profile. For less complex institutions engaged solely in traditional banking activities and whose directors and senior managers, in their respective roles, are actively involved in the oversight and management of day-to-day operations, relatively basic management systems and controls may be adequate. At more complex institutions, detailed and formal management systems and controls are needed to address their broader range of financial activities and to provide senior managers and directors, in their respective roles, with the information they need to monitor and direct day-to-day activities. All institutions are expected to properly manage their risks. For less complex institutions engaging in less sophisticated risk-taking activities, detailed or highly formalized management systems and controls are not required to receive strong or satisfactory component or composite ratings.

Examiners consider foreign branch and specialty examination findings and the ratings assigned to those areas, as appropriate, when assigning component and composite ratings under UFIRS. The specialty examination areas include Compliance, Community Reinvestment, Government Security Dealers, Information Systems, Municipal Security Dealers, Transfer Agent, and Trust.

Composite ratings are based on a careful evaluation of an institution's managerial, operational, financial, and compliance performance. The six key components used to assess an institution's financial condition and operations are capital adequacy, asset quality, management capability, earnings quantity and quality, the adequacy of liquidity, and sensitivity to market risk. The rating scale ranges from 1 to 5, with a rating of 1 indicating the strongest performance and risk-management practices, relative to the institution's size, complexity, and risk profile, and the level of least supervisory concern. A rating of 5 indicates the most critically deficient level of performance; inadequate risk-management practices relative to the institution's size, complexity, and risk profile; and the level

of greatest supervisory concern. The composite ratings are defined below.

Composite 1

Financial institutions with a composite 1 rating are sound in every respect and generally have components rated 1 or 2. Any identified weaknesses are minor and can be handled routinely by the board of directors and management. These financial institutions are the most capable of withstanding fluctuating business conditions and are resistant to outside influences, such as economic instability in their trade area. These institutions are in substantial compliance with laws and regulations. As a result, they exhibit the strongest performance and risk-management practices relative to their size, complexity, and risk profile, and give no cause for supervisory concern.

Composite 2

Financial institutions with a composite 2 rating are fundamentally sound. For a financial institution to receive this rating, generally none of its component ratings should be more severe than 3. Only moderate weaknesses are present, and the board of directors and management are capable of and willing to correct them. These financial institutions are stable, can withstand business fluctuations, and are in substantial compliance with laws and regulations. Overall risk-management practices are satisfactory relative to the institution's size, complexity, and risk profile. There are no material supervisory concerns and, as a result, the supervisory response is informal and limited.

Composite 3

Financial institutions with a composite 3 rating exhibit some degree of supervisory concern in one or more of the component areas. These institutions have a combination of moderate to severe weaknesses; however, the magnitude of the deficiencies generally will not cause a component to be rated more severely than 4. Management may lack the ability or willingness

to effectively address weaknesses within appropriate timeframes. Financial institutions in this group generally are less capable of withstanding business fluctuations and are more vulnerable to outside influences than those institutions rated a composite 1 or 2. Additionally, these financial institutions may be in significant noncompliance with laws and regulations. Risk-management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. These financial institutions require more than normal supervision, which may include formal or informal enforcement actions. Failure of the institution appears unlikely, however, given its overall strength and financial capacity.

Composite 4

Financial institutions with a composite 4 rating generally exhibit unsafe and unsound practices or conditions. They have serious financial or managerial deficiencies that result in unsatisfactory performance. The institution's problems range from severe to critically deficient, and weaknesses and problems are not being satisfactorily addressed or resolved by the board of directors and management. Financial institutions in this group generally are not capable of withstanding business fluctuations. There may be significant noncompliance with laws and regulations. Risk-management practices are generally unacceptable relative to the institution's size, complexity, and risk profile. Close supervisory attention is required, which means formal enforcement action is necessary in most cases to address the problems. Institutions in this group pose a risk to the deposit insurance fund. Failure of the institution is a distinct possibility if the problems and weaknesses are not satisfactorily addressed and resolved.

Composite 5

Financial institutions with a composite 5 rating exhibit extremely unsafe and unsound practices or conditions. Their performance is critically deficient and risk-management practices are inadequate relative to the institution's size, complexity, and risk profile. These institutions are of the greatest supervisory concern. The volume and severity of problems are beyond

management's ability or willingness to control or correct. Immediate outside financial or other assistance is needed for the financial institution to be viable. Ongoing supervisory attention is necessary. Institutions in this group pose a significant risk to the deposit insurance fund and their failure is highly probable.

COMPONENT RATINGS

Each of the component rating descriptions below lists the principal evaluation factors that relate to that component and briefly describes each numerical rating for that component. Some of the evaluation factors appear under one or more of the other components to illustrate the interrelationship among the components. The evaluation factors for each component are not listed in any particular order.

Capital Adequacy

A financial institution is expected to maintain capital commensurate with its risks and the ability of management to identify, measure, monitor, and control these risks. The effect of credit, market, and other risks on the institution's financial condition should be considered when evaluating the adequacy of capital. The types and quantity of risk inherent in an institution's activities will determine the need to maintain capital at levels above required regulatory minimums to properly reflect the potentially adverse consequences of these risks on the institution's capital.

The capital adequacy of an institution is rated based on, but not limited to, an assessment of the following evaluation factors:

- the level and quality of capital and the overall financial condition of the institution
- the ability of management to address emerging needs for additional capital
- the nature, trend, and volume of problem assets, and the adequacy of allowances for loan and lease losses and other valuation reserves
- balance-sheet composition, including the nature and amount of intangible assets, market risk, concentration risk, and risks associated with nontraditional activities

- risk exposure represented by off-balance-sheet activities
- the quality and strength of earnings, and the reasonableness of dividends
- prospects and plans for growth, as well as past experience in managing growth
- access to capital markets and other sources of capital, including support provided by a parent holding company

Ratings

1—A rating of 1 indicates a strong capital level relative to the institution's risk profile.

2—A rating of 2 indicates a satisfactory capital level relative to the institution's risk profile.

3—A rating of 3 indicates a less than satisfactory level of capital that does not fully support the institution's risk profile. The rating indicates a need for improvement, even if the institution's capital level exceeds minimum regulatory and statutory requirements.

4—A rating of 4 indicates a deficient level of capital. In light of the institution's risk profile, viability of the institution may be threatened. Assistance from shareholders or other external sources of financial support may be required.

5—A rating of 5 indicates a critically deficient level of capital. The institution's viability is threatened, and immediate assistance from shareholders or other external sources of financial support is required.

Asset Quality

The asset-quality rating reflects the quantity of existing and potential credit risk associated with the loan and investment portfolios, other real estate owned, other assets, and off-balance-sheet transactions. The ability of management to identify, measure, monitor, and control credit risk is also reflected here. The evaluation of asset quality should consider the adequacy of the allowance for loan and lease losses and weigh the institution's exposure to counterparty, issuer, or borrower default under actual or implied contractual agreements. All other risks

that may affect the value or marketability of an institution's assets, including but not limited to operating, market, reputation, strategic, or compliance risks, should be considered.

The asset quality of a financial institution is rated based on, but not limited to, an assessment of the following evaluation factors:

- the adequacy of underwriting standards, soundness of credit-administration practices, and appropriateness of risk-identification practices
- the level, distribution, severity, and trend of problem, classified, nonaccrual, restructured, delinquent, and nonperforming assets for both on- and off-balance-sheet transactions
- the adequacy of the allowance for loan and lease losses and other asset valuation reserves
- the credit risk arising from or reduced by off-balance-sheet transactions, such as unfunded commitments, credit derivatives, commercial and standby letters of credit, and lines of credit
- the diversification and quality of the loan and investment portfolios
- the extent of securities underwriting activities and exposure to counterparties in trading activities
- the existence of asset concentrations
- the adequacy of loan and investment policies, procedures, and practices
- the ability of management to properly administer its assets, including the timely identification and collection of problem assets
- the adequacy of internal controls and management information systems
- the volume and nature of credit-documentation exceptions

Ratings

1—A rating of 1 indicates strong asset-quality and credit-administration practices. Identified weaknesses are minor and risk exposure is modest in relation to capital protection and management's abilities. Asset quality is of minimal supervisory concern.

2—A rating of 2 indicates satisfactory asset-quality and credit-administration practices. The level and severity of classifications and other weaknesses warrant a limited level of supervisory attention. Risk exposure is commensurate with capital protection and management's abilities.

3—A rating of 3 is assigned when asset-quality or credit-administration practices are less than satisfactory. Trends may be stable or indicate deterioration in asset quality or an increase in risk exposure. The level and severity of classified assets, other weaknesses, and risks require an elevated level of supervisory concern. There is generally a need to improve credit-administration and risk-management practices.

4—A rating of 4 is assigned to financial institutions with deficient asset-quality or credit-administration practices. The levels of risk and problem assets are significant and inadequately controlled, and they subject the financial institution to potential losses that, if left unchecked, may threaten its viability.

5—A rating of 5 represents critically deficient asset-quality or credit-administration practices that present an imminent threat to the institution's viability.

Management

The capability of the board of directors and management, in their respective roles, to identify, measure, monitor, and control the risks of an institution's activities, and to ensure a financial institution's safe, sound, and efficient operation in compliance with applicable laws and regulations is reflected in this rating. Generally, directors need not be actively involved in day-to-day operations; however, they must provide clear guidance regarding acceptable risk-exposure levels and ensure that appropriate policies, procedures, and practices have been established. Senior management is responsible for developing and implementing policies, procedures, and practices that translate the board's goals, objectives, and risk limits into prudent operating standards.

Depending on the nature and scope of an institution's activities, management practices may need to address some or all of the following risks: credit, market, operating or transaction, reputation, strategic, compliance, legal, liquidity, and other risks. Sound management practices are demonstrated by active oversight by the board of directors and management; competent personnel; adequate policies, processes, and controls taking into consideration the size and sophistication of the institution; maintenance of

an appropriate audit program and internal control environment; and effective risk-monitoring and management information systems. This rating should reflect the board's and management's ability in relation to all aspects of banking operations as well as other financial-service activities the institution is involved in.

The capability and performance of management and the board of directors is rated based on, but not limited to, an assessment of the following evaluation factors:

- the level and quality of oversight and support of all institution activities by the board of directors and management
- the ability of the board of directors and management, in their respective roles, to plan for and respond to risks that may arise from changing business conditions or the initiation of new activities or products
- the adequacy of and conformance with appropriate internal policies and controls addressing the operations and risks of significant activities
- the accuracy, timeliness, and effectiveness of management information and risk-monitoring systems appropriate for the institution's size, complexity, and risk profile
- the adequacy of audits and internal controls to promote effective operations and reliable financial and regulatory reporting; safeguard assets; and ensure compliance with laws, regulations, and internal policies
- compliance with laws and regulations
- responsiveness to recommendations from auditors and supervisory authorities
- management depth and succession
- the extent that the board of directors and management are affected by or susceptible to dominant influence or concentration of authority
- reasonableness of compensation policies and avoidance of self-dealing
- demonstrated willingness to serve the legitimate banking needs of the community
- the overall performance of the institution and its risk profile

Ratings

1—A rating of 1 indicates strong performance by management and the board of directors and strong risk-management practices relative to the

institution's size, complexity, and risk profile. All significant risks are consistently and effectively identified, measured, monitored, and controlled. Management and the board have demonstrated the ability to promptly and successfully address existing and potential problems and risks.

2—A rating of 2 indicates satisfactory management and board performance and risk-management practices relative to the institution's size, complexity, and risk profile. Minor weaknesses may exist, but they are not material to the safety and soundness of the institution and are being addressed. In general, significant risks and problems are effectively identified, measured, monitored, and controlled.

3—A rating of 3 indicates management and board performance that needs improvement or risk-management practices that are less than satisfactory given the nature of the institution's activities. The capabilities of management or the board of directors may be insufficient for the type, size, or condition of the institution. Problems and significant risks may be inadequately identified, measured, monitored, or controlled.

4—A rating of 4 indicates deficient management and board performance or risk-management practices that are inadequate considering the nature of an institution's activities. The level of problems and risk exposure is excessive. Problems and significant risks are inadequately identified, measured, monitored, or controlled and require immediate action by the board and management to preserve the soundness of the institution. Replacing or strengthening management or the board may be necessary.

5—A rating of 5 indicates critically deficient management and board performance or risk-management practices. Management and the board of directors have not demonstrated the ability to correct problems and implement appropriate risk-management practices. Problems and significant risks are inadequately identified, measured, monitored, or controlled and now threaten the continued viability of the institution. Replacing or strengthening management or the board of directors is necessary.

Earnings

The earnings rating reflects not only the quantity and trend of earnings, but also factors that may affect the sustainability or quality of earnings. The quantity as well as the quality of earnings can be affected by excessive or inadequately managed credit risk that may result in loan losses and require additions to the allowance for loan and lease losses. High levels of market risk may unduly expose the institution's earnings to volatility in interest rates. The quality of earnings may also be diminished by undue reliance on extraordinary gains, nonrecurring events, or favorable tax effects. Future earnings may be adversely affected by an inability to forecast or control funding and operating expenses, improperly executed or ill-advised business strategies, or poorly managed or uncontrolled exposure to other risks.

The rating of an institution's earnings is based on, but not limited to, an assessment of the following evaluation factors:

- the level of earnings, including trends and stability
- the ability to provide for adequate capital through retained earnings
- the quality and sources of earnings
- the level of expenses in relation to operations
- the adequacy of the budgeting systems, forecasting processes, and management information systems in general
- the adequacy of provisions to maintain the allowance for loan and lease losses and other valuation allowance accounts
- the exposure of earnings to market risk such as interest-rate, foreign-exchange, and price risks

Ratings

1—A rating of 1 indicates earnings that are strong. Earnings are more than sufficient to support operations and maintain adequate capital and allowance levels after consideration is given to asset quality, growth, and other factors affecting the quality, quantity, and trend of earnings.

2—A rating of 2 indicates earnings that are satisfactory. Earnings are sufficient to support operations and maintain adequate capital and allowance levels after consideration is given to

asset quality, growth, and other factors affecting the quality, quantity, and trend of earnings. Earnings that are relatively static, or even experiencing a slight decline, may receive a 2 rating provided the institution's level of earnings is adequate in view of the assessment factors listed above.

3—A rating of 3 indicates earnings that need to be improved. Earnings may not fully support operations and provide for the accretion of capital and allowance levels in relation to the institution's overall condition, growth, and other factors affecting the quality, quantity, and trend of earnings.

4—A rating of 4 indicates earnings that are deficient. Earnings are insufficient to support operations and maintain appropriate capital and allowance levels. These institutions may be characterized by erratic fluctuations in net income or net interest margin, the development of significant negative trends, nominal or unsustainable earnings, intermittent losses, or a substantive drop in earnings from the previous years.

5—A rating of 5 indicates earnings that are critically deficient. A financial institution with earnings rated 5 is experiencing losses that represent a distinct threat to its viability through the erosion of capital.

Liquidity

In evaluating the adequacy of a financial institution's liquidity position, consideration should be given to the current level and prospective sources of liquidity compared to funding needs, as well as to the adequacy of funds-management practices relative to the institution's size, complexity, and risk profile. In general, funds-management practices should ensure that an institution is able to maintain a level of liquidity sufficient to meet its financial obligations in a timely manner and to fulfill the legitimate banking needs of its community. Practices should reflect the ability of the institution to manage unplanned changes in funding sources, as well as react to changes in market conditions that affect the ability to quickly liquidate assets with minimal loss. In addition, funds-management practices should ensure that

liquidity is not maintained at a high cost or through undue reliance on funding sources that may not be available in times of financial stress or adverse changes in market conditions.

Liquidity is rated based on, but not limited to, an assessment of the following evaluation factors:

- the adequacy of liquidity sources compared with present and future needs and the ability of the institution to meet liquidity needs without adversely affecting its operations or condition
- the availability of assets readily convertible to cash without undue loss
- access to money markets and other sources of funding
- the level of diversification of funding sources, both on- and off-balance-sheet
- the degree of reliance on short-term, volatile sources of funds, including borrowings and brokered deposits, to fund longer-term assets
- the trend and stability of deposits
- the ability to securitize and sell certain pools of assets
- the capability of management to properly identify, measure, monitor, and control the institution's liquidity position, including the effectiveness of funds-management strategies, liquidity policies, management information systems, and contingency funding plans

Ratings

1—A rating of 1 indicates strong liquidity levels and well-developed funds-management practices. The institution has reliable access to sufficient sources of funds on favorable terms to meet present and anticipated liquidity needs.

2—A rating of 2 indicates satisfactory liquidity levels and funds-management practices. The institution has access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Modest weaknesses may be evident in funds-management practices.

3—A rating of 3 indicates liquidity levels or funds-management practices in need of improvement. Institutions rated 3 may lack ready access to funds on reasonable terms or may show significant weaknesses in funds-management practices.

4—A rating of 4 indicates deficient liquidity levels or inadequate funds-management practices. Institutions rated 4 may not have or be able to obtain a sufficient volume of funds on reasonable terms to meet liquidity needs.

5—A rating of 5 indicates liquidity levels or funds-management practices so critically deficient that the continued viability of the institution is threatened. Institutions rated 5 require immediate external financial assistance to meet maturing obligations or other liquidity needs.

Sensitivity to Market Risk

The sensitivity to market risk component reflects the degree to which changes in interest rates, foreign-exchange rates, commodity prices, or equity prices can adversely affect a financial institution's earnings or economic capital. When evaluating this component, consideration should be given to management's ability to identify, measure, monitor, and control market risk; the institution's size; the nature and complexity of its activities; and the adequacy of its capital and earnings in relation to the level of market-risk exposure.

For many institutions, the primary source of market risk arises from nontrading positions and their sensitivity to changes in interest rates. In some larger institutions, foreign operations can be a significant source of market risk. For other institutions, trading activities are a major source of market risk.

Market risk is rated based on, but not limited to, an assessment of the following evaluation factors:

- the sensitivity of the financial institution's earnings or the economic value of its capital to adverse changes in interest rates, foreign-exchange rates, commodity prices, or equity prices
- the ability of management to identify, measure, monitor, and control exposure to market risk given the institution's size, complexity, and risk profile
- the nature and complexity of interest-rate risk exposure arising from nontrading positions
- where appropriate, the nature and complexity of market-risk exposure arising from trading and foreign operations

Ratings

1—A rating of 1 indicates that market-risk sensitivity is well controlled and that there is minimal potential that the earnings performance or capital position will be adversely affected. Risk-management practices are strong for the size, sophistication, and market risk accepted by the institution. The level of earnings and capital provide substantial support for the degree of market risk taken by the institution.

2—A rating of 2 indicates that market-risk sensitivity is adequately controlled and that there is only moderate potential that the earnings performance or capital position will be adversely affected. Risk-management practices are satisfactory for the size, sophistication, and market risk accepted by the institution. The level of earnings and capital provide adequate support for the degree of market risk taken by the institution.

3—A rating of 3 indicates that control of market-risk sensitivity needs improvement or that there is significant potential that the earnings performance or capital position will be adversely affected. Risk-management practices need to be improved given the size, sophistication, and level of market risk accepted by the institution. The level of earnings and capital may not adequately support the degree of market risk taken by the institution.

4—A rating of 4 indicates that control of market-risk sensitivity is unacceptable or that there is high potential that the earnings performance or capital position will be adversely affected. Risk-management practices are deficient for the size, sophistication, and level of market risk accepted by the institution. The level of earnings and capital provide inadequate support for the degree of market risk taken by the institution.

5—A rating of 5 indicates that control of market-risk sensitivity is unacceptable or that the level of market risk taken by the institution is an imminent threat to its viability. Risk-management practices are wholly inadequate for the size, sophistication, and level of market risk accepted by the institution.
