Display System Replacements Emulator
(DSREM)

Version 1.0
May 9, 2007

A component of:

Simulation and Integration of Ground, Network, and Air Links

Status:
  Operational

Connections:

  Connects to Charter as a client, connects to NASEM as a client.

Overview:

  DSREM, at this time, is an interim interface used for training during this transition from PVD to DSR and will be replaced with a full DSR interface when the PVDs have been completely phased out. On this one display the user can display a R CRD (Computer Readout Display), a D CRD or an A CRD as needed. Target and Track interaction is as appears on the real DSR consoles. Simulated moving or updating weather can be displayed as NeXrad or Analog weather.
