

Commodity Movements Originating in Florida Summary of 1993 CFS

In Florida, the CFS measured \$172 billion of goods shipments weighing 346 million tons. Florida accounted for approximately 3 percent of the value and 4 percent of the weight of total U.S. shipments. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments vary when measured by value and weight. The most important commodity originating in Florida by value was food or kindred products. Other important commodities by value were: transportation equipment; chemicals or allied products; electrical machinery, equipment, or supplies; and machinery, including computers. The most important commodity originating in Florida by weight was nonmetallic minerals. Other important commodities shipped by weight were: petroleum or coal products; food or kindred products; clay, concrete, glass, or stone products; and chemicals or allied products.

Local transportation of freight is important to Florida's commerce. The CFS shows that in 1993, about 63 percent of the value and over 82 percent of the weight of total shipments from Florida were shipped to destinations within the state. Approximately 39 percent of the value and 61 percent of the weight of all shipments were between places less than 50 miles apart. In comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In Florida, about 48 percent of the value and 74 percent of the weight of shipments were between places less than 100 miles apart.

About 37 percent of the value and 18 percent of the weight of all shipments from Florida went to other states. Some of the most important destination states by value were: Texas, Georgia, California, New York, and New Jersey. The most important destination by weight of shipments was Georgia. Other important destination states by weight were: Texas, Alabama, California, and Ohio.

Most commodities were moved by truck, about 78 percent of the value and 68 percent of the weight. Rail was used to move 3 percent of the value and 23 percent of the weight. Air was used to transport 3 percent of the value of shipments. The CFS data confirm the rising importance of parcel, U.S. postal, and courier services that have emerged in recent years. In 1993, this mode of transport was used to ship 530,000 tons of goods worth about \$19 billion or 11 percent of the value of all shipments in Florida. In comparison, about 9 percent of the value of total U.S. shipments were moved by this mode.

1993 Commodity Flow Survey State Summary: Florida
 Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in Florida	\$172.0 billion	345.9 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	2.8	3.5

Commodity Shipments Originating in Florida Ranked by Value		Commodity Shipments Originating in Florida Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Food or kindred products	21.7	Nonmetallic minerals	36.9
Transportation equipment	10.1	Petroleum or coal products	12.2
Chemicals or allied products	8.5	Food or kindred products	11.6
Electrical machinery, equipment, or supplies	8.0	Clay, concrete, glass, or stone products	10.9
Machinery, including computers	6.2	Chemicals or allied products	9.7
Other commodities	45.5	Other commodities	18.7
Total	100.0	Total	100.0

Domestic Destinations of Shipments Originating in Florida Ranked by Value		Domestic Destinations of Shipments Originating in Florida Ranked by Weight	
State	Percent of value	State	Percent of weight
Florida	63.2	Florida	81.8
Texas	4.4	Georgia	4.6
Georgia	4.1	Texas	1.1
California	3.2	Alabama	0.9
New York	2.2	California	0.6
New Jersey	1.5	Ohio	0.6
Other States	21.4	Other States	10.4
Total	100.0	Total	100.0

Modes of Transportation for Shipments Originating in Florida		
Modes	Percent of value	Percent of weight
Parcel, U.S. Postal Service, or courier service	10.8	0.2
Truck (for-hire, private, and both private truck and for-hire truck)	77.6	67.8
Air (including truck and air)	3.2	-
Rail	2.9	22.7
Water (inland water, Great Lakes, deep sea, truck and water, and rail and water)	**	**

SOURCE: U.S. Department of Commerce, Bureau of the Census, *1992 Census of Transportation, Communications, and Utilities, 1993 Commodity Flow Survey*, TC92-CF (Washington, DC: 1996).

The Commodity Flow Survey (CFS) is a comprehensive effort to learn where and how goods are shipped in the U.S. The CFS measures shipments of commodities by establishments with paid employees and engaged in manufacturing, mining, wholesale trade, or selected retail and services industries. Prior commodity surveys covered shipments only by manufacturing firms. Commodity flows are estimated for a universe of approximately 900,000 establishments.

Data collected on individual shipments include total value, total weight, commodity type, modes of transport, domestic origin and destination; data for export shipments include the city and country of destination, mode and port of exit. Information is also obtained on whether shipments are containerized or a hazardous material. Some firms provided data concerning on-site shipping facilities and access to shipping facilities, plus data on ownership and leasing of transportation equipment.

The CFS is conducted by the Bureau of the Census as part of the Economic Census. Funding and technical guidance is provided by the U.S. Department of Transportation. Initiated for 1993, the CFS is scheduled for 1997 and every 5 years thereafter for years ending in 2 and 7. Commodity surveys were conducted between 1963 and 1982, but data for 1982 were not published. No data were collected for 1987. Participants will report for a sample of shipments during a 2-week period each quarter during the reporting year.

The CFS is a mail-out/mail-back survey of 200,000 sampled employer establishments in selected industries. Establishments were selected by stratified sample, with strata based on geographic location and industry. Geographic strata are the 89 National Transportation Analysis Regions (NTARs), which provide nationwide coverage and are aggregations of Bureau of Economic Analysis economic areas. Within the strata, all establishments with annualized employment above a specified cutoff were selected with certainty, and the remaining smaller establishments were sampled with probability proportional to annualized payroll.

For 1993, each sampled establishment reported on a sample of individual shipments during a 2 week period in each calendar quarter. In addition, about 20,000 establishments will provide information on transportation facilities and arrangements in their final reporting period.

For further information about survey design and printed products, contact the Commodity Flow Survey Branch, Services Division, Bureau of the Census, Washington, DC 20233, or by calling 301/457-2805 or 2114. For information on related data programs and studies, contact the Bureau of Transportation Statistics at 202/366-DATA for voice, 202/366-3640 for fax, or CFS@BTS.GOV for e-mail.
