

Commodity Movements Originating in New Mexico Summary of 1993 CFS

In New Mexico, the CFS measured \$12 billion of goods weighing 61 million tons. New Mexico accounted for approximately 0.2 percent of the value and 0.6 percent of the weight of total U.S. shipments. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments vary when measured by value and by weight. The main commodities shipped from New Mexico by value were: petroleum or coal products; food or kindred products; machinery, including computers; primary metal products; and chemicals or allied products. The main commodities shipped by weight were: coal; petroleum or coal products; nonmetallic minerals; clay, concrete, glass, or stone products; and lumber of wood products, excluding furniture.

Local transportation of freight is important to New Mexico's commerce. The CFS shows that in 1993, about 49 percent of the value and 60 percent of the weight of total shipments from New Mexico were shipped to destinations within the state. About 35 percent of the value and about 55 percent of the weight of all shipments were between places less than 50 miles apart. In comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In New Mexico, about 45 percent of the value of shipments and 71 percent of the weight of shipments were between places less than 100 miles apart.

About 51 percent of the value and 40 percent of the weight of all shipments from New Mexico went to other states. The most important destination of shipments by value was Texas. Other important destination states by value were: Arizona, California, Colorado, and Massachusetts. Important destination states by weight were: Arizona, Texas, Wisconsin, Colorado, and Kansas.

Most commodities were moved by trucks, approximately 65 percent of the value and 42 percent of the weight. Rail was used to move about 9 percent of the value and 22 percent of the weight of shipments. The CFS data confirm the rising importance of parcel, U.S. postal, and courier services that have emerged in recent years. In 1993, this mode of transport was used to ship 28,000 tons of goods worth about \$2 billion or 12 percent of the value of all shipments in New Mexico. In comparison, about 9 percent of the value of total U.S. shipments were moved by this mode.

1993 Commodity Flow Survey State Summary: New Mexico
 Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in New Mexico	\$11.8 billion	61.4 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	0.2	0.6

Commodity Shipments Originating in New Mexico Ranked by Value		Commodity Shipments Originating in New Mexico Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Petroleum or coal products	17.6	Coal	36.5
Food or kindred products	12.7	Petroleum or coal products	25.3
Machinery, including computers	9.5	Nonmetallic minerals	13.2
Primary metal products	7.9	Clay, concrete, glass, or stone products	7.6
Chemicals or allied products	5.2	Lumber or wood products, excluding furniture	3.2
Other commodities	47.0	Other commodities	14.2
Total	100.0	Total	100.0

Domestic Destinations of Shipments Originating in New Mexico Ranked by Value		Domestic Destinations of Shipments Originating in New Mexico Ranked by Weight	
State	Percent of value	State	Percent of weight
New Mexico	48.3	New Mexico	59.7
Texas	19.8	Arizona	20.5
Arizona	8.2	Texas	9.7
California	4.5	Wisconsin	2.3
Colorado	2.6	Colorado	1.0
Massachusetts	2.1	Kansas	0.7
Other States	14.5	Other States	6.1

SOURCE: U.S. Department of Commerce, Bureau of the Census, *1992 Census of Transportation, Communications, and Utilities, 1993 Commodity Flow Survey*, TC92-CF (Washington, DC: 1996).

The Commodity Flow Survey (CFS) is a comprehensive effort to learn where and how goods are shipped in the U.S. The CFS measures shipments of commodities by establishments with paid employees and engaged in manufacturing, mining, wholesale trade, or selected retail and services industries. Prior commodity surveys covered shipments only by manufacturing firms. Commodity flows are estimated for a universe of approximately 900,000 establishments.

Data collected on individual shipments include total value, total weight, commodity type, modes of transport, domestic origin and destination; data for export shipments include the city and country of destination, mode and port of exit. Information is also obtained on whether shipments are containerized or a hazardous material. Some firms provided data concerning on-site shipping facilities and access to shipping facilities, plus data on ownership and leasing of transportation equipment.

The CFS is conducted by the Bureau of the Census as part of the Economic Census. Funding and technical guidance is provided by the U.S. Department of Transportation. Initiated for 1993, the CFS is scheduled for 1997 and every 5 years thereafter for years ending in 2 and 7. Commodity surveys were conducted between 1963 and 1982, but data for 1982 were not published. No data were collected for 1987. Participants will report for a sample of shipments during a 2-week period each quarter during the reporting year.

The CFS is a mail-out/mail-back survey of 200,000 sampled employer establishments in selected industries. Establishments were selected by stratified sample, with strata based on geographic location and industry. Geographic strata are the 89 National Transportation Analysis Regions (NTARs), which provide nationwide coverage and are aggregations of Bureau of Economic Analysis economic areas. Within the strata, all establishments with annualized employment above a specified cutoff were selected with certainty, and the remaining smaller establishments were sampled with probability proportional to annualized payroll.

For 1993, each sampled establishment reported on a sample of individual shipments during a 2 week period in each calendar quarter. In addition, about 20,000 establishments will provide information on transportation facilities and arrangements in their final reporting period.

For further information about survey design and printed products, contact the Commodity Flow Survey Branch, Services Division, Bureau of the Census, Washington, DC 20233, or by calling 301/457-2805 or 2114. For information on related data programs and studies, contact the Bureau of Transportation Statistics at 202/366-DATA for voice, 202/366-3640 for fax, or CFS@BTS.GOV for e-mail.
