

# **Grid Intensification Manual Updates (with canopy cover)**

**Version 1.2**  
**3.10.2009**

- Update Table of Contents
- P. 30 remove redundant lines from sample design shot.
- P, 32 if setting capable growing area is 0, then enter 0 for slope and aspect.
- P. 35 clarify that saplings are tallied individually. Clarify that DRC is collected on woodland species and DBH is tallied on timber species.
- P. 45/51 remove requirement to enter individual DRC for multi-stem woodland species in the remarks column. The remarks column is not big enough to accommodate this much information.
- P. 56 fix canopy cover transect diagram so transect lengths are correct.
