OFFICE OF FEDERAL HOUSING ENTERPRISE OVERSIGHT
1700 G STREET NW WASHINGTON DC 20552 (202) 414-3800

June 15, 2005

The Honorable Richard Shelby
Chairman
Committee on Banking, Housing, & Urban Affairs
United States Senate
Washington, D.C. 20510

The Honorable Michael G. Oxley
Chairman
Committee on Financial Services
United States House of Representatives
Washington, D.C. 20515

Dear Chairmen:

I am pleased to transmit the 2005 Report to Congress from the Office of Federal Housing Enterprise Oversight (OFHEO). This report has been prepared to meet the statutory requirements in section 1319B of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (Title XIII of P.L. 102-550). The views expressed are those of the Acting Director and do not necessarily represent those of the President or the Secretary of Housing and Urban Development.

This report covers accomplishments in 2004 during the tenure of former OFHEO Director Armando Falcon, Jr. who resigned May 20 after serving nearly six years. As Acting Director I thank him for his leadership and historic contributions to the safety and soundness regulation of Fannie Mae and Freddie Mac (the Enterprises).

Under Director Falcon, OFHEO accomplished its statutory mission, under difficult constraints, of ensuring the safe and sound operations of the Enterprises. Director Falcon transformed OFHEO from a 70-person agency with a \$16 million budget in 1999 into the strong, capable regulator it is today. He quadrupled OFHEO resources, completed a complex, risk-based capital regulation and crafted remediation plans for Freddie Mac and Fannie Mae. He reconfigured OFHEO's examination program which allowed Agency examiners to detect problems at Fannie Mae before disruptions occurred in our housing finance system. Finally, Director Falcon crafted a strong corporate governance regulation for the Enterprises. He played a significant role in preserving the integrity of our housing finance system which contributed to the record homeownership in our country today.

Pursuant to the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 the Agency continues to recommend legislative enhancements to OFHEO's authority, particularly in those areas that would align the safety and soundness authority of the Agency more closely to our fellow federal banking agencies. We also believe that permanent funding of OFHEO, outside the appropriations process, is critical to ensuring the agency can adapt and respond quickly to changing circumstances at either Enterprise.

Sincerely,

A handwritten signature in black ink, reading "Stephen A. Blumenthal". The signature is written in a cursive style with a large, stylized "H" at the end.

Stephen A. Blumenthal
Acting Director

cc: The Honorable Paul S. Sarbanes, Ranking Member, Senate Committee on Banking, Housing, & Urban Affairs
The Honorable Barney Frank, Ranking Member, House Committee on Financial Services

YEAR IN REVIEW

HOUSING SECTOR REMAINS STRONG, WITH MORE MODERATE REFINANCE VOLUMES

The U.S. economy grew at a more moderate but healthy 3.9 percent rate during 2004 compared to 4.4 percent the year before, still benefiting from the stimulus of prior years' tax and interest rate cuts. Labor market conditions continued to tighten in 2004. The unemployment rate fell to 5.4 percent at year-end, down from 5.7 percent one year earlier.

The persistence of the expansion led the Federal Reserve to adopt a tightening policy, and it began raising interest rates in June, the first time since May 2000. The Federal Funds target rate was raised five times between June and December, from 1.0 percent to 2.25 percent, the highest level since October 2001. Long-term yields initially rose in response but subsided shortly thereafter. Mortgage interest rates followed the trends of long-term Treasury issues, as is typical. According to Freddie Mac's Primary Mortgage Market Survey (PMMS), the average 30-year fixed-rate mortgage (FRM) commitment interest rate trended down to a low of 5.4 percent in the second week of March. That rate dramatically reversed course in the second quarter, rising to 6.3 percent in the second week of May 2004. The average commitment interest rate fell in the third quarter and was generally flat in the fourth quarter. For the year, the 30-year FRM commitment interest rate averaged 5.84 percent. That was just one basis point above the average rate for 2003, the lowest rate in the history of Freddie Mac's PMMS. The commitment rate on one-year Treasury-indexed adjustable-rate mortgages (ARM) averaged 3.9 percent in 2004, up slightly from the previous year's average of 3.8 percent.

Low interest rates continued to have a positive impact on the U.S. housing sector. Single-family housing starts increased for the fourth consecutive year, totaling 1.65 million units in 2004, up from 1.53 million units in 2003. Home sales set new records for the fourth consecutive year. Combined sales of new and existing homes totaled 7.9 million units in 2004, an increase of 9.9 percent from the record-setting level in 2003 of 7.3 million units. Whereas housing starts and sales continued to swell, originations of single-family mortgages retreated in 2004, falling 27 percent to \$2.8 trillion. Despite that decline, originations came in at their second highest level ever. The decline in originations was driven by a decline in mortgage refinancings after the extraordinary volumes in 2003 when interest rates declined significantly. According to *Inside Mortgage Finance*, refinancings totaled \$1.5 trillion in 2004, down from \$2.8 trillion the year before.

The average rate of increase in house prices, as measured by OFHEO's House Price Index, reached double-digits in 2004, the first time since 1979. The average U.S. home price increased 11.9 percent from the fourth quarter of 2003 to the fourth quarter of 2004, compared to 8.1 percent the year before. Five of the nine Census Divisions experienced double-digit rates of appreciation, up from three the year before. The generally healthy economy and continued low interest rates strengthened demand for homes.

The rising house price appreciation rate led to a decline in housing affordability. The National Association of Realtors' housing affordability index was 132.6 in 2004, down from

138.4 the year before. Notwithstanding, a record 69.2 percent of U.S. households owned their homes as of the end of the fourth quarter 2004, up from 68.6 percent one year earlier. The rental vacancy rate fell fractionally from the fourth quarter of 2003 to the fourth quarter of 2004, to 10.0 percent.

FINANCIAL PERFORMANCE OF THE ENTERPRISES IN 2004

Fannie Mae and Freddie Mac each were profitable in 2004 but faced internal and external challenges. Internally, both Enterprises had to address serious accounting and control problems. Externally, a major shift in the composition of primary mortgage market loan production and increased demand for mortgages by other investors diminished investment opportunities for Fannie Mae and Freddie Mac.

In December 2004, following an OFHEO report of special examination findings, the Securities and Exchange Commission (SEC) advised Fannie Mae that certain accounting practices followed for years 2001 through 2004 did not comply with Generally Accepted Accounting Principles. The SEC directed Fannie Mae to restate financial statements issued for each of those years. Accordingly, there are no audited financial data with which to gauge the financial performance of Fannie Mae for 2004. Data referenced below were derived from Fannie Mae's Monthly Summary for December 2004. Freddie Mac published unaudited financial data for 2004.

While mortgage originations came in at their second highest level ever in 2004, both Enterprises dramatically reduced their purchase and issuance activities. Higher ARM and subprime shares of mortgages originated in 2004 resulted in originators retaining a larger share of their production for their portfolios or using other securitization channels to a greater degree than usual. Fannie Mae purchased or guaranteed \$725 billion of mortgages in 2004. That was about one-half of the Enterprise's business activity the year before. The Enterprise issued \$552 billion of new mortgage-backed securities (MBS) in 2004, less than one-half the volume issued in 2003. Freddie Mac's business volume also was down sharply in 2004 compared to the previous year. The Enterprise purchased or guaranteed \$495 billion of mortgages in 2004 and issued \$365 billion of new MBS, about one-half the volume issued in 2003.

Each Enterprise grew its mortgage portfolio by less than one percent in 2004, the lowest rate of growth in well over a decade for both Enterprises. Competition for mortgages and mortgage securities by investors (banks in particular) continued to be strong. That competition caused a compression of spreads between yields on new mortgage investments and debt costs and helped to make portfolio purchases less attractive in 2004. The Enterprises generally invest in mortgages or mortgage securities only when yields are sufficient to provide desired levels of returns, after interest and appropriate hedging and rebalancing costs.

Freddie Mac's GAAP earnings fell in 2004. Net income was \$2.9 billion in 2004 compared with \$4.8 billion the year before. The decline was driven primarily by an increase (\$4.5 billion) in losses on derivative instruments that did not qualify for hedge accounting. Those losses were partially offset by a reduction in losses on debt retirement of \$1.4 billion. Guarantee fee income declined 16.4 percent in 2004, to \$1.4 billion. The more stable

interest rate environment in 2004 led to a substantial reduction in the amount of deferred fee income (i.e., credit and buy down fees) amortized to income. As a result, the average guarantee fee rate fell 5.8 basis points, to 17.5 basis points. Administrative expenses fell a modest 3 percent, to \$1.8 billion. Salaries, benefits, and professional services were up sharply because of the restatement but those increases were largely offset by a decline in other expenses.

Credit losses for Freddie Mac, which include charge-offs and foreclosed property expenses remained very low at \$137 million in 2004, up from \$86 million the year before. The credit loss rate for Freddie Mac (credit losses as a percentage of the average total mortgage portfolio, excluding non-Freddie Mac securities) increased from 0.8 basis points in 2003 to a modest 1.1 basis points in 2004.

The fair value balance sheet disclosure of Freddie Mac provides additional information on the economic condition of the Enterprise. Freddie Mac's fair value balance sheet showed an increase in fair value net worth of 12.8 percent or \$3.6 billion, to \$30.9 billion in 2004. Adjusted for capital transactions (primarily dividend payments), fair value net worth increased by \$4.6 billion. Core spread income from the retained mortgage portfolio and guarantee fees from the sold portfolio were chiefly responsible for the gain in fair value net worth achieved in 2004. However, significant portions of the gain were also accounted for by tighter mortgage-to-debt option-adjusted spreads and longer expected guarantee fee income streams on existing guarantees. These portions of the gain may provide little long-term benefit.

SUPERVISORY ACTIONS IN 2004

Enforcement Actions

OFHEO continued administrative actions against Leland Brendsel, former Freddie Mac Chief Executive Officer and Chairman, Vaughn Clarke, former Freddie Mac Chief Financial Officer, and the Enterprise. The charges relate to conduct and violations that contributed to the improper management of earnings and the resulting restatement of earnings by Freddie Mac. The charges call for the benefits of the individuals to be reduced to those appropriate in a termination for cause—a significant decrease—and for repayment of bonuses. Civil money penalties and restitution for losses to Freddie Mac are also sought against the two former executive officers. A U.S. District court ruled that compensation and other benefits held by Freddie Mac in response to a request from OFHEO must be released; and, accordingly, compensation and benefits were released by the company. The underlying administrative actions against the two individuals remain before an Administrative Law Judge, where discovery continues and various pre-hearing motions and filings are pending.

Supervisory Steps

As part of its special examination of Fannie Mae, OFHEO entered into an agreement with the Board of Directors of Fannie Mae. The Agreement specified actions the company must undertake to address accounting, staffing and internal control matters. The Agreement required the submission of a capital plan and a surplus capital requirement of 30 percent over the minimum capital level of the Enterprise and for a review of executive compensation programs. Also, the Agreement called for external legal and accounting reviews by firms selected by the Enterprise and approved by OFHEO. The Agreement further required creation of a chief risk officer and greater independence in the internal audit function.

As part of its special examination of Fannie Mae, OFHEO issued a number of subpoenas regarding individuals and materials. A large number of witnesses were interviewed and large amounts of materials reviewed by OFHEO attorneys in anticipation of such interviews. OFHEO is working with the Securities and Exchange Commission (SEC), Public Company Accounting Oversight Board (PCAOB) and Justice Department during the course of its special examination.

RULEMAKING

OFHEO proposed a rule to amend its corporate governance regulation that would update provisions to increase the oversight responsibilities of the Board, address audit firm and audit partner rotation, separate the functions of chief executive officer and chairman of the Board, create the positions of chief risk officer and chief compliance officer and add other provisions.

OFHEO ACTIONS ON EXECUTIVE COMPENSATION

OFHEO's enabling statute and the Enterprise charter acts charge the Director of OFHEO with oversight responsibility in the area of executive compensation. OFHEO's statute requires the Director to prohibit an Enterprise from providing excessive compensation to any executive officer. Specifically, the statute provides that compensation must be reasonable and comparable with compensation paid by other similar businesses to executives having similar duties and responsibilities. "Similar businesses" include publicly held financial institutions or major financial services companies.

The Enterprise charter acts require the companies to obtain the prior approval of OFHEO's Director before entering into or changing termination agreements with their executive officers. The Director may not approve any such agreement unless the Director determines that the benefits provided thereunder are comparable to benefits provided under such agreements for officers of other public and private entities involved in financial services and housing interests who have comparable duties and responsibilities.

In 2004, OFHEO's proposed corporate governance rule included several requirements in the area of executive compensation. Specifically, the rule:

- Requires reasonable and appropriate compensation for directors, officers and employees, highlighting the need to avoid compensation incentives that excessively focus on short-term earnings;
- Requires that compensation programs consider risk management, compliance with the law and operational stability in addition to earnings; and,
- Requires reimbursement by a senior officer if an accounting restatement is required under certain circumstances.

OFHEO's investigations of both Freddie Mac and Fannie Mae found compensation incentives focused primarily on short-term earnings to be instrumental in leading to improper conduct. Therefore, after reviewing nine termination benefit agreements and discussing them with the applicable enterprise, OFHEO required modifications in several cases to provide a more appropriate incentive structure. OFHEO also advised each Enterprise which executive officer's contracts are now subject to OFHEO's oversight due to organizational changes within each company.

OFHEO RESEARCH AND PUBLICATIONS

During 2004, OFHEO continued to focus its research plans and activities on a variety of topics that assist the agency in achieving its strategic goals. In 2004 OFHEO placed a priority on research and analysis primarily related to analyzing risk and capital adequacy. OFHEO also continued its practice of publishing reports and papers, and posting information on its Web site, to better inform interested parties about the issues OFHEO addresses regarding the Enterprises and the secondary mortgage market. The papers and reports are the result of research, analysis and special examination work accomplished throughout the year.

In September 2004, OFHEO released the “Report of Findings to Date: Special Examination of Fannie Mae” which outlined the misapplication of some Generally Accepted Accounting Principles (GAAP) that OFHEO found at Fannie Mae during the course of the special examination. OFHEO issued public statements on the special examination of Fannie Mae, the Freddie Mac restatement of financial results, the Agreement for corrective action with the Fannie Mae Board of Directors, directives to the Enterprises, and quarterly capital classifications throughout the year.

OFHEO also released two research papers during 2004. “The Single-Family Mortgage Industry in the Internet Era: Technology Developments and Market Structure,” released in January, examined how changes in technology have affected the structure and business practices of firms in the single-family mortgage industry in the last two decades, and how firms are seeking to exploit business opportunities created by automated underwriting and the Internet. “Mortgage Markets and the Enterprises in 2003,” released in October 2004, reviewed developments in the housing sector and the primary mortgage market, the secondary market activity of Fannie Mae and Freddie Mac, and the financial performance of the Enterprises in 2003.

OFHEO published two staff working papers in 2004, continuing the working paper series begun in 2002. These papers continue research on topics of interest to OFHEO, including the value of foreclosed property and equity options markets. These working papers, as well as OFHEO research papers and reports are available at www.ofheo.gov. OFHEO researchers also presented papers and led discussions at professional and industry conferences on topics such as house prices, the regulation of the Enterprises, and the performance of prime and non-prime mortgages.

OFHEO also published a public version of the software used to run the risk-based capital stress test, along with a stylized data set to use in the model. By running the data for this hypothetical firm through the stress test model, a member of the public can better understand the sensitivities and implications of the stress test.

In 2004 OFHEO began calculating and publishing the maximum conforming loan limit for single-family mortgages purchased by Fannie Mae and Freddie Mac. In November 2004, OFHEO announced that the 2005 limit can be no higher than \$359,650 for one-unit properties. Effective January 1, 2005, the Enterprises’ conforming loan limit for larger properties applies as follows: Two-unit mortgages are limited to \$460,400; three-unit mortgages: \$556,500; and four-unit mortgages: \$691,600. The limit in statutorily designated

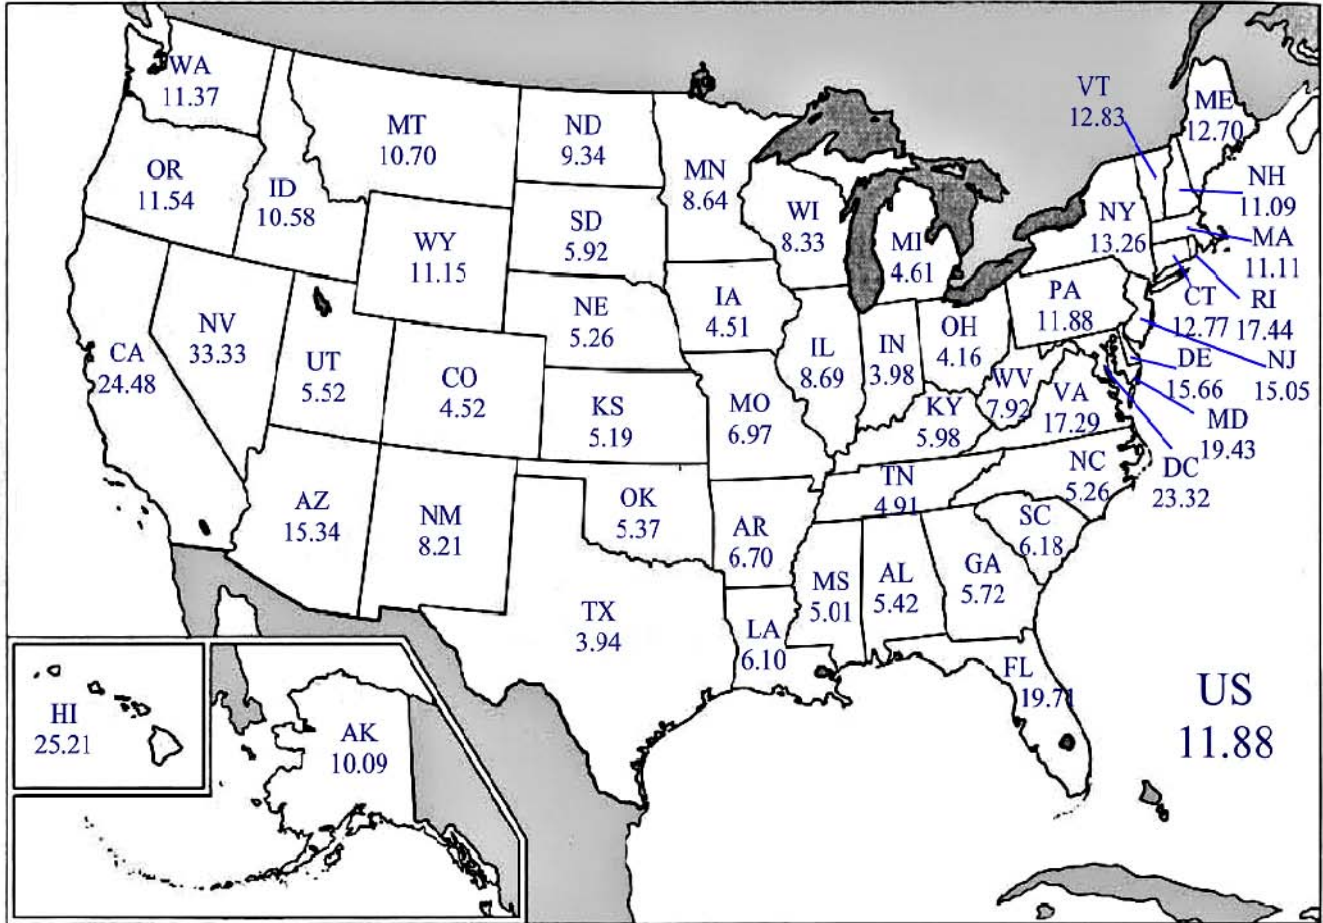

high-cost areas (Alaska, Guam, Hawaii, and the U.S. Virgin Islands) is 50 percent higher, for example, \$539,475 for a one-unit, single-family mortgage. For second mortgages, the 2005 limit is \$179,825. In the designated high-cost areas this is \$269,725.

OFHEO contributed its expertise in working with other federal agencies during the course of 2004. OFHEO worked with 10 other federal agencies and financial regulators to issue a Spanish-language brochure, "Putting Your Home on the Loan Line Is Risky Business," that alerts consumers to potential borrowing pitfalls, including high-cost home loans, and provides tips for getting the best financing deal possible. OFHEO also worked with the International Monetary Fund and the State Department to assist officials from Armenia, Kazakhstan, Japan and Korea with expertise on developing and regulating mortgage markets.

OFHEO also continued quarterly publication of its House Price Index (HPI), which uses Enterprise data to calculate changes in house prices for the nation as a whole, the nine Census Divisions, the 50 states and the District of Columbia, and 379 Metropolitan Statistical Areas or Metropolitan Divisions. In 2004, OFHEO began providing data on 25 additional MSAs and 29 Metropolitan Divisions (which replaced 11 MSAs) to be consistent with definitions revised by the Office of Management and Budget based on 2000 census data. The HPI is based on over 29 million repeat transactions over 30 years. OFHEO developed the HPI as a key input for its risk-based capital stress test. It is regularly reported by media organizations throughout the nation and used by researchers to analyze house price behavior (Map on following page).

OFHEO HOUSE PRICE INDEX U.S. MAP

Fourth Quarter 2003 – Fourth Quarter 2004

FINANCING OFHEO'S OPERATIONS

OFHEO'S BUDGET

The business operations of OFHEO are not financed by taxpayer funds. The annual operating budget, however, is subject to the federal appropriations process and is constrained by the amount appropriated by Congress and signed into law by the President. The amounts provided for by the appropriations process are collected from Fannie Mae and Freddie Mac in the form of an annual assessment.

Following two months of operating under continuing resolutions, OFHEO received its full fiscal year 2005 budget request of \$59.2 million in December 2004. This will fund existing activities and provide resources to strengthen examination, compliance, accounting oversight and capital review and adequacy programs. Subsequently, in May 2005, Congress appropriated an additional \$5 million for OFHEO to cover the increased costs of the special examinations of Fannie Mae and Freddie Mac and associated litigation.

Congress is considering legislation that would transfer all resources available to OFHEO to a new, strengthened housing government-sponsored enterprise regulator, outside of the appropriations process. Absent legislative change, however, OFHEO will continue to be subject to the appropriations process. The Administration proposed a fiscal year 2006 budget of \$60 million to fund OFHEO's operations.

OFHEO CONTINUES TO RECEIVE UNQUALIFIED AUDIT OPINION IN FY 2004

In conjunction with the goal of the government to improve accountability, OFHEO prepared financial statements for fiscal year 2004 and subjected these statements and underlying processes to an independent audit. The certified public accounting firm of Dembo, Jones, Healy, Pennington and Marshall audited the statements. The firm issued an unqualified audit opinion on OFHEO fiscal year 2004 financial statements, found no material weaknesses in internal controls, or instances of non-compliance with laws and regulations. While not required by law, OFHEO voluntarily began obtaining outside audit reviews of its financial statements in fiscal year 1998. Fiscal year 2004 represents the seventh straight year OFHEO has received a clean, unqualified audit opinion which can be viewed on OFHEO's Web site at <http://www.ofheo.gov/media/pdf/fy04auditedfinancials.pdf>.

FANNIE MAE ANNUAL EXAMINATION

In accordance with OFHEO's risk-based examination approach, examinations of Fannie Mae during 2004 primarily focused on the evaluation of the policies, practices, and controls in business lines managed by the Chief Financial Officer (CFO) and related functions. Examinations conducted in other areas of Fannie Mae focused on policies, risk management, and reports for the Board and executive management.

EXAMINATION RESULTS AND CONCLUSIONS

Overall, Fannie Mae's condition warrants significant supervisory concern. The quality of policies, controls and communication varied among the business lines due to weaknesses in the program of former executive management. The program failed to establish an explicit baseline of standards that ensured all Enterprise activities consistently met industry standards in policies, controls and communication. These weaknesses, coupled with a focus on expense control, impeded or prevented Fannie Mae from building aspects of the organizational structure and culture needed to effectively manage the company through significant business growth. Deficiencies noted during 2004 indicate Fannie Mae's program needs strengthening in several areas:

- The quality of policies varies due to the lack of standardization in their production and review.
- Reporting to the Board requires improvement.
- The lack of a centralized authority in operations and weaknesses in independent risk oversight prevented several deficiencies from being detected, reported, and corrected. The organizational structure failed to provide fundamental controls for the controller department.
- Deficiencies identified inadvertently or through reviews conducted by Fannie Mae and OFHEO indicate several areas in operations controls need strengthening.
- Information technology in the areas of business continuity planning, crisis management, data center, and e-business activities are managed satisfactorily.
- Credit risk management is satisfactory for processes concerning counterparty risk management, multifamily operations, and new product development. However, deficiencies noted in several areas indicate that business line management needs to strengthen its oversight functions.
- Liquidity management is satisfactory but requires strengthening in some areas of policies and procedures, contingency planning, and systems issues that impact some process efficiencies.

- Interest rate risk is managed satisfactorily, and risk levels remain within limits set by management.

The Board and management initiated actions to address the issues noted in this report, and have already devoted significant resources to correct the deficiencies noted in OFHEO's special examination of Fannie Mae released in September 2004.

MANAGEMENT SUPERVISION

The performances of the CEO, CFO, and controller were ineffective due to their lack of adequate policies, controls, and systems in the Controller's department and other areas managed by the CFO. The internal audit function was weak due to compromised independence, a lack of audit experience, and poor quality of the audit program. The interim and new management team has begun to implement a program to correct these deficiencies but it is too early to determine the effectiveness of their management or program.

The program of former executive management generated weaknesses in communication and controls. Some Board reports and presentations needed additional information and/or better risk metrics. The lack of a centralized authority in operations and independent risk oversight prevented some deficiencies from being detected, reported, and corrected. Poor controls in the controller department coupled with inadequate oversight from internal audit contributed to long-standing problems in financial reporting.

Former executive management fostered a culture of excessive expense control that contributed to inadequate policies, controls, and systems in the controller department and other areas within the Enterprise. The excessive expense controls prevented several systems, processes and controls from being properly implemented or updated, and impeded the ability of business line management to prepare for future growth in business activities and changes in Generally Accepted Accounting Principles (GAAP). Internal audit was also significantly understaffed.

Organizational structure and control deficiencies contributed to the use of accounting policies and practices that were overly aggressive or not compliant with GAAP. These deficiencies include:

- No policies or procedures to formally establish personnel responsibilities for the development, review, and approval of accounting standards.
- No Controller department procedures to formally detail actual practices in applying accounting methodologies, or recording transactions.
- Poor segregation of duties in the Controller department for the authorization and recording of transactions, the modeling and recording of transactions, and financial reporting and forecasting.
- Lack of accounting technical expertise in the CFO and many of the controller department's management and staff.

- The independence of internal audit was compromised through inappropriate reporting lines, and the CFO's undue influence over the general auditor's compensation. The general auditor was also responsible for auditing his prior work.
- Excessively low staff levels in the Controller department and internal audit.
- Systems limitations in the Controller department created by excessive expense controls over systems and staff resources.
- Inadequate communication with the Board and its audit committee on accounting policy, and the resulting impact on public disclosures and compliance with GAAP.

The lack of centralized authority in operations and independent risk oversight prevented many deficiencies in several business lines from being detected, reported, and corrected. Several internal control standards were left to individual managers to establish, and accountability for detection of deficiencies largely fell on internal audit. Internal audit did not detect or accurately report several deficiencies as well as its own resource deficiencies to the audit committee.

The former strategic plan did not adequately coordinate all business lines for new business growth and changes in accounting requirements. Business line management sometimes made decisions independently and addressed systems upgrades or deficiencies with manual work-arounds, rather than implementing improvements within a comprehensive framework.

The Board began taking action and established a compliance committee to oversee corrective actions and initiated analysis of compensation, organizational structure, and their capital plan after the release of OFHEO's special examination of Fannie Mae in September 2004. Once the SEC concurred with OFHEO's conclusions that accounting methodologies did not comply with GAAP guidelines, the Board established a program to correct accounting policies and methodologies. The Board devoted significant resources to develop and monitor a program to correct deficiencies noted in the special examination by:

- Appointing a non-executive chairman to the Board and establishing separate positions for Chairman and CEO.
- Establishing compliance and review committees of the Board and a team that monitors and reports to the compliance committee efforts made to comply with OFHEO's September 2004 agreement and March 2005 supplemental agreement.
- Hiring consultants to recommend an organizational structure and compensation plan that meets or exceeds industry standards.
- Removing key executives who managed the accounting activities, appointing interim managers and a permanent controller, and hiring search firms to help replace the interim CEO, CFO, and the head of internal audit.
- Replacing the external auditor. The new auditor has initiated a comprehensive, substantive audit of Fannie Mae's processes, controls, and accounting policies and methodologies.
- Hiring an accounting firm to assist management in a comprehensive review of all accounting policies.
- Changing the organizational structure of the departments managed by the CFO to establish appropriate internal controls and segregation of duties in the areas of

- internal audit, chief risk officer, accounting, policies, reporting performance, and performance planning, forecasting, and modeling.
- Strengthening independent risk management by establishing a centralized risk management unit, establishing appropriate separation of duties in the controller department, developing a stand-alone ethics and compliance function, and making internal audit independent both in organization structure and function.
 - Centralizing the line of business management of operations.
 - Eliminating hedge accounting for derivatives until systems can be upgraded to properly apply the rules and document compliance required by SFAS 133.

Operations Risk

The 2004 examinations focused on the evaluation of internal controls, systems, communication, and culture in the lines of business under the CFO, and corrective actions taken by the Board to address the deficiencies OFHEO noted. Limited operations reviews were conducted in cash flow forecasting, credit risk measurement, and information technology (IT) in the areas of business continuity planning, crisis management, data center and e-business activities.

Operations risk management for transactions, accounting, and financial statement records of the Controller's department is weak but improving. Operations examinations outside of the controller department were limited this year, accordingly, OFHEO cannot rate the quality of operations risk management in the other lines of business. In addition to deficiencies discovered through reviews conducted by OFHEO and Fannie Mae management, new issues continue to emerge that indicate that operations controls need strengthening. The full picture of the quality of operations risk management will not be known until the Board consultants and the external auditor complete their analyses and OFHEO completes its ongoing examination.

Operations risk management for business lines managed by the CFO is weak based on:

- Accounting policies that are not compliant with GAAP.
- Inadequate systems used to record transactions and produce financial statements.
- The lack of a standardized or centralized program for business line controls.
- An operations risk management program that did not meet industry standards in several areas in organizational structure and communication.
- Former executive management began implementing a program to correct these deficiencies in 2004 but did not communicate the deficiencies to the Board.

Many aspects of the operational structure do not meet industry standards in the areas of segregation of duties, personnel expertise, and systems limitations and controls. Inadequate segregation of duties, poor clarification of personnel responsibilities and inadequate technical expertise of decision-makers and a willful disregard of accounting rules contributed to the use of accounting policies and practices that were overly aggressive or not compliant with GAAP. The former CFO reporting lines generated conflicts of interest by combining the following functions:

- The authorization and recording of financial transactions.
- Modeling and recording of security amortization.
- Financial reporting and forecasting.
- Risk taking, risk management, and financial controls.

The corporate-wide standards for business line oversight of operations risk management are weak due to a lack of centralization in operations oversight and non-standardization in controls and reporting requirements. Individual managers sometimes determined their own controls and report quality, which led to non-standardized and uncoordinated solutions that generated work-around fixes rather than coordinated solutions built for long-term viability.

Operations risk management in business lines managed by the CFO is improving due to the significant resources employed by the Board and the new executive management team to identify and correct deficiencies. The program is in its initial stages, and will take considerable time to fully implement. Issues such as the segregation of duties, hiring of new personnel, new accounting policies, and temporary manual work-arounds for systems deficiencies have been or can be corrected within months. Implementation of new systems for financial records and other areas will require several years to address.

The Board and new executive management devoted significant resources to develop a program to improve operations risk management throughout the Enterprise. The program addresses the operational deficiencies noted in the formal agreements with OFHEO and identifies and corrects issues throughout Fannie Mae. The Board and company management are in the initial stages of developing and implementing a comprehensive, corporate-wide framework for monitoring and controlling operational risk. Company management began to implement improvements noted in the independent organizational study conducted by consultants hired by the Board, and developed tracking reports to help monitor progress in meeting time lines for correction. The corrective actions to address operations risk issues include:

- Operations risk management centralized in one business line.
- Integration of controller department systems into the corporate-wide program for information technology.
- An organization structure that meets or exceeds industry standards.
- Improved controls and clarified accountability within the lines of business.
- A centralized independent risk management function that evaluates all risks within Fannie Mae, including operations risk.
- Improved reports, and risk metrics to better communicate risk levels and trends.
- Improved policies and procedures to better communicate standards, controls, and risk limits.

Information technology in the areas of business continuity planning, crisis management, data center and e-business activities are managed satisfactorily. Systems are secure and management established effective systems redundancies and business continuity processes. The IT strategic plan is satisfactory and appropriately integrated with corporate objectives.

Policies for the areas examined were generally satisfactory but some contained out-of-date and incomplete information.

ASSET QUALITY AND CREDIT RISK MANAGEMENT

Credit quality is strong. Credit risk management is satisfactory for processes concerning counterparty risk management, multifamily operations, and new product development. Weaknesses in many of these areas indicate that management in both the single-family and multifamily lines of business and internal audit need to strengthen their oversight functions. Most weaknesses were minor but several are of greater significance:

- Management of mortgage fraud in seller/servicers.
- Systems integration and process efficiencies.
- Methodologies used in the loan loss reserve.
- Validation of some credit risk models.
- Policy review process.

Management in the lines of business and independent risk management have already begun to address many of these issues. Management has recently corrected issues in the risk rating system, begun improvements in policy review and model validation, and proposed structural changes to improve controls and operations.

EARNINGS

The analysis below is based on financial statements that will be revised significantly at the conclusion of the ongoing restatement.

Earnings for 2004 are satisfactory. The business model exhibits the capacity for sustainable profits. Earnings capacity benefits from the government sponsored Enterprise status of the company which lowers borrowing costs and enhances the market's reception to its guarantees. The analysis of earnings is impeded by the lack of GAAP-compliant statements.

The capacity of the Enterprise for future earnings is a key component of the plan of management to achieve the capital ratios required in its agreement with OFHEO. The preferred equity issuance near year-end 2004 increased capital by \$5 billion but as of March 2005, capital levels remained \$5 billion below a 30 percent surplus, the required level. Management has also reduced dividend payments by 50 percent, which will increase retained earnings by roughly \$1 billion per year. Reductions in asset growth to reduce capital requirements, however, may limit earnings growth.

The rapid earnings growth reported in preceding years was not maintained in 2004, as expansion of the mortgage asset portfolio ceased and the guaranty business grew only modestly. Earnings in 2005 will likely be affected by asset reductions caused by the need to build capital and higher expenses from the restatement effort and systems upgrades.

Earnings from the mortgage asset portfolio remained strong in 2004 but were restrained by flat growth and a lower investment spread. The lack of growth in mortgage assets in 2004 followed 13 consecutive years of double-digit growth. Unusually tight spreads between market yields on mortgages and Fannie Mae's borrowing costs limited profitable purchase opportunities. Strong demand for mortgage assets at depository institutions held down mortgage yields throughout 2004.

The guaranty business experienced lower growth but higher guarantee fee (g-fee) rates. The outstanding mortgage security portfolio grew 8 percent in 2004 after exceptionally high growth in 2003 at 26 percent. A shift in primary market production toward adjustable-rate mortgages (ARMs) and subprime loans contributed to Fannie Mae's lower share of new business. Private label mortgage-backed security (MBS) issues reached record levels at \$864 billion or about 46 percent of total MBS issues in 2004, up from about 20 percent in 2002 and 2003. The increase in g-fees is, in part, due to the increase in purchase money mortgages, and the decline in refinancings which have lower g-fees.

Expenses will increase in 2005 to cover financial restatement efforts and systems upgrades, partially offset from cost control in other expense categories. Expenses will increase to cover external consultants, the expanded scope of the external auditor, and internal activities to identify and correct deficiencies in the controller department and other areas within Fannie Mae. The increase in systems expenses is primarily from changes to the controller department systems so that they can automatically apply GAAP compliant accounting methodologies.

LIQUIDITY RISK

Liquidity management is satisfactory but requires strengthening in some areas of policies and procedures, contingency planning, and systems issues that impact some process efficiencies. Policies provide guidelines and limits for the securities portfolios and asset coverage of short term liabilities. Daily cash flows and asset portfolios are managed satisfactorily. Some manual processes are inefficient but are capable of producing impacted reports on time. Management is in the process of addressing the following issues.

- Some policies and procedures are being refined with more formal guidelines for cashflow forecasting and tenor management.
- Contingency planning is being refined with estimates of realistic stress scenarios.
- Processes will be refined through automation and systems integration.

The market value of Fannie Mae's mortgage and non-mortgage securities amply cover the liabilities that mature in one year or less. Systemic market events have not reduced the liquidity of the market for Fannie Mae debt because of the market's perception of Fannie Mae's debt as a "flight to quality" product. In addition, recent company-specific events concerning financial statement and internal control deficiencies generated only a small impact on the cost of and market access to funding to date. OFHEO cannot provide a liquidity rating until an evaluation is completed of the analysis of cash flow variances and stress scenarios by the management of the treasury department of the company.

SENSITIVITY TO MARKET RISK

Interest rate risk (IRR) is managed satisfactorily due to effective communication and risk management from front office personnel throughout portfolio strategy, portfolio transactions, treasury, and the risk policy committee. Risk levels have been consistently maintained within management's IRR limits. IRR management should be strengthened through:

- A more comprehensive policy.
- Reports that better communicate the Enterprise's total IRR profile to Board members.

OFHEO cannot provide a final rating on the quantity of risk until a comprehensive review of data inputs, assumptions, methodologies and models used to estimate risk/return metrics is completed. An evaluation of middle or back office operations, securities valuation methodologies, and IRR model development and use was not done during this examination cycle.

CAPITAL ADEQUACY

Fannie Mae's capital is classified as significantly undercapitalized at year-end 2004. As of December 31, 2004, based upon information provided and certified by Fannie Mae management including adjustments for the estimated impact of accounting errors, Fannie Mae's estimated core capital exceeded the estimated minimum capital requirement by a small margin. Given the significant control weaknesses and the remaining uncertainties associated with the ongoing review of Fannie Mae's financial controls and accounting policies, risk remains that accounting adjustments could deplete Fannie Mae's core capital from those estimates. The small surplus at year-end 2004 left little room for discrepancies in the estimated capital position. It is noteworthy, however, that as of March 31, 2005 Fannie Mae had achieved an estimated capital surplus over the minimum capital requirement, resulting in a classification of adequately capitalized for March 31, 2005. The estimated \$4 billion surplus on that date provided an added cushion to cover the impact of additional uncertainties in the estimated accounting impact on capital.

Capital was classified as adequately capitalized at the end of the first two quarters in 2004 because capital levels met and exceeded both the minimum and risk-based capital requirements based on existing financial statements. After the SEC required Fannie Mae to restate its financial statements to address accounting issues, OFHEO reduced Fannie Mae's capital classification to significantly undercapitalized at the end of the third quarter 2004 to reflect an estimated reduction in core capital below the minimum capital requirement.

OFHEO and Fannie Mae entered into an agreement on September 27, 2004, that required Fannie Mae to achieve a 30 percent capital surplus by June 30, 2005 to provide coverage for uncertainties in Fannie Mae's controls and accounting practices. On December 21, 2004, OFHEO classified Fannie Mae as significantly undercapitalized based upon the ruling of the Securities and Exchange Commission that Fannie Mae must restate its financial results due

to inaccuracies in SFAS 133 reporting. Fannie Mae disclosed that the estimated impact of the disallowed hedges approximates \$9 billion. OFHEO adjusted the previously reported financial results for September 30, 2004 reflecting the \$9 billion capital reduction, resulting in a deficit capital surplus of approximately \$2 billion. As a result of the significantly undercapitalized classification for September 30, 2004, Fannie Mae submitted a capital restoration plan that outlined the strategy of the company for achieving the required capital surplus by September 30, 2005. Fannie Mae strengthened its capital position by issuing \$5 billion in preferred stock on December 30, 2004. Additional accounting errors impacting December 31, 2004 surfaced in early 2005 resulting in a small estimated capital surplus of \$475 million.

Due to the continued uncertainty in the financial estimates and the small margin for error, OFHEO continued the significantly undercapitalized position as of year-end 2004. During 2005, Fannie Mae has continued to generate earnings and has initiated select asset sales. These actions have generated an estimated capital surplus of \$4 billion as of March 31, 2005 and a capital classification of adequately capitalized by OFHEO. Further, efforts to achieve the 30 percent capital surplus by September 30, 2005 in accordance with the capital restoration plan remain on track with contingency plans available should additional changes alter the plan.

Management satisfactorily monitors and reports regulatory capital to OFHEO. Operational weaknesses, accounting issues, and internal control deficiencies throughout Fannie Mae continue to impact capital requirements and capital management practices. Management continues to take steps to restore capital levels and remains on target to achieve the OFHEO-directed 30 percent minimum capital surplus by September 30, 2005. The capital restoration plan appropriately details contingent actions that could increase capital levels should primary means become insufficient.

FREDDIE MAC ANNUAL EXAMINATION

OFHEO's examination activities focused heavily on compliance by the Enterprise with the extensive requirements of the Consent Order the Board of Directors executed on December 9, 2003 (Consent Order)¹ and with the implementation by the Enterprise of plans it submitted in response to the Consent Order requirements. Correspondingly, we targeted our examination resources to evaluate Board and management compliance with specific actions required by the Consent Order and the Enterprise that pertained to: the Board of Directors and Senior Management (Article II); Internal Controls (Article III); Internal Audit (Article IV); Internal Accounting (Article V); Risk Management Transactions (Article VI); Public Disclosures and Regulatory Reporting (Article VII); and Consent Order Oversight and Reporting (Article VIII). We performed additional on-site and off-site examination activities necessary to assess credit risk (including asset quality), earnings, capital adequacy, information technology, interest rate risk, liquidity risk, and management processes.

EXAMINATION RESULTS AND CONCLUSIONS

Overall, the condition of the Enterprise is improving but continues to warrant supervisory concern. The Enterprise is in the process of implementing plans to address the matters in the wide-ranging Consent Order and is subject to a capital directive as a result of a combination of moderate to severe internal control weaknesses. Although the Enterprise reported 2004 financial results on March 31, 2005, it does not have current financial statements in circulation, and does not expect to be a timely filer of 2005 financial information until the first quarter of 2006. Ameliorating factors include: (1) a significant capital surplus; (2) risk management strengths in key areas such as credit, interest rate, and liquidity risk that provide the Enterprise with the ability to withstand economic and market fluctuations; and (3) appropriately intensive efforts on the part of the Board of Directors and senior management to correct known control weaknesses.

During 2004 the Board of Directors and senior management made concerted efforts to correct extensive control weaknesses of the Enterprise. OFHEO examiners observed improvements in both financial reporting and general operational controls. Although the remediation of internal control weaknesses is not complete, action plans are in place, or are being developed and implemented, to address identified weaknesses. The successful completion of those plans will require the continued commitment and intensity of the Board and management throughout 2005 and beyond. Moreover, improvements to systems capabilities and the successful implementation of re-engineered business processes will be necessary to restore the overall control environment to a satisfactory condition. The process of validating the adequacy of controls and the actions taken to address significant control

¹ See [OFHEO Consent Order No. 2003-02](#), dated December 9, 2003.

weaknesses will require substantial efforts on the part of Enterprise personnel and the independent auditor of the Enterprise.

Leadership from the Board and senior management has facilitated significant progress over the past year. The reconfigured Board and senior management committees and revised committee charters have provided a foundation for positive change.

MATTERS REQUIRING BOARD ATTENTION

Key matters requiring strong Board oversight:

- The Board should continue to monitor compliance efforts to ensure remediation targets are met. Considerable progress was made in 2004 to achieve compliance with the provisions of the Consent Order. Aggressive remediation efforts are underway and company management anticipates full compliance with the Consent Order and related plans during 2006.
- The Board should ensure management actions to correct internal control weaknesses and deficiencies result in processes that are repeatable and sustainable. The independent auditor, PricewaterhouseCoopers (PwC), identified material weaknesses and internal control deficiencies during its audit of the financial statements for the year ending December 31, 2003. PwC identified additional material weaknesses in 2004. Concerted undertakings to address control deficiencies and permit the timely preparation of accurate financial statements are underway.
- The Board should continually evaluate the effectiveness of governance practices to ensure they are consistent with leading practices of other large, complex financial services organizations.
- The Board should closely monitor staffing levels and capacity to ensure day-to-day activities and change initiatives are effectively managed. The aggregate level of change occurring throughout the Enterprise is high. Processes to manage change activities will require the adoption of advanced change control practices to ensure corporate-wide change events are properly controlled and integrated.

COMPLIANCE WITH CONSENT ORDER

Considerable effort has been made by the Board and management to comply with the Consent Order. The rate of progress has been acceptable and, to date, all required reports and plans have been filed timely. A significant amount of additional work remains before plans submitted in response to the Consent Order are fully implemented. In particular, as contemplated by the plans submitted pursuant to the Consent Order, additional time and effort is needed to complete activities associated with Article III - Internal Controls and Article V - Internal Accounting. Consent Order-related remediation efforts are expected to continue throughout 2005 and extend into 2006. OFHEO will continue to perform

examination activities as necessary to evaluate the effectiveness of actions taken in response to Consent Order requirements.

BOARD AND MANAGEMENT SUPERVISION

The quality of Board governance is satisfactory. The current senior management team is capable. The Board must continue to hold management accountable for the timely and complete remediation of issues. The Board is also encouraged to evaluate the effectiveness of its governance practices continually to ensure they are consistent with leading practices of other large, complex financial service organizations.

The Board made progress in a number of areas, including hiring executive and senior management, revising bylaws in accordance with the Consent Order, adopting corporate governance guidelines, and adopting agenda planning and issue/action item tracking reporting. The Board reconfigured its committee structure and revised the committee charters, and has increased the frequency with which committees meet. Production of board/committee meeting minutes became timelier. The Enterprise also has an initiative underway to improve board and senior management reporting.

Areas for improvement include: the development and implementation of a formal strategic planning process that is integrated throughout the corporation; a further cultural shift toward accountability for controls at all levels of the organization; ongoing succession planning for each key position; continued evolution in the quality and content of board-level reports; and ongoing director training.

Internal Controls

PwC cited a number of broad material weaknesses during its audit of the financial statements for 2003. Each broad material weakness represented numerous detailed weaknesses. Senior management elevated addressing the weaknesses to a corporate priority and has taken appropriate steps to assign sufficient resources with appropriate skill levels to the related projects. During 2004, the Enterprise utilized extensive procedures to verify the accuracy of the 2004 financial results rather than rely on internal controls. It is anticipated that the Enterprise will rely more fully on internal controls during 2005 as remediation activities are completed.

The significant and pervasive nature of weaknesses in accounting operations, along with the substantial manual controls needed to prepare reliable financial information, adversely affected Freddie Mac's ability to release timely quarterly financial information. Large-scale, persistent efforts are underway to create or improve the processes and controls necessary for the ongoing production of timely quarterly financial statements. The aggressive focus on implementing controls intended to mitigate control deficiencies and address accounting policy issues contributed to an improved timeframe compared with the prior year for releasing the year-end 2004 financial statements. Additional progress is needed to allow quarterly financial statements to be prepared and released within an appropriate timeframe.

The ability to release timely financial statements remains a substantial challenge for Freddie Mac. Critical components to reach the goal include:

- Implementing a more disciplined and formal control environment that permeates the organization;
- Moving toward greater reliance on automated, preventative controls rather than manual, detective controls; and
- Establishing a reliable self-assessment framework for internal controls that reinforces a strong internal control culture and incorporates responsibility and accountability.

Success is contingent on significant improvements to existing information technology systems and business processes. Information technology systems and business process-related initiatives are expected to be a significant, ongoing effort.

ASSET QUALITY AND CREDIT RISK MANAGEMENT

The credit risk management function remains satisfactory. Credit quality is strong based on internal asset quality indicators. Credit losses are expected to rise but remain low by historical standards. Mortgage delinquencies are well controlled. Counterparty financial strength is satisfactory. Vulnerability to deterioration in credit quality exists due to industry, competitive, regulatory, operational and technological factors.

The inability of the Enterprise to aggregate counterparty risks at the corporate level has been a long-standing finding of internal audit and OFHEO. Management should fulfill its commitment to a comprehensive counterparty risk management program which includes: appropriate eligibility standards, risk rating capabilities, and exposure limits.

Single-family

Credit risk management practices coupled with a number of positive economic factors contribute to Freddie Mac's strong single-family credit quality. Although the quality of single-family purchases remains strong, certain underwriting standards have been relaxed to increase market share and achieve affordable housing goals. Examples include the purchase of non-Loan Prospector and No Income/No Asset documentation loans. OFHEO has encouraged management to identify and implement strategies to quantify the impact of rising caution and defect rates on profitability, ROE, market share and affordable housing goals.

Multifamily

The quality of multifamily purchases is strong and is within corporate targets. Delinquencies are well-controlled. There were \$4.8 million in net recoveries versus a 2004 net credit loss target of \$15-\$25 million and 2003 net credit losses at \$10.5 million. Management has reported that credit quality and returns may decline in 2005 due to pressures to meet the Department of Housing and Urban Development's (HUD) affordable housing goals.

EARNINGS

Freddie Mac's fundamental earnings were constrained in 2004 due to market forces, and higher levels of administrative expenses. Market forces related to continued competition for mortgage assets caused compression in asset yields. Total yields on interest-earning assets declined to 4.66 percent from 4.93 percent in 2003. Freddie Mac reduced its purchases of 30-year products due to lower spreads and increased its level of lower yielding ARM products. The trade-off in purchasing ARMS was lower hedging costs related to reduced prepayment sensitivity. Freddie Mac expects net interest income to be materially lower in 2005 due to compression in net interest margin on its existing mortgage portfolio and lower nominal margins on floating rate mortgage-related security purchases. Company management expects this decrease to be significantly offset by decreased losses in non-interest income, assuming current forward rates are realized.

Freddie Mac's administrative expenses increased by \$400 million in 2004. Administrative expenses were higher due to continued infrastructure and control remediation efforts underway to improve Freddie Mac's financial reporting.

Freddie Mac's GAAP earnings fell 40 percent to \$2.9 billion, from \$4.8 billion in 2003. The primary driver of the decline was \$4.5 billion in mark-to-market derivative losses. The derivative losses were partly due to Freddie Mac's movement of substantially all pay-fixed swaps to no hedge designation in the second quarter of 2004. The Enterprise determined that substantially all pay-fixed swaps and other derivatives that previously had been in cash flow hedge accounting relationships no longer met the hedge accounting requirements of SFAS 133. The change in notional amount of derivatives not designated in hedge accounting relationships is likely to produce continued earnings volatility, as periodic changes in the fair value of these derivatives are reflected through derivatives gains or losses.

LIQUIDITY

Liquidity is satisfactory. The Enterprise has access to sufficient sources of funds on acceptable terms to meet present and anticipated liquidity needs. Management is able to forecast liquidity needs and sources effectively; and to identify, measure, monitor, and control the Enterprise's liquidity position. Liquidity management policies, procedures and a liquidity contingency plan are in place and identify authorized investments, exposure limit rules, and independent review requirements. Management consistently maintained its liquidity and contingency threshold of five percent of on-balance-sheet assets. Management has appropriate policies and procedures for forecasting short- and long-term liquidity needs. Risk limits are in place to ensure sufficient liquidity levels, and management evaluates limits and pertinent metrics on a daily, weekly, and monthly basis. Market risk oversight provides effective monitoring of risk limits as a form of independent risk oversight.

SENSITIVITY TO MARKET RISK

Interest rate risk management is satisfactory. Sensitivity to market risk reflects the degree to which changes in interest rates can adversely affect the Enterprise's earnings and capital. During 2004, Enterprise management demonstrated an appropriate ability to identify, measure, monitor, and control market risk in a manner commensurate with the nature and complexity of the Enterprise's activities. Freddie Mac's quantitative measures of Enterprise sensitivity to market risk exposures—primarily, Portfolio Market Value Sensitivity (PMVS), duration gap, convexity, yield curve risk, and basis risk—reflect that earnings and capital are appropriately protected against significant movements in market rates.

PMVS is the approved measure of the Board of interest rate risk exposure, and measures the estimated loss in the market value of the common equity of the Enterprise resulting from defined adverse changes in LIBOR rates. PMVS is a measure that encompasses both the duration and convexity components of interest rate risk. The PMVS levels and other metrics observed in 2004 indicate that market risk sensitivity is well-controlled and that there is limited potential that the earnings performance of the Enterprise or capital position will be adversely affected.

CAPITAL ADEQUACY

Regulatory capital is adequate. OFHEO's Office of Capital Supervision formally classifies capital adequacy on a quarterly basis in accordance with Subtitle B of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 and with the requirements set forth in OFHEO's minimum and risk-based capital regulations. The Enterprise currently is subject to an OFHEO capital directive that requires the Enterprise to maintain a capital surplus of 30 percent over its minimum capital requirement. The capital directive will remain in place until the OFHEO Director determines the directive should be modified or terminated.

On March 31, 2005, OFHEO announced that it had classified Freddie Mac as adequately capitalized as of December 31, 2004, and that the Enterprise was adequately capitalized during all periods in 2004. As of that date, the core capital of the Enterprise exceeded its minimum capital requirement by approximately 45 percent. OFHEO supports its capital classifications through a combination of compulsory capital reporting and weekly monitoring, and ongoing analyses of market and other factors, risk management practices, and other factors that could impact the adequacy of capital.

¹ This information is subject to change as a result of the pending re-audit and restatement of Fannie Mae's financial statements.

² Beginning in 1998, the guaranty liability for MBS held in the portfolio is classified as a liability.

³ Gross retained portfolio net of unamortized purchase premium, discounts and deferred price adjustments, and, beginning in 2002, unrealized gain/loss on available-for-sale securities. The amounts for 1999 through 2002 include certain loans held for investment that were previously classified as non-mortgage investments.

⁴ Values for years 1999 through 2003 exclude securities included in new balance sheet line item, "Loans held for securitization and sale", and in the retained mortgage portfolio.

⁵ The sum of (a) the stated value of common stock, (b) the stated value of outstanding noncumulative perpetual preferred stock, (c) paid-in capital, and (d) retained earnings, less treasury stock.

⁶ Total Fannie Mae MBS outstanding net of Fannie Mae MBS in the retained mortgage portfolio.

⁷ Includes REMICs and stripped MBS.

¹ This information is subject to change as a result of the pending re-audit and restatement of Fannie Mae's financial statements.

² Beginning with 1998, data include all seriously delinquent conventional loans with and without third-party credit enhancement. Prior to 1998, data include loans for which Fannie Mae has primary risk of loss. Data prior to 1992 include loans in relief or bankruptcy, even if they are less than 90 days delinquent.

³ Beginning in 1998, data include all loans that are two or more months delinquent. Data prior to 1998 include loans for which Fannie Mae has primary risk of loss.

⁴ Credit losses are charge-offs plus real estate owned expense; average balances used to calculate ratios subsequent to 1994; quarterly data are annualized.

⁵ Real estate owned balances reflect end-of-period amounts. Beginning with 1995, data reflect adoption of SFAS 114.

⁶ Beginning in 2000, "credit-enhanced" is expanded to include primary mortgage insurance. Prior to 2000, reflect proportion of the retained mortgage portfolio with additional recourse from a third party to accept some or all of the expected losses on defaulted mortgages.

¹ This information is subject to change as a result of the pending re-audit and restatement of Fannie Mae's financial statements.
² The difference between Core Capital and Minimum Capital Requirement.
³ Total Capital is Core Capital plus the total allowance for loan losses and guaranty liability for MBS, less any specific loss allowances.
⁴ The Risk-Based Capital Requirement is the amount of Total Capital that an Enterprise must hold to absorb projected losses flowing from future adverse interest rate and credit risk conditions and is specified by the Federal Housing Enterprise Financial Safety and Soundness Act of 1992.
⁵ The difference between Total Capital and the Risk-Based Capital Requirement.
⁶ Stock price at the end of the period multiplied by number of outstanding common shares.
⁷ Common dividends paid as a percentage of core net income available to common stockholders.

¹ For the period 2001 through 2003, data are based on restated and revised financial results.

² Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled.

³ Loans purchased from lenders. Excludes repurchased Freddie Mac MBS and structured securities.

⁴ Not included in total mortgages. Includes non-Freddie Mac mortgage-related securities and repurchased Freddie Mac MBS and structured securities. For the period 2002 through 2004, amounts include non-Freddie Mac mortgage-related securities purchased for structured securities (e.g. alternative collateral deals and structured securities backed by Ginnie Mae MBS). For years prior to 2002, includes alternative collateral deals and excludes structured securities backed by Ginnie Mae MBS.

¹ For the period 2001 through 2003, data are based on restated and revised financial results.

² Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled.

³ Loans purchased from lenders. Excludes repurchased Freddie Mac MBS and structured securities.

⁴ For the period 2002 through 2004, includes loans guaranteed by the Rural Housing Service.

⁵ For the period 2001 through 2004, includes balloons/resets.

¹ For the period 2001 through 2003, data are based on restated and revised financial results.

² Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled.

³ Includes home equity securities.

⁴ Not included in total mortgages. Includes non-Freddie Mac mortgage-related securities and repurchased Freddie Mac MBS and structured securities. For 2004, 2003 and 2002, amounts include non-Freddie Mac mortgage-related securities purchased for structured securities (e.g. alternative collateral deals and structured securities backed by Ginnie Mae MBS). For 2001, includes alternative collateral deals and excludes structured securities backed by Ginnie Mae MBS.

¹ For the period 2000 through 2003, data are based on restated and revised financial results.

² In 1993, Freddie Mac adopted a change in reporting of uncollectible interest on single-family mortgages. Pre-1993 amounts do not reflect that change.

³ Defined as provision for credit losses plus real estate owned operations expense. From 1988 to 1990, data include real estate owned disposition loss provisions instead of expense, and before 1988 only mortgage loan loss provision.

⁴ Ratio computed as annualized net income available to common stockholders divided by the simple average of beginning and ending stockholders' equity, net of preferred stock (at redemption value).

N/A = not available

¹ For the period 2001 through 2003, data are based on restated and revised financial results. Certain data for 2004 do not reflect minimum capital reports previously submitted to OFHEO and are subject to change.

² Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled.

³ Excludes "Reserve for losses on mortgage loans held for investment."

⁴ Based on fair value. Consists of Freddie Mac's cash and investments portfolio, excluding cash and cash equivalents and mortgage-related securities within that portfolio.

⁵ The sum of (a) the stated value of outstanding common stock, (b) the stated value of outstanding noncumulative perpetual preferred stock, (c) paid-in capital, and (d) retained earnings, less Treasury stock.

⁶ Represents MBS and structured securities that are held by third parties. For years prior to 2002, includes MBS and structured securities in Freddie Mac's cash and investments portfolio.

⁷ Represents total multiclass MBS held by third parties.

¹ For the period 2000 through 2003, data are based on restated and revised financial results, except for the credit-enhanced share of the total mortgage portfolio in 2000.

² Based on the number of mortgages 90 days or more delinquent or in foreclosure. 1994 -1999 data include only loans for which Freddie Mac assumed primary default risk. Pre-1994 calculations included all loans. Rates for 2000 through 2004 are based on the total single-family mortgage portfolio. Includes delinquencies on mortgage loans where Freddie Mac has transferred primary or full default risk to various third parties as well as multiclass MBS backed by alternative collateral deals.

³ Based on net carrying value of mortgages 60 days or more delinquent or in foreclosure.

⁴ Credit losses equal to REO operations expense (income) plus Charge-offs, net. Calculated as credit losses (gains) divided by the average total mortgage portfolio, excluding non-Freddie Mac mortgage-related securities and that portion of structured securities that is backed by Ginnie Mae MBS.

⁵ Based on the total mortgage portfolio excluding non-Freddie Mac mortgage-related securities and that portion of issued structured securities that is backed by Ginnie Mae MBS.

⁶ Includes loans for which the lender or a third party has retained primary default risk by pledging collateral or agreeing to accept losses on loans that default. In many cases, the lender's or third party's risk is limited to a specific level of losses at the time the credit enhancement becomes effective.

- 1 For the period 2001 through 2003, data are based on restated and revised financial results. Certain data for 2004 do not reflect minimum capital reports previously submitted to OFHEO and are subject to change.
- 2 The difference between Core Capital and Minimum Capital Requirement.
- 3 Total Capital is Core Capital plus the total allowance for loan losses and guaranty liability for MBS, less any specific loss allowances. For 2002, calculated by OFHEO prior to the restatement of Freddie Mac's 2002 financial results.
- 4 The Risk-Based Capital Requirement is the amount of Total Capital that an Enterprise must hold to absorb projected losses flowing from future adverse interest rate and credit risk conditions and is specified by the Federal Housing Enterprises Financial Safety and Soundness Act of 1992.
- 5 The difference between Total Capital and Risk-Based Capital Requirement.
- 6 Stock price at the end of the period multiplied by number of outstanding common shares.
- 7 Common dividends paid as a percentage of net income available to common stockholders.
