

Supporting the Nation's Science Education Endeavor

1960s

1962 Technical Information Division becomes the Division of Technical Information Extension (DTIE); DTIE maintained Atoms for Peace libraries, first booklets in the series “Understanding the Atom”

1963 Weinberg Report issued by the White House, documented the value of technical information and identified the transfer of information as an inseparable part of R&D; DTIE supported foreign exhibits program; production of microfiche began

1964 Provided scientific materials for the Third Geneva Conference and distributed half-million booklets to the New York World's Fair

1967 Computer processing of information began, electronic information was stored to enable rapid searching of bibliographic information

1969 DTIE was instrumental in establishing the International Nuclear Information System created under the International Atomic Energy Agency; work began on instructional series for elementary school science, “The World of the Atom”
