

## WORKFORCE INVESTMENT ACT PERFORMANCE HIGHLIGHTS

The Office of Performance and Technology has developed a series of “WIA Snapshots” highlighting three years of data on the WIA Adult, Dislocated Worker, and Youth programs.<sup>1</sup> These snapshots provide an overview of recent trends in demographic characteristics, program information, services received, and performance outcomes for individuals who have exited these programs (generally, these are program completers). A snapshot for each program is attached and a synopsis is provided below.

### Demographic Characteristics

- The number of WIA Adults more than doubled between PY 2004 and PY 2006, largely due to the co-enrollment of the Wagner-Peyser Employment Service exiters.
  - Preliminary analysis shows that the majority of co-enrolled exiters that accounted for this overall upswing in WIA Adult exiters occurred in only a few states.
- Both the number and the share of low-income WIA Adult exiters decreased in each of the last three years.
- Both the number and the share of WIA Adult and Youth TANF recipients declined slightly in each of the last three years.
- The share of offenders remained roughly the same among the WIA Adult and Youth populations (about 9 percent for Youth and 7 percent for WIA Adults) between PY 2004 and PY 2006.

### Program Information

- The share of WIA Adults co-enrolled in the Wagner-Peyser Employment Service increased more than 26 percent between PY 2005 and PY 2006; New York’s outcomes reported contributed to roughly half this increase.
- The share of Dislocated Workers co-enrolled in the Wagner-Peyser Employment Service increased by nearly 14 percent from PY 2004 to PY 2006; New York’s outcomes reported contributed to roughly a third of this increase.
- As a likely result of increased co-enrollment in the Wagner-Peyser Employment Service, the average length of participation for WIA Adults and Dislocated Workers fell: for WIA Adults, it dropped by 50 percent between PY 2005 and PY 2006 from 42 weeks down to 21 weeks, for WIA Dislocated Workers, it dropped from 42 weeks to 35 weeks.

### Services Received

- Roughly 110,000 WIA Adults continued to receive training but the share of training services as compared to other services (e.g., core and intensive) fell sharply from 45

---

<sup>1</sup> Based on Program Years 2004-2006 Workforce Investment Act Standardized Record Data (WIASRD).

percent to 22 percent because the number of WIA Adult exiters more than doubled as discussed above, and typically co-enrolled Wagner-Peyser Employment Service exiters do not receive training.

- The number of WIA Dislocated Workers who received training continued to fall for the third year in a row, from 93,000 in PY 2004 to 77,000 in PY 2006.
- Less than one-fifth of WIA Adults and Dislocated Workers program exiters received supportive services such as assistance with transportation, assistance with uniforms or other appropriate work attire, or linkages to community services. In contrast, nearly one third of Youth program exiters received such services.

### Performance Outcomes

- The Entered Employment Rate fell between PY 2005 and PY 2006 for WIA Adults and Dislocated Workers program exiters, mostly attributable to New York's reported outcomes.
- Retention remains high, above 80 percent, for all three programs over all three years. This is significant in that in PY 2005 the definition for retention was changed to add another measurement point for retention (2<sup>nd</sup> and 3<sup>rd</sup> quarters after exit).
- Earnings fell slightly among WIA Dislocated Workers program exiters and remained about the same for WIA Adults and Youth program exiters.
