William Anderson, Chief Economist

HIGHLIGHTS & SUMMARY

Highlights

- There is no denying that Nevada's short-term economic performance is worrisome. This softening, due in large part to the residential construction downturn, has negatively impacted, among other things, the State's labor markets, unemployment insurance activity, and retail trends.
- However, examining current trends in a broader context, coming on the heels of a multi-year boom in the Nevada economy, offers a much more encouraging perspective. For instance, despite job growth which continues to ease, and is approaching 1%, the State is home to 250,000 more jobs than just five years ago. In addition, a look to the future suggests that better news may be ahead in the years to come, especially in light of approximately 40,000 new hotel rooms likely to be constructed in southern Nevada over the next half-decade. The first batch of these rooms is scheduled to come on-line in late-December, with the opening of the Palazzo.
- After topping out in early-2002, Nevada's unemployment rate (seasonally adjusted¹) trended down until the beginning of 2006, and it has been on the upswing, albeit unevenly, since. September's 5.1% reading is up 0.9 percentage point from a year ago and is the highest it has been since late-2003. It is up from 5% in August.
- As a result, Nevada's jobless rate has edged ahead of the national average, following a five-year period in which it was lower than national norms. Through the first nine months of the year, Nevada's unemployment rate has averaged 4.7% (not seasonally adjusted) compared to 4.6% for the U.S. as a whole. A year ago, during the first nine months of 2006, Nevada's jobless rate was 0.6 percentage point below the national average, a clear sign of the change in the State's economic fortunes.
- Year-to-date through September, the Clark County unemployment rate stands at 4.6%, not adjusted for seasonal variation, marginally higher than Washoe County's 4.5%. In the balance of the rest of the State, it is 5.2%.
- Job growth continues to ease, and remains the lowest it has been since mid-2002. Through September of

¹ The seasonal adjustment process removes the month-to-month seasonal effects from a data series. Over the course of a year, the levels of employment and unemployment undergo sharp fluctuations due to such seasonal developments as changes in weather, the planting and harvesting of crops, major holidays, and the opening

and closing of schools. Since these seasonal events follow a more or less regular pattern each year, their influence on statistical trends can be eliminated by adjusting the statistics from month to month.

this year, job gains have averaged 2.4%. This is just one-half the rate of growth realized in 2006.

- Typically, job readings increase from August to September, due, in large part, to the start of the school year. This year, September job readings were up 9,000 relative to August, the smallest monthly increase since 2002.
- Las Vegas metropolitan statistical area (MSA) job growth has averaged 2.5% through September, slightly higher than Reno-Sparks' 2.2% gain. The year-over-year increase in the Carson City MSA was minimal, at 0.1%.
- Through the first nine months of the year, national job growth has averaged 1.4%, a full percentage point below Nevada's 2.4% gain.
- Nevada average weekly wages, at \$802 in the first quarter of 2007, stood 4.9% higher than a year ago. This compares favorably to the 3.4% advance for all of 2006.
- The weakness in the housing segment is impacting the State's labor markets. Construction jobs are off by 3,000 so far this year. In 2006, the construction sector added about 9,000 new jobs. Unemployment insurance claims from the construction industry are up by approximately one-third.

- All told, though the first nine months of this year, initial claims for unemployment insurance are up 20% from a year ago. September claims totaled nearly 12,000, a gain of almost 25% from a year ago. Claims activity has been trending up since, roughly, mid-2006.
- Continued unemployment insurance claims remain well above year-ago readings. For the year, they are up by nearly 30%. The average duration of UI claims continues to creep up, albeit unevenly, and stands at 13.2 weeks in September. The number of individuals exhausting their unemployment insurance benefits is also trending up, a pattern consistent with the moderating pace of economic growth. On average in 2007, about 2,100 Nevadans per month have received final benefit payments, one-third higher than a year ago.
- There were 59,100 Nevada employers (a new economic barometer covering the number of employers with recorded unemployment insurance contributions, shown for the first time in this *Briefing*) in 2007:IIQ. This translates into a gain of 4.7% from the same period a year ago. In recent years, the growth in the number of Nevada employers peaked in 2005, at more than 6%. It has eased in both 2006 and so far in 2007.
- Nevada's taxable sales, which comprise the tax base for the State's largest General Fund revenue source (the sales tax), have declined in each of the past five

months. The August decline, at 5.7% relative to a year ago, is the sharpest year-over-year decline in the past decade, except for 6.6% drop in September 2001.

- At 3.35 million, Las Vegas visitor volume in August stood 0.4% higher than a year ago.
- Through the first eight months of the year, gaming win is up just 2.1%. Gaming win has significant impacts on gaming tax collections, the second-largest General Fund revenue source.
- For all of 2006, Nevada personal income grew at a 7.9% pace. Income gains were the lowest since 2003. Still, Nevada continued to outpace the nation, where personal income grew just 6.6% in 2006. Through the first half of this year, income is up 7.4% in the State, another impressive showing in light of the nation's 6.4% gain.
- Activity on the residential real estate and construction front remains weak. Housing permit activity is down by over 40% in the first three quarters of 2007 in the State. In southern Nevada, new home closings are down by 44% year-to-date (through September). Recorded resales are down by nearly the same amount. At \$313,500 in September, the median price of new homes stood 2.4% below a year ago.

2006 and 2007 Summary

The federal/state cooperative program under which employment and unemployment estimates for states and local areas are developed is the Local Area Unemployment Statistics Program (LAUS). These estimates are prepared by state employment security agencies in accordance with Bureau of Labor Statistics definitions and procedures. They are used for planning and budgetary purposes, as an indication of need for employment and training programs, and to allocate federal funds under the Workforce Investment Act (WIA), Federal Emergency Management Agency (FEMA), etc.

Initial Claim – An initial claim is any notice of unemployment filed by an individual to initiate 1) a determination of entitlement to and eligibility for compensation (a new claim); 2) a subsequent period of unemployment within a benefit year or period of eligibility (an additional claim); or 3) a new claim filed to request a determination of eligibility and establishment of a new benefit year within an existing spell of unemployment (transitional claim).

Continued Claim – A claim filed after the initial claim, by mail, telephone, electronically, or in person, for waiting-period credit or payment for a certified week of unemployment.

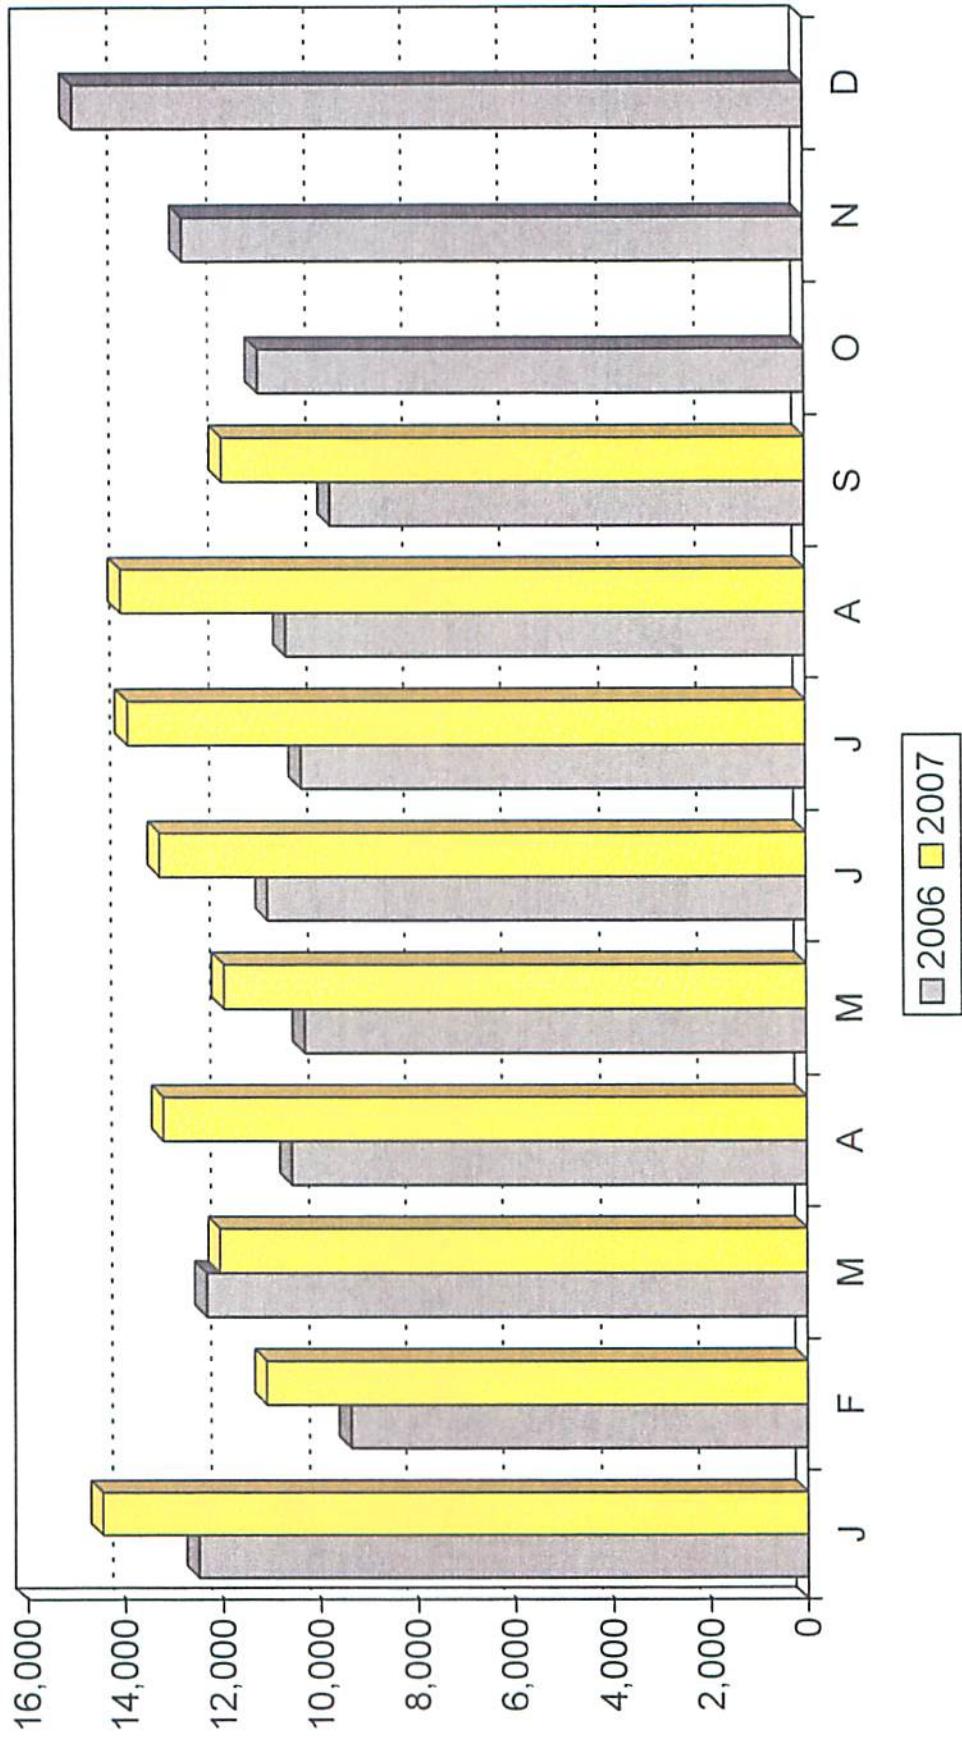

Average Duration -The average number of consecutive weeks a claim is paid, expressed on a 12-month moving average basis.

Exhaustions - Benefit payments in a claimant's final week of eligibility.

Personal income is defined as the income that is received by persons from participation in production, from both government and business transfer payments, and from government interest (which is treated like a transfer payment). It is calculated as the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments to persons, less personal contributions for social insurance.
