HIGHLIGHTS & SUMMARY

Highlights

- Nevada's economy grew at a remarkable pace over the course of the 2004-2006 period. A slowdown was inevitable. Historically, Nevada's economic performance has been greatly impacted by significant expansions in the gaming industry. The regional economy tends to boom with each round of megaresort openings, with much more moderate growth in the interim. Except for The Wynn, which opened in April 2005, there has been an absence of megaresort openings since the early part of this decade. This, coupled with the well-publicized housing slump, helps to explain the moderation in economic growth in Nevada over the course of the past several months.
- Fortunately, there is reason for optimism. Beginning with the opening of the Palazzo late this year, there are approximately 40 thousand new rooms scheduled to come on-line over the next several years. In addition, the consensus appears to be that the housing market correction will have run its course by sometime in 2009, which will also add further strength to the State's economy. Over the long-term, continued population growth, solid job gains, and associated wage and income advances will lead to a healthy housing sector, albeit one with market-driven cyclical ups and downs.
- After topping out in early-2002, Nevada's unemployment rate (seasonally adjusted¹) trended down until the beginning of 2006, and it has been on the upswing, albeit unevenly, since. The most recent reading for June, at 4.6%, is up 0.4 percentage point from a year ago and is the highest it has been since mid-2004. It is unchanged from May.
- As was the case in May, June's jobless rate was higher than the nation's 4.5% tally. This comes after a five-year period in which Nevada's unemployment rate was lower than national norms. However, through the first half of the year, the unemployment rate has averaged 4.5%, not seasonally adjusted, in Nevada. Nationally, the jobless rate has averaged 4.6% so far this year.
- Year-to-date through June, the Clark County unemployment rate stands at 4.4%, not adjusted for seasonal variation, while it is 4.5% in Washoe County. In the balance of the rest of the State, it is 5.2%.

¹ The seasonal adjustment process removes the month-to-month seasonal effects from a data series. Over the course of a year, the levels of employment and unemployment undergo sharp fluctuations due to such seasonal developments as changes in weather, the planting and harvesting of crops, major holidays, and the opening and closing of schools. Since these seasonal events follow a more or less regular pattern each year, their influence on statistical trends can be eliminated by adjusting the statistics from month to month.

- Job growth remains positive, but has slipped well below gains recorded in previous years. During 2004 and 2005, job gains in Nevada came in at about 6%. Growth eased to 4.8% in 2006. During the first six months of this year, job growth has averaged 2.8%.
- In June, the 1.31 million jobs maintained in the State's business establishments translate into a gain of 22,300 (1.7%) from the same month a year ago. Nevada began the year with a 3.7% job gain in January. Growth has eased every month since. Job growth in recent months has been the lowest since mid-2002.
- In the U.S., June job growth came in at 1.4%. Through the first half of the year, national job growth has averaged 1.5% and remains below Nevada's gain. So, again, job growth trends in Nevada are relatively favorable vs. national norms.
- Las Vegas metropolitan statistical area (MSA) job growth has averaged 3% through June, slightly higher than Reno-Sparks' 2.5% gain. The year-over-year increase in the Carson City MSA was minimal, at 0.6%.
- It is important to put the slowdown in job growth in perspective. Despite this year's slowdown, over the past five years, Nevada's economy has generated 265 thousand jobs and has grown at a 4.6% average annual clip. This is a remarkable showing. Over the same period, job growth in the U.S. as a whole has only averaged 1.1%.
- The weakness in the housing segment is impacting the State's labor markets. June construction jobs are off by 5,200 relative to a year ago. This translates into a Y-T-D loss of 2,500. In 2006, the construction sector added about 9,000 new jobs.
- Nevada average weekly wages, at \$770, rose 3.4% in 2006, helped by a 5.5% gain in the final quarter of the year. Wage growth was down from 4.5% in 2005 and 5% in 2004.
- Though the first six months of this year, initial claims for unemployment insurance are up 15% from a year ago, fueled by a 20% gain in June.
- Continued unemployment claims remain well above year-ago readings. In June, they were up 24% from the same month in 2006. For the year, they are up 26%. The average duration of UI claims continues to creep up and stands at 13.24 weeks in June.
- Additionally, June unemployment insurance claims in the construction industry are up by 26% compared to the same month in 2006, further evidence of the weakness in the housing sector.

- Nevada's taxable sales have declined in each of the past two months, including a 3.6% drop in May. So far in 2007, sales are up just 0.8% from a year ago. Through the first five months of the year, sales have totaled \$19.97 billion. Sales advanced by 9.4% in 2003, followed by double-digit gains in both 2004 and 2005. Such strong gains cannot continue uninterrupted. As a result, sales gains have been slowing since early in 2006.
- At 3.38 million, Las Vegas visitor volume edged up 1.2% from year-ago readings in May. As it has for the past several months, visitor volume will probably trend in a fairly narrow range until the next round of megaresort openings gets underway.
- Through May, calendar year gaming win is up 1.5%. As with visitor volume, these results will benefit from upcoming casino openings.
- For all of 2006, Nevada personal income grew at a 7.4% pace. Income gains were the lowest since 2003. Still, Nevada continued to outpace the nation, where personal income grew just 6.3% in 2006. Through the first quarter of this year, income is up 7.2% in the State, another impressive showing in light of the nation's 5.8% gain.
- As for Nevada's construction and real estate activity, signs of weakness in the residential sector remain evident on a number of different fronts. Housing

The federal/state cooperative program under which employment and unemployment estimates for states and local areas are developed is the Local Area Unemployment Statistics Program (LAUS). These estimates are prepared by state employment security agencies in accordance with Bureau of Labor Statistics definitions and procedures. They are used for planning and budgetary purposes, as an indication of need for employment and training programs, and to allocate federal funds under the Workforce Investment Act (WIA), Federal Emergency Management Agency (FEMA), etc.

The federal/state cooperative program under which job estimates for states and local areas are developed is the Current Employment Statistics Program (CES). The Program revolves around a monthly survey of non-farm business establishments used to collect wage and salary employment, hours worked, and payroll, by industry and area.

Initial Claim – An initial claim is any notice of unemployment filed by an individual to initiate 1) a determination of entitlement to and eligibility for compensation (a new claim); 2) a subsequent period of unemployment within a benefit year or period of eligibility (an additional claim); or 3) a new claim filed to request a determination of eligibility and establishment of a new benefit year within an existing spell of unemployment (transitional claim).

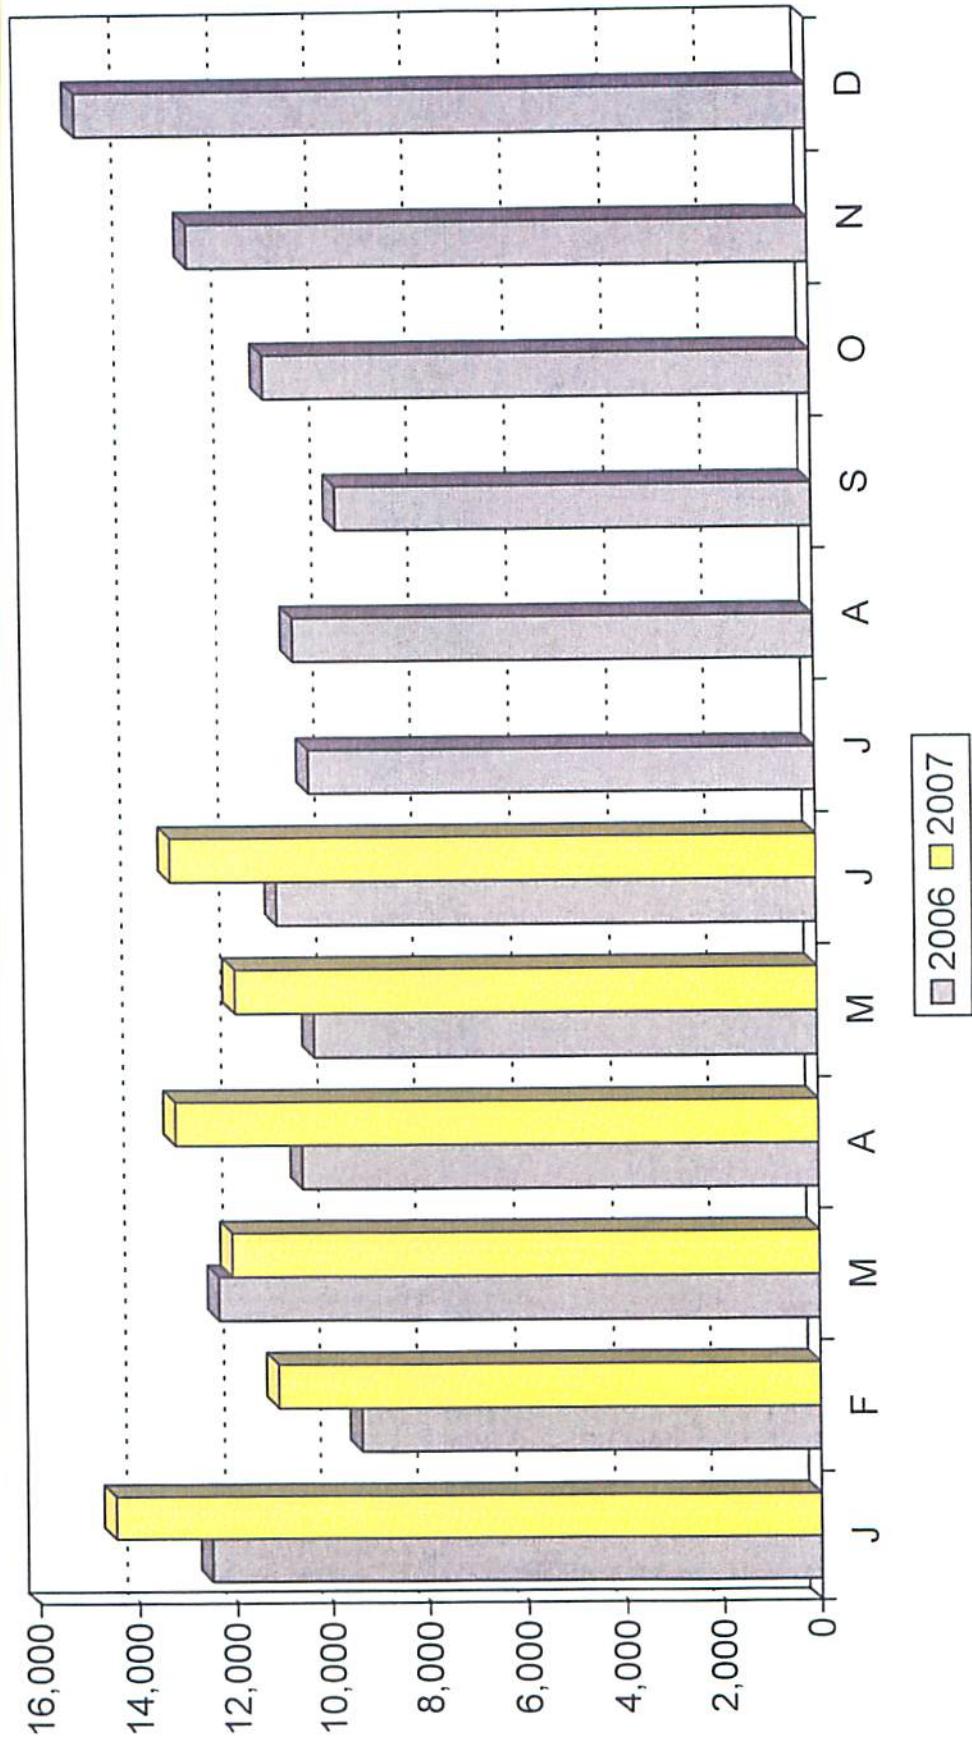

Continued Claim – A claim filed after the initial claim, by mail, telephone, electronically, or in person, for waiting-period credit or payment for a certified week of unemployment.

Average Duration -The average number of consecutive weeks a claim is paid, expressed on a 12-month moving average basis.

Personal income is defined as the income that is received by persons from participation in production, from both government and business transfer payments, and from government interest (which is treated like a transfer payment). It is calculated as the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments to persons, less personal contributions for social insurance.
