Re: IMPORTANT PRODUCT AVAILABILITY INFORMATION
Phospholine Iodide[®]
(echothiophate iodide for ophthalmic solution)

Dear Health Care Provider:

In August 2008, you received a letter from Wyeth Pharmaceuticals concerning a supply outage of Phospholine Iodide, 6.25 mg (0.125%), a product indicated for the treatment of glaucoma or accommodative esotropia (strabismus).

The product is once again available for sale under the following limited distribution program:

Program Criteria:

- Product may only be purchased directly from Wyeth.
- Such sales are limited to one bottle per patient per month.
- Wyeth is restricting shipments to either pharmacies or directly to physicians.
- Pharmacies may be required to provide Wyeth with the name of the prescribing physician.
- Wyeth is unable to accept stocking orders.

Under the limited distribution program outlined above, we are working to ensure that orders are filled and shipped promptly so that patients who need this product can receive it. In the meantime, Wyeth continues to take measures designed to prevent a reoccurrence of this outage.

If you wish to place an order for a current patient or have any questions, please call our Customer Service Department at 1-800-666-7248.

The product prescribing information can be accessed at www.wyeth.com.

Sincerely,

Joseph S. Camardo, M.D.
Senior Vice President
Global Medical Affairs
