RE: WOMEN'S WELLNESS

Dear Sir / Madam:

This is a 30-day notification of a statement of nutritional support for a dietary supplement. The product name is **Andrew Lessman's Women's Wellness**. The structure / function claims on all sizes and configurations of this product are identical. They are as follows:

Andrew Lessman's WOMEN'S WELLNESS is a natural formula designed to support the special needs of women at all stages of life. Preliminary studies suggest that phytoestrogens, like those contained in Women's Wellness, can help to reduce hot flashes, night sweats and other menopausal symptoms – but evidence is not conclusive. In addition to the benefits of Soy, Women's Wellness also contains standardized extracts and concentrates of key foods that have long been associated with the support of women's health. It delivers 250 milligrams of a concentrated, standardized extract of Green Tea, which is the customary beverage consumed in the healthy Asian diet and contains extremely powerful natural anti-oxidant compounds called polyphenols. We also include 25 milligrams of our special Broccoli Sprout extract standardized for Sulforaphane, which is thought to be responsible for delivering Broccoli's anti-oxidant and health benefits, including the support of the body's production of powerful anti-oxidants, such as glutathione. Women's Wellness also contains 125 milligrams of our special 17:1 Cranberry concentrate, which is an excellent source of powerful anti-oxidants referred to as procyanidins and offers natural healthy support to a woman's urinary tract. We also add two powerful anti-oxidant carotenoids, Lutein and Lycopene (not included in most women's supplement products and included here at levels higher than found in leading multi-vitamins), because they are so supportive of the health of uniquely female tissues, organs and systems. All of these ingredients combine to make Women's Wellness a truly unique and comprehensive formula to support the health of women of all ages.

Respectfully Submitted,

Dr Nancy Steely, ND
Director of Research
