

Novox Caplets (*carprofen*), 25 mg, 75 mg and 100 mg

For oral use in dogs only
Non-steroidal anti-inflammatory drug

Dog Owner Information about Novox Caplets for Osteoarthritis and Post-Surgical Pain This summary contains important information about Novox Caplets. You should read this information before you start giving your dog Novox Caplets and review it each time the prescription is refilled. This sheet is provided only as a summary and does not take the place of instructions from your veterinarian. Talk to your veterinarian if you do not understand any of this information or if you want to know more about Novox Caplets.

What is Novox Caplets?

Novox Caplets are a nonsteroidal anti-inflammatory drug (NSAID) that is used to reduce pain and inflammation (soreness) due to osteoarthritis and pain following surgery in dogs. A licensed veterinarian must prescribe carprofen for your dog. It is available as a caplet and is given to dogs by mouth.

Osteoarthritis (OA) is a painful condition caused by “wear and tear” of cartilage and other parts of the joints that may result in the following changes or signs in your dog:

- Limping or lameness
- Decreased activity or exercise (reluctance to stand, climb stairs, jump or run, or difficulty in performing these activities)
- Stiffness or decreased movement of joints

Surgical pain (e.g., for surgeries such as spays, ear procedures or orthopedic repairs) can be controlled when your veterinarian administers Novox Caplets before the procedure. Then, your veterinarian may prescribe Novox treatment for your dog for several days after going home.

What kind of results can I expect when my dog is on Novox Caplets for OA?

While Novox Caplets are not a cure for osteoarthritis, it can relieve the pain and inflammation of OA and improve your dog's mobility.

- Response varies from dog to dog but can be quite dramatic.
- In most dogs, improvement can be seen in a matter of days.
- If Novox Caplets are discontinued or not given as directed, your dog's pain and inflammation may come back.

Who should not take Novox Caplets?

Your dog should not be given Novox Caplets if he/she:

- Has had an allergic reaction to the active ingredient, carprofen.
- Has had an allergic reaction to aspirin or other NSAIDs (for example etodolac or phenylbutazone) such as hives, facial swelling, or red or itchy skin.

Novox Caplets should be given to dogs only. Cats should not be given Novox Caplets. Call your veterinarian immediately if your cat receives Novox Caplets. People should not take Novox Caplets. Keep Novox Caplets and all medicines out of reach of children. Call your physician immediately if you accidentally take Novox Caplets.

How to give Novox Caplets to your dog.

Novox Caplets should be given according to your veterinarian's instructions. Your veterinarian will tell you what amount of Novox Caplets is right for your dog and for how long it should be given. Novox Caplets should be given by mouth and may be given with or without food.

What to tell/ask your veterinarian before giving Novox Caplets.

Talk to your veterinarian about:

- What tests might be done before Novox Caplets is prescribed.
- How often your dog may need to be examined by your veterinarian.
- The risks and benefits of using Novox Caplets.

continued on back

If your dog is prescribed Novox Caplets for osteoarthritis, ask your vet about:

- The signs of OA you have observed (for example limping, stiffness).
- The importance of weight control and exercise in the management of OA.

Tell your veterinarian if your dog has ever had the following medical problems:

- Experienced side effects from Novox Caplets or other NSAIDs, such as aspirin
- Digestive upset (vomiting and/or diarrhea)
- Liver disease
- Kidney disease
- A bleeding disorder (for example, Von Willebrand's disease)

Tell your veterinarian about:

- Any other medical problems or allergies that your dog has now or has had.
- All medicines that you are giving your dog or plan to give your dog, including those you can get without a prescription.
- If your dog is pregnant, nursing or if you plan to breed your dog.

What are the possible side effects that may occur in my dog during Novox Caplets therapy?

Carprofen, like other drugs, may cause some side effects. Serious but rare side effects have been reported in dogs taking NSAIDs, including Novox Caplets. Serious side effects can occur with or without warning and in rare situations result in death.

The most common NSAID-related side effects generally involve the stomach (such as bleeding ulcers), and liver or kidney problems. Look for the following side effects that can indicate your dog may be having a problem with Novox Caplets or may have another medical problem:

- Decrease or increase in appetite
- Vomiting
- Change in bowel movements (such as diarrhea, or black, tarry or bloody stools)
- Change in behavior (such as decreased or increased activity level, incoordination, seizure or aggression)
- Yellowing of gums, skin, or whites of the eyes (jaundice)
- Change in drinking habits (frequency, amount consumed)
- Change in urination habits (frequency, color, or smell)
- Change in skin (redness, scabs, or scratching)

It is important to stop therapy and contact your veterinarian immediately if you think your dog has a medical problem or side effect from Novox Caplets therapy. If you have additional questions about possible side effects, talk to your veterinarian.

Can Novox Caplets be given with other medicines?

Novox Caplets should not be given with other NSAIDs (for example, aspirin, etodolac, deracoxib, meloxicam, tepoxalin) or steroids (for example, cortisone, prednisone, dexamethasone, triamcinolone).

Tell your veterinarian about all medicines you have given your dog in the past, and any medicines that you are planning to give with Novox Caplets. This should include other medicines that you can get without a prescription. Your veterinarian may want to check that all of your dog's medicines can be given together.

What do I do in case my dog eats more than the prescribed amount of Novox Caplets?

Contact your veterinarian immediately if your dog eats more than the prescribed amount of Novox Caplets.

What else should I know about Novox Caplets?

This page provides a summary of information about Novox Caplets. If you have any questions or concerns about Novox Caplets or osteoarthritis pain, talk to your veterinarian.

As with all prescribed medicines, Novox Caplets should only be given to the dog for which it was prescribed. It should be given to your dog only for the condition for which it was prescribed.

It is important to periodically discuss your dog's response to Novox Caplets at regular check ups. Your veterinarian will best determine if your dog is responding as expected and if your dog should continue receiving Novox Caplets.

To report a suspected adverse reaction call VEDCO, Inc. at 1-888-708-3326.
