AFOS-ERA VERIFICATION OF GUIDANCE AND  
LOCAL AVIATION/PUBLIC WEATHER FORECASTS--NO. 24  
(APRIL 1995 - SEPTEMBER 1995)

Valery J. Dagostaro, J. Paul Dallavalle, and Jennifer L. Offutt

1. INTRODUCTION

The Techniques Development Laboratory, now known as the Meteorological Development Laboratory (MDL), periodically produces verification results for MDL's automated guidance and National Weather Service (NWS) local forecasts made at Weather Service Forecast Offices (WSFO's). This office note continues a series of documents presenting seasonal verification results. Here, we present verification statistics for the warm season months of April 1995 through September 1995 for maximum/minimum (max/min) temperature, probability of precipitation (PoP), cloud amount, surface wind, ceiling height, and visibility. Specific details about the local and objective forecasts and the verifying observations are summarized in Table 1.1. It's important to consider this information when interpreting the verification scores. For example, the objective max/min temperature forecast system is based on calendar day observations for Alaska, but on daytime/nighttime periods for the conterminous U.S. For Alaska, the definitions of the official local max/min temperature forecasts and verifying observations, in turn, differ from those of the guidance. Dagostaro and Dallavalle (1991) provide more specific information about the forecasts, observations, and verification procedure for each weather element.

For this season, the objective guidance was based on forecast equations developed by use of the Model Output Statistics (MOS) technique (Glahn and Lowry 1972) and applied to forecast fields from the Nested Grid Model (NGM) (Hoke et al. 1989) and the Limited-area Fine-mesh Model (LFM) (Gerrity 1977; Newell and Deaven 1981). Additional information about the objective guidance prediction equations is available from the references listed in Table 1.2. Details regarding the local data collection in the conterminous U.S. and Alaska are described briefly in Dagostaro and Dallavalle (1991). For additional information about the local data collection process, see Ruth and Alex (1987). The central data collection and data processing system is described in Dagostaro (1985).

Verification statistics are provided for the 102 stations in the conterminous U.S. and Alaska listed in Table 1.3. The scores are those recommended in the NWS National Verification Plan (National Weather Service 1982). Definitions of the categories used for verification are given in Table 1.4. For the aviation weather elements, we verified the local forecasts associated with the FT issuance times of approximately 0900 and 1800 UTC. Objective guidance for the aviation weather elements, as well as all local and guidance forecasts for the public weather elements, were verified for the 0000 and 1200 UTC forecast cycles. Because verification data or forecast projections for Alaska differ from those of the conterminous U.S., data for the six Alaskan stations were verified separately from those of the conterminous U.S.

For most weather elements, verification results are presented for all stations in the conterminous U.S. combined, followed by results for each of

the four NWS regions in the conterminous U.S. and for the Alaska Region. Following this convention, max/min temperature scores are presented in Tables 2.1 - 2.12. For PoP, scores are presented in Tables 3.1 - 3.10 for the conterminous U.S. stations combined and for the four NWS regions in the conterminous U.S. PoP verification scores were unavailable for Alaskan stations (see section 2.) Tables 4.1 - 4.12 show cloud amount verification scores. For wind speed and direction, objective guidance verification results are presented in Tables 5.1 - 5.12, while the analogous local scores are given in Tables 5.13 - 5.24. Verification results for the 42-h significant wind speed are presented for the conterminous U.S. stations combined and for the Alaska Region in Tables 5.25 - 5.28. For ceiling height, Tables 6.1 - 6.4 contain the objective forecast results for the conterminous U.S. stations combined and for the Alaska Region, while Tables 6.5 - 6.8 contain ceiling height scores for the local forecasts. Tables 7.1 - 7.8 show objective and local visibility forecast results for the conterminous U.S. stations combined and for the Alaska Region.

## 2. SUMMARY (APRIL 1995 - SEPTEMBER 1995)

During the 1995 warm season, the NGM-based MOS was the official objective guidance for stations in the conterminous U.S., and LFM-based MOS was the official objective guidance for stations in Alaska. Please note that for some weather elements, forecast definitions for LFM and NGM MOS differ slightly.

Eighteen stations were commissioned as ASOS sites during the warm season. The stations listed below were commissioned on the following dates: May 1, 1995 - Billings, Montana; June 1, 1995 - El Paso, Texas, and San Antonio, Texas; July 1, 1995 - Detroit, Michigan; Kansas City, Missouri; Meridian, Mississippi; and Milwaukee, Wisconsin; August 1, 1995 - Albany, New York; Atlanta, Georgia; and Grand Rapids, Michigan; and September 1, 1995 - Fresno, California; Las Vegas, Nevada; Lubbock, Texas; Providence, Rhode Island; Rapid City, South Dakota; Reno, Nevada; and Spokane, Washington. Because the ASOS cloud amount observations are incomplete, we set to missing the observed cloud amount data for those stations after they were commissioned. Observed cloud amount data were also set to missing for the AEV ASOS sites listed in Table 1.3 that were commissioned prior to the 1995 warm season.

Dagostaro and Dallavalle (1997) documented data problems associated with the change in format of the hourly surface observations on January 1, 1995 and the use of old data collection software. We continued to eliminate 42-h significant wind and precipitation amount observations for some stations until we were sure that the correct data collection software was in use.

During the 1995 warm season, we continued to replace the locally-collected LFM MOS PoP guidance for the Alaska sites with centrally-archived values whose valid times matched those of the local forecasts and verifying observations (see Dagostaro and Dallavalle 1997). However, neither the guidance nor the local PoP forecasts were verified due to a continuing problem with the precipitation amount observations for Alaska caused by the change in the hourly observation format on January 1, 1995.

Table 1.1. Forecasts and observations in the NWS verification data.

Weather Element	Type of Data	Data Source <sup>1</sup>	Projections From		Forecast Cycle (UTC)	Comments
			Forecast Cycle	Forecast Cycle		
Max temp	LFM MOS	FMAK1	24, 48		0000	Calendar day max temperature forecast for Alaska; guidance no longer available for the conterminous U.S.
			36, 60		1200	
	NGM MOS	FWC	24, 48		0000	
			36, 60		1200	
Local Fcst	Local Fcst	FP	24, 48		0000	Daytime max temperature for all stations. In the conterminous U.S., actual daytime period depends on time zone. For Alaska, forecasts are valid for 12-h periods ending at 30 (42) and 54 (66) hours after 0000 (1200) UTC.
			36, 60		1200	
	Obs	SAO				
Min temp	LFM MOS	FMAK1	36, 60		0000	Calendar day min temperature forecast for Alaska; guidance no longer available for the conterminous U.S.
			24, 48		1200	
	NGM MOS	FWC	36, 60		0000	
			24, 48		1200	
Local Fcst	Local Fcst	FP	36, 60		0000	Nighttime min temperature for all stations. In the conterminous U.S., actual night-time period depends on time zone. For Alaska, forecasts are valid for 12-h periods ending at 30 (42) and 54 (66) hours after 1200 (0000) UTC.
			24, 48		1200	
	Obs	SAO				
PoP	LFM MOS	FMAK1	30, 42, 54		0000, 1200	For Alaska, forecasts are for 12-h periods ending at the indicated projections. Guidance for the conterminous U.S. is no longer available.
	NGM MOS	FWC	24, 36, 48		0000, 1200	
Local Fcst	Local Fcst	FP	24, 36, 48		0000, 1200	Same as the guidance. For Alaska, the local forecasts are valid 30, 42, and 54 hours from the forecast cycle.
	Obs	SAO				

Table 1.1. Continued.

Weather Element	Type of Data	Data Source <sup>1</sup>	Projections From Forecast Cycle	Forecast Cycle (UTC)	Comments
Precipitation type <sup>2</sup>	LFM MOS	FMAK1	18, 30, 42	0000, 1200	For Alaska, guidance is for frozen and unfrozen precipitation (freezing is considered unfrozen but is not verified). There is no guidance for the conterminous U.S.
	NGM MOS	FWC	18, 30, 42	0000, 1200	Forecasts are valid at specific hours corresponding to the indicated projections. Guidance is for freezing, frozen, and liquid precipitation (mixed frozen and liquid is considered liquid).
	Local Fcst	MEF	18, 30, 42	0000, 1200	Forecasts of freezing, frozen, and liquid precipitation (mixed frozen and liquid is considered frozen) for all stations. Forecasts are valid at specific hours corresponding to the indicated projections.
	Obs	SAO			Obs are collected at the verifying time and $\pm 1$ hour of the verifying time.
Snow amount <sup>2</sup>	LFM MOS				For Alaska, appropriate guidance is not available; no guidance for the conterminous U.S.
	NGM MOS	FWC	24	0000, 1200	Categorical forecasts of snow amount for the 12-h period ending at the indicated projection.
	Local Fcst	MEF	24	0000, 1200	Snow amount forecast in inches for the 12-h period ending at the indicated projection.
	Obs	SSM			12-h snow amount.
Cloud amount	LFM MOS	FMAK1	12, 18, 24	0000, 1200	Categorical forecasts of opaque sky cover for Alaska; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 18, 24	0000, 1200	Categorical forecasts of opaque sky cover.
	Local Fcst	MEF	12, 18, 24	0000, 1200	Categorical forecasts of sky cover.
	Obs	SAO			Observed total sky cover (includes thin clouds) at the verifying hour.
Wind speed	LFM MOS	FMAK2	12, 18, 24, 42	0000, 1200	For Alaska, forecasts are valid at specific hours after 0000 or 1200 UTC; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 18, 24, 42	0000, 1200	Forecasts are valid at the indicated hours after 0000 or 1200 UTC.
	Local Fcst	FT	3, 9, 15	0900, 1800	Aviation terminal forecasts are valid for variable time periods. Forecasts valid for the "projections" at left are verified. Approximate FT issuance times, at left, depend on time zone where station is located.
	Obs	MEF	42	0000, 1200	A yes/no forecast of $\geq 22$ kt wind speed valid at the specific hour after 0000 or 1200 UTC.
	Obs	SAO			Observed values collected at the stations for the specific hour and $\pm 3$ hours (highest sustained wind) correspond to the valid times of the local aviation terminal forecasts. Observed values corresponding to the 42-h significant wind are based on 0000 or 1200 UTC. Verifying obs corresponding to the guidance are from MDL hourly archives.

Table 1.1. Continued

Weather Element	Type of Data	Data Source <sup>1</sup>	Projections From Forecast Cycle	Forecast Cycle (UTC)	Comments
Wind direction	LFM MOS	FMAK2	12, 18, 24	0000, 1200	For Alaska, forecasts are valid at specific hours after 0000 or 1200 UTC; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 18, 24	0000, 1200	Forecasts are valid at the indicated hours after 0000 or 1200 UTC.
	Local Fcst	FT	3, 9, 15	0900, 1800	Same as for local aviation terminal forecasts of wind speed.
	Obs	SAO			Observed values collected at the stations for the specific hour correspond to the valid time of the local forecasts. Verifying obs corresponding to the guidance are from MDL hourly archives.
Ceiling height	LFM MOS	FMAK2	12, 18, 24	0000, 1200	Categorical value. Definitions of categories match the official definitions of LIFR and IFR, but differ slightly from the official definitions of MVFR and VFR; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 15, 18, 24	0000, 1200	Categorical value. Definitions of categories match the official definitions of LIFR, IFR, MVFR, and VFR.
	Local Fcst	FT	3, 6, 9, 15	0900, 1800	Forecasts are converted to categorical values. See wind speed for FT valid times and issuance times.
	Persis	SAO			Persistence observations used for comparison with the local forecasts are collected at the stations and are the latest hourly obs available at the scheduled FT release time. Since March 1987, persistence obs used for comparison with the MOS guidance are from hourly obs taken at 0900 (2100) UTC for the 0000 (1200) UTC cycle. These latter obs are collected at MDL.
	Obs	SAO			Observations taken at specific hours. Obs corresponding to the valid times of the local forecasts are collected at the stations. Verifying obs that correspond to the valid times of the MOS guidance are from hourly obs collected at MDL.
Visibility	LFM MOS	FMAK2	12, 18, 24	0000, 1200	See ceiling height.
	NGM MOS	FWC	12, 15, 18, 24	0000, 1200	See ceiling height.
	Local Fcst	FT	3, 6, 9, 15	0900, 1800	See ceiling height.
	Persis	SAO			See ceiling height.
	Obs	SAO			See ceiling height.

<sup>1</sup>Data sources are as follows:

- FMAK1, FMAK2 - bulletins contain LFM-based MOS guidance for all weather elements for stations in Alaska; LFM-based MOS guidance for the conterminous U.S. is no longer available
- FWC - FWC bulletin contains NGM-based MOS guidance for all weather elements for stations in the conterminous U.S. only
- FP - Coded city forecast (FPUS4) bulletin containing official local public weather element forecasts in the conterminous U.S.; data in Alaska are obtained from the FPAK4 bulletin
- FT - Aviation terminal forecast containing official local forecasts for aviation weather elements
- MEF - Manually entered forecast product containing official local forecasts of some weather elements
- SAO - Surface airways observation containing verifying observations corresponding to local and MOS forecasts for most weather elements
- SSM - Surface synoptic report containing verifying observations of snow amount

<sup>2</sup>Precipitation type and snow amount forecasts are not verified for the warm season months of April through September.

<sup>1</sup>Cloud amount observations were not used after the station was commissioned as an ASOS site.

<sup>2</sup>MLB had no data for the cloud amount and 42-h significant wind verifications. Data were also not available for the local surface wind, ceiling height, and visibility verifications.

<sup>3</sup>TCC had no data for the max/min temperature and PoP verifications. Data also were not available for the cloud amount and 42-h significant wind verifications for the 1200 UTC cycle, the local ceiling height, visibility, and surface wind verifications for the FT release time of approximately 0900 UTC, the MOS surface wind verification for the 1200 UTC cycle, and the MOS ceiling height and visibility verifications for the 0000 and 1200 UTC cycles.

<sup>4</sup>LAX was not included in the max/min temperature and PoP verifications.

<sup>5</sup>This station had no precipitation amount observations.

Table 1.4. Definitions of categories used for verification.

Category	Precipitation Type	Snow Amount* (in)	Cloud Amount	Wind Speed (kt)	Wind Direction (degrees)	Ceiling Height (ft)	Visibility (mi)
1	ZL, ZR, any combination of precipitation types that includes ZL or ZR	<2	CLR, -SCT, -BKN, -OVC, -X	≤12	340-20	≤400	<1
2	IC, IP, IPW, S, SG, SP, SW, any combination of frozen and liquid	2-3	SCT	13-17	30-60	500-900	1-2 3/4
3	L, R, RW	4-5	BKN	18-22	70-110	1000-3000	3-5
4		≥6	OVC, X	23-27	120-150	≥3100	>5
5				28-32	160-200		
6				≥33	210-240		
7					250-290		
8					300-330		

\* Scores based on cumulative snow amount categories of ≥ 2, ≥ 4, and ≥ 6 inches are noted in the verification tables.
