Lawyer's Notes

[1] with sexual dysfunction post-operatively.

[2] Today, I'll tell you about the negative
[3] impact that HSDD has on menopausal women, and talk
[4] also about why I'm an advocate for a low-dose
[5] testosterone patch.

[6] Let me begin by describing some of the
[7] research that helps us understand HSDD.

[8] [Slide.]

[9] The Women's International Study of Health
[10] and Sexuality—or the WISHeS Study—was
[11] specifically designed to better understand HSDD in
[12] women, as available studies didn't completely
[13] capture all important aspects of this disorder—in
[14] particular, distress. This was a self-report
[15] survey of more than 4,500 women in the United
[16] States and Europe between the ages of 20 and 70.
[17] I'll be discussing a U.S. sub-population of 520
[18] surgically and naturally menopausal women with
[19] partners.

[20] This survey used three validated
[21] instruments: the Short Form-36, a measure of
[22] overall health status; and the Personal Distress

[1] on couples, for women, sexuality typically exists
[2] within the context of the important relationships
[3] of their lives. As you can see in this graph,
[4] sexual satisfaction and relationship satisfaction
[5] are intr

[1] Scale; and Profile of Female Sexual Function.

[2] So what did these studies teach us?

[3] [Slide.]

[4] Well, we learned that women with HSDD do
[5] engage in sexual activity. As these data
[6] illustrate, partner-initiated sexual activity is
[7] constant for women, whether they have no or normal
[8] desire. But, importantly, women with HSDD are
[9] significantly less likely to initiate sexual
[10] activity. This confirms that focusing only on the
[11] frequency of sexual activity can be misleading when
[12] trying to understand the sexual experience of women
[13] with HSDD.

[14] [Slide.]

[15] Not surprisingly, we also learned that
[16] sexual desire correlates with a woman's overall
[17] level of satisfaction with her sexual life. This
[18] graph shows that women with less desire were less
[19] satisfied with their sex lives. Women with higher
[20] desire scores were more satisfied overall.

[21] [Slide.]

[22] With respect to the effect of low desire
